CERTIFICATION STATEMENT

This *2026 Semiannual Groundwater Monitoring and Corrective Action Report, Plant Bowen Ash Pond 1 (AP-1)* has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Geosyntec Consultants, Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

Whitney B. Law	August 31, 2026
Georgia Professional Engineer No. 36641	Date

SUMMARY

This summary of the *2026 Semiannual Groundwater Monitoring and Corrective Action Report* provides the status of groundwater monitoring and corrective action program for the reporting period of January through June 2026 (referred to herein as the "semiannual reporting period") at Georgia Power Company's (Georgia Power's) Plant Bowen Ash Pond 1 (AP-1) (the Site). This summary was prepared by Geosyntec Consultants, Inc. (Geosyntec) on behalf of Georgia Power to meet the requirements listed in Part A, Section 6[1] of the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (federal CCR Rule) (40 Code of Federal Regulations [CFR] 257 Subpart D).

Plant Bowen and the Site

Plant Bowen is located at 317 Covered Bridge Rd SW, nine miles southwest of Cartersville in Bartow County, Georgia. Plant Bowen is a four-unit, coal-fired, electric-generating facility that commenced operations in the 1970s. CCR material resulting from power generation have historically been transferred and stored at the Site. In preparation for AP-1 closure, the plant completed the conversion to dry ash handling in early 2019 and AP-1 no longer receives ash. The Site is located on the western portion of the Plant Bowen property. The Georgia Environmental Protection Division (GA EPD) approved closure permit no. 008-021D(CCR) for AP-1 on February 17, 2022, and the Site closure is underway.

Groundwater at the Site is monitored using a comprehensive well network system that meets federal and state monitoring requirements. Routine sampling and reporting began after the background groundwater conditions were established between June 2016 and August 2017. Based on groundwater conditions at the Site, an assessment monitoring program and assessment of corrective measures (ACM) program were established in January 2018 and January 2019, respectively. During the semiannual reporting period,

[1] 80 FR 21468, Apr. 17, 2015, as amended at 81 FR 51807, Aug. 5, 2016; 83 FR 36452, July 30, 2018; 85 FR 53561, Aug. 28, 2020

the Site remained in assessment monitoring as corrective measures are being evaluated. A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD in February 28, 2023 with revisions provided on July 5, 2024 (Geosyntec, 2023c, GEOS ID 739305; Geosyntec, 2024b, GEOS ID 854212). Following GA EPD's approval of the *BGWC-22 Pilot Study Workplan* (Geosyntec, 2025b) on March 14, 2025, a pilot study was initiated at AP-1 in support of the ongoing remedy selection process in April 2025. The pilot study was completed with the last performance monitoring event in February 2026 upon GA EPD's approval of the proposed reduction of pilot study post-injection monitoring request letter dated April 1, 2026. The *Pilot Study Summary Report* summarizing the pilot studies conducted and performance results was submitted to GA EPD under separate cover on July 31, 2026.

During the semiannual reporting period, Geosyntec conducted a single groundwater sampling event in January/February 2026 in support of the assessment monitoring program. Groundwater samples were submitted to Pace Analytical Services, LLC (Pace Analytical), for analysis. Per the federal CCR Rule, groundwater data from the semiannual assessment monitoring event conducted during the semiannual reporting period were evaluated in accordance with the certified statistical methods. The evaluations identified statistically significant values of select Appendix III [2] and Appendix IV[3] constituents in excess of established groundwater protection standards (GWPS) in select monitoring wells, as summarized in the table below for the semiannual reporting period.

Based on a review of the Appendix III and Appendix IV statistical results completed for the groundwater monitoring and corrective action program for the semiannual reporting period, the Site will continue in assessment monitoring. Georgia Power will continue routine groundwater monitoring and reporting at the Site. Reports will be posted to Georgia Power's CCR Rule Compliance website and provided to GA EPD semiannually.

[2] Boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids
[3] Antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, fluoride, lead, lithium, mercury, molybdenum, selenium, thallium, and radium 226 + 228

Appendix III Constituent	January/February 2026
Boron	BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-19, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, BGWC-52
Calcium	BGWC-7, BGWC-12, BGWC-14A, BGWC-16, BGWC-20, BGWC-22, BGWC-23, BGWC-24
Chloride	BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, BGWC-52
pH	BGWC-16, BGWC-18
Sulfate	BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-52
Total Dissolved Solids	BGWC-7, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24
Appendix IV Constituent[4]	**January/February 2026**
Arsenic[5]	BGWC-34D
Cobalt	BGWC-16, BGWC-22
Lithium	BGWC-20
Molybdenum	BGWC-43D

[4] A statistically significant level (SSL)-related constituent is determined by comparing the confidence intervals developed to either the constituent's maximum contaminant level (MCL), if available; where an MCL has not been established, then a CCR-rule specific GWPS; or background concentrations for constituents where the concentration is greater than the MCL or rule-specified GWPS.

1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (federal CCR Rule) (40 Code of Federal Regulations [CFR] Part 257, Subpart D) and the Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10, Geosyntec Consultants, Inc. (Geosyntec) has prepared this *2026 Semiannual Groundwater Monitoring and Corrective Action Report* to document groundwater monitoring activities conducted at Georgia Power Company (Georgia Power) Plant Bowen (Site) Ash Pond 1 (AP-1) for the reporting period of January through June 2026 (referred to herein as the "semiannual reporting period").

Groundwater monitoring and reporting for the CCR unit is performed in accordance with the monitoring requirements of § 257.90 through § 257.95 of the federal CCR Rule, and GA EPD Rules for Solid Waste Management 391-3-4-.10(6). To specify groundwater monitoring requirements, GA EPD rule 391-3-4-.10(6)(a) incorporates by reference the federal CCR Rule. For ease of reference, the federal CCR Rule is cited within this report in lieu of citing both sets of regulations. Also, the closure permit issued by GA EPD (i.e., no. 008-021D(CCR)) stipulates that Georgia Power must maintain the groundwater monitoring system and monitor the groundwater in accordance with the approved site-specific groundwater monitoring plan and GA EPD rule 391-3-4-.10 as part of the closure and post-closure care programs.

Due to statistically significant levels (SSLs) of cobalt and molybdenum reported in the *2018 Annual Groundwater Monitoring and Corrective Action Report* (Geosyntec, 2019a), Georgia Power initiated an assessment of corrective measures (ACM) for AP-1 in January 2019. Pursuant to § 257.96(b), Georgia Power continues to monitor groundwater associated with AP-1 in accordance with the assessment monitoring program established for the unit in 2018, including semiannual monitoring and reporting pursuant to § 257.90 through § 257.95 of the federal CCR Rule and GA EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). A *Draft Remedy Selection Report,* which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD on February 28, 2023 with revisions provided on July 5, 2024, (Geosyntec, 2023c, GEOS ID 739305; Geosyntec, 2024b, GEOS ID 854212). With GA EPD approval in March 2025, a pilot study was initiated to address the SSL of cobalt at BGWC-22.

The current reporting period groundwater data indicate that the identified SSLs of arsenic in BGWC-34D, cobalt in BGWC-22 and BGWC-16, molybdenum in BGWC-43D, and lithium in BGWC-20 are horizontally and vertically delineated to below their corresponding groundwater protection standards (GWPS) and contained within the property boundary or resolved with a previously approved alternate source demonstration (ASD) (Geosyntec, 2021b). Additional data related to the SSL of lithium in BGWC-20 are being collected and will be summarized in a future *Draft Remedy Selection Report Addendum*, which will be submitted to GA EPD under separate cover.

1.1 Site Description and Background

Plant Bowen is a four-unit, coal-fired, electric-generating facility that commenced operations in the 1970s. The plant is located nine miles southwest of Cartersville in Bartow County, Georgia. The plant is bordered by the Etowah River to the north and east, and sparsely populated, forested, rural and industrial land on the south and west (**Figure 1**).

AP-1 at the Site occupies an area of approximately 254 acres. In preparation for AP-1 closure, the plant completed the conversion to dry ash handling in early 2019, and AP-1 no longer receives ash. Georgia Power submitted to GA EPD a notice of intent (NOI) stating that waste stream flows are no longer directed to AP-1, effective December 31, 2020. Georgia Power began closure of AP-1 in 2021 by excavation and consolidation of CCR material into an approximately 144-acre lined, multi-cell storage facility situated within the current footprint of AP-1. Closure activities are conducted in accordance with § 257.102 and corresponding Rule 391-3-4-.10(7)(b). The proposed closure approach provides a source control measure that reduces the potential for migration of CCR constituents to groundwater. Details of the closure approach are included in the 2021 Closure Plan and published to Georgia Power's CCR Rule Compliance website. The Closure Plan was approved by GA EPD on February 21, 2022, through an issued CCR Permit (008-021D(CCR)). CCR was certified removed from Cell 1A and 1B and liner placement has been completed (**Figure 2**). Cell 3 CCR removal is underway.

1.2 Regional Geology and Hydrogeologic Setting

The following section summarizes the geologic and hydrogeologic conditions at AP-1 as described in the *Hydrogeologic Assessment Report (Revision 3) – AP-1* (HAR Rev 3) (Geosyntec, 2021c) prepared in support of the AP-1 solid waste handling permit.

1.2.1 Regional and Site Geology

The Site is located within the Great Valley District of the Valley and Ridge Physiographic Province (Valley and Ridge) in northwest Georgia. The Valley and Ridge is characterized by Paleozoic sedimentary rocks that have been folded and faulted into the ridges and valleys that gave this region its name. The floor of the valley is underlain by shales, dolomites, and limestones of Cambrian and Ordovician age. Geologic mapping performed by Lawton et al. (1976) indicates that the Site is underlain by the Ordovician-Cambrian age Knox Dolomite and the Ordovician age Newala Limestone. Based on review of subsurface investigations at the Site, the bedrock is described as predominantly dolomite. The overall Site is underlain primarily by residuum and competent dolomite/limestone bedrock. AP-1 is underlain primarily by three units: (i) fill material consisting of earthen embankments and CCR material; (ii) residuum; and (iii) competent dolomite/limestone bedrock.

Based on subsurface investigations, the residuum at the Site is the result of in-place weathering of the underlying dolomite/limestone bedrock. The residuum consists mainly of mottled light brown to red to yellow, low to high plasticity, stiff to very stiff clay, silt, and silty clay. Most soils contain varying amounts of black chert nodules and chert gravel. The bedrock beneath the Site is described as light to dark gray, fine to medium-grained, thinly bedded to massive, dense, and hard dolomite, limestone, and dolomitic limestone. Some evidence of weathering along fracture or bedding surfaces is observed, with some manganese or iron oxide staining. Abundant calcite veins and occasional zones of healed dolomite breccia are observed throughout the bedrock. Solution features such as voids in the underlying limestone/dolomite bedrock have formed in the bedrock over geological timeframes, primarily along pre-existing discontinuities such as joints and bedding planes. At the Site, these solution features are typically filled with residuum from the in-place weathering of the bedrock or the downward migration of the overlying residuum, but they may also be open, or water filled.

1.2.2 Hydrogeologic Setting

The uppermost aquifer at the Site occurs near the interface of the residuum and the fractured and solutioned bedrock. Groundwater recharge is by precipitation infiltrating through the residuum to bedrock, or in bedrock outcrop areas through direct infiltration into the bedrock. Groundwater flow in bedrock is under unconfined to semi-confined conditions from the mantle of overlying lower-permeability residuum and is controlled by secondary porosity along fractures and solution-enhanced features that are typically

filled with residuum. Based on observations of residuum soil types, horizontal hydraulic conductivity values, and boring logs and geophysical evaluations, the movement of groundwater in the clay-rich residuum and upper weathered bedrock zone is slow and likely behaves as flow through low-permeability porous media.

1.3 Groundwater Monitoring Well Network

In accordance with § 257.91, a groundwater monitoring system was installed at AP-1 that consists of a sufficient number of wells installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer to represent the groundwater quality both upgradient of the unit (i.e., background conditions) and passing the waste boundary of the unit. The number, spacing, and depths of the groundwater monitoring wells were selected based on the characterization of site-specific hydrogeologic conditions.

As part of the assessment monitoring program, assessment monitoring wells have been installed since 2018 to supplement the pre-existing detection monitoring wells and characterize the nature and extent of SSLs in groundwater downgradient of AP-1. Pursuant to § 257.195(g)(1)(iv), the wells classified as "assessment monitoring wells" will continue to be sampled concurrently with the detection monitoring well network as part of the ongoing assessment groundwater monitoring program.

An on-site network of piezometers is used in combination with the detection and assessment monitoring well networks to gauge water levels to define groundwater flow direction and gradients.

The locations of the current detection monitoring wells, assessment monitoring wells, and piezometers are shown on **Figure 2**; well and piezometer construction details are listed in **Table 1**.

2.0 GROUNDWATER MONITORING ACTIVITIES

In accordance with § 257.90(e), the following describes monitoring-related activities performed during the semiannual reporting period and discusses any change in status of the monitoring program. Groundwater sampling was performed in accordance with § 257.93.

2.1 Monitoring Well Installation and Maintenance

No additional detection monitoring wells, assessment wells, or piezometers were installed during this semiannual reporting period. However, monitoring wells BGWC-20 and BGWC-43D were redeveloped on January 7, 2026, prior to the semiannual sampling event.

The well and piezometer networks are inspected semiannually to evaluate if any repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). In January/February 2026, the networks were inspected and no necessary corrective actions were identified, as documented in **Appendix A**. This documentation was prepared under the direction of a professional geologist or engineer registered in the State of Georgia.

2.2 Assessment Monitoring

Georgia Power initiated an assessment monitoring program for groundwater at AP-1 in January 2018 based on statistically significant increases (SSIs) of Appendix III constituents documented in the *2017 Annual Groundwater Monitoring and Corrective Action Report* (Anchor QEA, 2018). A notice of assessment monitoring was placed in the operating record on May 15, 2018. Currently identified SSLs of Appendix IV constituents exceeding their respective GWPS at AP-1 are cobalt in BGWC-16 and BGWC-22, arsenic in BGWC-34D, lithium in BGWC-20, and molybdenum in BGWC-43D. Monitoring well BGWC-38D exhibited an SSL of molybdenum in the past. Concentrations of molybdenum have decreased to less than the GWPS and the statistical analysis no longer indicates an SSL in this well.

Pursuant to § 257.96, an ACM was initiated for AP-1 in January 2019. An *Assessment of Corrective Measures Report – Plant Bowen Ash Pond 1 (AP-1)* (ACM Report) was subsequently prepared for AP-1 (Geosyntec, 2019b) and submitted to GA EPD in June 2019 and posted to the CCR compliance website in July 2019. In accordance with §

257.96(b), groundwater continues to be monitored at AP-1 under the assessment monitoring program while the ACM phase is implemented.

In support of the routine assessment monitoring program, a semiannual assessment monitoring event was conducted in January/February 2026. Due to suspect data for mercury reported for BGWC-24, this well was resampled on April 9, 2024; the resample result is more consistent with historical values. The wells sampled and the dates the samples were collected at AP-1 during the semiannual reporting period are summarized in **Table 2**. Details of these events and analytical results are discussed in Section 3.

2.3 Additional Groundwater Evaluations

Groundwater samples were collected from the entire AP-1 detection and assessment well networks during the January/February 2026 event and were analyzed for major cations, major anions, iron, and manganese. The data were collected in support of evaluating the geochemical composition of groundwater in conjunction with the ACM activities.

Additionally, supplemental groundwater samples were collected from BGWC-20 on April 7, 2026, for select Appendix III, Appendix IV, and geochemical parameters to provide additional data in support of the lithium SSL evaluation.

2.4 Assessment of Corrective Measures

To support remedial design, a pre-design investigation (PDI) including a high-resolution site characterization, treatability study, and pilot study was initiated in June 2023. The results of the high-resolution site characterization and treatability study were summarized in the *BGWC-22 Pilot Study Workplan* (Geosyntec, 2025b) and submitted to GA EPD on February 7, 2025. The BGWC-22 workplan was subsequently approved by GA EPD on March 14, 2025.

The bench scale laboratory treatability study concluded during the first half of 2025 to inform remedial design for the proposed remedy to address cobalt at BGWC-22 and BGWC-16.

Following GA EPD approval of the *BGWC-22 Pilot Study Workplan* (Geosyntec, 2025b) on March 14, 2025, a geochemical injection was performed from April 22 to 27 and from July 7 to 17, 2025. A post-injection performance program was initiated on May 1, 2025. Details of these events and analytical results are discussed in Section 6 of this report. Based on the stabilized performance data observed in recent monitoring events, a request

to reduce the duration of the post-injection performance program was submitted to GA EPD on January 15, 2026 (Geosyntec, 2026) and subsequently approved on April 1, 2026. The pilot study was concluded with the final post-injection performance monitoring event completed in February 2026. A Pilot Study Summary Report (PSSR) was prepared and submitted to GA EPD in a separate cover on July 31, 2026 (Geosyntec, 2026c).

3.0 SAMPLING METHODOLOGY AND ANALYSES

The following section presents a summary of the field sampling procedures that were implemented, and the groundwater sampling results that were obtained in connection with the assessment monitoring program conducted at AP-1 during the semiannual reporting period.

3.1 Groundwater and Surface Water Level Measurement

A synoptic round of depth-to-groundwater-level measurements were recorded from the AP-1 wells and piezometers during the January/February (January) 2026 assessment monitoring event and used to calculate the corresponding groundwater elevations, which are presented in **Table 3**. The January 2026 elevations are generally representative of the groundwater elevations reported for prior monitoring events.

Surface water elevations were recorded along the Etowah River, Euharlee Creek, and General Service Water Pond (GSWP) using transducers installed at the locations indicated on **Figure 2**.

The groundwater and surface water elevation data were used to prepare potentiometric surface maps for the January 2026 event, which are presented on **Figure 3**. Groundwater flow pathways at the Site are expected to be influenced by solution features, fractures, and weathered zones in the upper bedrock. Interpretation of the potentiometric surface contours indicates that groundwater generally flows to the north, northwest, and west. A component of flow in the southernmost portion of AP-1 is to the south and west, likely due to groundwater mounding related to historical free water storage at the former recycle pond at the southern end of AP-1 (now decommissioned), the influence of which has reduced since closure activities began in 2021. Under post-closure conditions, the groundwater flow direction is anticipated to resemble the regional flow regime more closely (south to north).

3.2 Groundwater Gradient and Flow Velocity

The horizontal groundwater hydraulic gradients within the residuum and fractured and solutioned bedrock of the uppermost aquifer beneath AP-1 were calculated using groundwater elevation data recorded during the January 2026 gauging event, and along three main interpreted groundwater flow paths to account for changing flow directions underlying AP-1, as discussed in Section 3.1 (i.e., north, northwest, west, and south/southwest). Horizontal hydraulic gradients were calculated between the following

well pairs: BGWC-9/PZ-1, BGWC-20/BGWC-31, and BGWC-24/BGWC-40. The supporting calculations are presented in **Table 4**; the locations of the flow paths used in the calculations and associated potentiometric contour lines are shown on **Figure 3**. The calculated hydraulic gradient along the north, west, and south/southwest flow paths for the semiannual reporting period are 0.015 feet per foot (ft/ft), 0.018 ft/ft, and 0.030 ft/ft, respectively.

Because of lithologic heterogeneity and anisotropic groundwater flow, groundwater velocity calculations using derivations of Darcy's Law, or other methods, may not capture the full range and distribution of flow velocities beneath and around AP-1 (Geosyntec, 2021c). Groundwater flow velocity calculations are provided as a general estimate of groundwater flow velocity at the site based on available information and assumptions described below.

The approximate horizontal flow velocities along the north, west, and south/southwest flow paths were calculated using the following derivative of Darcy's Law. The calculations are presented on **Table 4**.

$$V = \frac{K_h * i}{n_e}$$

Where:

V = Groundwater flow velocity $\left(\frac{feet}{day}\right)$

K_h = Horizontal Hydraulic Conductivity $\left(\frac{feet}{day}\right)$

i = Horizontal hydraulic gradient $\left(\frac{feet}{foot}\right) = \frac{h_1 - h_2}{L}$

h_1 and h_2 = Groundwater elevation at location 1 and 2

L = distance between location 1 and 2

n_e = Effective porosity

Groundwater flow in bedrock is controlled by secondary porosity features that are typically filled with residuum. Based on the range of hydraulic conductivity measurements from wells and piezometers screened in the upper bedrock at AP-1, flow velocities were calculated using: (i) the geometric mean and the highest of the observed

horizontal hydraulic conductivity (K_h) values as presented in the HAR Rev 3 (Geosyntec, 2021c); (ii) the average hydraulic gradients presented at the beginning of Section 3.2; and (iii) an estimated effective porosity (n_e) of 0.3 for the fractured and solutioned dolomite/limestone bedrock (Geosyntec, 2021c).

Horizontal hydraulic conductivity values measured for bedrock ranged from 3.0 x 10^{-2} to 33.0 feet per day (ft/day), with a geometric mean of 2.4 ft/day. Using the geometric mean K_h value of 2.4 ft/day for the bedrock, the calculated flow velocities along the north, west, and south/southwest flow paths are 0.12 ft/day, 0.14 ft/day, and 0.24 ft/day, respectively. This variability in calculated groundwater flow velocity is consistent with groundwater flow in dolomite/limestone bedrock controlled by secondary porosity features that are typically filled with residuum.

3.3 Groundwater Sampling Procedures

Groundwater samples were collected using low-flow sampling procedures in accordance with § 257.93(a). Purging and sampling was performed using dedicated bladder pumps with dedicated tubing, non-dedicated bladder pumps, and peristaltic pumps. For wells sampled with non-dedicated bladder and peristaltic pumps, the pump intake was lowered to the midpoint of the well screen (or as appropriate based on the groundwater level). Non-dedicated bladder pump and peristaltic pump samples were collected using new disposable polyethylene tubing; all non-dedicated tubing was disposed of following the sampling event. All non-disposable equipment was decontaminated before use and between well locations.

An in-situ water quality field meter (Aqua TROLL 400) was used to monitor and record field water quality parameters [i.e., pH, conductivity, dissolved oxygen (DO), temperature, and oxidation reduction potential (ORP)] during well purging to verify stabilization prior to sampling. Turbidity was monitored using a LaMotte 2020we (or similar) portable turbidity meter. Groundwater samples were collected once the following stabilization criteria were met:

- pH ± 0.1 standard units (s.u.).
- Conductivity ± 5%.
- ± 0.2 milligrams per liter (mg/L) or ± 10% (whichever is greater) for DO > 0.5 mg/L. No criterion applies if DO < 0.5 mg/L, record only.

- Turbidity measured less than 5 nephelometric turbidity units (NTU) or measured between 5 and 10 NTU following three hours of purging.

Following purging, and once stabilization was achieved, unfiltered samples were collected into appropriately preserved laboratory-supplied sample containers. Sample bottles were placed in ice-packed coolers and submitted to Pace Analytical Services, LLC (Pace Analytical), following chain-of-custody protocol. The field sampling and equipment calibration forms generated during the semiannual reporting period are provided in **Appendix B**.

3.4 Laboratory Analyses

Laboratory analyses were performed by Pace Analytical, which is accredited by the National Environmental Laboratory Accreditation Program (NELAP). Pace Analytical maintains a NELAP certification for the Appendix III and Appendix IV constituents and the geochemical parameters analyzed for this project. Analytical methods used for groundwater sample analysis are listed in the analytical laboratory reports included in **Appendix B**. The groundwater results from the semiannual reporting period are summarized in **Table 5**.

3.5 Quality Assurance and Quality Control Summary

Quality assurance/quality control (QA/QC) samples were collected during the groundwater monitoring events at the minimum rate of one QA/QC sample per 10 groundwater samples and included the following: field duplicates, equipment blanks, and field blank samples. QA/QC samples were collected in appropriately preserved laboratory-provided sample containers and submitted under the same chain of custody as the primary samples for analysis of the same constituents by Pace Analytical.

In addition to collecting QA/QC samples, the data were validated based on the pertinent methods referenced in the laboratory reports, professional and technical judgment, and applicable federal and site-specific guidance documents (USEPA, 2011; USEPA, 2017). Where necessary, the data were qualified with supporting documentation and justifications. The validated data meet project objectives and the associated data validation reports are provided in **Appendix B**, along with the laboratory reports.

4.0 STATISTICAL ANALYSIS

The following section summarizes the statistical analysis of Appendix III groundwater monitoring data performed pursuant to § 257.93. In addition, pursuant to § 257.95(d)(2), Georgia Power established GWPS for the Appendix IV constituents and completed statistical analyses of the Appendix IV groundwater monitoring data obtained during the semiannual reporting period. The data were analyzed by Groundwater Stats Consulting (GSC); the reports generated from the analyses are provided in **Appendix C**.

4.1 Statistical Methods

Groundwater data from the semiannual reporting period were statistically analyzed in accordance with the Professional Engineer-certified (PE-certified) Statistical Analysis Method Certification (October 2017, revised January 2020) (Anchor QEA, 2017; Geosyntec, 2020). The Sanitas groundwater statistical software was used to perform the statistical analyses. Sanitas is a decision-support software package that incorporates the statistical tests required of Subtitle C and D facilities by USEPA regulations and guidance as recommended in the USEPA document *Statistical Analysis of Groundwater Data at RCRA Facilities Unified Guidance* (Unified Guidance) (USEPA, 2009).

Appendix III statistical analysis was performed to assess if Appendix III constituents have returned to background levels. Appendix IV constituents were evaluated to assess if concentrations statistically exceeded the established GWPS. Detailed statistical methods used for Appendix III and Appendix IV constituents are discussed in the statistical analysis reports provided in **Appendix C** and summarized in Sections 4.1.1 and 4.1.2. The GWPS were finalized pursuant to § 257.95(d)(2) and presented in **Table 6**.

4.1.1 Appendix III Statistical Methods

Based on guidance from GA EPD, statistical tests used to evaluate the groundwater monitoring data consist of interwell prediction limits (PLs) combined with a 1-of-2 verification resample plan for each of the Appendix III constituents. Interwell PLs pool upgradient well data to establish a background limit for an individual constituent, and the most recent sample from each downgradient well is compared to the same limit for each constituent to assess whether there are SSIs. An "initial exceedance" occurs when an Appendix III constituent reported in the groundwater of a downgradient detection monitoring well exceeds the constituent's associated PL. The 1-of-2 resample plan allows for collection of an independent resample. A confirmed exceedance is noted only

when the resample confirms the initial exceedance by also exceeding the statistical limit. If the resample falls within its respective PL, no exceedance is declared.

4.1.2 Appendix IV Statistical Methods

To statistically compare groundwater data to GWPS, confidence intervals are constructed for each of the detected Appendix IV constituents in each downgradient detection and assessment monitoring well. In accordance with Section 21.1.1 of the Unified Guidance (USEPA, 2009), four independent data are the minimum population size recommended to construct confidence intervals required to assess SSLs for Appendix IV constituents. Due to previous non-routine (or ACM investigation) sampling, some Appendix IV constituents at a well location have differing number of analytical data points.

The confidence intervals are compared to the GWPS. Only when the entire confidence interval is above a GWPS is the well/constituent pair considered to exceed its GWPS. If a confidence interval exceeds a GWPS, an SSL exceedance is identified.

USEPA revised the federal CCR Rule on July 30, 2018, updating GWPS for cobalt, lead, lithium, and molybdenum. As described in § 257.95(h)(1-3), the GWPS is defined by the criteria below. These criteria were adopted into the GA EPD Rules for Solid Waste Management 391-3-4-.10 on February 22, 2022.

(1) The maximum contaminant level (MCL) established under § 141.62 and § 141.66.

(2) Where an MCL has not been established:

  (i) Cobalt 0.006 mg/L;

  (ii) Lead 0.015 mg/L;

  (iii) Lithium 0.04 mg/L; and

  (iv) Molybdenum 0.1 mg/L.

(3) Background levels for constituents where the background level is higher than the MCL or rule-specified GWPS.

Following the above requirements, GWPS have been established for statistical comparison of Appendix IV constituents and are presented in **Table 6**.

4.2 Statistical Analyses Results

Based on review of the Appendix III statistical analysis discussion presented in **Appendix C**, groundwater conditions have not returned to background and assessment monitoring should continue. Based on the statistical analysis of Appendix IV constituents, select Appendix IV constituents exceeded the GWPS during the semiannual reporting period:

4.2.1 January/February 2026 Data

- Arsenic: BGWC-34D
- Cobalt: BGWC-16, BGWC-22
- Lithium: BGWC-20
- Molybdenum: BGWC-43D

Wells with SSLs were further evaluated using the Sen's Slope/Mann Kendall trend test (**Appendix C**). Statistically significant increasing trends of cobalt in BGWC-16 and BGWC-22[6] as well as lithium in BGWC-20 and upgradient well BGWA-48D were identified during this reporting period. No statistically significant trends were identified for arsenic in BGWC-34D or molybdenum in BGWC-43D.

4.2.2 Summary of Statistical Analyses

The SSLs identified for the semiannual reporting period are generally consistent with the 2025 annual reporting period.

[6]Cobalt concentration reported for BGWC-22 for the February 2026 event was less than the GWPS and cobalt concentrations reported for BGWC-22 have been continually decreasing since September 2020.

5.0 NATURE AND EXTENT

Based on the groundwater data presented herein, the SSL of cobalt associated with BGWC-22 is horizontally and vertically delineated to below the GWPS as calculated by confidence intervals (statistical analysis) prepared for assessment wells BGWC-32 and BGWC-35D, respectively. Of note, the cobalt concentration reported for BGWC-22 is less than the GWPS for the most recent sampling event and cobalt concentrations reported for BGWC-22 have been continually decreasing since September 2020. The cobalt SSL identified in BGWC-16 is horizontally and vertically delineated by PZ-7 and BGWC-53D. The SSL of molybdenum identified in BGWC-43D is horizontally and vertically delineated by BGWC-50D and BGWC-49D, respectively. The horizontal and vertical delineation of the SSL of lithium in BGWC-20 to below GWPS is achieved by BGWC-31, BGWC-19, and BGWC-34D. The groundwater data from the January/February 2026 semiannual assessment monitoring event were used to generate the cobalt, lithium, and molybdenum iso-concentration maps presented on **Figure 4** through **Figure 6**.

Georgia Power will continue to monitor the assessment wells and adaptively manage the Site as new data become available.

5.1 Alternate Source Demonstration

An ASD was prepared and submitted to GA EPD on January 29, 2021, to address the SSL of arsenic in assessment well BGWC-34D (Geosyntec, 2021b). The ASD presented multiple lines of evidence that the arsenic groundwater concentrations detected in BGWC-34D are not associated with a release from AP-1 but are instead caused by a natural source of arsenic in the site-specific rock formation. The arsenic ASD was approved by GA EPD on August 18, 2021.

6.0 MONITORING PROGRAM STATUS

6.1 Assessment Monitoring Status

Pursuant to § 257.96(b), Georgia Power will continue to monitor the groundwater at AP-1 in accordance with the assessment monitoring program regulations of § 257.95 while ACM efforts are implemented to address SSL concentrations of cobalt, lithium, and molybdenum in select AP-1 wells. Pursuant to § 257.95(g)(1)(iv), the additional assessment wells will continue to be sampled as part of the ongoing assessment groundwater monitoring program.

6.2 Assessment of Corrective Measures

A *Draft Remedy Selection Repor*t was submitted to GA EPD on February 28, 2023 (Geosyntec, 2023c, GEOS ID 739305). A revision to the *Draft Remedy Selection Report* was submitted on July 5, 2024 (Geosyntec, 2024b, GEOS ID 854212). The submitted report summarizes:

- The current groundwater conceptual site model applicable to evaluating groundwater corrective measures proposed in the ACM Report (Geosyntec, 2019b);
- An evaluation of each corrective measure retained for further consideration following the completed investigations; and
- An evaluation of corrective measure options using the comparative criteria such as long- and short-term effectiveness and protectiveness, source control effectiveness, and ease of implementation. The *Draft Remedy Selection Report* presents geochemical approaches (in-situ injections) coupled with monitored natural attenuation as the proposed groundwater remedy for AP-1.

With the written concurrence letter from GA EPD, Georgia Power initiated a high-resolution site characterization in June 2023 to characterize and refine the proposed in-situ injection treatment area proximal to BGWC-22. Based upon the results of the high-resolution site characterization and treatability study, a Pilot Test Notification Form and the *BGWC-22 Pilot Study Workplan* (Geosyntec, 2025b) were submitted to GA EPD on February 7, 2025. The Pilot Test Notification Form was approved by GA EPD's Underground Injection Control (UIC) Program on March 11, 2025, and the workplan was

subsequently approved by GA EPD'S Solid Waste Management Program on March 14, 2025.

Following GA EPD approval, pilot study injection activities were performed from April 22 to 27 and from July 7 to 17, 2025, in accordance with the GA EPD approved Pilot Test Notification Form and pilot study workplan. A *Pilot Study Post-Injection Event Report* (Geosyntec, 2025c) summarizing pilot study activities from November 2024 to May 2025 was submitted to GA EPD on June 6, 2025.

A post-injection performance monitoring program was initiated in May 2025 and concluded in February 2026 during this reporting period with GA EPD's approval of the *Proposed Reduction of Pilot Study Post-Injection Monitoring* request letter (Geosyntec, 2026a). Geosyntec prepared a comprehensive *Pilot Study Summary Report* (Geosyntec, 2026c) summarizing the pilot study results, inclusive of the sample data collected for the duration of the post-injection performance monitoring and provides recommendations for the design and implementation of the full-scale groundwater remedy. The report was submitted to GA EPD under separate cover July 31, 2026; the report is also included in **Appendix D** of this semiannual groundwater monitoring report.

In response to the identification of SSL of lithium in BGWC-20 during the previous reporting period, additional data related to the lithium SSL are being collected and will be summarized in a future *Draft Remedy Selection Report Addendum*, which will be submitted to GA EPD under separate cover.

7.0 CONCLUSIONS AND FUTURE ACTIONS

This *2026 Semiannual Groundwater Monitoring and Corrective Action Report* for Plant Bowen AP-1 was prepared to fulfill the requirements of the federal CCR Rule and GA EPD Rules for Solid Waste Management 391-3-4-.10. Statistical analyses of the groundwater monitoring data for AP-1 for the semiannual reporting period identified the continued presence of SSLs of arsenic in BGWC-34D, cobalt in BGWC-22 and BGWC-16, molybdenum in BGWC-43D, as well as the SSL of lithium in BGWC-20 identified during the 2025 annual reporting period. Based on the most current groundwater quality, the SSLs in BGWC-16, BGWC-20, BGWC-22, BGWC-34D, and BGWC-43D are vertically and horizontally delineated to below their respective GWPS within the property boundary, or resolved with a previously approved ASD (Geosyntec, 2021b). In accordance with GA EPD Rule 391-3-4-.10(6) and § 257.96, the Site is in an ACM program for the identified SSLs.

Georgia Power will continue to monitor AP-1 groundwater under the assessment monitoring program as aspects of the ACM program are implemented to address the Appendix IV SSLs. A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD in February 2023 with revisions provided on July 5, 2024 (Geosyntec, 2023c, GEOS ID 739305; Geosyntec, 2024b, GEOS ID 854212). An addendum to the *Draft Remedy Selection Report* will be submitted to GA EPD to address the more recently identified lithium SSL in BGWC-20. The next routine semiannual assessment monitoring event for AP-1 is tentatively scheduled for July/August 2026. Progress made regarding the corrective action design evaluation will be documented in the next groundwater monitoring and corrective action report.

Notes:

(1) Coordinates in North American Datum (NAD) 1983, State Plane, Georgia-West, feet. Survey completed by GEL Solutions obtained June 10, 2020. Survey for wells BGWC-51 and BGWC-52 was obtained January 28, 2021. Survey for wells BGWC-49D and BGWC-50D was obtained March 25, 2021. Survey for wells PZ-7 and PZ-8 was obtained April 11, 2022. Survey for well PT-02 obtained November 20, 2023. Survey for well PT-03 obtained December 21, 2023. Survey for wells BGWC-53D, PT-04, PT-05, and PT-06 was obtained November 26, 2024.

(2) Elevations referenced to the North American Vertical Datum of 1988 (NAVD88). Survey completed by GEL Solutions obtained June 10, 2020. Survey for wells BGWC-51 and BGWC-52 was obtained January 28, 2021. Survey for wells BGWC-49D and BGWC-50D was obtained March 25, 2021. Survey for piezometers PZ-7 and PZ-8 was obtained April 11, 2022. Survey for piezometer PT-02 obtained November 20, 2023. Survey for piezometer PT-03 obtained December 21, 2023. Survey for well BGWC-53D and piezometers PT-04, PT-05, and PT-06 was obtained November 26, 2024.

(3) Survey points measured at nail or known reference point.

(4) Ground surface elevation measured at nail or known reference point on surface concrete pad.

(5) Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.

(6) Groundwater Zone Screened references USCS ASTM 2488 Visual Manual Group Symbol or well survey.

(7) Total well depth accounts for the sump if data is provided on the well construction logs.

(8) Temporary piezometers INW-01 and PT-02 through PT-06 were installed in support of an Assessment of Corrective Measures pre-design investigation and are not included in the monitoring well network.

Notes:
-- = Not applicable
BTOC = below top of casing
(1) Elevations referenced to the North American Vertical Datum of 1988 (NAVD88). Survey completed by GEL Solutions obtained June 10, 2020. Survey for wells BGWC-51 and BGWC-52 was obtained January 28, 2021. Survey for wells BGWC-49D and BGWC-50D was obtained March 25, 2021. Survey for piezometers PZ-7 and PZ-8 was obtained April 7, 2022. Survey for well PT-02 obtained November 20, 2023. Survey for well PT-03 obtained December 21, 2023. Survey completed by Gunnin Land. Surveying for piezometer Euharlee Creek was obtained March 10, 2023.
(2) Piezometers MW-108 and temporary piezometers INW-01 and PT-02 through PT-06 are not part of the monitoring well network. These piezometers are gauged on a routine basis to supplement data for groundwater contour development.
(3) Surface water elevations of Etowah River, Euharlee Creek, and General Service Water Pond are recorded using In-Situ® Instruments, Inc.'s Win-Situ® or HydroVu® reporting software and Level Troll 500® pressure transducers. The transducer that recorded data for Euharlee Creek is located in a tributary with surface elevations representative of Euharlee Creek conditions.

Table 4
Horizontal Groundwater Gradient and Flow Velocity Calculations
Georgia Power Company
Plant Bowen - Ash Pond
Bartow County, GA

Gauging Event	Well Pair	Groundwater Elevations in Well Pairs (ft)		Change in Elevation (ft)	Distance Between Well 1 and Well 2 (L) (ft)	Hydraulic Gradient (ft/ft)	Average Hydraulic Conductivity (K_h) (ft/day)	Estimated Effective Porosity (n_e)	Calculated Groundwater Flow Velocity (V) (ft/day)	Calculated Groundwater Flow Velocity (V) (ft/year)
January 29, 2026	BGWC-9 to PZ-1	661.02	646.39	14.63	1,004	0.015	2.4	0.3	0.12	42.5
January 29, 2026	BGWC-20 to BGWC-31	660.20	656.05	4.15	237	0.018	2.4	0.3	0.14	51.1
January 29, 2026	BGWC-24 to BGWC-40	685.89	664.37	21.52	717	0.030	2.4	0.3	0.24	87.6

Notes:
ft = feet
ft/day = feet per day
ft/ft = feet per foot
ft/year = feet per year
K_h = Average horizontal hydraulic conductivity (An average of 2.40 feet/day K_h was computed from slug test data derived from 26 locations in the bedrock across the Site)
n_e = effective porosity (Effective porosity of 30% was selected for the fractured and solutioned dolomite/limestone bedrock)
V = groundwater flow velocity
(1) Groundwater flow velocity equation: $V= (K_h * i)/n_e$
$i = h_1-h_2/L$ = horizontal hydraulic gradient (h_1 and h_2 = groundwater elevation at location 1 and 2)
L = distance between location 1 and 2 along the flow path.
(2) Flow path direction relative to the orientation of AP-1 and illustrated on Figure 3 of associated report.
(3) Elevations shown are referenced to datum NAVD88, which indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.

Notes:
mg/L - milligrams per liter
pCi/L - picocuries per liter
SU - Standard Units
NA - Indicates not analyzed
< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
U - Indicates the parameter was not detected above the analytical minimum detectable concentration (MDC) (Specific to combined radium 226/228)
H - Sample analysis performed beyond the recognized method holding time.
TDS - Total Dissolved Solids
(1) Appendix III/IV parameter per 40 CFR 257 Subpart D. Parameters are reported in units of milligrams per liter (mg/L), except for pH reported as s.u. (standard units) and combined radium reported as picocuries per liter (pCi/L).
(2) Metals were analyzed by EPA Method 6010D, 6020B, and 7470A, anions were analyzed by EPA Method 300.0, TDS was analyzed by SM2540C-2015, alkalinity was analyzed by Standard Method 2320B-2011, and combined radium 226/228 was analyzed by EPA Method 9315 and 9320.
(3) The pH value presented was recorded at the time of sample collection in the field.

Notes:
mg/L - milligrams per liter
pCi/L - picocuries per liter
SU - Standard Units
NA - Indicates not analyzed
< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
U - Indicates the parameter was not detected above the analytical minimum detectable concentration (MDC) (Specific to combined radium 226/228)
H - Sample analysis performed beyond the recognized method holding time.
TDS - Total Dissolved Solids
(1) Appendix III/IV parameter per 40 CFR 257 Subpart D. Parameters are reported in units of milligrams per liter (mg/L), except for pH reported as s.u. (standard units) and combined radium reported as picocuries per liter (pCi/L).
(2) Metals were analyzed by EPA Method 6010D, 6020B, and 7470A, anions were analyzed by EPA Method 300.0, TDS was analyzed by SM2540C-2015, alkalinity was analyzed by Standard Method 2320B-2011, and combined radium 226/228 was analyzed by EPA Method 9315 and 9320.
(3) The pH value presented was recorded at the time of sample collection in the field.

Chromium	mg/L	0.1	N/A	0.005	0.1
Cobalt	mg/L	N/A	0.006	0.005	0.006
Combined Radium 226 + 228	pCi/L	5	N/A	1.62	5
Fluoride	mg/L	4	N/A	0.57	4
Lead	mg/L	N/A	0.015	0.0024	0.015
Lithium	mg/L	N/A	0.04	0.0022	0.04
Mercury	mg/L	0.002	N/A	0.00022	0.002
Molybdenum	mg/L	N/A	0.1	0.01	0.1
Selenium	mg/L	0.05	N/A	0.005	0.05
Thallium	mg/L	0.002	N/A	0.00082	0.002

Notes:
CCR = Coal Combustion Residuals
EPA = Environmental Protection Agency
GWPS = Groundwater Protection Standard
MCL = Maximum Contaminant Level
mg/L = milligrams per liter
N/A = Not Applicable
pCi/L = picocuries per liter
(1) On February 22, 2022, the Georgia Environmental Protection Division (GA EPD) adopted the federally promulgated GWPS for cobalt, lithium, lead, and molybdenum.
(2) The background limits were used when determining the GWPS under 40 CFR 257.95(h) and GA EPD Rule 391-3-4-.10(6)(a). A cell with two values denotes that different background concentrations were calculated per semiannual event, presented in the order of the events.
(3) Under 40 CFR 257.95(h)(1-3) the GWPS is: (i) the maximum contaminant level (MCL) established under §§141.62 and 141.66 of this title; (ii) where an MCL has not been established a rule-specific GWPS; or (iii) background levels for constituents where the background level is higher than the MCL or rule-specified GWPS.
(4) The GWPS apply to the February 2026 sampling event.

Georgia Registered Professional Geologist No. 2316

Notes:
1. Water level elevations recorded on January 29, 2026. Elevation provided in feet referenced to the North American Vertical Datum (NAVD) 88. The Former Recycle Pond has been decommissioned.
2. Surface water elevations of Etowah River, Euharlee Creek, and General Service Water Pond are recorded using In-Situ® Instruments, Inc.'s WinSitu® or HydroVu® reporting software and Level Troll 500® pressure transducers. The transducer that recorded data for Euharlee Creek is located in a tributary with surface elevations representative of Euharlee Creek conditions.
3. The map shows only the wells/piezometers currently installed at the time of the gauging event.
4. Aerial photograph source for immediate vicinity of AP-1: Georgia Power Company, January 2026.
5. Aerial photograph source for surrounding area: Nearmap, March 2026.

RE: Project: Plant Bowen AP-1st SA
Pace Project No.: 92841933

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between February 03, 2026 and February 13, 2026. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

RE: Project: Plant Bowen AP-1st SA- RADs
Pace Project No.: 92841936

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between February 03, 2026 and February 13, 2026. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

Revision 1 (03/05/2026): Report revised to add missing samples originally not included.

Revision 2 (03/10/26): Report revised to update collected year to 2026.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen AP1 2026S1R1
Pace Project No.: 92854042

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Bowen-AP1-BGWC-20
Pace Project No.: 92853441

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on April 07, 2026. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

Revision 1 (05/04/2026): Collected times corrected on blank samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Pace Analytical Services, LLC
9800 Kincey Ave. Suite 100
Huntersville, NC 28078
(704)875-9092

QUALIFIERS

Project: Bowen-AP1-BGWC-20
Pace Project No.: 92853441

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92853441

[1]	GEOSYNTEC
[2]	DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

ANALYTE QUALIFIERS

J	Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

QUALIFIERS

Project: Plant Bowen AP-1st SA- RADs
Pace Project No.: 92841936

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92841936

[1] GEOSYNTEC

[2] DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

Sample ID	Type of Preservative	pH upon receipt	Date preservation adjusted	Time preservation adjusted	Amount of Preservative added	Lot #

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DENR Certification Office (i.e. Out of hold, incorrect preservative, out of temp, incorrect containers.

DC#_Title: ENV-FRM-HUN1-0083 v05_Sample Condition Upon Receipt

Effective Date: 05/24/2024

*Check mark top half of box if pH and/or dechlorination is verified and within the acceptance range for preservation samples.
Exceptions: VOA, Coliform, TOC, Oil and Grease, DRO/8015 (water) DOC, LLHg
**Bottom half of box is to list number of bottles
***Check all unpreserved Nitrates for chlorine

QUALIFIERS

Project: Plant Bowen AP-1st SA
Pace Project No.: 92841933

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92841933

[1]	GEOSYNTEC
[2]	DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

ANALYTE QUALIFIERS

1g	Analysis conducted outside method specifications. Sample evaporated in 104°C oven instead of a drying oven.
2g	The percent readback for the mid-level calibration standard was below laboratory acceptance limits. The result is reported since the continuing calibration verification (CCV) standard has the same true value concentration as the mid-level standard, and the bracketing CCVs were within acceptance limits.
3g	dilution due to sample reading OR
4g	sample reran to prove cleanliness
B	Analyte was detected in the associated method blank.
CU	The continuing calibration for this analyte is above laboratory acceptance limits. Analyte was not detected above the reporting limit in any of the associated samples.
H1	Analysis conducted outside the EPA method holding time.
J	Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.

QUALIFIERS

Project: Plant Bowen AP-1st SA
Pace Project No.: 92841933

ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

Pace	DC#_Title: ENV-FRM-HUN1-0083 v05_Sample Condition Upon Receipt
	Effective Date: 05/24/2024

Laboratory receiving samples:

Asheville ☐ Eden ☐ Greenwood ☐ Huntersville ☐ Raleigh ☐ Mechanicsville ☐ Atlanta ☑ Kernersville ☐

Sample Condition Upon Receipt

Client Name: GA Power

Project #: WO# : 92841933

92841933

Courier: ☐ Commercial ☐ Fed Ex ☑ Pace ☐ UPS ☐ USPS ☐ Other:____ ☐ Client

Custody Seal Present? ☐ Yes ☑ No **Seals Intact?** ☐ Yes ☐ No ☑ N/A

Date/Initials Person Examining Contents: 2/3/26 (JH)

Packing Material: ☐ Bubble Wrap ☐ Bubble Bags ☑ None ☐ Other

Biological Tissue Frozen? ☐ Yes ☐ No ☑ N/A

Thermometer: ☑ IR Gun ID: 083

Type of Ice: ☑ Wet ☐ Blue ☐ None

Cooler Temp: 2.2 **Correction Factor:** Add/Subtract (°C) 0.0

Temp should be above freezing to 6°C

☐ Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 2.2

USDA Regulated Soil (☐ N/A, water sample)

Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.

Memorandum

Date: 30 April 2026

To: Kristen Jurinko

From: Ashley Wilson

CC: K. Henderson

Subject: Stage 2A Data Validation - Level II Data Deliverables – Pace Analytical Services, LLC Project Numbers 92841933 and 92841936, Revision 3

SITE: Plant Bowen Ash Pond 1

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of thirty-five aqueous samples, four field duplicates, four equipment blanks and four field blanks collected 2-6 and 9-10 February 2026 as part of the Plant Bowen Ash Pond on-site sampling event.

The samples were analyzed at Pace Analytical Services, LLC, Mount Juliet, Tennessee, for the following analytical test:

- Lithium by United States (US) Environmental Protection Agency (EPA) Methods 3015/6020B

The samples were analyzed at Pace Analytical Services, LLC, Asheville, North Carolina, for the following analytical tests:

- Alkalinity by SM 2320B
- Total Dissolved Solids (TDS) by Standard Method (SM 2540C
- Sulfide by SM 4500-S2D
- Anions (Chloride, Fluoride and Sulfate) by US EPA Method 300.0

The samples were analyzed at Pace Analytical Services, LLC, West Columbia, South Carolina, for the following analytical tests:

- Metals by US EPA Methods 3005A/6020B
- Mercury by US EPA Method 7470A

The samples were analyzed at Pace Analytical Services, LLC, Greensburg, Pennsylvania, for the following analytical tests:

- Radium-226 by US EPA Method 9315

- Radium-228 by US EPA Method 9320
- Total Radium by Calculation

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives, with the following exceptions.

The non-detect results for samples BOW-BGWA-2, BOW-BGWC-24, BOW-BGWC-32, BOW-BGWC-35D, and BOW-BGWC-43D were R qualified as rejected due to holding time exceedance.

The qualified data that was not rejected should be used within the limitations of the qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- American National Standard, Verification and Validation of Radiological Data for use in Waste Management and Environmental Remediation, February 15, 2012 (ANSI/ANS-41.5-2012).

The following samples were analyzed and reported in the laboratory reports:

92841933047	92841936047	BOW-BGWC-22

The samples were received within 0-6 degrees Celsius (ºC). No sample preservation issues were noted by the laboratory.

Revisions were made to laboratory report 92841936 as listed below:

- Revision 1 (03/05/2026): Report revised to add missing samples originally not included.
- Revision 2 (03/10/26): Report revised to update collected year to 2026.
- Revision 3 (04/21/2026): Report revised to add the correct QC sheets.

1.0 METALS

The samples were analyzed for metals by US EPA methods 3015/6020B and 3005A/6020B. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine impact on data quality and usability.

1.1 Overall Assessment

1.1.1 Completeness

The metals data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.1.2 Analysis Anomaly

The continuing calibration verification (CCV) for calcium in batch 988592 associated with samples BOW-AP1-EB-01 and BOW-AP1-FB-01 was high and outside of laboratory specified acceptance criteria. Since calcium was not detected in samples BOW-AP1-EB-01 and BOW-AP1-FB-01, no qualifications were applied to the data.

The CCV for thallium in batch 989772 associated with the following samples was high and outside of laboratory specified acceptance criteria. Therefore, the concentration of thallium in BOW-BGWC-16 was J+ qualified as estimated with a high bias. However, the concentration was J qualified as estimated greater than the method detection limit (MDL) and less than the reporting limit (RL), the final qualification is J as estimated with no bias. Since thallium was nondetect in the remaining samples, no additional qualifications or bias were applied to the data.

Samples Associated with High CCV
BOW-BGWA-29
BOW-BGWA-47D
BOW-BGWA-48D
BOW-BGWC-10

Samples Associated with High CCV
BOW-BGWC-12
BOW-BGWC-16
BOW-BGWC-17
BOW-BGWC-18

Samples Associated with High CCV
BOW-BGWC-7
BOW-BGWC-8
BOW-BGWC-9

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
BOW-BGWC-16	Thallium	0.00023	J,CU	0.00023	J	CC2

mg/L-milligrams per liter
J-the result is less than the reporting limit, but greater than or equal to the method detection limit, and the concentration is an approximate value
CU-the continuing calibration for this analyte is above laboratory acceptance limits. Analyte was not detected above the reporting limit in the associated samples
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

The laboratory flagged the following samples for the percent readback for the mid-level calibration standard for calcium was below laboratory acceptance limits. Therefore, the concentration of calcium in these samples were J- qualified as estimated with a low bias.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWA-29	Calcium	21.3	M1,2g	21.3	J	CC2
BOW-BGWA-47D	Calcium	118	2g	118	J	CC2
BOW-BGWA-48D	Calcium	41.3	2g	41.3	J	CC2
BOW-BGWC-10	Calcium	70.7	2g	70.7	J	CC2
BOW-BGWC-30	Calcium	72.6	2g	72.6	J	CC2
BOW-BGWC-38D	Calcium	193	2g	193	J	CC2
BOW-BGWC-49D	Calcium	216	2g	216	J	CC2
BOW-BGWC-7	Calcium	121	2g	121	J	CC2
BOW-BGWC-8	Calcium	43.2	2g	43.2	J	CC2
BOW-BGWC-9	Calcium	75.5	2g	75.5	J	CC2

mg/L-milligrams per liter
2g-The percent readback for the mid-level calibration standard was below laboratory acceptance limits. The result is reported since the continuing calibration verification standard has the same true value concentration as the midlevel standard, and the bracketing continuing calibration verification standards were within acceptance limits.
M1-Matrix spike recovery exceeded quality control limits. Batch accepted based on laboratory control sample recovery.

1.2 Holding Time

The holding time for the metals analysis of a preserved water sample is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The metals were not detected in the method blanks at or above the MDLs, with the following exception.

Manganese [0.0023 milligrams per liter (mg/L)] was detected in the method blank in batch 989775 at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated concentration of manganese in sample BOW-BGWC-52 was U qualified as not detected at or above the RL. Since the remaining samples were either nondetect or detected at concentrations greater than five times the blank contamination, no qualifications were applied to those data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
BOW-BGWC-52	Manganese	0.0032	J,B	0.0050	U	BC1

mg/L-milligrams per liter
J-the result is less than the reporting limit, but greater than or equal to the method detection limit, and the concentration is an approximate value
B-analyte was detected in the associated method blank

1.4 Matrix Spike/Matrix Spike Duplicate

Matrix spike/matrix spike duplicate (MS/MSD) pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five sample set specific MS/MSD pairs were reported, using samples BOW-AP1-FD-02, BOW-BGWC-7, BOW-BGWA-29, BOW-BGWA-2, and BOW-AP1-FD-04. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of calcium and magnesium in the MS/MSD pair using sample BOW-BGWA-29 were high and low, respectively, and outside of the laboratory specified acceptance criteria. Since the calcium and magnesium concentrations in sample BOW-BGWA-29 were greater than four times the spike concentrations, no qualifications were applied to the data.

One or both recoveries of calcium and magnesium in the MS/MSD pair using sample BOW-BGWA-2 were low and outside of the laboratory specified acceptance criteria. Since the calcium and magnesium concentrations in sample BOW-BGWA-2 were greater than four times the spike concentrations, no qualifications were applied to the data.

One or both recoveries of boron and calcium in the MS/MSD pair using sample BOW-AP1-FD-04 were low or high and outside of the laboratory specified acceptance criteria. Since the boron and calcium concentrations in sample BOW-AP1-FD-04 were greater than four times the spike concentrations, no qualifications were applied to the data.

Batch MS/MSD pairs were also reported. Since these were batch QC, the results do not affect the samples in this data set, and qualifications were not applied to the data.

1.5 Laboratory Control Sample

Laboratory control samples (LCSs) were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCSs were reported with each batch. The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Blank

Four field blanks BOW-AP1-FB-01, BOW-AP1-FB-02, BOW-AP1-FB-03, and BOW-AP1-FB-04 were collected with the sample set. Metals were not detected in the field blanks at or above the MDLs, with the following exceptions.

Lithium (0.000730 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in field blank BOW-AP1-FB-01. Therefore, the estimated concentrations of lithium in the associated samples were U qualified as not detected at or above the RL.

Chromium (0.00025 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in field blank BOW-AP1-FB-03. Therefore, the estimated concentrations of chromium in the associated samples were U qualified as not detected at or above the RL.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
BOW-AP1-EB-01	Lithium	0.000611	J	0.00200	U	BFL
BOW-AP1-FD-01	Lithium	0.000922	J	0.00200	U	BFL
BOW-BGWA-47D	Lithium	0.000732	J	0.00200	U	BFL
BOW-BGWC-12	Lithium	0.00181	J	0.00200	U	BFL
BOW-BGWC-50D	Lithium	0.00173	J	0.00200	U	BFL
BOW-BGWC-9	Lithium	0.00180	J	0.00200	U	BFL
BOW-AP1-EB-03	Chromium	0.00026	J	0.0050	U	BFL
BOW-AP1-FD-03	Chromium	0.00060	J	0.0050	U	BFL
BOW-BGWA-2	Chromium	0.00055	J	0.0050	U	BFL
BOW-BGWA-29	Chromium	0.00054	J	0.0050	U	BFL
BOW-BGWC-19	Chromium	0.00035	J	0.0050	U	BFL

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
BOW-BGWC-23	Chromium	0.00042	J	0.0050	U	BFL
BOW-BGWC-32	Chromium	0.00053	J	0.0050	U	BFL
BOW-BGWC-36D	Chromium	0.00066	J	0.0050	U	BFL
BOW-BGWC-40	Chromium	0.00070	J	0.0050	U	BFL
BOW-BGWC-43D	Chromium	0.00025	J	0.0050	U	BFL
BOW-BGWC-51	Chromium	0.00051	J	0.0050	U	BFL
BOW-BGWC-52	Chromium	0.00044	J	0.0050	U	BFL

mg/L-milligrams per liter
J-the result is less than the reporting limit, but greater than or equal to the method detection limit, and the concentration is an approximate value

1.7 Equipment Blank

Four equipment blanks BOW-AP1-EB-01, BOW-AP1-EB-02, BOW-AP1-EB-03, and BOW-AP1-EB-04 were collected with the sample set. Metals were not detected in the equipment blanks at or above the MDLs, with the following exceptions.

Lithium (0.000611 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in field blank BOW-AP1-EB-01. Since the lithium concentration in BOW-AP1-EB-01 was previously qualified U qualified as nondetect due to field blank contamination, no additional qualifications were applied to the data.

Chromium (0.00026 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in field blank BOW-AP1-EB-03. Since the chromium concentration in BOW-AP1-EB-03 was previously U qualified as nondetect due to field blank contamination, no additional qualifications were applied to the data.

Lithium (0.000711 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in field blank BOW-AP1-EB-04. Therefore, the estimated concentration of lithium in associated sample BOW-BGWC-30 was U qualified as not detected at or above the RL.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
BOW-BGWC-30	Lithium	0.00199	J	0.00200	U	BEL

mg/L-milligrams per liter
J-the result is less than the reporting limit, but greater than or equal to the method detection limit, and the concentration is an approximate value

1.8 Field Duplicate

Four field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, and BOW-AP1-FD-04 were collected with the sample set. Acceptable precision (RPD ≤ 20% or difference < RL) was demonstrated between the field duplicates and the original samples BOW-BGWA-47D, BOW-BGWC-21, BOW-BGWC-52, and BOW-BGWC-22, respectively, with the following exceptions.

Arsenic was detected in field duplicate BOW-AP1-FD-01 at an estimated concentration greater than the MDL and less than the RL and not detected in parent sample BOW-BGWA-47D, resulting in a noncalculable RPD result. Since the absolute difference between the parent sample and field duplicate were less than the RL, no qualifications were applied to the data.

Arsenic was not detected in field duplicate BOW-AP1-FD-04 and was detected in parent sample BOW-BGWC-22 at an estimated concentration greater than the MDL and less than the RL, resulting in a noncalculable RPD result. Since the absolute difference between the parent sample and field duplicate were less than the RL, no qualifications were applied to the data.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

2.0 MERCURY

The samples were analyzed for mercury by US EPA method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Time
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Field Blank
- ✓ Equipment Blank
- ✓ Field Duplicate
- ✓ Sensitivity

2.1 Overall Assessment

The mercury data reported in this data set are considered usable for supporting project objectives. The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

2.2 Holding Time

The holding time for the mercury analysis of a water sample is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Mercury was not detected in the method blanks at or above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three sample set specific MS/MSD pairs were reported, using samples BOW-BGWC-12, BOW-BGWC-52, and BOW-BGWC-49D. The recovery and RPD results were within the laboratory specified acceptance criteria.

Batch MS/MSD pairs were also reported. Since these were batch QC, the results do not affect the samples in this data set, and qualifications were not applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the frequency for the number and types of samples analyzed (one per batch of 20 samples). LCSs were reported for each batch. The recovery results were within the laboratory specified acceptance criteria.

2.6 Field Blank

Four field blanks BOW-AP1-FB-01, BOW-AP1-FB-02, BOW-AP1-FB-03, and BOW-AP1-FB-04 were collected with the sample set. Mercury was not detected in the field blanks at or above the MDLs.

2.7 Equipment Blank

Four equipment blanks BOW-AP1-EB-01, BOW-AP1-EB-02, BOW-AP1-EB-03, and BOW-AP1-EB-04 were collected with the sample set. Mercury was not detected in the equipment blanks at or above the MDLs.

2.8 Field Duplicate

Four field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, and BOW-AP1-FD-04 were collected with the sample set. Acceptable precision (RPD < 20% or difference < RL) was demonstrated between the field duplicates and the original samples BOW-BGWA-47D, BOW-BGWC-21, BOW-BGWC-52, and BOW-BGWC-22, respectively.

2.9 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

3.0 WET CHEMISTRY

The samples were analyzed for TDS by Standard Method 2540C, alkalinity by Standard Method 2320B, sulfide by Standard Method 4500-S2D and anions (chloride, fluoride, and sulfate) by US EPA method 300.0.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine impact on data quality and usability.

⊗ Overall Assessment
⊗ Holding Times
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Laboratory Duplicate
✓ Field Blank
✓ Equipment Blank
✓ Field Duplicate
✓ Sensitivity

3.1 Overall Assessment

3.1.1 Completeness

The wet chemistry data reported in this data set are considered usable for supporting project objectives, with the following exceptions.

The non-detect results for samples BOW-BGWA-2, BOW-BGWC-24, BOW-BGWC-32, BOW-BGWC-35D, and BOW-BGWC-43D were R qualified as rejected due to holding time exceedance.

The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 98.5%.

3.1.2 Analysis Anomaly

The laboratory noted that samples analyzed for TDS in batch 990814 were evaporated in an oven at 104ºC instead of a drying oven at 180ºC as specified in the method. Therefore, the results in the associated samples were J qualified as estimated.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
BOW-BGWA-2	Total Dissolved Solids	243	1g	243	J	OT1
BOW-BGWC-23	Total Dissolved Solids	1160	1g	1160	J	OT1
BOW-BGWC-32	Total Dissolved Solids	850	1g	850	J	OT1
BOW-BGWC-35D	Total Dissolved Solids	2360	1g	2360	J	OT1
BOW-BGWC-43D	Total Dissolved Solids	1310	1g	1310	J	OT1

mg/L-milligrams per liter
1g-analysis conducted outside method specifications. Sample evaporated in 104°C oven instead of a drying oven.

3.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions (Chloride, Fluoride, and Sulfate)	US EPA Method 300	28 days from collection to analysis
Alkalinity (Total, Bicarbonate, and Carbonate)	SM 2320B	14 days from collection to analysis
Total Dissolved Solids	SM 2540C	7 days from collection to analysis

Analyte	Method	Holding Time
Sulfide	SM 4500-S2D	7 days from collection to analysis

The holding times were met for the sample analyses, with the following exception.

Sulfide was analyzed outside of the 7-day holding time for batches 990583 and 989822. Therefore, the nondetect results of sulfide in the associated samples were R qualified as rejected, and the detected concentration in sample BOW-BGWC-23 was J- qualified as estimated with a low bias.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
BOW-BGWA-2	Sulfide	0.022	U,H1	0.022	R	HT2
BOW-BGWC-23	Sulfide	1.2	H1	1.2	J-	HT2
BOW-BGWC-24	Sulfide	0.022	U,H1	0.022	R	HT2
BOW-BGWC-32	Sulfide	0.022	U,H1	0.022	R	HT2
BOW-BGWC-35D	Sulfide	0.022	U,H1	0.022	R	HT2
BOW-BGWC-43D	Sulfide	0.022	U,H1	0.022	R	HT2

mg/L-milligrams per liter
U-indicates the compound was analyzed for, but not detected
H1-analysis conducted outside the Environmental Protection Agency method holding time

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples).

One sample set specific MS/MSD pair was reported for total alkalinity using sample BOW-BGWC-20.

Sample set specific MS/MSD pairs were reported for sulfide using samples BOW-BGWC-30, BOW-BGWC-7, and BOW-PZ-7.

Sample set specific MS/MSD pair was reported for anions using samples BOW-AP1-FD-01, BOW-BGWA-29, BOW-BGWC-22, BOW-BGWC-25, BOW-BGWC-30, and BOW-BGWC-9.

The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of fluoride in the MS/MSD pair using sample BOW-BGWA-29 were low and outside the laboratory specified acceptance criteria. Therefore, the concentration of fluoride in sample BOW-BGWA-29 was J- qualified as estimated with a low bias.

The recoveries of sulfate in the MS/MSD pair using sample BOW-BGWC-9 were low and outside the laboratory specified acceptance criteria. Therefore, the concentration of sulfate in sample BOW-BGWC-9 was J- qualified as estimated with a low bias.

One or both recoveries of fluoride and sulfate in the MS/MSD pair using sample BOW-AP1-FD-01 were low and outside the laboratory specified acceptance criteria. Therefore, the concentrations of fluoride and sulfate in sample BOW-AP1-FD-01 was J- qualified as estimated with a low bias. Since the concentration of fluoride was J qualified as estimated greater than the MDL and less than the RL, the final qualification for fluoride in sample BOW-AP1-FD-01 was J qualified as estimated.

The recoveries of chloride in the MS/MSD pair using sample BOW-BGWC-30 were low and outside the laboratory specified acceptance criteria. Therefore, the concentration of chloride in sample BOW-BGWC-30 was J- qualified as estimated with a low bias.

The recoveries of chloride and sulfate in the MS/MSD pair using sample BOW-BGWC-22 were low and outside the laboratory specified acceptance criteria. Therefore, the concentrations of chloride and sulfate in sample BOW-BGWA-29 were J- qualified as estimated with a low bias.

Batch MS/MSD pairs were also reported for alkalinity, sulfide, and anions. Since these were batch QC there was no impact on the data and qualifications were not applied.

Sample ID	**Compound**	**Laboratory Result (mg/L)**	**Laboratory Flag**	**Validation Result (mg/L)**	**Validation Qualifier**	**DQM Reason Code**
BOW-AP1-FD-01	Fluoride	0.068	J,M1	0.068	J	MS1
BOW-AP1-FD-01	Sulfate	62.0	M1	62.0	J-	MS1
BOW-BGWA-29	Fluoride	0.23	M1	0.23	J-	MS1
BOW-BGWC-22	Chloride	131	M1	131	J-	MS1
BOW-BGWC-22	Sulfate	220	M1	220	J-	MS1
BOW-BGWC-9	Sulfate	98.4	M1	98.4	J-	MS1
BOW-BGWC-30	Chloride	76.8	M1	76.8	J-	MS1

mg/L-milligrams per liter
J-Estimated concentration at or above the adjusted method detection limit and below the adjusted reporting limit
M1-Laboratory flag indicating the matrix spike recovery exceeded laboratory specified acceptance criteria

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

3.6 Laboratory Duplicate

Sample set specific laboratory duplicates were reported for TDS using samples BOW-AP1-EB-01, BOW-AP1-FD-04, BOW-BGWA-2, BOW-BGWC-17, and BOW-BGWC-31. The RPD results were within the laboratory specified acceptance criteria.

Batch laboratory duplicates were also reported for TDS. Since these were batch QC, there was no impact on the data and qualifications were not applied.

3.7 Field Blank

Four field blanks BOW-AP1-FB-01, BOW-AP1-FB-02, BOW-AP1-FB-03, and BOW-AP1-FB-04 were collected with the sample set. The wet chemistry parameters were not detected in the field blanks at or above the MDLs.

3.8 Equipment Blank

Four equipment blanks BOW-AP1-EB-01, BOW-AP1-EB-02, BOW-AP1-EB-03, and BOW-AP1-EB-04 were collected with the sample set. The wet chemistry parameters were not detected in the equipment blanks at or above the MDLs.

3.9 Field Duplicate

Four field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, and BOW-AP1-FD-04 were collected with the sample set. Acceptable precision (RPD < 20% or difference < RL) was demonstrated between the field duplicates and the original samples BOW-BGWA-47D, BOW-BGWC-21, BOW-BGWC-52, and BOW-BGWC-22, respectively, with the following exception.

Fluoride was detected at an estimated concentration greater than the MDL and less than the RL in field duplicate BOW-AP1-FD-02 and not detected in parent sample BOW-BGWC-21, resulting in noncalculable RPD results. Since the absolute difference between the parent sample and field duplicate was less than the RL, no qualifications were applied to the data.

3.10 Sensitivity

The samples were reported to the MDLs for anions and to the RLs for alkalinity and TDS. Elevated non-detect results were not reported.

4.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA method 9315, radium-228 by US EPA method 9320, and total radium by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine impact on data quality and usability.

4.1 Overall Assessment

The radium-226 and radium-228 data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.1.1 Analysis Anomaly

Total radium was reported at the minimum detectable concentration (MDC), for radium-226 and radium-228. Radium-226 was detected greater than the MDC in samples BOW-BGWA-2, BOW-BGWA-47D, BOW-BGWA-48D, BOW-BGWC-10, BOW-BGWC-20, BOW-BGWC-50D, and BOW-BGWC-9. Since total radium is calculated from radium-226 and radium-228, and radium-226 was greater than the MDC, and based on professional and technical judgment, the total radium concentrations for these samples were reported with no qualifications.

Total radium was reported at the MDC, for radium-226 and radium-228. Radium-228 was detected greater than the MDC in samples BOW-AP1-EB-01, BOW-AP1-FB-03, BOW-BGWC-12, BOW-BGWC-23, and BOW-BGWC-36D. Since total radium is calculated from radium-226 and radium-228, and radium-226 was greater than the MDC, and based on professional and technical judgment, the total radium concentrations for these samples were reported with no qualifications.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
BOW-AP1-EB-01	Combined Radium 226 + 228	1.37	U	1.37	NA	RO1
BOW-AP1-FB-03	Combined Radium 226 + 228	0.918	U	0.918	NA	RO1
BOW-BGWA-2	Combined Radium 226 + 228	1.24	U	1.24	NA	RO1

4.2 Holding Times

The holding times for the radium-226 and radium-228 analyses of a water sample are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Method blanks were reported for the radium-226 and

radium-228 data. Radium-226 and radium-228 were not detected in the method blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 [0.701 picocuries per liter (pCi/L)] was detected in the method blank in batch 799530 at a concentration greater than the measured 2σ uncertainty. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the method blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated sample was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for sample BOW-BGWC-14A and BOW-BGWC-31 were J qualified as estimated and the combined radium 226 + 228 concentrations for samples BOW-BGWC-12, BOW-BGWC-16, and BOW-BGWC-36D were UJ qualified as not statistically distinguishable from the blank.

Radium-228 (0.737 pCi/L) was detected in the method blank in batch 799531 at a concentration greater than the MDC. Therefore, the radium-228 concentration with a mean difference less than 2 and a concentration less than ten times the method blank concentration for radium-228 in the associated sample was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for sample BOW-AP1-FB-03 was UJ qualified as estimated as not statistically distinguishable from the blank.

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported with data.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCS/laboratory controls sample duplicate (LCSD) pairs were reported for radium-226 and radium-228. The recovery and replicate error ratio (RER) [2 sigma (2σ)] results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

Two sample set specific laboratory duplicates were reported with the sample set using samples BOW-BGWC-7 and BOW-BGWC-53D. The RPDs were within laboratory specified acceptance criteria.

Batch laboratory duplicates were also reported with the sample set. Since these are batch QC, no qualifications were applied to the data.

4.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses, and a tracer was reported for the radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

4.8 Field Blank

Four field blanks BOW-AP1-FB-01, BOW-AP1-FB-02, BOW-AP1-FB-03 and BOW-AP1-FB-04 were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (0.731 pCi/L) was detected in the BOW-AP1-FB-02 at a concentration greater than the measured 2σ uncertainty. Since the radium-228 results for the associated samples greater than the MDC were either J qualified as estimated or UJ qualified as not statistically distinguishable

from the blank due to method blank due to statistically positive method blank result, no additional qualifications were applied to the data.

Radium-228 (0.918 pCi/L) was detected in BOW-AP1-FB-03 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the field blank concentration in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated sample was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for sample BOW-BGWC-23 was UJ qualified as not statistically distinguishable from the blank. Since the radium-228 results for the other associated samples greater than the MDC were UJ qualified as not statistically distinguishable from the blank due to method blank due to statistically positive method blank result, no additional qualifications were applied to those data.

Radium-228 (0.404 pCi/L) was detected in the BOW-AP1-FB-04 at a concentration greater than the measured 2σ uncertainty. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the field blank concentration in the associated sample was J qualified as estimated and the radium concentration with a mean difference less than 2 in the associated sample was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for samples BOW-BGWC-38D and BOW-BGWC-49D were J qualified as estimated.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
BOW-BGWC-23	Radium-228	1.11	NA	1.11	UJ	BFH
BOW-BGWC-23	Combined Radium 226 + 228	1.33	U	1.33	UJ	RO1|BFH
BOW-BGWC-38D	Radium-228	0.854	NA	0.854	UJ	BFH
BOW-BGWC-38D	Combined Radium 226 + 228	1.87	NA	1.87	J	BFH
BOW-BGWC-49D	Radium-228	2.08	NA	2.08	J	BFH
BOW-BGWC-49D	Combined Radium 226 + 228	3.63	NA	3.63	J	BFH

U-not detected at or above the minimum detectable concentration
NA-not applicable

4.9 Equipment Blank

Four equipment blanks BOW-AP1-EB-01, BOW-AP1-EB-02, BOW-AP1-EB-03, and BOW-AP1-EB-04 were collected with the sample set and analyzed for radium-226 and radium-228.

Radium-226 and Radium-228 were not detected in the equipment blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (1.27 pCi/L) was detected in equipment blank, BOW-AP1-EB-01, at a concentration greater than the MDC. Since the radium-228 result for the associated sample greater than the MDC was UJ qualified as not statistically distinguishable from the blank due to statistically positive field blank result, no additional qualifications were applied to the data.

Radium-226 (0.249 pCi/L) was detected in the BOW-AP1-EB-03 at a concentration greater than the measured 2σ uncertainty. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated sample was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for samples BOW-BGWC-35D, BOW-BGWC-24, BOW-BGWC-38D, and BOW-BGWC-49D was J qualified as estimated and the combined radium 226 + 228 concentration for sample BOW-BGWA-2 was UJ qualified as not statistically distinguishable from the blank.

Radium-228 (0.552 pCi/L) was detected in equipment blank, BOW-AP1-EB-03, at a concentration greater than the measured 2σ uncertainty. Since the radium-228 result for the associated sample greater than the MDC was UJ qualified as not statistically distinguishable from the blank due to statistically positive method blank result, no additional qualifications were applied to the data.

Radium-228 (0.649 pCi/L) was detected in equipment blank, BOW-AP1-EB-04, at a concentration greater than the measured 2σ uncertainty. Since the associated samples were either nondetect or previously UJ qualified as not statistically distinguishable from the blank due to statistically positive field blank result, no additional qualifications were applied to the data.

4.10 Field Duplicate

Four field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, and BOW-AP1-FD-04 were collected with the sample set. Acceptable precision [mean difference (MD) ≤ 3, RPD < 20% or difference < RL] was demonstrated between the field duplicates and the original samples BOW-BGWA-47D, BOW-BGWC-21, BOW-BGWC-52, and BOW-BGWC-22, respectively.

4.11 Sensitivity

The samples were reported to the MDCs. No elevated non-detect results were reported.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected at or above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected at or above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

GROUNDWATER STATS
CONSULTING

August 31, 2026

Southern Company Services
Attn: Mr. Kevin Stephenson
241 Ralph McGill Blvd NE, Bin 10160
Atlanta, Georgia 30308

Re: Plant Bowen Ash Pond 1 (AP-1)
February 2026 Sample Event Analysis

Dear Mr. Stephenson,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the statistical analysis of groundwater data for the Groundwater Detection and Assessment Monitoring Semi-Annual February 2026 sample event for Georgia Power Company's Plant Bowen AP-1. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for the Appendix III and IV parameters began in 2016 for the majority of wells, and at least 8 background samples were collected at each of the groundwater monitoring wells. Sampling is conducted on a semi-annual basis for all constituents. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient well:** BGWA-2, BGWA-29, BGWA-47D, and BGWA-48D
- **Downgradient wells:** BGWC-7, BGWC-8, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-19, BGWC-20, BGWC-21, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, and BGWC-52

- **Assessment wells:** BGWC-31, BGWC-32, BGWC-34D, BGWC-35D, BGWC-36D, BGWC-38D, BGWC-40, BGWC-43D, BGWC-49D, BGWC-50D, BGWC-53D, and PZ-7

Note that upgradient well BGWA-33 and assessment wells BGWA-6, BGWC-37D, BGWC-39, BGWC-41D, BGWC-42D, and BGWC-44D were repurposed to piezometers following approval of the Groundwater Monitoring Plan Minor Modification on July 16, 2025. Therefore, these wells are not included in this analysis.

Sampling for assessment wells started at various dates ranging from October 2018 to December 2024 as listed below:

- October 2018 - BGWC-31, BGWC-32, BGWC-34D, BGWC-35D, and BGWC-36D
- May 2019 - BGWC-38D
- December 2019 - BGWC-40
- May 2020 - BGWC-43D
- March 2021 – BGWC-49D and BGWC-50D
- April 2022 – PZ-7
- December 2024 – BGWC-53D

Data from assessment wells are analyzed using confidence intervals for Appendix IV constituents when a minimum of 4 samples are available. Currently, all assessment wells have the required minimum samples and, therefore, are evaluated using confidence intervals. Data from all assessment wells are plotted on the time series graphs and box plots.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting.

The CCR program consists of the following constituents listed below. The terms "constituent" and "parameter" are interchangeable.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient

and assessment well/constituent pairs with 100% non-detects follows this letter. For all constituents, a substitution of the most recent reporting limit is used for non-detect data which generally gives the most conservative limit in each case. In the case of cadmium, historic reporting limits were either higher than or equal to the MCL or CCR-Rule specified levels. Similarly, dilution factors during this event for beryllium and selenium resulted in elevated reporting limits for some wells. Therefore, the most recent (and lower) reporting limits were substituted across all wells for these constituents.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Based on the previous screening, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the 2017 screening to demonstrate that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

The original background screening was conducted in 2017 by MacStat Consulting. Values identified as outliers were flagged in the database and excluded prior to construction of statistical limits. Interwell prediction limits, combined with a 1-of-2 resample plan, were recommended for all Appendix III constituents.

Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells would not be conservative from a regulatory perspective; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter. While data were further tested for intrawell eligibility during the

screening, interwell methods are used for all Appendix III constituents in accordance with Georgia EPD requirements.

Summary of Statistical Methods

Based on the evaluation for state and federal regulatory requirements, the following methods were selected for Appendix III and IV constituents:

- Appendix III: Interwell prediction limits, combined with a 1-of-2 resample plan, for each Appendix III constituent
- Appendix IV: Confidence intervals on downgradient well data compared against Groundwater Protection Standards (GWPS) for each Appendix IV constituent

The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. Parametric prediction limits (or tolerance limits or confidence intervals as applicable) are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric prediction limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The following approaches are used for handling non-detects (USEPA, 2009):

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated

with upgradient well data during each event after careful screening for any new outliers. While this was not required for this report, in some cases, deselecting the earlier portion of data may be necessary prior to construction of limits so that resulting statistical limits are conservative (lower) from a regulatory perspective and capable of rapidly detecting changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

For Appendix III parameters, compliance is determined by comparing the most recent observation to a background prediction limit. The corresponding trend tests for evaluating prediction limit exceedances of Appendix III parameters are performed at the 99% confidence level to provide a high level of confidence against false positives. For Appendix IV Assessment Monitoring parameters, however, compliance is assessed by comparing a full (or truncated as necessary) period of record to a GWPS using a confidence interval. The corresponding trend tests for evaluating confidence interval exceedances of Appendix IV constituents are performed at the 95% confidence level to provide greater capability of identifying potential trends than the 99% confidence level. Additionally, the 95% confidence level is recommended in cases with limited sample sizes and, particularly, for new assessment wells.

Summary of Background Update Conducted in 2025 – Appendix III & IV

Outlier Analysis

Time series plots were used to identify suspected outliers, or values that would result in limits that are not representative of the current background data population. Suspected outliers at upgradient wells for Appendix III and Appendix IV parameters were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits. When the most recent value is identified as an outlier, values are often not flagged in the database at this time as the measurements may represent a possible trend. If future values do not remain at similar concentrations, these values will be flagged as outliers and deselected.

Tukey's outlier test identified values for antimony, arsenic, and fluoride. Any values identified by Tukey's, but not flagged in the database, appeared representative of remaining concentrations among pooled upgradient data or were an order of magnitude below the respective Maximum Containment Level (MCL). Previously flagged values were confirmed using the Tukey's outlier test to evaluate pooled upgradient well data and visual screening with time series plots. When any values are flagged in the database as outliers, the measurements are plotted in a disconnected and lighter symbol on the time

series graph. The accompanying data pages display the flagged value in a lighter font as well.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends can be identified by visual inspection, a quantification of the trend and its statistical significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each upgradient well to identify statistically significant increasing or decreasing trends. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits. The following statistically significant trends were identified at upgradient wells:

Appendix III

Increasing

- Calcium: BGWA-2
- Sulfate: BGWA-2
- TDS: BGWA-2

Decreasing

- Chloride: BGWA-29 and BGWA-47D
- pH: BGWA-2 and BGWA-47D
- Sulfate: BGWA-29

Appendix IV

Increasing

- Chromium: BGWA-47D
- Lead: BGWA-47D and BGWA-48D

Decreasing

- Barium: BGWA-2, BGWA-29, BGWA-47D, and BGWA-48D
- Fluoride: BGWA-2

Although the results of the trend analyses showed statistically significant decreasing and increasing trends at individual upgradient wells for the Appendix III and IV parameters, the concentrations were similar to those reported in other upgradient wells, and truncating earlier measurements within an individual upgradient well would have no bearing on resulting statistical limits that are constructed using pooled data from all upgradient wells. Additionally, concentrations for some well/constituent pairs were below respective regulatory standards (such as an MCL for Appendix IV parameters). If the observed decreasing or increasing trends persist over a longer time frame and influence resulting statistical limits, some records may require truncation. In the cases of chromium, fluoride, and lead, the trends are a result of non-detects and estimated measurements reported below the practical quantitation limit.

Statistical Analysis of Appendix III Parameters – February 2026

Outlier Analysis

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. No additional Appendix III values were flagged as an outlier in the database for Appendix III parameters. Values in background which were previously flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February 2026 (Figure D). Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The February 2026 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the

resample falls within the statistical limit, the initial exceedance is considered to be a false positive result. Therefore, no exceedance is noted and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. A summary table of the interwell prediction limits follows this letter. The following prediction limit exceedances were noted for Appendix III parameters:

- Boron: BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-19, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, and BGWC-52
- Calcium: BGWC-7, BGWC-12, BGWC-14A, BGWC-16, BGWC-20, BGWC-22, BGWC-23, and BGWC-24
- Chloride: BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, and BGWC-52
- pH (lower limit): BGWC-16 and BGWC-18
- Sulfate: BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, and BGWC-52
- TDS: BGWC-7, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, and BGWC-24

<u>Trend Test Evaluation – Appendix III</u>

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site. Upgradient trends are an indication of variability in groundwater unrelated to practices at the site. A summary along with complete graphical results of the trend tests follows this report. Statistically significant trends were noted for the following well/constituent pairs:

Increasing

- Boron: BGWC-12, BGWC-14A, BGWC-20, BGWC-22, and BGWC-25
- Calcium: BGWA-2 (upgradient), BGWC-12, BGWC-14A, BGWC-16, BGWC-20, and BGWC-22
- Chloride: BGWC-10 and BGWC-25
- Sulfate: BGWA-2 (upgradient), BGWC-12, BGWC-14A, and BGWC-16

- TDS: BGWA-2 (upgradient), BGWC-10, BGWC-12, BGWC-14A, BGWC-16, and BGWC-20

Decreasing

- Boron: BGWC-7, BGWC-9, BGWC-17, BGWC-18, BGWC-24, BGWC-30, BGWC-51, and BGWC-52
- Calcium: BGWC-7 and BGWC-24
- Chloride: BGWA-29, BGWA-47D (both upgradient), BGWC-9, BGWC-12, BGWC-16, BGWC-24, BGWC-30, BGWC-51, and BGWC-52
- pH: BGWA-2, BGWA-47D (both upgradient), and BGWC-16
- Sulfate: BGWA-29 (upgradient), BGWC-7, BGWC-9, BGWC-10, and BGWC-24
- TDS: BGWC-7 and BGWC-24

Statistical Analysis of Appendix IV Parameters – February 2026

For Appendix IV parameters, confidence intervals for each downgradient well/constituent were compared against corresponding GWPS. GWPS were developed as described below. Well/constituent pairs containing 100% non-detects do not require analysis. Data from upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis. No additional measurements were flagged among upgradient wells, and all previously flagged measurements were confirmed. No new outliers were flagged during this analysis.

Additionally, downgradient well data through February 2026 were screened through visual screening using time series graphs. Since the downgradient well data are used to construct confidence intervals, values that are marginally high relative to the rest of the data are retained unless there is particular justification for excluding them. No additional measurements were flagged among downgradient wells, and all previously flagged measurements were confirmed. During previous analyses, elevated reporting limits for lithium at wells BGWC-32, BGWC-38D, and BGWC-40 were flagged and remain flagged. Additionally, a high historic observation for antimony at BGWC-24 was resampled and the original sample remains flagged as an outlier. A summary of flagged outliers follows this report (Figure C).

<u>Interwell Upper Tolerance Limits</u>

Interwell tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through February 2026 for Appendix IV constituents (Figure F). Parametric tolerance limits are calculated, with a target of 95%

confidence and 95% coverage, when data follow a normal or transformed-normal distribution, such as for combined radium 226 + 228. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were constructed using the highest background measurement. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison of downgradient well data to GWPS, confidence intervals were constructed for the Appendix IV constituents in each downgradient well with 8 or more observations and each assessment well with 4 or more observations using all available data through February 2026.

Confidence intervals were compared to the GWPS prepared as described above. These intervals were constructed as either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the

appropriate order statistics depending on the sample size as interval limits, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The achievable confidence level associated with nonparametric confidence intervals is dependent upon the number of samples available.

Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. Note that due to increasing trends for cobalt at downgradient well BGWC-16 and lithium at BGWC-20, the records were truncated to eliminate the trend and only the most recent observations were used to construct the confidence interval (USEPA Unified Guidance, 2009, Chapter 7). The resulting confidence intervals represent current groundwater quality conditions. Trend tests using both the full and truncated records follow this report (Figure H).

Summaries of the confidence intervals follow this letter (Figure I) and exceedances were identified for the following well/constituent pairs:

- Arsenic: BGWC-34D
- Cobalt: BGWC-16 and BGWC-22
- Lithium: BGWC-20
- Molybdenum: BGWC-43D

Trend Test Evaluation – Appendix IV

Data at wells with confidence interval exceedances are further evaluated using the Sen's Slope/Mann Kendall trend test at the 95% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure J). Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability in groundwater quality unrelated to practices at the site. A summary of the Appendix IV trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing

- Cobalt: BGWC-16 and BGWC-22
- Lithium: BGWA-48D (upgradient) and BGWC-20

Decreasing

- Lithium: BGWA-29 (upgradient)

Note that although statistically significant trends were identified for lithium at upgradient wells BGWA-29 and BGWA-48D, the slopes are zero. The Mann-Kendall slope estimates, which represent the median slope of all the possible pairwise slopes, are displayed on the result from a large number of non-detects that are substituted with the same value.

Resample Reports – April 2026

Additional samples were collected in April 2026 for antimony, arsenic, barium, beryllium, boron, cadmium, calcium, chromium, cobalt, fluoride, lead, lithium, mercury, molybdenum, pH, selenium, TDS, and thallium at downgradient well BGWC-20 and for mercury and pH at downgradient well BGWC-24.

Interwell prediction limits using pooled upgradient well data through February 2026 were constructed to evaluate the April 2026 resamples for resampled Appendix III parameters at wells BGWC-20 and BGWC-24 (Figure K). A summary of the prediction limits follows this report, and exceedances were identified for the following well/constituent pairs:

- Boron: BGWC-20
- Calcium: BGWC-20
- TDS: BGWC-20

Confidence intervals were constructed for resampled Appendix IV parameters in downgradient well BGWC-20 and BGWC-24 using data through April 2026 for comparison to each constituent's respective GWPS (Figure L). Note that the earlier concentrations remain truncated for lithium at well BGWC-20, and only concentrations from 2022 onward (the 9 most recent observations) were used to construct the respective confidence interval. The following exceedance was identified:

- Lithium: BGWC-20

Summary

Observations from the February 2026 sample event and April 2026 resamples were compared to established interwell prediction limits for Appendix III constituents. Several statistically significant increases were identified and may be seen on the summary table following this letter.

- Boron: BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-19, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, and BGWC-52
- Calcium: BGWC-7, BGWC-12, BGWC-14A, BGWC-16, BGWC-20, BGWC-22, BGWC-23, and BGWC-24
- Chloride: BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, and BGWC-52
- pH (lower limit): BGWC-16 and BGWC-18
- Sulfate: BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, and BGWC-52
- TDS: BGWC-7, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, and BGWC-24

When confidence intervals were constructed on downgradient wells for Appendix IV constituents and compared to respective GWPS, the following exceedances were identified:

- Arsenic: BGWC-34D
- Cobalt: BGWC-16 and BGWC-22
- Lithium: BGWC-20
- Molybdenum: BGWC-43D

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Bowen AP-1. If you have any questions or comments, please feel free to contact us.

100% Non-Detects: Appendix IV Downgradient & Assessment

Analysis Run 4/9/2026 2:32 PM View: Appendix IV Confidence Intervals
Plant Bowen Client: Southern Company Data: Bowen AP-1

Antimony (mg/L)
BGWC-12, BGWC-18, BGWC-53D, PZ-7

Beryllium (mg/L)
BGWC-7, BGWC-8, BGWC-9, BGWC-10, BGWC-14A, BGWC-20, BGWC-21, BGWC-25, BGWC-30, BGWC-31, BGWC-32, BGWC-34D, BGWC-35D, BGWC-40, BGWC-43D, BGWC-49D, BGWC-50D, BGWC-53D

Cadmium (mg/L)
BGWC-7, BGWC-8, BGWC-9, BGWC-10, BGWC-12, BGWC-21, BGWC-25, BGWC-31, BGWC-32, BGWC-34D, BGWC-35D, BGWC-36D, BGWC-40, BGWC-49D, BGWC-50D, BGWC-53D

Chromium (mg/L)
BGWC-53D

Cobalt (mg/L)
BGWC-51

Lead (mg/L)
BGWC-7, BGWC-53D, PZ-7

Lithium (mg/L)
BGWC-18, BGWC-19, BGWC-21, BGWC-25, BGWC-31

Mercury (mg/L)
BGWC-32, BGWC-40, BGWC-49D, BGWC-50D, BGWC-53D

Molybdenum (mg/L)
BGWC-12, BGWC-16, BGWC-17, BGWC-18, PZ-7

Selenium (mg/L)
BGWC-7, BGWC-10, BGWC-25, BGWC-50D, PZ-7

Thallium (mg/L)
BGWC-8, BGWC-10, BGWC-21, BGWC-25, BGWC-31, BGWC-49D, BGWC-50D, BGWC-53D

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Date Ranges

Date: 6/10/2026 3:49 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Cobalt (mg/L)
BGWC-16 overall:9/24/2020-2/4/2026
Lithium (mg/L)
BGWC-20 overall:7/27/2022-4/7/2026

Appendix III Interwell Prediction Limits - Significant Results

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Constituent: Combined Radium 226 + 228 Analysis Run 6/10/2026 3:06 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Constituent: Combined Radium 226 + 228 Analysis Run 6/10/2026 3:06 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lithium Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lithium Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lithium Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lithium Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

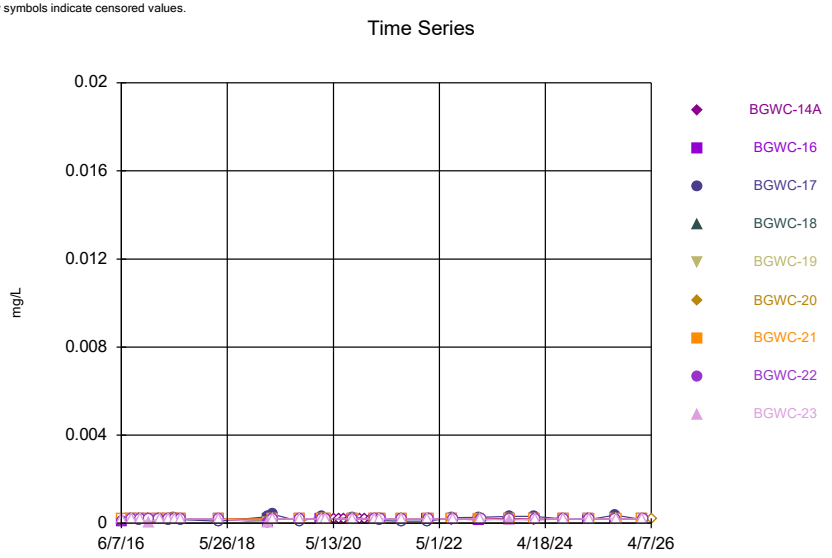
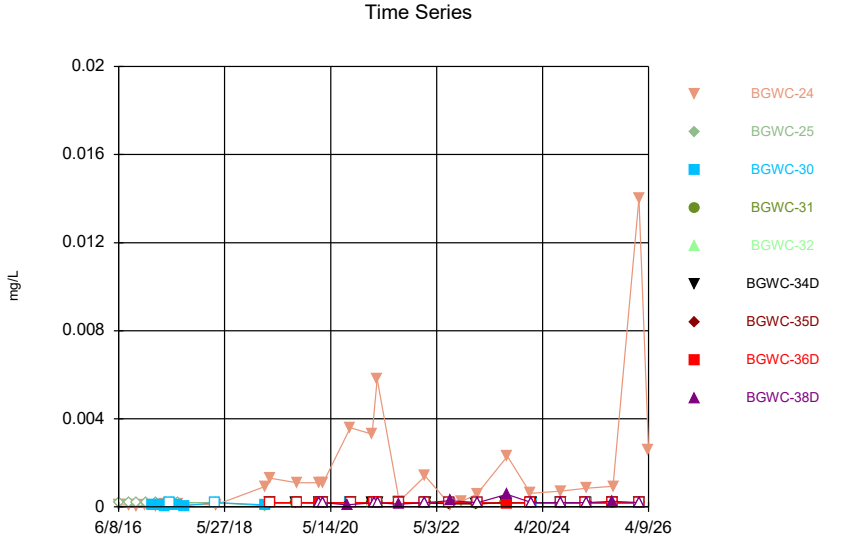
Constituent: Mercury Analysis Run 6/10/2026 3:06 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



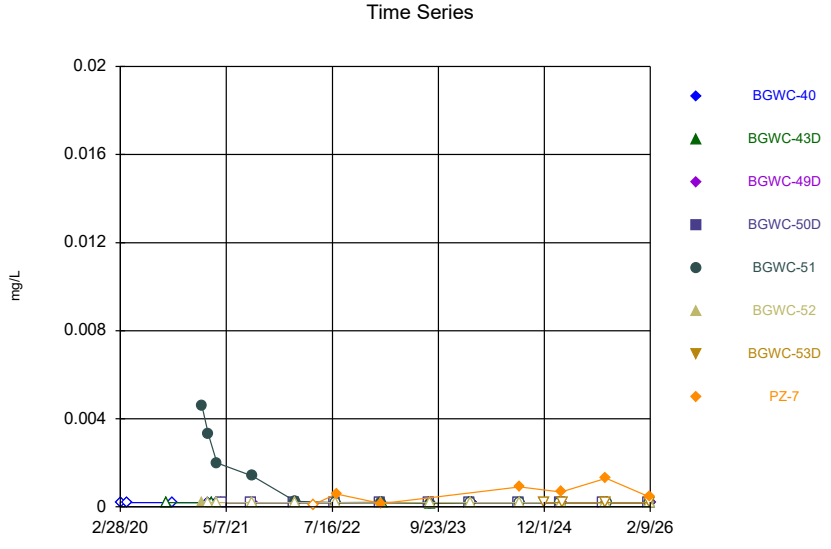
Constituent: Mercury Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Constituent: Mercury Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

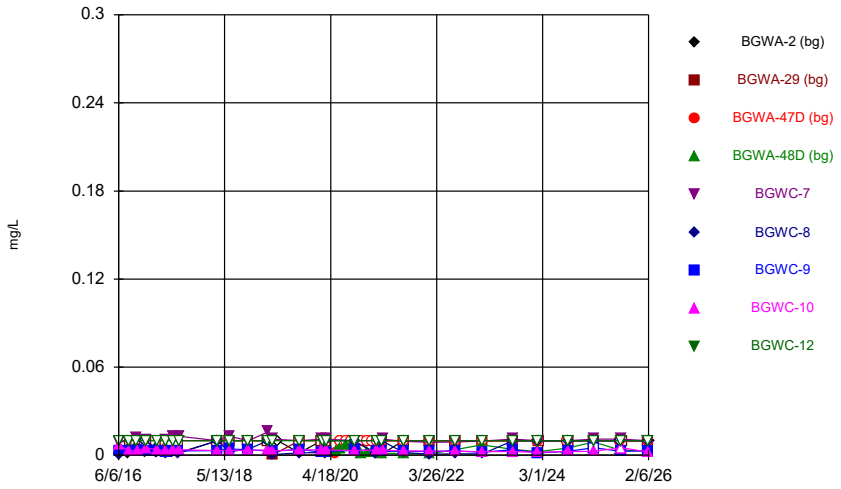
Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Constituent: Mercury Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

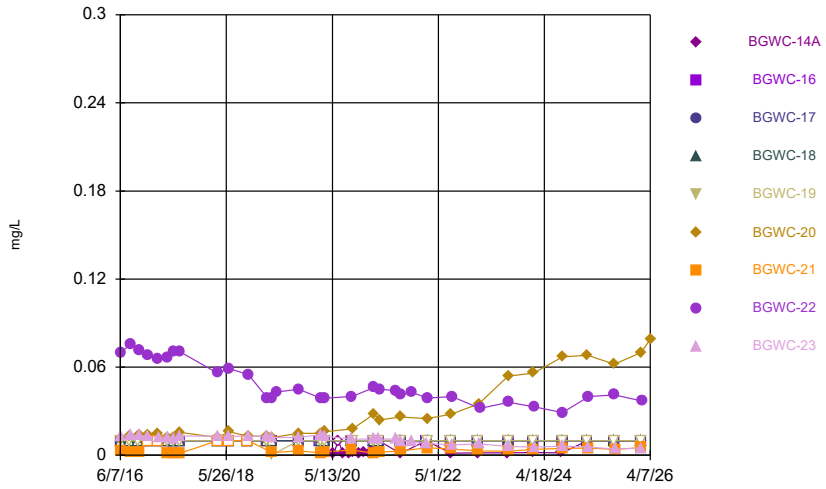
Time Series



Constituent: Molybdenum Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

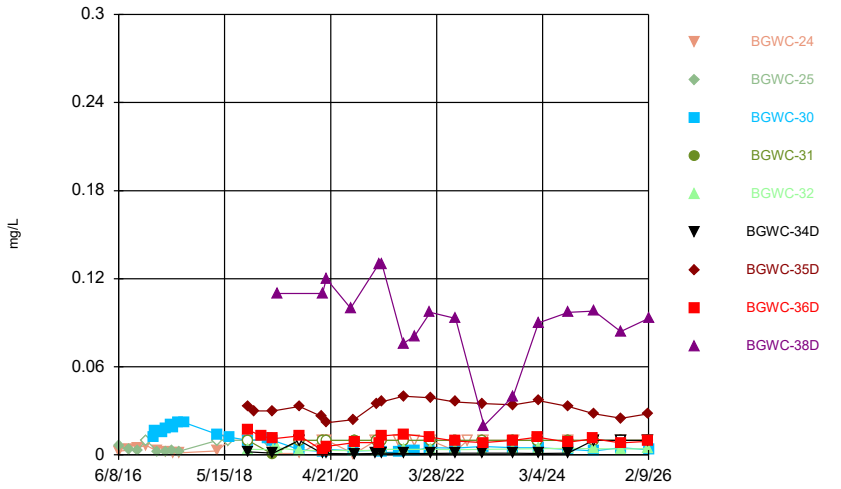
Time Series



Constituent: Molybdenum Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

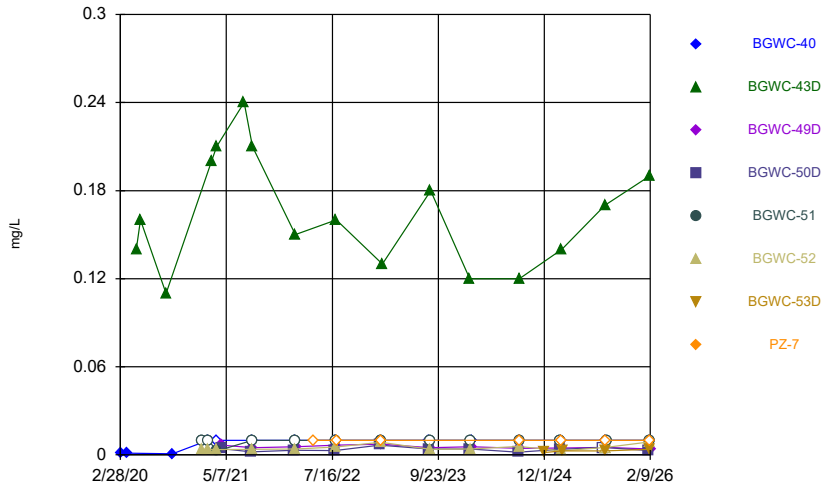
Time Series



Constituent: Molybdenum Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

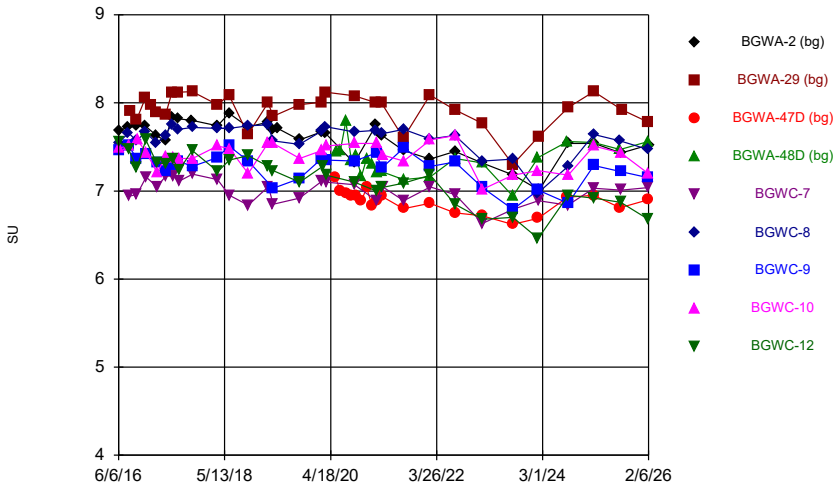
Time Series



Constituent: Molybdenum Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Time Series

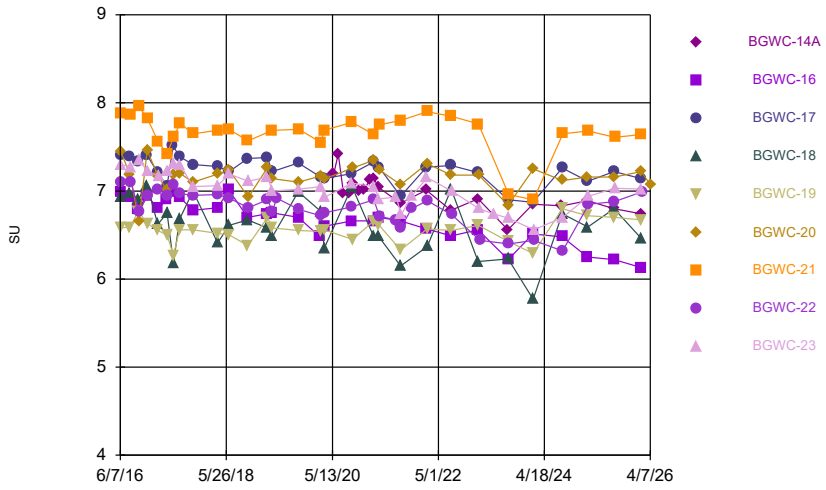


Constituent: pH, Field Analysis Run 6/10/2026 3:07 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Time Series

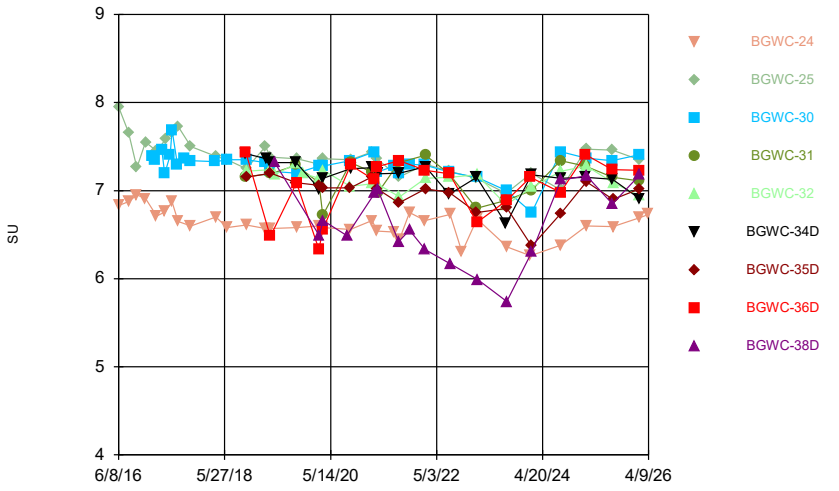


Constituent: pH, Field Analysis Run 6/10/2026 3:07 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Time Series

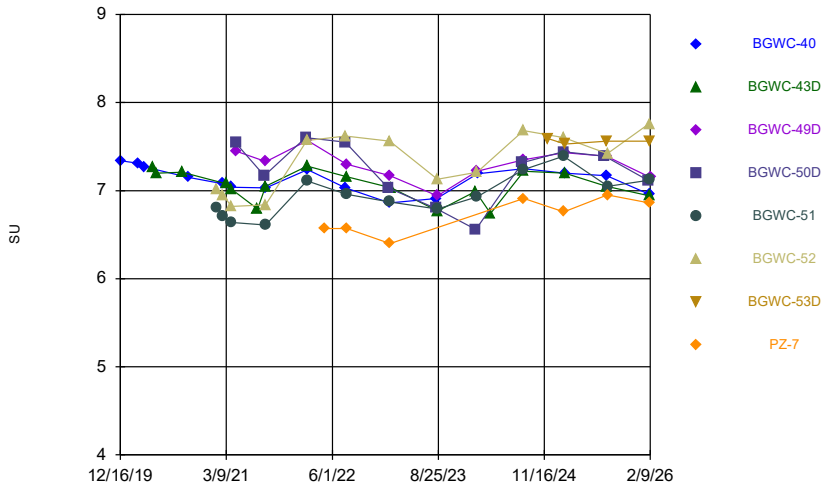


Constituent: pH, Field Analysis Run 6/10/2026 3:07 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

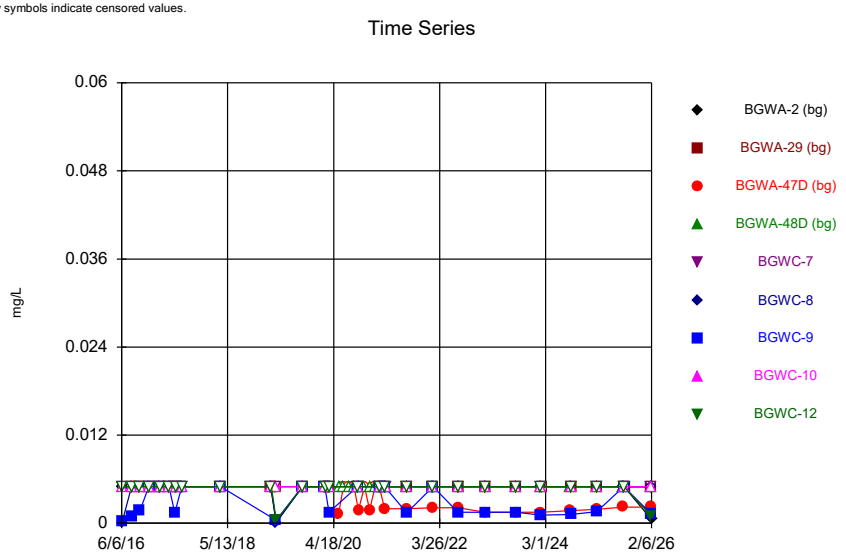
Time Series



Constituent: pH, Field Analysis Run 6/10/2026 3:07 PM

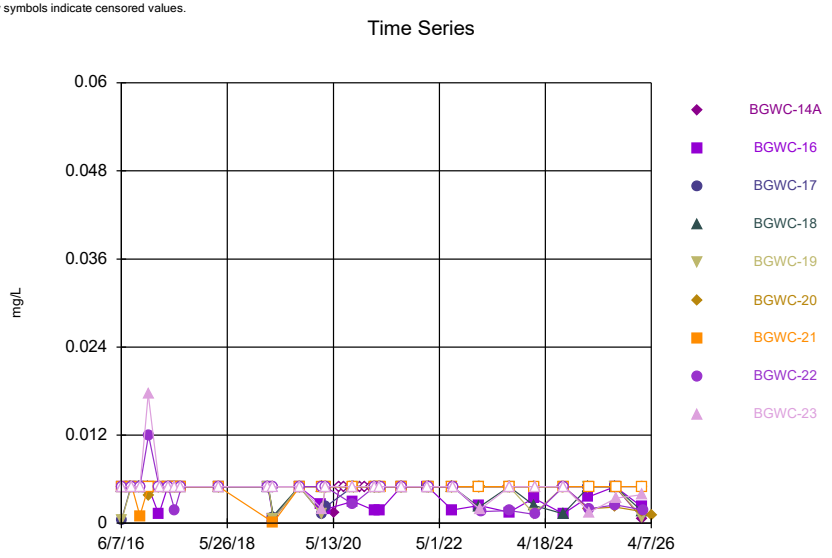
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



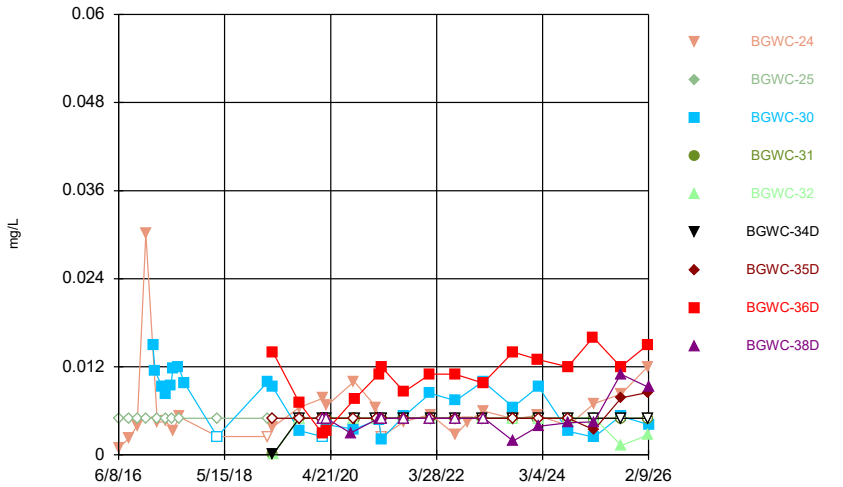
Constituent: Selenium Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



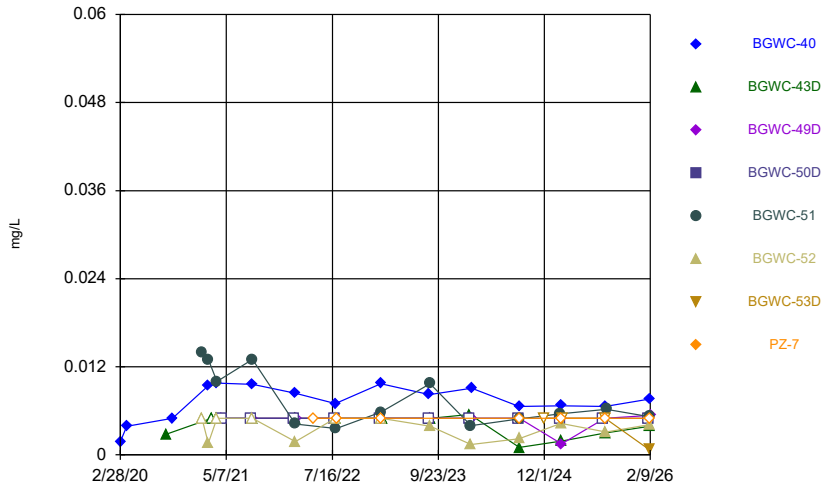
Constituent: Selenium Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Constituent: Selenium Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

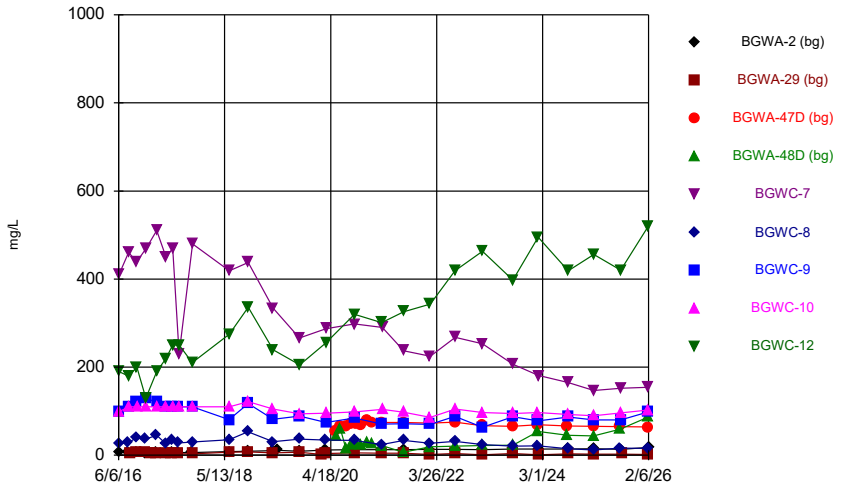
Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Constituent: Selenium Analysis Run 6/10/2026 3:07 PM
Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Time Series



Constituent: Sulfate Analysis Run 6/10/2026 3:07 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lithium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lithium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lithium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 6/10/2026 3:10 PM

Plant Bowen Client: Southern Company Data: Bowen AP-1

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 6/10/2026 3:10 PM

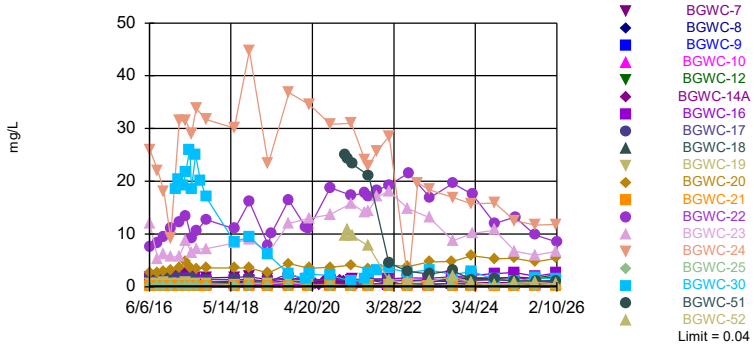
Exceeds Limit: BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-19, BGWC-20...

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 92 background values. 20.65% NDs. Annual per-constituent alpha = 0.00853. Individual comparison alpha = 0.0002254 (1 of 2). Comparing 19 points to limit.

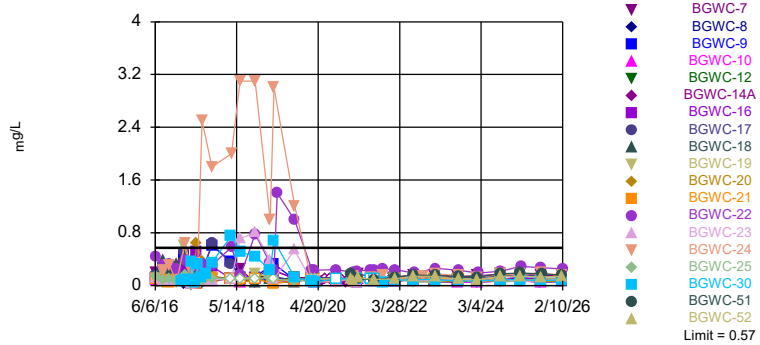
Within Limit

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 101 background values. 47.52% NDs. Annual per-constituent alpha = 0.007121. Individual comparison alpha = 0.000188 (1 of 2). Comparing 19 points to limit.

Constituent: Fluoride Analysis Run 4/9/2026 1:51 PM View: Appendix III Interwell

Sanitas™ v.10.1.06e Software licensed to Groundwater Stats Consulting. UG

Exceeds Limit: BGWC-20

Prediction Limit

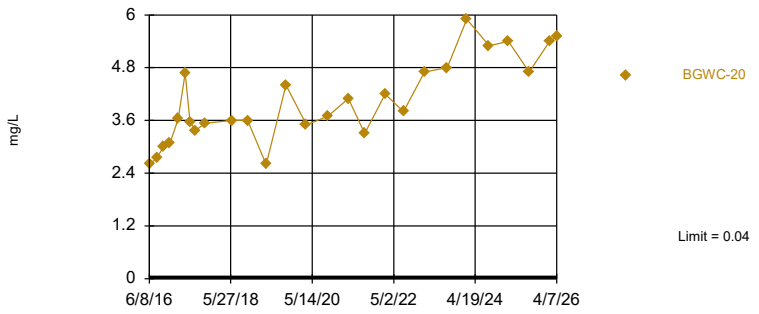
Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 92 background values. 20.65% NDs. Annual per-constituent alpha = 0.00853. Individual comparison alpha = 0.0002254 (1 of 2). Assumes 18 future values.

Constituent: Boron Analysis Run 6/10/2026 3:27 PM View: Appendix III Interwell - Resample
