- EQBL091219 (SDG: 2623138) collected on the nitrile gloves
- EQBL091619 (SDG: 2623221) collected on the tubing
- EQBL091719 (SDG: 2623393) collected on the bladder pump grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method blank and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for metals were not performed on any project samples in this SDG.

Post Digestion Spike (PDS)

A PDS analysis was available for review.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. Equipment blank samples EQBL091219 (SDG 2623138), EQBL091619 (SDG 2623221) and EQBL091719 (SDG 2623393) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 1 & 2 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 1 & 2 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-13RZ	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of MS/MSD recoveries.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD for anions was performed sample GWC-13RZ, and the sulfate recoveries were below the lower QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than 4x the spiked concentration: **Reason Code: M-**.

Action: Sulfate results were qualified as estimated and flagged "J".

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blanks were associated with this SDG. The equipment blanks associated with the samples of this SDG (EQBL091219, EQBL091619, and EQBL091719) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected that is associated with samples in this SDG. The equipment blank(s) associated with the samples in this SDG reported TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-13RZ was reported in this SDG and was sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

M1 = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

M- = MS and MSD recoveries outside acceptance limits. The result may be biased low.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL); estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623393

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and/or quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-10	09/17/19	II	GWC-15R	09/17/19	II
GWC-10R	09/17/19	II	GWC-15Z	09/17/19	II
GWC-11	09/17/19	II	<u>QC Samples</u>		
GWC-11R	09/17/19	II	Dup-3	09/17/19	II
GWC-12	09/17/19	II	FBL091719	09/17/19	II
GWC-14Z	09/17/19	II	EQBL091719	09/17/19	II

This sample was collected from Landfill Cells 1&2 on September 17, 2019. Sample Dup-3 is a field duplicate of sample GWC-12. Sample FBL091719 is a field blank and EQBL091719 is an equipment blank. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL091219 (SDG: 2623138) collected on the nitrile gloves
- EQBL091619 (SDG: 2623221) collected on the tubing
- EQBL091719 (SDG: 2623393) collected on the bladder pump grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method, field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for metals were not performed on any project samples in this SDG.

Post Digestion Spike (PDS)

A PDS analysis was available for review.

Field Duplicate Precision

One field duplicate sample pair (Dup-3/GWC-12) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blank FBL091719 was reported with detections of zinc; however, method blank contamination resulted in the qualification of zinc in this field blank. Therefore, this field blank does not qualify as a representative determinant of zinc contamination. Equipment blank samples EQBL091219 (SDG 2623138), EQBL091619 (SDG 2623221) and EQBL091719 (SDG 2623393) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 1 & 2 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 1 & 2 do not qualify as representative determinants of field and sampling accuracy

for zinc. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-10	Ca	50x	GWC-14Z	Ca	50x
GWC-10R	Ca	50x	GWC-15R	Ca	50x
GWC-11	Ca	50x	GWC-15Z	Ca	50x
GWC-11R	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD for anions was performed sample FBL091719 and the percent recoveries and RPDs were within QC limits.

Field Duplicate Precision

One field duplicate sample pair (Dup-3/GWC-12) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank(s) associated with the samples of this SDG (FBL091719, EQBL091219, EQBL091619, and EQBL091719) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate sample pair (Dup-3/GWC-12) was collected with this SDG, and the RPDs were within QC limits.

Laboratory Duplicate Precision

The laboratory analyzed a duplicate sample of GWC-10 and Dup-3 and the RPDs were within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG did not contain TDS. There are equipment blank(s) associated with Cells 1&2 reported TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-10, GWC-10R, GWC-11, GWC-11R, GWC-12, GWC-14Z, GWC-15R, GWC-15Z, and Dup-3, along with field and equipment blank samples were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2622807

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level	
GWA-51RZ	09/05/19	II	GWC-24R	09/05/19	II	
GWA-53	09/05/19	II	GWC-22R	09/05/19	II	
GWA-53R	09/05/19	II	QC Samples			
GWA-54	09/05/19	II				
GWA-55	09/05/19	II		Dup-2	09/05/19	II
GWA-55R	09/05/19	II		FBL090519	09/05/19	II
GWC-25R	09/05/19	II		EQBL090519	09/05/19	II

These samples were collected from Landfill Cells 3&4 on September 5, 2019. Sample Dup-2 is a field duplicate of GWC-24R. Samples FBL090519 and EQBL090519 are field blank and equipment blanks respectively and are associated with the samples in this SDG. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL090519 (SDG: 2622807), collected with poly tubing
- EQBL090419 (SDG: 2622808), collected on the nitrile gloves
- EQBL090619 (SDG: 2622810), collected on the grab plate

The highest result of any detected analyte between the three equipment blanks were used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for MS/MSD recoveries, method blank contamination and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained calcium and zinc at concentrations between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for mercury and metals were performed on sample GWA-51RZ and the recoveries and RPDs were within QC limits with the following exception; the percent recoveries were outside of QC limits or calcium. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration. **Reason Code: M+**

Action: No qualification was necessary because the sample result was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-24R) was submitted with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blank FBL090519 was reported with detections of zinc; however, method blank contamination resulted in the qualification of zinc in this field blank. Therefore, this field blank does not qualify as a representative determinant of zinc contamination. Equipment blank sample EQBL090519 and equipment blanks EQBL090419 (SDG 2622808) and EQBL090619 (SDG 2622810) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 3 and 4 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 3 and 4 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-51RZ	Ca	50x	GWA-55	Ca	50x
GWA-53	Ca	50x	GWA-55R	Ca	50x
GWA-53R	Ca	50x	GWC-25R	Ca	50x
GWA-54	Ca	50x	GWC-24R	Ca	50x
GWC-22R	Ca	50x	Dup-2	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was performed on sample FBL090519 and the percent recoveries and RPDs were within QC limits.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-24R) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG, FBL090519, EQBL090419, EQBL090519, and EQBL090619, did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits except for field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWA-24R) was submitted with this SDG and the RPDs were within QC limits. A laboratory duplicate of sample GWA-53R was performed and the RPD was within QC limits.

Laboratory Duplicate Precision

A laboratory duplicate of sample GWA-53R was performed and the RPD was within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG (FBL090519, EQBL090419, EQBL090519, and EQBL090619) contained TDS however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-51RZ, GWA-53, GWA-53R, GWA-54, GWA-55, GWA-55R, GWC-25R, GWC-24R, GWC-22R, and Dup-2, along with field and equipment blank samples were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte detected in associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2622808

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-36	09/04/19	II	GWA-56	09/04/19	II
GWA-36R	09/04/19	II	QC Samples		
GWA-37	09/04/19	II	Dup-1	09/04/19	II
GWA-38	09/04/19	II	FBL090419	09/04/19	II
GWA-52	09/04/19	II	EQBL090419	09/04/19	II

These samples were collected from Landfill Cells 3&4 on September 4, 2019. Sample Dup-1 is a field duplicate of GWA-38. Samples FBL090419 and EQBL090419 are field blank and equipment blanks respectively and are associated with the samples in this SDG. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL090519 (SDG: 2622807), collected with poly tubing
- EQBL090419 (SDG: 2622808), collected on the nitrile gloves
- EQBL090619 (SDG: 2622810), collected on the grab plate

The highest result of any detected analyte between the three equipment blanks were used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method, field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained calcium and/or zinc at concentrations between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL.**

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for mercury and metals were performed on a non-project sample of this SDG and therefore matrix effects could not be evaluated.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-38) was submitted with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blank FBL090419 was reported with detections of zinc; however, method blank contamination resulted in the qualification of zinc in this field blank. Therefore, this field blank does not qualify as a representative determinant of zinc contamination. Equipment blank sample EQBL090419

and equipment blanks EQBL090519(SDG 2622807) and EQBL090619(SDG 2622810) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 3 and 4 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 3 and 4 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered “not detected” as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged “U”. No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-36	Ca	50x	GWA-52	Ca	50x
GWA-36R	Ca	50x	GWA-56	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged “J” by the laboratory. The “J” qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was performed on sample EQBL090419 and the percent recoveries and RPDs were within QC limits.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-38) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG (FBL090419 and EQBL090419, EQBL090519, EQBL090619) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits except for field duplicate precision and field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-38) was submitted with this SDG and the RPDs was outside of QC limits. A laboratory duplicate of sample GWA-36R was performed and the RPD was within QC limits.

Action: TDS results of the Dup-1/GWA-38 field duplicate pair were qualified and flagged "J".

Laboratory Duplicate Precision

A laboratory duplicate of sample GWA-36R was performed and the RPD was within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The associated equipment blanks (EQBL090419, EQBL090519, EQBL090619) and the field blank associated with the samples in this SDG (FBL090419) contained TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-36, GWA-36R, GWA-37, GWA-38, GWA-52, GWA-56, and Dup-1, along with field and equipment blank samples were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
-----------------	-------------	------	-----	--------	----------------	------------	----------	----------	--------------	-------

Notes:

Laboratory Qualifiers:

B = Analyte detected in associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

FD = Field duplicate imprecision.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2622810

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-18R	09/06/19	II	QC Samples		
GWC-20R	09/06/19	II	Dup-3	09/06/19	II
GWC-21R	09/06/19	II	FBL090619	09/06/19	II
GWC-23R	09/06/19	II	EQBL090619	09/06/19	II

These samples were collected from Landfill Cells 3&4 on September 6, 2019. Sample Dup-3 is a field duplicate of GWC-20R. Samples FBL090619 and EQBL090619 are field blank and equipment blanks respectively and are associated with the samples in this SDG. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL090519 (SDG: 2622807), collected with poly tubing
- EQBL090419 (SDG: 2622808), collected on the nitrile gloves
- EQBL090619 (SDG: 2622810), collected on the grab plate

The highest result of any detected analyte between the three equipment blanks were used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this

narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for MS/MSD recoveries, method blank contamination and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method(s) blank associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for mercury and metals were performed on samples GWC-18R and GWC-23R respectively and the recoveries and RPDs were within QC limits with the following exception; the percent recoveries were outside of QC limits or calcium. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration.

Reason Code: M+

Action: No qualification was necessary because the sample result was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-3/GWC-20R) was submitted with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are

collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blank FBL090619 was reported with detections of zinc; however, method blank contamination resulted in the qualification of zinc in this field blank. Therefore, this field blank does not qualify as a representative determinant of zinc contamination. Equipment blank sample EQBL090619 and equipment blanks EQBL090519 (SDG 2622807) and EQBL090419 (SDG 2622808) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 3 and 4 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 3 and 4 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered “not detected” as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged “U”. No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-18R	Ca	50x	GWC-23R	Ca	50x
GWC-20R	Ca	50x	Dup-3	Ca	50x
GWC-21R	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged “J” by the laboratory. The “J” qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was performed on non-project samples in this SDG, therefore the matrix effects could not be evaluated.

Field Duplicate Precision

One field duplicate pair (Dup-3/GWC-20R) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG, FBL090619, EQBL090419, EQBL090519, and EQBL090619, did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits except for field duplicate precision and field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-3/GWC-20R) was submitted with this SDG and the RPDs were outside of QC limits.

Action: TDS results of the Dup-3/GWA-20R field duplicate pair were qualified and flagged "J".

Laboratory Duplicate Precision

A laboratory duplicate of sample GWA-18R was performed and the RPD was within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG (EQBL090619 and FBL090619) contained TDS however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-18R, GWC-20R, GWC-21R, GWC-23R, and Dup-3, along with field and equipment blank samples were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

FD = Field duplicate imprecision.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

TABLE 1
SUMMARY OF DATA QUALIFIERS
SAMPLE DELIVERY GROUP 2622810
SAMPLING DATE: September 6, 2019
Plant Bowen Landfill Cells 3 & 4: Event 13

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
-----------------	-------------	------	-----	--------	----------------	------------	----------	----------	--------------	-------

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2622908

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-16R	09/09/19	II
GWC-18	09/09/19	II
GWC-19R	09/09/19	II

These samples were collected from Landfill Cells 3&4 on September 9, 2019. No field blanks are associated with this day of sampling. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL090519 (SDG: 2622807), collected with poly tubing
- EQBL090419 (SDG: 2622808), collected on the nitrile gloves
- EQBL090619 (SDG: 2622810), collected on the grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for metals and mercury were performed on non-project samples in this SDG, therefore the matrix effects could not be evaluated.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pair(s) were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. Equipment blank samples EQBL090519 (SDG 2622807), EQBL090419 (SDG 2622808) and EQBL090619 (SDG 2622810) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 3 and 4 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 3 and 4 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution	Sample	Metal	Dilution
GWC-16R	Ca	50x	GWC-19R	Ca	50x
GWC-18	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was performed on sample GWC-16R and the percent recoveries and RPDs were within QC limits.

Field Duplicate Precision

No field duplicate pair(s) were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank(s) associated with the samples of this SDG (EQBL090419, EQBL090519, and EQBL090619) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pair(s) were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank(s) associated with the samples of this SDG (EQBL090419, EQBL090519 and EQBL090619) contained TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-16R, GWC-18, and GWC-19R were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte detected in associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623139

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-17R	09/10/19	II

These samples were collected from Landfill Cells 3&4 on September 10, 2019. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL090519 (SDG: 2622807), collected with poly tubing
- EQBL090419 (SDG: 2622808), collected on the nitrile gloves
- EQBL090619 (SDG: 2622810), collected on the grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of method and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for metals and mercury were performed on non-project samples in this SDG, therefore the matrix effects could not be evaluated.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pair(s) were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. Equipment blank samples EQBL090519 (SDG 2622807), EQBL090419 (SDG 2622808) and EQBL090619 (SDG 2622810) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 3 and 4 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 3 and 4 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution
GWC-17R	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions were performed on non-project samples, therefore, matrix effects specific to anions in these project samples were not assessed.

Field Duplicate Precision

No field duplicate pair(s) were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank(s) associated with the samples of this SDG (EQBL090419, EQBL090519, and EQBL090619) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of holding time exceedance and equipment blank contamination. No qualification was applied due to equipment blank contamination.

Holding Times

The sample analyses were performed 1-day outside of the 7-day analysis holding time.

Action: The associated TDS results for sample GWC-17R was qualified as estimated and flagged "J".

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pair(s) were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank(s) associated with the samples of this SDG (EQBL090419, EQBL090519 and EQBL090619) contained TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-17R was reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

SUMMARY OF DATA QUALIFIERS

TABLE 1
SUMMARY OF DATA QUALIFIERS
SAMPLE DELIVERY GROUP 2623139
SAMPLING DATE: September 10, 2019
Plant Bowen Landfill Cells 3 & 4: Event 13

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
GWC-17R	GWC-17R	N	2623139	2540C	total dissolved solids	312		J	H	mg/L
GWC-17R	GWC-17R	N	2623139	6020B	zinc	0.0055	J,B	U*	BL	mg/L

Laboratory Qualifiers:

B = Analyte detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

H = Holding time was exceeded

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2622907

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWA-39Z	09/09/19	II
GWA-40	09/09/19	II

The samples reported in this SDG were collected from Landfill Cells 9&10 on September 9, 2019. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL091119 (SDG: 2623134), collected on the poly tubing
- EQBL091019 (SDG: 2623137), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of method blank contamination and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL (0.0045 J mg/L). Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL.**

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U". Concurrent qualification of associated zinc results are applicable due to site-specific equipment blank contamination containing zinc. See Sampling Accuracy section below for details.*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for mercury on sample GWA-39Z and the percent recoveries and RPD were within the QC limits.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The field blank samples contained calcium, nickel and/or zinc. However, no qualification was required due to the field blanks not being collected on the same day as the samples of this SDG. Both of the equipment blanks (EQBL091119 – SDG: 2623134 and EQBL091019 – SDG: 2623137) contained calcium and zinc between the method detection limit (MDL) and the reporting limit (RL). Results less than five times

the blank are considered not detected as a possible field artifact: **Reason Code: BE.**

Action: The positive zinc results less than five times the equipment blank were qualified as not detected due to possible blank contamination and flagged "U". Concurrent qualification of associated zinc results are applied due to method blank contamination containing zinc. See Method Blanks section below for details.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-39Z	Ca	50x	GWA-40	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG did not contain anions indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on sample GWA-39Z and the percent recoveries and RPDs were within QC limits.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain anions. No qualification required.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Laboratory Duplicate Precision

The laboratory duplicates analyzed were not for project samples in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain TDS. No qualification required.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWA-39Z and GWC-40 were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte detected in associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623134

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-39RZ	09/11/19	II	GWC-48	09/11/19	II
GWA-43	09/11/19	II	GWC-49R	09/11/19	II
GWA-43R	09/11/19	II	GWC-49Z	09/11/19	II
GWC-44	09/11/19	II			
GWC-45	09/11/19	II	QC Samples		
GWC-45R	09/11/19	II	Dup-2	09/11/19	II
GWC-46R	09/11/19	II	FBL091119	09/11/19	II
GWC-47R	09/11/19	II	EQBL091119	09/11/19	II

The samples reported in this SDG were collected from Landfill Cells 9&10 on September 11, 2019. Sample Dup-2 is the field duplicate of sample GWC-48. Sample FBL091119 is a field blank, and sample EQBL091119 is an equipment blank. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL091119 (SDG: 2623134), collected on the poly tubing
- EQBL091019 (SDG: 2623137), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of method, field and equipment blank contamination and MS/MSD recoveries.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method(s) blank associated with the samples analyzed within this SDG contained boron and zinc at concentrations between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive boron and zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U". Concurrent qualification of associated zinc results are applicable due to site-specific equipment blank contamination containing zinc. See Sampling Accuracy section below for details.*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for mercury on sample GWA-43R and the MS recovery was below the lower QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than 4x the spiked concentration. **Reason Code: M+**

Action: No qualification was required for the calcium results because the sample was analyzed at a dilution and the concentration was greater than 4x the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-48) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The field blank FLB-091119 contained calcium, nickel, and zinc and qualification was required for nickel and zinc. However, method blank contamination of zinc disqualified the field blank as a potential QC measurement and results were qualified only for nickel for this QC sample. Both of the equipment blanks (EQBL091119 – SDG: 2623134 and EQBL091019 – SDG: 2623137) contained calcium and zinc between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE, BF.**

Action: The positive nickel results less than five times the field blank were qualified as not detected due to possible blank contamination and flagged "U". The positive zinc results less than five times the equipment blank were qualified as not detected due to possible blank contamination and flagged "U*". Concurrent qualification of associated zinc results were applied due to method blank contamination containing zinc. See Method Blanks section below for details.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-39RZ	Ca	50x	GWC-46R	Ca	50x
GWA-43R	Ca	50x	GWC-47R	Ca	50x
GWC-45R	Ca	50x	GWC-49R	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG did not contain anions indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on a non-project sample; therefore, matrix effects specific to anions in these project samples were not assessed.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-48) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain anions. No qualification required.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits with the exception of the laboratory and field duplicate RPDs.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-48) was submitted with this SDG and the RPD was outside the QC limits.

Action: The TDS results reported in samples Dup-2 and GWC-48 were qualified as estimated and flagged "J".

Laboratory Duplicate Precision

The laboratory analyzed samples GWA-43 and Dup-2 in duplicate and the RPDs were greater than the laboratory QC limits but within project QC limits. Both results were reported at concentrations above the RL. When one or more results are below the RL the difference between the values must not exceed the RL.

Action: No qualification was required for Dup-2 because the RPD was within project QC limits and the difference between the results was less than the RL. Qualification for GWA-43 was required as the RPD was greater than the project limits and the results were flagged "J".

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain TDS. No qualification required.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWA-39RZ, GWA-43, GWA-43R, GWC-44, GWC-45, GWC-45R, GWC-46R, GWC-47R, GWC-48, GWC-49R, GWC-49Z, and Dup-2, along with the field and equipment blank samples, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte detected in associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BF = Field blank contamination. The result should be considered "not-detected".

BL = Laboratory blank contamination. The result should be considered "not-detected".

FD = Field duplicate imprecision.

LD = Laboratory duplicate imprecision.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

TABLE 1
SUMMARY OF DATA QUALIFIERS
SAMPLE DELIVERY GROUP 2623134
SAMPLING DATE: September 11, 2019
Plant Bowen Landfill Cells 9 & 10: Event # 13

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
-----------------	-------------	------	-----	--------	----------------	------------	----------	----------	--------------	-------

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623137

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
QC Samples					
GWA-41	09/10/19	II	Dup-1	09/10/19	II
GWA-41R	09/10/19	II	FBL091019	09/10/19	II
GWA-42	09/10/19	II	EQBL091019	09/10/19	II

The samples reported in this SDG were collected from Landfill Cells 9&10 on September 10, 2019. Sample FBL091019 is a field blank, and sample EQBL091019 is an equipment blank. Dup-1 is a field duplicate of sample GWA-41. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL091119 (SDG: 2623134), collected on the poly tubing
- EQBL091019 (SDG: 2623137), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of method, field, and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method(s) blank associated with the samples analyzed within this SDG contained boron and zinc at concentrations between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive boron and zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for mercury on sample GWA-41 the percent recovery and RPD were within QC limits.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair was submitted in this SDG (Dup-1/GWA-41) and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. Field blank FLB-091019 contained calcium and zinc; however, method blank contamination of zinc disqualified the field blank as a potential QC measurement and results were qualified only for calcium for this QC sample. Both of the equipment blanks (EQBL091119 – SDG: 2623134 and EQBL091019 – SDG:

2623137) contained calcium and zinc between the method detection limit (MDL) and the reporting limit (RL). However, method blank contamination of zinc and field blank contamination of calcium disqualified EQBL091019 as a potential QC for those analytes. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BF**.

Action: The positive calcium results less than five times the field blank were qualified as not detected due to possible blank contamination and flagged "U". No qualification of sample results were required based on equipment blank contamination due to method blank qualification overriding the equipment blank.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-41R	Ca	50x	GWC-42	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG did not contain anions indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on a non-project sample; therefore, matrix effects specific to anions in these project samples were not assessed.

Field Duplicate Precision

One field duplicate pair was submitted in this SDG (Dup-1/GWA-41) and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain anions. No qualification required.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair was submitted in this SDG (Dup-1/GWA-41) and the RPDs were within QC limits.

Laboratory Duplicate Precision

The laboratory analyzed sample EQBL 091019 in duplicate and the RPDs were in the laboratory QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain TDS. No qualification required.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWA-41, GWA-41R, GWA-42, and Dup-1, along with the field and equipment blank samples, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BF = Field blank contamination. The result should be considered "not-detected".

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

TABLE 1

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623140

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWA-47	09/12/19	II

The samples reported in this SDG were collected from Landfill Cells 9&10 on September 12, 2019. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL091119 (SDG: 2623134), collected on the poly tubing
- EQBL091019 (SDG: 2623137), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of method blank contamination and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL (0.0045 J mg/L). Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: No qualification was required because the sample result was 5x greater than the blank result.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for metals on a non-project sample; therefore, matrix effects specific to metals in these project samples were not assessed.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The field blank samples contained calcium, nickel and/or zinc. However, no qualification was required due to the field blanks not being collected on the same day as the samples of this SDG. Both of the equipment blanks (EQBL091119 – SDG: 2623134 and EQBL091019 – SDG: 2623137) contained calcium and zinc between the method detection limit (MDL) and the reporting limit (RL).

Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE.**

Action: The positive zinc results less than five times the equipment blank were qualified as not detected due to possible blank contamination and flagged "U".*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-47	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value verses the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG did not contain anions indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on a non-project sample; therefore, matrix effects specific to anions in these project samples were not assessed.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain anions. No qualification required.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Laboratory Duplicate Precision

The laboratory duplicates analyzed were not for project samples in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank samples did not contain TDS. No qualification required.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWA-47 was reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

GWC-47	GWC-47	N	2623140	6020B	zinc	0.035	B	U*	BE	mg/L

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Prediction Limit
Intrawell Non-parametric, GWA-3 (bg)

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 32 background values. 68.75% NDs. Well-constituent pair annual alpha = 0.0003144. Individual comparison alpha = 0.0001572 (1 of 3). Assumes 1 future value.

Constituent: Antimony Analysis Run 8/28/2019 8:59 AM View: 1&2 overburden metals 1of3
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Within Limit
Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 26 background values. 92.31% NDs. Well-constituent pair annual alpha = 0.0005605. Individual comparison alpha = 0.0002803 (1 of 3).

Constituent: Antimony Analysis Run 8/28/2019 8:59 AM View: 1&2 overburden metals 1of3

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 32 background values. 46.88% NDs. Well-constituent pair annual alpha = 0.0003144. Individual comparison alpha = 0.0001572 (1 of 3).

Constituent: Chromium Analysis Run 8/28/2019 9:04 AM View: 1&2 overburden metals 1of3
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 32 background values. 53.13% NDs. Well-constituent pair annual alpha = 0.0003144. Individual comparison alpha = 0.0001572 (1 of 3).

Constituent: Chromium Analysis Run 8/28/2019 9:04 AM View: 1&2 overburden metals 1of3
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Prediction Limit
Intrawell Non-parametric, GWC-6

Non-parametric test used after natural log transformation resulted in a parametric limit of 2.353, which exceeds 10 times the highest background value (user-adjustable cutoff). Limit is highest of 32 background values. 31.25% NDs. Well-constituent pair annual alpha = 0.0003144. Individual comparison alpha = 0.0001572 (1 of 3). Assumes 1 future value.

Prediction Limit
Intrawell Non-parametric, GWC-7Z

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 11 background values. 9.091% NDs. Well-constituent pair annual alpha = 0.005605. Individual comparison alpha = 0.002806 (1 of 3). Assumes 1 future value.

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 27 background values. 29.63% NDs. Well-constituent pair annual alpha = 0.0005119. Individual comparison alpha = 0.000256 (1 of 3).

Constituent: Zinc Analysis Run 8/28/2019 9:11 AM View: 1&2 overburden metals 1of3
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. All background values (n = 5) were censored; limit is most recent reporting limit. Well-constituent pair annual alpha = 0.03756. Individual comparison alpha = 0.01896 (1 of 3).

Constituent: Zinc Analysis Run 8/28/2019 9:11 AM View: 1&2 overburden metals 1of3
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Prediction Limit
Intrawell Parametric, GWC-8Z

Background Data Summary (after Aitchison's Adjustment): Mean=0.001482, Std. Dev.=0.001802, n=10, 50% NDs. Normality test: Shapiro Wilk @alpha = 0.01, calculated = 0.8217, critical = 0.781. Kappa = 2.329 (c=16, w=11, 1 of 3, event alpha = 0.05132). Report alpha = 0.0002993. Assumes 1 future value.

Constituent: Zinc Analysis Run 8/28/2019 9:11 AM View: 1&2 overburden metals 1of3
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Prediction Limit
Intrawell Non-parametric, GWC-9

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 27 background values. 14.81% NDs. Well-constituent pair annual alpha = 0.0005119. Individual comparison alpha = 0.000256 (1 of 3). Assumes 1 future value.

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 32 background values. 46.88% NDs. Well-constituent pair annual alpha = 0.003603. Individual comparison alpha = 0.001803 (1 of 2).

Constituent: Antimony Analysis Run 8/23/2019 1:31 PM View: 1&2 bedrock 1of2 metals
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. All background values (n = 32) were censored; limit is most recent reporting limit. Well-constituent pair annual alpha = 0.003603. Individual comparison alpha = 0.001803 (1 of 2).

Constituent: Antimony Analysis Run 8/23/2019 1:31 PM View: 1&2 bedrock 1of2 metals
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric, GWA-2R (bg)

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 32 background values. 53.13% NDs. Well-constituent pair annual alpha = 0.003603. Individual comparison alpha = 0.001803 (1 of 2). Assumes 1 future value.

Constituent: Antimony Analysis Run 8/23/2019 1:31 PM View: 1&2 bedrock 1of2 metals
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. All background values (n = 26) were censored; limit is most recent reporting limit. Well-constituent pair annual alpha = 0.005327. Individual comparison alpha = 0.002667 (1 of 2).

Non-parametric test used after natural log transformation resulted in a parametric limit of 28.7, which exceeds 10 times the highest background value (user-adjustable cutoff). Limit is highest of 27 background values. 44.44% NDs. Well-constituent pair annual alpha = 0.004998. Individual comparison alpha = 0.002502 (1 of 2).

Within Limit

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 84 background values. 76.19% NDs. Annual per-constituent alpha = 0.009151. Individual comparison alpha = 0.0002703 (1 of 2). Comparing 17 points to limit.

Constituent: Boron Analysis Run 8/28/2019 12:51 PM View: Cells1&2_AppIII_Interwell
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Exceeds Limit: GWC-13, GWC-14_14Z,
GWC-13R 13RZ

Prediction Limit
Interwell Parametric

Background Data Summary (based on square root transformation): Mean=1.193, Std. Dev.=0.2613, n=84, 7.143% NDs. Normality test: Shapiro Francia @alpha = 0.01, calculated = 0.9609, critical = 0.96. Kappa = 2.104 (c=7, w=17, 1 of 2, event alpha = 0.05132). Report alpha = 0.007498. Individual comparison alpha = 0.0004426. Comparing 17 points to limit.

Constituent: Chloride Analysis Run 8/28/2019 12:51 PM View: Cells1&2_AppIII_Interwell
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Within Limit

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 84 background values. 50% NDs. Annual per-constituent alpha = 0.009151. Individual comparison alpha = 0.0002703 (1 of 2). Comparing 17 points to limit.

Constituent: Fluoride Analysis Run 8/28/2019 12:51 PM View: Cells1&2_AppIII_Interwell
Plant Bowen Client: Southern Company Data: Bowen 1&2 CCR

Exceeds Limits: GWC-15R, GWC-8RR,
GWC-8Z

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 85 background values. Annual per-constituent alpha = 0.0179. Individual comparison alpha = 0.0005287 (1 of 2). Comparing 17 points to limit.

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 20 background values. 90% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2).

Constituent: Antimony Analysis Run 8/26/2019 4:08 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. All background values (n = 20) were censored; limit is most recent reporting limit. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2).

Constituent: Antimony Analysis Run 8/26/2019 4:08 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric, GWA-37 (bg)

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 20 background values. 45% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2). Assumes 1 future value.

Constituent: Antimony Analysis Run 8/26/2019 4:08 PM View: cell 3&4 OB&BR intrawell metals

Within Limit

Prediction Limit
Intrawell Parametric

Background Data Summary: Mean=0.01511, Std. Dev.=0.007558, n=20. Normality test: Shapiro Wilk @alpha = 0.01, calculated = 0.9362, critical = 0.868. Kappa = 2.565 (c=16, w=11, 1 of 2, event alpha = 0.05132). Report alpha = 0.0002993.

Constituent: Barium Analysis Run 8/26/2019 4:13 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Prediction Limit
Intrawell Non-parametric, GWA-36 (bg)

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 20 background values. 35% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2). Assumes 1 future value.

Constituent: Beryllium Analysis Run 8/26/2019 4:13 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Prediction Limit
Intrawell Parametric, GWA-36R (bg)

Background Data Summary (based on square root transformation) (after Aitchison's Adjustment): Mean=0.01139, Std. Dev.=0.01613, n=20, 50% NDs. Normality test: Shapiro Wilk @alpha = 0.01, calculated = 0.9, critical = 0.868. Kappa = 2.565 (c=16, w=11, 1 of 2, event alpha = 0.05132). Report alpha = 0.0002993. Assumes 1 future value.

Background Data Summary: Mean=0.0007923, Std. Dev.=0.0002524, n=20, 15% NDs. Normality test: Shapiro Wilk @alpha = 0.01, calculated = 0.9525, critical = 0.868. Kappa = 2.565 (c=16, w=11, 1 of 2, event alpha = 0.05132). Report alpha = 0.0002993.

Constituent: Cadmium Analysis Run 8/26/2019 4:14 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Prediction Limit
Intrawell Parametric, GWA-36R (bg)

Background Data Summary (after Aitchison's Adjustment): Mean=0.0001686, Std. Dev.=0.0002355, n=20, 40% NDs. Normality test: Shapiro Wilk @alpha = 0.01, calculated = 0.9013, critical = 0.868. Kappa = 2.565 (c=16, w=11, 1 of 2, event alpha = 0.05132). Report alpha = 0.0002993. Assumes 1 future value.

Constituent: Cadmium Analysis Run 8/26/2019 4:15 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Prediction Limit
Intrawell Non-parametric, GWA-37 (bg)

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 20 background values. 90% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2). Assumes 1 future value.

Within Limit

Prediction Limit
Intrawell Non-parametric, GWA-55 (bg)

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 20 background values. 85% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2). Assumes 1 future value.

Constituent: Selenium Analysis Run 8/26/2019 4:25 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric, GWA-55R (bg)

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 20 background values. 90% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2). Assumes 1 future value.

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 20 background values. 40% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2).

Constituent: Thallium Analysis Run 8/26/2019 4:29 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric, GWC-22R

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 20 background values. 50% NDs. Well-constituent pair annual alpha = 0.008564. Individual comparison alpha = 0.004291 (1 of 2). Assumes 1 future value.

Constituent: Thallium Analysis Run 8/26/2019 4:29 PM View: cell 3&4 OB&BR intrawell metals
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Within Limit

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 19 background values. 31.58% NDs. Well-constituent pair annual alpha = 0.009641. Individual comparison alpha = 0.004832 (1 of 2).

Prediction Limit
Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 15 background values. 13.33% NDs. Well-constituent pair annual alpha = 0.01501. Individual comparison alpha = 0.007533 (1 of 2).

Within Limit

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 144 background values. 67.36% NDs. Annual per-constituent alpha = 0.002083. Individual comparison alpha = 0.00009478 (1 of 2). Comparing 11 points to limit.

Constituent: Boron Analysis Run 8/28/2019 1:01 PM View: Cells3&4_AppIII_interwell
Plant Bowen Client: Southern Company Data: Bowen 3&4 CCR

Exceeds Limit: GWC-16R, GWC-17R, GWC-21R, GWC-23R

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 144 background values. Annual per-constituent alpha = 0.002083. Individual comparison alpha = 0.00009478 (1 of 2). Comparing 11 points to limit.
