# 2026 SEMIANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION REPORT

Atlantic Coast Consulting, Inc.

## PROFESSIONAL CERTIFICATION

This *2026 Semiannual Groundwater Monitoring and Corrective Action Report, Georgia Power Company – Plant Wansley Landfill* has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residuals Rule [40 Code of Federal Regulations (CFR) 257 Subpart D], specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Atlantic Coast Consulting, Inc. (ACC). I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules for Solid Waste Management 391-3-4-.01.

## SUMMARY

This summary of the *2026 Semiannual Groundwater Monitoring and Corrective Action Report* provides the groundwater monitoring and corrective action program status from January through June 2026 for Georgia Power Company (Georgia Power) Plant Wansley Coal Combustion Residuals (CCR) Landfill (Site). This summary was prepared by Atlantic Coast Consulting, Inc. (ACC) on behalf of Georgia Power to meet the requirements listed in Part A, Section 6[1] of the United States Environmental Protection Agency (US EPA) CCR Rule [40 Code of Federal Regulations (CFR) 257 Subpart D].

Plant Wansley and Plant Wansley Landfill

Plant Wansley is located at 1371 Liberty Church Road, approximately 12 miles southeast of the City of Carrollton. The Site is located on the southern portion of the Plant Wansley property. As part of the 2022 Integrated Resource Plan, the Georgia Public Service Commission approved decertification and retirement of the Plant Wansley Coal fired units on August 31, 2022.

The groundwater monitoring system is comprised of a comprehensive network of wells installed to meet federal and state monitoring requirements. After background groundwater conditions were established between August 2011 and July 2013, routine sampling and reporting began in accordance with the Solid Waste Handling Permit (074-005D(LI)) requirements specified in the Design and Operation (D&O) Plan that existed at that time. Georgia Environmental Protection Division (EPD) issued a Handling Permit for CCR, Permit No. 074-005D(CCR), on December 8, 2022, which replaced the former solid waste permit. In April 2026, EPD approved a Major Modification for the expansion of the landfill permit and associated construction has begun. Routine groundwater monitoring and reporting is conducted at the site pursuant to the Groundwater Monitoring Plan in the 2026 permit. The monitoring program meets the requirements of 40 CFR § 257.90 through § 257.95. Background groundwater conditions for Appendix III[2] and IV parameters[3] were established between May 2016 and August 2017, and background sampling for the updated well network begun in July 2026. Alternate Source Demonstrations (ASDs) completed in 2017-2025 have presented evidence demonstrating that statistically significant increases (SSIs)

[1] 80 FR 21468, Apr. 17, 2015, as amended at 81 FR 51807, Aug. 5, 2016; 83 FR 36452, July 30, 2018; 85 FR 53561, Aug. 28, 2020
[2] Boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids (TDS)
[3] Antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, fluoride, lead, lithium, mercury, molybdenum, selenium, thallium, and radium 226+228

in groundwater are not due to a release from the unit. During the 2026 semiannual reporting period, the Site remained in detection monitoring.

During the 2026 semiannual reporting period, ACC conducted a groundwater sampling event in January 2026. Groundwater samples were submitted to Eurofins Environment Testing America for analysis. Per the CCR Rule, the groundwater results were evaluated in accordance with the certified statistical methods. That evaluation showed SSIs of Appendix III parameters in wells provided in the table below.

| Appendix III Parameter | January 2026 |
|---|---|
| Boron | GWC-12*, GWC-14*, GWC-35* |
| Chloride | GWC-14* |

* ASD has been approved by Georgia EPD.

Verified SSIs confirmed during the current monitoring period have been addressed by previous ASDs approved by Georgia EPD. Based on review of the Appendix III statistical results completed for the groundwater monitoring and corrective action program from January through June 2026, the Site will remain in detection monitoring. Georgia Power will continue detection groundwater monitoring and reporting at the Site. Reports will be posted to Georgia Power's website and provided to the Georgia EPD semiannually.

# 1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (US EPA) Coal Combustion Residuals (CCR) Rule [40 Code of Federal Regulations (CFR) 257 Subpart D] and the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management 391-3-4-.10, Atlantic Coast Consulting, Inc. (ACC) has prepared this *2026 Semiannual Groundwater Monitoring and Corrective Action Report* to document groundwater monitoring activities conducted at the Plant Wansley CCR Landfill (Site). Semiannual monitoring and reporting for the CCR Unit are performed in accordance with the monitoring requirements of 40 CFR § 257.90 through § 257.95 of the Federal CCR Rule and Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a).

Georgia EPD issued its approval of the Major Modification for CCR Permit No. 074-005D(CCR) on April 17, 2026, which superseded the permit issued on December 8, 2022, which in turn had replaced Georgia Solid Waste Permit No. 074-005D(LI). Routine groundwater monitoring and reporting is conducted at the Site pursuant to the Groundwater Monitoring Plan (GWMP) in the 2026 permit. This report provides the results of the sampling event conducted in January 2026 and includes results for: (1) a list of modified parameters derived from Appendix I of 40 CFR § 258 included in the Design and Operation (D&O) Plan in the permit; and (2) CCR detection monitoring sampling event for 40 CFR § 257 Appendix III parameters.

This document serves as the *2026 Semiannual Groundwater Monitoring and Corrective Action Report* in accordance with Georgia EPD Rule 391-3-4-.10(6)(a) and 40 CFR § 257.90(e). For ease of reference when discussing aspects of the CCR Rule, only the US EPA CCR Rules are cited within this report.

## 1.1 Site Description and Background

Plant Wansley is located in northeast Heard County and southeast Carroll County, Georgia, at 1371 Liberty Church Road, approximately 12 miles southeast of the City of Carrollton. The plant property encompasses approximately 5,100 acres and is bounded on the east by the Chattahoochee River (Figure 1, Site Map). As part of the 2022 Integrated Resource Plan, the Georgia Public Service Commission approved decertification and retirement of the Plant Wansley coal-fired units by August 31, 2022. The Site is located on the property south of the plant. With the approval of the Major Modification for Expansion, the Site now consists of four cells. Each cell of the Plant Wansley CCR Landfill was lined with a 60-mil thick high-density polyethylene (HDPE) liner underlain by a geosynthetic clay liner (GCL), a 2-foot compacted clay layer [maximum hydraulic conductivity of $1 \times 10^{-5}$ centimeters per second (cm/sec)], and structural fill. A leachate collection and removal system overlies the liner system to remove liquids and reduce head pressure on the liner.

In preparation for CCR Landfill Expansion-Cell 4, Georgia Power proactively removed previously placed CCR at Cells 1 and 2. Following CCR removal, protective cover and leachate collection systems were removed in preparation for reconstruction of the liner system in Cells 1-3. Georgia EPD issued its approval for Cell 2 to receive CCR on July 31, 2026.

Routine groundwater sampling and reporting began after background groundwater conditions were established between August 2011 and July 2013, prior to placement of waste, in accordance with the Solid Waste Permit requirements specified in the D&O Plan that existed at that time. The monitoring program has been modified to include Appendix III parameters to meet the requirements of 40 CFR § 257.90 through § 257.95. Background groundwater conditions

for Appendix III and IV parameters were established between May 2016 and August 2017. Background sampling for the updated well network began in July 2026.

## 1.2 Regional Geology and Hydrogeologic Setting

The Site is located in the Piedmont physiographic province of Georgia characterized by low, linear ridges separated by broad, open valleys trending northeast-southwest. The Piedmont contains predominately metamorphic rock of Precambrian to Paleozoic age. Over geologic time the Piedmont has experienced multiple events of uplift, folding and faulting, alteration, and erosion.

Soils in the Piedmont formed mostly from the in-place weathering of the underlying crystalline bedrock. Near the ground surface, the soils are silt- and clay-rich. Sand and fine sand become more prominent with depth. Furthermore, with increasing depth the weathered materials tend to retain details of the structural features of the underlying bedrock.

The Site is situated on several bedrock types composed of schist, gneiss, quartzite, and amphibolite identified in boring logs (Golder, 2018). Residual soils are primarily sandy silt, silty sand, sandy clay, and silty clay which overlie bedrock across the site. Saprolitic soils were described at variable thickness across the Site but were generally encountered at or near ground surface.

Groundwater occurs across the Site in the overburden soils, as well as in the underlying and hydraulically connected bedrock. Recharge to the bedrock originates from groundwater stored in low permeability, high porosity, clay- and silt-rich overburden material. Infiltration of groundwater through overburden material to bedrock occurs in areas of enhanced permeability (i.e., areas of high fracture density). The water table surface at the Site is a subdued mimic of the topography. The top of the rock surface generally follows topography and likely controls groundwater flow direction in the uppermost aquifer as well. Groundwater flow across the Site is generally to the east and northeast.

## 1.3 Groundwater Monitoring Well Network

A groundwater monitoring system was installed within the uppermost aquifer at the Site. The monitoring system is designed to monitor groundwater passing the waste boundary of the CCR Unit within the uppermost aquifer. Figure 2, Well Location Map, shows the monitoring well locations (Table 1, Monitoring Well Network Summary). Wells were located to serve as upgradient and downgradient monitoring points, based on groundwater flow direction.

# 2.0 GROUNDWATER MONITORING ACTIVITIES

Pursuant to 40 CFR § 257.90(e), the following describes monitoring-related activities performed during the semiannual monitoring period. There are no changes in the status of the monitoring program. All groundwater sampling was performed in accordance with 40 CFR § 257.93. Samples were collected in January 2026 from each well in the certified monitoring system shown on Figure 2, except for monitoring wells GWA-3 and GWC-31, which purged dry and only recovered sufficiently for limited representative sample collection during the January 2026 event.

## 2.1 Monitoring Well Installation and Maintenance

Changes were made to the groundwater monitoring system during the reporting period related to expansion construction. Monitoring wells are inspected semiannually to determine if any repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). In January 2026, monitoring wells were inspected, and routine maintenance was performed as needed. Well inspection checklists completed during the reporting period are included in Appendix A, Laboratory Analytical and Field Sampling Reports. These well inspections were performed under the direction of a professional geologist or engineer registered in the State of Georgia. No repairs were conducted during the monitoring period.

As a part of the upcoming Cell 4 expansion at the Site, the groundwater monitoring network has been modified to incorporate the new cell. The updated groundwater monitoring well network for Cell 4 is described in the GWMP by Hodges, Harbin, Newberry & Tribble (HHNT), which was approved by Georgia EPD on January 26, 2026. For reference, the proposed well network depicting the upcoming changes is included as Figure 3, Expansion Monitoring Network. The well installation report, which incorporates the changes to the monitoring network, is included in Appendix B, Well Abandonment and Installation Report.

## 2.2 Detection Monitoring Program

Detection monitoring is performed on a semiannual basis in accordance with the approved Georgia EPD CCR Permit and the Site's GWMP. A semiannual sampling event was conducted in January 2026. A summary of groundwater sampling events completed during the reporting period is provided in Table 2, Groundwater Event Summary.

Groundwater samples from wells in the detection monitoring system were collected from each monitoring well and analyzed for:

- A state-modified Appendix I list of detection parameters according to Georgia EPD Handling Permit for CCR [No. 074-005D(CCR)]. The state-modified Appendix I parameter list includes antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc.
- Appendix III parameters according to 40 CFR § 257.94(a).

The parameters required by Appendix I and Appendix III are summarized in Table 3, Summary of Required Groundwater Monitoring Parameters. Copies of the analytical data packages for the semiannual detection monitoring events are included in Appendix A.

## 2.3 Additional Sampling

Surface water samples were collected from SWA-1, SWC-3, SWC-5, SWA-6, and SWC-7 during the January 2026 event. Locations SWC-2, SWC-4, SWC-8, and SWC-9 were dry at the time of sampling during the January 2026 event. Field parameter logs and laboratory analytical reports for surface water samples collected during the January 2026 monitoring event are included in Appendix A. A tabular summary of historical surface water monitoring results is presented in Appendix C, Historical Surface Water Analytical Data, and includes data from the current monitoring event as well as each of the historical monitoring events.

Additional geochemical analytical data was collected during the January 2026 event for evaluation purposes only.

# 3.0 SAMPLE METHODOLOGY AND ANALYSIS

The following sections describe the methods used to conduct groundwater monitoring at the Site during the semiannual monitoring period.

## 3.1 Groundwater Flow Direction, Gradient, and Velocity

Prior to sampling, groundwater elevations were recorded from each well in the network at the Site. Groundwater elevations recorded during the monitoring event are summarized in Table 4, Summary of Groundwater Elevations. Groundwater elevation data was used to develop Figure 4, Potentiometric Contour Map – January 2026. As shown on Figure 4, groundwater flows semi-radially from topographic highs near GWA-2 and GWA-28. A thorough review of historical groundwater elevations and flow directions, including data from older suitability borings from within the waste footprint which have since been properly abandoned, has been completed. As appropriate, this data has been utilized to more accurately represent groundwater flow direction under the waste footprint while remaining consistent with elevations observed in current groundwater monitoring wells during recent monitoring events.

The horizontal groundwater flow velocity at the Site was calculated using a derivation of Darcy's Law. Specifically:

Equation

$$v = \frac{K(i)}{ne}$$

where:
v = groundwater velocity
K = hydraulic conductivity
i = hydraulic gradient
ne = effective porosity

Groundwater flow velocities were calculated for the Site based on hydraulic gradients, average hydraulic conductivity based on previous slug test data, and an estimated effective porosity of 0.10 (SCS, 2007). The groundwater flow velocity has been calculated and is tabulated on Table 5, Horizontal Groundwater Flow Velocity Calculations – January 2026. The calculated flow velocity was approximately 0.46 feet per day during the January 2026 event. Calculated groundwater velocities across the Site are generally consistent with historical calculations and site-specific geology; therefore, confirming the groundwater monitoring network as properly located to monitor the uppermost aquifer.

## 3.2 Groundwater Sampling

Groundwater samples were collected using low-flow sampling procedures in accordance with 40 CFR § 257.93(a) and the D&O Plan. Purging and sampling was performed using either a peristaltic pump, dedicated QED bladder pump, or non-dedicated QED bladder pump. Pump intakes were located at the midpoint of the well screen (or as appropriately determined by the water level). Any non-disposable equipment was decontaminated before use and between well locations using procedures described in the latest version of the Region IV US EPA Lab Services and Applied Science Division (LSASD) Field Equipment Cleaning and Decontamination as a guide (US EPA, 2025).

Monitoring wells were purged and sampled using low-flow sampling procedures. An Aqua Troll (In-Situ field instrument) was used to monitor and record field water quality parameters (pH, specific conductance, oxidation-reduction potential [ORP], dissolved oxygen [DO], and temperature) during well purging prior to sampling. Turbidity was measured using a Hach 2100Q

portable turbidimeter. Groundwater samples were collected when the following stabilization criteria were met:

- ± 0.1 standard units for pH
- ± 5% for specific conductance
- ± 10% for DO, or 0.2 milligrams per liter (mg/L), whichever is greater. No criterion applies if DO < 0.5 mg/L
- Turbidity measurements less than 5 nephelometric turbidity units (NTU)

Once stabilization was achieved, samples were collected directly into appropriately preserved laboratory-supplied sample containers. Sample bottles were placed in ice-packed coolers and submitted to Eurofins Environment Testing America (Eurofins) following chain-of-custody protocol. Stabilization logs for each well during the monitoring event are included in Appendix A.

## 3.3 Laboratory Analyses

Laboratory analyses were performed by Eurofins. Eurofins is accredited by the National Environmental Laboratory Accreditation Program (NELAP) and maintains a NELAP certification for the parameters analyzed for this project. In addition, Eurofins is certified to perform analysis by the State of Georgia. Analytical results collected during the monitoring period are summarized in Table 6, Groundwater Analytical Data Summary – January 2026. Surface water analytical results collected during the monitoring period are presented in Table 7, Surface Water Analytical Data Summary – January 2026. Additional geochemical analytical data collected during January 2026 are also summarized in Tables 6 and 7. Analytical methods used for groundwater monitoring parameters, chain-of-custody records, and analytical results are provided in laboratory reports in Appendix A.

## 3.4 Quality Assurance and Quality Control

During each sampling event, quality assurance/quality control (QA/QC) samples are collected at a rate of one set per every 10 or 20 detection samples in accordance with the GWMP. Equipment blanks (where non-dedicated sampling equipment is used) were collected at a rate of one set per 10 detection samples, while field blanks (where dedicated sampling equipment is used) and duplicate samples were collected at a minimum rate of one set per 20 detection samples. QA/QC sample data were evaluated during data validation and are included in Appendix A.

Groundwater quality data in this report was validated in accordance with US EPA guidance (US EPA, 2011) and the analytical methods. Data validation generally consisted of reviewing sample integrity, holding times, laboratory method blanks, laboratory control samples, matrix spike/matrix spike duplicate recoveries and relative percent differences (RPDs), post digestion spikes, laboratory and field duplicate RPDs, field and equipment blanks, and reporting limits (RLs). Where appropriate, validation qualifiers and flags are applied to the data using US EPA procedures as guidance (US EPA, 2017). Data validation summaries are included in Appendix A.

Values followed by a "J" flag in Tables 6 and 7 indicate that the result is an estimated parameter concentration detected between the method detection limit (MDL) and the laboratory RL. The estimated value is positively identified but is below the lowest level that can be reliably achieved within specified limits of precision and accuracy under routine laboratory operating conditions. “J” flagged data is used to establish background statistical limits but are not used when performing statistical analyses or calculating RPDs. The validated data meet project objectives and the associated data validation reports are provided in Appendix A, along with the laboratory reports.

# 4.0 STATISTICAL ANALYSIS

The statistical method used at the Site was developed by Groundwater Stats Consulting, LLC (GSC), using methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities, Unified Guidance*, March 2009, US EPA 530/ R-09-007 (US EPA, 2009).

Statistical analyses of January 2026 groundwater monitoring data were performed by GSC following the appropriate certified statistical methodology for the Site in the GWMP. A summary of the statistical methodology used at the Site for routine groundwater monitoring is provided in Table 8, Statistical Method Summary. Statistical analysis methods and results are provided in Appendix D, Statistical Analysis Reports. The methods and results are summarized in the following sections.

## 4.1 Appendix I and III Parameters Methods

To develop the statistical methods, analytical data collected during the background period was evaluated and used to develop statistical limits for each Appendix I and III parameter. Sanitas groundwater statistical software was used to screen the data and perform the statistical analyses. Sanitas is a decision support software package that incorporates the statistical tests required of Subtitle C and D facilities by US EPA regulations.

Interwell prediction limits (PLs) pool upgradient well data to establish a background limit for an individual parameter, and the most recent sample from each downgradient well is compared to the same limit for each parameter. Intrawell PLs are constructed from historical data within a given well, and the most recent sample is compared to background.

Statistical tests used to evaluate permit-required Appendix I groundwater monitoring data consist of intrawell PLs combined with a 1-of-2 verification resample plan for the permit-required Appendix I parameters.

Statistical tests used to evaluate Appendix III groundwater monitoring data consist of interwell PLs combined with a 1-of-2 verification resample plan for parameters boron, calcium, chloride, and fluoride. Monitoring results for pH, sulfate, and total dissolved solids (TDS) were evaluated using intrawell PLs combined with a 1-of-2 verification resample plan.

Intrawell statistical methods are a conservative first step that may be overly sensitive to natural variation, particularly for nonparametric limits with small background sample sizes. Therefore, in instances where an apparent Appendix I or III statistically significant increase (SSI) is identified by intrawell statistical methods, interwell statistical methods may be used as a reasonable second step to determine sitewide background.

If data from a sampling event initially exceeds the PL, the resampling strategy may be used to verify the result. In 1-of-2 resampling, one independent resample may be collected and evaluated within 90 days to determine whether the initial exceedance is verified. If a resample exceeds the PL, the initial exceedance is verified, and an SSI is identified. When a resample result does not verify the initial result, and does not exceed the PL, there is no SSI. If resampling is not performed, the initial exceedance is a confirmed SSI.

## 4.2 Statistical Analysis Results for Appendix I Parameters

Analytical data from the monitoring event in January 2026 was statistically analyzed in accordance with the statistical methods. The statistical analysis and comparison to PLs are included in Appendix D.

Based on the statistical results presented in Appendix D, evaluation of parameters exhibiting initial exceedances of the intrawell statistical analysis identified unverified exceedances for barium in GWC-6, GWC-20, and GWC-35. The barium results were not identified as exceedances of the interwell PLs by utilizing the two-step approach.

## 4.3 Statistical Analysis Results for Appendix III Parameters

Analytical data from the monitoring event in January 2026 was statistically analyzed in accordance with the statistical methods. The statistical analysis and comparison to PLs are included in Appendix D.

Based on the statistical results presented in Appendix D, evaluation of the statistical analysis identified verified SSIs for boron in GWC-12, GWC-14, and GWC-35 and chloride in GWC-14. Therefore, the exceedances identified during the January 2026 event include:

- Boron: GWC-12, GWC-14, and GWC-35
- Chloride: GWC-14

### 4.3.1 Summary of Appendix III SSIs in 2026

The boron SSIs identified for GWC-12 and GWC-14 are consistent with conditions outlined by Alternate Source Demonstrations (ASDs) completed in April 2018 (ACC, 2018) and August 2022 (ACC, 2022). The boron SSI identified for GWC-35 is consistent with conditions outlined by ASDs completed in April 2024 (ACC, 2024) and May 2025 (ACC, 2025). The chloride SSI identified for GWC-14 is consistent with conditions outlined by ASDs completed in April 2018 (ACC, 2018) and August 2022 (ACC, 2022). These SSIs have been addressed by Georgia EPD approved ASDs. Therefore, the Site will remain in detection monitoring.

# 5.0 ALTERNATE SOURCE DEMONSTRATIONS

ASDs were previously submitted to Georgia EPD under separate report covers to address SSIs of Appendix I and Appendix III parameters. Based on Georgia EPD guidance, ASDs no longer require concurrence if an SSI has not been detected for two consecutive events, which indicates natural variability. SSIs confirmed in GWC-12 and GWC-14 during this reporting period have been addressed by an August 2022 update to the April 2018 ASD, both of which have been approved by Georgia EPD, as listed in the table below. The SSI for boron in GWC-35 was addressed by an ASD submitted in May 2025, which was an update to an ASD submitted in April 2024.

| Reference | SSI(s) | Well(s) | Status |
|---|---|---|---|
| Atlantic Coast Consulting, Inc., Alternate Source Demonstration – Plant Wansley CCR Landfill, April 2018, updated August 2022. | boron | GWC-12 and GWC-14 | Approved October 19, 2022 |
| | chloride | GWC-14 | |
| Atlantic Coast Consulting, Inc., Alternate Source Demonstration – Plant Wansley CCR Landfill, April 2024, updated May 2025. | boron | GWC-35 | Approved September 5, 2025 |

# 6.0 MONITORING PROGRAM STATUS

In accordance with 40 CFR § 257.94(e) and § 257.95 and Georgia's Solid Waste Management Rule 391-3-4-.10, the Site will remain in detection monitoring. Verified SSIs for Appendix III parameters during the January 2026 monitoring event have been addressed by previous ASDs.

As part of the Cell 4 expansion at the Site, the groundwater monitoring network has been modified to incorporate the new cell. The proposed groundwater monitoring well network for Cell 4 is described in the revised GWMP submitted by HHNT on November 6, 2025, which is currently under review by Georgia EPD. Future well installation reports for these wells will be included in the Site's annual report. Figure 3 shows the expansion monitoring network including the abandoned groundwater monitoring wells and the new groundwater monitoring wells. The new groundwater monitoring wells will be sampled for their first background sampling event in July 2026 and sampled quarterly thereafter until eight events have been completed.

## 7.0 CONCLUSIONS AND FUTURE ACTIONS

This *2026 Semiannual Groundwater Monitoring and Corrective Action Report, Georgia Power Company – Plant Wansley CCR Landfill* was prepared to fulfill the requirements of US EPA's CCR Rule 257.90(e) and Georgia EPD Rules for Solid Waste Management Chapter 391-3-4-.10.

Statistical evaluations of the groundwater monitoring data for the Site identified SSIs of Appendix III groundwater monitoring parameters. Verified SSIs have been addressed by Georgia EPD approved ASDs, and the Site remains in detection monitoring.

The next semiannual monitoring event is tentatively scheduled for July 2026.

Notes:
Elevations shown are in datum NAVD88, which indicates feet in elevation referenced to the North American Vertical Datum 1988.
Georgia State Plane NAD83 West Zone referenced for horizontal datum.
Survey points measured at nail or known reference point.
Groundwater Zone Screened references USCS ASTM 2488 Visual Manual Group Symbol or well survey.
PWR = Partially weathered rock.
Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.
* Well was abandoned between March 9 and April 2, 2026.

| GWC-35 | 730.64 | 8.65 | 721.99 |

Notes:
Elevations referenced to the North American Vertical Datum 1988.
Groundwater elevations measured January 20, 2026.

Table 5
Horizontal Groundwater Flow Velocity Calculations - January 2026
Georgia Power Company
Plant Wansley CCR Landfill
Heard County, GA

| Well Pair | Groundwater Elevations in Well Pairs (feet) | | Change in Elevation (feet) | Distance Between Well 1 and Well 2 (feet) | Hydraulic Gradient (i) | Average Hydraulic Conductivity (K) (feet per day) | Estimated Effective Porosity (ne) | Calculated Groundwater Flow Velocity (feet per day) | Calculated Groundwater Flow Velocity (feet per year) |
|---|---|---|---|---|---|---|---|---|---|
| GWA-1 to GWC-20 | 752.51 | 699.18 | 53.33 | 1314 | 0.041 | 1.16 | 0.10 | 0.48 | 174 |
| GWA-2 to GWC-7 | 769.05 | 722.66 | 46.39 | 1134 | 0.041 | 1.16 | 0.10 | 0.48 | 174 |
| GWA-4 to GWC-5 | 752.59 | 736.46 | 16.13 | 438.8 | 0.037 | 1.16 | 0.10 | 0.43 | 157 |
| **Average** | | | | | **0.040** | **1.16** | **0.10** | **0.46** | **168** |

Notes:
In-situ hydraulic conductivity (slug) tests at the Site calculated an average of 1.16 feet per day (Site Acceptability Report, Southern Company Services, 2007).
Effective porosity of 10% was selected for Gravelly Clayey Silts from Handbook of Hydrology (Maidment, 1993).
See Figure 3 for illustrated flow paths.
Groundwater flow velocity equation: V = (K* i)/ne, where V is groundwater velocity, K is hydraulic conductivity, i is hydraulic gradient, and ne is effective porosity.

Notes:
mg/L - milligrams per liter
SU - Standard Units
NA - Indicates not analyzed
< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the MDL, but below the laboratory reporting limit.
Parameters required by permit are Appendix I parameters included to meet Georgia EPD Rule 391-3-4-.14 requirements.

| **Additional Parameters** | | | | | | | | | |
| Total Alkalinity as CaCO3 | mg/L | 28 | 37 | 26 | NA | 43 | 38 | 29 | 12 |
| Bicarbonate Alkalinity as CaCO3 | mg/L | 28 | 37 | 26 | NA | 43 | 38 | 29 | 12 |
| Carbonate Alkalinity as CaCO3 | mg/L | < 3.0 | < 3.0 | < 3.0 | NA | < 3.0 | < 3.0 | < 3.0 | < 3.0 |
| Magnesium | mg/L | 0.89 | 1.8 | 1.5 | 3.0 | 3.3 | 1.4 | 1.6 | 6.7 |
| Potassium | mg/L | 0.95 J | 1.1 | 1.8 | 1.2 | 1.9 | 2.4 | 1.9 | 2.8 |
| Sodium | mg/L | 11 | 13 | 6.3 | 12 | 10 | 11 | 5.0 | 5.4 |

Notes:
mg/L - milligrams per liter
SU - Standard Units
NA - Indicates not analyzed
< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the MDL, but below the laboratory reporting limit.
Parameters required by permit are Appendix I parameters included to meet Georgia EPD Rule 391-3-4-.14 requirements.

Table 8
Statistical Method Summary
Georgia Power Company
Plant Wansley CCR Landfill
Heard County, GA

| Plant Wansley CCR Landfill Statistical Method Summary | | |
|---|---|---|
| Monitoring Well Network | Upgradient Wells | GWA-1, GWA-2, GWA-3, GWA-4, GWA-28, and GWA-29 |
| | Downgradient Wells | GWC-5, GWC-6, GWC-7, GWC-8, GWC-9, GWC-10, GWC-11, GWC-12, GWC-13, GWC-14, GWC-15, GWC-16, GWC-17, GWC-18, GWC-19, GWC-20, GWC-21, GWC-22, GWC-23, GWC-24, GWC-25, GWC-26, GWC-27, GWC-30, GWC-31, GWC-32, GWC-33, GWC-34, and GWC-35 |
| CCR Monitoring Parameters | Appendix III (Detection Monitoring) | Boron, Calcium, Chloride, Fluoride, pH, Sulfate, and Total Dissolved Solids |
| | Appendix IV (Assessment Monitoring) | Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Combined Radium 226 + 228, Fluoride, Lead, Lithium, Mercury, Molybdenum, Selenium, and Thallium |
| Modified Appendix I Metals | Detection Monitoring | Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Mercury, Nickel, Selenium, Silver, Thallium, Vanadium, and Zinc |
| Statistical Methodology | Data Screening Proposed Background | Evaluate outliers, trends, and seasonality when sufficient data are available |
| | Statistical Limits | Interwell (boron, calcium, chloride, and fluoride) or intrawell (pH, sulfate, Total Dissolved Solids, and Modified Appendix I Metals) statistical limits are on parameter specific basis, depending on the appropriateness of the method as determined by the Analysis of Variance. Intrawell exceedances are further evaluated by interwell analysis per the two-step statistical method. |

# Login Sample Receipt Checklist

Client: Southern Company

Job Number: 705-55375-1

**Login Number: 55375**
**List Number: 1**
**Creator: Gay, Dalton**

**List Source: Eurofins Atlanta**

| Question | Answer | Comment |
|---|---|---|
| The cooler's custody seal, if present, is intact. | True | |
| The cooler does not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Sample custody seals, if present, are intact. | True | |
| Sample collection date/times are provided. | True | |
| The samples do not appear to have been compromised or tampered with. | True | |
| Containers are not broken or leaking. | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Sample containers have legible labels. | True | |
| Appropriate sample containers were rec'd and sufficient volume for all analyses. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs). | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Is there sufficient air space in bottle for bacteriological analysis. | N/A | |

This receipt checklist is generated for all samples received in this Login. It may not be applicable to all Jobs associated with this Login.

# Definitions/Glossary

Client: Southern Company
Project/Site: Plant Wansley Landfill

Job ID: 705-55375-1

## Qualifiers

### HPLC/IC

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

### Metals

| Qualifier | Qualifier Description |
|---|---|
| ^2 | Calibration Blank (ICB and/or CCB) is outside acceptance limits. |
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| E | Result exceeded calibration range. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ☼ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**705-55375-1**

**Revision 4**
The report being provided is a revision of the original report sent on 1/30/2026. The report (revision 4) is being revised in order to explain the reason for the Revision 3 report was to perform a data quality review per client request for Mercury for the following samples: WAN-GWC-9 (705-55740-3), WAN-GWC-26 (705-55740-5), WAN-GWC-33 (705-55740-6), and WAN-LF-EB-05 (705-55740-10). After confirming bottle labeling and computer data entries, samples were re-digested and re-analyzed for mercury with results now reported for the re-analysis of these 4 samples. No other changes are made to this report.

Report revision history
Revision 1 - 2/11/2026 - in order to include in this report other Plant Wansley Landfill samples that were submitted later.

Revision 2 - 2/13/2026 - Reason - The report is being revised again in order to attach the correct COCs to this report.

Revision 3 - 2/19/2026 - Reason - Per client request Mercury was reanalyzed for the following samples: WAN-GWC-9 (705-55740-3), WAN-GWC-26 (705-55740-5), WAN-GWC-33 (705-55740-6), and WAN-LF-EB-05 (705-55740-10). No other changes are made to this report.

**Receipt**
The samples were received on 1/21/2026 2:50 PM, 1/23/2026 9:47 AM and 1/23/2026 12:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 0.4º C, 0.4º C, 0.7º C, 0.9º C, 0.9º C and 1.0º C.

**HPLC/IC**
No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**Metals**
Method 6020B: The continuing calibration blank (CCB) for analytical batch 705-109719 contained Thallium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

**General Chemistry**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Job Notes

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

# Login Sample Receipt Checklist

Client: Southern Company

Job Number: 705-55747-1

**Login Number: 55747**
**List Number: 1**
**Creator: Gay, Dalton**

**List Source: Eurofins Atlanta**

| Question | Answer | Comment |
|---|---|---|
| The cooler's custody seal, if present, is intact. | True | |
| The cooler does not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Sample custody seals, if present, are intact. | True | |
| Sample collection date/times are provided. | True | |
| The samples do not appear to have been compromised or tampered with. | True | |
| Containers are not broken or leaking. | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Sample containers have legible labels. | True | |
| Appropriate sample containers were rec'd and sufficient volume for all analyses. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs). | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Is there sufficient air space in bottle for bacteriological analysis. | N/A | |

# Definitions/Glossary

Client: Southern Company
Project/Site: Plant Wansley Landfill - Surface Waters

Job ID: 705-55747-1

## Qualifiers

### HPLC/IC

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

### Metals

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| E | Result exceeded calibration range. |
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ☼ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**705-55747-1**

**Revision 2**
The report being provided is a revision of the original report sent on 2/5/2026. The report is being revised again in order to attach the correct Chain of Custody (COC) page associated for these results.

Report revision history
Revision 1 - 2/10/2026 - Reason - in order to correct QC reporting for Anions by Method 300.0.

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

**Receipt**
The samples were received on 1/23/2026 9:47 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.9°C and 1.0°C.

**HPLC/IC**
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**Metals**
Method 6020B - Dissolved: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 705-110330 and analytical batch 705-110830 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**General Chemistry**
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

# Login Sample Receipt Checklist

Client: Southern Company

Job Number: 705-57765-1

**Login Number: 57765**
**List Number: 1**
**Creator: Stephens, Andrena**

**List Source: Eurofins Atlanta**

| Question | Answer | Comment |
|---|---|---|
| The cooler's custody seal, if present, is intact. | True | |
| The cooler does not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Sample custody seals, if present, are intact. | True | |
| Sample collection date/times are provided. | True | |
| The samples do not appear to have been compromised or tampered with. | True | |
| Containers are not broken or leaking. | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Sample containers have legible labels. | True | |
| Appropriate sample containers were rec'd and sufficient volume for all analyses. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs). | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Is there sufficient air space in bottle for bacteriological analysis. | True | |

This receipt checklist is generated for all samples received in this Login. It may not be applicable to all Jobs associated with this Login.

# Definitions/Glossary

Client: Southern Company
Project/Site: Plant Wansley Landfill

Job ID: 705-57765-1

## Qualifiers

### Metals

| Qualifier | Qualifier Description |
|---|---|
| ^+ | Continuing Calibration Verification (CCV) is outside acceptance limits, high biased. |
| B | Compound was found in the blank and sample. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ☼ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**705-57765-1**

**Revision 1**
The report being provided is a revision of the original report sent on 2/28/2026. The report is being revised in order to correct the date & time this sample was received and to use the corrected Chain of Custody (COC) provided.

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

**Receipt**
The sample was received on 2/12/2026 11:48 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.3°C, 1.4°C, 2.0°C and 3.1°C.

**Metals**
Method 6020B - Total Recoverable: The continuing calibration verification (CCV) associated with batch 705-115022 recovered above the upper control limit for Copper. The samples associated with this CCV were non-detects or less than the reporting limit (RL) for the affected analytes; therefore, the data have been reported. The associated samples are:WAN-GWC-31 (705-57765-1), (CCV 705-115022/38) and (CCV 705-115022/47).

Method 6020B - Total Recoverable: The continuing calibration verification (CCV) associated with batch 705-115022 recovered above the upper control limit for Lead. The CCV affected only the batch QC and no client samples. Data was reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

# Detection Summary

# Login Sample Receipt Checklist

Client: Southern Company

Job Number: 705-55375-2

**Login Number: 55375**
**List Number: 1**
**Creator: Gay, Dalton**

**List Source: Eurofins Atlanta**

| Question | Answer | Comment |
|---|---|---|
| The cooler's custody seal, if present, is intact. | True | |
| The cooler does not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Sample custody seals, if present, are intact. | True | |
| Sample collection date/times are provided. | True | |
| The samples do not appear to have been compromised or tampered with. | True | |
| Containers are not broken or leaking. | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Sample containers have legible labels. | True | |
| Appropriate sample containers were rec'd and sufficient volume for all analyses. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs). | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Is there sufficient air space in bottle for bacteriological analysis. | N/A | |

This receipt checklist is generated for all samples received in this Login. It may not be applicable to all Jobs associated with this Login.

# Definitions/Glossary

Client: Southern Company
Project/Site: Plant Wansley Landfill

Job ID: 705-55375-2

## Qualifiers

### Metals

| Qualifier | Qualifier Description |
|---|---|
| ^+ | Continuing Calibration Verification (CCV) is outside acceptance limits, high biased. |
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| B | Compound was found in the blank and sample. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ☼ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**705-55375-2**

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

**Receipt**
The samples were received on 1/21/2026 2:50 PM, 1/23/2026 9:47 AM and 1/23/2026 12:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.4°C, 0.4°C, 0.7°C, 0.9°C and 1.0°C.

**Metals**
Method 6020B - Total Recoverable: The method blank for preparation batch 705-109295 and analytical batch 705-109719 contained Potassium above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 6020B - Total Recoverable: The method blank for preparation batch 705-109295 and analytical batch 705-110331 contained Sodium above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 6020B - Total Recoverable: The following sample was diluted due to the nature of the sample matrix causing high percent relative standard deviations (%RSDs) : WAN-GWA-28 (705-55375-4). Elevated reporting limits (RLs) are provided.

Method 6020B - Total Recoverable: The continuing calibration verification (CCV) associated with batch 705-111321 recovered above the upper control limit for Potassium. The samples associated with this CCV were non-detects for the affected analytes or less than the reporting limit (RL); therefore, the data have been reported. The associated samples are:WAN-GWA-28 (705-55375-4) and (CCV 705-111321/45).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**General Chemistry**
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

# Eurofins Atlanta

## Job Notes

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

## Authorization

# Login Sample Receipt Checklist

Client: Southern Company

Job Number: 705-55747-2

**Login Number: 55747**
**List Number: 1**
**Creator: Gay, Dalton**

**List Source: Eurofins Atlanta**

| Question | Answer | Comment |
|---|---|---|
| The cooler's custody seal, if present, is intact. | True | |
| The cooler does not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Sample custody seals, if present, are intact. | True | |
| Sample collection date/times are provided. | True | |
| The samples do not appear to have been compromised or tampered with. | True | |
| Containers are not broken or leaking. | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Sample containers have legible labels. | True | |
| Appropriate sample containers were rec'd and sufficient volume for all analyses. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs). | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Is there sufficient air space in bottle for bacteriological analysis. | N/A | |

This receipt checklist is generated for all samples received in this Login. It may not be applicable to all Jobs associated with this Login.

# Definitions/Glossary

Client: Southern Company
Project/Site: Plant Wansley Landfill - Surface Waters

Job ID: 705-55747-2

## Qualifiers

### Metals

| Qualifier | Qualifier Description |
|---|---|
| ^+ | Continuing Calibration Verification (CCV) is outside acceptance limits, high biased. |
| B | Compound was found in the blank and sample. |
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ☼ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**705-55747-2**

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

**Receipt**
The samples were received on 1/23/2026 9:47 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.9°C and 1.0°C.

**Metals**
Method 6020B - Total Recoverable: The method blank for preparation batch 705-110121 and analytical batch 705-110530 contained Potassium above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed

Method 6020B - Total Recoverable: The continuing calibration verification (CCV) associated with batch 705-110530 recovered above the upper control limit for Sodium. Any detections are considered estimated. Only batch QC MS & MSD samples ae affected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**General Chemistry**
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

# Detection Summary

Client: Southern Company
Project/Site: Plant Wansley Landfill - Surface Waters

Job ID: 705-55747-2

# Login Sample Receipt Checklist

Client: Southern Company

Job Number: 705-57765-2

**Login Number: 57765**
**List Number: 1**
**Creator: Stephens, Andrena**

**List Source: Eurofins Atlanta**

| Question | Answer | Comment |
|---|---|---|
| The cooler's custody seal, if present, is intact. | True | |
| The cooler does not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Sample custody seals, if present, are intact. | True | |
| Sample collection date/times are provided. | True | |
| The samples do not appear to have been compromised or tampered with. | True | |
| Containers are not broken or leaking. | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Sample containers have legible labels. | True | |
| Appropriate sample containers were rec'd and sufficient volume for all analyses. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs). | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Is there sufficient air space in bottle for bacteriological analysis. | True | |

This receipt checklist is generated for all samples received in this Login. It may not be applicable to all Jobs associated with this Login.

## Qualifiers

### Metals

| Qualifier | Qualifier Description |
|---|---|
| ^+ | Continuing Calibration Verification (CCV) is outside acceptance limits, high biased. |
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ☼ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

**Job Narrative**
**705-57765-2**

**Revision 1**
The report being provided is a revision of the original report sent on 2/19/2026. The report is being revised in order to correct the date & time this sample was received and to use the corrected Chain of Custody (COC) provided.

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

**Receipt**
The sample was received on 2/11/2026 03:30 PM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.3°C, 1.4°C, 2.0°C and 3.1°C.

**Metals**
Method 6020B: The continuing calibration verification (CCV) associated with batch 705-115022 recovered above the upper control limit for Magnesium, Potassium and Sodium. The CCV affected only the batch QC and no samples in this submittal. Data was reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

**LEVEL 2A LABORATORY DATA VALIDATIONS**

# Plant Wansley Landfill

# Semiannual Event

# January 2026

# Georgia Power Company – Plant Wansley Landfill

# Quality Control Review of Analytical Data – January 2026

This narrative presents results of the Quality Control (QC) data review performed on analytical data submitted by Eurofins Environment Testing America for groundwater and surface water samples collected at Plant Wansley Landfill (LF) between January 20, 2026 and February 11, 2026. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision-making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1 of this Appendix. SDG 705-55375-1 was revised to correct errant mercury data. Sample WAN-GWC-31 was collected later and only submitted for metals analysis due to the well purging dry.

In accordance with groundwater monitoring and corrective action procedures discussed in the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.14 and Title 40 Code of Federal Regulations (CFR), Subpart D – Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detection monitoring constituents listed in 40 CFR, Part 257, Appendix III, and permit-required metals listed in 40 CFR, Part 258, Appendix I. Test methods included Inductively Coupled Plasma – Mass Spectrometry (US EPA Method 6020B), Mercury in Liquid Wastes (US EPA Method 7470A), Determination of Inorganic Anions (US EPA Method 300.0), and Solids in Water (Standard Methods 2540C).

Data were reviewed in accordance with the US EPA Region 4 Data Validation Standard Operating Procedures for Contract Laboratory Program Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0)[1] and the National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017)[2]. The review included an assessment of the results for completeness, precision (laboratory duplicate recoveries and matrix spike/matrix spike duplicate recoveries), accuracy (laboratory control samples and matrix spike samples), and blank contamination (field, equipment, and laboratory blanks). Sample receipt conditions, holding times, and chains of custody were reviewed. If there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytical methodology, method-specific criteria or professional judgment were used.

## DATA QUALITY OBJECTIVES

**Laboratory Precision:** Laboratory goals for precision were met.

**Field Precision:** Field goals for precision were met, except for zinc and total dissolved solids (TDS) from WAN-GWC-21 (705-55375-8), TDS in WAN-GWC-13 (705-55666-4) and WAN-GWC-19 (705-55666-9), and calcium in WAN-GWC-15 (705-55666-5) as described in the qualifications section below.

**Accuracy:** Laboratory goals for accuracy were met, except for dissolved barium and dissolved cobalt from WAN-SWC-3 (705-55747-3) as described in the qualifications section below.

**Detection Limits:** Project goals for detection limits were met. Certain samples were diluted due to the concentration of target or non-target analyte interferences. Dilutions do not require qualifications based on US EPA guidelines. Reporting limits (RLs) of non-detect compounds are elevated proportional to the dilution when undiluted sample results were not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of site-wide characterization.

**Completeness:** There were no rejected analytical results for this event, resulting in a completion of 100%.

**Holding Times:** Holding time requirements were met.

## QUALIFICATIONS

In general, chemical results for the samples collected at the site were qualified on the basis of low precision or low accuracy or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data by the laboratory during the validation process:

**J+:** The analyte was positively identified above the method detection limit; however, the analyte was also detected in a method blank, field blank, and/or equipment blank.

**J:** The analyte was positively identified above the method detection limit; however, the associated numerical value is the estimated concentration of the analyte in the sample.

**U:** The analyte was not detected above the method detection limit.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. The applied qualifications may not have been required for all samples collected at the site. A summary of sample qualifications can be found in Table 2 of this Appendix.

- Samples WAN-GWC-21 (705-55375-8) and WAN-LF-FD-04 (705-55375-10) were qualified as estimated (J) for zinc and TDS as the original sample analysis did not yield detectable concentrations of these analytes but the field duplicate sample did.

- Samples WAN-GWC-19 (705-55666-9) and WAN-LF-FD-05 (705-55666-13) were qualified as estimated (J) for TDS as the field relative percent difference (RPD) exceeded QC criteria (43.6%, above the limit of 20).

- Samples WAN-GWC-13 (705-55666-4) and WAN-LF-FD-06 (705-55666-14) were qualified as estimated (J) for TDS as the RPD exceeded QC criteria (87.8%, above the limit of 20).

- Samples WAN-GWC-15 (705-55666-5) and WAN-LF-FD-07 (705-55666-15) were qualified as estimated (J) for calcium as the RPD exceeded QC criteria (20.3%, above the limit of 20).

- Sample WAN-SWC-3 (705-55747-3) was qualified as estimated (J) for dissolved barium, as the MS and MSD recoveries were outside QC criteria (both 74%, below the range of 75-125).

- Sample WAN-SWC-3 (705-55747-3) was qualified as estimated (J) for dissolved cobalt as the MS and MSD recoveries were outside QC criteria (39% and 30%, respectively, below the range of 75-125).

- Samples WAN-GWA-29 (705-55375-5) and WAN-GWC-14 (705-55375-7) were qualified as estimated (J+) for thallium due to the analyte being detected in an associated blank sample (laboratory calibration blank), as shown in Table 2.

- Samples WAN-GWC-7 (705-55740-1), WAN-GWC-8 (705-55740-2), WAN-GWC-9 (705-55740-3), WAN-GWC-23 (705-55740-4), WAN-GWC-33 (705-55740-6), WAN-GWC-34 (705-55740-7), and WAN-GWC-35 (705-55740-8) were qualified as estimated (J+) for sulfate due to the analyte being detected in an associated blank sample (WAN-LF-EB-07), as shown in Table 2).

- Sample WAN-GWC-31 (705-57765-1) was qualified as estimated (J+) for copper due to the analyte being detected in an associated blank sample (laboratory calibration blank), as shown in Table 2).

- Sample WAN-GWC-31 (705-57765-1) was qualified as estimated (J+) for vanadium due to the analyte being detected in an associated blank sample (batch method blank), as shown in Table 2.

Atlantic Coast Consulting, Inc. reviewed the laboratory data from the Plant Wansley LF sampled between January 20, 2026 and February 11, 2026, in accordance with the analytical methods, the laboratory-specified QC criteria, and the guidelines. As described above, the results were acceptable for project use.

# January 2026

# Georgia Power Company – Plant Wansley Landfill

# Quality Control Review of Analytical Data – January 2026

This narrative presents results of the Quality Control (QC) data review performed on analytical data submitted by Eurofins Environment Testing America, Savannah for groundwater and surface water samples collected at Plant Wansley Landfill (LF) between January 20, 2026 and February 11, 2026. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision-making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1 of this Appendix. Sample WAN-GWC-31 was collected later and only submitted for metals analysis due to the well purging dry.

The samples were analyzed for geochemical parameters. Test methods included Inductively Coupled Plasma – Mass Spectrometry (US EPA Method 6020B) and Alkalinity in Water (Standard Methods 2320B).

Data were reviewed in accordance with the US EPA Region 4 Data Validation Standard Operating Procedures for Contract Laboratory Program Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0)[1] and the National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017)[2]. The review included an assessment of the results for completeness, precision (laboratory duplicate recoveries and matrix spike/matrix spike duplicate recoveries), accuracy (laboratory control samples and matrix spike samples), and blank contamination (laboratory blanks). Sample receipt conditions, holding times, and chains of custody were reviewed. If there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytical methodology, method-specific criteria or professional judgment were used.

## DATA QUALITY OBJECTIVES

**Laboratory Precision:** Laboratory goals for precision were met.

**Field Precision:** Field goals for precision were not applicable to this sampling event.

**Accuracy:** Laboratory goals for accuracy were met, except for magnesium and sodium from WAN-GWC-5 (705-55666-1) as described in the qualifications section below.

**Detection Limits:** Project goals for detection limits were met.

**Completeness:** There were no rejected analytical results for this event, resulting in a completion of 100%.

**Holding Times:** Holding time requirements were met.

## QUALIFICATIONS

In general, chemical results for the samples collected at the site were qualified on the basis of low precision or low accuracy or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data by the laboratory during the validation process:

**J+:** The analyte was positively identified above the method detection limit; however, the analyte was also detected in a method blank, field blank, and/or equipment blank.

**J:** The analyte was positively identified above the method detection limit; however, the associated numerical value is the estimated concentration of the analyte in the sample.

**U:** The analyte was not detected above the method detection limit.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. The applied qualifications may not have been required for all samples collected at the site. A summary of sample qualifications can be found in Table 2 of this Appendix.

- Sample WAN-GWC-5 (705-55666-1) was qualified as estimated (J) for magnesium as the matrix spike (MS) recovery was outside QC criteria (171% above the range of 75-125).

- Sample WAN-GWC-5 (705-55666-1) was qualified as estimated (J) for sodium as the matrix spike duplicate (MSD) recovery was outside QC criteria (153% above the range of 75-125).

- Certain potassium and sodium results on SDG 705-55375-2 were qualified as potentially high biased (J+) due to the analyte being detected in an associated blank sample (batch method blank), as shown in Table 2.

- Sample WAN-GWC-31 (705-57765-2) was qualified as estimated (J+) for magnesium, potassium, and sodium due to the analytes being detected in an associated blank sample (laboratory calibration blank), as shown in Table 2.

Atlantic Coast Consulting, Inc. reviewed the laboratory data from the Plant Wansley LF sampled between January 20, 2026 and February 11, 2026, in accordance with the analytical methods, the laboratory-specified QC criteria, and the guidelines. As described above, the results were acceptable for project use.

| 55375-2 | WAN-GWC-5 | Magnesium | | | J | MS/MSD outside QC criteria |
| 55375-2 | WAN-GWC-5 | Sodium | | | J | MS/MSD outside QC criteria |

Abbreviations:
LCS – Laboratory Control Sample
MDC – Minimum Detectable Concentration
MS – Matrix Spike
MDL – Method Detection Limit
RL – Reporting Limit
SDG – Sample Delivery Group

Qualifiers:
J+ – Field, Equipment, or Method Blank Detection
J – Estimated Result
ND – Non-Detect Result

TABLE 2 (continued)

Qualifier Summary Table – January 2026

Georgia Power Company – Plant Wansley Landfill

| SDG | Field Identification | Constituent | New RL | New MDL or MDC | Qualifier | Reason |
|---|---|---|---|---|---|---|
| 55747-2 | WAN-SWC-3 | Potassium | | | J+ | Blank detection |
| 55747-2 | WAN-SWC-5 | Potassium | | | J+ | Blank detection |
| 55747-2 | WAN-SWC-7 | Potassium | | | J+ | Blank detection |
| 57765-2 | WAN-GWC-31 | Magnesium | | | J+ | Blank detection |
| 57765-2 | WAN-GWC-31 | Potassium | | | J+ | Blank detection |
| 57765-2 | WAN-GWC-31 | Sodium | | | J+ | Blank detection |

Abbreviations:
LCS – Laboratory Control Sample
MDC – Minimum Detectable Concentration
MS – Matrix Spike
MDL – Method Detection Limit
RL – Reporting Limit
SDG – Sample Delivery Group

Qualifiers:
J+ – Field, Equipment, or Method Blank Detection
J – Estimated Result
ND – Non-Detect Result

# Low-Flow Test Report:

**Test Date / Time:** 1/20/2026 11:46:08 AM
**Project:** Plant Wansley Landfill
**Operator Name:** Taylor Goble

| | | |
|---|---|---|
| **Location Name: GWA-1**<br>**Well Diameter: 2 in**<br>**Casing Type: PVC**<br>**Screen Length: 10 ft**<br>**Top of Screen: 39.79 ft**<br>**Total Depth: 49.79 ft**<br>**Initial Depth to Water: 25.61 ft** | **Pump Type: Peristaltic Pump**<br>**Tubing Type: Poly**<br>**Tubing Inner Diameter: 0.17 in**<br>**Pump Intake From TOC: 44 ft**<br>**Estimated Total Volume Pumped: 3.5 liter**<br>**Flow Cell Volume: 90 ml**<br>**Final Flow Rate: 100 ml/min**<br>**Final Draw Down: 2.61 ft** | **Instrument Used: Aqua TROLL 400**<br>**Serial Number: 1283493** |

**Test Notes:**
Sampled at 1221. Clear 38 degrees

## CERTIFICATION PAGE

I hereby certify that this *Well Abandonment, Design, Installation, and Development Report – Plant Wansley CCR Landfill* has been prepared by, or under the direct supervision of, a Qualified Groundwater Scientist with Geosyntec Consultants, Inc. and is in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule [40 Code of Federal Regulations 257 Subpart D], specifically §257.91(e)(1), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10.

According to 391-3-4-.01, a Qualified Groundwater Scientist is "a professional engineer or geologist registered to practice in Georgia who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields that enable individuals to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action."

# 1. INTRODUCTION

This report details modifications to the groundwater well network at the Coal Combustion Residuals (CCR) Landfill as the footprint is expanded for the construction of an additional Landfill cell (Cell 4) between existing Cells 2 and 3. This report documents the abandonment of fourteen (14) detection monitoring wells (wells) and the design, installation, and development of eleven (11) detection monitoring wells at Georgia Power Company (Georgia Power) Plant Wansley CCR Landfill.

The well abandonments and installations were completed to meet the requirements promulgated in the United States Environmental Protection Agency (US EPA) CCR rule [40 Code of Federal Regulations (CFR) Part 257, Subpart D], specifically 40 CFR §257.91(e)(1) and Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10.

The locations of the abandoned monitoring wells are shown on **Figure 1**, and the locations of the newly installed detection monitoring wells are shown on **Figure 2.**

## 2. WELL ABANDONMENT

A total of 14 wells (GWA-2 through GWA-4, GWC-5 through GWC-9, GWC-24, GWC-25, GWC-31, and GWC-33 through GWC-35) were abandoned from March 9 to April 2, 2026, by Cascade Drilling, Inc. of Memphis, Tennessee (Cascade) to facilitate construction activities near the landfill. The work was completed under the supervision of a Geosyntec Consultants, Inc. (Geosyntec) staff member with direction and oversight from a Geosyntec professional geologist licensed in the State of Georgia and performed by a Georgia-licensed well driller.

The locations of the abandoned wells are presented on **Figure 1**, and the well construction, water levels, and abandonment dates are summarized in **Table 1**. The wells were constructed of 2-inch diameter polyvinyl chloride (PVC) well screen and riser installed in a 6-inch diameter borehole. The wells were screened in saprolite, partially weathered rock (PWR), and bedrock. The water level and total well depth were measured prior to abandonment at each location.

The wells located within or in close proximity to the future Cell 4 limits of waste were abandoned by tremie-grouting a cement/bentonite mixture into the well casing and screen, ensuring the grout reached the top of the PVC casing. After the well casings were grouted, the wells were over drilled to the bottom of the original borehole. The borehole was then filled with a non-shrinking cement/bentonite grout mixture via tremie pipe to within 10 feet of the bottom of the compacted clay liner. The remaining borehole was filled with hydrated 3/8-inch, uncoated bentonite chips. Wells GWC-33, GWC-34, and GWC-35 had a ground elevation in excess of 10 feet below the proposed bottom of the compacted clay liner and thus were grouted to ground surface.

The wells located outside the future Cell 4 limits of waste were abandoned by tremie-grouting a cement/bentonite mixture into the well casing and screen, ensuring the grout reached the top of the PVC casing. After the well casings were grouted, the wells were over drilled to 10 feet beyond anticipated excavation depths, and the remaining borehole was filled with hydrated 3/8-inch, uncoated bentonite chips.

All well covers, concrete pads, and bollards were also removed at each well location. Well abandonment forms are provided in **Appendix A**.

# 3. DRILLING AND WELL INSTALLATION

Well installation was performed in general accordance with the *Georgia Water Well Standard Act* OCGA § 12-5-120 and SESDGUID-101-R2. Well drilling, installation, and surface completion activities were performed by Cascade. In accordance with the Georgia Water Well Standards Act, the driller was required to have an insurance bond on file with the State of Georgia at the time of drilling. A copy of this bond is provided in **Appendix B**. A geologist under the supervision of a professional geologist (PG) registered to practice in the State of Georgia, both of whom are employed with Geosyntec, documented the drilling and installation efforts to record observations, soil and rock descriptions, subsurface stratigraphy, water elevations, and other field activities.

The locations of the wells are shown on **Figure 2**. Well construction details are provided in **Table 2,** and boring and well construction data are included in **Appendix C**.

## 3.1 Drilling Method

The boreholes for GWA-2A through GWA-4A, GWC-24A, GWC-25A, GWC-31A, and GWC-36 through GWC-40 were advanced using rotasonic drilling techniques with continuous core collection. A track mounted Terra Sonic 150CC drill rig was used to install the borings for the wells, using a nominal 6-inch outer drill casing and a 4-inch diameter core barrel.

Drilling equipment was cleaned prior to mobilizing to the Site and between well locations. Care was taken so that the drilling methods did not introduce contamination of the groundwater from surface activities.

## 3.2 Screened Interval

Details regarding the well screened intervals are provided in **Table 2**. The wells are screened in the uppermost water bearing unit of the Site. Screened elevations across the new wells range from approximately 670.75 to 764.11 feet (referenced to the North American Vertical Datum of 1988 [NAVD]). Wells were constructed with a 10-foot well screen segment.

## 3.3 Well Casings and Screens

The wells are constructed of 2-inch inner diameter Schedule 40 PVC casing with flush-threaded fittings. The wells were installed with a 10-foot nominal length U-Pack® dual-wall screen with 0.010-inch slots. The casings and screens arrived pre-cleaned and

packaged by the manufacturer. The U-Pack screens were constructed onsite by packing sand between slotted PVC and the screen. Well construction materials are sufficiently durable to resist chemical and physical degradation and do not interfere with the quality of the groundwater. Casing and screens are flush-threaded. Solvent or glue was not used to construct the wells. The wells were completed with a 4-inch-long PVC sump attached to the bottom of the screen. The PVC products used were American Society for Testing and Materials (ASTM) and National Sanitation Foundation (NSF) rated. Details regarding well screening intervals are provided in **Table 2**.

## 3.4 Well Intake Design

The wells were designed and constructed to: (1) allow sufficient groundwater flow to the well for sampling (for performance monitoring and injection wells); (2) minimize the passage of formation materials (turbidity) into the well; and (3) ensure sufficient structural integrity to prevent collapse of the well. The annular space between the face of the formation and the screens was filled to minimize passage of formation materials into the well. A filter pack of clean, well-rounded, quartz sand was installed in each well. The 0.010-inch slot size was selected to minimize the inflow of formation material without impairing influent groundwater flow.

## 3.5 Filter Pack

Highly Pure Quartzite manufactured by Covia was used as the filter pack material for the well. The filter pack material meets the ASTM D5092 uniformity coefficient specification of 2.5 or less, with a uniformity coefficient of 1.5 or less.

Filter pack material was placed within the U-Pack dual-wall well screens and in the annular space between the outside of the U-Pack screen and borehole wall to ensure an adequate thickness of filter pack material between the wells and the formation. Placement of the filter pack between the borehole wall and PVC was placed via gravity-pouring. Filter pack material placed in the annular space outside of the well screens extended a minimum of 2 feet above the top of screens. No bridging occurred during filter pack placement at any of the well locations.

Upon placement of the filter pack, the wells were pumped with a submersible pump to ensure settlement of the filter pack. The top of filter pack depth was measured following pumping to ensure appropriate extension of filter sand above the screens. The depth of top of filter pack was measured and recorded on the well construction logs provided in **Appendix C**.

## 3.6 Annular Seal

A minimum of two feet of bentonite chips (1/2" bentonite pellets) were placed immediately above the filter pack by gravity-pouring into the annular space and hydrated per manufacture's specifications. A tremie pipe was used to probe the annular space to ensure that no bridging occurred. The bentonite was hydrated with potable water for a duration meeting the manufacture's specifications prior to grouting the remaining annulus.

The annulus above the bentonite seal were grouted with a cement/bentonite grout placed via tremie pipe (initial grouting) and direct pour methods (for topping off) from the top of the bentonite seal. During grouting, care was taken to assure that the bentonite seal was not disturbed by locating the base of the tremie pipe approximately 2 feet above the bentonite seal and injecting grout at low pressure/velocity. A cement apron 4-feet by 4-feet by 4-inches was poured around stickup casings at all locations. A metal survey pin was placed on the front side of the concrete pad, several inches from the well vault. The pads were mounded slightly outward to direct surface drainage away from the wells.

## 3.7 Cap and Protective Casing

The well risers were completed as stick-up locations fitted with a locking cap and a lockable cover. A one-quarter inch vent hole was drilled into the PVC riser pipe to provide an avenue for the escape of gas. The protective cap guards the casing from damage and the locking cap serves as a security device to prevent well tampering. Bollards were installed around the four corners of the concrete pad to protect the wells. A weep hole was drilled in the outer protective casing near the bottom above the concrete pad. Pea gravel was placed inside the protective casing between the riser pipe and the outer casing. The wells were clearly marked with the proper well identification number on the stand-up casing. Construction details are documented on the well construction logs provided in **Appendix C**.

# 4. WELL DEVELOPMENT

The newly installed wells were developed by Atlantic Coast Consulting (ACC) using a combination of surging and pumping to (i) restore the natural hydraulic conductivity of the formation, and (ii) remove fine-grained sediments to ensure low-turbidity groundwater samples. The wells were alternately surged and purged until visually clear of particulates. Turbidity, pH, temperature, specific conductivity, oxidation-reduction potential (ORP), and dissolved oxygen (DO) measurements were recorded to ensure that the well was fully developed, and field parameters were stabilized. The well development field forms provided by ACC are included in **Appendix D**.

## 5. SURVEY

Upon completion of the well installation, horizontal locations and vertical elevations of the newly installed detection monitoring wells were surveyed by Thompson Engineering, a Georgia-licensed surveyor and certified on April 29, 2026. The top of the PVC casing [top of casing (TOC) elevation] and the survey pin installed at the well pad were surveyed to within 0.5-foot horizontal accuracy and to 0.01-foot vertical accuracy. The horizontal location (i.e., northing and easting) was recorded in feet relative to the North American Datum of 1983 (NAD) with the vertical elevation recorded in feet relative to 1988 NAVD. Certified survey data is provided in the well construction table (**Table 2**). A copy of the certified survey data for the newly installed detection monitoring wells is provided in **Appendix E.**

Project Name: Wansley Well Installation and Abandonment Well ID: GWA-2

Project No.: GW12295 Abandonment Co.: Cascade

Geosyntec Rep: G. Kouvatsis Date of Abandonment: 3/18/2026

Abandonment Method (i.e. Grout in Place, Overdrill and Grout, etc.): Grout in place, overdrill to 55 ft, chips to surface

Depths (ft below ground surface):

Water Level: 43.04 ft Total Depth of Well: 56.84 ft bgs

Grouting:

Grouting of Well Casing: 18 gallons

Grouting of Borehole: 11 bags of holeplug

Total Volume of Grout Used: 18 gallons

Grout Mixture:

1 Bags of Cement Used ( 92 lbs. each)

1/4 Bags of Bentonite Used ( 50 lbs. each)

25 Gallons of Water Used

Cement Brand: Holcim

Bentonite Brand: Quik-gel

Grout Settlement After 24 Hours: N/A ft

Length of PVC riser removed: 40 ft

Notes:

# Well Abandonment Field Form

Project Name: Wansley Well Installation and Abandonment Well ID: GWA-3

Project No.: GW12295 Abandonment Co.: Cascade

Geosyntec Rep: G. Kouvatsis Date of Abandonment: 3/16/2026

Abandonment Method (i.e. Grout in Place, Overdrill and Grout, etc.): Grout in place, overdrill to 28 ft, chips to surface

Depths (ft below ground surface):

Water Level: 27.20 ft Total Depth of Well: 28.30 ft bgs

Grouting:

Grouting of Well Casing: 7 gallons

Grouting of Borehole: 7 bags of holeplug

Total Volume of Grout Used: 7 gallons

Grout Mixture:

1 Bags of Cement Used ( 92 lbs. each)

1/4 Bags of Bentonite Used ( 50 lbs. each)

25 Gallons of Water Used

Cement Brand: Holcim

Bentonite Brand: Quik-gel

Grout Settlement After 24 Hours: N/A ft

Length of PVC riser removed: 10 ft

Notes: Grout in place on 3/16/2026. Overdrilled and chipped to the top on 3/18/26.

# Well Abandonment Field Form

Project Name: Wansley Well Installation and Abandonment Well ID: GWA-4

Project No.: GW12295 Abandonment Co.: Cascade

Geosyntec Rep: G. Kouvatsis Date of Abandonment: 3/10/2026

Abandonment Method (i.e. Grout in Place, Overdrill and Grout, etc.): Grout in place, overdrill to 32 ft, chips to surface

Depths (ft below ground surface):

Water Level: 22.87 ft Total Depth of Well: 38.08 ft bgs

Grouting:

Grouting of Well Casing: 8 gallons

Grouting of Borehole: 35 bags of holeplug

Total Volume of Grout Used: 43 gallons

Grout Mixture:

1 Bags of Cement Used ( 92 lbs. each)

1/4 Bags of Bentonite Used ( 50 lbs. each)

25 Gallons of Water Used

Cement Brand: Holcim

Bentonite Brand: Quik-gel

Grout Settlement After 24 Hours: 5 ft

Length of PVC riser removed: 31 ft

Notes:

Geosyntec Rep: G. Kouvatsis Date of Abandonment: 3/20/2026

Abandonment Method (i.e. Grout in Place, Overdrill and Grout, etc.): Grout in place, overdrill to 38 ft, grout to 10 ft bgs, chips to surface

Depths (ft below ground surface):

Water Level: 13.12 ft Total Depth of Well: 37.79 ft bgs

Grouting:

Grouting of Well Casing: 8 gallons

Grouting of Borehole: 37 gallons

Total Volume of Grout Used: 45 gallons

Grout Mixture:

1 Bags of Cement Used ( 92 lbs. each)

1/4 Bags of Bentonite Used ( 50 lbs. each)

25 Gallons of Water Used

Cement Brand: Holcim

Bentonite Brand: Quik-gel

Grout Settlement After 24 Hours: 0 ft

Length of PVC riser removed: 14 ft

Notes: All of the PVC screen was retrieved.

# Well Abandonment Field Form

Project Name: Wansley Well Installation and Abandonment Well ID: GWC-6

Project No.: GW12295 Abandonment Co.: Cascade

Geosyntec Rep: G. Kouvatsis Date of Abandonment: 3/20/2026

Abandonment Method (i.e. Grout in Place, Overdrill and Grout, etc.): Grout in place, overdrill to 28 ft, grouted to 13 ft bgs, chips to surface

Depths (ft below ground surface):

Water Level: 13.92 ft Total Depth of Well: 28.01 ft bgs

Grouting:

| | | |
|---|---|---|
| Grouting of Well Casing: | 6 | gallons |
| Grouting of Borehole: | 22 | gallons |
| Total Volume of Grout Used: | 28 | gallons |

Grout Mixture:

1 Bags of Cement Used ( 92 lbs. each)

1/4 Bags of Bentonite Used ( 50 lbs. each)

25 Gallons of Water Used

Cement Brand: Holcim

Bentonite Brand: Quik-gel

Grout Settlement After 24 Hours: 0 ft

Length of PVC riser removed: 29 ft

Notes:

# APPENDIX B

# Well Driller Performance Bonds

GA Water Well Contractor License # 651

Bond Number 612424813

## Performance Bond For Water Well Contractors

Name of Water Well Contractor Richard Alan Mooney

Know All Men By These Presents

That we Cascade Drilling, L.P. and Richard Alan Mooney any and all employees, officers and partners (collectively hereinafter, **Principal**), and we United States Fire Insurance Company, duly organized under the laws of the State of Delaware (hereinafter, **Surety**), are held and firmly bound unto the Director of the Environmental Protection Division, Department of Natural Resources, State of Georgia (**Director**) and his or her successor or successors in office, as **Obligee**, in the full sum of **THIRTY THOUSAND DOLLARS ($30,000.00)** for the payment of which will and truly to be made, the Principal and Surety bind ourselves, our heirs, administrators, successors and assigns, jointly and severally, by these presents.

WHEREAS, the Water Well Standards Act of 1985 (O.C.G.A. §§ 12-5-120 *et seq.*) (the Act) requires that a Water Well Contractor, as that term is defined by the Act, have a performance bond with the Director to ensure compliance with the Act; and WHEREAS the above bound Principal is subject to the terms and provisions of said Act.

NOW, THEREFORE, the conditions of this obligation are such that if the above bound Principal shall fully and faithfully perform the duties and in all things comply with the procedures and standards set forth in the Act as now and hereafter amended, and the rules and regulations promulgated pursuant thereto, including but not limited to the correction of any violation of such procedures and standards upon discovery, irrespective of whether such discovery is made before completion of any well subject to this bond, then this obligation shall be void; otherwise it shall remain in full force and effect.

And Surety, for value received, agrees that no amendment to existing laws, rules or regulations, or adoption of new laws, rules or regulations shall in anyway discharge its obligation on this bond, and does hereby waive notice of any such amendment, adoption or modification.

This bond shall be effective from the 30th day of June, 20 25 and shall continue in effect until June 30, 2027, unless sooner terminated by mutual agreement of Principal and Surety, provided that no such termination may be made unless sixty (60) days' prior written notice is made to the Director. In the event of such termination, the rights of the Director as Obligee and beneficiaries under this bond which arose prior to such termination shall continue.

IN WITNESS THEREOF the Principal and Surety have caused these present to be duly signed and sealed, this the 2nd day of May, 20 25.

**Principal** Cascade Drilling, L.P.

Print name: Melissa Haddick

Title: Attorney-in-Fact

Seal:

Revised 03.17.2021

**POWER OF ATTORNEY**
**UNITED STATES FIRE INSURANCE COMPANY**
**PRINCIPAL OFFICE - MORRISTOWN, NEW JERSEY**

**(PRODUCER CODE)**

**KNOW ALL MEN BY THESE PRESENTS**: That United States Fire Insurance Company, a corporation duly organized and existing under the laws of the state of Delaware, has made, constituted and appointed, and does hereby make, constitute and appoint: **Sandra Parker; Melissa Haddick; Tannis Mattson; Orlando Aguirre; Stacy Killebrew; Madison Diaz and Megan Sivley** each, its true and lawful Attorney(s)-In-Fact, with full power and authority hereby conferred in its name, place and stead, to execute, acknowledge and deliver: Any and all bonds and undertakings of surety and other documents that the ordinary course of surety business may require, and to bind United States Fire Insurance Company thereby as fully and to the same extent as if such bonds or undertakings had been duly executed and acknowledged by the regularly elected officers of United States Fire Insurance Company at its principal office, in amounts or penalties: **One Hundred Twenty Five Million Eight Hundred Thousand Dollars ($125,800,000)**

This Power of Attorney limits the act of those named therein to the bonds and undertakings specifically named therein, and they have no authority to bind United States Fire Insurance Company except in the manner and to the extent therein stated.

This Power of Attorney is granted pursuant to Article IV of the By-Laws of United States Fire Insurance Company as now in full force and effect, and consistent with Article III thereof, which Articles provide, in pertinent part:

Article IV, Execution of Instruments - Except as the Board of Directors may authorize by resolution, the Chairman of the Board, President, any Vice-President, any Assistant Vice President, the Secretary, or any Assistant Secretary shall have power on behalf of the Corporation:

(a) to execute, affix the corporate seal manually or by facsimile to, acknowledge, verify and deliver any contracts, obligations, instruments and documents whatsoever in connection with its business including, without limiting the foregoing, any bonds, guarantees, undertakings, recognizances, powers of attorney or revocations of any powers of attorney, stipulations, policies of insurance, deeds, leases, mortgages, releases, satisfactions and agency agreements;
(b) to appoint, in writing, one or more persons for any or all of the purposes mentioned in the preceding paragraph (a), including affixing the seal of the Corporation.

Article III, Officers, Section 3.11, Facsimile Signatures. The signature of any officer authorized by the Corporation to sign any bonds, guarantees, undertakings, recognizances, stipulations, powers of attorney or revocations of any powers of attorney and policies of insurance issued by the Corporation may be printed, facsimile, lithographed or otherwise produced. In addition, if and as authorized by the Board of Directors, dividend warrants or checks, or other numerous instruments similar to one another in form, may be signed by the facsimile signature or signatures, lithographed or otherwise produced, of such officer or officers of the Corporation as from time to time may be authorized to sign such instruments on behalf of the Corporation. The Corporation may continue to use for the purposes herein stated the facsimile signature of any person or persons who shall have been such officer or officers of the Corporation, notwithstanding the fact that he may have ceased to be such at the time when such instruments shall be issued.

**IN WITNESS WHEREOF**, United States Fire Insurance Company has caused these presents to be signed and attested by its appropriate officer and its corporate seal hereunto affixed this 17th day of January, 2025.

**UNITED STATES FIRE INSURANCE COMPANY**

Matthew E. Lubin, President

State of New Jersey}
County of Morris }

On this 17th day of January, 2025, before me, a Notary public of the State of New Jersey, came the above named officer of United States Fire Insurance Company, to me personally known to be the individual and officer described herein, and acknowledged that he executed the foregoing instrument and affixed the seal of United States Fire Insurance Company thereto by the authority of his office.

ETHAN SCHWARTZ
NOTARY PUBLIC
STATE OF NEW JERSEY
MY COMMISSION EXPIRES 6/25/2029
COMMISSION: #50223171

Ethan Schwartz (Notary Public)

I, the undersigned officer of United States Fire Insurance Company, a Delaware corporation, do hereby certify that the original Power of Attorney of which the foregoing is a full, true and correct copy is still in force and effect and has not been revoked.

**IN WITNESS WHEREOF**, I have hereunto set my hand and affixed the corporate seal of United States Fire Insurance Company on the 2nd day of May 20 25

**UNITED STATES FIRE INSURANCE COMPANY**

Michael C. Fay, Senior Vice President

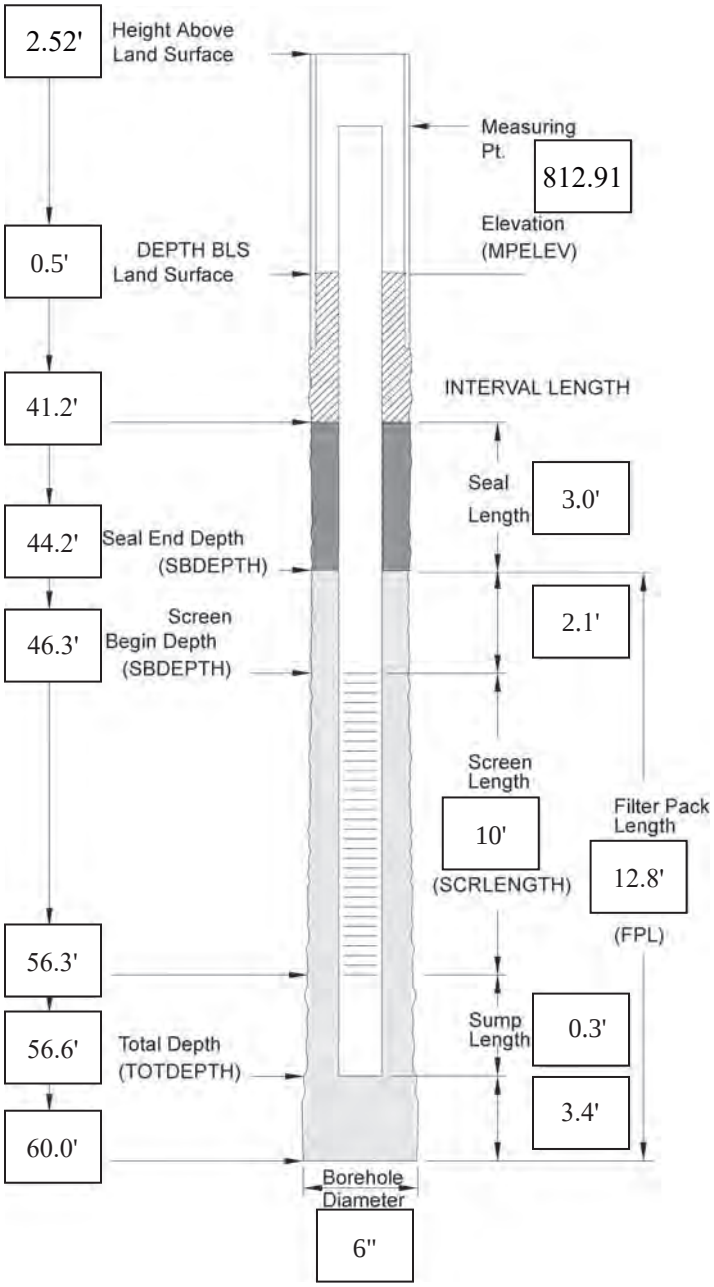
# WELL CONSTRUCTION LOG
# ABOVE GROUND COMPLETION

Well I.D.: GWA-2A

Drilling Company: Cascade Drilling
Drillers: N.Bruno
Geologist/Engineer: G. Kouvatsis
Signature: _ G.K.

Site: Plant Wansley
Project Number: 26003370
Installation Method: Sonic
Casing Installation Date: 3/20/2026
Well Type: Monitoring Well
Well Completion Method: Stick up
Geologic Completion Zone: PWR/Bedrock



**Well Completion**
Guard Posts **YES** Date: 4/2/2026
Surface Pad Size: 4 ft x 4 ft
**Protective Casing or Cover**
Diameter/Type: 4" x 4" metal
Depth BGS: 2' Weep Hole **YES**
**Grout**
Composition/Proportions: Aquaguard 2 50-lbs bag, 30 gallons of water
Placement Method: Tremie pipe

**Seal** Date: 3/20/2026
Type: 1/2" non-coated bentonite pellets
Source: Pel-Plug 1 5-gallon bucket
Set-up/Hydration Time: 2 hours
Placement Method: Gravity pour
Vol. Fluid Added: NA
**Filter Pack**
Type: 20/40 Filtersil sand
Source: Covia Corporation
Amount Used: 2 cubic ft Placement Method:
Gravity pour **Well Riser Pipe**
Casing Material: Sch 40 PVC
Casing Inside Diameters: 2 in.
**Screen**
Material: Sch 40 PVC U-Pack
Inside Diameter: 2 in.
Screen Slot Size: 0.010 in.
Percent Open Area: NA
Sump or Bottom Cap **YES**
Type/Length: 0.3' Sch 40 PVC cone
**Backfill Plug YES**
Material: Bentonite chips and 20/40 silica sand
Placement Method: Gravity pour
Set-up/Hydration Time: Overnight
**Total Water Volume During Construction**
Introduced (Gal): 10 Recovered (Gal): 10
**Reviewed**
By: Dalton Kegley Date: 6/3/2026

**Comments**
Backfilled to 57' with bentonite chips and to 56.6' with sand.

Composition/Proportions: Aquaguard 2 50-lbs bag, 30 gallons of water
Placement Method: Tremie pipe

**Seal** Date: 3/17/2026
Type: 1/2" non-coated bentonite pellets
Source: Pel-Plug 1 5-gallon bucket
Set-up/Hydration Time: Overnight
Placement Method: Gravity pour
Vol. Fluid Added: NA
**Filter Pack**
Type: 20/40 Filtersil sand
Source: Covia Corporation
Amount Used: 2 cubic ft
Placement Method: Gravity pour
**Well Riser Pipe**
Casing Material: Sch 40 PVC
Casing Inside Diameters: 2 in.
**Screen**
Material: Sch 40 PVC U-Pack
Inside Diameter: 2 in.
Screen Slot Size: 0.010 in.
Percent Open Area: NA
Sump or Bottom Cap **YES**
Type/Length: 0.3' Sch 40 PVC cone
**Backfill Plug YES**
Material: Bentonite chips
Placement Method: Gravity pour
Set-up/Hydration Time: 1 hour
**Total Water Volume During Construction**
Introduced (Gal): 10 Recovered (Gal): 10
**Reviewed**
By: Dalton Kegley Date: 6/3/2026

**Comments**
Total boring depth is 55', chips from 55' to 44.5'.

| Totla Volume Removed: | 38.7 Gallons | | | | | | | |

Development Method: Surged well with ridged tubing and surge block for approximately 20 minutes. Switched to reclaimer pump.
Well development until five well volumes were removed and turbidity fell under 5 NTUs.

Notes: H = well depth (BTOC) - W.L. (BTOC)
2" diameter well: 0.16 X H = volume in gallons
4" diameter well: 0.66 X H = voume in gallons

All coordinates are based upon Georgia State Plane, West Zone. Elevations are refrenced to NAVD 1988 datum.
Control used to perform work set by Thompson in 2021 by running static sessions and submitting to OPUS for coordinates and elevations. Equipment used for horizontal positions: Trimble R12 RTK GPS. Elevations for each point was established by running closed level loops with Trimble Dini level. Thompson Engineering Project 26-1102-0052

Notes:
1. Results for parameters are reported in milligrams per liter (mg/L). pH results are reported in Standard Units.
2. < indicates the parameter was not detected above the relevant laboratory method detection limit (MDL). The value displayed is the MDL.
3. J indicates the result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the MDL, but below the laboratory reporting limit.
4. TDS indicates total dissolved solids.
5. Appendix III refer to parameters per 40 CFR § 257.94(a).
6. Parameters required by permit are Appendix I parameters included to meet Georgia EPD Rule 391-3-4-.14 requirements.

Re: Plant Wansley Landfill – January/February 2026
Background Update & Statistical Analysis

Dear Mr. Singleton,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the January/February 2026 background update and Semi-Annual Groundwater Monitoring Statistical summary of the statistical analysis of groundwater data for Georgia Power Company's Plant Wansley Landfill. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling began for the CCR program in 2016, and for the State program in 2011 in accordance with the Georgia EPD's Solid Waste Permit. An exception includes downgradient well GWC-10 which was first sampled in 2016 for both CCR and State programs. At least 8 background samples have been collected at each of the groundwater monitoring wells. Semi-annual sampling is performed in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations; and the January/February 2026 samples are evaluated in this report.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** GWA-1, GWA-2, GWA-3, GWA-4, GWA-28, and GWA-29
- **Downgradient wells:** GWC-5, GWC-6, GWC-7, GWC-8, GWC-9, GWC-10, GWC-11, GWC-12, GWC-13, GWC-14, GWC-15, GWC-16, GWC-17, GWC-18, GWC-19, GWC-20, GWC-21, GWC-22, GWC-23, GWC-24, GWC-25, GWC-26, GWC-27, GWC-30, GWC-31, GWC-32, GWC-33, GWC-34, and GWC-35

While downgradient well GWC-24 has had periods of being historically dry, this well has been consistently sampled over the past few years. Note that limited samples were collected from upgradient well GWA-3 and downgradient well GWC-31 and no observations were reported for chloride, fluoride, sulfate, and TDS at these wells during the January/February 2026 sample event.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology prepared in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance.

The following constituents were evaluated:

- **CCR Appendix III -** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Georgia EPD Appendix I -** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix I well/constituent pairs with 100% non-detects follows this letter.

Time series plots for Appendix I and III parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Due to varying detection limits in background data sets due to improved laboratory practices, a substitution of the most recent reporting limit is used for all non-detects.

Note that for calculation of intrawell prediction limits, substitution of the most recent reporting limit is performed separately for each well/parameter pair. In some cases, the reporting limit provided by the laboratory contained varying limits for a given parameter; therefore, the substitution may differ from well to well and may result in slight changes in statistical limits between sample events. Substitution of the most recent reporting limit generally gives the most conservative limit in each case. As a result of elevated historic reporting limits for silver at upgradient well GWA-29, the most recent reporting limit of 0.001 mg/L was substituted across all wells for silver to construct statistical limits that are conservative from a regulatory perspective and are representative of current groundwater quality conditions.

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods were recommended. Power curves were provided previously, based on a 1-of-3 resample plan for Appendix I constituents and a 1-of-2 resample plan for Appendix III constituents, to demonstrate that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. During the background update in March 2022, sufficient samples were available for Appendix I constituents to provide sufficient power using a 1-of-2 resample plan and a power curve was provided with that report. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. Power curves were based on the following:

**Georgia EPD Appendix I Constituents:**

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan (all parameters)
- # Constituents: 16
- # Downgradient wells: 29

**CCR Appendix III Constituents:**

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan – (pH, sulfate, and TDS)
- Interwell Prediction Limits with 1-of-2 resample plan – (boron, calcium, chloride, and fluoride)
- # Constituents: 7
- # Downgradient wells: 29

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits.

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In the intrawell case, data for all wells and constituents may re-evaluated when a minimum of 4 new data points is available to determine whether earlier concentrations are representative of present-day groundwater quality. In some cases, an earlier portion of data is deselected prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Two-Step Statistical Analysis

Intrawell statistical methods, combined with 1-of-2 plan, may be used as a conservative first step for identifying potential facility impacts in downgradient wells. Intrawell methods

use background data for individual wells and may be overly sensitive to variation. In particular for nonparametric limits with small background sample sizes, the probability of a false positive is higher than the desired annual sitewide rate of 10%. Therefore, exceedances may occur as a result of spatial variation rather than facility impacts. A second step can be used to further evaluate those exceedances and reduce the overall number of SSIs that result from spatial variation. In instances where intrawell statistical methods identify an apparent SSI, a second step of interwell statistical evaluation may be used to determine whether the measurement exceeds the sitewide background limit based on pooled upgradient well data. This is similar in concept to the procedure used in compliance monitoring programs where an interwell statistical limit is used to determine "background" (USEPA Unified Guidance (2009), Chapter 7, Section 7.5). For the detection monitoring program, if the result does not exceed sitewide (interwell) background, an SSI is not declared.

When the result exceeds the sitewide (interwell) background, the 1-of-2 resample plan allows for collection of an independent resample to confirm or disconfirm the initial finding. A statistically significant increase is not declared unless all resamples also exceed the intrawell prediction limit (United State Environmental Protection Agency (USEPA) Unified Guidance, March 2009, Chapter 19). When the resample confirms the initial exceedance, further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). When any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. In cases where intrawell and interwell exceedances are noted and no resamples are collected, the initial exceedance will be considered a confirmed statistically significant increase (SSI).

Trend tests, in addition to interwell prediction limits, are recommended for well/constituent pairs found to have an initial intrawell SSI. Trend analysis will provide for detection of long-term changes and potential facility impacts at a given well in cases where the concentrations at that well remain below the sitewide upgradient limits. Thus, the two-step approach has additional capability to detect long-term changes at downgradient wells compared to interwell methods alone. While a trend may be identified by visual inspection, a quantification of the trend and its significance is needed to identify whether concentrations are statistically significantly increasing, decreasing, or remaining stable over time. The absence of a statistically significant increasing trend indicates that an initial intrawell exceedance is short-term and may be the result of spatial variation rather than facility impact to groundwater. If a facility impact has occurred, it will likely result in additional exceedances in future sampling events. When a statistically significant increasing trend is noted, additional data may be needed to demonstrate that there is reasonable evidence that the initial intrawell statistical exceedance is a result of spatial

variation rather than a result of impact to groundwater quality downgradient of the facility.

**Background Update Summary – Georgia EPD Appendix I and CCR Appendix III Constituents – Conducted in Spring 2026**

Outlier Analysis

Prior to updating background data, Tukey's outlier test and visual screening were used to evaluate data through August/October 2025 at all wells for Appendix I and III constituents tested using intrawell methods and through January/February 2026 on pooled upgradient well data for Appendix III constituents tested using interwell methods.

Tukey's outlier test on data evaluated with intrawell prediction limits identified values for barium, chromium, copper, nickel, pH, silver, sulfate, TDS, thallium, vanadium, and zinc. Previously flagged values were confirmed by Tukey's test and visual screening except for chromium observations at upgradient wells GWA-28 and GWA-29 and downgradient wells GWC-9 and GWC-25, and nickel at downgradient well GWC-9. These previously flagged values were unflagged during this analysis as the observations were either not identified by Tukey's test as outliers or, in the case of chromium at well GWC-25, were only slightly above the respective reporting limits. While not identified by Tukey's test, the lowest value for barium at well GWC-9 was identified visually and flagged as an outlier to reduce variation and construct a statistical limit that is representative of current groundwater quality.

Tukey's outlier test on pooled upgradient well data identified values for calcium, chloride, and fluoride. Previously flagged values were confirmed by Tukey's test and visual screening. Any values identified by Tukey's, but not flagged in the database, appeared representative of remaining concentrations among pooled upgradient data. Although it has no impact on resulting statistical limits, the highest value for calcium at well GWC-25 was flagged as it was several standard deviations above any remaining observations within the record. Tukey's outlier test results for all Appendix III parameters are shown in Figure C.

As mentioned above, flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. An updated summary of flagged outliers follows this letter (Figure C).

Mann-Whitney Evaluation

For constituents requiring intrawell prediction limits (all Appendix I constituents and pH, sulfate, and TDS for the Appendix III constituents), the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the medians of historical data through August 2023, to new compliance samples at each well through August/October 2025 (Figure D). Previously truncated records were also compared to more recent data through August/October 2025. Any records that were truncated during previous updates due to concentrations that were not representative of present-day groundwater quality conditions used curtailed portions of the respective record for comparison with the Mann-Whitney test. Discussions of any truncated records were included in previous background update reports.

If the medians of the two groups are not significantly different at the 99% confidence level, background data are typically updated to include the newer compliance data. Note that the Mann-Whitney did not produce results for well/constituent pairs with no variation among the compliance data (i.e., compliance data were 100% non-detects). The Mann-Whitney test identified statistically significant differences for the following well/constituent pairs:

Appendix I:
Increasing

- Barium: GWC-5, GWC-12, GWC-16, GWC-17, GWC-18, GWC-34, and GWC-35
- Copper: GWC-8
- TDS: GWC-30 and GWC-35
- Zinc: GWC-9

Decreasing

- Barium: GWC-8
- Beryllium: GWC-5 and GWC-13
- Cadmium: GWC-5, GWC-9, GWC-17, and GWC-30
- Cobalt: GWC-8, GWC-17, and GWC-27
- Copper: GWA-29 (upgradient)
- Lead: GWA-1 (upgradient)
- Nickel: GWA-2 and GWA-29 (both upgradient)
- Vanadium: GWC-12
- Zinc: GWA-29 (upgradient)

Appendix III:
Increasing

- Sulfate: GWA-2 (upgradient) and GWC-35
- TDS: GWC-30 and GWC-35

Decreasing

- pH: GWC-9
- TDS: GWC-7

Most of the statistically significant differences for both Appendix I and Appendix III resulted from either reported trace values compared to non-detect results within a given record or the reported concentrations in more recent data were either within the range of or similar to observations earlier in the record; therefore, these records were updated with data through August/October 2025. Exceptions include barium, sulfate, and TDS in downgradient well GWC-35 where an increasing trend was observed among compliance data; therefore, these records were not updated with data through August 2025.

While cobalt at downgradient well GWC-7 was not identified by the Mann-Whitney test with a statistically significant difference between background and compliance data, earlier concentrations in the record are higher than those prior to January 2018; therefore, the earlier portion of the record was truncated to construct statistical limits using relatively stable data that are capable of detecting changes in groundwater quality.

Although upgradient well GWA-3 and downgradient well GWC-31 did not have sufficient compliance data in some cases to be evaluated with the Mann-Whitney test, the available compliance data were all within the range of each record's existing background data. All records for upgradient well GWA-3 and downgradient well GWC-31 were updated through August/October 2025.

A summary of background date ranges for these well/constituent pairs, along with other well/constituent pairs with truncated records, follows this letter. All records for constituents using intrawell methods will be re-evaluated during the next background update as discussed earlier.

<u>Seasonality</u>

Seasonal patterns were observed among wells GWC-7, GWC-8, GWC-9, and GWC-19 for barium, cobalt, nickel, and sulfate, and data were evaluated using the Kruskal-Wallis test to determine whether seasonality is statistically significant at the 95% confidence level (Figure E). When the test identifies seasonality, data are deseasonalized so that the resulting statistical limits will correctly account for the seasonality as a predictable pattern

rather than random variation or a release. This procedure includes subtracting the seasonal mean from each value within a given season and adding the overall mean to each observation. Statistically significant seasonality was identified in the following well/constituent pairs:

- Barium: GWC-9 and GWC-19
- Cobalt: GWC-7, GWC-8, and GWC-9
- Nickel: GWC-8

Therefore, these records are deseasonalized prior to constructing intrawell prediction limits.

Upgradient Well Trend Tests – Interwell

The Sen's Slope/Mann Kendall trend test was used to evaluate data at upgradient wells for each of the parameters tested using interwell prediction limits—boron, calcium, chloride, and fluoride (Appendix III) to identify statistically significant increasing or decreasing trends in background at the 99% confidence level (Figure F). The following statistically significant trends were noted:

Increasing:
- Calcium: GWA-1, GWA-28, and GWA-29
- Chloride: GWA-1

Decreasing:
- Fluoride: GWA-29

Although statistically significant trends were identified when each upgradient well was tested individually, reported measurements for these well/constituent pairs are either within the range of concentrations reported at remaining upgradient wells or truncating the record to reduce the trend would not greatly impact resulting statistical limits; therefore, no adjustments were required. Truncation of upgradient well records to remove trends should be done with caution since the higher concentrations could appear in future years at downgradient wells in the absence of facility impacts.

**Statistical Analysis of Georgia EPD Appendix I Constituents – January/February 2026**

Intrawell limits constructed from carefully screened background data from within each well serve to provide statistical limits that are representative of the background data population, and that will rapidly identify a change in more recent compliance data from within a given well. The most recent sample from the same well is compared to its

respective background. This statistical method removes the element of variation from across wells and eliminates the chance of mistaking spatial variation for a release from the facility.

In cases where downgradient average concentrations are higher than observed upgradient concentrations for a given constituent where intrawell analyses are recommended, the current assumption is that this is due to variation rather than a result of practices at the landfill. Validation of this assumption requires a separate analysis or investigation that is beyond the scope of this data screening study. However, for this site, the pre-waste data support the assumption of variation rather than impacts of the landfill.

Intrawell Prediction Limits

Intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed using all available data through August/October 2025, except for the cases mentioned above, for each well with detections (Figure G). No statistical analyses were required for well/constituent pairs with 100% non-detects. The January/February 2026 compliance data are compared to the intrawell background limits.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of an additional sample to determine whether the initial exceedance is confirmed. When the resample confirms the initial exceedance, a statistically significant increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. A summary of the Georgia EPD prediction limits follows this report. Exceedances were noted for the following well/constituent pairs:

- Barium: GWA-2 (upgradient), GWC-6, GWC-20, and GWC-35

The prediction limits for the deseasonalized cases using seasonal cutoff dates of 1/1 and 7/1 are included separately after the rest of the plots. No exceedances were identified for the deseasonalized prediction limits.

Two-Step Approach

Following the two-step analysis procedure, interwell prediction limits were then constructed using pooled upgradient well data through January/February 2026 to evaluate the initial intrawell prediction limit exceedances for the downgradient well/constituent pairs mentioned above (Figure H). No exceedances were identified.

Trend Test Analysis – Appendix I Constituents

Data from downgradient well/constituent pairs for Appendix I constituents found to exceed their respective prediction limit are further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level along with upgradient wells for the same constituents (Figure I). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site. Such patterns are an indication of variability in groundwater unrelated to practices at the site. A summary of the trend test results follows this letter and the following statistically significant trends were identified:

Increasing

- Barium: GWA-4 (upgradient) and GWC-35

Decreasing

- None

**Statistical Analysis of CCR Appendix III Parameters – January/February 2026**

As mentioned above, intrawell limits constructed from carefully screened background data from within each well serve to provide statistical limits that are representative of the background data population, and that will rapidly identify a change in more recent compliance data from within a given well. Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The most recent sample from each downgradient well is compared to the background limit to determine whether apparent exceedances are present.

Background (upgradient) well data used to construct interwell prediction limits were reassessed for potential outliers during this analysis and no new values were flagged among upgradient wells for Appendix III parameters evaluated with interwell prediction limits.

Intrawell Prediction Limits

For sulfate, pH, and TDS, intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical data through August/October 2025 except for cases mentioned above, (Figure J). Observations from the January/February 2026 sample event from each well, except sulfate and TDS at upgradient well GWA-3 and downgradient well GWC-31, are compared to the background limits to determine whether initial exceedances are present. Exceedances were noted for the following well/constituent pairs:

- Sulfate: GWA-2 (upgradient), GWC-8, and GWC-35
- TDS: GWC-24

Two-Step Approach

Following the two-step analysis procedure, interwell prediction limits were then constructed using pooled upgradient well data January/February 2026 to evaluate the initial intrawell prediction limit exceedances for the downgradient well/constituent pairs mentioned above (Figure K). No exceedances were identified.

Interwell Prediction Limits

For boron, calcium, chloride, and fluoride which are evaluated using all historical upgradient well data through January/February 2026 to construct interwell prediction limits combined with a 1-of-2 resample plan (Figure L). As mentioned above, downgradient well GWC-31 was not sampled for chloride and fluoride during the January/February 2026 event; therefore, no comparisons were made for these well/constituent pairs. The following statistically significant increases were identified:

- Boron: GWC-12, GWC-14, and GWC-35
- Chloride: GWC-14

Trend Test Analysis – Appendix III Constituents

Data from downgradient well/constituent pairs for Appendix III constituents found to exceed their respective prediction limit are further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level along with upgradient wells for the same constituents (Figure M). As mentioned above, upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site. Such patterns are an indication of variability in groundwater unrelated to practices at the site. A summary of the trend test results follows this letter and the following statistically significant trends were identified:

Increasing
- Chloride: GWA-1 (upgradient)
- Sulfate: GWA-2 (upgradient)

Decreasing
- None

**Summary**

Based on the statistical analyses of the January/February 2026 observations for Appendix I and III constituents, the following prediction limit exceedances were identified:

Appendix I:

- None

Appendix III

- Boron: GWC-12, GWC-14, and GWC-35
- Chloride: GWC-14

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Wansley Landfill. If you have any questions or comments, please feel free to contact us.
