Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Joju Abraham
Southern Company
241 Ralph McGill Blvd SE
B10185
Atlanta, Georgia 30308

Generated 9/18/2024 5:17:32 PM

JOB DESCRIPTION

CCR - Plant Scherer Ash Pond

JOB NUMBER

680-254295-2

Eurofins Savannah
5102 LaRoche Avenue
Savannah GA 31404

See page two for job notes and contact information.

my EOL

Eurofins Savannah

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Authorization

Generated

Definitions/Glossary

Client: Southern Company
Project/Site: CCR - Plant Scherer Ash Pond

Job ID: 680-254295-2

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Sample Summary

Client: Southern Company
Project/Site: CCR - Plant Scherer Ash Pond

Job ID: 680-254295-2

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
680-254295-1	SCH-SGWC-18	Water	08/05/24 11:32	08/07/24 11:30
680-254295-2	SCH-SGWC-17	Water	08/05/24 11:52	08/07/24 11:30
680-254295-3	SCH-PZ-13S	Water	08/05/24 13:37	08/07/24 11:30

680-254295-8	SCH-AP1-FD-4	Water	08/05/24 00:00	08/07/24 11:30
680-254295-9	SCH-AP1-EB-3	Water	08/05/24 13:25	08/07/24 11:30
680-254295-10	SCH-AP1-EB-4	Water	08/05/24 15:00	08/07/24 11:30

Job Narrative
680-254295-2

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 8/7/2024 11:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.1°C, 1.8°C and 2.1°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Eurofins Savannah

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Authorization

Definitions/Glossary

Client: Southern Company
Project/Site: CCR - Plant Scherer Additional PZ

Job ID: 680-254303-2

Qualifiers

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Sample Summary

Client: Southern Company
Project/Site: CCR - Plant Scherer Additional PZ

Job ID: 680-254303-2

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
680-254303-1	SCH-PZ-25S	Water	08/06/24 12:42	08/07/24 11:30

Job Narrative
680-254303-2

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 8/7/2024 11:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.6°C.

Gas Flow Proportional Counter
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

APPENDIX B

Data Validation Summary February-May 2024

Quality Control Review of Analytical Data - Plant Scherer Ash Pond 1 (AP-1)
Submitted by Eurofins Environmental Testing
February-May 2024

This narrative presents results of the quality control (QC) data review performed on analytical data submitted by Eurofins Environmental Testing, Inc. for groundwater samples collected at Plant Scherer CCR Ash Pond 1 (AP-1) between February 20 and May 6, 2024. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1. In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D - Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detection monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Test methods included Inductively Coupled Plasma - Mass Spectrometry (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Determination of Inorganic Anions by Ion Chromatography (USEPA Method 300.0), Total Dissolved Solids (Standard Methods 2540C), Sulfide (EPA 9034), Alkalinity by Titration (Standard Methods 2320B), Radium-226 (USEPA Method 9315) and Radium-228 (USEPA Method 9320).

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program (CLP) Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0), US EPA Region IV Data Validation Standard Operating Procedures for CLP Mercury Data by Cold Vapor Atomic Absorption (September 2011, Rev. 2.0), the National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020), and US Department of Energy, Evaluation of Radiochemical Data Usability (April 1997). The review included an assessment of the results for completeness, precision (field and laboratory duplicates, matrix spike/matrix spike duplicates), accuracy (laboratory control samples and matrix spike samples), and sensitivity (reporting limits and blank contamination, including field and laboratory blanks). Additionally, sample procedures, holding times and chains-of-custody were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytic methodology, method-specific criteria or professional judgment was used.

DATA QUALITY OBJECTIVES

Laboratory Precision: Laboratory goals for precision were met.

Field Precision: Field goals for precision were met with the exception of sulfate as described in the qualification section below.

Accuracy: Laboratory goals for accuracy were met with the exception of chromium, magnesium, and mercury, as described in the qualification section below.

Sensitivity: Project goals for detection limits were met. Certain samples were diluted due to elevated concentrations of target analytes. Dilutions do not require qualifications based on USEPA guidelines. Detection and reporting limits of non-detect compounds are elevated proportional to the dilution when undiluted sample results are not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of site-wide characterization. Detections were found in certain blank results, as described in the qualification sections below.

Completeness: There were no rejected analytical results for this event, resulting in a completion of 100%.

Holding Times: All holding time requirements were met in accordance with specific analytical methods.

QUALIFICATIONS

In general, chemical results for the samples collected at the Site were qualified on the basis of imprecision or inaccuracy, or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data during the data validation process.

J	The analyte was reported above the method detection limit and below the reporting limit. The concentration reported is an estimated value.
J+	The analyte was reported above the method detection limit; however, the concentration reported is an estimated value that may be biased high.
U	The analyte was not detected above the method detection limit.
UJ	The analyte was not detected above the method detection limit and the associated numerical value is the approximate concentration of the analyte in the sample.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. Although these qualifications were applied to data from samples collected at the site and reported in SDGs qualifications may not have been required or applied to all samples collected. A summary of sample qualifications can be found in Table 2.

- Sulfate results in samples SCH-SGWC-10 and SCH-AP1-FD-2 from SDG 680-247129-1 were qualified as estimated (J) when the field duplicate relative percent difference (RPD) exceeded criteria.

- Chromium and magnesium results in sample SCH-SGWC-19 from SDG 680-246967-1 were qualified as estimated, bias high (J+), when the associated matrix spike (MS) and or matrix spike duplicate (MSD) recovery exceeded laboratory criteria.

- The non-detect mercury result in sample SCH-SGWC-8 from SDG 680-247026-1 was qualified as estimated, non-detect (UJ), when the associated MS and/or MSD recovered below laboratory criteria.

- Certain alkalinity, antimony, chromium, iron, lead, lithium, molybdenum, sodium, and sulfide results in SDGs 680-246967-1, 680-247129-1, 680-247026-1, 680-247203-1, 680-247265-1, and 680-247024-1 were qualified as non-detect (U) when the analyte was detected at a similar level in an associated blank sample. As shown in Table 2, if the original sample results were below the reporting limit (RL), the results were qualified as non-detect (U) and the RL was reported. If the original sample results were greater than the RL, the original results were reported and were U qualified.

- Isotope radium-228 and combined radium results in sample SCH-PZ-17I from SDG 680-247197-2 were qualified as non-detect (U) for blank contamination and the minimum detectable concentration (MDC) was raised to the original sample result.

WSP reviewed the data from samples collected at Plant Scherer CCR AP-1 between February 20 and May 6, 2024, in accordance with the analytical methods, the laboratory specific QC criteria, and the guidelines. As described above, 100% of the results were acceptable for project use. The data are considered usable for meeting project objectives and the results are considered valid.

APPENDIX B

Data Validation Summary July-August 2024

Quality Control Review of Analytical Data - Plant Scherer Ash Pond 1 (AP-1)
Submitted by Eurofins Environmental Testing
July-August 2024

This narrative presents results of the quality control (QC) data review performed on analytical data submitted by Eurofins Environmental Testing, Inc. for groundwater samples collected at Plant Scherer CCR Ash Pond 1 (AP-1) between July 31 and August 6, 2024. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1. In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D - Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detection monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Test methods included Inductively Coupled Plasma - Mass Spectrometry (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Determination of Inorganic Anions by Ion Chromatography (USEPA Method 300.0), Total Dissolved Solids (Standard Methods 2540C), Sulfide (EPA 9034), Alkalinity by Titration (Standard Methods 2320B), Radium-226 (USEPA Method 9315) and Radium-228 (USEPA Method 9320).

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program (CLP) Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0), US EPA Region IV Data Validation Standard Operating Procedures for CLP Mercury Data by Cold Vapor Atomic Absorption (September 2011, Rev. 2.0), the National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020), and US Department of Energy, Evaluation of Radiochemical Data Usability (April 1997). The review included an assessment of the results for completeness, precision (field and laboratory duplicates, matrix spike/matrix spike duplicates), accuracy (laboratory control samples and matrix spike samples), and sensitivity (reporting limits and blank contamination, including field and laboratory blanks). Additionally, sample procedures, holding times and chains-of-custody were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytic methodology, method-specific criteria or professional judgment was used.

DATA QUALITY OBJECTIVES

Laboratory Precision: Laboratory goals for precision were met.

Field Precision: Field goals for precision were met.

Accuracy: Laboratory goals for accuracy were met with the exception of chloride, fluoride, sulfate, and magnesium, as described in the qualification section below.

Sensitivity: Project goals for detection limits were met with the exception of total dissolved solids (TDS). A lesser volume of sample was used for selected samples in TDS analysis due to the nature of the sample matrix, resulting in elevated reporting limits (RLs).

Certain samples were diluted due to elevated concentrations of target analytes. Dilutions do not require qualifications based on USEPA guidelines. Detection and reporting limits of non-detect compounds are elevated proportional to the dilution when undiluted sample results are not provided by the laboratory. The data

usability of diluted results was evaluated by the data user in the context of site-wide characterization. Detections were found in certain blank results, as described in the qualification sections below.

Completeness: There were no rejected analytical results for this event, resulting in a completion of 100%.

Holding Times: All holding time requirements were met in accordance with specific analytical methods.

QUALIFICATIONS

In general, chemical results for the samples collected at the Site were qualified on the basis of imprecision or inaccuracy, or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data during the data validation process.

J	The analyte was reported above the method detection limit and below the reporting limit. The concentration reported is an estimated value.
J+	The analyte was reported above the method detection limit; however, the concentration reported is an estimated value that may be biased high.
J-	The analyte was reported above the method detection limit; however, the concentration reported is an estimated value that may be biased low.
U	The analyte was not detected above the method detection limit.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. Although these qualifications were applied to data from samples collected at the site and reported in SDGs, qualifications may not have been required or applied to all samples collected. A summary of sample qualifications can be found in Table 2.

- Sulfate, fluoride, and chloride results in sample SCH-AP1-FD-1, from SDG 680-254086-1, were qualified as estimated (J) when the associated matrix spike (MS), matrix spike duplicate (MSD), and or relative percent difference (RPD) recovered outside laboratory criteria

- The chloride result in sample SCH-SGWC-18 from SDG 680-254295-1 was qualified as estimated, bias high (J+), when the associated matrix spike (MS) and or matrix spike duplicate (MSD) recovery exceeded laboratory criteria.

- The magnesium result in sample SCH-SGWC-18 from SDG 680-254295-1 was qualified as estimated, bias low (J-), when the associated matrix spike (MS) and or matrix spike duplicate (MSD) recovered below laboratory criteria.

- Certain alkalinity and lithium, results in SDGs 680-254141-1 and 680-254295-1 were qualified as non-detect (U) when the analyte was detected at a similar level in an associated blank sample. As shown in Table 2, if the original sample results were below the reporting limit (RL), the results were qualified as non-detect (U) and the RL was reported. If the original sample results were greater than the RL, the original results were reported and were U qualified.

- Certain isotopes, radium-228 and radiun-226, results in samples from SDGs 680-254303-2, 680-254086-2, 680-254295-2, and 680-254141-2 were qualified as non-detect (U) for blank

contamination and the minimum detectable concentration (MDC) was raised to the original sample result.

- Certain total radium results from SDGs 680-254303-2, 680-254086-2, and 680-254295-2 were qualified as estimated, bias high (J+) when an associated radium isotope was qualified for blank contamination.

WSP reviewed the data from samples collected at Plant Scherer CCR AP-1 between July 31 and August 6, 2024, in accordance with the analytical methods, the laboratory specific QC criteria, and the guidelines. As described above, 100% of the results were acceptable for project use. The data are considered usable for meeting project objectives and the results are considered valid.

680-254295-2	SCH-AP1-FD-4	Combined 226+228	--	--	J+	Method blank contamination, result > MDC	BL2
680-254141-2	SCH-SGWC-22	Radium 226	--	0.347	U	Method blank contamination	BL2

Abbreviations:
RL : Reporting limit
MDC : Minimum detectable concentration
SDG : Sample delivery group
MS: Matrix Spike
RPD: Relative Percent Difference
QC: Quality control

Qualifiers:
U: Non-detected
J: Estimated
J+: Estimated, high bias
J-: Estimated, low bias

APPENDIX B

Laboratory Accreditation

State of Florida
Department of Health, Bureau of Public Health Laboratories
This is to certify that

E87052

EUROFINS SAVANNAH
5102 LAROCHE AVENUE
SAVANNAH, GA 31404

has complied with Florida Administrative Code 64E-1,
for the examination of environmental samples in the following categories

DRINKING WATER - GROUP I UNREGULATED CONTAMINANTS, DRINKING WATER - GROUP II UNREGULATED CONTAMINANTS, DRINKING WATER - GROUP III UNREGULATED CONTAMINANTS, DRINKING WATER - PRIMARY INORGANIC CONTAMINANTS, DRINKING WATER - SECONDARY INORGANIC CONTAMINANTS, DRINKING WATER - SYNTHETIC ORGANIC CONTAMINANTS, NON-POTABLE WATER - EXTRACTABLE ORGANICS, NON-POTABLE WATER - GENERAL CHEMISTRY, NON-POTABLE WATER - METALS, NON-POTABLE WATER - MICROBIOLOGY, NON-POTABLE WATER - PESTICIDES-HERBICIDES-PCB'S, NON-POTABLE WATER - VOLATILE ORGANICS, SOLID AND CHEMICAL MATERIALS - EXTRACTABLE ORGANICS, SOLID AND CHEMICAL MATERIALS - GENERAL CHEMISTRY, SOLID AND CHEMICAL MATERIALS - METALS, SOLID AND CHEMICAL MATERIALS - PESTICIDES-HERBICIDES-PCB'S, SOLID AND CHEMICAL MATERIALS - VOLATILE ORGANICS

Continued certification is contingent upon successful on-going compliance with the NELAC Standards and FAC Rule 64E-1 regulations. Specific methods and analytes certified are cited on the Laboratory Scope of Accreditation for this laboratory and are on file at the Bureau of Public Health Laboratories, P. O. Box 210, Jacksonville, Florida 32231. Clients and customers are urged to verify with this agency the laboratory's certification status in Florida for particular methods and analytes.

Date Issued: July 01, 2024 Expiration Date: June 30, 2025

Marie-Claire Rowlinson, PhD, D(ABMM)
Bureau of Public Health Laboratories
DH Form 1697, 7/04
NON-TRANSFERABLE E87052-83-07/01/2024
Supersedes all previously issued certificates

Laboratory Scope of Accreditation

Attachment to Certificate #: E87052-83, expiration date June 30, 2025. This listing of accredited analytes should be used only when associated with a valid certificate.

State Laboratory ID: E87052 EPA Lab Code: GA00006 (912) 354-7858

July 24, 2024
I.D. #: E87689

Eurofins St. Louis
13715 Rider Trail North
Earth City, MO 63045

Dear Laboratory Director:

Based on the authority mandated by sections 381.00591, 403.0625 and 403.863 Florida Statutes and chapter 64E-1 FAC, I hereby declare that

Eurofins St. Louis

is granted certification to perform analyses in the following Fields of Accreditation on environmental samples:

Drinking Water – Radiochemistry; Non-Potable Water – General Chemistry, Metals, Radiochemistry; Solid and Chemical Materials – Metals, Radiochemistry

Certification in this case specifies that the above named laboratory has met the minimum requirements for a certified laboratory as set forth in section 64E-1.102 FAC.

This certification is effective as July 1, 2024, and shall be in effect until June 30, 2025, or until revoked by the Florida Department of Health.

If I can be of any further assistance, feel free to call the certification program office at (904) 791-1599.

Sincerely,

Vanessa Soto Contreras
Program Administrator
Environmental Laboratory Certification Program

VSC\nlc

State of Florida
Department of Health, Bureau of Public Health Laboratories
This is to certify that

E87689

EUROFINS ST. LOUIS
13715 RIDER TRAIL NORTH
EARTH CITY, MO 63045

has complied with Florida Administrative Code 64E-1,
for the examination of environmental samples in the following categories

DRINKING WATER - RADIOCHEMISTRY, NON-POTABLE WATER - GENERAL CHEMISTRY, NON-POTABLE WATER - METALS, NON-POTABLE WATER - RADIOCHEMISTRY, SOLID AND CHEMICAL MATERIALS - METALS, SOLID AND CHEMICAL MATERIALS - RADIOCHEMISTRY

Continued certification is contingent upon successful on-going compliance with the NELAC Standards and FAC Rule 64E-1 regulations. Specific methods and analytes certified are cited on the Laboratory Scope of Accreditation for this laboratory and are on file at the Bureau of Public Health Laboratories, P. O. Box 210, Jacksonville, Florida 32231. Clients and customers are urged to verify with this agency the laboratory's certification status in Florida for particular methods and analytes.

Date Issued: January 26, 2024 Expiration Date: June 30, 2024

State of Florida
Department of Health, Bureau of Public Health Laboratories
This is to certify that

E87689

EUROFINS ST. LOUIS
13715 RIDER TRAIL NORTH
EARTH CITY, MO 63045

has complied with Florida Administrative Code 64E-1,
for the examination of environmental samples in the following categories

DRINKING WATER - RADIOCHEMISTRY, NON-POTABLE WATER - GENERAL CHEMISTRY, NON-POTABLE WATER - METALS, NON-POTABLE WATER - RADIOCHEMISTRY, SOLID AND CHEMICAL MATERIALS - METALS, SOLID AND CHEMICAL MATERIALS - RADIOCHEMISTRY

Continued certification is contingent upon successful on-going compliance with the NELAC Standards and FAC Rule 64E-1 regulations. Specific methods and analytes certified are cited on the Laboratory Scope of Accreditation for this laboratory and are on file at the Bureau of Public Health Laboratories, P. O. Box 210, Jacksonville, Florida 32231. Clients and customers are urged to verify with this agency the laboratory's certification status in Florida for particular methods and analytes.

Date Issued: September 18, 2024 Expiration Date: June 30, 2025

Marie-Claire Rowlinson, PhD, D(ABMM)
Bureau of Public Health Laboratories
DH Form 1697, 7/04
NON-TRANSFERABLE E87689-74-09/18/2024
Supersedes all previously issued certificates

CC Ben Hodges, Georgia Power Company

FROM WSP USA Inc.

PLANT SCHERER ASH POND 1 – WELL MAINTENANCE AND REPAIR DOCUMENTATION

GEORGIA POWER COMPANY

WSP USA Inc. (WSP) has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at Plant Scherer Ash Pond 1 during the semi-annual reporting period. Repairs and maintenance were completed in accordance with the Georgia Environmental Protection Division (GAEPD) guidance on routine visual inspections of groundwater monitoring wells.

Table 1: Plant Scherer Ash Pond 1 – Well Maintenance Summary

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/Repair Performed
Scherer / AP1	04/2024	SGWA-3	Cleared overgrowth from well pad
Scherer / AP1	01/2024	SGWA-4	Replaced well lid. Cleared overgrowth from well pad
Scherer / AP1	04/2024	SGWC-6	Cleared overgrowth from well pad
Scherer / AP1	01/2024	SGWC-8	Replaced broken latch
Scherer / AP1	07/2024	SGWC-10	Cleared overgrowth from well pad and hinge repaired
Scherer / AP1	01/2024	SGWC-13	Replaced lock tab and hinge on well casing
Scherer / AP1	04/2024	SGWC-15	Anthill cleared to improve access and visibility
Scherer / AP1	04/2024	SGWC-16	Anthill cleared to improve access and visibility
Scherer / AP1	01/2024	SGWC-20	Replaced lock tab
Scherer / AP1	04/2024	PZ-10S	Cleared overgrowth from well pad
Scherer / AP1	04/2024	PZ-11S	Cleared overgrowth from well pad
Scherer / AP1	07/2024	PZ-32S	Cleared overgrowth from well pad and areas surrounding

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/Repair Performed
Scherer / AP1	07/2024	PZ-32D	Cleared overgrowth from well pad and areas surrounding
Scherer / AP1	07/2024	PZ-36I	Anthill cleared to improve access and visibility
Scherer / AP1	07/2024	PZ-36S	Anthill cleared to improve access and visibility
Scherer / AP1	04/2024	PZ-45D	Cleared overgrowth from well pad
Scherer / AP1	04/2024	PZ-46D	Cleared overgrowth from well pad
Scherer / AP1	04/2024	PZ-47D	Cleared overgrowth from well pad
Scherer / AP1	04/2024	PZ-49S	Cleared overgrowth from well pad
Scherer / AP1	04/2024	PZ-55	Cleared overgrowth from well pad
Scherer / AP1	04/2024	LPZ-03	Cleared overgrowth from well pad
Scherer / AP1	07/2024	LPZ-04	Replaced pad and protective cover
Scherer / AP1	04/2024	LPZ-05	Cleared overgrowth from well pad

All maintenance and repairs are also documented in the 2024 semi-annual groundwater monitoring report.

TECHNICAL MEMORANDUM

DATE November 14, 2024

TO Joju Abraham, PG
Southern Company Services

CC Ben Hodges, Georgia Power Company

FROM WSP USA Inc.

PLANT SCHERER ASH POND 1 – WELL MAINTENANCE AND REPAIR DOCUMENTATION

GEORGIA POWER COMPANY

WSP USA Inc. (WSP) has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at Plant Scherer Ash Pond 1 during the annual reporting period. Repairs and maintenance were completed in accordance with the Georgia Environmental Protection Division (GAEPD) guidance on routine visual inspections of groundwater monitoring wells.

Table 1: Plant Scherer Ash Pond 1 – Well Maintenance Summary

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/Repair Performed
Scherer / AP1	11/2024	SGWA-1	Cleared overgrowth from well pad
Scherer / AP1	11/2024	SGWA-2	Cleared overgrowth from well pad
Scherer / AP1	11/2024	SGWA-3	Cleared overgrowth from well pad
Scherer / AP1	11/2024	SGWC-6	Replaced protective cover lid and cleaned off well pad
Scherer / AP1	11/2024	SGWC-7	Patched holes in the top of the protective cover to prevent insects from entering
Scherer / AP1	11/2024	SGWC-12	Replaced protective cover lid and cleaned off well pad
Scherer / AP1	11/2024	SGWC-13	Cleared wasps and ants in protective casing and ant mound on well pad
Scherer / AP1	11/2024	SGWC-15	Cleared ant mound on well pad
Scherer / AP1	11/2024	SGWC-16	Cleared ant mound on well pad
Scherer / AP1	11/2024	SGWC-17	Cleared ant mound on well pad
Scherer / AP1	11/2024	SGWC-23	Cleared overgrowth from well pad

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/Repair Performed
Scherer / AP1	11/2024	SGWA-24	Cleared ant mound on well pad
Scherer / AP1	11/2024	SGWA-25	Cleared overgrowth from well pad
Scherer / AP1	11/2024	PZ-9I	Modified the protective cover lid latch so that the well can lock and cleaned off well pad
Scherer / AP1	08/2024	PZ-14I	Replaced well cap
Scherer / AP1	11/2024	PZ-17I	Cleared ant mound on well pad
Scherer / AP1	08/2024	PZ-32D	Replaced well cap
Scherer / AP1	11/2024	PZ-39S	Cleared overgrowth from well pad and areas surrounding
Scherer / AP1	08/2024	PZ-42I	Replaced well cap
Scherer / AP1	11/2024	PZ-45D	Cleared overgrowth to improve access and visibility
Scherer / AP1	11/2024	PZ-47D	Cleared overgrowth to improve access and visibility
Scherer / AP1	11/2024	PZ-49D	Screwed well tag to protective cover and replaced gate
Scherer / AP1	11/2024	PZ-49S	Replaced gate
Scherer / AP1	11/2024	PZ-54	Cleared ant mound on well pad
Scherer / AP1	11/2024	PZ-56	Cleared overgrowth from well pad
Scherer / AP1	11/2024	PZ-59S	Cleared ants in protective casing
Scherer / AP1	11/2024	PZ-61	Cleared overgrowth to improve access and visibility
Scherer / AP1	11/2024	PZ-65	Cleared overgrowth to improve access and visibility
Scherer / AP1	11/2024	PZ-68	Cleared overgrowth to improve access and visibility
Scherer / AP1	11/2024	PZ-69I	Cleared overgrowth to improve access and visibility

All maintenance and repairs are also documented in the 2024 annual groundwater monitoring report.

Statistical Analyses February-May 2024

GROUNDWATER STATS
CONSULTING

August 30, 2024

Southern Company Services
Attn: Mr. Joju Abraham
241 Ralph McGill Blvd NE, Bin 10160
Atlanta, Georgia 30308-3374

Re: Plant Scherer Ash Pond (AP)
Statistical Analysis – February 2024 Sample Event

Dear Mr. Abraham,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the February 2024 Semi-Annual Groundwater Detection and Assessment Monitoring of groundwater data for Georgia Power Company's Plant Scherer AP. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for the Appendix III and IV parameters began in 2016, and at least 8 background samples were collected at each of the groundwater monitoring wells. Sampling is conducted on a semi-annual basis for all constituents. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient well:** SGWA-1, SGWA-2, SGWA-3, SGWA-4, SGWA-5, SGWA-24, and SGWA-25
- **Downgradient wells:** SGWC-6, SGWC-7, SGWC-8, SGWC-9, SGWC-10, SGWC-11, SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22, and SGWC-23

- **Assessment Wells:** PZ-13S, PZ-14S, PZ-17I, PZ-39S, PZ-40I, PZ-41S, PZ-42I, PZ-43S, PZ-44I, and PZ-69I

The assessment wells were first sampled as early as October 2018 and all data are included on the time series graphs and box plots. These well/constituent pairs are formally evaluated for Appendix IV constituents using confidence intervals which require a minimum of 4 samples.

Resamples were collected in October 2022 for the following well/constituent pairs due to the August 2022 samples exceeding hold times for mercury and TDS:

- Mercury: SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22, SGWC-23, PZ-14S, PZ-39S, PZ-40I, and PZ-42I
- pH: SGWC-16, SGWC-17, SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22, SGWC-23, PZ-14S, PZ-39S, PZ-40I, and PZ-42I
- TDS: SGWC-16 and SGWC-17

Additional resamples were collected in November 2022 for the following well/constituent pairs due to the October 2022 resamples exceeding hold times for TDS:

- pH: SGWC-16 and SGWC-17
- TDS: SGWC-16 and SGWC-17

Per request of WSP Golder, the August 2022 samples that exceeded hold times for mercury and TDS are not included in the Sanitas database. The resamples collected for pH at these wells in October and November 2022 and were retained in the database.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology provided in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance.

The CCR program monitors the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS

- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228 fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A list of Appendix IV downgradient well/constituent pairs containing 100% non-detects follows this letter. For all constituents, a substitution of the most recent reporting limit is used for non-detect data. This generally gives the most conservative limit in each case. Due to varying reporting limits during the February 2024 sample event for fluoride, the previous reporting limit of 0.2 mg/L was substituted across all wells in order to maintain conservative (i.e., lower) limit from a regulatory perspective.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Based on a previous screening, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the screening to demonstrate that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

The original background screening was conducted in 2017 by MacStat Consulting. Values identified as outliers were flagged in the database and excluded prior to construction of statistical limits. Interwell prediction limits, combined with a 1-of-2 resample plan, were recommended for all Appendix III constituents.

Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are

similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells would not be conservative from a regulatory perspective; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter. While data were further tested for intrawell eligibility during the screening, interwell methods were recommended for all Appendix III constituents in accordance with Georgia EPD requirements.

Summary of Statistical Methods:

Based on the evaluation for state and federal regulatory requirements, the following methods were selected for Appendix III and IV constituents:

- Appendix III: Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- Appendix IV: Confidence intervals on downgradient well data compared against Ground Water Protection Standards (GWPS) for each Appendix IV constituent

The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. Parametric prediction limits (or tolerance limits or confidence intervals as applicable) are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The following approaches are used for handling non-detects (USEPA, 2009):

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.

- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. While this was not required for this report, in some cases, deselecting the earlier portion of data may be necessary prior to construction of limits so that resulting statistical limits are conservative (lower) from a regulatory perspective and capable of rapidly detecting changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Statistical Analysis of Appendix III Parameters – February 2024

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. Data from upgradient wells for Appendix III parameters are reassessed for outliers during each analysis. Previously flagged values were confirmed, and no additional outliers were flagged. A summary of flagged outliers follows this report.

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February 2024 (Figure D). Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The February 2024 samples from each downgradient well are compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result; therefore, no exceedance is noted, and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. Several

prediction limit exceedances were identified for Appendix III parameters. A summary table of the interwell prediction limits follows this letter and includes a list of exceedances. Note that while the Sanitas software does not identify reported estimated measurements flagged with "J" by the laboratory in accordance with the EPA Unified Guidance (2009), the reported estimated measurement of 1.1 mg/L for fluoride at downgradient well SGWC-8 exceeded the background limit of 0.2 mg/L. The interwell prediction limit of 0.2 mg/L resulted from the substitution of the most recent reporting limit for all non-detects for fluoride.

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site, which is an indication of variability in groundwater unrelated to practices at the site. A summary of the trend test results including a list of statistically significant trends follows this letter. Statistically significant trends were noted for the following well/constituent pairs:

Increasing:

- Boron: SGWC-10, SGWC-11, SGWC-16, SGWC-18, and SGWC-22
- Calcium: SGWA-2, SGWA-4, SGWA-5, SGWA-24 (all upgradient), SGWC-13 SGWC-17, SGWC-19, SGWC-21, and SGWC-22
- Chloride: SGWA-24 (upgradient), SGWC-9, SGWC-11, SGWC-12, SGWC-13, SGWC-15, SGWC-16, SGWC-21, SGWC-22, and SGWC-23
- pH: SGWC-18
- Sulfate: SGWC-12, SGWC-13, SGWC-16, SGWC-17, SGWC-19, SGWC-21, and SGWC-22
- TDS: SGWA-4 (upgradient), SGWC-13, SGWC-17, SGWC-19, and SGWC-22

Decreasing:

- Boron: SGWC-20, SGWC-21, and SGWC-23
- Calcium: SGWC-9
- Chloride: SGWC-7
- pH: SGWA-4 (upgradient) and SGWC-11
- Sulfate: SGWA-3, SGWA-4 (both upgradient), SGWC-7, SGWC-9, and SGWC-23
- TDS: SGWC-9 and SGWC-23

Statistical Analysis of Appendix IV Parameters – February 2024

For Appendix IV parameters, confidence intervals for each downgradient well/constituent were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. Downgradient well/constituent pairs containing 100% non-detects do not require analysis.

Data from upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis. Previously flagged values were confirmed, and no additional outliers were flagged. A summary of flagged outliers follows this report (Figure C).

Interwell Upper Tolerance Limits

First, interwell tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through February 2024 for Appendix IV constituents (Figure F). Parametric tolerance limits are calculated, with a target of 95% confidence and 95% coverage, when data follow a normal or transformed-normal distribution. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were used. As mentioned above, a reporting limit of 0.2 mg/L was substituted across all wells for fluoride.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed for each of the Appendix IV constituents in downgradient and assessment wells with 4 or more samples (Figure H).

The Sanitas software was used to calculate the confidence intervals, either parametric or nonparametric, depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the largest and smallest order statistics depending on the sample size as interval limits, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The confidence level associated with nonparametric confidence intervals is dependent upon the number of samples available.

Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. Summaries of the confidence interval results, along with graphical comparison against GWPS follow this letter. Exceedances were noted for the following well/constituent pairs:

- Cobalt: SGWC-10, SGWC-11, SGWC-15, SGWC-18, and SGWC-20

Trend Test Evaluation – Appendix IV

When confidence interval exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 95% confidence level (Figure I). Utilizing the 95% confidence level for trend tests readily identifies significant trends and is more sensitive than the 99% confidence level without drastically increasing the false negative rate. Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. When similar patterns exist upgradient of the site, it is an indication of variability in groundwater which

may be unrelated to practices at the site. A summary of the Appendix IV trend test results follows this letter and statistically significant trends were identified for the following well/constituent pairs:

Increasing

- None

Decreasing

- Cobalt: SGWA-1, SGWA-25 (both upgradient), SGWC-11, SGWC-18, and SGWC-20

Resample Reports – May 2024

A resample was collected in May 2024 based on the results of the two-step approach for the following well/constituent pair:

- Combined Radium 226 + 228: PZ-17I

An additional resample for pH at assessment well PZ-17I was also collected. Intrawell prediction limits were constructed using background data through May 2024 resamples for combined radium 226 + 228 at assessment well PZ-17I. (Figure J). No exceedance was identified.

Summary

Observations from the February 2024 sample event and resamples from May 2024 at Scherer AP were compared to established interwell prediction limits for all Appendix III constituents. Several statistically significant increases were identified and may be seen on the summary table following this letter.

When confidence intervals were constructed on downgradient wells for Appendix IV constituents and compared to respective GWPS, the following exceedances were identified:

- Cobalt: SGWC-10, SGWC-11, SGWC-15, SGWC-18, and SGWC-20

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Scherer AP. If you have any questions or comments, please feel free to contact us.

SCHERER ASH POND GWPS				
Constituent Name	**MCL**	**CCR-Rule Specified**	**Background Limit**	**GWPS**
Antimony, Total (mg/L)	0.006		0.0021	0.006
Arsenic, Total (mg/L)	0.01		0.0015	0.01
Barium, Total (mg/L)	2		0.091	2
Beryllium, Total (mg/L)	0.004		0.0025	0.004
Cadmium, Total (mg/L)	0.005		0.0025	0.005
Chromium, Total (mg/L)	0.1		0.024	0.1
Cobalt, Total (mg/L)		0.006	0.02	0.02
Combined Radium, Total (pCi/L)	5		1.66	5
Fluoride, Total (mg/L)	4		0.2	4
Lead, Total (mg/L)		0.015	0.001	0.015
Lithium, Total (mg/L)		0.04	0.0051	0.04
Mercury, Total (mg/L)	0.002		0.0005	0.002
Molybdenum, Total (mg/L)		0.1	0.015	0.1
Selenium, Total (mg/L)	0.05		0.005	0.05
Thallium, Total (mg/L)	0.002		0.001	0.002

Grey cell indicates Background Limit is higher than MCL or CCR-Rule Specified Level

**GWPS = Groundwater Protection Standard*

**MCL = Maximum Contaminant Level*

**CCR = Coal Combustion Residuals*

Sanitas™ v.10.0.16e Software licensed to . UG
Hollow symbols indicate censored values.

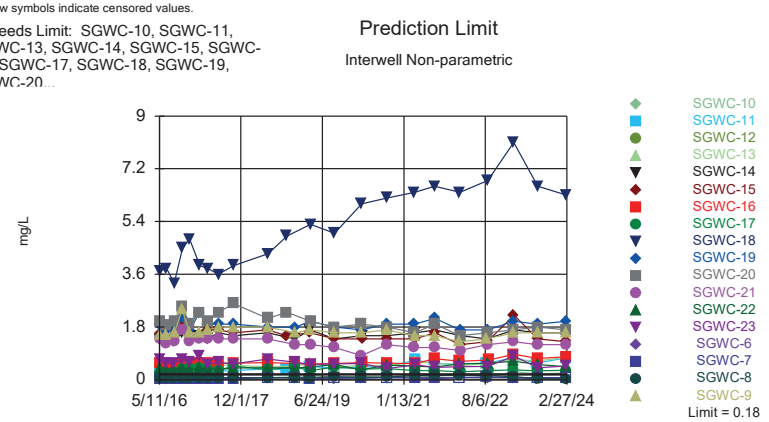
Exceeds Limit: SGWC-10, SGWC-11, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-18, SGWC-19, SGWC-20...

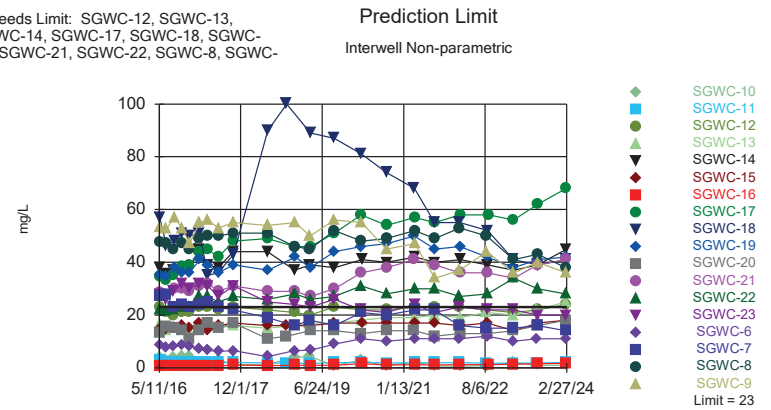


Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 154 background values. 89.61% NDs. Annual per-constituent alpha = 0.002986. Individual comparison alpha = 0.00008305 (1 of 2). Comparing 18 points to limit.

Constituent: Boron, total Analysis Run 5/2/2024 9:26 AM View: Appendix III - Interwell
Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.16e Software licensed to . UG

Exceeds Limit: SGWC-12, SGWC-13, SGWC-14, SGWC-17, SGWC-18, SGWC-19, SGWC-21, SGWC-22, SGWC-8, SGWC-9

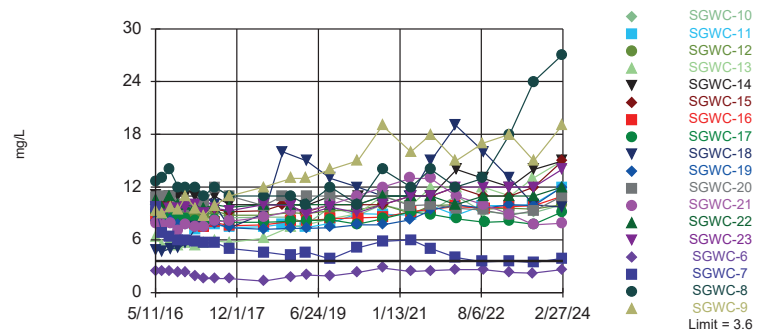


Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 154 background values. Annual per-constituent alpha = 0.002986. Individual comparison alpha = 0.00008305 (1 of 2). Comparing 18 points to limit.

Constituent: Calcium, total Analysis Run 5/2/2024 9:26 AM View: Appendix III - Interwell
Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.16e Software licensed to . UG

Exceeds Limit: SGWC-10, SGWC-11, SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-19, SGWC-20...

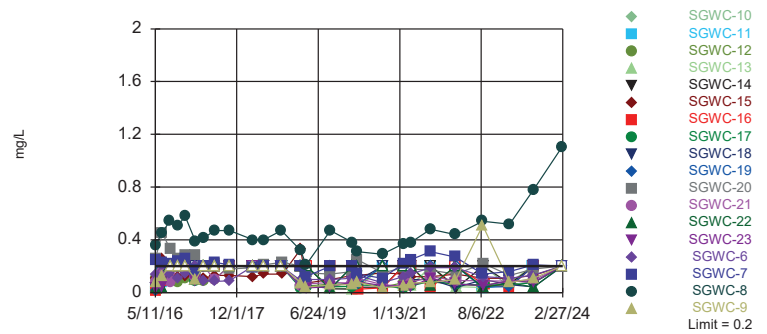


Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 154 background values. Annual per-constituent alpha = 0.002986. Individual comparison alpha = 0.00008305 (1 of 2). Comparing 18 points to limit.

Constituent: Chloride, Total Analysis Run 5/2/2024 9:26 AM View: Appendix III - Interwell
Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.16e Software licensed to . UG
Hollow symbols indicate censored values.

Within Limit



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 181 background values. 56.35% NDs. Annual per-constituent alpha = 0.002152. Individual comparison alpha = 0.00005983 (1 of 2). Comparing 18 points to limit.

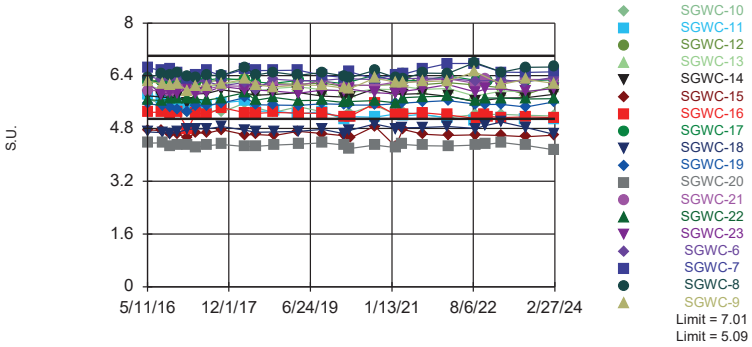
Constituent: Fluoride, total Analysis Run 5/2/2024 9:26 AM View: Appendix III - Interwell
Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.16e Software licensed to . UG

Exceeds Limits: SGWC-11, SGWC-15, SGWC-18, SGWC-20

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 175 background values. Annual per-constituent alpha = 0.004628. Individual comparison alpha = 0.0001287 (1 of 2). Comparing 18 points to limit.

Constituent: pH Analysis Run 5/2/2024 9:26 AM View: Appendix III - Interwell

Plant Scherer Data: Scherer AP

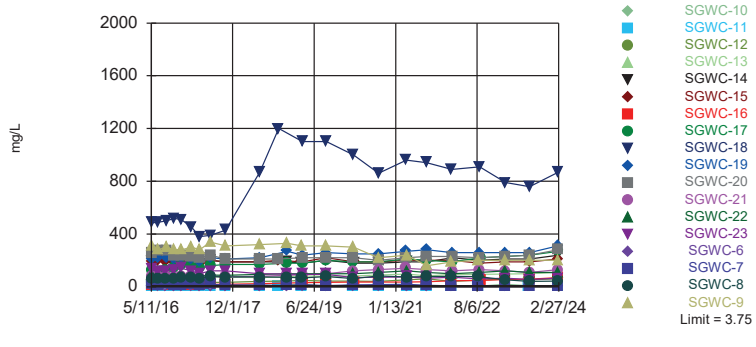
Sanitas™ v.10.0.16e Software licensed to . UG

Hollow symbols indicate censored values.

Exceeds Limit: SGWC-10, SGWC-11, SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-18, SGWC-19...

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 154 background values. 47.4% NDs. Annual per-constituent alpha = 0.002986. Individual comparison alpha = 0.00008305 (1 of 2). Comparing 18 points to limit.

Constituent: Sulfate, total Analysis Run 5/2/2024 9:26 AM View: Appendix III - Interwell

Plant Scherer Data: Scherer AP

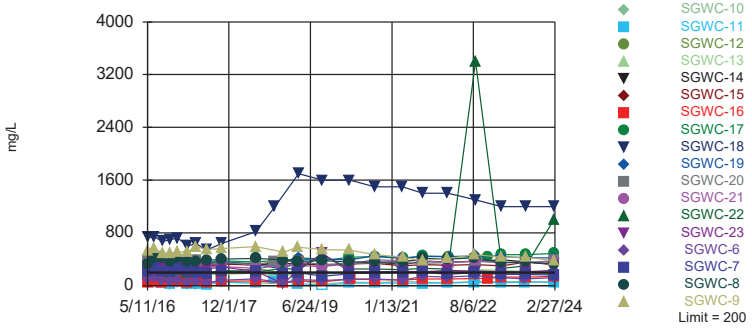
Sanitas™ v.10.0.16e Software licensed to . UG

Hollow symbols indicate censored values.

Exceeds Limit: SGWC-13, SGWC-14, SGWC-15, SGWC-17, SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22, SGWC-23...

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 154 background values. 0.6494% NDs. Annual per-constituent alpha = 0.002986. Individual comparison alpha = 0.00008305 (1 of 2). Comparing 18 points to limit.

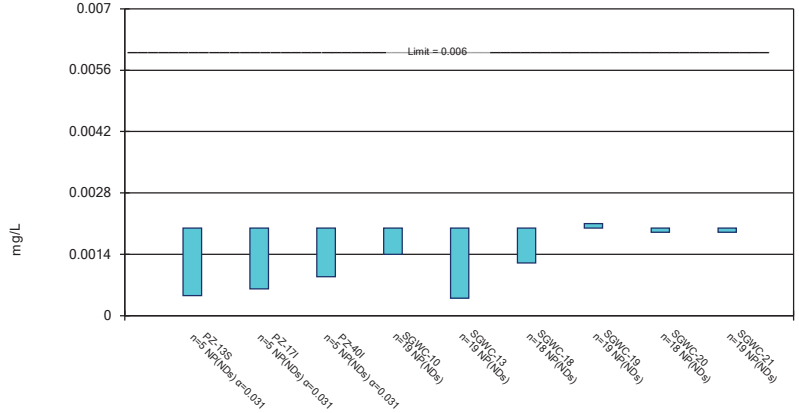
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Antimony Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

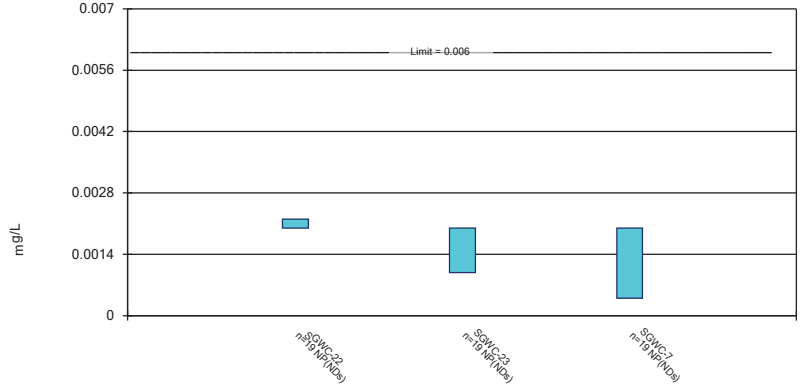
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Antimony Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

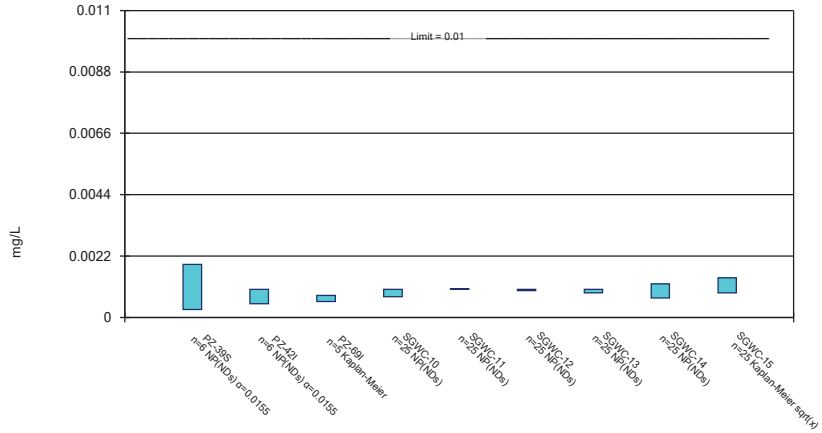
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Arsenic Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

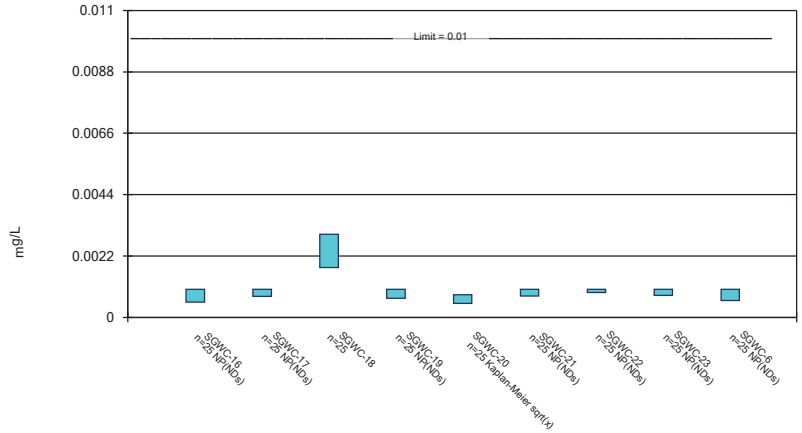
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Arsenic Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

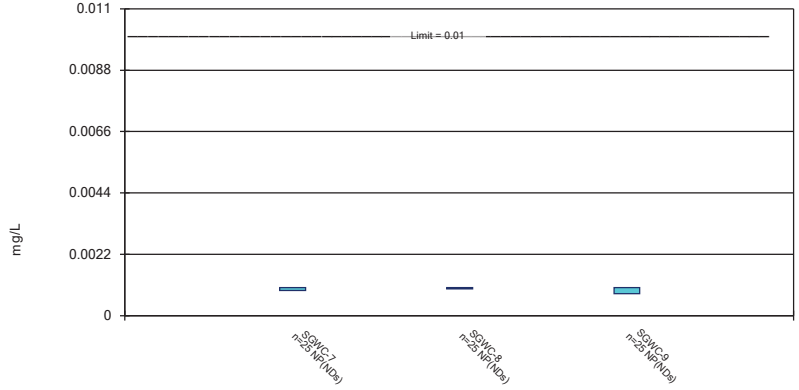
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Arsenic Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

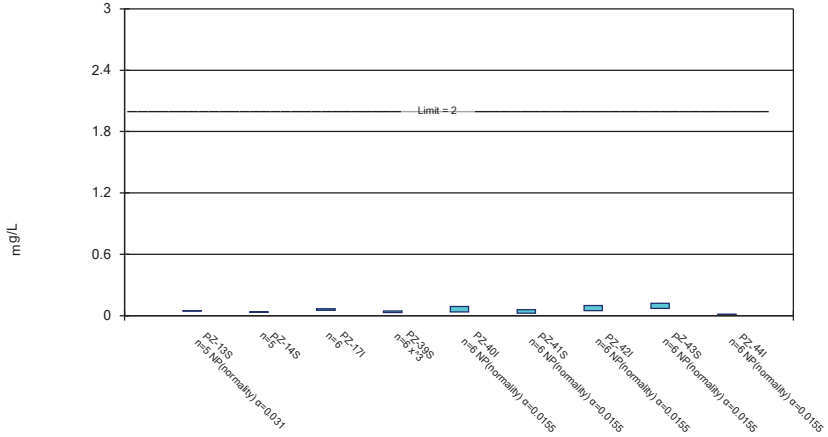
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

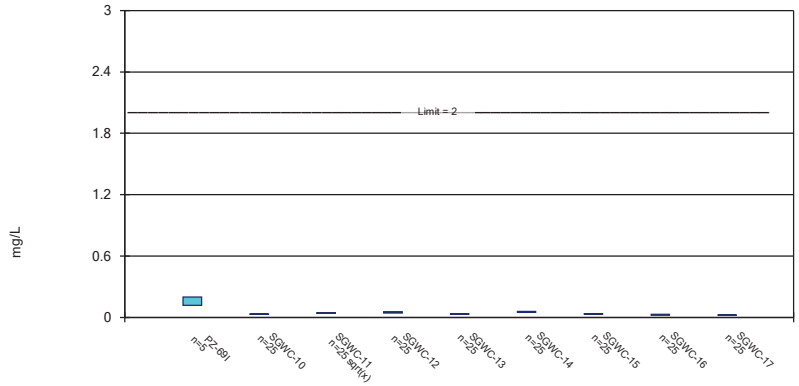
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

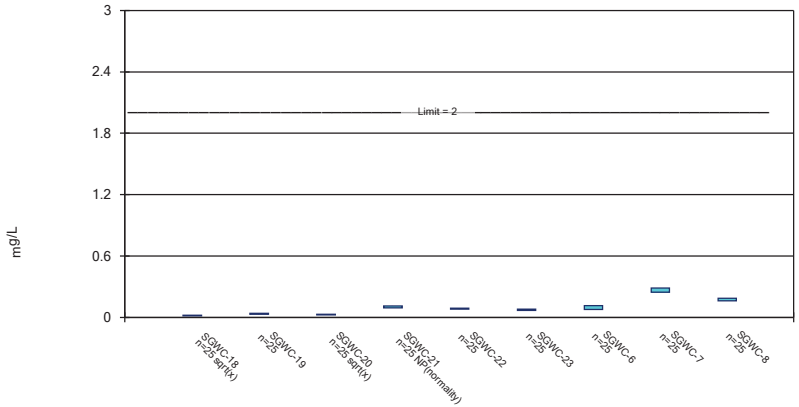
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

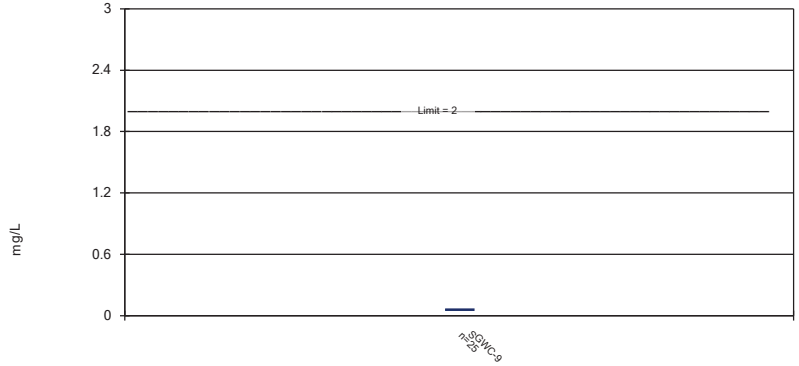
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

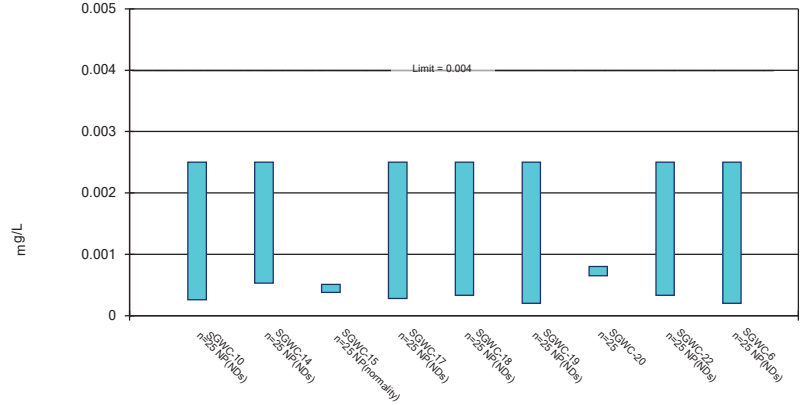
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

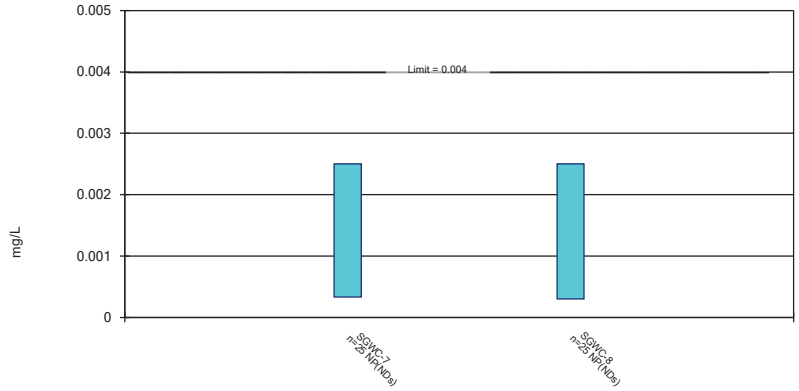
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Beryllium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

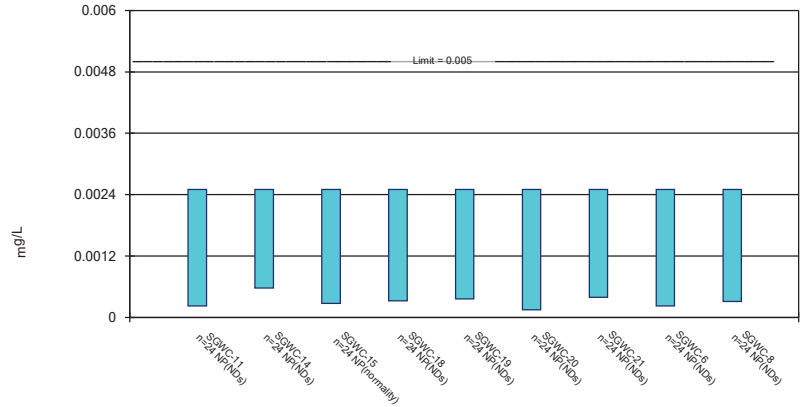
Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



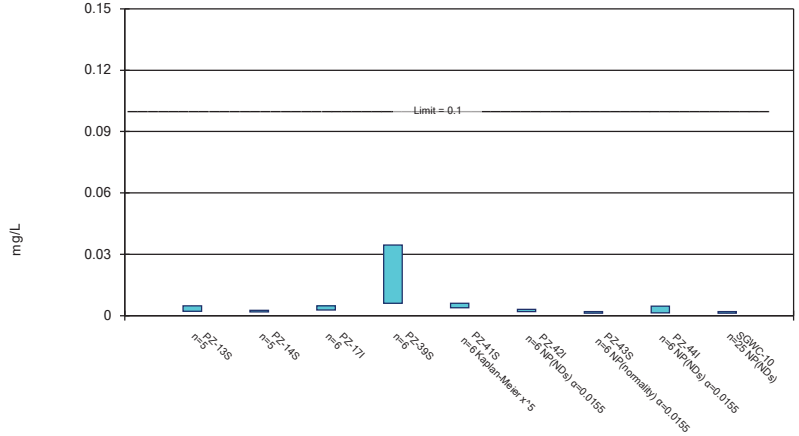
Constituent: Cadmium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



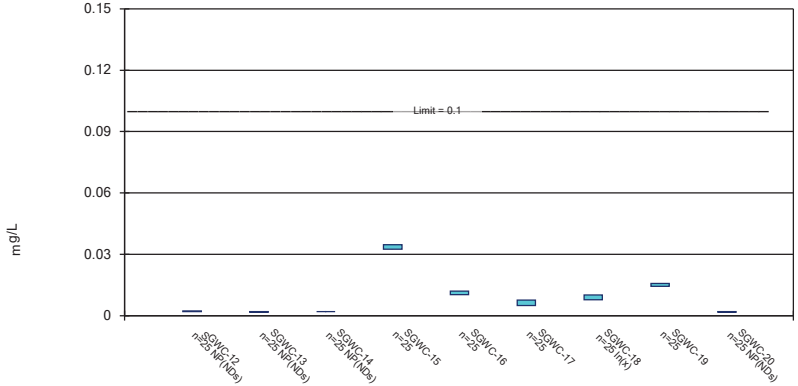
Constituent: Chromium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



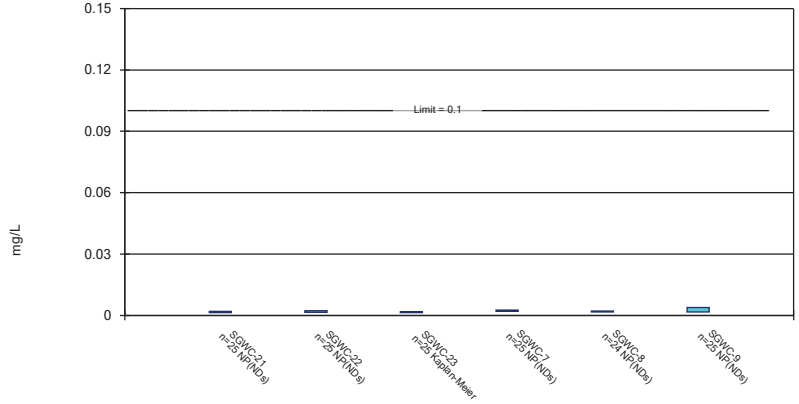
Constituent: Chromium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



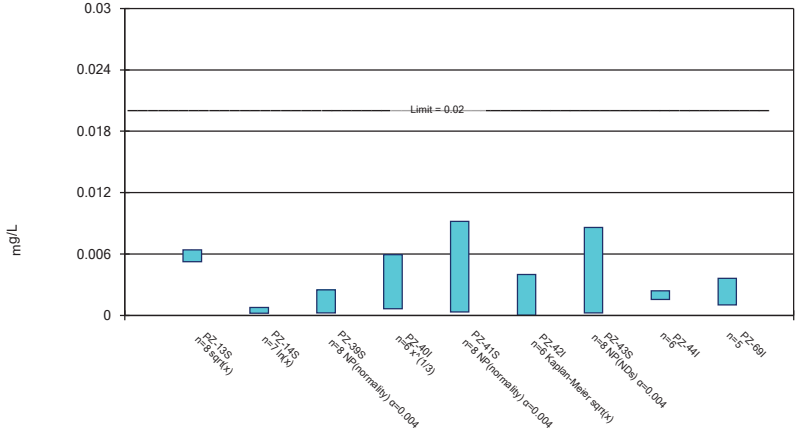
Constituent: Chromium Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



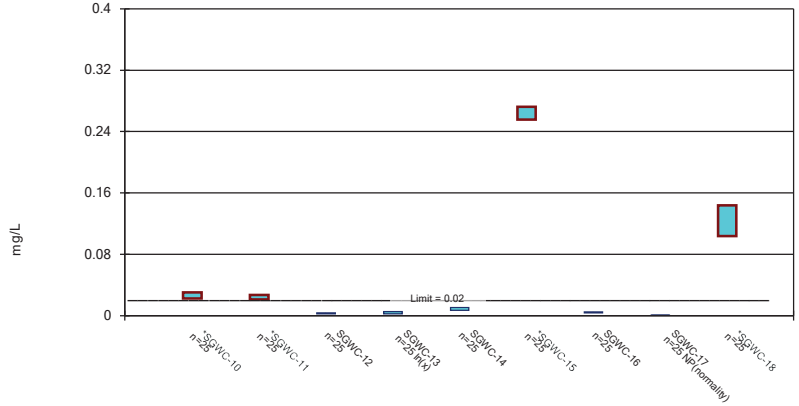
Constituent: Cobalt Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



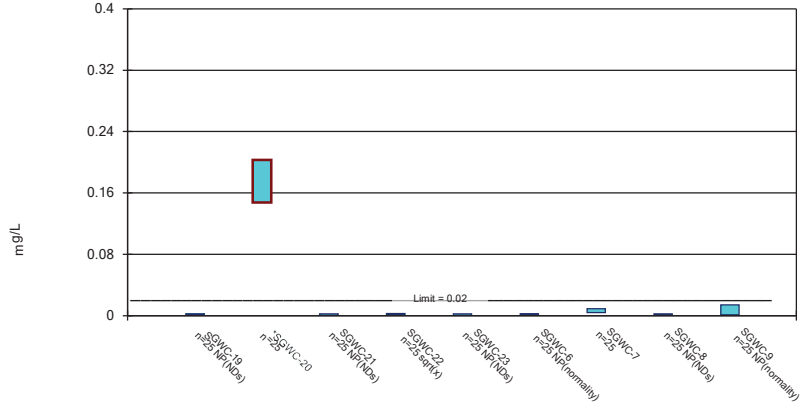
Constituent: Cobalt Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



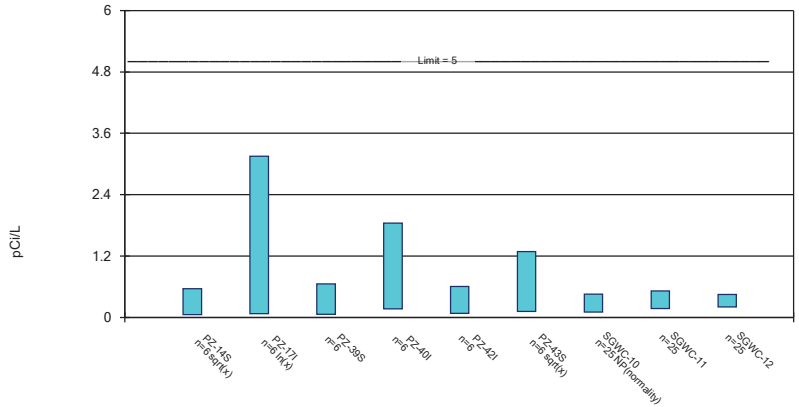
Constituent: Cobalt Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 5/1/2024 4:27 PM View: Confidence Interval

Plant Scherer Data: Scherer AP

Sanitas™ v.10.0.10 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Re: Plant Scherer Ash Pond (AP)
Statistical Analysis – July/August 2024 Sample Event

Dear Mr. Abraham,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the July/August 2024 Semi-Annual Groundwater Detection and Assessment Monitoring of groundwater data for Georgia Power Company's Plant Scherer AP. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for the Appendix III and IV parameters began in 2016, and at least 8 background samples were collected at each of the groundwater monitoring wells. Sampling is conducted on a semi-annual basis for all constituents. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient well:** SGWA-1, SGWA-2, SGWA-3, SGWA-4, SGWA-5, SGWA-24, and SGWA-25
- **Downgradient wells:** SGWC-6, SGWC-7, SGWC-8, SGWC-9, SGWC-10, SGWC-11, SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22, and SGWC-23

- **Assessment Wells:** PZ-13S, PZ-14S, PZ-17I, PZ-39S, PZ-40I, PZ-41S, PZ-42I, PZ-43S, PZ-44I, and PZ-69I

The assessment wells were first sampled as early as October 2018 and all data are included on the time series graphs and box plots. These well/constituent pairs are formally evaluated for Appendix IV constituents using confidence intervals which require a minimum of 4 samples.

Resamples were collected in October 2022 for the following well/constituent pairs due to the August 2022 samples exceeding hold times for mercury and TDS:

- Mercury: SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22, SGWC-23, PZ-14S, PZ-39S, PZ-40I, and PZ-42I
- pH: SGWC-16, SGWC-17, SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22, SGWC-23, PZ-14S, PZ-39S, PZ-40I, and PZ-42I
- TDS: SGWC-16 and SGWC-17

Additional resamples were collected in November 2022 for the following well/constituent pairs due to the October 2022 resamples exceeding hold times for TDS:

- pH: SGWC-16 and SGWC-17
- TDS: SGWC-16 and SGWC-17

Per request of WSP Golder, the August 2022 samples that exceeded hold times for mercury and TDS are not included in the Sanitas database. The resamples collected for pH at these wells in October and November 2022 and were retained in the database.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology provided in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance.

The CCR program monitors the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS

- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228 fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A list of Appendix IV downgradient well/constituent pairs containing 100% non-detects follows this letter. For all constituents, a substitution of the most recent reporting limit is used for non-detect data. This generally gives the most conservative limit in each case. Due to varying reporting limits during the July/August 2024 sample event for fluoride and lithium, the most recent reporting limits of 0.2 mg/L and 0.005 mg/L, respectfully, were substituted across all wells in order to maintain conservative (i.e., lower) limit from a regulatory perspective.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Based on a previous screening, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the screening to demonstrate that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

The original background screening was conducted in 2017 by MacStat Consulting. Values identified as outliers were flagged in the database and excluded prior to construction of statistical limits. Interwell prediction limits, combined with a 1-of-2 resample plan, were recommended for all Appendix III constituents.

Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are

similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells would not be conservative from a regulatory perspective; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter. While data were further tested for intrawell eligibility during the screening, interwell methods were recommended for all Appendix III constituents in accordance with Georgia EPD requirements.

Summary of Statistical Methods:

Based on the evaluation for state and federal regulatory requirements, the following methods were selected for Appendix III and IV constituents:

- Appendix III: Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- Appendix IV: Confidence intervals on downgradient well data compared against Ground Water Protection Standards (GWPS) for each Appendix IV constituent

The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. Parametric prediction limits (or tolerance limits or confidence intervals as applicable) are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The following approaches are used for handling non-detects (USEPA, 2009):

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.

- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. While this was not required for this report, in some cases, deselecting the earlier portion of data may be necessary prior to construction of limits so that resulting statistical limits are conservative (lower) from a regulatory perspective and capable of rapidly detecting changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Statistical Analysis of Appendix III Parameters – July/August 2024

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. Data from upgradient wells for Appendix III parameters are reassessed for outliers during each analysis. Previously flagged values were confirmed, and no additional outliers were flagged. A summary of flagged outliers follows this report.

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through August 2024 (Figure D). Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The July/August 2024 samples from each downgradient well are compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result; therefore, no exceedance is noted, and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. Several

prediction limit exceedances were identified for Appendix III parameters. A summary table of the interwell prediction limits follows this letter and includes a list of exceedances. Note that while the Sanitas software does not identify reported estimated measurements flagged with "J" by the laboratory in accordance with the EPA Unified Guidance (2009), the reported estimated measurement of 7.9 mg/L for chloride at downgradient well SGWC-21 exceeded the background limit of 3.6 mg/L.

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site, which is an indication of variability in groundwater unrelated to practices at the site. A summary of the trend test results including a list of statistically significant trends follows this letter. Statistically significant trends were noted for the following well/constituent pairs:

Increasing:

- Boron: SGWC-10, SGWC-11, SGWC-16, SGWC-18, and SGWC-22
- Calcium: SGWA-2, SGWA-4, SGWA-5, SGWA-24 (all upgradient), SGWC-13 SGWC-17, SGWC-19, SGWC-21, and SGWC-22
- Chloride: SGWA-24 (upgradient), SGWC-9, SGWC-11, SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-18, SGWC-22, and SGWC-23
- pH: SGWC-18
- Sulfate: SGWC-12, SGWC-13, SGWC-16, SGWC-17, SGWC-19, SGWC-21, and SGWC-22
- TDS: SGWA-4 (upgradient), SGWC-13, SGWC-17, SGWC-19, and SGWC-22

Decreasing:

- Boron: SGWC-20 and SGWC-23
- Calcium: SGWC-9
- pH: SGWA-4 (upgradient), SGWC-11, and SGWC-16
- Sulfate: SGWA-3, SGWA-4 (both upgradient), SGWC-7, SGWC-9, and SGWC-23
- TDS: SGWC-9

Statistical Analysis of Appendix IV Parameters – July/August 2024

For Appendix IV parameters, confidence intervals for each downgradient well/constituent were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. Downgradient well/constituent pairs containing 100% non-detects do not require analysis.

Data from upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis. Previously flagged values were confirmed, and no additional outliers were flagged. A summary of flagged outliers follows this report (Figure C).

Interwell Upper Tolerance Limits

Interwell tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through August 2024 for Appendix IV constituents (Figure F). Parametric tolerance limits are calculated, with a target of 95% confidence and 95% coverage, when data follow a normal or transformed-normal distribution. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were used. As mentioned above, a reporting limit of 0.2 mg/L was substituted across all wells for fluoride.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed for each of the Appendix IV constituents in downgradient wells with a minimum of 8 samples and assessment wells with a minimum of 4 samples (Figure H).

The Sanitas software was used to calculate the confidence intervals, either parametric or nonparametric, depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the largest and smallest order statistics depending on the sample size as interval limits, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The confidence level associated with nonparametric confidence intervals is dependent upon the number of samples available.

Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. Summaries of the confidence interval results, along with graphical comparison against GWPS follow this letter. Exceedances were noted for the following well/constituent pairs:

- Cobalt: SGWC-10, SGWC-11, SGWC-15, SGWC-18, and SGWC-20

Trend Test Evaluation – Appendix IV

When confidence interval exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 95% confidence level (Figure I). Utilizing the 95% confidence level for trend tests readily identifies significant trends and is more sensitive than the 99% confidence level without drastically increasing the false negative rate. Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. When similar patterns exist upgradient of the site, it is an indication of variability in groundwater which

may be unrelated to practices at the site. A summary of the Appendix IV trend test results follows this letter and statistically significant trends were identified for the following well/constituent pairs:

Increasing

- None

Decreasing

- Cobalt: SGWA-1, SGWA-25 (both upgradient), SGWC-11, SGWC-18, and SGWC-20

Summary

Observations from the August 2024 sample event at Scherer AP were compared to established interwell prediction limits for all Appendix III constituents. Several statistically significant increases were identified and may be seen on the summary table following this letter.

When confidence intervals were constructed on downgradient wells for Appendix IV constituents and compared to respective GWPS, the following exceedances were identified:

- Cobalt: SGWC-10, SGWC-11, SGWC-15, SGWC-18, and SGWC-20

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Scherer AP. If you have any questions or comments, please feel free to contact us.

Box & Whiskers Plot

Constituent: Cadmium Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride, Total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride, Total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride, Total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride, Total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride, total Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 10/14/2024 5:39 PM

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

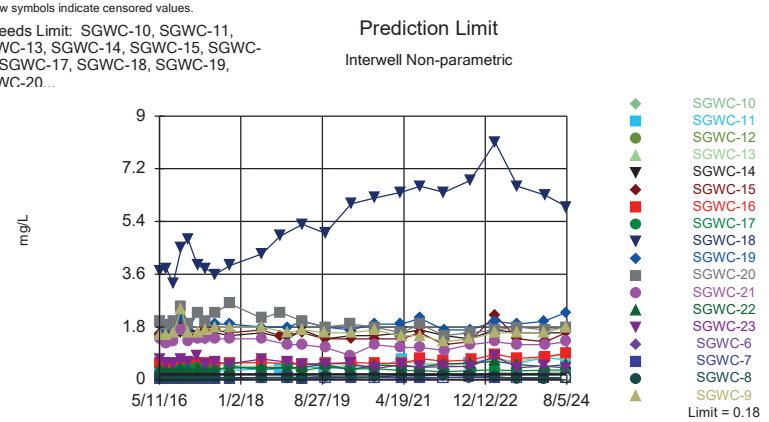
Exceeds Limit: SGWC-10, SGWC-11, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-18, SGWC-19, SGWC-20...

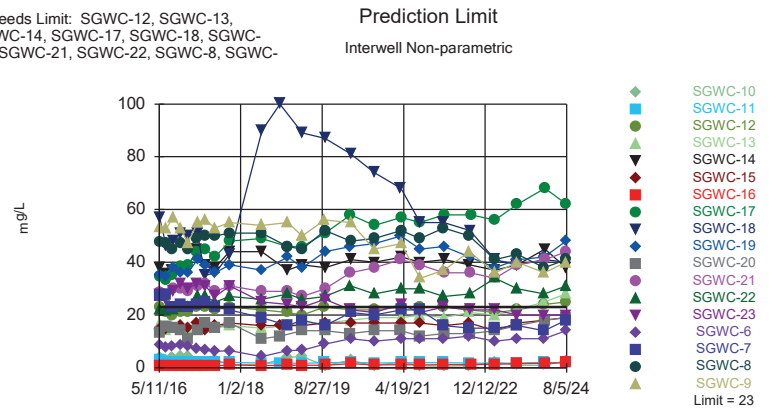


Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 161 background values. 90.06% NDs. Annual per-constituent alpha = 0.002711. Individual comparison alpha = 0.00007541 (1 of 2). Comparing 18 points to limit.

Constituent: Boron, total Analysis Run 9/12/2024 3:45 PM View: Appendix III - Interwell
Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Exceeds Limit: SGWC-12, SGWC-13, SGWC-14, SGWC-17, SGWC-18, SGWC-19, SGWC-21, SGWC-22, SGWC-8, SGWC-9

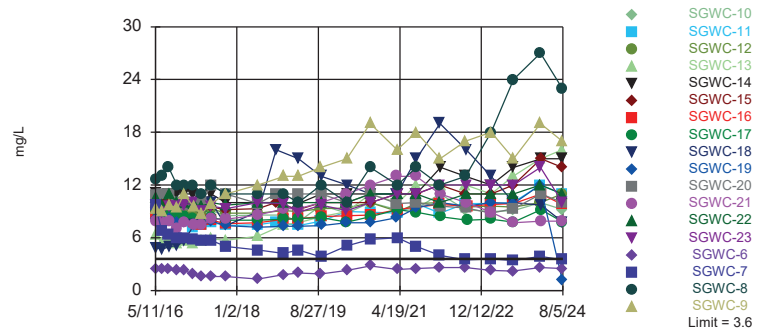


Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 161 background values. Annual per-constituent alpha = 0.002711. Individual comparison alpha = 0.00007541 (1 of 2). Comparing 18 points to limit.

Constituent: Calcium, total Analysis Run 9/12/2024 3:45 PM View: Appendix III - Interwell
Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Exceeds Limit: SGWC-10, SGWC-11, SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-18, SGWC-20...

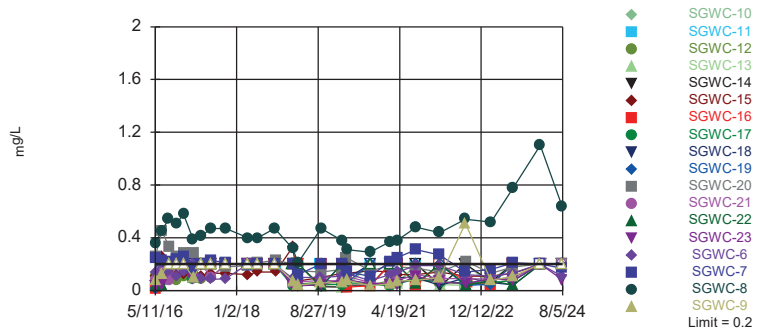


Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 161 background values. Annual per-constituent alpha = 0.002711. Individual comparison alpha = 0.00007541 (1 of 2). Comparing 18 points to limit.

Constituent: Chloride, Total Analysis Run 9/12/2024 3:45 PM View: Appendix III - Interwell
Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Exceeds Limit: SGWC-8



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 188 background values. 56.38% NDs. Annual per-constituent alpha = 0.002009. Individual comparison alpha = 0.00005586 (1 of 2). Comparing 18 points to limit.

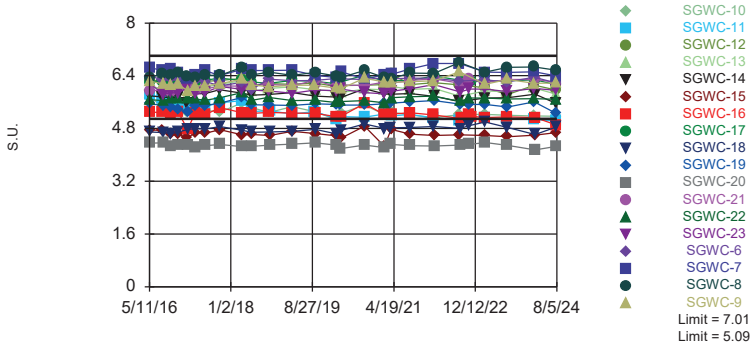
Constituent: Fluoride, total Analysis Run 9/12/2024 3:45 PM View: Appendix III - Interwell
Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Exceeds Limits: SGWC-11, SGWC-15, SGWC-16, SGWC-18, SGWC-20

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 182 background values. Annual per-constituent alpha = 0.004263. Individual comparison alpha = 0.0001185 (1 of 2). Comparing 18 points to limit.

Constituent: pH Analysis Run 9/12/2024 3:45 PM View: Appendix III - Interwell

Plant Scherer Client: Southern Company Data: Scherer AP

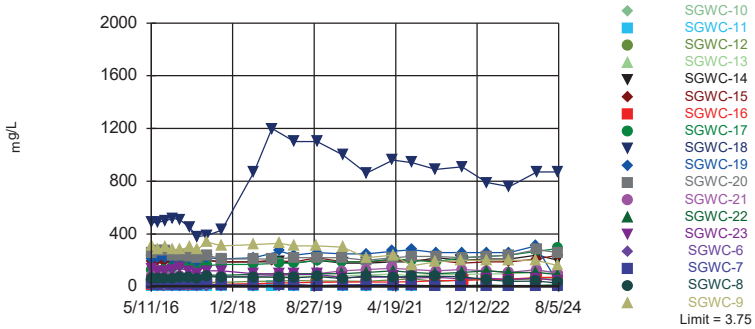
Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Exceeds Limit: SGWC-10, SGWC-11, SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-16, SGWC-17, SGWC-18, SGWC-19...

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 161 background values. 47.2% NDs. Annual per-constituent alpha = 0.002711. Individual comparison alpha = 0.00007541 (1 of 2). Comparing 18 points to limit.

Constituent: Sulfate, total Analysis Run 9/12/2024 3:45 PM View: Appendix III - Interwell

Plant Scherer Client: Southern Company Data: Scherer AP

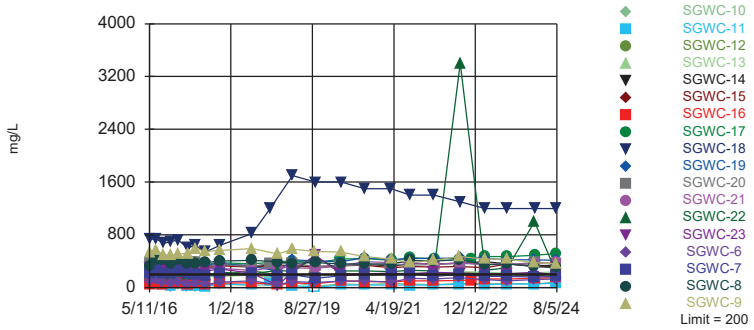
Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Exceeds Limit: SGWC-12, SGWC-13, SGWC-14, SGWC-15, SGWC-17, SGWC-18, SGWC-19, SGWC-20, SGWC-21, SGWC-22...

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 161 background values. 0.6211% NDs. Annual per-constituent alpha = 0.002711. Individual comparison alpha = 0.00007541 (1 of 2). Comparing 18 points to limit.

Constituent: Total Dissolved Solids [TDS] Analysis Run 9/12/2024 3:45 PM View: Appendix III - Interwell

Plant Scherer Client: Southern Company Data: Scherer AP

Prediction Limit

Constituent: Boron, total (mg/L) Analysis Run 9/12/2024 3:47 PM View: Appendix III - Interwell

Plant Scherer Client: Southern Company Data: Scherer AP

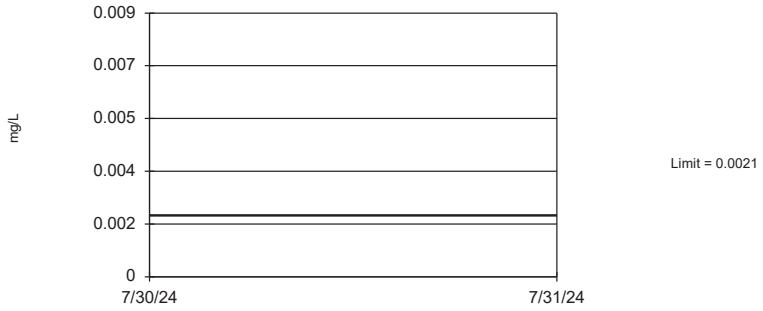
Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 147 background values. 95.24% NDs. 97.07% coverage at alpha=0.01; 97.85% coverage at alpha=0.05; 99.41% coverage at alpha=0.5. Report alpha = 0.0005313.

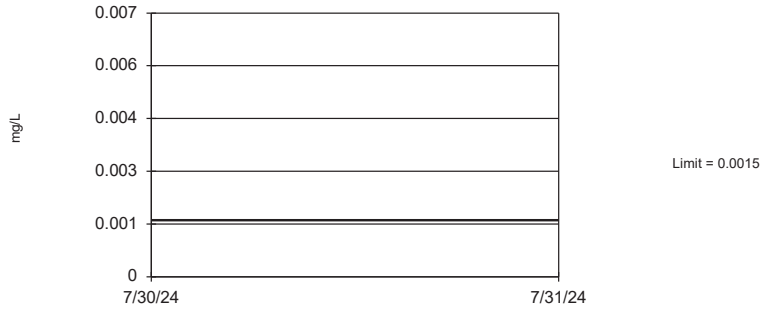
Constituent: Antimony Analysis Run 10/17/2024 9:08 AM View: UTLs

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 182 background values. 87.91% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

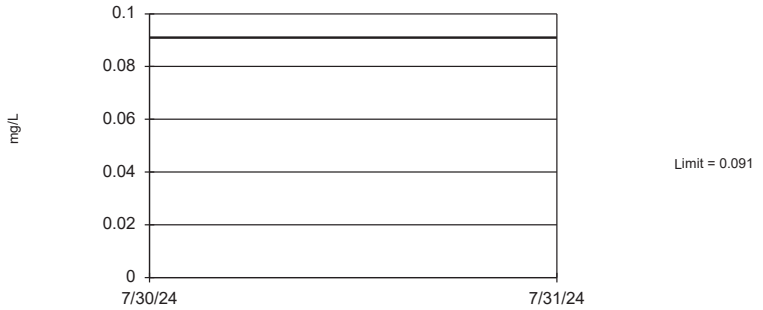
Constituent: Arsenic Analysis Run 10/17/2024 9:08 AM View: UTLs

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 182 background values. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

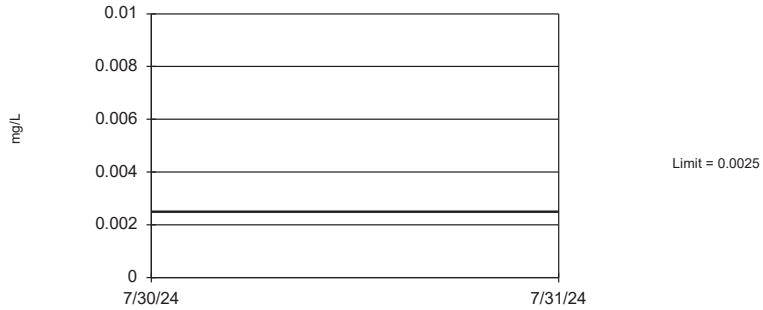
Constituent: Barium Analysis Run 10/17/2024 9:08 AM View: UTLs

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 182 background values. 92.86% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

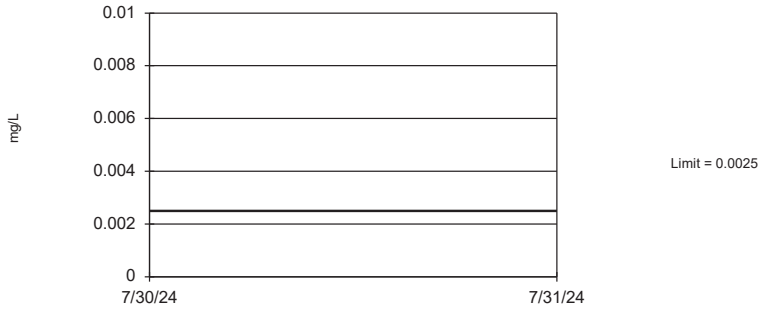
Constituent: Beryllium Analysis Run 10/17/2024 9:08 AM View: UTLs

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 175 background values. 98.86% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

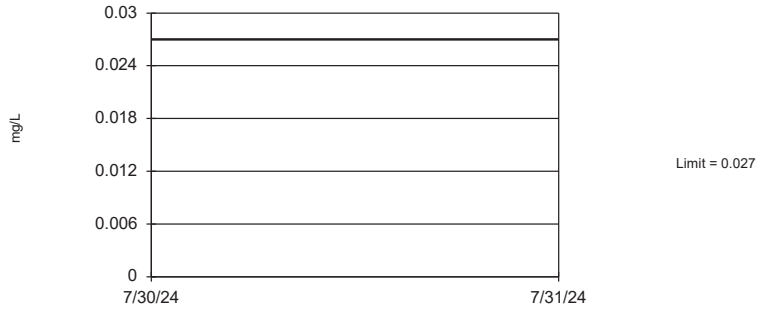
Constituent: Cadmium Analysis Run 10/17/2024 9:08 AM View: UTLs

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 189 background values. 25.4% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

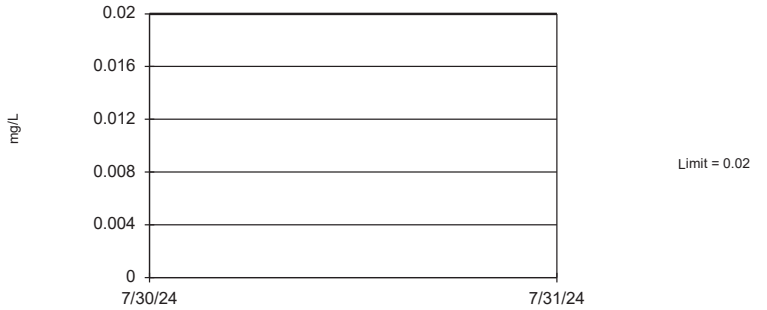
Constituent: Chromium Analysis Run 10/17/2024 9:08 AM View: UTLs

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 182 background values. 66.48% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

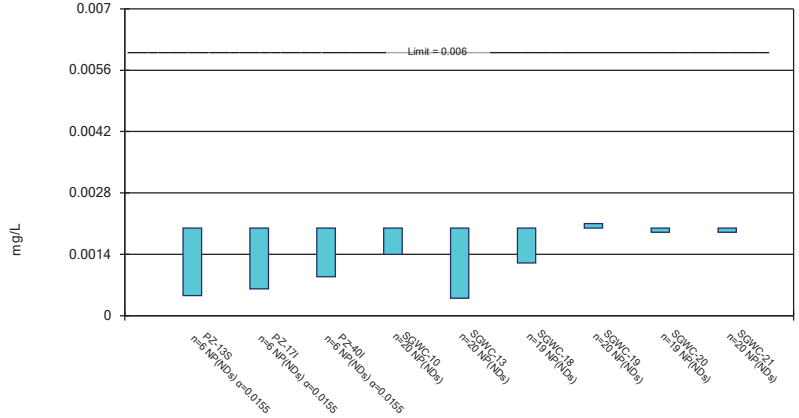
Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



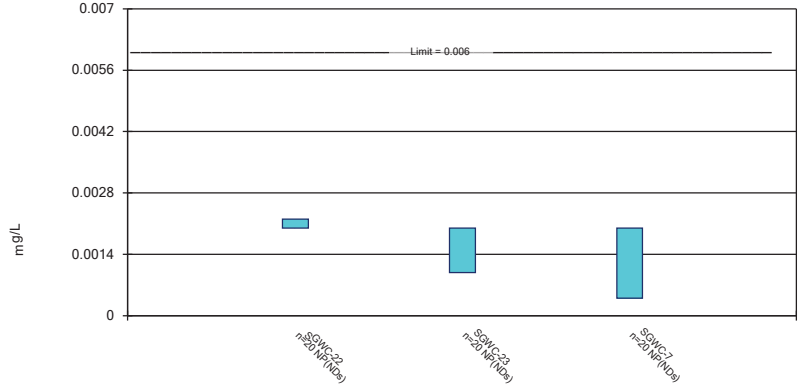
Constituent: Antimony Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



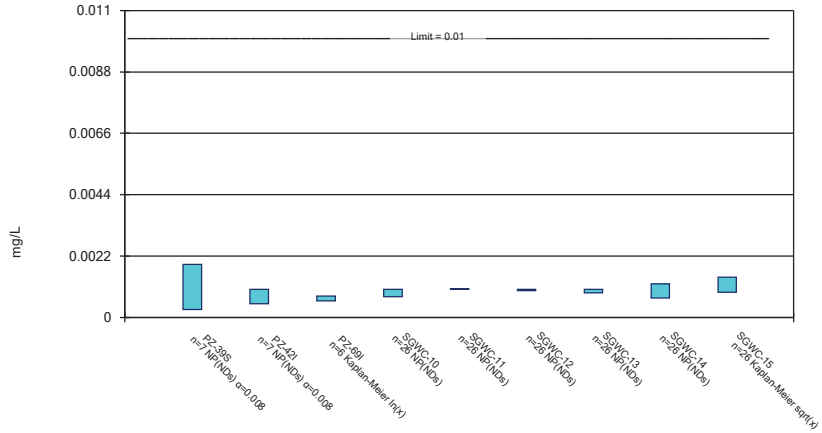
Constituent: Antimony Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



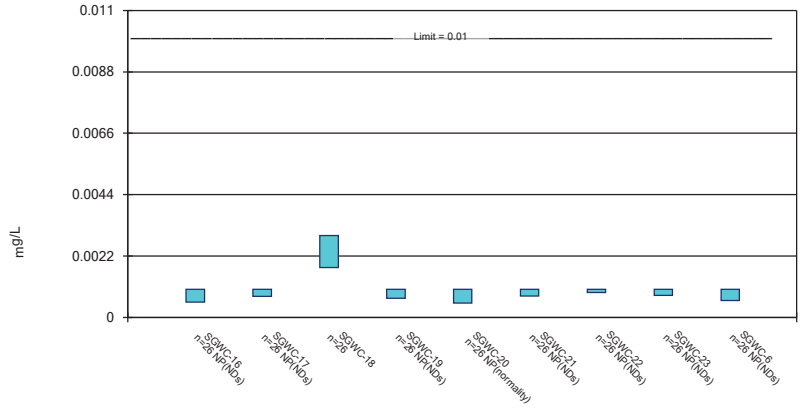
Constituent: Arsenic Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



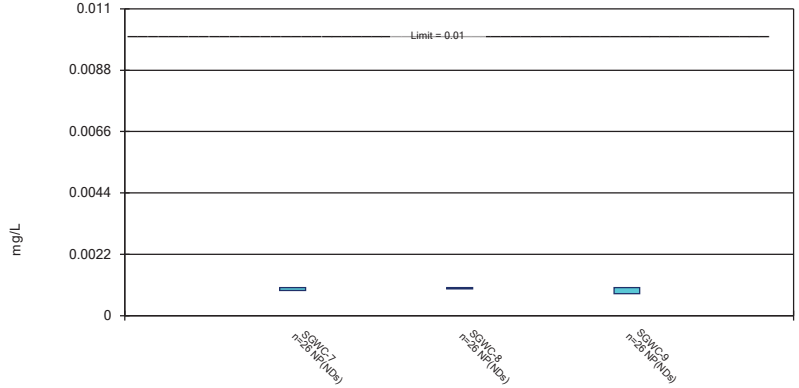
Constituent: Arsenic Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



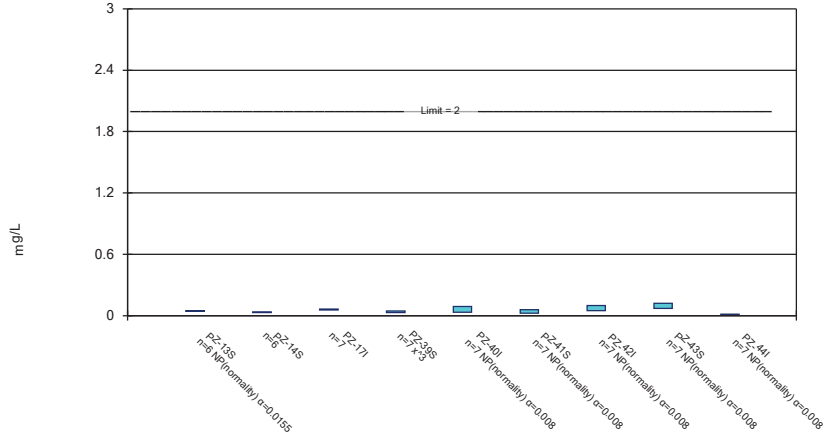
Constituent: Arsenic Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



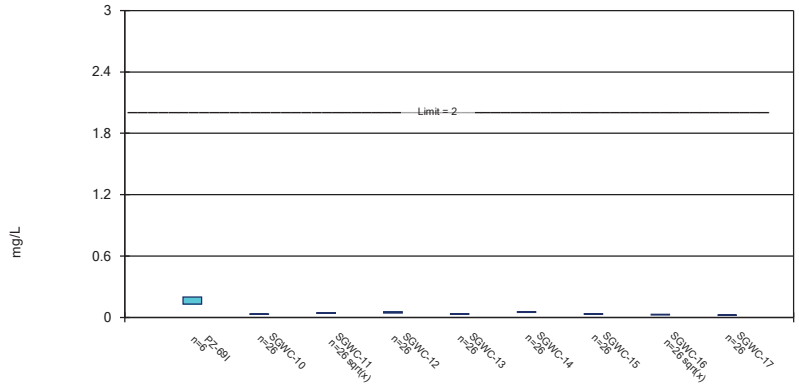
Constituent: Barium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



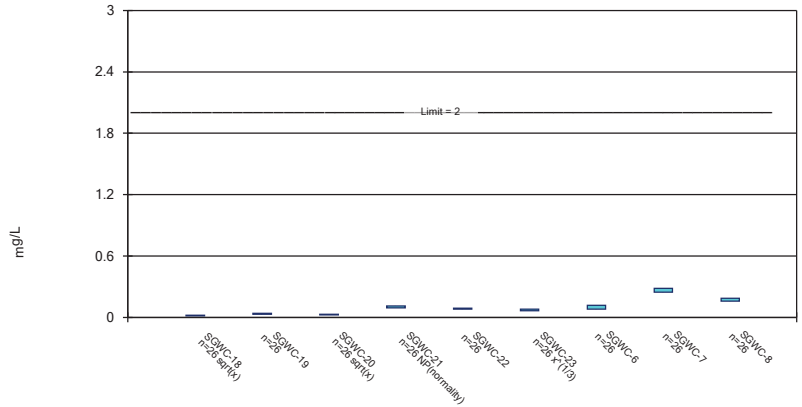
Constituent: Barium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



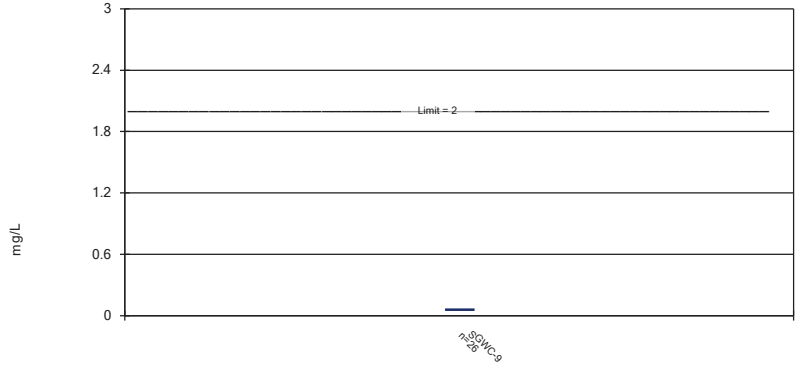
Constituent: Barium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



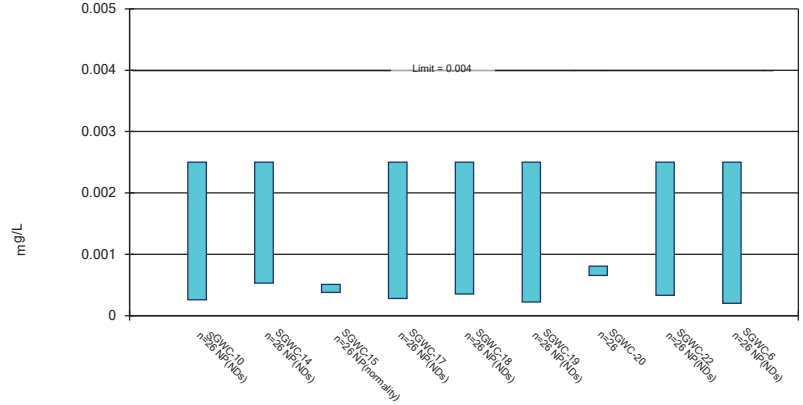
Constituent: Barium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



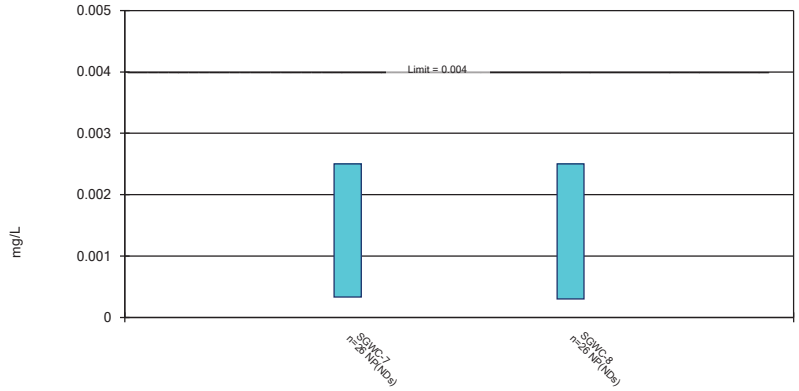
Constituent: Beryllium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



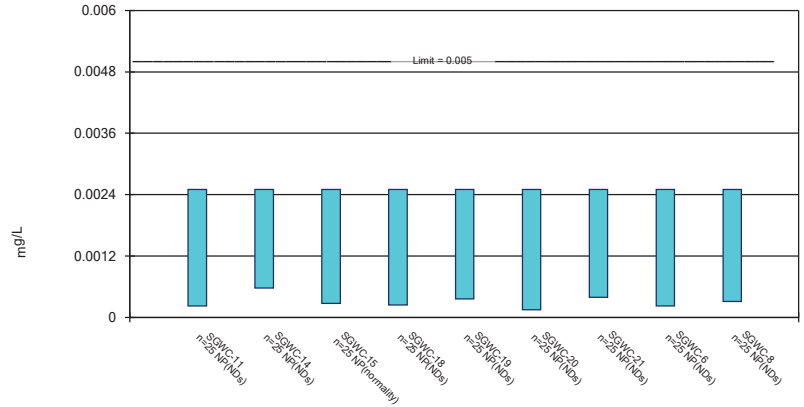
Constituent: Beryllium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



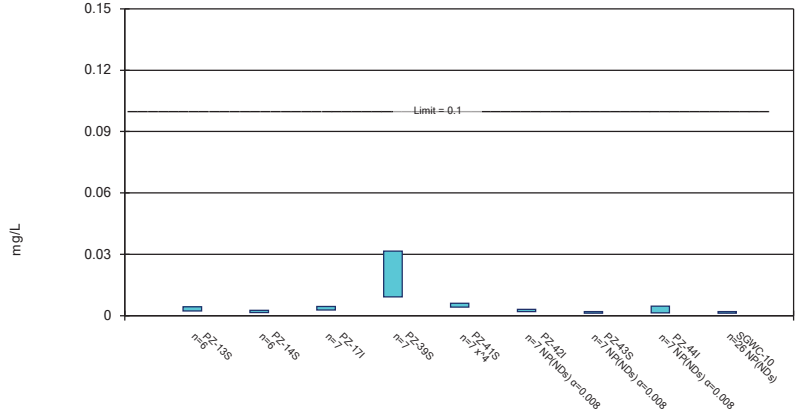
Constituent: Cadmium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



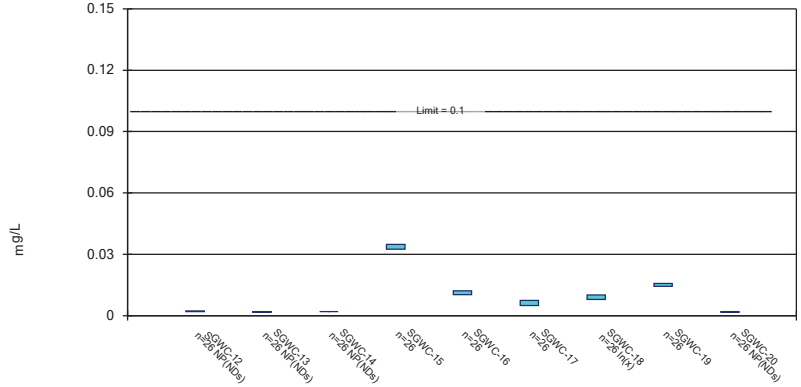
Constituent: Chromium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



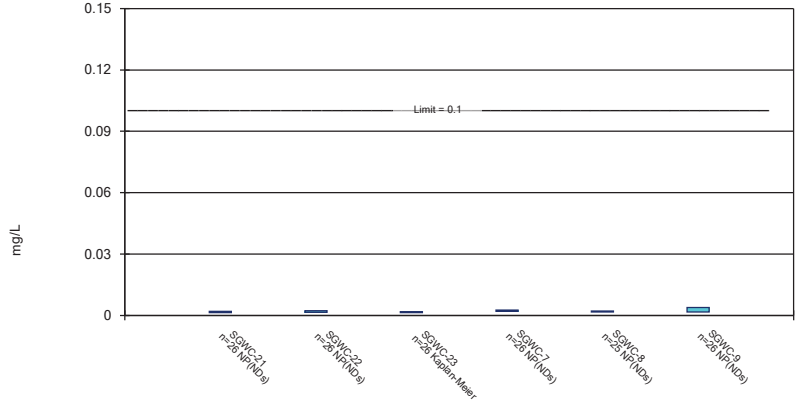
Constituent: Chromium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



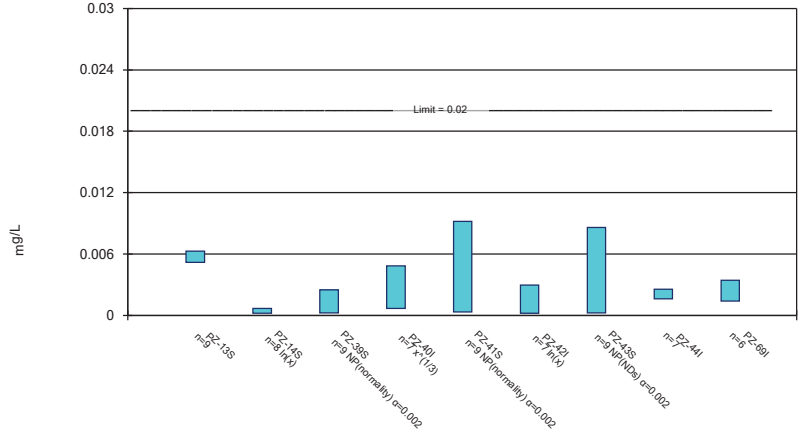
Constituent: Chromium Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



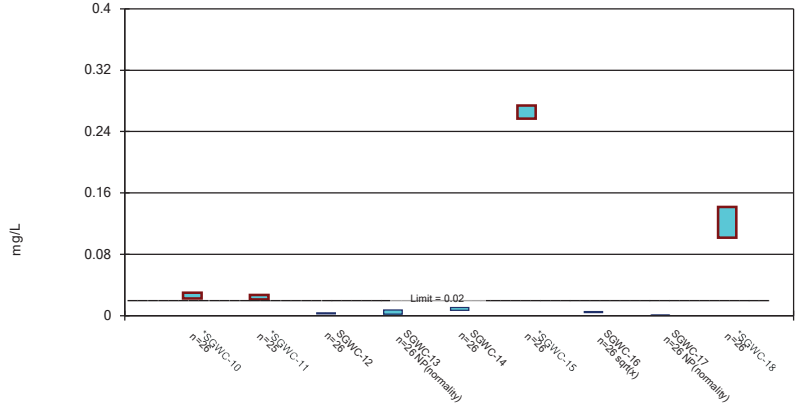
Constituent: Cobalt Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



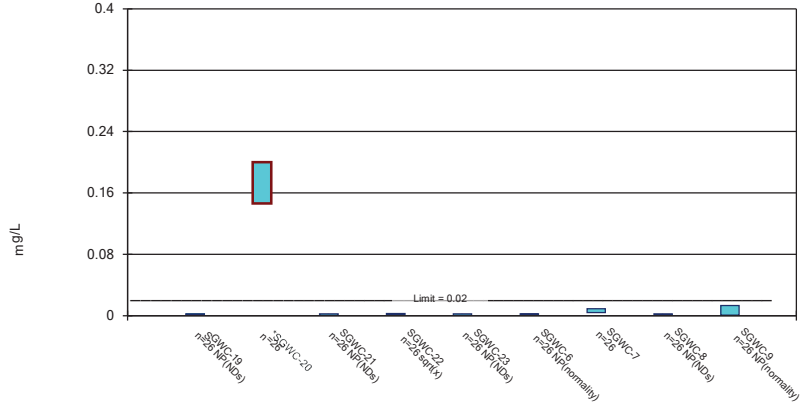
Constituent: Cobalt Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



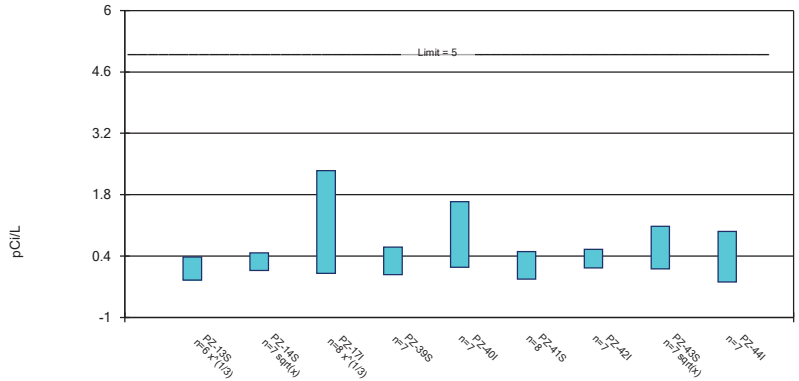
Constituent: Cobalt Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



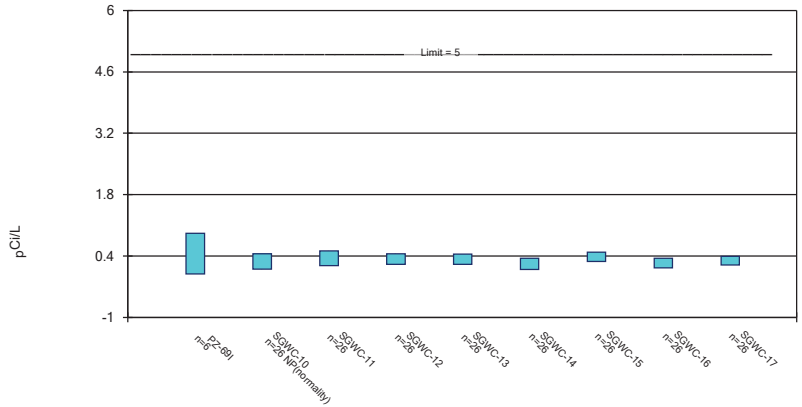
Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



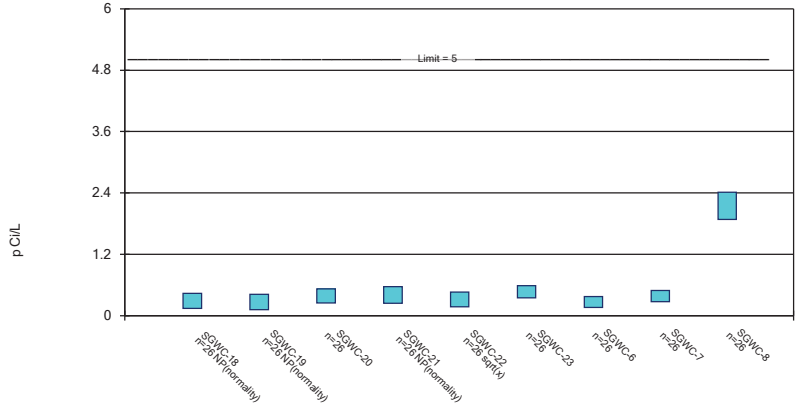
Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

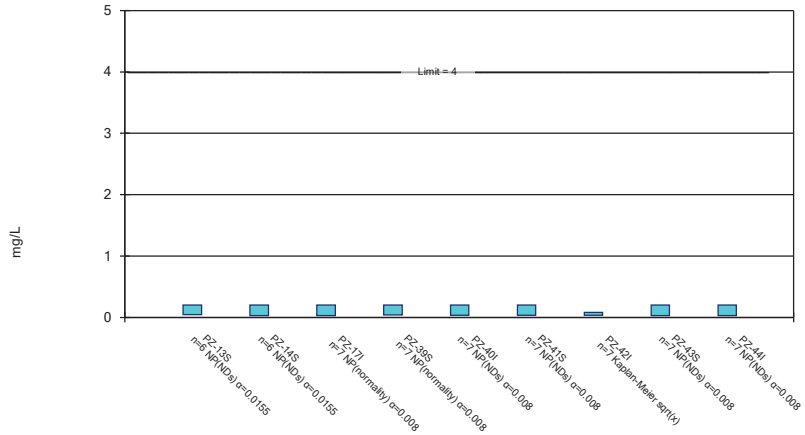
Constituent: Combined Radium 226 + 228 Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



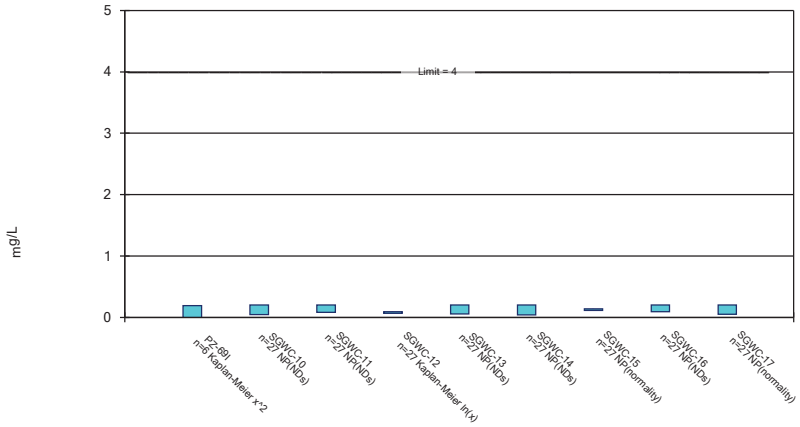
Constituent: Fluoride, total Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



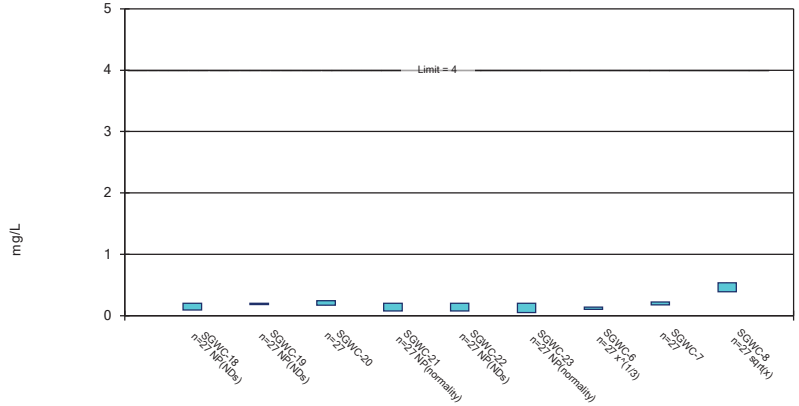
Constituent: Fluoride, total Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



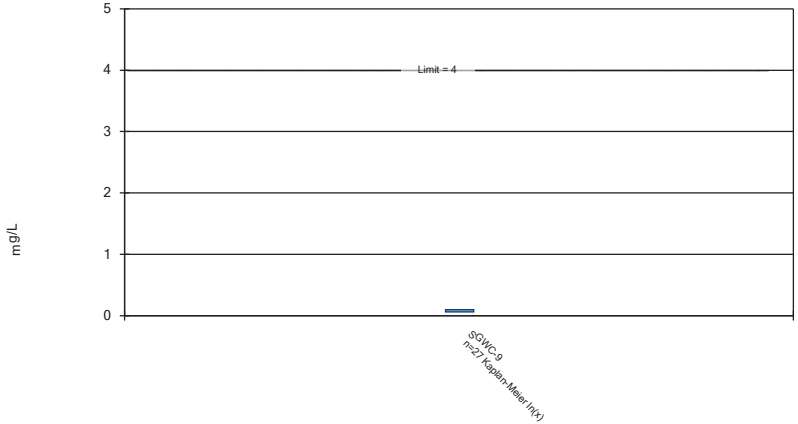
Constituent: Fluoride, total Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



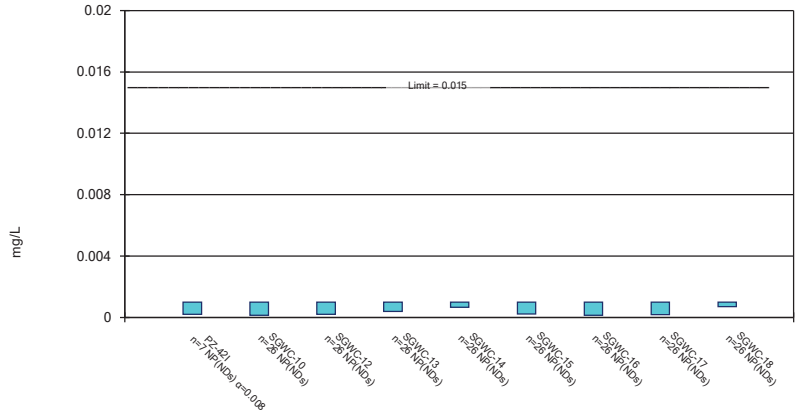
Constituent: Fluoride, total Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Lead Analysis Run 10/14/2024 5:41 PM View: Confidence Intervals

Plant Scherer Client: Southern Company Data: Scherer AP

Sanitas™ v.10.0.22 Sanitas software utilized by Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Georgia Licensed Professional Engineer No. 026729

1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule [40 Code of Federal Regulations (CFR) 257 Subpart D]; published in 80 FR 21302-21501, April 17, 2015 (CCR Rule; USEPA, 2015), WSP USA Inc. (WSP) has prepared this *2024 Semi-Annual Remedy Selection and Design Progress Report Plant Scherer Ash Pond 1* (Semi-Annual Progress Report) for Georgia Power Company (Georgia Power) Plant Scherer Ash Pond 1 (AP-1 or Site). Specifically, this Semi-Annual Progress Report has been prepared pursuant to 40 CFR § 257.97(a) and the Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10(6)(a). This Semi-Annual Progress Report documents activities conducted in support of the previously submitted *Assessment of Corrective Measures Report – Plant Scherer Ash Pond 1* (ACM Report; Golder, 2022).

Plant Scherer is a coal-fired power generation facility located in northeast Monroe County approximately 5 miles south of Juliette, GA. A site location map is included as Figure 1.

Pursuant to § 257.96, Georgia Power initiated an ACM for AP-1 on November 18, 2021, to address the occurrence of cobalt in groundwater at statistically significant levels (SSLs). Subsequently, Georgia Power completed an ACM report on April 15, 2022 and posted it to the CCR compliance website in May 2022.

A potable well survey of potential groundwater wells within a two-mile radius of AP-1 was conducted in October 2024 and consisted of reviewing federal, state, and county records, and online resources and procuring an Environmental Data Resources (EDR) report, which is included in Appendix A. Additional federal, state, and county records and online sources outside of the EDR survey were reviewed by WSP. There are 120 wells located within a two-mile radius of AP-1 including 104 private drinking water wells, 7 industrial wells, 4 public drinking water wells, 3 Georgia Open Records Act (GORA) wells, and 2 USGS wells. There were 14 wells within the two-mile radius of AP-1 that were not previously identified on past well surveys. These wells included 9 private drinking water wells, 1 public drinking water well, 3 GORA wells, and 1 USGS well. The nine private drinking water wells are located off-property to the north, northeast, east and southeast of AP-1. One public drinking water well is located on plant property to the south-southeast of AP-1 near Lake Juliette and near two of the plant's industrial wells. The three GORA wells are located to the east of AP-1. The USGS well is located on plant property to the southeast of AP-1, near Lake Juliette and near a plant industrial well. Cobalt is delineated horizontally and vertically to the immediate area of AP-1 and both the off-property and on-property wells are not expected to be affected. Other than the 14 newly identified wells within the two-mile radius, the findings from the October 2024 well survey are consistent with the January 2024 well survey (WSP 2024a).

In addition to the assessment monitoring program at the Site, Georgia Power conducted a human health and ecological risk assessment of cobalt SSLs in groundwater at AP-1 through March 2020. The risk evaluation provides one of many lines of evidence that will be reviewed and factored into the remedy selection process, which will be completed in accordance with § 257.97. Based on this risk evaluation, "*constituents evaluated from AP-1 are not expected to pose a risk to human health or the environment. Accordingly, no further risk evaluation for groundwater or surface water is warranted*" (Wood, 2021). Cobalt data collected since March 2020 are consistent with data used in the risk evaluation; therefore, the conclusions of the *2021 Risk Evaluation Report* are supported by current conditions. The risk assessment will be updated prior to submittal of the Draft Remedy Selection Report, anticipated in 2025.

1.1 Evaluation of Corrective Measures

Pursuant to § 257.97, Georgia Power is evaluating the potential corrective measures in the ACM report to identify a remedy or combination of remedies as soon as feasible. The following corrective measures have been subject to evaluation for potential use at AP-1:

- Geochemical Approaches (In-Situ Injection)
- Hydraulic Containment (Pump and Treat)
- Monitored Natural Attenuation (MNA)
- In-Situ Solidification/Stabilization (ISS)
- Permeable Reactive Barrier (PRB)
- Phytoremediation
- Subsurface Vertical Barrier Wall (SVBW).

An evaluation of remedial technologies is presented in Table 1. To date, in-situ solidification/stabilization, phytoremediation, and subsurface vertical barrier wall have been removed from consideration. As required by the CCR Rule, this semi-annual progress report describes the progress made in selecting and designing a remedy.

The following remedial alternatives have been retained for further evaluation.

- **Geochemical Approaches (In-Situ Injection):** An injection well network, or other means of introducing reagents or air into the subsurface, is used to provide suitable reagents for either anaerobic or aerobic attenuation of constituents present as SSLs, including cobalt. Under aerobic conditions, soluble iron or manganese and oxygen (either via air sparging or through a chemical oxidant) would be injected to promote the formation of iron or manganese (oxy-) hydroxides for subsequent sorption of cobalt onto these mineral phases. If sufficient iron is present in groundwater, the use of air sparging alone may be considered to precipitate iron (oxy-) hydroxides for sorption. In-situ chemical oxidation (ISCO) or in-situ chemical reduction (ISCR) can be used to chemically alter the redox environment in the subsurface to affect the mobility of certain inorganic compounds.
- **Hydraulic Containment (Pump and Treat)**: Hydraulic containment involves extracting groundwater from wells or collection trenches to depress the water table and locally control the flow of groundwater. The proposed technology for a pump-and-treat system would include the installation of vertical and/or angled groundwater extraction wells downgradient of the area(s) targeted for treatment. Groundwater extraction wells can be designed and screened in the unconsolidated saprolite, transition zone, and fractured bedrock materials at the Site for effective hydraulic capture. Groundwater extraction wells installed in bedrock can alternatively be completed as open-hole borings to maximize groundwater removal from multiple water-bearing fracture zones at varying depths.
- **Monitored Natural Attenuation (MNA):** MNA relies on natural attenuation processes to achieve site-specific remediation objectives within a reasonable time frame relative to more active methods. Under certain conditions, natural processes effectively reduce the dissolved concentrations of inorganic constituents in groundwater through mechanisms such as sorption and/or mineral precipitation.

- **Permeable Reactive Barrier (PRB):** PRB technology typically involves the installation of a permeable subsurface wall constructed with reactive media for the removal of constituents as groundwater flows through the media. Both a combined zero-valent iron (ZVI)-carbon matrix or carbon only (bio-barrier) are likely viable for the removal of cobalt from groundwater. Carbon could be provided as peat moss, mulch, or from another source. Exact placement of the PRB would be contingent on finalization of the nature and extent characterization. PRBs can also be constructed as “funnel and gate” systems, where a barrier wall directs groundwater to a smaller “treatment gate” filled with reactive media.

Georgia Power proactively initiated adaptive site management as outlined in the ACM Report (Golder, 2022) to support the groundwater remedy selection process and address potential changes in site conditions as appropriate during the AP-1 closure. The adaptive site management approach will take existing site conditions, including natural attenuation mechanisms, into account.

Characterization activities to evaluate attenuation mechanisms at the Site may include collection of data necessary to progressively evaluate the existing and long-term effectiveness of these processes in the aquifer and reduce uncertainty for decision making at each screening step as listed in the EPA guidelines for MNA (US EPA 2007, 2015). The 2007 MNA technical guidance specific to inorganic contaminants contained four “tiers.” The 2015 MNA guidance, which expands on and is designed to be a companion to the 2007 MNA guidance, retains these four “tiers,” but describes them as “phases.”

- **Phase I:** Demonstration that the groundwater plume is *not expanding*.
- **Phase II:** Determination that the *mechanism and rate* of the attenuation process are sufficient.
- **Phase III:** Determination that the *capacity* of the aquifer is sufficient to attenuate the mass of contaminant within the plume and the *stability* of the immobilized contaminant is sufficient to resist re-mobilization.
- **Phase IV:** Design of a *performance monitoring program* based on an understanding of the mechanism of the attenuation process, and establishment of contingency remedies tailored to site-specific characteristics.

2.0 AP-1 CLOSURE ACTIVITIES

The *Amended Written Closure Plan* (Georgia Power, 2020) was prepared in accordance with 40 CFR 257, Subpart D and meets the requirements of 40 CFR 257.102(b) and 391-3-4-.10. The surface impoundment (AP-1) at Plant Scherer is planned to be closed by consolidating the CCR within the 550-acre impoundment to a smaller footprint in accordance with 391-3-4-.10 and 40 CFR 257.102(b)(1)(iii). The proposed closure footprint will consist of two principal regions within the existing AP-1 footprint: a closure-by-removal area located to the north and a consolidated closure-in-place footprint in the south. The two proposed closure areas will be separated by a new northern embankment berm that will buttress the CCR consolidated within the southern closure-in-place footprint. The reduced footprint of the consolidated CCR will then be closed in place with a final cover system. Site work, including dewatering of free-standing water in AP-1 and infrastructure updates, has begun in anticipation of closure while the CCR permit application is under review by GA EPD.

3.0 SUMMARY OF WORK COMPLETED

The following sections summarize field investigation activities and supplemental data collected to support site characterization and delineation of identified Appendix IV SSLs, as well as to evaluate the corrective measures presented in the ACM report. The data will be used to evaluate the feasibility, mechanisms, rates, and stability of

identified remedial alternatives to address SSLs of cobalt in groundwater at AP-1. An evaluation of the data as they relate to remedy selection alternatives is ongoing and will be presented in future report(s).

3.1 Nature and Extent Delineation

CCR compliance groundwater monitoring-related activities have been performed for AP-1 since September 2016 pursuant to the CCR rule. Georgia Power initiated an assessment monitoring program in November 2018 after identifying statistically significant increases (SSIs) of Appendix III parameters in groundwater. Pursuant to § 257.95, samples were collected from the detection and assessment monitoring wells and analyzed for Appendix IV constituents.

Assessment monitoring groundwater data exhibit SSLs of cobalt at monitoring wells SGWC-10, SGWC-11, SGWC-15, SGWC-18, and SGWC-20. Details are provided in the *2024 Annual Groundwater Monitoring and Corrective Action Report* (WSP, 2025).

The locations of the Site monitoring wells and piezometers are shown on Figure 2. Table 2 provides a summary of construction details for each of the Site monitoring wells and piezometers, respectively. A potentiometric surface map illustrating the July 30, 2024, potentiometric surface elevations is provided as Figure 3.

3.1.1 Horizontal and Vertical Delineation

To characterize the nature and extent of cobalt SSLs, multiple piezometers have been installed and sampled semi-annually at the Site; the table below lists the respective pairs of horizontal and vertical delineation piezometers that are sampled with reference to the detection monitoring wells. Figures 5, 5A, 5B, and 5C present cobalt isoconcentration contours at each of the five monitoring wells where SSLs of cobalt has been identified (SGWC-10, SGWC-11, SGWC-15, SGWC-18 and SGWC-20).

Detection Monitoring Well with Cobalt SSL	Assessment Well Providing Vertical Delineation	Assessment Well Providing Horizontal Delineation
SGWC-10	PZ-69I	PZ-13S
SGWC-11	PZ-44I	PZ-14S
SGWC-15	PZ-17I	PZ-39S
SGWC-18	PZ-40I	PZ-41S
SGWC-20	PZ-42I	PZ-43S

Based on review of the analytical results and statistical analyses, horizontal and vertical delineations are complete. Horizontal delineation for cobalt is defined by assessment monitoring wells PZ-13S, PZ-14S, PZ-39S, PZ-41S and PZ-43S. There are no SSLs for any of the horizontal assessment wells and therefore horizontal delineation is complete. Vertical delineation for cobalt is defined using assessment monitoring wells PZ-69I, PZ-44I, PZ-17I, PZ-40I, and PZ-42I. There are no SSLs for PZ-69I, PZ-44I, PZ-17I, PZ-40I, and PZ-42I, therefore, vertical delineation is complete. Details regarding the data for specific well pairs used for delineation are described in detail in the *2024 Annual Groundwater Monitoring and Corrective Action Report* (WSP, 2025).

3.1.2 Transect Soil Borings Investigation

Mineralogical and chemical analyses were conducted on soil samples collected from soil borings PZ-44I, PZ-53, SGWC-15C, SGWC-18D, and SGWC-20C (Figure 4). The analyses included Selected Sequential Extraction

(SSEP; by modified Tessier et al., 1979) to determine metal operational fraction and high-definition mineralogical identification and metal/mineral association using Tescan Integrated Mineral Analyzer (TIMA-X). The results of these analyses are provided in Appendix B. The results of the mineralogical and metal fraction associations are discussed in detail in the Geochemical Site Model (GCSM) and the Geochemical Modeling Report, both of which will be provided to GA EPD as an attachment to the Draft Remedy Selection Report.

Briefly, cobalt in samples from PZ-53 (180.3 mg/kg) and PZ-44I (215.5 mg/kg) adjacent to SGWC-10 and SGWC-11 is above typical background concentrations of cobalt (ranging from <0.3 to 70 mg/kg, average of 5.9 mg/kg) in soils of the eastern United States (Smith and Huyck, 1999). The vast majority of cobalt (>93%) was identified to be environmentally available (i.e., present in SSEP factions 1 through 5). Manganese was also identified to be the highest at the Site (based on samples analyzed) at PZ-53 and PZ-44I; measured at up to 4,815 mg/kg, with 93+% environmentally available (SSEP fractions 1 through 5). TIMA-X further confirmed the strong association between iron or manganese oxides/hydroxides with cobalt, indicating the natural occurrence and attenuation of cobalt at the Site. Notably, PZ-53 and PZ-44I are in the general vicinity of the diabase dike that has been previously mapped at the Site. In all other aquifer solids, cobalt concentrations are much lower, but still show a strong association with iron or manganese oxides in SSEP fraction 4, confirming natural occurrence and attenuation.

3.2 Supplemental Data Collection

Groundwater samples collected from the detection and assessment monitoring well networks in July and August 2024 were analyzed for major ions (magnesium, potassium, sodium, total and bicarbonate alkalinity), and minor ions (sulfide, iron and manganese). Results are included in the *2024 Annual Groundwater Monitoring and Corrective Action Report* (WSP, 2025).

Groundwater and aquifer solids collected to date along with data collection described below were used to evaluate the feasibility, mechanisms, rates, and stability of identified remedial alternatives to address SSLs of cobalt in groundwater at AP-1.

4.0 UPDATED SITE CONCEPTUAL MODEL

Additional data collection since the issuance of the ACM allows for the development of a more refined conceptual site model (CSM) and will be used to supplement the current *Hydrogeologic Assessment Report* (WSP, 2024b). The following summarizes the current understanding of the CSM within the context of selecting an appropriate groundwater corrective measure for AP-1.

- The July 30, 2024 potentiometric surface shows groundwater flow is generally from the west and northwest towards AP-1 and radially to the northeast and east, southeast and south, and southwest from AP-1, which sits on a topographic high, as shown on Figure 3. The latest water level data collected in 2024 confirmed groundwater flow in the uppermost aquifer to be consistent with the CSM.
- Cobalt concentrations above the GWPS are limited to the immediate proximity of detection wells SGWC-15 SGWC-18 and SGWC-20, (Figures 5, 5A, 5B, and 5C). At SGWC-10, elevated cobalt is limited to a small area bounded by delineation wells PZ-13S, PZ-14S, PZ-25I, and PZ-69I.
- Based on the data and modeling scenarios, monitored natural attenuation (MNA) provides the best option for corrective action near wells SGWC-10 and SGWC -11, while in-situ injection of potassium permanganate and

potassium bicarbonate along with MNA provides the most promising option for groundwater corrective action near wells SGWC-15, SGWC-18, and SGWC-20.

5.0 CORRECTIVE MEASURES ALTERNATIVES

Table 1 presents a summary of each of the remedial alternatives presented as part of the ACM. Table 3 provides a summary of additional data planned to be collected to further evaluate the feasibility of these alternatives. The retention evaluation (Retained for Further Evaluation or Not Retained) for each potential remedial alternative is included in Table 1. Each of the alternatives described in Section 1.1 and listed below are retained for further evaluation:

- Geochemical Approaches (In-Situ Injection)
- Hydraulic Containment (Pump and Treat)
- Monitored Natural Attenuation (MNA)
- Permeable Reactive Barrier (PRB)

Phytoremediation, in-situ solidification/stabilization (ISS), and subsurface vertical barrier wall (SVBW) have been removed from consideration as remedial alternatives for the Site as described below:

- Phytoremediation has not been retained due to relatively thick clay-rich overburden. Other options are considered more suitable. In addition, the presence of Site utilities beyond the limits of AP-1 in the areas of cobalt detections limits the amount of space available to install phytoremediation components. The potential for compromising the stability of the dam along the eastern side of AP-1 is also a consideration relative to the construction of phytoremediation (e.g., digging many holes to plant deep-rooted trees at the base of the dam) in the immediate vicinity of the certain wells with identified SSLs. As such, phytoremediation has been screened out based on deficiencies of effectiveness and the depth and geology of the affected area.
- In-Situ Solidification/Stabilization has not been retained for consideration at AP-1. ISS has been more widely implemented as a source control measure. Because the cobalt detections at AP-1 are relatively low, cobalt SSLs are localized to a few locations, and the occurrence of cobalt at these locations are likely due to groundwater pH variations along the flow paths; ISS is not practical for groundwater remediation at these locations beyond the AP-1 boundary. As such, ISS has been screened out.
- Subsurface Vertical Barrier Wall has not been retained for consideration at AP-1. A cut-off wall is not appropriate for the remediation of cobalt at Plant Scherer as the concentrations of cobalt exceeding the GWPS is limited to a small area surrounding each of five wells. SVBW is typically used for groundwater remediation to prevent lateral migration of impacts in groundwater. The lateral extent of cobalt concentrations exceeding the GWPS at Scherer has been delineated to a small area. The source of cobalt in groundwater at each of the five well locations (SGWC-10, SGWC-11, SGWC-15, SGWC-18, and SGWC-20) is released from the natural environment as a result of low pH in groundwater.

6.0 PLANNED ACTIVITIES

Georgia Power has initiated activities as outlined in the ACM Report (Golder, 2022) to support the groundwater remedy selection process and address potential changes in Site conditions as appropriate. The adaptive site management approach toward remedy selection may be adjusted as new Site information and technologies

become available. To this end, Georgia Power will continue its data collection efforts as necessary in support of efforts to refine the CSM and to further evaluate the feasibility of each corrective measure retained for further evaluation.

Additional field investigation activities, supplementary data collection and data analyses are planned as described in Table 3 to evaluate potential remedial alternatives. Key elements are summarized below.

- Collect additional groundwater quality data to further evaluate natural attenuation. In addition to Appendix III/IV constituents, monitoring wells may also be analyzed for major cations/anions and other parameters for characterization of groundwater and evaluation of potential remedies.
- Evaluate Site soil data to determine attenuation mechanism and rates, aquifer capacity for attenuation, and mineralogical characterization for geochemical modeling.
- Perform geochemical modeling and conceptualize injection of various media to support future remedy selection.
- Initiate bench-scale testing of injectate amendments to confirm preliminary geochemical modeling results.

Georgia Power will continue to prepare semi-annual progress reports to document AP-1 groundwater conditions, results associated with additional data collection, and the progress in selecting and designing a groundwater remedy in accordance with § 257.97(a). Georgia Power will include these future semi-annual progress reports with routine groundwater monitoring and corrective action reports to meet the requirements of § 257.105(h)(12), § 257.106(h)(9), and § 257.107(h)(9), respectively.

EVALUATION OF REMEDIAL TECHNOLOGIES
Georgia Power Company
Plant Scherer – Ash Pond 1
Monroe County, GA

Corrective Measure	REGULATORY CITATION FOR CRITERIA: 40 CFR 257.96(C)(1)		
	Description	**Performance**	**Reliability**
Geochemical Approaches (in-situ injection)	Use of an injection well network, or other means of introducing reagents or air into the subsurface, to provide suitable reagents for either anaerobic or aerobic attenuation of cobalt (Co). Under anaerobic conditions, chemical reducing agents or electron donors to spur microbial reduction would be injected. Attenuation of Co would occur by retention within sparingly soluble sulfide minerals. Under aerobic conditions, soluble iron or manganese and oxygen (either via air sparging or through a chemical oxidant) would be injected to promote the formation of iron or manganese (oxy-) hydroxides for subsequent sorption of Co onto these mineral phases. If sufficient iron is present in groundwater, the use of air sparging alone may be considered to precipitate iron (oxy-) hydroxides for sorption. In-situ chemical oxidation (ISCO) or in-situ chemical reduction (ISCR) can be used to chemically alter the redox environment in the subsurface to affect the mobility of certain inorganic compounds, including Co.	The effective immobilization of Co has been shown under aerobic and anaerobic conditions; however, the anaerobic approach (involving the injection of an electron donor together with iron or manganese and sulfur) requires careful study and testing. While aerobic approaches are somewhat less complex, additional aquifer characterization is needed to further evaluate these options.	Reliability dependent on permeability of the subsurface and the amount and distribution of secondary iron or manganese (oxy-) hydroxides (for aerobic approach), or electron donors and soluble iron or manganese and sulfur that can be consistently distributed (for anaerobic approach). Reliable technology if injected materials can be distributed throughout the impacted aquifer. Bench- and/or pilot-scale treatability testing programs are needed to understand the biogeochemical processes that would effectively reduce migration of Co in groundwater.
Hydraulic Containment (pump-and-treat)	Hydraulic containment refers to the use of groundwater extraction to induce a hydraulic gradient for hydraulic capture or control the migration of impacted groundwater. This approach uses extraction wells or trenches to capture groundwater, which may subsequently require above-ground treatment and permitted discharge to a receiving water feature, reinjection into the groundwater, or reuse (e.g., land application, CCR conditioning, etc.). It is applicable to a variable mix of inorganic constituents, including dissolved Co.	Pump and treat (P&T) is effective at providing hydraulic control, but it is unclear whether full groundwater remediation can be achieved without further understanding attenuation mechanisms at the Site. At AP-1, implementation of the corrective measure is contingent on completing additional assessment activities (i.e., high-resolution site characterization, additional pump tests, flow modeling, and capture zone analysis). This is needed to refine the constituent distribution in the subsurface to target specific zones for pumping for improved mass recovery efficiency/effectiveness and to further evaluate the potential remedy performance.	Generally reliable for hydraulic containment, but uncertainty exists whether groundwater remediation goals can be achieved within a reasonable time frame without further understanding attenuation mechanisms.

TABLE 1
EVALUATION OF REMEDIAL TECHNOLOGIES
Georgia Power Company
Plant Scherer – Ash Pond 1
Monroe County, GA

Corrective Measure	REGULATORY CITATION FOR CRITERIA: 40 CFR 257.96(C)(1)		
	Description	**Performance**	**Reliability**
Monitored Natural Attenuation (MNA)	MNA relies on natural attenuation processes to achieve site-specific remediation objectives within a reasonable time frame relative to more active methods. Under certain conditions (e.g., through sorption, mineral precipitation, or oxidation-reduction reactions), MNA effectively reduces the dissolved concentrations of inorganic constituents in groundwater. Attenuation mechanisms for inorganic constituents at CCR sites, including Co at AP-1, are either physical (e.g., dilution, dispersion, flushing, and related processes) or chemical (sorption or oxidation reduction reactions). Chemical attenuation processes include precipitation, and sorption reactions such as adsorption on the surfaces of soil minerals, absorption into the matrix of soil minerals, or partitioning into organic matter. Further, oxidation-reduction (redox) reactions, via abiotic or biotic processes, can transform the valence states of some inorganic constituents to less soluble and thus less mobile forms. For Co, the main attenuation processes include sorption to iron and manganese oxides and formation of sparingly soluble sulfide minerals.	Physical and chemical MNA mechanisms for Co, including dilution, dispersion, sorption, and oxidation reduction reactions can be effective at achieving groundwater protection standards (GWPS) within a reasonable time frame. Closure will improve the mass balance such that the buffer capacity of the aquifer is unlikely to be exhausted, and the attenuation processes already at work for Co at AP-1 will further enhance ongoing MNA.	Reliable as long as sufficient attenuation capacity is present. MNA is reliable and can either be used as a stand-alone corrective measure for groundwater impacted by dissolved Co, or in combination with a second technology.
In-Situ Solidification / Stabilization (ISS)	ISS, also referred to as single auger mixing or deep soil mixing, uses a crane-mounted large-diameter auger system to drill into affected soils and uniformly mix the soils with cement to create a monolith (solidification) or with appropriate chemical additives to chemically bind constituents within the solid matrix (stabilization). This remedy can also be achieved by a cutter head on an excavator if treatment depths do not exceed the reach of the excavator. Additional equipment utilized for treatment primarily consists of a grout mixing plant, a grout pump and a mixing rig designed to encapsulate constituents in a monolithic solid of low hydraulic conductivity, thereby minimizing constituent migration.	Groundwater impacts outside the ISS treatment zone would be addressed through the processes of natural attenuation. This alternative would isolate/secure the area of influence outside the CCR unit in a bound matrix, and over time, allow the concentrations of constituents of concern (COCs) in groundwater to decline to below applicable standards.	In-situ stabilization can be a reliable corrective measure for Co in groundwater. Reliability is dependent successful implementation of the mix design in the field to achieve monolith uniformity and hydraulic conductivity reduction.
Permeable Reactive Barrier (PRB)	Permeable reactive barrier (PRB) technology typically involves the installation of a permeable subsurface wall constructed with reactive media for the removal of constituents as groundwater passes through. Either a zero-valent iron (ZVI) plus carbon matrix or a carbon only bio-barrier are likely viable for the removal of Co. The carbon could be supplied as peat moss, mulch, or another carbon source. Exact placement of the PRB would be contingent on finalization of the nature and extent characterization. PRB walls are typically keyed into the bedrock. While the shallow groundwater in the residuum and fractured bedrock is connected to the groundwater in more competent bedrock, the higher permeability/conductivity of the PRB is not expected to impede groundwater flow. PRBs can also be constructed as “funnel and gate” systems, where a barrier wall directs groundwater to a smaller “treatment gate” filled with reactive media.	PRBs have been shown to effectively address Co in groundwater. The approach is expected to achieve GWPS for Co as impacted groundwater passes through the reactive barrier. Furthermore, additional testing is required to select the appropriate sorptive media mix.	Reliable groundwater corrective measure technology, but loss of reactivity over time may require re-installation depending on the duration of the remedy. Additional data collection, including conducting a bench and/or pilot study, is needed to select the appropriate reactive media mix and dosages for a PRB wall.

Corrective Measure	REGULATORY CITATION FOR CRITERIA: 40 CFR 257.96(C)(1)		
	Description	**Performance**	**Reliability**
Phyto Remediation (TreeWell®)	Phytoremediation uses trees and other plants to degrade or immobilize constituents or achieve hydraulic control without the need for an above-ground water treatment system and infrastructure. Within the context of AP-1, this corrective measure would likely use an engineered (proprietary) TreeWell® phytoremediation system along the point of compliance or downgradient edge of the impacted groundwater for hydraulic control. The system promotes root development to the targeted groundwater zone (depth), allowing for hydraulic control of impacted groundwater. In addition, immobilization of Co within the root zone as well as incidental uptake of dissolved Co with groundwater is expected to occur concurrent with hydraulic control.	Once established (typically at the end of the third growing season), a TreeWell® system is effective for providing hydraulic containment of groundwater, and potential reduction of Co concentration through immobilization and/or uptake and sequestration in the tree biomass; however, the main purpose is to provide hydraulic control.	Engineered phytoremediation is a proven technology where hydrogeologic factors are taken into account (e.g., hydraulic conductivity, flow velocity, depth to impacted groundwater zone, etc.). This is considered an active remedial approach through the use of trees as the "pumps" driving the system. Careful design will be needed to select the proper species, which will include consideration of groundwater chemistry, plant uptake of constituents, and groundwater flow modeling to evaluate the required number and placement of TreeWell® units.
Subsurface Vertical Barrier Walls (SVBW)	This approach involves placing a barrier to groundwater flow in the subsurface to prevent future migration of dissolved constituents in groundwater beyond the walled area to downgradient areas. In general, barrier walls are designed to provide containment; and when fully encompassing, SVBWs require a pump and treatment system to maintain inward hydraulic gradients and treat extracted water. Barrier walls can also be used in downgradient applications to limit potential influence to/from surface water features. A variety of barrier materials can be used, including cement and/or bentonite slurries, geomembrane composite materials, or driven materials such as steel or vinyl sheet pile.	Barrier walls are a proven technology for groundwater cutoff at impoundments. Slurry walls are limited by the depth of installation, which is approximately 90 ft below ground surface. However, site-specific geologic and technology-specific considerations may limit this depth to shallower installations. Within the context of AP-1, a barrier wall might be used in conjunction with a “funnel and gate” system for a PRB rather than a stand-alone technology. As such, groundwater with Co above GWPS could either be directed to “treatment gates” for passive treatment (in a PRB) or migration of impacted groundwater could be minimized via barrier wall installation. Additional subsurface investigations, aquifer testing, and compatibility testing with site-specific groundwater will be needed.	Generally reliable as a barrier to groundwater flow; however, treatment of downgradient groundwater is incidental and not the primary objective.

Corrective Measure	REGULATORY CITATION FOR CRITERIA: 40 CFR 257.96(C)(1)		
	Ease of Implementation	**Potential Impacts**	**Time Requirement to Begin/Complete**
Geochemical Approaches (in-situ injection)	Moderate. Installation of injection well network or other injection infrastructure would be required. Alternative installation approaches may be considered, such as along the downgradient edge of impacted groundwater, which would function similarly to a PRB application. Potential for clogging of aquifer matrix and/or injection well infrastructure. Chemical distribution during injections (i.e., radius of influence) needs to be evaluated.	Minimal impacts are expected if remedy works as designed, based on a thorough pre-design investigation, geochemical modeling, and bench/pilot study results. Redox-altering processes have the potential to mobilize naturally occurring constituents as an unintended consequence if not properly studied and implemented.	Design of a geochemical in-situ injection system will require numerical groundwater flow and geochemical modeling, bench-scale testing and may require a pilot test to obtain final design parameters that may take up to 24 months. After design, installation of the injection network can be accomplished relatively quickly (1 to 2 months). Once installed, the time required to achieve GWPS within the treatment area may be relatively quick but depends on the attenuation process kinetics of each targeted constituent. The time for complete distribution of the injected materials throughout the treatment area is also variable.
Hydraulic Containment (pump-and-treat)	Moderate. Proven approach, and supplemental installation of extraction wells/trenches is straightforward. The extracted groundwater may potentially require an above-ground treatment system. A variety of sorption and precipitation approaches exist for ex-situ treatment of Co. Operation and maintenance (O&M) requirements are expected to include upkeep of infrastructure components (pumps, pipes, tanks, instrumentation and controls, above-ground treatment system) and handling of treatment residuals.	The main potential impacts are related to the presence and operation of an on-site above-ground water treatment facility and related infrastructure to convey and treat extracted groundwater. Pumping activity may unintentionally alter the geochemistry within the hydraulic capture zone.	Design of a pump-and-treat system will require additional aquifer testing, numerical groundwater modeling, and if needed, design of a treatment system for the extracted groundwater (which itself will require significant treatability testing). Installation of extraction wells and/or trenches can be accomplished relatively quickly (1 to 2 months) and if required, the treatment system would require up to an additional year for construction and startup. The initiation of the approach would be contingent on the startup of the wastewater treatment infrastructure. Hydraulic containment can be achieved relatively quickly after startup of the extraction system, but uncertainty exists with respect to the time to achieve GWPS without additional data collection to better understand attenuation mechanisms for Co.
Monitored Natural Attenuation (MNA)	Easy. Easy to implement with respect to infrastructure, monitoring, and reporting. Proven approach, but additional data are needed to show that the existing attenuation capacity is sufficient to meet site objectives within a reasonable timeframe. A monitoring well network already exists to implement future groundwater monitoring efforts.	No impacts are anticipated; MNA relies on the natural processes active in the aquifer matrix to reduce constituent concentrations.	The evaluation of MNA as a viable remedy demonstrates that attenuation mechanisms and capacity are naturally present in the groundwater system. An MNA evaluation and groundwater and geochemical modeling and can take up to 1 year. The infrastructure to initiate MNA is already in place but may require some additional wells. MNA is expected to be successful within a reasonable time frame following pond closure. Engineering measures will be implemented during closure of the CCR unit to minimize potential impacts to the subsurface during closure activities and routine groundwater monitoring will be used to verify that groundwater impacts remain stable or decrease over time.
In-Situ Solidification / Stabilization (ISS)	Difficult. ISS has been proven effective and stabilizing waste masses to prevent leaching, but very intensive program to solidify an entire CCR unit. Significant heavy equipment and traffic on-Site and working on the AP-1 unit. ISS has not been commonly used to stabilize entire ash units as part of a closure strategy.	Following completion, potential impacts of the remedy will be negligible. During construction, general construction safety risks would be elevated above less-intensive remedies.	Design of an In-situ stabilization remedy for AP-1 will take several years to complete and will require bench scale testing to determine the appropriate amendment mix for a variety of overburden geologic materials. Pilot testing will also be needed to verify the ability of equipment to solidify material at depth. Following design, implementation to solidify the AP-1 CCR mass could take many years and may be delayed by availability of specialized contractors and equipment.

TABLE 1
EVALUATION OF REMEDIAL TECHNOLOGIES

Corrective Measure	REGULATORY CITATION FOR CRITERIA: 40 CFR 257.96(C)(1)		
	Ease of Implementation	**Potential Impacts**	**Time Requirement to Begin/Complete**
Permeable Reactive Barrier (PRB)	Moderate to Difficult. Trenching would be required to install a mix of reactive materials in the subsurface. Continuous trenching may be the most feasible construction method. Installation methods and materials are readily available. Once installed, treatment will be passive and O&M requirements are minimal if replacement of the PRB is not necessary.	Minimal impacts are expected following the construction of the remedy. However, ZVI has the potential to create anaerobic conditions downgradient of the PRB wall that may mobilize redox-sensitive naturally occurring constituents. These conditions need to be carefully monitored. Short-term impacts during the construction of the remedy can be mitigated through appropriate planning and health and safety measures.	Design of a PRB may take up to 2 years, including bench/column testing for selection of reactive media and dosages (percent by weight), selection of ballast material for target hydraulic conductivity of the mixed porous media, and numerical groundwater modeling required to evaluate post-installation flow. Installation of a PRB can be accomplished relatively quickly (6 to 12 months), depending on the final location and configuration. Once installed, the time to achieve GWPS downgradient of the PRB is anticipated to be relatively short.
Phytoremediation	Reasonably implementable to moderate. Engineered approach has been proven effective, and specific depth zones can be targeted. Species are selected and trees are installed such that the root zone can intercept impacted groundwater flow paths. Area must be clear of above and below-ground structures (e.g., power lines). The system, once established (approximately three growing seasons), is a self-maintaining, sustainable remedial system that has no external energy requirements and little maintenance (i.e., efforts normally associated with landscaping).	Minimal impacts are expected. In fact, there are several positive impacts expected, including enhanced aesthetics, wildlife habitat, and limited energy consumption.	The design phase may take up to 6 months, and some groundwater modeling may be required. Depending on the number of required units, the installation effort is expected to last several weeks. Hydraulic capture/control is expected approximately three years after planting and system performance is expected to further improve over time.
Subsurface Vertical Barrier Walls (SVBW)	Moderate to difficult. Trenching will be required to fill in the various slurry mixes; alternatively, sheet pile installations can be accomplished without excavation of trenches. The application of barrier walls is limited by the depth of installation, which, similarly to PRBs, should be keyed into a low permeability layer such as a thick clay layer, PWR, or bedrock. Installation methods and materials are readily available.	Minimal impacts are expected following the construction of the remedy. Short-term impacts during the construction of the remedy can be mitigated through appropriate planning and health and safety measures. Changes to groundwater flow patterns due to installation of the barrier wall are expected, which can affect other aspects of groundwater corrective action.	The design phase may take up to 24 months and is likely to include additional aquifer testing and numerical groundwater modeling. Installation of a barrier wall can be accomplished relatively quickly (6 to 12 months), depending on the final location and configuration. Once installed, preventing migration of constituents dissolved in groundwater is anticipated to be relatively quick. Since this approach does not treat the downgradient area of impacted groundwater but prevents migration, it will likely have to be maintained long term and be coupled with other approaches.

TABLE 1
EVALUATION OF REMEDIAL TECHNOLOGIES
Georgia Power Company
Plant Scherer – Ash Pond 1
Monroe County, GA

Corrective Measure	REGULATORY CITATION FOR CRITERIA: 40 CFR 257.96(C)(1)		Relative Costs	Retention Evaluation
	Institutional Requirements	Other Env. Or Public Health Requirements		
Geochemical Approaches (in-situ injection)	Deed restrictions may be necessary until in-situ treatment has achieved GWPS. A new UIC permit (for in-situ injections) would be required to implement this corrective measure. No other institutional requirements expected.	None expected. Potential for mobilization of redox-sensitive constituents exists during implementation of an anerobic attenuation approach. Following installation, the remedy is passive.	Medium (depending on expanse of injection network required and injectate volume required per derived design parameters)	Retained for further analysis; can be applied to retain Co as a sparingly soluble mineral or could be applied to raise the groundwater pH to promote immobilization through sorption mechanisms.
Hydraulic Containment (pump-and-treat)	Depending on the effluent management strategy, modifications to the existing NPDES permit may be required, or an underground injection control (UIC) permit may be needed if groundwater recirculation is chosen. In addition, deed restrictions may be required as long as groundwater conditions remain above regulatory standards for unrestricted use.	Above-ground treatment components may need to be present for an extended period of time, generating residuals requiring management and disposal.	Medium to high (depending on remedy duration, complexity of above-ground treatment system, and volume of water processed)	Retained for further analysis; extracted water could be routed to wastewater treatment infrastructure built for dewatering and closure of ponds at the site.
Monitored Natural Attenuation (MNA)	MNA may require the implementation of institutional controls, such as deed restrictions, until GWPS can be achieved.	Little to no physical disruption to remediation areas and no adverse construction-related impacts are expected on the surrounding community.	Low to medium	Retained for further analysis. The MNA Feasibility Report suggested that MNA may not be feasible alone for each of the SSL well locations, may be used in conjunction with other potential groundwater corrective measures.
In-Situ Solidification / Stabilization (ISS)	Deed restrictions may be necessary until groundwater concentrations are below GWPS. No other institutional requirements that may limit application of this technology are expected.	Changes to groundwater chemistry relative to the mobility of Appendix IV constituents following completion of ISS, where large volumes of amendments (typically portland cement) are added to the subsurface, are unknown and would require pilot testing.	Very high, significant equipment, labor, and reactant/stabilization demand.	Not Retained for further analysis. ISS has been more widely implemented as a source control measure. Because the cobalt detections at AP-1 are relatively low, cobalt SSLs are localized beyond the AP-1 boundary, and the occurrence of cobalt at these locations is likely due to groundwater pH variations along the flow paths, ISS is not practical for groundwater remediation.
Permeable Reactive Barrier (PRB)	Deed restrictions may be necessary for groundwater where a PRB is selected. No other institutional requirements are expected.	None expected. Following installation, the remedy is passive. However, certain treatment media (such as ZVI) have the potential to mobilize naturally occurring constituents outside the flow path of the PRB.	Medium to high (for installation) - minimal O&M requirements if replacement is not necessary	Retained for further analysis; capable of treating Co when PRB can be placed appropriately given physical Site constraints.

TABLE 1
EVALUATION OF REMEDIAL TECHNOLOGIES
Georgia Power Company
Plant Scherer – Ash Pond 1
Monroe County, GA

Corrective Measure	REGULATORY CITATION FOR CRITERIA: 40 CFR 257.96(C)(1)		Relative Costs	Retention Evaluation
	Institutional Requirements	Other Env. Or Public Health Requirements		
Phytoremediation	Deed restrictions may be necessary for groundwater areas upgradient of the phytoremediation layout. No other institutional requirements are expected.	None expected. Following installation, the remedy is passive and does not require external energy.	Medium (for installation) - minimal O&M requirements	Not retained due to deficiencies/incompatibility with the relatively thick overburden, partially weathered rock, and site layout. Other options more suitable for this site.
Subsurface Vertical Barrier Walls (SVBW)	Deed restrictions may be necessary for groundwater areas in the vicinity of the barrier wall until remedial goals are met. No other institutional requirements are expected.	If groundwater extraction associated with barrier walls is necessary to maintain inward gradients, above-ground treatment components may need to be present for an extended period of time, generating residuals requiring management and disposal.	Medium to high (depending on length and depth of wall and need for treatment of extracted water)	Capable of limiting Co migration in groundwater, but not retained for further analysis due to the localized nature of the Co SSLs at this site.

Notes:

[1] Coordinates are in feet relative to North American Datum (NAD) 1983, State Plane, Georgia-West.

[2] Elevations shown are in datum NAVD88, which indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.

[3] Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.

[4] - = not applicable

[5] Total well depth accounts for sump if data provided on well construction logs.

[6] Elevation of the bottom of the outer well casing and elevation of top of open corehole.

[7] PWR = Partially Weathered Rock TWR = Transitionally Weathered Rock

TABLE 3
PROPOSED ACM SUPPLEMENTARY DATA COLLECTION TASKS FOR JANUARY THROUGH JUNE 2025
Georgia Power Company
Plant Scherer - Ash Pond 1
Monroe County, GA

Data Collection Event	Applicable CMs[1]	Applicability / Rationale	Field Component	Parameters of Interest (POI)
Groundwater Sampling	ISI P&T MNA PRB	Evaluation of attenuation mechanisms and rates and aquifer capacity for attenuation to determine the viability of applicable CMs for remedy selection.	Collect groundwater samples from existing well network currently sampled under the assessment monitoring program as well as additional site piezometers within migration pathway.	Routine App III/IV parameters. Other parameters: sulfide, iron, manganese, magnesium, sodium, potassium, bicarbonate alkalinity, dissolved organic carbon (DOC), and total hardness to be collected at select locations.
Soil Data Analysis	ISI MNA PRB	Evaluate soil data to determine attenuation mechanism and rates, aquifer attenuation and mineralogical characterization to support geochemical modeling.	No Field Component	Mineralogical characterization to support geochemical modeling.
Geochemical Modeling	ISI MNA	Evaluate attenuation mechanisms/rates and aquifer capacity for attenuation and/or mineralogical composition to determine the viability of MNA and/or the treatability through ISI.	No Field Component	Attenuation rates and aquifer capacity for attenuation.
Bench Scale Testing	ISI MNA	Proceed with bench scale testing of injectate amendments to confirm preliminary geochemical modeling results.	No Field Component	The final phase of bench scale testing which includes a design and implementation plan.

[1] Applicable Corrective Measures (CMs) retained for further evaluation:

a) Geochemical Approaches, In-Situ Injection (ISI)
b) Hydraulic Containment, Pump & Treat (P&T)
c) Monitored Natural Attenuation (MNA)
d) Permeable Reactive Barrier (PRB)

Latitude (North):	33.079999 - 33° 4' 48.00''
Longitude (West):	83.785944 - 83° 47' 9.40''
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	239936.4
UTM Y (Meters):	3663417.0
Elevation:	440 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	33083-A7 EAST JULIETTE, GA
Version Date:	1973

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

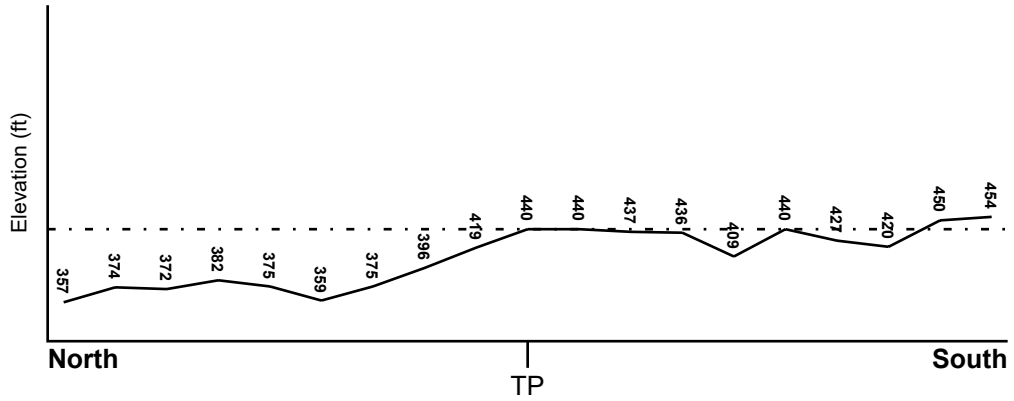
TOPOGRAPHIC INFORMATION

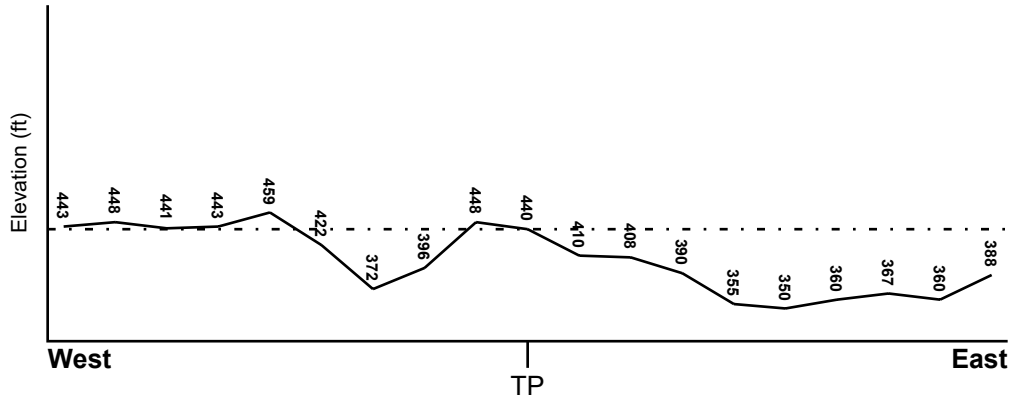
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 440 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
13207C0150D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EAST JULIETTE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Pennsylvanian
Series:	Felsic paragneiss and schist
Code:	mm1 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Metamorphic Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	DAVIDSON
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	HIGH
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.50 Min: 4.50
2	7 inches	12 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.50 Min: 4.50
3	12 inches	53 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.50 Min: 4.50
4	53 inches	72 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 6.50 Min: 4.50

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam
sandy clay loam
gravelly - clay loam

Surficial Soil Types: sandy loam
sandy clay loam
gravelly - clay loam

Shallow Soil Types: clay
sandy clay
sandy clay loam
gravelly - clay loam

Deeper Soil Types: fine sandy loam
sandy loam
loamy sand
weathered bedrock

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: Georgia GIS Clearinghouse
Telephone: 706-542-1581

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

A listing of Private Water Well locations
Georgia Department of Public Health
Telephone: (404) 657-2700
A listing of Private Water Well locations

Georgia Public Supply Wells
Source: Georgia Department of Community Affairs
Telephone: 404-894-0127

USGS Georgia Water Wells
Source: USGS, Georgia District Office
Telephone: 770-903-9100

DNR Managed Lands
Source: Department of Natural Resources
Telephone: 706-557-3032
This dataset provides 1:24,000-scale data depicting boundaries of land parcels making up the public lands managed by the Georgia Department of Natural Resources (GDNR). It includes polygon representations of State Parks, State Historic Parks, State Conservation Parks, State Historic Sites, Wildlife Management Areas, Public Fishing Areas, Fish Hatcheries, Natural Areas and other specially-designated areas. The data were collected and located by the Georgia Department of Natural Resources. Boundaries were digitized from survey plats or other information.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

ANALYSIS REPORT

Method Summaries *Test method information available upon request.*

S(T) and C(T): Total sulfur and total carbon by LECO, Method CSA06V
S(SO4): Sulfate by HCl digestion with ICP finish, Method CSA07V
S(S2-): Sulfide by calculation of S(T) - S(SO4)

TIC: Total inorganic carbon by coulometry, Method CSB02V
AP: Acid generating potential based on sulfide sulfur
NP: Modified neutralisation potential by excess acid addition and back titration to pH 8.3
Net NP: Net neutralisation potential = NP - AP
NPR: Neutralisation potential ratio = NP/AP

Metals by Aqua regia digest with ICP-OES/MS finish, Method ICP21B20/ICM21B20
Metals by multi-acid digest with ICP-OES/MS finish, Method ICP40Q12/IMS40Q12
Tessier Sequential Extraction - method available on request

TIMA DATA

prepared for:

WSP-USA Plant Scherer

CA20I-19515-01B
MI7008-MAR24
June 14, 2024

Prepared by:

Lain Glossop
Senior Mineralogist

Method Summary

Quantitative TIMA Analysis:

The mineralogical analysis was conducted with the TIMA-X technology. TIMA-X is an acronym for TESCAN Integrated Mineral Analyzer, which is one of the newest Automated Scanning Electron Microscopy (ASEM) instruments on the market. It is based on four Energy Dispersive X-Ray (EDX) silicon drift detectors (SDD) attached to a TESCAN MIRA (field-emission gun – FEG) platform, which also includes back scattered electron (BSE) and secondary electron (SE) detectors. The TIMA system utilizes both the EDX and BSE signals to identify minerals at each measurement point (or each homogenous segment of a grain, depending upon the analysis mode). It is optimized to deal with rapidly acquired low-count spectra. These EDX (and BSE) spectra (and BSE data) are compared to entries in a mineral library on a first match principle to identify the mineral phase, where this mineral library is based on theoretical mineral/phase composition or created by the user based on BSE, X-ray spectral windows counts, and/or ratios.

It must be noted, that due to the difference in grain size, all size fractions contain particles that are close to the measurement area (~3 µm) and the spacing of the measurement points and therefore can encounter less precision in the measurements. In addition, the X-ray beam can scatter at the edges of particles and can lead to inaccurate analytical results. As the particles become smaller, the edges constitute a larger percentage of the total particle mass. Therefore, some bias might be introduced, especially in the fine fraction, and caution is advised in interpreting the results in this particular fraction.

The limit of detection for any element within a phase is >1-2 wt% or 10,000 - 20,000 ppm by automated SEM based EDS methods. Any elements that are present below this level are likely not to be detected. Accurate element reconciliation between TIMA calculated values and geochemical assay values is not possible for elements that are distributed in phases where the level of the element does not exceed 10,000 - 20,000 PPM. Many minerals display compositional variation with solid solution between end-members. Therefore, in order to balance the TIMA calculated assay to direct chemical assay more accurately, EMPA is recommended to quantify the mineral chemistries in the sample.

It is not possible to distinguish chemically similar phases by any EDS based SEM system (e.g. magnetite and hematite). X-Ray diffraction is required to properly speciate chemically similar minerals, or polymorphs.
