

# Transforming your business with renewable energy

## Clean And Renewable Energy Subscription (CARES) Program

Elevate your business with renewable energy through the Georgia Power Clean And Renewable Energy Subscription (CARES) program. Designed for commercial and industrial customers aiming to further their commitment to renewable energy and sustainability, the CARES program offers the opportunity to subscribe to new renewable energy resources procured by Georgia Power. As part of this program, Georgia Power will retire Renewable Energy Certificates (RECs) on behalf of participating customers, enabling them to enjoy the environmental benefits associated with their pro-rata share of the energy produced by the program's resources.

# How it works

- 1** Georgia Power signs Power Purchase Agreement (PPA) with renewable developer
- 2** Renewable energy generated delivered to the power grid
- 3** Customers Pay either
  - VARIABLE PRICE OPTION:** Fixed price per kWh charge based largely on the PPA supply cost.
  - FIXED PRICE OPTION:** Fixed cost per kWh based on the current and projected value of RECs
- 4** Customer receives hourly credit per kWh (Variable Price Option only)

# Key Benefits

## Good for the planet

Reduce carbon emissions and combat climate change

## Grow clean energy infrastructure

Increased demand stimulates new renewable energy facilities

## Fuel economic growth

Supporting financial viability of renewable energy leads to job creation

## Demonstrate commitment

Differentiate your business as an industry leader in sustainability

# Program Availability & Eligibility

**2,100 MW**

**CFE-ATC**  
**100 MW**

Around the clock carbon-free energy for existing or new load of  $\geq 25$  MW

**Existing Load**  
**900 MW**

Existing Commercial & Industrial customers with aggregated load of  $\geq 3$  MW

**New Load**  
**500 MW**

New and existing Commercial & Industrial customers with incremental new load addition of  $\geq 15$  MW

**MUSH**  
**50 MW**

Municipalities, Universities, Schools, and Hospitals with aggregated load of 1MW-3MW
