Project No.: 6122-16-0287

**GEORGIA POWER COMPANY
PLANT BOWEN
SOLID WASTE DISPOSAL FACILITY
PERMIT NO. 008-018D (LI)**

**2019 ANNUAL
GROUNDWATER MONITORING & CORRECTIVE ACTION REPORT**

CERTIFICATION STATEMENT

This 2019 Annual Groundwater Monitoring & Corrective Action Report, Georgia Power Company - Plant Bowen Solid Waste Facility Landfill Cells 1 & 2, 3 & 4, and 9 & 10 has been prepared in compliance with the United States Environmental Protection Agency coal combustion residual rule [40 Code of Federal Regulations (CFR) 257 Subpart D] and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Wood Environment & Infrastructure Solutions, Inc.

Wood certifies that all Site constituents were below the applicable Georgia maximum contaminant levels (MCL) with the exception of antimony in upgradient well GWA-39RZ at Cells 9 & 10, and downgradient well GWC-16R at Cells 3 & 4 in the March and September 2019 events. The reported antimony concentrations of 0.014 and 0.0098 mg/L in GWA-39RZ and 0.020 and 0.011 mg/L in GWC-16R, exceeded the Georgia MCL of 0.006 mg/L. Alternate Source Demonstrations (ASD), dated August 2017 and April 2018, show antimony is the result of natural variability in the groundwater quality. In a letter dated January 30, 2019, EPD approved the April 2018 ASD for antimony.

1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (US EPA) Coal Combustion Residuals (CCR) Rule 40 Code of Federal Regulations (CFR) 257 Subpart D and the Georgia Environmental Protection Division (EPD) Rules of Solid Waste Management 391-3-4-.10, this 2019 Annual Groundwater Monitoring & Corrective Action Report has been prepared to document groundwater monitoring activities conducted during the 2019 calendar year at Georgia Power Company's (GPC's) Plant Bowen solid waste disposal facility Cells 1 & 2, 3 & 4, and 9 & 10 (Site).

Groundwater monitoring is conducted under the requirements of the Georgia Solid Waste Permit No. 008-018D (LI) and in accordance with the specifications in the Design and Operation (D&O) Plan. This includes semi-annual groundwater sampling and groundwater level monitoring at the Site. A minor modification, dated August 9, 2017, approved the addition of Appendix III and IV parameters contained in the U.S. Federal regulations 40 CFR 257 Subpart D to the groundwater monitoring plan in Solid Waste Permit No. 008-018D (LI). An application for a new Georgia CCR permit was submitted in November 2018 for the facility to replace the Solid Waste Permit. The Georgia CCR permit is pending from EPD.

This report provides the results from the two semi-annual sampling events of 2019 conducted in March and September 2019 at Cells 1 & 2, Cells 3 & 4, and Cells 9 & 10. These sampling events include the scheduled semi-annual sampling for EPD's Solid Waste Permit constituents and the US EPA's CCR Appendix III constituents. The following sections describe the Site's groundwater monitoring program, analytical data collected from the sampling events, statistical analysis of the data, a description of groundwater flow, and a discussion of the current findings at the Site. This report is both the second semi-annual groundwater monitoring report required by the Solid Waste Permit and the annual groundwater monitoring report required by the US EPA CCR Rule. Statistical analysis for constituents in the State D&O Plan and the Federal CCR Appendix III constituents are included in this report.

1.1 Site Description and Background

Georgia Power Company's (GPC) Plant Bowen solid waste disposal facility is located in Bartow County off State Highway 113, approximately 7 miles west-southwest of Cartersville and 20 miles southeast of Rome (**Figure 1: Site Location Map**). The disposal facility is approximately 300 acres located on a previously undeveloped, contiguous portion of the plant property. The Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10 are located on the northeast portion of the Plant Bowen property. The disposal facility receives coal combustion by-products, coal ash and gypsum, from coal power generating processes at the Site. The landfill cells are lined in accordance with Solid Waste Permit No. 008-018D (LI). Cells 3 & 4 have a leachate collection system. Gypsum placement in disposal Cells 1 & 2 began in November 2008, whereas ash placement in disposal Cells 3 & 4 began in February 2015. Waste placement operations were initiated in Cells 9 & 10 in November 2015. Cells 9 & 10 are only used to store non-marketable gypsum. Cells 5, 6, 7, and 8 are undeveloped at this time and will be used as future cells.

A well network around each of the active disposal cells monitors the groundwater conditions at the Site. The monitoring well locations are shown in **Figure 2: Monitoring Well Network - September 2019**. A subset of the monitoring wells is equipped with data loggers and telemetry systems for water level measurements and data transmission for real-time monitoring of groundwater levels in the subsurface karst geology.

Background sampling for CCR parameters began in February 2016 and was completed in August 2017. The CCR background study results and statistical analysis were presented in the 2017 Annual Groundwater Monitoring and Corrective Action Report required under the CCR Rules. This report presents the data for two semi-annual sampling events for CCR and Solid Waste Permit constituents conducted in 2019. The Site status remains in detection monitoring.

1.2 Regional Geology and Hydrogeologic Setting

The geology and hydrogeology of the Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10 area are summarized below. The Plant Bowen Site lies within the Valley and Ridge physiographic province about three to four miles north of the Cartersville Fault. The Cartersville Fault separates the late Precambrian-aged metamorphic rocks to the east and south from the Cambrian-aged sedimentary rocks to the north-northwest and west.

The lithologies present in the landfill area of the plant Site from the ground surface to depth are terrace deposits, a residuum clay overburden, dolomite, and limestone bedrock. The Knox Group (dolomite and limestone bedrock) produces a characteristic orange to red clayey residuum (overburden) that ranges in thickness from 19 to 127 feet across the Plant Bowen Site and often contains weathered chert and dolomite fragments. Silt and clay with some gravel and sand (terrace deposits) overlay the clayey residuum in some areas but are not continuous across the landfill area.

Two main hydrostratigraphic layers (water-bearing zones) are present at the Plant Bowen Site: overburden (residuum clay), and bedrock (dolomite and limestone) – both units comprise the uppermost aquifer for groundwater monitoring purposes. Overburden materials are very heterogeneous ranging in composition from well-graded gravelly sand to fat clay. Bedrock underlying the Site (officially mapped as Knox undifferentiated) is a carbonate bedrock. Karst features within the underlying carbonate bedrock are predominately formed along initial discontinuities including joints, fissures (slots), fractures, and bedding planes or other linear features. These karst features may be partially or completely filled with soft unconsolidated sediments or may be empty or filled with water.

The water table commonly occurs in the lower overburden, but at some locations the water table is near the overburden-bedrock interface or in the upper fractured bedrock. Based on this data, it is likely that the overburden and bedrock are essentially a single inter-connected water-bearing zone below the unsaturated overburden. Therefore, the overburden and the upper fractured sedimentary bedrock together comprise the uppermost aquifer beneath the landfill area.

The groundwater flow in the Landfill Cells 1 & 2, 3 & 4, 9 & 10 area is to the north-northeast and west-northwest. However, there are variations in groundwater flow direction due to heterogeneous and anisotropic conditions at the Site.

1.3 Groundwater Monitoring Network

There are three developed disposal units comprising the CCR Landfill Cells 1 & 2, Cells 3 & 4, and Cells 9 & 10. The groundwater monitoring network is described below.

A groundwater monitoring system was installed within the uppermost aquifer at the Site. The monitoring system is designed to monitor groundwater passing the waste boundary of the CCR Units within the uppermost aquifer beneath the units. Wells were located to serve as upgradient and downgradient monitoring points based on groundwater flow direction. **Table 1: Monitoring Well Network Summary** provides the pertinent construction details for the well network at the Site.

The current monitoring well network at disposal Cells 1 & 2 consists of 29 wells (9 upgradient and 20 downgradient wells) at 17 locations, as a result of some wells located in a cluster representing the overburden and the bedrock. Sixteen wells are screened in the overburden and 13 wells in the upper bedrock. Additionally, five wells are monitored for water levels only.

The current monitoring well network at disposal Cells 3 & 4 consists of 23 monitoring wells at 19 locations. Nine wells are screened in the overburden and 14 wells in the upper bedrock. This well network currently consists of 12 upgradient wells and 11 downgradient wells.

The current monitoring network at disposal Cells 9 & 10 consists of 17 monitoring wells at 11 locations. Ten wells are screened in the overburden and 7 wells in the upper bedrock. This well network currently consists of 8 upgradient wells and 9 downgradient wells.

The monitoring wells were sampled for the 16 Solid Waste Permit metals and 5 field parameters, as specified in the D&O Plan for the Site. The wells were also sampled for the seven CCR Appendix III parameters. In accordance with § 391-3-4 for the 16 Solid Waste Permit metals and § 257.94(e) for the Appendix III parameters, data from all wells were compared to the appropriate standards in accordance with regulatory requirements for drinking water.

2.0 GROUNDWATER MONITORING ACTIVITIES

The following describes monitoring-related activities performed during the 2019 calendar year and discusses the status of the monitoring program. In 2019, samples were collected from each well in the certified monitoring system shown on **Figure 2**. Downgradient well GWC-21R was sampled again in June 2019 for fluoride to confirm the initial concentration. Downgradient wells GWC-21R and GWC-45 were sampled again in October for antimony, copper, and zinc to confirm initial concentrations. **Table 2: Groundwater Sampling Event Summary**, presents a summary of the 2019 groundwater sampling events completed at Plant Bowen’s Landfill Cells 1 & 2, 3 & 4, and 9 & 10.

2.1 Monitoring Well Installation and Maintenance

There was no change to the groundwater monitoring system during the 2019 calendar year; the network remained the same as in the previous reporting year. Monitoring well-related activities were limited to the following: visual inspection of well conditions prior to sampling, recording the Site conditions, and performing exterior maintenance to conduct sampling under safe and clean conditions.

2.2 Detection Monitoring Program

In accordance with § 257.94(b), the detection groundwater monitoring program continued during the 2019 calendar year. Groundwater samples were collected semi-annually from each monitoring well in the monitoring network and analyzed for Appendix III constituents (boron, calcium, chloride, fluoride, pH, sulfate, and Total Dissolved Solids) according to § 257.94(a). Data reports for the 2019 calendar year detection monitoring event are included in **Appendix A: Laboratory Analytical Data and Field Sampling Reports for 2019**. Statistical exceedances were identified during the 2019 monitoring event and were addressed with alternate source demonstrations or confirmation sampling.

2.3 Other Groundwater Sampling

In addition to sampling and analyzing the Appendix III parameters, the 16 Solid Waste Permit metals listed below were also sampled and analyzed concurrent with the 2019 semi-annual CCR detection monitoring events as required by the Georgia Solid Waste Permit (No. 008-018D (LI)).

Antimony	Arsenic	Barium	Beryllium	Cadmium	Chromium
Cobalt	Copper	Lead	Mercury	Nickel	Selenium
Silver	Thallium	Vanadium	Zinc		

The laboratory reports for these monitoring events are provided in **Appendix A**.

3.0 SAMPLE METHODOLOGY & ANALYSES

The following sections describe the methods used to conduct groundwater monitoring at Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10 CCR unit during the 2019 calendar year semi-annual events.

3.1 Groundwater Elevation Measurements and Flow Direction

Prior to each sampling event, groundwater levels were measured and recorded to the nearest 0.01 foot within a 24-hour period from each well in the certified networks for Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10. Groundwater levels recorded during the 2019 monitoring events are summarized in **Table 3: Summary of Groundwater Elevations**. Groundwater elevations vary between landfill cells due to topographic variations and anisotropic conditions in the overburden-bedrock aquifer. Also, groundwater elevations are mostly similar between the overburden and the upper bedrock at most onsite locations indicating a hydraulic communication between the overburden and upper bedrock. Groundwater levels typically varied within a one foot range in the overburden and upper bedrock within most well clusters, with the exception of well clusters, namely, GWC-6/GWC-6RZ, GWA-4/GWA-4RZ, GWC-13/GWC-13RZ, GWC-45/GWC-45R, and GWA-50/GWA-50R that showed greater variations.

Groundwater levels from the March and September 2019 detection monitoring events were used to develop potentiometric surface elevation contour maps provided as **Figures 3 and 4: Potentiometric Surface – Overburden Wells Events 12 and 13 (March and September 2019), respectively, and Figures 5 and 6: Potentiometric Surface – Rock Wells Events 12 and 13 (March and September 2019)**. The general direction of groundwater flow in the overburden in the Landfill Cells 1 & 2 and 9 & 10 area is to the north-northeast. Groundwater flow in the overburden in the Landfill Cells 3 & 4 was to the west-northwest in March 2019 (**Figure 3**). In September 2019 the groundwater level was below the top of the pump in overburden well GWC-18, and so the GWC-18 groundwater elevation could not be used in the preparation of the September 2019 potentiometric contouring of the overburden in Cells 3 & 4. Because the September groundwater elevation was lower (below the pump) than the March 2019 groundwater elevation of 681.37 feet, which was above the pump, the groundwater flow direction in Landfill Cells 3 & 4 is estimated to be to the west-northwest in September 2019 (**Figure 4**), as was observed in March 2019. The general groundwater flow direction in the bedrock is similar to the overburden, with groundwater flow in the bedrock in the Landfill Cells 1 & 2 and 9 & 10 area is to the north-northeast. Groundwater flow in the bedrock in the Landfill Cells 3 & 4 area is to the west-northwest (**Figures 5 and 6**). The groundwater flow patterns observed during the 2019 detection monitoring events are consistent with historic observations.

3.2 Groundwater Gradient and Flow Velocity

Groundwater flow velocities were calculated for the Site based on hydraulic gradients, hydraulic conductivity from previous slug test results, and an estimated effective porosity of 0.01 (based on default soil type value for silty clays to clays in USEPA 530/SW-89-031) of the screened horizon.

The average hydraulic conductivity (measured in centimeters/second or cm/sec) values used in the soil aquifer calculations (2.54×10^{-5} cm/sec = 0.072 ft/day) and the bedrock aquifer calculations (1.26×10^{-4} cm/sec = 0.36 ft/day) are presented in the *Plant Bowen Proposed Coal Combustion By-Product Storage Facility Site Acceptability Report* (Southern Company Services, 2002). Measured hydraulic conductivity data in the uppermost aquifer at the Site are lower than many karst aquifers, but comparable to fractured carbonate aquifers in the Valley & Ridge region. The hydraulic gradients were calculated between well pairs. Horizontal groundwater flow velocities at Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10 were calculated using the commonly-used derivative of Darcy's Law:

Where:

$V =$ Groundwater flow velocity $\left(\frac{\text{feet}}{\text{day}}\right)$

$K =$ Average Hydraulic Conductivity of the aquifer $\left(\frac{\text{feet}}{\text{day}}\right)$

$i =$ Horizontal hydraulic gradient $\left(\frac{\text{feet}}{\text{feet}}\right)$

$n_e =$ Effective porosity

Using this equation, groundwater flow velocities are calculated for various areas of the Site for both overburden and bedrock and are tabulated on **Table 4: Groundwater Flow Velocity Calculations**. The velocities presented on **Table 4** were calculated using groundwater elevation data measured on March 5 and September 3, 2019.

Estimated linear groundwater flow velocities presented in **Table 4** are similar to historical data from the Site. Estimated linear groundwater flow velocities for March and September 2019 sampling events range from approximately 0.02 to 0.09 feet per day in the overburden aquifer and from approximately 0.05 to 0.75 feet per day in the bedrock aquifer (**Table 4**). Lower groundwater velocities noted in the overburden material are due to the abundance of residual clays in this zone. Higher velocities noted in the bedrock aquifer are attributed to preferential groundwater flow in the fractured bedrock. Groundwater flow in the Knox Dolomite Formation, underlying the Site, occurs in joints, fractures, bedding planes, and solution channels (Croft, 1963). These pathways can facilitate relatively higher groundwater flows in the upper bedrock aquifer. However, the flow rates noted in the upper bedrock wells (**Table 4**) also suggest an abundance of residual clays in the epikarst zone at the Site.

3.3 Continuous Water Level Monitoring (Hydrogeologic Monitoring)

GPC continuously monitors groundwater level fluctuations in accordance with the *Plant Bowen Site Acceptability Report - Hydrogeological Assessment and Demonstration of Engineering Measures* (Southern Company Services, 2004). The hydrogeologic monitoring network provides site-wide water-level data which is evaluated for changes in subsurface hydrologic conditions. The hydrogeologic data is evaluated weekly and reported semi-annually by Wood. The telemetry equipment maintenance is performed by Wood.

3.3.1 Hydrogeologic Monitoring Network

Hydrogeologic monitoring locations shown on **Figure 2** for Cells 1 & 2, 3 & 4, and 9 & 10 were selected following analysis of the interim data and review of historical groundwater elevations and potentiometric surface maps. Across the landfill cells, there are a total of 37 wells currently equipped with transducers for monitoring water levels. An onsite river gauge is used to monitor surface water elevations in the Etowah River. Alternatively, the USGS river gauge (#02394670) at Cartersville, Georgia is used to monitor the surface water elevations in the Etowah River. Rainfall data is also obtained from the USGS station #02394670 on the Etowah River at Georgia Route 61.

For the hydrogeologic monitoring network, GPC utilized In-Situ® Instruments, Inc.'s Win-Situ® reporting software, and Level Troll 500® pressure transducers. Each pressure transducer was deployed in a selected monitoring well at a fixed depth and linked to its own telemetry box with a vented transducer cable. Groundwater levels are recorded multiple times daily from each well transducer and is programmed to record any fluctuation in water level of ± 0.5 feet occurring within the 4-hour recording schedule. The telemetry system relays water level data via satellite to a central data storage unit that can be accessed in real-time over the internet; whereby, the data can be checked for unusual groundwater level fluctuations. Groundwater elevations, along with the river stage elevations and rainfall data recorded between May 1, 2019 and October 31, 2019 are provided in this semi-annual monitoring report for the three disposal cell units as **Appendix D: Memorandum on Hydrogeologic Monitoring Program**.

3.3.2 Hydrogeologic Monitoring Results

The hydrogeologic monitoring network pressure transducers are operational and collecting continuous groundwater elevation data, with the exceptions described in **Appendix D**. Tables in the hydrogeologic monitoring memo (**Appendix D**) list identified data anomalies and the causes during the monitoring period. The majority of the anomalies noted in daily groundwater elevations are directly attributed to drawdown during sampling events, manual water level gauging, well and transducer maintenance, including corrections for transducer measurement drift by updating elevations based on taped-down measurements, and mechanical/electrical problems with transducers or telemetry units, changes in river stage, or significant rain events. Hydrologic monitoring data from May 1, 2019 to October 31, 2019 did not show water level fluctuations attributed to subsurface changes that might be indicative of land subsidence or sinkhole formation.

3.4 Groundwater Sampling

Groundwater samples were collected from monitoring wells using low-flow sampling procedures. Monitoring wells were purged and sampled using a dedicated QED bladder pump or a peristaltic pump using new disposable polyethylene tubing. A SmarTroll (In-Situ field instrument) was used to monitor and record field water quality parameters (pH, conductivity, temperature, oxidation-reduction potential (ORP), and dissolved oxygen) during well purging to verify stabilization prior to sampling. Turbidity was measured using a Hach 2100Q (or similar) portable turbidity meter. Sampling equipment and pump intakes were placed at the midpoint of the well screen. Care was

taken to maintain a water level above the top of screen and not draw the water level down below the pump during purging. Water level stabilization was achieved when three consecutive water level measurements vary by 0.3 foot or less at a pumping rate of no less than 100 milliliters per minute (mL/min). Groundwater samples were collected when the following stabilization criteria were met:

- pH \pm 0.1 Standard Units (S.U.);
- Specific conductance \pm 5%;
- 0.2 Mg/L or 10% for DO > 0.5 mg/l (whichever is greater).
- Turbidity measurements less than 10 NTU

Once stabilization was achieved, samples were collected into appropriately-preserved laboratory-supplied sample containers. If turbidity readings are greater than 10 NTU at the time of sampling, a dissolved metals sample is also collected by filtering the water with a 0.45-micron water filter Total and filtered samples for metals were collected on May 6, 2019 from well GWC-8Z during this event. No dissolved metals samples were collected during the September 2019 sampling event. Sample bottles were placed in ice-packed coolers, and submitted to Pace Analytical, Inc. in Peachtree Corners (Atlanta), Georgia following chain-of-custody protocol.

An ephemeral spring at the Site is checked for water during each groundwater sampling event. There was no water present in the spring during the March and September 2019 events.

3.5 Laboratory Analyses

Cells 1 & 2, 3 & 4 and 9 & 10 monitoring wells were sampled and analyzed for applicable state and federal monitoring parameters. Analytical methods used for groundwater sample analysis are listed on the analytical laboratory reports included in **Appendix A**.

Laboratory analyses were performed by Pace Analytical Services, LLC, of Peachtree Corners (Atlanta), Georgia. The Pace Laboratory is accredited by National Environmental Laboratory Accreditation Program (NELAP) and maintain a NELAP certification for all parameters analyzed. In addition, Pace Laboratories are certified to perform analysis by the State of Georgia. Groundwater data laboratory reports and chain of custody records for the monitoring events are presented in **Appendix A**.

3.6 Groundwater Analytical Results

3.6.1 CCR Constituents

Tables 5, 6, and 7: Analytical Data Summary Appendix III (2019) Landfill Cells 1 & 2, 3 & 4, and 9 & 10 summarize the analytical data for the seven Appendix III parameters for the March and September 2019 sampling events. The Appendix III parameter concentrations were less than the Georgia and/or Federal drinking water primary and secondary MCLs. The complete laboratory and field data sheets are included in **Appendix A**. Time Series data for the Appendix III parameters are provided in **Appendix B: Historical Groundwater Monitoring Results**.

3.6.2 Solid Waste Permit Metals

Tables 8, 9, and 10: Analytical Data Summary Solid Waste Permit Metals (2019) Landfill Cells 1 & 2, 3 & 4, and 9 & 10, respectively, summarize the analytical data for 16 Solid Waste Permit metals for the most recent sampling events (March and September 2019). There are five metals (copper, nickel, silver, vanadium, and zinc) currently being analyzed per requirements of the Georgia Solid Waste Regulations that are not required under the CCR regulations. Of these, zinc is the only constituent consistently detected above the PQL. Zinc concentrations ranged from 0.010 to 0.56 mg/L and are considerably lower than the Secondary MCL of 5 mg/L. The complete laboratory and field sampling reports are included in **Appendix A**. Time Series data for the Solid Waste Permit metals are provided in **Appendix B**.

In accordance with the Georgia Solid Waste Regulations, the metals data from active monitoring wells at the disposal facility were compared to Georgia drinking water primary and secondary MCLs. With the exception of antimony concentrations in two wells (GWA-39RZ and GWC-16R), the other target constituents were below the primary and secondary MCLs as specified by US EPA and Georgia EPD. The reported antimony concentrations of 0.014 and 0.0098 mg/L in upgradient well GWA-39RZ and 0.020 and 0.011 mg/L in downgradient well GWC-16R, respectively, were above the Georgia MCL of 0.006 mg/L. The Alternate Source Demonstrations submitted August 2017 and April 2018 indicate that the antimony detections in GWC-16R and GWA-39RZ are the result of natural variability in groundwater quality. Well GWA-39RZ is an upgradient well (**Figures 3 to 6**) and as such, is not indicative of a release from Cells 9 & 10.

3.7 Quality Assurance & Quality Control

Quality assurance and quality control of the groundwater data was assessed by performing a data quality evaluation of the results reported. A data quality evaluation was conducted on the 2019 data using laboratory precision and accuracy, analytical method requirements and requirements in the field sampling plan. The data quality evaluation showed the data is usable.

The analytical results provided in **Tables 5 to 10** provide concentrations from the most recent sampling events as reported by the laboratory. When values are followed by a "J" flag, this indicates that the value is an estimated analyte concentration detected between the method detection limit (MDL) and the laboratory reporting limit (PQL). The estimated value is positively identified but is below lowest level that can be reliably achieved within specified limits of precision and accuracy under routine laboratory operating conditions.

Quality control procedures included calculating the relative percent difference (RPD) between sample and sample duplicate concentrations. This is calculated as:

$$RPD = \frac{Conc1 - Conc2}{(Conc1 + Conc2) / 2}$$

The RPD calculations are provided in **Table 11: RPD Calculations** for all detected concentrations above the PQL for wells and corresponding duplicates. Other constituents were below the PQL. For a RPD to be representative of the process, the concentrations have to be five times the PQL in

accordance with US EPA guidance on inorganic data review, (US EPA August 2014). The RPD values of concentrations five times the PQL ranged within the allowable 20% RPD indicating good sampling precision with a few exceptions which include sulfate, zinc and/or TDS in one sample pair each. The RPD for sulfate in GWA-2/Dup-1 was outside of quality control limits and is qualified with J-flag due to field duplicate imprecision. The concentration of sulfate in both samples is low; consequently, slight variation between the two samples resulted in an elevated RPD. The sulfate results are considered valid and appropriate for use in statistical analysis.

Zinc results reported for sample duplicate pair GWC-12 exceeded the quality control limit; however, the zinc result is not designated as above the 20% RPD due to method blank contamination, and the concentrations are less than five times the PQL.

The TDS concentrations in GWA-38 and GWC-48 and their duplicates were less than five times the PQL and do not qualify as a greater than 20% RPD. The RPD for TDS in GWC-20R/Dup-3 was outside of quality control limits and is qualified with J-flag due to field duplicate imprecision. The GWC-20R TDS parent sample concentration of 24.0 mg/L was less than five times the PQL while the Dup-3 concentration of 179 mg/L was more than five times. The laboratory did not identify a discrepancy in the methodology or calculations. It was observed that field duplicate results were more consistent with past results for well GWC-20R. The specific conductance data measured in the field (309 $\mu\text{S}/\text{cm}$) also supports a TDS concentration closer to data measured in the duplicate sample for GWC-20R; therefore, the field duplicate value of 179 mg/L was selected as the more representative TDS result.

The 2019 analytical results were compared to MCLs and secondary MCLs to evaluate groundwater quality and used in the statistical evaluation. The 2019 constituent concentrations were within the historical range of concentrations. Those few concentrations higher than the historical range were identified as statistical exceedances.

4.0 STATISTICAL ANALYSIS

The Site is currently performing detection monitoring. Statistical analysis of the Solid Waste Permit metals and Appendix III groundwater monitoring data was performed on samples collected from the certified groundwater monitoring network pursuant to § 257.93(f) and following the PE-certified statistical analysis plans. The statistical analysis plans used at the Site for the Appendix III parameters were developed in 2017 by MacStat Consulting, Ltd. in accordance with § 257.93(f) using methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities, Unified Guidance*, March 2009, EPA 530/R-09-007 (USEPA, 2009). To develop the statistical method, analytical data collected during the background period were evaluated and used to develop statistical limits for each Appendix III parameter. Subsequent detection monitoring results were compared to the statistical limits to determine if concentrations were statistically different from background.

Historically, interwell statistical methods were used for the 16 Solid Waste Permit metals, in accordance with the D&O Plan. In July 2019, Georgia EPD requested the historic data for the 16 Solid Waste Permit metals be screened to evaluate if interwell or intrawell statistical methods are appropriate at this time. The data was evaluated by Groundwater Stats Consulting in August 2019 and determined intrawell prediction limits statistical method was appropriate for the 16 Solid Waste Permit metals. The barium in well GWC-13RZ was analyzed using a Trend Test. Intrawell statistical analysis was used to evaluate the March and September 2019 data for the 16 Solid Waste Permit metals and this report reflects the change in statistical methods.

4.1 Statistical Method

Sanitas is a commercially available decision support software package, developed in 1991, that incorporates the statistical tests required of Subtitle C and D facilities by US EPA regulations and guidance as recommended in the US EPA Unified Guidance (2009) document. A flow diagram showing the decision logic of the statistical procedures utilized in the Sanitas software is presented in **Figure 7: Flow Diagram for Prediction Limits**. The Sanitas groundwater statistical software was used to perform the statistical analyses of groundwater quality data obtained in March and September 2019. Interwell and intrawell methods were used, depending on the constituent, for the analysis of the Appendix III parameters. Intrawell methods were used for the 16 Solid Waste Permit metals during the March and September 2019 events. Groundwater conditions at the Site and data distribution influence which method is selected. Specific test information is provided below.

When using the interwell method, upgradient well data are pooled to establish a background statistical limit. Data from the March and September 2019 monitoring events were compared to the background statistical limit to evaluate whether concentrations exceed background statistical limits. The selected statistical method uses a 1-of-2 verification resample plan. When an initial statistically significant increase (SSI) or questionable result occurs, a second sample may be collected to verify the initial result or determine if the result was an outlier.

Groundwater quality data with significant natural spatial variation and no pre-existing exceedances of background statistical limits were evaluated using intrawell prediction limits. Using this method,

historical data from within a given well is used to establish statistical limits for future comparisons at the same well. Background data from the parameter at the well (e.g. pH at GWA-36) was used to establish a background statistical limit for that parameter at that well; therefore, each parameter will have a different statistical limit at each well. Data from the March and September 2019 monitoring events were compared to the statistical limits to determine whether concentrations exceed background statistical limits. The intrawell statistical method uses a 1-of-3 or 1-of-2 verification resample plan. When an SSI or questionable result occurs, up to 2 additional samples using the 1-of-3 verification resample plan may be collected to verify the initial result or determine if the result was an outlier.

If data from a sampling event initially exceed the PL, the resampling strategy may be used to verify the result. If the resamples exceed the PL, the initial exceedance is verified and a statistically significant increase (SSI) is identified. When a resample result does not verify the initial result, and does not exceed the PL, there is no SSI. If resampling is not performed, the initial exceedance is a confirmed exceedance. If the initial finding is not verified by resampling, the resampled value will replace the initial finding. When the resample confirms the initial finding, the exceedance will be reported.

Intrawell prediction limits were used to analyze the 16 Solid Waste Permit metals data for Cells 1 & 2, 3 & 4, and 9 & 10 at the Bowen Landfill Cells. The Appendix III parameters were analyzed using both interwell and intrawell prediction limits as described in the statistical analysis plans prepared for the CCR monitoring program and are summarized below.

Landfill Cells 1 & 2

Interwell Prediction Limits: boron, fluoride, chloride, and pH

Intrawell Prediction Limits: calcium, sulfate, and TDS, and 16 Solid Waste Permit metals

Landfill Cells 3 & 4

Interwell Prediction Limits: boron, fluoride, and calcium

Intrawell Prediction Limits: chloride, pH, sulfate, and TDS, and 16 Solid Waste Permit metals

Landfill Cells 9 & 10

Interwell Prediction Limits: boron, fluoride, and pH

Intrawell Prediction Limits: calcium, chloride, sulfate, and TDS, and 16 Solid Waste Permit metals

Parametric methods are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a non-parametric test is utilized. The confidence level is dependent upon the number of available background samples, resample plan, as well as the number of comparisons. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits.

Some analytes may have a statistically-significant seasonal trend, based on testing with the non-parametric, seasonal Kruskal-Wallis test. If a statistically significant seasonal trend is found, then

the data may be deseasonalized prior to statistical testing. The Sanitas software did not deseasonalize the 2019 data.

Time series plots (**Appendix B**) display concentrations over time for wells and analytes, and may be used to identify suspected increasing or decreasing trends. While trends may be visual, a quantification of the trend and its significance is needed. Background data are tested using the Sen's Slope/Mann Kendall or linear regression trend test to confirm suspected increasing or decreasing trends. The distribution of the data determines which trend test is used. In the absence of suspected contamination, trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, earlier data will be evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When the historical records of data are truncated for the reasons above, a summary report will be included in **Appendix C: Statistical Results** showing the date ranges used in construction of the statistical limits. Summary tables of the statistical analyses accompany the prediction limits in **Appendix C**.

The following table provides a summary of the statistical methodology used at Cells 1 & 2, 3 & 4, and 9 & 10 for the 2019 events.

Table 12: Statistical Method Summary

Statistical Methodology	Data Screening on Proposed Background	Evaluate outliers, trends, and seasonality when sufficient data are available
	Statistical Limits	Interwell statistical limits will be applied on a parameter basis, depending on the appropriateness of the method as determined by the Analysis of Variance. Intrawell statistical limits will be applied on a parameter basis, depending on the appropriateness of the method.
	Prediction Limits	When data contain between 15-50% non-detects the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit. Non-parametric when data sets contain greater than 50% non-detects or when data are not normally or transformed-normally distributed.
	Management of Non-Detects	When data contain less than 15% non-detects in background, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the practical quantitation limit (PQL) as reported by the laboratory.

Statistical Methodology	Management of Non-Detects	When data contain between 15-50% non-detects the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
	Confidence Intervals	Used in Assessment and Corrective Action monitoring.
	No Statistical Testing	Statistical testing is not required for parameters containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
	Verification Resample Plan	Optional 1-of-2 with minimum of 8 samples per well for interwell testing. Optional 1-of-3 or 1-of-2 with minimum of 8 samples per well for intrawell testing.
	Optional	<ul style="list-style-type: none"> ▪ Initial statistical exceedance warrants independent resampling within 90 days. ▪ If resample passes, well/parameter is not a confirmed statistically significant increase (SSI). ▪ If resample exceeds, well/parameter has a confirmed SSI. ▪ If no resample is collected, the original result is deemed verified.

4.2 Statistical Analyses Results

Analytical data from the monitoring events in March and September 2019 at the Landfill Cells 1 & 2, 3 & 4, 9 & 10 were statistically analyzed in accordance with the D&O Plan and with the PE-certified statistical methods for the CCR groundwater monitoring program.

The statistical analysis and comparison to prediction limits are included as **Appendix C**. Based on the statistical results presented in **Appendix C**, the following summarizes statistical exceedances identified for Appendix III CCR constituents during the 2019 calendar year.

**Statistical Analysis Summary – CCR Constituents
March 2019**

Appendix III Parameters	Wells with Concentrations Above Prediction Limits
Cells 1 & 2	
Chloride	GWC-13, GWC-13RZ, GWC-14Z
pH	GWC-8RR, GWC-8Z
Sulfate	GWC-15R
Cells 3 & 4	
Calcium	GWC-16R, GWC-17R, GWC-21R, GWC-23R
Chloride	GWC-18, GWC-18R, GWC-20R
Sulfate	GWC-17R, GWC-19R
TDS	GWC-16R
Cells 9 & 10	
Calcium	GWC-44, GWC-49R
Chloride	GWC-45R, GWC-48, GWC-49R
pH	GWC-44, GWC-45, GWC-48
Sulfate	GWC-44, GWC-45R, GWC-47R, GWC-49R
TDS	GWC-45

TDS – Total Dissolved Solids

**Statistical Analysis Summary – CCR Constituents
September 2019**

Appendix III Parameters	Wells with Concentrations Above Prediction Limits
Cells 1 & 2	
Chloride	GWC-13, GWC-13RZ, GWC-14Z
pH	GWC-8RR, GWC-15Z
Sulfate	GWC-15R
Cells 3 & 4	
Calcium	GWC-16R, GWC-17R, GWC-21R, GWC-23R
pH	GWC-22R
Cells 9 & 10	
Chloride	GWC-48
pH	GWC-44, GWC-45, GWC-48, GWC-49R, GWC-49Z
Sulfate	GWC-49R

Based on the statistical results presented in **Appendix C**, the following summarizes statistical exceedances identified for the Solid Waste Permit metals during the 2019 monitoring events.

**Statistical Analysis Summary – Solid Waste Permit Metals
March 2019**

Solid Waste Permit Metals	Wells with Concentrations Above Prediction Limits
Cells 1 & 2	
Barium	GWC-13RZ
Zinc	GWC-13
Cells 3 & 4	
Antimony	GWC-16R
Cells 9 & 10	
Barium	GWC-45, GWC-49R
Chromium	GWC-47R
Zinc	GWC-47

**Statistical Analysis Summary – Solid Waste Permit Metals
September 2019**

Solid Waste Permit Metals	Wells with Concentrations Above Prediction Limits
Cells 1 & 2	
Barium	GWC-13RZ
Cells 3 & 4	
Barium	GWC-21R
Zinc	GWC-21R
Cells 9 & 10	
Antimony	GWC-45, GWC-49R
Barium	GWC-49R
Zinc	GWC-47R, GWC-48

As presented in the Statistical Analysis Summary above in this section, several of the constituents analyzed in March and September 2019 had concentrations above the calculated prediction limits (PLs). Most of these concentrations above the PLs have been addressed previously in the August 2017 and April 2018 Alternate Source Demonstrations (ASDs) (**Appendix E: Alternate Source Demonstrations**). In a letter dated January 30, 2019, EPD approved the April 2018 ASD for antimony, barium, zinc, pH, calcium, chloride, sulfate, and TDS. The 2019 statistical exceedances are further evaluated in the sections below.

4.2.1 Constituent Exceedances Not Addressed in an ASD

As summarized in the table below, chromium, copper, and fluoride concentrations in wells GWC-47R, GWC-45, and GWC-21R, respectively, were above the PLs and had not been addressed by a previous ASD. The initial exceedances of these three metals were not verified with subsequent sampling, and no further action is needed to address these 2019 metals concentrations.

Summary of Statistical Exceedances Not Previously Addressed by an ASD

Well	Constituent	Initial Concentration (mg/L)	Resample Concentration (mg/L)	Prediction Limit (mg/L)	Statistical Result
GWC-21R	Fluoride	0.51 *	<0.030 [^]	0.40	Exceedance Not Verified
GWC-47R	Chromium	0.018 *	0.0015 J **	0.0053	Exceedance Not Verified
GWC-45	Copper	0.012 J **	0.00021 J ***	0.025	Exceedance Not Verified

*March 2019; ^June 2019; **September 2019; ***October 2019

4.2.2 Exceedances Resolved with Resampling

The following table summarizes those 2019 concentrations above a PL where the initial exceedances of these constituents and wells were not verified with subsequent sampling in September 2019, and no further action is needed to address these 2019 concentrations.

Summary of Statistical Exceedances Resolved with Resampling

Well	Constituent	Initial Concentration (mg/L)	Resample Concentration (mg/L)	Prediction Limit (mg/L)	Statistical Result
GWC-44	Calcium	17.2 J *	7.1 **	10.0 *	Exceedance Not Verified
GWC-49R	Calcium	31.0 *	24.3 **	30.0 *	Exceedance Not Verified
GWC-18	Chloride	2.8 *	2.0 **	2.4 *	Exceedance Not Verified
GWC-18R	Chloride	3.3 *	2.3 **	2.9 *	Exceedance Not Verified
GWC-20R	Chloride	2.7 *	1.6 **	2.3 *	Exceedance Not Verified
GWC-45R	Chloride	4.3 *	2.9 **	3.3 *	Exceedance Not Verified
GWC-49R	Chloride	2.7 *	1.4 **	1.8 *	Exceedance Not Verified
GWC-8Z	pH	8.0 *	7.2 **	7.6-5.2 *	Exceedance Not Verified
GWC-17R	Sulfate	25.9 *	6.0 **	9.3 *	Exceedance Not Verified
GWC-19R	Sulfate	4.3 *	3.7 **	3.7 *	Exceedance Not Verified
GWC-44	Sulfate	79.7 *	19.8 **	49.0 *	Exceedance Not Verified
GWC-45R	Sulfate	4.3 *	2.6 **	3.4 *	Exceedance Not Verified
GWC-47R	Sulfate	14.8 *	10.7 **	11.0 *	Exceedance Not Verified
GWC-16R	TDS	344 *	275 **	340 *	Exceedance Not Verified

2019 Annual Groundwater Monitoring & Corrective Action Report
Wood Project 6122-16-0287

Well	Constituent	Initial Concentration (mg/L)	Resample Concentration (mg/L)	Prediction Limit (mg/L)	Statistical Result
GWC-45	TDS	39.0 *	<10.0 **	31.0 *	Exceedance Not Verified
GWC-16R	Antimony	0.020*	0.011 **	0.019 *	Exceedance Not Verified (ASDs: August 2017 and April 2018)
GWC-21R	Antimony	0.010 **	0.0020 J ***	0.0064 **	Exceedance Not Verified (ASDs: August 2017 and April 2018)
GWC-45	Barium	0.0066 J *	0.0061 J **	0.0063 *	Exceedance Not Verified
GWC-13	Zinc	0.021*	0.0070 J **	0.02 *	Exceedance Not Verified
GWC-47	Zinc	0.051*	0.035 **	0.045 *	Exceedance Not Verified (ASD April 2018)

*March 2019; **September 2019; ***October 2019

4.2.3 Exceedances Addressed by Alternate Source Demonstrations

The following wells had constituent concentrations detected once above a PL in September 2019 and have not been resampled to verify the exceedance. In some instances, the exceedance is addressed specifically in a previous ASD. In others, the rationale presented therein can be applied to exceedances of those constituents in nearby wells. Also included below are the wells and constituents identified as having an initial concentration and a re-sample concentration verify a statistical exceedance. The April 2018 ASD addressed the statistical exceedances of calcium, chloride, pH, sulfate, TDS, antimony, barium, and zinc.

Summary of Statistical Exceedances Addressed by an ASD

Well	Constituent	Exceedance Event	Comment
GWC-16R, GWC-17R, GWC-21R, GWC-23R	Calcium	March & September 2019	Addressed in April 2018 ASD
GWC-13, GWC-13RZ	Chloride	March & September 2019	Addressed in April 2018 ASD
GWC-8RR, GWC-44, GWC-45, GWC-48	pH	March & September 2019	Addressed in April 2018 ASD

2019 Annual Groundwater Monitoring & Corrective Action Report
Wood Project 6122-16-0287

Well	Constituent	Exceedance Event	Comment
GWC-15Z, GWC-22R, GWC-49Z	pH	September 2019	Addressed in April 2018 ASD
GWC-49R	Sulfate	March & September 2019	Addressed in April 2018 ASD
GWC-13RZ	Barium	March & September 2019	Addressed in April 2018 ASD
GWC-14Z	Chloride	March & September 2019	The data used to demonstrate chloride in Cells 1&2 downgradient wells GWC-13 and GWC-13RZ were due to natural variability can also be applied to the chloride in GWC-14Z. The chloride in GWC-14Z is due to natural variation as described in the April 2018 ASD because GWC-14Z has similar concentrations and is located near GWC-13 and has similar concentrations as upgradient well GWA-4RZ. The GWC-14 chloride was below the chloride secondary MCL.
GWC-48	Chloride	March & September 2019	The data used to demonstrate chloride in Cells 1&2 downgradient wells GWC-13 and GWC-13RZ and Cells 9&10 well GWA-40 were due to natural variability can also be applied to the chloride in GWC-48. Chloride in GWC-48 is lower than the concentrations in GWC-13 and GWC-13RZ. The chloride concentration in Cells 9&10 upgradient wells (GWA-42 and GWA-43R) are similar to those in GWC-48. The GWC-48 chloride was below the chloride secondary MCL.
GWC-49R	pH	September 2019	The data used to demonstrate pH in Cells 9&10 downgradient wells GWC-44, GWC-45, GWC-48, and GWC-49Z was due to natural variability can also be applied to the pH in GWC-49R which is adjacent to GWC-49Z. The pH in GWC-49R is likely a natural variation in the groundwater based on similar pH values in Cells 9&10 upgradient wells (GWA-39RZ, GWA-42, GWA-43R).
GWC-15R	Sulfate	March & September 2019	The data used to demonstrate sulfate in Cells 1&2 upgradient well GWA-4RZ and Cells 9&10 downgradient well GWC-49R were due to natural variability can also be applied to the sulfate in downgradient well GWC-15R. Sulfate concentration in Cells 1&2 upgradient wells (GWA-2R and GWA-4RZ) have similar or higher concentrations than GWC-15R. The sulfate in GWC-15R was below the sulfate secondary MCL.

2019 Annual Groundwater Monitoring & Corrective Action Report
Wood Project 6122-16-0287

Well	Constituent	Exceedance Event	Comment
GWC-45	Antimony	September 2019	The data used to demonstrate antimony in Cells 3&4 downgradient wells GWC-16R and GWC-21R were due to natural variability can also be applied to the antimony in downgradient well GWC-45. Antimony in GWC-45 is likely a natural variation in the groundwater based on antimony concentration in Cells 9&10 upgradient wells (GWA-39RZ) having similar or higher concentrations than GWC-45. Antimony in GWC-45 was less than the antimony MCL.
GWC-49R	Antimony	September 2019	The data used to demonstrate antimony in Cells 3&4 downgradient wells GWC-16R and GWC-21R were due to natural variability can also be applied to the antimony in GWC-49R. Antimony in GWC-49R is likely a natural variation in the groundwater based on antimony concentration in Cells 9&10 upgradient well (GWA-39RZ) having similar or higher concentrations than GWC-49R. Antimony in GWC-49R was less than the antimony MCL.
GWC-21R	Barium	September 2019	The data used to demonstrate barium in Cells 1&2 downgradient well GWC-13RZ were due to natural variability can also be applied to the barium in GWC-21R. Barium in GWC-21R is likely a natural variation in the groundwater based on barium concentration in Cells 3&4 upgradient wells (GWA-56 and GWA-54) having similar or higher concentrations than GWC-21R and well GWA-56 and GWA-36 also having increasing barium trends. Barium in GWC-21R was less than the barium MCL.
GWC-49R	Barium	March & September 2019	The data used to demonstrate barium in Cells 1&2 downgradient wells GWC-13RZ were due to natural variability can also be applied to the barium in GWC-49R. Barium in GWC-49R is a natural variation in the groundwater based on the barium concentration in Cells 9&10 upgradient wells (GWA-39RZ, GWA-39Z, GWA-41, GWA-41R, and GWA-43) having similar or higher concentrations to GWC-49R and one upgradient well (GWA-42) showing an increasing trend in barium. Barium in GWC-49R was less than the barium MCL.
GWC-21R	Zinc	September 2019	The data used to demonstrate zinc in Cells 9&10 downgradient well GWC-47 were due to natural variability can also be applied to the zinc in downgradient well GWC-21R. Zinc in GWC-21R is a natural variation in the groundwater based on the zinc concentration in Cells 3&4 upgradient wells (GWA-36 and GWA-36R) having similar or higher concentrations to GWC-21R and four upgradient wells (GWA-36, GWA-52, GWA-53R, and GWA-55) showing an increasing trend in zinc. Zinc in GWC-21R was less than the zinc secondary MCL.

Well	Constituent	Exceedance Event	Comment
GWC-47R, GWC-48	Zinc	September 2019	The data used to demonstrate zinc in Cells 9&10 downgradient well GWC-47 were due to natural variability can also be applied to the zinc in GWC-47R and GWC-48, which are adjacent to GWC-47 and have similar concentrations. Zinc in GWC-47R and GWC-48 was less than the zinc secondary MCL.

The Appendix III parameters (calcium, chloride, pH, sulfate, and TDS) with concentrations above prediction limits in March and September 2019 are addressed in the April 2018 ASD. The solid waste permit metals (antimony, barium, and zinc) are also addressed in the April 2018 ASD. Therefore, a separate ASD does not appear to be warranted at this time.

These concentrations above the PL are not thought to be the result of a release from the Landfill Cells 1 & 2, 3 & 4, and 9 & 10 and are likely attributed to natural variability of groundwater chemistry underlying the Site that is not properly accommodated by the existing statistical methods due to geochemical differences between upgradient and downgradient wells, as described in the earlier ASD documents. The supporting evidence for natural variability as presented in the earlier ASD documents are summarized as follows.

- 1) The presence of naturally-occurring sulfide minerals containing these metals at the Site,
- 2) A lack of increasing concentration trends of these metals and inorganic parameters over time, and
- 3) The lack of co-occurrence or correlation of metals with indicator parameters, and
- 4) The non-detectable or low concentrations of other indicator parameters, including boron and fluoride, strongly support the natural occurrence of target parameters showing a SSI.
- 5) The landfill cells are lined, and Cells 3 & 4 have a leachate collection system in accordance with Solid Waste Permit No. 008-018D (LI).

Pursuant to § 257.94(e) and § 391-3-4.14.23(c), GPC will continue detection monitoring at Landfill Cells 1 & 2, 3 & 4, and 9 & 10.

5.0 MONITORING PROGRAM STATUS

The Plant Bowen Landfill Cells 1 & 2, 3 & 4, 9 & 10 are in detection monitoring. In 2019, statistical exceedances of Appendix III and the State Solid Waste Permit constituents were identified. Those statistical exceedances were either not confirmed by subsequent resampling or addressed in ASDs that showed the target constituent concentrations were not an indication of a release from the lined landfill cells, but were due to naturally-occurring sources in the geological formation and natural variability of groundwater chemistry. Groundwater monitoring at Plant Bowen Landfill Cells 1 & 2, 3 & 4, 9 & 10 will continue in detection monitoring phase.

6.0 CONCLUSIONS & FUTURE ACTIONS

In accordance with § 391-3-4 for the 16 Solid Waste Permit metals and § 257.94(e) for the Appendix III parameters, data from the Site wells were compared to the appropriate standards in accordance with regulatory requirements for drinking water. At the request of Georgia EPD, the 16 Solid Waste Permit metals were statistically analyzed using intrawell methods. The Appendix III parameters were statistically analyzed per the statistical plans prepared for the CCR monitoring program.

Concentrations of the 16 Solid Waste Permit metals and Appendix III parameters were below the Georgia MCLs and secondary MCLs, with the exception of antimony in upgradient well GWA-39RZ at Cells 9 & 10, and downgradient well GWC-16R at Cells 3 & 4. An August 2017 Alternate Source Demonstration (**Appendix E**) showed antimony concentrations in well GWC-16R vary naturally in groundwater at the Site. In a letter dated January 30, 2019, EPD approved the April 2018 ASD for antimony. Well GWA-39RZ is an upgradient well and is not located in a groundwater flow path as demonstrated by groundwater flow direction based on measured water level elevations. The majority of the metals and the Appendix III parameters were within their respective statistically calculated PLs for the 2019 sampling events. Most of the concentrations above PLs observed in 2019 were re-occurrences of statistical exceedances previously addressed in ASD reports (April 2018 or August 2017). The initial statistical exceedance of fluoride in well GWC-21R, chromium in GWC-47R, and copper in well GWC-45 were not addressed in a previous ASD, but were verified as not an exceedance with subsequent sampling and no further action is needed to address these 2019 metals concentrations. These statistical exceedances are not thought to be the result of a release from the Landfill Cells 1 & 2, 3 & 4, and 9 & 10 and are attributed to natural variability of groundwater chemistry underlying the Site. Those exceedances in the downgradient wells analyzed using the interwell method may likely be due to the statistical method not accommodating the geochemical differences between upgradient and downgradient locations.

Pursuant to § 257.94(e) and § 391-3-4.14.23(c), GPC will continue detection monitoring at the Site. The next scheduled groundwater monitoring event is scheduled for March-April 2020.

Notes:

1. ft NAD83 indicates feet referenced to the North American Datum of 1983.
2. NAVD88 indicates the North American Vertical Datum 1988.
3. TOC indicates top of casing.
4. The listed monitoring wells are measured for water levels and sampled for groundwater quality. Some wells are only measured for water levels as indicated under Purpose.

**TABLE 2
GROUNDWATER SAMPLING EVENT SUMMARY**

Well ID	Hydraulic Location	Summary of Sampling Events				Status of Monitoring Well
		March 6 - 27, and May 6, 2019	June 18, 2019	September 4 - 19, 2019	October 21, 2019	
Purpose of Sampling Event		Detection	Verification	Detection	Verification	
LANDFILL CELLS 9 & 10 MONITORING WELL NETWORK						
GWA-39Z	Upgradient	D04		D05		Detection Monitoring
GWA-39RZ	Upgradient	D04		D05		Detection Monitoring
GWA-40	Upgradient	D04		D05		Detection Monitoring
GWA-41	Upgradient	D04		D05		Detection Monitoring
GWA-41R	Upgradient	D04		D05		Detection Monitoring
GWA-42	Upgradient	D04		D05		Detection Monitoring
GWA-43	Upgradient	D04		D05		Detection Monitoring
GWA-43R	Upgradient	D04		D05		Detection Monitoring
GWC-44	Downgradient	D04		D05		Detection Monitoring
GWC-45	Downgradient	D04		D05	V03-Sb + Cu	Detection Monitoring
GWC-45R	Downgradient	D04		D05		Detection Monitoring
GWC-46R	Downgradient	D04		D05		Detection Monitoring
GWC-47	Downgradient	D04		D05		Detection Monitoring
GWC-47R	Downgradient	D04		D05		Detection Monitoring
GWC-48	Downgradient	D04		D05		Detection Monitoring
GWC-49Z	Downgradient	D04		D05		Detection Monitoring
GWC-49R	Downgradient	D04		D05		Detection Monitoring

Notes:

Dxx - Detection Event Number

V = Verification Event and parameter resampled

Sb = Antimony

Fl = Fluoride

Cu = Copper

Zn = Zinc

Notes:

1. MCL indicates Environmental Protection Agency (EPA) and Georgia Environmental Protection Division (EPD) maximum contaminant level.
2. (SMCL) indicates a secondary MCL that is established by EPA only as a general guideline (not enforced).
3. Results for substances are reported in milligrams per liter (mg/L).
4. ND (Not Detected) indicates the substance was not detected above the analytical method detection limit (MDL).
5. ND (value J) indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value.
Therefore, the value displayed (value J) is qualified by the laboratory as an estimated number.
6. N/R indicates a substance does not have an MCL or SMCL, but is evaluated statistically, as required by EPA's CCR Rule.
7. TDS indicates total dissolved solids.
8. NA = parameter not analyzed
9. Appendix III = indicator parameters evaluated during Detection Monitoring

5. ND (value J) indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value.
Therefore, the value displayed (value J) is qualified by the laboratory as an estimated number.
6. N/R indicates a substance does not have an MCL or SMCL, but is evaluated statistically, as required by EPA's CCR Rule.
7. TDS indicates total dissolved solids.
8. NA = parameter not analyzed
9. Appendix III = indicator parameters evaluated during Detection Monitoring

TABLE 6
ANALYTICAL DATA SUMMARY

Zinc	(5)	ND (0.0034 J)	ND (0.0072 J)	ND	ND (0.0061 J)	ND	ND (0.0058 J)	0.032	0.035	

Notes:

1. MCL indicates Environmental Protection Agency (EPA) and Georgia Environmental Protection Division (EPD) maximum contaminant level.
2. (SMCL) indicates a secondary MCL that is established by EPA only as a general guideline (not enforced).
3. ^{***} EPA Action Level for lead. [^]EPD secondary MCL for copper per Georgia Rule 391-3-5-.19 as a general guideline (not enforced).
4. Results for substances are reported in milligrams per liter (mg/L).
5. ND (Not Detected) indicates the substance was not detected above the analytical method detection limit (MDL).
6. ND (value J) indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value.
Therefore, the value displayed (value J) is qualified by the laboratory as an estimated number.
7. N/R indicates a substance does not have an MCL or SMCL, but is evaluated statistically, as required by EPA's CCR Rule.
8. Bolded and shaded cells indicate MCL exceedance

Notes:

1. MCL indicates Environmental Protection Agency (EPA) and Georgia Environmental Protection Division (EPD) maximum contaminant level.
2. (SMCL) indicates a secondary MCL that is established by EPA only as a general guideline (not enforced).
3. *** EPA Action Level for lead. ^EPD secondary MCL for copper per Georgia Rule 391-3-5-.19 as a general guideline (not enforced).
4. Results for substances are reported in milligrams per liter (mg/L).
5. ND (Not Detected) indicates the substance was not detected above the analytical method detection limit (MDL).
6. ND (value J) indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value. Therefore, the value displayed (value J) is qualified by the laboratory as an estimated number.
7. N/R indicates a substance does not have an MCL or SMCL, but is evaluated statistically, as required by EPA's CCR Rule.
8. NA = parameter not analyzed
9. Bolded and shaded cells indicate MCL exceedance

Notes:

1. MCL indicates Environmental Protection Agency (EPA) and Georgia Environmental Protection Division (EPD) maximum contaminant level.
2. (SMCL) indicates a secondary MCL that is established by EPA only as a general guideline (not enforced).
3. ^{***} EPA Action Level for lead. [^]EPD secondary MCL for copper per Georgia Rule 391-3-5-.19 as a general guideline (not enforced).
4. Results for substances are reported in milligrams per liter (mg/L).
5. ND (Not Detected) indicates the substance was not detected above the analytical method detection limit (MDL).
6. ND (value J) indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value.
Therefore, the value displayed (value J) is qualified by the laboratory as an estimated number.
7. N/R indicates a substance does not have an MCL or SMCL, but is evaluated statistically, as required by EPA's CCR Rule.
8. NA = parameter not analyzed
9. Bolded and shaded cells indicate MCL exceedance

TABLE 10
ANALYTICAL DATA SUMMARY
Solid Waste Permit Metals (2019)
Landfill Cells 9 & 10

Substance	Well ID

RE: Project: Plant Bowen cells 1+2
Pace Project No.: 2616508

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 22, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 1+2

Pace Project No.: 2616508

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells-State List
Pace Project No.: 2616509

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 22, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells-State List

Pace Project No.: 2616509

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells-State List
Pace Project No.: 2616511

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 22, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells-State List

Pace Project No.: 2616511

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

REPORT OF LABORATORY ANALYSIS

RE: Project: Plant Bowen Cells
Pace Project No.: 2616596

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 26, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel
betsy.mcdaniel@pacelabs.com

QUALIFIERS

Project: Plant Bowen Cells

Pace Project No.: 2616596

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells - State List
Pace Project No.: 2616600

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 26, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen Cells - State List

Pace Project No.: 2616600

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

REPORT OF LABORATORY ANALYSIS

RE: Project: Plant Bowen Cells
Pace Project No.: 2616602

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 26, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel
betsy.mcdaniel@pacelabs.com

QUALIFIERS

Project: Plant Bowen Cells

Pace Project No.: 2616602

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells
Pace Project No.: 2616671

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 27, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel
betsy.mcdaniel@pacelabs.com

QUALIFIERS

Project: Plant Bowen Cells

Pace Project No.: 2616671

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant Bowen Landfill Cells
Pace Project No.: 2618213

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on May 07, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel
betsy.mcdaniel@pacelabs.com

QUALIFIERS

Project: Plant Bowen Landfill Cells

Pace Project No.: 2618213

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

RE: Project: Plant Bowen Cells 3+4
Pace Project No.: 2615878

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 09, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen Cells 3+4

Pace Project No.: 2615878

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells 3+4
Pace Project No.: 2615879

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 09, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

Pace Project No.: 2615879

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells 3+4
Pace Project No.: 2615881

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 09, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen Cells 3+4

Pace Project No.: 2615881

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells
Pace Project No.: 2615967

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 12, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel
betsy.mcdaniel@pacelabs.com

QUALIFIERS

Project: Plant Bowen Cells

Pace Project No.: 2615967

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 3+4
Pace Project No.: 2616191

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 15, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Plant Bowen cells 3+4

Pace Project No.: 2616191

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1A Out of hold rerun result confirms original. Original reported.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

H5 Reanalysis conducted in excess of EPA method holding time. Results confirm original analysis performed in hold time.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells
Pace Project No.: 2619873

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on June 19, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen Cells

Pace Project No.: 2619873

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

QUALIFIERS

Project: Plant Bowen cells-State List

Pace Project No.: 2616179

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells - 9+10
Pace Project No.: 2616189

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 15, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Plant Bowen cells - 9+10
Pace Project No.: 2616189

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

REPORT OF LABORATORY ANALYSIS

RE: Project: Plant Bowen cells-State List
Pace Project No.: 2616193

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 15, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells-State List
Pace Project No.: 2616193

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

- | | |
|----|---|
| B | Analyte was detected in the associated method blank. |
| D3 | Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference. |
| M1 | Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. |
| M6 | Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution. |

RE: Project: Plant Bowen cells-State List
Pace Project No.: 2616284

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 19, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel
betsy.mcdaniel@pacelabs.com

QUALIFIERS

Project: Plant Bowen cells-State List

Pace Project No.: 2616284

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells-State List
Pace Project No.: 2616510

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on March 22, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells-State List

Pace Project No.: 2616510

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DEHNR Certification Office (i.e. out of hold, incorrect preservative, out of temp, incorrect containers)

Product Name: Low-Flow System

Date: 2019-03-20 12:35:56

Project Information:

Operator Name Kevin Stephenson
Company Name Resolute
Project Name Cells 1&2
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 463068
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type QED Dedicated
Tubing Type LDPE
Tubing Diameter 0.17 in
Tubing Length 152 ft

Pump placement from TOC 146.80 ft

Well Information:

Well ID GWA-1
Well diameter 2 in
Well Total Depth 151.80 ft
Screen Length 10 ft
Depth to Water 77.35 ft

Pumping Information:

Final Pumping Rate 140 mL/min
Total System Volume 1.15844 L
Calculated Sample Rate 240 sec
Stabilization Drawdown 123.96 in
Total Volume Pumped 19.6 L

Project Information:

Operator Name Robert Mull
Company Name Resolute Env
Project Name Cells 1&2
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 553835
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Dedicated Pump
Tubing Type LDPE
Tubing Diameter .17 in
Tubing Length 113 ft

Pump placement from TOC 106.3 ft

Well Information:

Well ID GWC-6
Well diameter 2 in
Well Total Depth 111.37 ft
Screen Length 10 ft
Depth to Water 62.08 ft

Pumping Information:

Final Pumping Rate 100 mL/min
Total System Volume 0.9893668 L
Calculated Sample Rate 240 sec
Stabilization Drawdown 2.52 in
Total Volume Pumped 3.2 L

Company Name Resolute Env
Project Name Cells 1&2
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 553835
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Dedicated Pump
Tubing Type LDPE
Tubing Diameter .17 in
Tubing Length 48.3 ft

Pump placement from TOC 42.3 ft

Well Information:

Well ID GWC-11
Well diameter 2 in
Well Total Depth 47.35 ft
Screen Length 10 ft
Depth to Water 17.33 ft

Pumping Information:

Final Pumping Rate 100 mL/min
Total System Volume 0.7005834 L
Calculated Sample Rate 180 sec
Stabilization Drawdown 0.24 in
Total Volume Pumped 2.2 L

Product Name: Low-Flow System

Date: 2019-03-12 12:50:08

Project Information:

Operator Name Veronica Fay
Company Name Resolute
Project Name Cells 3&4
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 463068
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type QED Dedicated
Tubing Type LDPE
Tubing Diameter 0.17 in
Tubing Length 80.3 ft

Pump placement from TOC 75.3 ft

Well Information:

Well ID GWC-18
Well diameter 2 in
Well Total Depth 80.3 ft
Screen Length 10 ft
Depth to Water 68 ft

Pumping Information:

Final Pumping Rate 150 mL/min
Total System Volume 0.713413 L
Calculated Sample Rate 180 sec
Stabilization Drawdown 0 in
Total Volume Pumped 2.25 L

Notes

Prepurged 4.5 L

Casing had wasps and lady bugs seeking shelter from cold. Initially purged ladybugs from well. Was able to purge bugs from well after 5L. BP controller dropped pressure at 1158 to below 100ml/min. Adjusted it to 150 ml/min.

Variance 2			0.14	0.01	0.51			0.01	-0.61

Notes

Prepurged 1L
Was not able to sample. Turbidity rising & ran out of time. Tried decreasing and increasing pump rate to lower turbidity.

Product Name: Low-Flow System

Date: 2019-03-15 13:26:25

Project Information:

Operator Name Robert Mull
Company Name Resolute Env
Project Name Cells 9&10
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 553835
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Dedicated Pump
Tubing Type LDPE
Tubing Diameter .17 in
Tubing Length 119 ft

Pump placement from TOC 112.5 ft

Well Information:

Well ID GWA-39Z
Well diameter 2 in
Well Total Depth 117.50 ft
Screen Length 10 ft
Depth to Water 54.96 ft

Pumping Information:

Final Pumping Rate 130 mL/min
Total System Volume 1.016147 L
Calculated Sample Rate 240 sec
Stabilization Drawdown 3.84 in
Total Volume Pumped 28.6 L

Notes

Prepurged 1L

Took 7 additional stable readings after the third stable reading to try and achieve desired ph range between 5.6-7.9. Well stable around 4.41 pH

Variance 2			-0.25	0.01	0.22			0.07	-0.07

Notes

Prepurged 0.5L

Adjusted pump rate to 140ml/min at 1143, to 130ml/min at 1152 and 100ml/min at 1223 to reduce drawdown. Well a little shallow for BP Controller; caused turbidity and drawdown to periodically fluctuate.

Notes

1L Prepured

Ph kept increasing although well had stabilized. Called Brad F. at 1156& under instructions from Joju A., well was not sampled due to climbing pH.

Well will be redeveloped next week and will be resampled then.

Variance 2			0.07	0.03	-1.91			-0.07	17.57

Notes

Well development requested due to persistent pH over 8.0. Redevelopment performed and pH lower than 8.0 documented. Pre-purged 57 liters. Bug parts observed in discharge tube and bucket. Upon completion well seems clean with a turbidity below 1 NTU.

Sonde SN 364455
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type QED Dedicated
Tubing Type LDPE
Tubing Diameter 0.17 in
Tubing Length 95 ft

Pump placement from TOC 89.47 ft

Well Information:

Well ID GWC-49Z
Well diameter 2 in
Well Total Depth 94.47 ft
Screen Length 10 ft
Depth to Water 47.42 ft

Pumping Information:

Final Pumping Rate 140 mL/min
Total System Volume 0.9040251 L
Calculated Sample Rate 240 sec
Stabilization Drawdown 7.78 in
Total Volume Pumped 15.68 L

Product Name: Low-Flow System

Date: 2019-03-07 15:13:47

Project Information:

Operator Name Veronica Fay
Company Name Resolute
Project Name Cells 3&4
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 463068
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type QED Dedicated
Tubing Type LDPE
Tubing Diameter 0.17 in
Tubing Length 106 ft

Pump placement from TOC 100.7 ft

Well Information:

Well ID GWA-55R
Well diameter 2 in
Well Total Depth 105.7 ft
Screen Length 10 ft
Depth to Water 38.43 ft

Pumping Information:

Final Pumping Rate 170 mL/min
Total System Volume 0.8281228 L
Calculated Sample Rate 180 sec
Stabilization Drawdown 0 in
Total Volume Pumped 2.55 L

RE: Project: Plant Bowen cells 1+2
Pace Project No.: 2623127

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report replaces the report issued on September 23, 2019. This report was revised to correct the Fluoride reporting limit as 0.3 mg/L in accordance with GPC contract specifications. No other changes have been made to this report

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 1+2

Pace Project No.: 2623127

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

H1 Analysis conducted outside the EPA method holding time.

RE: Project: Plant Bowen cells 1+2
Pace Project No.: 2623138

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Plant Bowen cells 1+2

Pace Project No.: 2623138

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells 1+2
Pace Project No.: 2623221

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 17, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Plant Bowen Cells 1+2

Pace Project No.: 2623221

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant Bowen cells 1+2
Pace Project No.: 2623391

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 20, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 1+2

Pace Project No.: 2623391

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 1+2
Pace Project No.: 2623392

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 20, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 1+2

Pace Project No.: 2623392

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 1+2
Pace Project No.: 2623393

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 20, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Plant Bowen cells 1+2

Pace Project No.: 2623393

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 3+4
Pace Project No.: 2622807

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 06, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report replaces the report issued on September 12, 2019. This report was revised to correct the Fluoride reporting limit as 0.3 mg/L in accordance with GPC contract specifications. No other changes have been made to this report

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Plant Bowen cells 3+4

Pace Project No.: 2622807

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 3+4
Pace Project No.: 2622808

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 06, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report replaces the report issued on September 13, 2019. This report was revised to correct the Fluoride reporting limit as 0.3 mg/L in accordance with GPC contract specifications. No other changes have been made to this report

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 3+4

Pace Project No.: 2622808

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 3+4
Pace Project No.: 2622810

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 06, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report replaces the report issued on September 13, 2019. This report was revised to correct the Fluoride reporting limit as 0.3 mg/L in accordance with GPC contract specifications. No other changes have been made to this report

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 3+4

Pace Project No.: 2622810

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 3+4
Pace Project No.: 2622908

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 10, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report replaces the report issued on September 18, 2019. This report was revised to correct the Fluoride reporting limit as 0.3 mg/L in accordance with GPC contract specifications. No other changes have been made to this report

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 3+4

Pace Project No.: 2622908

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

RE: Project: Plant Bowen cells 3+4
Pace Project No.: 2623139

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for

QUALIFIERS

Project: Plant Bowen cells 3+4

Pace Project No.: 2623139

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

H1 Analysis conducted outside the EPA method holding time.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 9+10
Pace Project No.: 2622907

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 10, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report replaces the report issued on September 18, 2019. This report was revised to correct the Fluoride reporting limit as 0.3 mg/L in accordance with GPC contract specifications. No other changes have been made to this report

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 9+10

Pace Project No.: 2622907

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

RE: Project: Plant Bowen cells 9+10
Pace Project No.: 2623134

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 9+10

Pace Project No.: 2623134

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen cells 9+10
Pace Project No.: 2623137

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 9+10

Pace Project No.: 2623137

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant Bowen cells 9+10
Pace Project No.: 2623140

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on September 13, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring for
Betsy McDaniel

QUALIFIERS

Project: Plant Bowen cells 9+10

Pace Project No.: 2623140

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-A Pace Analytical Services - Asheville

PASI-GA Pace Analytical Services - Atlanta, GA

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

H1 Analysis conducted outside the EPA method holding time.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: Plant Bowen Cells
Pace Project No.: 2624563

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on October 21, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Betsy McDaniel
betsy.mcdaniel@pacelabs.com

QUALIFIERS

Project: Plant Bowen Cells

Pace Project No.: 2624563

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

Product Name: Low-Flow System

Date: 2019-09-13 12:20:42

Project Information:

Operator Name Audrey Crafton
Company Name Resolute
Project Name Cells 1&2
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 553835
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Dedicated
Tubing Type LDPE
Tubing Diameter .17 in
Tubing Length 98 ft

Pump placement from TOC 93.2 ft

Well Information:

Well ID GWA-3
Well diameter 2 in
Well Total Depth 98.2 ft
Screen Length 10 ft
Depth to Water 66.85 ft

Pumping Information:

Final Pumping Rate 120 mL/min
Total System Volume 0.7924154 L
Calculated Sample Rate 240 sec
Stabilization Drawdown 134.88 in
Total Volume Pumped 9 L

Product Name: Low-Flow System

Date: 2019-09-17 10:42:36

Project Information:

Operator Name Veronica Fay
Company Name Resolute
Project Name Cells 1&2
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 613229
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Dedicated
Tubing Type LDPE
Tubing Diameter 0.17 in
Tubing Length 101 ft

Pump placement from TOC 95.2 ft

Well Information:

Well ID GWC-10R
Well diameter 2 in
Well Total Depth 100.2 ft
Screen Length 10 ft
Depth to Water 36.78 ft

Pumping Information:

Final Pumping Rate 135 mL/min
Total System Volume 0.9308057 L
Calculated Sample Rate 180 sec
Stabilization Drawdown 0 in
Total Volume Pumped 7 L

Project Information:

Operator Name Audrey Crafton
Company Name Resolute
Project Name Cells 1&2
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 553835
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Dedicated
Tubing Type LDPE
Tubing Diameter .17 in
Tubing Length 75 ft

Pump placement from TOC 69.9 ft

Well Information:

Well ID GWC-15Z
Well diameter 2 in
Well Total Depth 74.9 ft
Screen Length 10 ft
Depth to Water 43.46 ft

Pumping Information:

Final Pumping Rate 125 mL/min
Total System Volume 0.6897567 L
Calculated Sample Rate 240 sec
Stabilization Drawdown 6.24 in
Total Volume Pumped 2.5 L

Notes

Prepurged 2L

Ants starting to make nest at top of casing. Coming in through hole in casing for telemetry wire. No dead ants purged from well. Slight drawdown issue. Takes a while to stabilize. Prefers lower pump rate. Dropped pump rate to 130ml/ min at 1013 then to 100ml/min at 1043 to attempt to stabilize drawdown.

Project Name Cells 9&10
Site Name Plant Bowen
Latitude 0° 0' 0"
Longitude 0° 0' 0"
Sonde SN 553835
Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Dedicated
Tubing Type LDPE
Tubing Diameter .17 in
Tubing Length 140 ft

Pump placement from TOC 135.1 ft

Well Information:

Well ID GWA-39RZ
Well diameter 2 in
Well Total Depth 140.1 ft
Screen Length 10 ft
Depth to Water 66.82 ft

Pumping Information:

Final Pumping Rate 140 mL/min
Total System Volume 0.9798792 L
Calculated Sample Rate 240 sec
Stabilization Drawdown 706.5 in
Total Volume Pumped 70 L

DQE SUMMARIES

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616508

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-6RZ	03/21/19	II	<u>QC Samples</u>		
GWC-6	03/21/19	II	FBL032119	03/21/19	II
GWA-4RZ	03/21/19	II	EQBL032119	03/21/19	II
GWC-7Z	03/21/19	II			
GWC-9	03/21/19	II			

These samples were collected from Landfill Cells 1&2 on March 21, 2019. Sample FBL032119 is a field blank sample and EQBL032119 is an equipment blank sample. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL031919 (SDG: 2616511) collected on the tubing
- EQBL032119 (SDG 2616508) collected on the nitrile gloves
- EQBL032219 (SDG 2616600) collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. Field blank FBL032119 is associated with the samples in this SDG.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for field and equipment blank contamination, and MS/MSD recoveries.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

A batch MS/MSD analysis for mercury was performed on project sample GWC-6RZ and the recoveries and RPD were within QC limits. A batch MS/MSD for metals was performed on sample GWC-7Z, and the recoveries were outside of QC limits for calcium. The MS recovery was above the upper limit, and the MSD recovery was below the lower QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than 4x the spiked concentration: **Reason Code: M**

Action: No qualification was required because the sample result was greater than 4x the spike concentration.

Post Digestion Spike (PDS)

A PDS analysis was not performed on any project samples for metals.

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The equipment and field blanks associated with the samples in this SDG reported mercury and calcium between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: The positive mercury results less than 5 times the blank value were qualified as not detected due to possible blank contamination flagged "U". No qualification was necessary for calcium because the associated results were greater than 5 times the blank value.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-6	Ca	50x	GWA-4RZ	Ca	50x
GWC-7Z	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of method, field, and equipment blank contamination, and MS/MSD recoveries.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained chloride between the MDL and the RL, indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL**

Action: The chloride results for samples GWC-6RZ, GWC-6, GWC-7Z, EQBL032119, FBL032119 were qualified as not detected due to possible blank contamination flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for anions were performed project samples GWC-6RZ and GWC-6 from this SDG. The recoveries and RPDs were within QC limits with the exception of the MSD recovery for sulfate in sample GWC-6RZ, which was above the upper QC limit.

Action: No qualification was necessary because the MS recovery and RPD were within QC limits.

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment and field blanks associated with the samples in this SDG reported chloride and sulfate between the MDL and RL. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF.**

Action: The associated chloride results in EQBL032119 and FBL032119 were considered not detected due to method blank contamination and therefore, not used in the evaluation of potential cross contamination during sampling. No qualification was necessary for sulfate because the associated results were greater than five times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment blanks associated with the samples in this SDG reported TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the validator.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-6RZ, GWC-6, GWA-4RZ, GWC-7Z, and GWC-9 along with field and equipment blanks were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.
 J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
 D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".
 BL = Laboratory blank contamination. The result should be considered "not-detected".
 -- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL); estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.
 U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616509

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the Laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-1	03/20/19	II	<u>QC Samples</u>		
GWA-2	03/20/19	II	Dup-2	03/20/19	II
GWA-5	03/20/19	II			
GWA-3	03/20/19	II			

These samples were collected from Landfill Cells 1&2 on March 20, 2019. Sample Dup-2 is a field duplicate of GWA-1. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL031919 (SDG: 2616511) collected on the tubing
- EQBL032119 (SDG 2616508) collected on the nitrile gloves
- EQBL032219 (SDG 2616600) collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. Field blank FBL031919 (SDG 2616511) is associated with the samples in this SDG.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for metals were not performed on project samples in this SDG.

Post Digestion Spike (PDS)

A PDS analysis was not performed on any project samples for metals.

Field Duplicate Precision

One field duplicate sample pair (Dup-2/GWA-1) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The equipment and field blanks associated with the samples in this SDG reported mercury and calcium between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: The positive mercury results less than 5 times the blank value were qualified as not detected due to possible blank contamination flagged "U". No qualification was necessary for calcium because the associated results were greater than 5 times the blank value.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution	Sample	Metal	Dilution
GWA-1	Ca	50x	Dup-2	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of method, field, and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained chloride between the MDL and the RL, indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL**

Action: The associated positive chloride results less than five times the blank value were qualified as not detected due to possible blank contamination flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for anions were not performed on any project samples in this SDG.

Field Duplicate Precision

One field duplicate sample pair (Dup-2/GWA-1) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment and field blanks associated with the samples in this SDG reported chloride and sulfate between the MDL and RL. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: Associated sulfate and chloride results in the field and equipment blanks considered not detected due to method blank contamination were not used in the evaluation of potential cross contamination during sampling. No qualification was necessary for sulfate and chloride because the associated results were greater than five times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment blanks associated with the samples in this SDG reported TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and the RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-1, GWA-2, GWC-5, GWA-3, and Dup-2, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL); estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616511

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-50	03/19/19	II	<u>QC Samples</u>		
GWA-50R	03/19/19	II	Dup-1	03/19/19	II
GWA-2R	03/19/19	II	FBL031919	03/19/19	II
			EQL031919	03/19/19	II

These samples were collected from Landfill Cells 1&2 on March 19, 2019. Sample Dup-1 is a field duplicate of sample GWA-50. Sample FBL031919 is a field blank and sample EQL031919 is an equipment blank. Three equipment blanks were collected on different equipment used to sample the locations:

- EQL031919 (SDG: 2616511) collected on the tubing
- EQL032119 (SDG 2616508) collected on the nitrile gloves
- EQL032219 (SDG 2616600) collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. Field blank FBL031919 is associated with the samples in this SDG.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for metals was not performed on any sample from this SDG.

Post Digestion Spike (PDS)

A PDS analysis was not available for review.

Field Duplicate Precision

One field duplicate sample pair (Dup-1/GWA-50) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The equipment and field blanks associated with the samples in this SDG reported mercury and calcium between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: The positive mercury results less than 5 times the blank value were qualified as not detected due to possible blank contamination flagged "U". No qualification was necessary for calcium because the associated results were greater than 5 times the blank value.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-2R	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of method, field, and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blanks associated with the samples analyzed in this SDG contained chloride between the MDL and the RL, indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL**

Action: The associated positive chloride results less than five times the blank value were qualified as not detected due to possible blank contamination flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was performed project samples Dup-1 and GWA-2R (MS only). Recoveries and RPDs were within QC limits except for sulfate in sample GWA-2R. Sulfate recovered below the QC limit. **Reason Code: M-**

Action: The sulfate results reported in sample GWA-2R were qualified as estimated and flagged "J".

Field Duplicate Precision

One field duplicate sample pair (Dup-1/GWA-50) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment and field blanks associated with the samples in this SDG reported chloride and sulfate between the MDL and RL. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: The associated chloride results in EQBL031919 and FBL031919 were considered not detected due to method blank contamination and therefore, not used in the evaluation of potential cross contamination during sampling. No qualification was necessary for sulfate because the associated results were greater than five times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate sample pair (Dup-1/GWA-50) was collected with this SDG, and the RPD was within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment blanks associated with the samples in this SDG reported TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-50 and its field duplicate (Dup-1), GWA-50R, and GWA-2R, along with field and equipment blanks were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

BL = Laboratory blank contamination. The result should be considered "not-detected".

M+ = MS and MSD recoveries outside acceptance limits. The result may be biased high.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616596

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-13	03/23/19	II	GWC-11	03/23/19	II
GWC-12	03/23/19	II	GWC-11R	03/23/19	II

These samples were collected from Landfill Cells 1&2 on March 23, 2019. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL031919 (SDG: 2616511) collected on the tubing
- EQBL032119 (SDG 2616508) collected on the nitrile gloves
- EQBL032219 (SDG 2616600) collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. Field blank FBL032219 (SDG 2616600) is associated with the samples in this SDG.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for metals was not performed on any sample from this SDG. A batch MS/MSD for mercury was performed on sample GWC-13 and the recoveries and RPD were within QC limits.

Post Digestion Spike (PDS)

A PDS analysis was not performed on any project samples for metals.

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The equipment and field blanks associated with the samples in this SDG reported mercury and calcium between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: The positive mercury results less than 5 times the blank value were qualified as not detected due to possible blank contamination flagged "U". No qualification was necessary for calcium because the associated results were greater than 5 times the blank value.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution	Sample	Metal	Dilution
GWC-13	Ca	50x	GWC-11R	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of method, field, and equipment blank contamination, and MS/MSD recoveries.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blanks associated with the samples analyzed in this SDG contained sulfate between the MDL and the RL, indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL**

Action: No qualification was necessary for sulfate because the associated results were greater than five times the blank value.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was performed on sample GWC-13, and the sulfate recoveries were outside of QC limits. Associated results should be considered estimated due to matrix interference:

Reason Code: M-

Action: The sulfate result for sample GWC-13 was qualified as estimated and flagged "J".

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment and field blanks associated with the samples in this SDG reported chloride and sulfate between the MDL and RL. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: Associated chloride results in the field and equipment blanks considered not detected due to method blank contamination were not used in the evaluation of potential cross contamination during sampling. No qualification was necessary for sulfate and chloride because the associated results were greater than five times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected and analyzed with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment blanks associated with the samples in this SDG reported TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-11, GWC-11R, GWC-12, and GWC-13 were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

M1 = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

BF = Field blank contamination. The result should be considered "not-detected".

BL = Laboratory blank contamination. The result should be considered "not-detected".

M- = MS and MSD recoveries outside acceptance limits. The result may be biased low.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL); estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616600

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-13RZ	03/22/19	II	<u>QC Samples</u>		
GWC-10R	03/22/19	II	Dup-3	03/22/19	II
GWC-10	03/22/19	II	FBL032219	03/22/19	II
GWC-14Z	03/22/19	II	EQBL032219	03/22/19	II
GWC-15Z	03/22/19	II			

These samples were collected from Landfill Cells 1&2 on March 22, 2019. Sample Dup-3 is a field duplicate of sample GWC-14Z. Sample FBL032219 is a field blank and EQBL032219 is an equipment blank. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL031919 (SDG: 2616511) collected on the tubing
- EQBL032119 (SDG 2616508) collected on the nitrile gloves
- EQBL032219 (SDG 2616600) collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. Field blank FBL032219 is associated with the samples in this SDG.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for metals was not performed on any sample from this SDG.

Post Digestion Spike (PDS)

A PDS analysis was not available for review.

Field Duplicate Precision

One field duplicate sample pair (Dup-3/GWC-14Z) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The equipment and field blanks associated with the samples in this SDG reported mercury and calcium between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: The positive mercury results less than 5 times the blank value were qualified as not detected due to possible blank contamination flagged "U". No qualification was necessary for calcium because the associated results were greater than 5 times the blank value.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution	Sample	Metal	Dilution
GWC-13RZ	Ca	50x	GWC-14Z	Ca	50x
GWC-10R	Ca	50x	GWC-15Z	Ca	50x
GWC-10	Ca	50x	Dup-3	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of method, field, and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained sulfate between the MDL and the RL, indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL**

Action: The positive sulfate results for samples EQBL032219 and FBL0332219 were qualified as not detected due to possible blank contamination flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG.

Field Duplicate Precision

One field duplicate sample pair (Dup-3/GWC-14Z) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment and field blanks associated with the samples in this SDG reported chloride and sulfate between the MDL and RL. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF**.

Action: The associated sulfate results in EQBL032219 and FBL032219 were considered not detected due to method blank contamination and therefore, not used in the evaluation of potential cross contamination during sampling. No qualification was necessary for chloride because the associated results were greater than five times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate sample pair (Dup-3/GWC-14Z) was collected with this SDG, and the RPD was within QC limits.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample in duplicate and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field blank did not contain TDS. The equipment blanks associated with the samples in this SDG reported TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-13RZ, GWC-10R, GWC-10, GWC-14Z and its field duplicate (Dup-3), GWC-15Z along with field and equipment blanks, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

BF = Field blank contamination. The result should be considered "not-detected".

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616602

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and/or quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-15R	03/25/19	II

This sample was collected from Landfill Cells 1&2 on March 25, 2019. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL031919 (SDG: 2616511) collected on the tubing
- EQBL032119 (SDG 2616508) collected on the nitrile gloves
- EQBL032219 (SDG 2616600) collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. Field blank FBL032219 (SDG 2616600) is associated with the samples in this SDG.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for MS/MSD recoveries and field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD for metals was performed sample GWC-15R, and the calcium recoveries were outside of QC limits. The MS recovery was above the upper QC limit, and the MSD recovery was below the lower QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than 4x the spiked concentration: **Reason Code: M.**

Action: No qualification was required because the sample result was greater than 4x the spike concentration.

Post Digestion Spike (PDS)

A PDS analysis was available for review.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The equipment and field blanks associated with the samples in this SDG reported mercury and calcium between the method detection limit (MDL) and the reporting limit (RL).

Results less than five times the blank are considered not detected as a possible field artifact: **Reason**

Code: BE/BF.

Action: The mercury result for sample GWC-15R was qualified as not detected due to possible blank contamination flagged "U". No qualification was necessary for calcium because the associated results were greater than 5 times the blank value.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-15R	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of method, field, and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained sulfate between the MDL and the RL, indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL.**

Action: No qualification was necessary because the associated sample results were greater than five times the blank value.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment and field blanks associated with the samples in this SDG reported chloride and sulfate between the MDL and RL. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF.**

Action: Associated sulfate and chloride results in the field and equipment blanks considered not detected due to method blank contamination were not used in the evaluation of potential cross contamination during sampling. No qualification was necessary for sulfate and chloride because the associated results were greater than five times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however there were none in this SDG.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field blank did not contain TDS. The equipment blanks associated with the samples in this SDG reported TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-15R was reported in this SDG and was sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

TABLE 1
SUMMARY OF DATA QUALIFIERS

TABLE 1
SUMMARY OF DATA QUALIFIERS
SAMPLE DELIVERY GROUP 2616602
SAMPLING DATE: March 25, 2019
Plant Bowen Landfill Cells 1 & 2

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
GWC-15R	GWC-15R	N	2616602	6020B	lead	0.00047	J	J	--	mg/L
GWC-15R	GWC-15R	N	2616602	6020B	nickel	0.0011	J	J	--	mg/L
GWC-15R	GWC-15R	N	2616602	6020B	zinc	0.0039	J	J	--	mg/L
GWC-15R	GWC-15R	N	2616602	7470A	mercury	0.00011	J	U*	BE/BF	mg/L

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

BF = Field blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL); estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616671

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-8RR	03/27/19	II

This sample was collected from Landfill Cells 1&2 on March 27, 2019. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL031919 (SDG: 2616511) collected on the tubing
- EQBL032119 (SDG 2616508) collected on the nitrile gloves
- EQBL032219 (SDG 2616600) collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. Field blank FBL032219 (SDG 2616600) is associated with the samples in this SDG.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method, field, and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained mercury between the MDL and the RL indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The mercury result for sample GWC-8RR was qualified as not detected due to possible blank contamination flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for metals was not performed any project samples in this SDG. The batch MS/MSD for mercury was performed on sample GWC-8RR and the recoveries and RPDs were within QC limits.

Post Digestion Spike (PDS)

A PDS analysis was not available for review.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The equipment and field blanks associated with the samples in this SDG reported mercury and calcium between the method detection limit (MDL) and the reporting limit (RL).

Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF.**

Action: No additional qualification was necessary for mercury because the associated result was previously qualified due to method blank contamination. No qualification was necessary for calcium because the associated results were greater than 5 times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-8RR	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The equipment and field blanks associated with the samples in this SDG reported chloride and/or sulfate between the MDL and RL. Results less than five times the blank are considered not detected as a possible field artifact: **Reason Code: BE/BF.**

Action: Associated chloride and sulfate results in the field and equipment blanks considered not detected due to method blank contamination were not used in the evaluation of potential cross contamination during sampling. No qualification was necessary for chloride and sulfate because the associated results were greater than five times the blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however there were none in this SDG.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field blank did not contain TDS. The equipment blanks associated with the samples in this SDG reported TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-8RR was reported in this SDG and was sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

TABLE 1
SUMMARY OF DATA QUALIFIERS
SAMPLE DELIVERY GROUP 2616671
SAMPLING DATE: March 27, 2019
Plant Bowen Landfill Cells 1 & 2

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
GWC-8RR	GWC-8RR	N	2616671	6020B	boron	0.0078	J	J	--	mg/L
GWC-8RR	GWC-8RR	N	2616671	6020B	calcium	20.6	J, D3	J	--	mg/L
GWC-8RR	GWC-8RR	N	2616671	6020B	chromium	0.0021	J	J	--	mg/L
GWC-8RR	GWC-8RR	N	2616671	7470A	mercury	0.000039	J, B	U*	BL	mg/L

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2618213

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in May 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

Qualifier Unusable Data

- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
- UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-8Z	05/06/19	II

This sample was collected from Landfill Cells 1&2 on May 6, 2019 after redevelopment due to high turbidity during the March event. No equipment or field blanks were collected since only one well was sampled.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained dissolved barium between the method detection limit (MDL) and the reporting limit (RL) indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL.**

Action: No qualification was required because the associated sample results were greater than five times the blank value.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSDs for total and dissolved metals and mercury were performed on sample GWC-8Z, and the MS recovery and RPD for dissolved mercury were outside of QC limits. **Reason Codes: MS-L, MS-P**

Action: The dissolved mercury result for sample GWC-8Z was qualified as not detected with an approximated detection limit and flagged "UJ".

Post Digestion Spike (PDS)

A PDS analysis was not available for review.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy is measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No equipment or field blanks were collected because only one well was sampled and no equipment decontamination was performed.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-8Z	Ca (total)	50x
GWC-8Z	Ca (diss.)	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than five times the RL. The samples analyzed for both total and dissolved metals include GWC-8Z, and the dissolved results are less than or equal to the respective total metal results.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of method blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained chloride and sulfate between the MDL and the RL indicating possible interference from the analytical system. Results less than five times the method blank value are considered not detected as a possible laboratory artifact: **Reason Code: BL.**

Action: No qualification was required for chloride and sulfate because the associated results were greater than five times the blank value.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No equipment or field blanks were collected because only one well was sampled and no equipment decontamination was performed.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required a dilution; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however there were none in this SDG.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No equipment or field blanks were collected because only one well was sampled and no equipment decontamination was performed.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however there were none in this SDG.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. Professional judgment was not used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March/May event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-8Z was reported in this SDG and was sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
 D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

Reason Codes:

M- = MS and MSD recoveries outside acceptance limits. The result may be biased low.
 MP = MS/MSD imprecision.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL); estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2615878

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

Qualifier Unusable Data

- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
- UR The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-36	03/06/19	II	QC Samples		
GWA-37	03/06/19	II	Dup-1	03/06/19	II

These samples were collected from Landfill Cells 3&4 on March 6, 2019. Sample Dup-1 is a field duplicate of sample GWA-36. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL030819 (SDG: 2615881), collected on the nitrile gloves
- EQBL031219-1 (SDG: 2616284), collected on the tubing
- EQBL031219-2 (SDG: 2616284), collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of MS/MSD recoveries and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

A batch MS/MSD analysis was performed for mercury on a non-project sample, therefore, matrix effects specific to mercury in these project samples were not assessed. A batch MS/MSD analysis was performed for metals on sample GWA-56 (reported in SDG 2615879) and the MSD recovery of calcium was above the upper QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration. **Reason Code: M+**

Action: No qualification was required for the calcium results because the sample was analyzed at a dilution and the concentration was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-36) was submitted in this SDG, and the RPDs were within limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. One of the associated equipment blanks (EQBL030819 - SDG 2615581) contained calcium, chromium, copper, and nickel between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: The nickel and copper results less than five times the blank value were qualified as not detected due to possible blank contamination flagged "U". No qualification was required for calcium and chromium results because the associated results were non-detect or greater than five times the blank.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-36	Ca	50x	Dup-1	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions were performed on non-project samples, therefore, matrix effects specific to anions in these project samples were not assessed.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-36) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL030819, EQBL031219-1, and EQBL031219-2) contained chloride between the MDL and RL. Results less than five times the equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: The positive chloride results less than five times the blank value were qualified as not detected due to possible blank contamination flagged "U".*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of field duplicate RPDs and equipment blank contamination. No qualification was applied due to equipment blank contamination.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-36) was submitted in this SDG and the RPD was outside of the QC limit.

Action: The associated TDS results for samples GWA-36 and Dup-1 were qualified as estimated and flagged "J" unless overridden or combined with flags for other QC criteria.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL030819, EQBL031219-1, and EQBL031219-2) contained TDS between the MDL and the RL or above the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-36 and GWA-37 were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
 D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".
 FD = Field duplicate imprecision.
 PJ = Professional judgment
 -- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.
 U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2615879

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

Qualifier Unusable Data

- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
- UR The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-36R	03/07/19	II	GWA-54	03/07/19	II
GWA-38	03/07/19	II	GWA-55R	03/07/19	II
GWA-52	03/07/19	II	GWA-56	03/07/19	II

The samples were collected from Landfill Cells 3&4 on March 7, 2019. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL030819 (SDG: 2615881), collected on the nitrile gloves
- EQBL031219-1 (SDG: 2616284), collected on the tubing
- EQBL031219-2 (SDG: 2616284), collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for MS/MSD recoveries and equipment blank contamination; however, no qualification was required.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for metals was performed on sample GWA-56 and the MSD recovery for calcium was above the upper QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration. **Reason Code: M+**

Action: No qualification was required for the calcium result because the sample was analyzed at a dilution and the concentration was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. One of the associated equipment blanks (EQBL030819 - SDG 2615581) contained calcium, chromium, copper, and nickel between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: No qualification was required because the associated results were non-detect or greater than five times the blank concentration.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-36R	Ca	50x	GWA-55R	Ca	50x
GWA-52	Ca	50x	GWA-56	Ca	50x
GWA-54	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits except for equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG, therefore matrix affects specific to anions in these project samples were not assessed.

Field Duplicate Precision

No field duplicate pairs were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. Two of the equipment blank samples (EQBL031219-1 and EQBL031219-2 in SDG 2616284) contained chloride above the RL. Results less than five times the equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: The positive chloride results less than five times the blank value were qualified as not detected due to possible blank contamination flagged "U".*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits except for equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL030819, EQBL031219-1, and EQBL031219-2) contained TDS between the MDL and the RL or above the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-36R, GWA-38, GWA-52, GWA-54, GWA-55R and GWA-56, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2615881

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-51RZ	03/08/19	II	GWC-25R	03/08/19	II
GWA-53	03/08/19	II	QC Samples		
GWA-55	03/08/19	II	FBL030819	03/08/19	II
GWC-24R	03/08/19	II	EQBL030819	03/08/19	II

These samples were collected from Landfill Cells 3&4 on March 8, 2019. Sample FBL030819 is a field blank associated with the samples in this SDG, and sample EQBL030819 is an equipment blank. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL030819 (SDG: 2615881), collected on the nitrile gloves
- EQBL031219-1 (SDG: 2616284), collected on the tubing
- EQBL031219-2 (SDG: 2616284), collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary. The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except MS/MSD recoveries and field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for metals was performed on sample GWA-56 (reported in SDG 2615879) and the MSD recovery for calcium was above the upper QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration. **Reason Code: M+**

Action: No qualification was required for the calcium result because the sample was analyzed at a dilution and the concentration was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blank (FBL030819) contained chromium between the method detection limit (MDL) and the reporting limit (RL), and one of the associated equipment blanks (EQBL030819) contained calcium, chromium, copper, and nickel between the MDL and the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BF/BE.**

Action: The copper result for sample GWC-25R was qualified as not detected due to possible blank contamination flagged "U". No qualification was required for calcium, chromium and nickel because the associated samples were non-detect or greater than 5x the blank result.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution	Sample	Metal	Dilution
GWA-51RZ	Ca	50x	GWC-24R	Ca	50x
GWA-53	Ca	50x	GWC-25R	Ca	50x
GWA-55	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits except for field and equipment blank contamination; however, no qualification was necessary.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG, therefore matrix effects specific to anions in these project samples were not assessed

Field Duplicate Precision

No field duplicate pairs were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The associated field blank sample (FBL030819) contained chloride between the MDL and RL, and two of the equipment blank samples (EQBL031219-1 and EQBL031219-2 in SDG 2616284) contained chloride above the RL. Results less than five times the field or equipment blank are considered “not detected” as a possible field artifact: **Reason Codes: BF, BE.**

Action: No qualification was required for chloride because the associated results were greater than five times the blank result.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged “J” by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits except for field and equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted in this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The associated field blank sample (FBL030819) contained TDS between the MDL and RL, and the equipment blank samples (EQBL030819, EQBL031219-1, and EQBL031219-2) contained TDS between the MDL and the RL or above the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-51RZ, GWA-53, GWA-55, GWC-24R, GWC-25R, along with one equipment blank and one field blank were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2615967

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-16R	03/11/19	II	QC Samples		
GWC-22R	03/11/19	II	Dup-2	03/11/19	II
GWC-21R	03/11/19	II			

These samples were collected from Landfill Cells 3&4 on March 11, 2019. Sample Dup-2 is a field duplicate of GWC-22R. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL030819 (SDG: 2615881), collected on the nitrile gloves
- EQBL031219-1 (SDG: 2616284), collected on the tubing
- EQBL031219-2 (SDG: 2616284), collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for MS/MSD recoveries, field duplicate precision, and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for mercury was performed on sample GWA-16R, and the recoveries and RPDs were in QC limits. The batch MS/MSD analysis for metals was performed on a non-project sample, and the recoveries of calcium were outside of the QC limits. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration. **Reason Code: M+, M-**

Action: No qualification was necessary because the sample result was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-22R) was submitted with this SDG and the RPDs were within QC limits except for zinc.

Action: The zinc result for sample Dup-2 was qualified as not detected with an approximate detection limit and flagged "UJ". No additional qualification was necessary for the zinc result in sample GWC-22R.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. One of the associated equipment blanks (EQBL030819 - SDG 2615581) contained calcium, chromium, copper, and nickel between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the equipment blank are considered “not detected” as a possible field artifact: **Reason Code: BE.**

Action: The copper and nickel results less than five times the blank value were qualified as not detected due to possible blank contamination flagged “U”. No qualification was necessary for calcium and chromium because the associated results were non-detect or greater than five times the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-16R	Ca	50x	GWC-21R	Ca	50x
GWC-22	Ca	50x	Dup-2	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged “J” by the laboratory. The “J” qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits except for equipment blank contamination, however no qualification was necessary.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG, therefore matrix affects specific to anions in these project samples were not assessed.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-22R) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. Two of the equipment blank samples (EQBL031219-1 and EQBL031219-2 in SDG 2616284) contained chloride above the RL. Results less than five times the equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: No qualification was required because the associated chloride results were greater than five times the blank result.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWC-22R) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL030819, EQBL031219-1, and EQBL031219-2) contained TDS between the MDL and the RL or above the RL. No qualification applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-16R, GWC-22R, and GWC-21R were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".

FD = Field duplicate imprecision.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 3&4 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616191

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 3 & 4 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for, but was not detected above the level of the reported sample reporting or method detection; however the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-17R	03/12/19	II	QC Samples		
GWC-18	03/12/19	II	FBL031219-1	03/12/19	II
GWC-18R	03/12/19	II	EQBL031219-1	03/12/19	II
GWC-19R	03/12/19	II	FBL031219-2	03/12/19	II
GWC-20R	03/12/19	II	EQBL031219-2	03/12/19	II
GWC-23R	03/12/19	II	Dup-3	03/12/19	II
GWA-53R	03/12/19	II			

These samples were collected from Landfill Cells 3&4 on March 12, 2019. Sample Dup-3 is a field duplicate of GWC-19R. Samples FBL031219-1 and FBL031219-2 are field blanks associated with the samples in this SDG, and EQBL031219-1 and EQBL031219-2 are equipment blanks. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 3&4 and are listed below:

- EQBL030819 (SDG: 2615881), collected on the nitrile gloves
- EQBL031219-1 (SDG: 2616284), collected on the tubing
- EQBL031219-2 (SDG: 2616284), collected on the bladder pump

The highest result of any detected analyte between the three equipment blanks or two field blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for MS/MSD recoveries and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of constituents of interest.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for mercury were performed on samples GWA-37Z (SDG 2616179) and GWA-41 (SDG 2616193), and the recoveries and RPDs were within QC limits. Batch MS/MSD analyses for metals were performed samples GWA-47 (SDG 2616179) and GWA-41 (SDG 2616193), and the calcium recoveries were above and below the QC limits, respectively. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration.

Reason Codes: M+, M-

Action: No qualification was necessary because the sample result was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-3/GWC-19R) was submitted with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blanks (FBL031219-1 and FBL031219-2) were non-detect for metals and mercury. Equipment blank sample FBL030819 contained calcium, chromium, copper, and nickel between Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: The chromium results less than five times the blank value were qualified as not detected due to possible blank contamination and flagged "U". No qualification was required for calcium, copper and nickel results because the associated results were non-detect or greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-17R	Ca	50x	GWC-19R	Ca	50x
GWC-18	Ca	50x	GWC-20R	Ca	50x
GWC-18R	Ca	50x	GWC-23R	Ca	50x
GWC-53R	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits except for field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG, therefore matrix affects specific to anions in these project samples were not assessed.

Field Duplicate Precision

One field duplicate pair (Dup-3/GWC-19R) was submitted with this SDG and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG (FBL031219-1, FBL031219-2, EQBL031219-1, and EQBL031219-2) contained chloride above the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BF/BE.**

Action: No qualification was required for chloride results because the associated samples were greater than five times the blank result.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no anion results were reported between the MDL and RL.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits except for LCS recoveries and field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were outside of the upper QC limit in one of two LCSs associated with the samples in this SDG. Associated positive results may be biased high and require qualification.

Reason Code: L+.

Action: The associated TDS results were qualified as estimated and flagged "J" unless overridden by qualification for other criteria.

Field Duplicate Precision

One field duplicate pair (Dup-3/GWC-19R) was submitted with this SDG and the RPDs were within QC limits. A laboratory duplicate of sample GWC-17R was performed and the RPD was within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG (EQBL031219-1, FBL031219-1, EQBL031219-2 and FBL031219-2) contained TDS between the MDL and the RL and above the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 3&4 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-17R, GWC-18, GWC-18R, GWC-19R, GWC-20R, GWC-23R and GWC-53R, along with 2 field and 2 equipment blank samples were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
 D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
 H5 = Reanalysis conducted in excess of EPA method holding time. Results confirm original analysis performed in hold time.
 1A = Out of hold rerun result confirms original. Original reported.
 L1 = Analyte recovery in the LCS was above QC limits. Results for this analyte in associated samples may be biased high.

Reason Codes:

BE = Equipment blank contamination. The result should be considered "not-detected".
 BF = Field blank contamination. The result should be considered "not-detected".
 L+ = LCS and LCSD recoveries outside acceptance limits. The result may be biased high.
 -- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL); estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.
 U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616179

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan (FSP)*, Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
<u>Qualifier</u>	<u>Unusable Data</u>

- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
- UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-39Z	03/15/19	II	QC Samples		
GWA-47	03/15/19	II	FBL031519	03/15/19	II
GWA-48	03/15/19	II	EQBL031519	03/15/19	II

The samples reported in this SDG were collected from Landfill Cells 9&10 on March 15, 2019. Sample FBL031519 is a field blank, and sample EQBL031519 is an equipment blank. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL031519 (SDG: 2616179), collected on the poly tubing
- EQBL031819 (SDG: 2616284), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of equipment blank contamination and MS/MSD recoveries; however, no qualification was required.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG did not contain metals indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for mercury on sample GWA-39Z and the recoveries and RPD were within the QC limits. An MS/MSD analysis was performed for metals on sample GWA-47 and the recoveries of calcium were above the upper QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than 4x the spiked concentration.

Reason Code: M+

Action: No qualification was required for the calcium results because the sample was analyzed at a dilution and the concentration was greater than 4x the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The field blank samples did not contain metals. However, one of the equipment blanks (EQBL031819 – SDG: 2616284) contained Ca between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact:

Reason Code: BE.

Action: No qualification was required because the calcium present in the samples was greater than 5x the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-39Z	Ca	50x	GWA-47	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits with the exception of field and equipment blank contamination; however, no qualification was required.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG did not contain anions indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on a non-project sample; therefore, matrix effects specific to anions in these project samples were not assessed.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field blank samples (FBL031519 and FBL031819) and/or the equipment blank samples (EQBL031519 and EQBL031819) contained chloride between the MDL and the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE/BF.**

Action: No qualification was required for chloride because the sample results were greater than 5x the field and equipment blank values.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits with the exception of the laboratory duplicate RPD and field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed sample FBL031519 in duplicate and the RPD was greater than the laboratory QC limits but within project QC limits. Both results were reported at concentrations below the RL. When one or more results are below the RL the difference between the values must not exceed the RL.

Action: No qualification was required because the RPD was within project QC limits and the difference between the results was less than the RL.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field blank (FBL031519 and FBL031819) and the equipment blank (EQBL031519 and EQBL031819) samples contained TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWA-39Z, GWA-47, and GWC-48, along with the field and equipment blank samples, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
 D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
 M6 = Matrix spike and matrix duplicate recovery not evaluated against control limits due to sample dilution.

Reason Codes:

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.The associated numerical value is the approximate concentration of the analyte in the sample.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616189

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan (FSP)*, Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-40	03/13/19	II	QC Samples		
GWA-43	03/13/19	II	Dup-1	03/13/19	II
GWA-43R	03/13/19	II			

The samples reported in this SDG were collected from Landfill Cells 9&10 on March 13, 2019. Sample Dup-1 is the field duplicate of sample GWA-40. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL031519 (SDG: 2616179), collected on the poly tubing
- EQBL031819 (SDG: 2616284), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of equipment blank contamination and MS/MSD recoveries; however, no qualification was required.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG did not contain metals indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for mercury on sample GWA-39Z (reported in SDG: 2616179) and the recoveries and RPD were within the QC limits. An MS/MSD analysis was performed for metals on sample GWA-47 (reported in SDG: 2616179) and the recoveries of calcium were above the upper QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than 4x the spiked concentration. **Reason Code: M+**

Action: No qualification was required for the calcium results because the sample was analyzed at a dilution and the concentration was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-40) was submitted in this SDG and RPDs were within limits indicating good sampling precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. However, one of the equipment blanks (EQBL031819 – SDG: 2616284) contained Ca between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact:

Reason Code: BE.

Action: No qualification was required because the calcium present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-40	Ca	50x	Dup-1	Ca	50x
GWA-43R	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was required.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG did not contain anions indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on a project samples GWA-40 and GWA-43 (MS only) and the recoveries and RPDs were within QC limits indicating no matrix effects were apparent.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-40) was submitted in this SDG and RPDs were within limits indicating good sampling precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained chloride between the MDL and the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: No qualification was required for chloride because the sample results were greater than five times the equipment blank values.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-1/GWA-40) was submitted in this SDG and RPDs were within limits indicating good sampling precision.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory; however, there were none reported in this SDG.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWA-40, GWA-43, and GWC-43R, along with the field and equipment blank samples, and a field duplicate were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
 D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

Reason Codes:

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616193

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan (FSP)*, Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-41	03/14/19	II	GWC-45	03/14/19	II
GWA-41R	03/14/19	II	GWC-45R	03/14/19	II
GWA-42	03/14/19	II	GWA-39RZ	03/14/19	II
GWC-44	03/14/19	II			

The samples reported in this SDG were collected from Landfill Cells 9&10 on March 14, 2019. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL031519 (SDG: 2616179), collected on the poly tubing
- EQBL031819 (SDG: 2616284), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of equipment blank contamination and MS/MSD recoveries; however, no qualification was required.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG did not contain metals indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD analyses were performed for mercury and metals on sample GWA-41, and the recoveries of calcium were below the lower QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than four times the spiked concentration.

Reason Code: M-

Action: No qualification was required for the calcium results because the sample was analyzed at a dilution and the concentration was greater than four times the spike amount potentially masking the spike.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. However, one of the equipment blanks (EQBL031819 – SDG: 2616284) contained Ca between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact:

Reason Code: BE.

Action: No qualification was required because the calcium present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution	Sample	Metal	Dilution
GWA-41	Ca	50x	GWC-44	Ca	50x
GWA-41R	Ca	50x	GWC-45R	Ca	50X
GWA-42	Ca	50x	GWA-39RZ	Ca	50X

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value verses the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits with the exception of method and equipment blank contamination and MS/MSD recoveries.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG contained chloride at a concentration below the MDL and the RL (0.31 J mg/L). Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive chloride results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on sample GWC-45 and the recoveries and RPDs were within QC limits with the exception of the MSD recovery and RPD for chloride. **Reason Code: M-**

Action: The associated chloride result was qualified as estimated and flagged "J" unless overridden by or combined with other QC qualifiers. See the Professional Judgment section below for final flag applied to the associated result.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained chloride between the MDL and the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: No qualification was required because the chloride present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory; however, there were none reported in this SDG.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. Professional judgment was used to modify the flags applied above to the chloride result for sample GWC-45, which required qualification for both method blank contamination and low MSD recovery. The "U*" and "J" flags were therefore combined to indicate the result should be considered not detected due to blank contamination and the reported MDL and RL should be considered estimated.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWA-41, GWA-41R, GWA-42, GWC-44, GWC-45, GWC-45R, and GWA-39RZ, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

- J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
- B = Analyte was detected in the associated method blank.
- D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- M1 = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M6 = Matrix spike and matrix duplicate recovery not evaluated against control limits due to sample dilution.

Reason Codes:

- BE = Equipment blank contamination. The result should be considered "not-detected".
- BL = Laboratory blank contamination. The result should be considered "not-detected".
- M- = MS and MSD recoveries outside acceptance limits. The result may be biased low.
- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

- J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.
- UJ = The analyte was analyzed for, but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
- U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616284

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan (FSP)*, Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
			QC Samples		
GWC-46R	03/18/19	II	Dup-2	03/18/19	II
GWC-49R	03/18/19	II	FBL031819	03/18/19	II
			EQBL031819	03/18/19	II

The samples reported in this SDG were collected from Landfill Cells 9&10 on March 18, 2019. Sample Dup-2 is a field duplicate of sample GWC-49R. Sample FBL031819 is a field blank, and sample EQBL031819 is an equipment blank. Equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL031519 (SDG: 2616179), collected on the poly tubing
- EQBL031819 (SDG: 2616284), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was required.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG did not contain metals indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for mercury on sample GWC-46R and the recoveries and RPD were within the QC limits. An MS/MSD analysis was performed for metals on a non-project therefore, matrix affects specific to anions in these project samples were not assessed.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWA-49R) was submitted in this SDG and the RPDs were within limits indicating good sampling precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The field blank sample did not contain metals. However, one of the equipment blanks (EQBL031819 – SDG: 2616284) contained Ca between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact:

Reason Code: BE.

Action: No qualification was required because the calcium present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-46R	Ca	50x	Dup-2	Ca	50x
GWA-49R	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value verses the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was required.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG did not contain anions indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on a non-project sample; therefore, matrix affects specific to anions in these project samples were not assessed.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWA-49R) was submitted in this SDG and RPDs were within QC limits indicating good sampling precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field blank sample (FBL031819) did not contain anions; however, the equipment blank samples (EQBL031519 and EQBL031819) contained chloride between the MDL and the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: No qualification was required for chloride because the sample results were greater than five times the equipment blank values.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits with the exception of laboratory duplicate RPD and field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate pair (Dup-2/GWA-49R) was submitted in this SDG and RPDs were within limits indicating good sampling precision.

Laboratory Duplicate Precision

The laboratory analyzed sample FBL031519 in duplicate and the RPD was greater than the laboratory QC limits but within project QC limits. Both results were reported at concentrations below the RL. When one or more results are below the RL the difference between the values must not exceed the RL.

Action: No qualification was required because the RPD was within project QC limits and the difference between results was less than the RL.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field blank (FBL031819) and the equipment blank (EQBL031519 and EQBL031819) samples contained TDS between the MDL and the RL. No qualification applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWC-46R, GWC-49R and its field duplicate (Dup-2), along with the field and equipment blank samples, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616510

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan (FSP)*, Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and/or quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-49Z	03/19/19	II
GWC-47R	03/19/19	II

These samples reported in this SDG were collected from Landfill Cells 9&10 on March 19, 2019. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL031519 (SDG: 2616179), collected on the poly tubing
- EQBL031819 (SDG: 2616284), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was required.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG did not contain metals indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for metals on non-project samples; therefore, project-specific matrix accuracy and precision could not be assessed.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. However, one of the equipment blanks (EQBL031819 – SDG: 2616284) contained Ca between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact:

Reason Code: BE.

Action: No qualification was required because the calcium present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-47R	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits with the exception of method and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG contained chloride at a concentration below the MDL and the RL (0.31 J mg/L). Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL.**

Action: The positive chloride results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on non-project samples; therefore, project-specific matrix accuracy and precision could not be assessed.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained chloride between the MDL and the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: No qualification was required because the chloride present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a project sample GWC-49Z and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory; however, there were none reported in this SDG.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWC-49Z and GWC-47R, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

B = Analyte was detected in the associated method blank.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 12 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 9 & 10 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2616510

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 12 Groundwater Detection Monitoring Sampling Event and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 9 & 10 at Plant Bowen, located in Cartersville, Georgia in March 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan (FSP)*, Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.

<u>Qualifier</u>	<u>Unusable Data</u>
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.
UR	The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood, formerly Amec Foster Wheeler) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300 and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method 6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300 and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and/or quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-49Z	03/19/19	II
GWC-47R	03/19/19	II

These samples reported in this SDG were collected from Landfill Cells 9&10 on March 19, 2019. No field blanks are associated with this day of sampling. However, equipment blanks were collected on different equipment used to sample the locations at Landfill Cells 9&10 and are listed below:

- EQBL031519 (SDG: 2616179), collected on the poly tubing
- EQBL031819 (SDG: 2616284), collected on the nitrile gloves

The highest result of any detected analyte between the two equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was required.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG did not contain metals indicating the analytical system was contaminant free during analysis.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for metals on non-project samples; therefore, project-specific matrix accuracy and precision could not be assessed.

Post Digestion Spike (PDS)

PDS analysis results were not available for review.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. However, one of the equipment blanks (EQBL031819 – SDG: 2616284) contained Ca between the method detection limit (MDL) and the reporting limit (RL). Results less than five times the blank are considered not detected as a possible field artifact:

Reason Code: BE.

Action: No qualification was required because the calcium present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Method SW6020B and 7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-47R	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300. Each of the Level II components were within QC limits with the exception of method and equipment blank contamination.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed within this SDG contained chloride at a concentration below the MDL and the RL (0.31 J mg/L). Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive chloride results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

An MS/MSD analysis was performed for anions on non-project samples; therefore, project-specific matrix accuracy and precision could not be assessed.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained chloride between the MDL and the RL. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact: **Reason Code: BE.**

Action: No qualification was required because the chloride present in the samples was greater than five times the equipment blank value.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range, however no samples in this SDG required a dilution. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

Laboratory method blanks are not required for the analysis of TDS.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate pairs were submitted with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a project sample GWC-49Z and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank samples (EQBL031519 and EQBL031819) contained TDS between the MDL and the RL. No qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory; however, there were none reported in this SDG.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 17 wells, along with the required QC samples, were sampled and analyzed during the March event in Landfill Cells 9&10 according to the FSP (Amec Foster Wheeler, 2017). Of those 17 well locations, GWC-49Z and GWC-47R, were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

B = Analyte was detected in the associated method blank.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623127

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWA-2R	09/13/19	II	GWC-7Z	09/13/19	II
GWA-3	09/13/19	II	GWA-50	09/13/19	II
GWA-4RZ	09/13/19	II			

These samples were collected from Landfill Cells 1&2 on September 13, 2019. No field blanks were collected on this day or were reported for this SDG. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL091219 (SDG: 2623138) collected on the nitrile gloves
- EQBL091619 (SDG: 2623221) collected on the tubing
- EQBL091719 (SDG: 2623393) collected on the bladder pump grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained boron and zinc at concentrations between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive boron and zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for mercury and metals was performed on samples GWA-2R and GWA-3 respectively, and the recoveries and RPD were within QC limits.

Post Digestion Spike (PDS)

A PDS analysis was not performed on any project samples for metals.

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. Equipment blank samples EQBL091219 (SDG 2623138), EQBL091619 (SDG 26223221) and EQBL091719 (SDG 2623393) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 1 & 2 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 3 and 4 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

Sample	Metal	Dilution	Sample	Metal	Dilution
GWA-2R	Ca	50x	GWC-7Z	Ca	50x
GWA-4RZ	Ca	50x			

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was performed on sample GWA-2R and the percent recoveries and RPDs were within QC limits.

Field Duplicate Precision

No field duplicate sample pairs were collected and submitted with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank(s) associated with the samples of this SDG (EQBL091219, EQBL091619, and EQBL091719) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected and analyzed with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected with these samples. The equipment blank(s) associated with the samples of this SDG (EQBL091219) contained TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-2R, GWA-3, GWA-4RZ, GWC-7Z, and GWA-50 were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623138

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the Laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
			<u>QC Samples</u>		
GWA-1	09/12/19	II	Dup-1	09/12/19	II
GWA-2	09/12/19	II	FBL 091219	09/12/19	II
GWA-50R	09/12/19	II	EQBL 091219	09/12/19	II

These samples were collected from Landfill Cells 1&2 on September 12, 2019. Sample Dup-1 is a field duplicate of GWA-2. Samples FBL091219 and EQBL091219 are field and equipment blanks (respectively) and are associated with the samples in this SDG. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL091219 (SDG: 2623138) collected on the nitrile gloves
- EQBL091619 (SDG: 2623221) collected on the tubing
- EQBL091719 (SDG: 2623393) collected on the bladder pump grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method, field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for metals were not performed on project samples in this SDG.

Post Digestion Spike (PDS)

A PDS analysis was not performed on any project samples for metals.

Field Duplicate Precision

One field duplicate sample pair (Dup-1/GWA-2) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blank FBL091219 was reported with detections of zinc; however, method blank contamination resulted in the qualification of zinc in this field blank. Therefore, this field blank does not qualify as a representative determinant of zinc contamination. Equipment blank samples EQBL091219, EQBL091619 (SDG 2623221) and EQBL091719 (SDG 2623393) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 1 & 2 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 1 & 2 do not qualify as representative determinants of field and sampling accuracy for zinc. Results

less than five times the field and/or equipment blank are considered “not detected” as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged “U”. No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWA-1	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged “J” by the laboratory. The “J” qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits with the exception of field duplicate precision.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for anions were not performed on any project samples in this SDG.

Field Duplicate Precision

One field duplicate sample pair (Dup-1/GWA-2) was collected with this SDG, and the RPD for sulfate was outside of QC limits.

Action: The sulfate results of the field duplicate pair (Dup-1/GWA-2) was qualified and flagged "J".

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blank(s) associated with the samples of this SDG (FBL091219, EQBL091219, EQBL091619, and EQBL091719) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate sample pair (Dup-1/GWA-2) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG reported TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged “J” by the laboratory, however no TDS results were reported between the MDL and the RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWA-1, GWA-2, GWA-50R, and Dup-2, along with field and equipment blank samples were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

FD = Field duplicate imprecision.

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

TABLE 1
SUMMARY OF DATA QUALIFIERS
SAMPLE DELIVERY GROUP 2623138
SAMPLING DATE: September 12, 2019
Plant Bowen Landfill Cells 1 & 2

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
-----------------	-------------	------	-----	--------	----------------	------------	----------	----------	--------------	-------

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623221

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the Laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and quality control (QC) samples:

Sample ID	Sample Date	DQE Level	Sample ID	Sample Date	DQE Level
GWC-5	09/16/19	II	GWC-9	09/16/19	II
GWC-6	09/16/19	II	<u>QC Samples</u>		
GWC-6RZ	09/16/19	II	Dup-2	09/16/19	II
GWC-8Z	09/16/19	II	FBL091619	09/16/19	II
GWC-8RR	09/16/19	II	EQBL091619	09/16/19	II

These samples were collected from Landfill Cells 1&2 on September 16, 2019. Sample Dup-2 is a field duplicate of GWC-8RR. Samples FBL091619 and EQBL091619 are field and equipment blanks (respectively) and are associated with the samples in this SDG. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL091219 (SDG: 2623138) collected on the nitrile gloves
- EQBL091619 (SDG: 2623221) collected on the tubing
- EQBL091719 (SDG: 2623393) collected on the bladder pump grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method, field and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analysis for metals was performed on sample GWC-5 and the recoveries and RPD were within QC limits.

Post Digestion Spike (PDS)

A PDS analysis was not performed on any project samples for metals.

Field Duplicate Precision

One field duplicate sample pair (Dup-2/GWC-8RR) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. The associated field blank FBL091619 was reported with detections of zinc; however, method blank contamination resulted in the qualification of zinc in this field blank. Therefore, this field blank does not qualify as a representative determinant of zinc contamination. Equipment blank samples EQBL091219 (SDG 2623138), EQBL091619 and EQBL091719 (SDG 2623393) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 1 & 2 contained concentrations of zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks

in Cells 1 & 2 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered “not detected” as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged “U”. No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>	<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-6	Ca	50x	GWC-8RR	Ca	50x
GWC-6RZ	Ca	50x	GWC-9	Ca	50x
GWC-8Z	Ca	50x	Dup-2	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged “J” by the laboratory. The “J” qualifier is retained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value verses the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Batch MS/MSD analyses for anions were not performed on any project samples in this SDG.

Field Duplicate Precision

One field duplicate sample pair (Dup-2/GWC-8RR) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinse Blanks, Field Blanks)

The field and equipment blank(s) associated with the samples of this SDG (FBL091619, EQBL091219, EQBL091619, and EQBL091719) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is retained by the data validator.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

One field duplicate sample pair (Dup-2/GWC-8RR) was collected with this SDG, and the RPDs were within QC limits.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

The field and equipment blanks associated with the samples in this SDG reported TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and the RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-5, GWC-6, GWC-6RZ, GWC-8Z, GWC-8RR, GWC-9, and Dup-2, along with field and equipment blank samples were reported in this SDG and were sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

TABLE 1
SUMMARY OF DATA QUALIFIERS
SAMPLE DELIVERY GROUP 2623221
SAMPLING DATE: September 16, 2019
Plant Bowen Landfill Cells 1 & 2

Field Sample ID	Location ID	Type	SDG	Method	Parameter Name	Lab Result	Lab Qual	Val Qual	Reason Codes	Units
EQBL-091619	Equipment Blank	EB	2623221	6020B	calcium	0.019	J		--	mg/L
EQBL-091619	Equipment Blank	EB	2623221	6020B	zinc	0.0066	J,B	U*	BL	mg/L
FBL-091619	Field Blank	FB	2623221	6020B	zinc	0.0062	J,B	U*	BL	mg/L

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

**Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/
Semiannual State Design and Operation Permit Monitoring**

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623391

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and/or quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-13	09/18/19	II

This sample was collected from Landfill Cells 1&2 on September 18, 2019. Three equipment blanks were collected on different equipment used to sample the locations:

- EQBL091219 (SDG: 2623138) collected on the nitrile gloves
- EQBL091619 (SDG: 2623221) collected on the tubing
- EQBL091719 (SDG: 2623393) collected on the bladder pump grab plate

The highest result of any detected analyte between the three equipment blanks was used to qualify associated sample results if necessary.

The analytical results for the metals, anions, and TDS data are usable with the qualifications discussed in this narrative. A summary of the data quality is presented below.

Metals (SW6020B/SW7470A)

The samples were submitted to Pace for CCR Appendix III and State D&O Permit metals by Method SW6020B and/or mercury by SW7470A. The CCR Appendix III metals are: boron (B) and calcium (Ca). The State D&O Permit metals are: antimony (Sb), arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu), lead (Pb), mercury (Hg), nickel (Ni), selenium (Se), silver (Ag), thallium (Tl), vanadium (V), and zinc (Zn). Each of the Level II components were within QC limits except for method blank contamination, MS/MSD recoveries and equipment blank contamination.

Holding Times

The sample analyses were performed within the 6 month and 28-day (for mercury) analysis holding times.

Method Blanks

The method blank(s) associated with the samples analyzed within this SDG contained zinc at a concentration between the MDL and the RL. Results less than five times the blank are considered not detected as a possible laboratory artifact: **Reason Code: BL**.

Action: The positive zinc results less than five times the method blank were qualified as not detected due to possible blank contamination and flagged "U".*

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD for metals was performed sample GWC-13, and the calcium MSD recovery was below the lower QC limit. No qualification is required if the sample was analyzed at a dilution prior to analysis or if the sample result is greater than 4x the spiked concentration: **Reason Code: M-**.

Action: No qualification was required because the sample result was greater than 4x the spike concentration.

Post Digestion Spike (PDS)

A PDS analysis was available for review.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

Field accuracy was measured through the collection of equipment/rinsate blanks and field blanks. Equipment rinsate blanks are collected to monitor the decontamination process and field blanks are collected to assess the water used to decontaminate the equipment and the containers into which samples are placed. No field blank was collected with these samples. Equipment blank samples EQBL091219 (SDG 2623138), EQBL091619 (SDG 2623221) and EQBL091719 (SDG 2623393) contained one or more of the following analytes: calcium and zinc. All of the equipment blanks in Cells 1 & 2 contained concentrations of

zinc and were qualified due to method blank contamination in their respective SDG. Therefore, the equipment blanks in Cells 1 & 2 do not qualify as representative determinants of field and sampling accuracy for zinc. Results less than five times the field and/or equipment blank are considered "not detected" as a possible field artifact.

Action: No qualification was applied to zinc results based on field or equipment blanks due to method blank contamination; the blank results were flagged "U". No qualification was required for calcium results because the associated results were greater than 5x the blank concentration.*

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of metals by USEPA Methods SW6020B and SW7470A. The laboratory RL was elevated where dilutions were required to place the constituent within the calibration range. The following samples in this SDG required dilution:

<u>Sample</u>	<u>Metal</u>	<u>Dilution</u>
GWC-13	Ca	50x

Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory. The "J" qualifier is maintained by the data validator.

Total and Dissolved Metals Comparison

If total and dissolved metals samples were collected, comparison of the total and dissolved results can aid in the representativeness of the total metals value versus the metals that may be associated with suspended solids and metals actually dissolved within the water column. The dissolved metals results should be less than or equal to the total metals concentration for positive results greater than 5 times the RL. No total and dissolved samples were collected and reported in this SDG.

Anions (EPA 300.0)

The samples were submitted to Pace for anions (chloride, fluoride, and sulfate) by Method 300.0. Each of the Level II components were within the QC limits.

Holding Times

The sample analyses were performed within the 28-day analysis holding times.

Method Blanks

The method blank associated with the samples analyzed in this SDG contained no reportable detections of anions.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The batch MS/MSD analyses for anions was not performed any project samples in this SDG.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blanks were associated with this SDG. The equipment blanks associated with the samples of this SDG (EQBL091219, EQBL091619, and EQBL091719) did not contain anions.

Reporting Limits

The laboratory RLs were below the screening values for samples submitted for the analysis of anions by USEPA Method 300 and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however there were none in this SDG.

TDS (SM 2540C)

The samples were submitted to Pace for TDS by Method SM 2540C. Each of the Level II components were within the QC limits with the exception of equipment blank contamination; however, no qualification was applied.

Holding Times

The sample analyses were performed within the 7-day analysis holding times.

Method Blanks

The analytical method does not require the analysis of a method blank.

Laboratory Control Sample (LCS)

Percent recoveries for target analytes were within quality control limits in the LCS.

Field Duplicate Precision

No field duplicate sample pairs were collected with this SDG.

Laboratory Duplicate Precision

The laboratory analyzed a non-project sample and the RPD was within QC limits indicating good method precision.

Sampling Accuracy (Equipment Rinsate Blanks, Field Blanks)

No field blank was collected that is associated with samples in this SDG. The equipment blanks associated with the samples in this SDG reported TDS; however, no qualification was applied.

Reporting Limits

The laboratory RL was below the screening value of 500 mg/L for samples submitted for the analysis of TDS by Method SM 2540C and no samples required dilutions; therefore, RLs were met for this project. Additionally, data are evaluated down to the MDL and results reported between the MDL and RL are considered quantitative estimates. Results reported between the MDL and RL were qualified as estimated and flagged "J" by the laboratory, however no TDS results were reported between the MDL and RL.

Overall Site Evaluation and Professional Judgment Flagging Changes

The chemical data included in this SDG was validated in general accordance with the guidelines contained in the project work plan and validation SOPs. No professional judgment was used to modify flags for results reported in samples presented in this SDG.

Completeness

A total of 23 wells, along with the required QC samples, were sampled and analyzed during the September event in Landfill Cells 1&2 according to the FSP (Amec Foster Wheeler, 2017). Of those 23 well locations, GWC-13 was reported in this SDG and was sampled and analyzed as scoped.

Therefore, both field and analytical completeness calculated for this SDG was 100%.

Notes:

Laboratory Qualifiers:

B = Analyte was detected in the associated method blank.

J = Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

Reason Codes:

BL = Laboratory blank contamination. The result should be considered "not-detected".

-- = No Reason Code assigned for values detected between the method detection limit (MDL) and the reporting limit (RL);estimated quantitation.

Validation Qualifiers:

J = The compound was positively identified; however, the associated numerical value is an estimated concentration only. The associated numerical value is the approximate concentration of the analyte in the sample.

U* = This analyte should be considered "not-detected" because it was detected in an associated blank at a similar level.

Data Evaluation Narrative

Project: Plant Bowen CCR Event # 13 Groundwater Detection Monitoring/

Semiannual State Design and Operation Permit Monitoring

Wood Project Number: 6122160287.1903.****

Site: Landfill Cells 1&2 - Plant Bowen, Georgia

Matrix: Groundwater

Pace SDG No: 2623392

Introduction

A data quality evaluation (DQE) was performed on the laboratory data reported for the CCR Event # 13 Groundwater Detection Monitoring Sampling and the Semiannual State Design and Operation (D&O) Permit sampling event conducted at Landfill Cells 1 & 2 at Plant Bowen, located in Cartersville, Georgia in September 2019. The samples were collected and analyzed per the protocols presented in the Plant Bowen *Field Sampling Plan* (FSP), Revision 1, Update 3 (Amec Foster Wheeler, 2017). The following sections provide summary discussions of the required data qualifications for the analytical methods for samples collected. A Level II DQE validation was performed on the samples analyzed by the fixed-based laboratory within these sample delivery groups (SDGs). A Level II DQE consists of review of the following criteria: sample integrity, holding times, method blanks, laboratory control samples (LCSs), matrix spikes/matrix spike duplicate (MS/MSD) recoveries and relative percent differences (RPDs), post digestion spikes (PDS), where applicable, laboratory and field duplicate RPDs, field and/or equipment blanks, and reporting limits. Additionally, the data summary tables generated from the electronic data deliverable (EDD) were compared to the laboratory hardcopy data report to verify that the EDD and laboratory data report agree.

The data were reviewed using the laboratory’s precision and accuracy limits, the method requirements, and any requirements listed in the FSP. It should be noted that at the time of this review, a finalized QAPP was not provided. DQE data qualifications were applied, if necessary, using the procedures in USEPA National Functional Guidelines for Inorganic Data Review (USEPA, 2014), as guidance, and professional judgment using the following qualifiers:

<u>Qualifier</u>	<u>Usable Data</u>
J	The analyte was positively identified but the result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. <i>SCS Definition: Value J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce as reliable of a value. Therefore, the value displayed (value J) is qualified by the laboratory as estimated.</i>
UJ	The analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. The reported method detection limit is approximate and may be inaccurate or imprecise.
U	Analyte was analyzed for but was not detected above the level of the reported sample reporting/method detection limit. <i>Note: SCS does not use the “U” flag except when reporting results for radium that are detected below the Minimum Detection Concentration (MDC).</i>
U*	This analyte should be considered “not-detected” because it was detected in an associated blank at a similar level.
R	The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet QC criteria. The presence or absence of the analyte cannot be confirmed.

UR The analyte was analyzed for but was not detected above the level of the reported sample reporting or method detection; however, the data are unusable. The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The analyte may or may not be present in the sample.

The analytical results for the samples reported in this SDG are usable with the qualifications discussed in this narrative. A summary of the data with associated qualifiers is presented in **Table 1**.

Deliverables

The data package as submitted to Wood Environment & Infrastructure Solutions, Inc. (Wood) is complete to perform a Level II DQE for United States Environmental Protection Agency (USEPA) Methods SW6020B, SW7470A, EPA 300.0, and SM 2540C.

Sample Integrity

The groundwater samples were submitted to Pace Analytical Services, Inc. (Pace) in Peachtree Corners, Georgia and analyzed for CCR Appendix III metals and State D&O Permit metals by Method SW6020B, mercury by Method SW7470, anions (chloride, fluoride, and sulfate) by Method 300.0, and total dissolved solids (TDS) by Method SM 2540C.

Based on the information provided on the Chain-of-Custody (COC) forms, the field samples arrived at the laboratory intact and within the temperature range and preservation requirements. Completed COC documents are included in the data package.

Sample Identification

This SDG contains the following groundwater and/or quality control (QC) samples:

Sample ID	Sample Date	DQE Level
GWC-13RZ	09/19/19	II

This sample was collected from Landfill Cells 1&2 on September 19, 2019. Three equipment blanks were collected on different equipment used to sample the locations:
