RE: Project: Plant McD AP-2, 3/4 Assessment  
Pace Project No.: 92650182

Dear Andrea McClure:

Enclosed are the analytical results for sample(s) received by the laboratory between February 02, 2023 and February 08, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

Revision 1: Ferric iron did not initially report for 92650182-009.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

**Method:** EPA 6010D  
**Description:** 6010D ATL ICP  
**Client:** Georgia Power  
**Date:** July 28, 2023

### General Information:

25 samples were analyzed for EPA 6010D by Pace Analytical Services Peachtree Corners, GA. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 755832

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92650180001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3927043)
  - Calcium
  - Magnesium
  - Sodium
- MSD (Lab ID: 3927044)
  - Potassium

## QUALIFIERS

Project: Plant McD AP-2, 3/4 Assessment

Pace Project No.: 92650182

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

1g Sample residue exceeded method SM 2540C recommended 200 mg.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant McD AP-2, 3/4 Supplement  
Pace Project No.: 92650184

Dear Andrea McClure:

Enclosed are the analytical results for sample(s) received by the laboratory between February 02, 2023 and February 10, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang  
bonnie.vang@pacelabs.com

## PROJECT NARRATIVE

Project: Plant McD AP-2, 3/4 Supplement  
Pace Project No.: 92650184

---

**Method:** EPA 6010D  
**Description:** 6010D ATL ICP  
**Client:** Georgia Power  
**Date:** July 28, 2023

### General Information:

1 sample was analyzed for EPA 6010D by Pace Analytical Services Peachtree Corners, GA. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 757456

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92651576001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3934805)
  - Calcium
  - Sodium

### Additional Comments:

## REPORT OF LABORATORY ANALYSIS

## QUALIFIERS

Project: Plant McD AP-2, 3/4 Supplement

Pace Project No.: 92650184

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant McD AP 2-3/4 Detect RADS  
Pace Project No.: 92650188

Dear Andrea McClure:

Enclosed are the analytical results for sample(s) received by the laboratory between February 02, 2023 and February 08, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang  
bonnie.vang@pacelabs.com

### REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: Plant McD AP 2-3/4 Detect RADS

Pace Project No.: 92650188

---

**Date:** March 22, 2023

Georgia Power EQulS Database Manager requested Pace Project Manager remove the sample matrix and date from the Sample IDs. This update ensures sample nomenclature is followed on final PDF and EDD for successful upload of laboratory data into the Georgia Power EQulS database.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: Plant McD AP 2-3/4 Detect RADS

Pace Project No.: 92650188

---

**Method:** EPA 9315

**Description:** 9315 Total Radium

**Client:** Georgia Power

**Date:** March 22, 2023

**General Information:**

32 samples were analyzed for EPA 9315 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

## REPORT OF LABORATORY ANALYSIS

## PROJECT NARRATIVE

Project: Plant McD AP 2-3/4 Detect RADS

Pace Project No.: 92650188

---

**Method:** EPA 9320

**Description:** 9320 Radium 228

**Client:** Georgia Power

**Date:** March 22, 2023

**General Information:**

32 samples were analyzed for EPA 9320 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

## PROJECT NARRATIVE

Project: Plant McD AP 2-3/4 Detect RADS

Pace Project No.: 92650188

---

**Method:** Total Radium Calculation

**Description:** Total Radium 228+226

**Client:** Georgia Power

**Date:** March 22, 2023

**General Information:**

32 samples were analyzed for Total Radium Calculation by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

### QUALITY CONTROL - RADIOCHEMISTRY

Project: Plant McD AP 2-3/4 Detect RADS

Pace Project No.: 92650188

QC Batch: 565151

Analysis Method: EPA 9315

QC Batch Method: EPA 9315

Analysis Description: 9315 Total Radium

Laboratory: Pace Analytical Services - Greensburg

Associated Lab Samples: 92650188001, 92650188002, 92650188003, 92650188004

METHOD BLANK: 2743953

Matrix: Water

Associated Lab Samples: 92650188001, 92650188002, 92650188003, 92650188004

Parameter	Act ± Unc (MDC) Carr Trac	Units	Analyzed	Qualifiers
Radium-226	0.0640 ± 0.166 (0.397) C:100% T:NA	pCi/L	02/17/23 19:36	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

### QUALITY CONTROL - RADIOCHEMISTRY

Project: Plant McD AP 2-3/4 Detect RADS

Pace Project No.: 92650188

QC Batch: 565150

Analysis Method: EPA 9320

QC Batch Method: EPA 9320

Analysis Description: 9320 Radium 228

Laboratory: Pace Analytical Services - Greensburg

Associated Lab Samples: 92650188001, 92650188002, 92650188003, 92650188004

METHOD BLANK: 2743952

Matrix: Water

Associated Lab Samples: 92650188001, 92650188002, 92650188003, 92650188004

Parameter	Act ± Unc (MDC) Carr Trac	Units	Analyzed	Qualifiers
Radium-228	0.323 ± 0.277 (0.553) C:86% T:88%	pCi/L	02/14/23 13:14	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

### QUALITY CONTROL - RADIOCHEMISTRY

Project: Plant McD AP 2-3/4 Detect RADS

Pace Project No.: 92650188

QC Batch: 567006

Analysis Method: EPA 9320

QC Batch Method: EPA 9320

Analysis Description: 9320 Radium 228

Laboratory: Pace Analytical Services - Greensburg

Associated Lab Samples: 92650188025, 92650188026, 92650188027, 92650188028, 92650188029, 92650188030, 92650188031

METHOD BLANK: 2753261

Matrix: Water

Associated Lab Samples: 92650188025, 92650188026, 92650188027, 92650188028, 92650188029, 92650188030, 92650188031

Parameter	Act ± Unc (MDC) Carr Trac	Units	Analyzed	Qualifiers
Radium-228	0.472 ± 0.269 (0.470) C:89% T:96%	pCi/L	02/20/23 15:18	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

## QUALIFIERS

Project: Plant McD AP 2-3/4 Detect RADS  
Pace Project No.: 92650188

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.

Section A  
Required Client Information:

Company: Georgia Power - Coal Combustion Residuals  
 Address: 2480 Heater Road  
 Atlanta, GA 30339  
 Email: laudolent@scgpower.com  
 Phone: (478) 822-8178  
 Requested Date/Dists: 10 DAY TAT

Section B  
Required Project Information:

Report To: Laurent Collier  
 Copy To: Golder  
 Purchase Order #:   
 Project Name: Plant Head AP 2480 Detention  
 Project #: GA166849822

Section C  
Vendor Information:

Vendor: scginc@scgpower.com  
 Address:   
 Project Manager: Benita Yang  
 POC: Paula R.   
 Requesting Agency:   
 State: GA

**SAMPLE ID**  
 One Character per box.  
 (A-Z, 0-9 / -)  
 Sample IDs must be unique

RE: Project: Plant McD AP-2-3/4 Assessm RAD  
Pace Project No.: 92650189

Dear Andrea McClure:

Enclosed are the analytical results for sample(s) received by the laboratory between February 02, 2023 and February 08, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang  
bonnie.vang@pacelabs.com

### REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: Plant McD AP-2-3/4 Assessm RAD

Pace Project No.: 92650189

---

**Date:** March 20, 2023

Georgia Power EQulS Database Manager requested Pace Project Manager remove the sample matrix and date from the Sample IDs. This update ensures sample nomenclature is followed on final PDF and EDD for successful upload of laboratory data into the Georgia Power EQulS database.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: Plant McD AP-2-3/4 Assessm RAD

Pace Project No.: 92650189

---

**Method:** EPA 9315

**Description:** 9315 Total Radium

**Client:** Georgia Power

**Date:** March 20, 2023

**General Information:**

24 samples were analyzed for EPA 9315 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

## REPORT OF LABORATORY ANALYSIS

## PROJECT NARRATIVE

Project: Plant McD AP-2-3/4 Assessm RAD

Pace Project No.: 92650189

---

**Method:** EPA 9320

**Description:** 9320 Radium 228

**Client:** Georgia Power

**Date:** March 20, 2023

**General Information:**

24 samples were analyzed for EPA 9320 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: Plant McD AP-2-3/4 Assessm RAD

Pace Project No.: 92650189

---

**Method:** Total Radium Calculation

**Description:** Total Radium 228+226

**Client:** Georgia Power

**Date:** March 20, 2023

**General Information:**

24 samples were analyzed for Total Radium Calculation by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

## QUALIFIERS

Project: Plant McD AP-2-3/4 Assessm RAD  
Pace Project No.: 92650189

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant McD AP-1/AP-234 Assessme  
Pace Project No.: 92650426

Dear Andrea McClure:

Enclosed are the analytical results for sample(s) received by the laboratory on February 03, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang  
bonnie.vang@pacelabs.com  
(704)875-9092  
Project Manager

### REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full, without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: Plant McD AP-1/AP-234 Assessme

Pace Project No.: 92650426

---

**Date:** July 28, 2023

Georgia Power EQulS Database Manager requested Pace Project Manager remove the sample matrix and date from the Sample IDs. This update ensures sample nomenclature is followed on final PDF and EDD for successful upload of laboratory data into the Georgia Power EQulS database.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## PROJECT NARRATIVE

Project: Plant McD AP-1/AP-234 Assessme  
Pace Project No.: 92650426

---

**Method:** EPA 6010D  
**Description:** 6010D ATL ICP  
**Client:** Georgia Power  
**Date:** July 28, 2023

### General Information:

3 samples were analyzed for EPA 6010D by Pace Analytical Services Peachtree Corners, GA. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 3010A with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Surrogates:

All surrogates were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 755832

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92650180001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3927043)
  - Calcium
  - Magnesium
  - Sodium
- MSD (Lab ID: 3927044)
  - Potassium

### Additional Comments:

## QUALIFIERS

Project: Plant McD AP-1/AP-234 Assessme

Pace Project No.: 92650426

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

1g Sample residue exceeded method SM 2540C recommended 200 mg.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant McD AP-1234 Assessm RADS  
Pace Project No.: 92650427

Dear Andrea McClure:

Enclosed are the analytical results for sample(s) received by the laboratory on February 03, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang  
bonnie.vang@pacelabs.com

**Method:** EPA 9315

**Description:** 9315 Total Radium

**Client:** Georgia Power

**Date:** March 20, 2023

**General Information:**

3 samples were analyzed for EPA 9315 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

**Method:** Total Radium Calculation

**Description:** Total Radium 228+226

**Client:** Georgia Power

**Date:** March 20, 2023

**General Information:**

3 samples were analyzed for Total Radium Calculation by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

**Hold Time:**

The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

**Laboratory Control Spike:**

All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

## QUALIFIERS

Project: Plant McD AP-1234 Assessm RADS

Pace Project No.: 92650427

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant Mcd Delineation  
Pace Project No.: 92661552

Dear Laura Hartley:

Enclosed are the analytical results for sample(s) received by the laboratory on April 11, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang  
bonnie.vang@pacelabs.com

### REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## QUALIFIERS

Project: Plant Mcd Delineation

Pace Project No.: 92661552

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

H1 Analysis conducted outside the EPA method holding time.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant McDonough-CCR Ash Pond  
Pace Project No.: 92650835

Dear Kelley Sharpe:

Enclosed are the analytical results for sample(s) received by the laboratory on February 07, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Maiya Parks

## QUALIFIERS

Project: Plant McDonough-CCR Ash Pond  
Pace Project No.: 92650835

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

BC The same analyte was detected in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit.

RE: Project: Plant McDonough-CCR Ash Pond  
Pace Project No.: 92653561

Dear Jessica Ware:

Enclosed are the analytical results for sample(s) received by the laboratory on February 22, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Maiya Parks  
maiya.parks@pacelabs.com

## QUALIFIERS

Project: Plant McDonough-CCR Ash Pond

Pace Project No.: 92653561

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Data Validation Summary, September 2022

---

## Quality Control Review of Analytical Data- Ash Pond AP-2 and 3/4 Submitted by Pace Analytical Services, LLC September 2022

This narrative presents results of the quality control (QC) data review performed on analytical data submitted by Pace Analytical Services, LLC. for groundwater samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 (Site) between September 7, 2022 and October 27, 2022. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1. In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D - Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detection monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Groundwater samples were also analyzed for alkalinity. Test methods included Inductively Coupled Plasma- Mass Spectrometry (ICP-MS) (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Inductively Coupled Plasma (ICP) (6010D), Determination of Inorganic Anions By Ion Chromatography (USEPA Method 300.0), Total Dissolved Solids (TDS) (Standard Methods 2540C), Radium-226 (USEPA Method 9315) and Radium-228 (USEPA Method 9320). Additional surface water samples were collected and analyzed for Total Metals (USEPA Method 6020B), Cations (6010D), Anions (300.0), Alkalinity by Titration through Standard Method 2320B (SM2320B), and TDS (SM 2540C).

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program (CLP) Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0), US EPA Region IV Data Validation Standard Operating Procedures for CLP Mercury Data by Cold Vapor Atomic Absorption (September 2011, Rev. 2.0), the National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020), and US Department of Energy, Evaluation of Radiochemical Data Usability (April 1997). The review included an assessment of the results for completeness, precision (laboratory and field duplicates, matrix spike/matrix spike duplicates), accuracy (laboratory control samples and matrix spike samples), and blank contamination (including field and laboratory blanks). Additionally, sample procedures, holding times and chains-of-custody were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytic methodology, method-specific criteria or professional judgment was used.

### DATA QUALITY OBJECTIVES

<b>Laboratory Precision:</b>	Laboratory goals for precision were met with the exception of TDS.
<b>Field Precision:</b>	Field goals for precision were met.
<b>Accuracy:</b>	Laboratory goals for accuracy were met with the exception of barium, calcium, fluoride, iron, magnesium, radium-226, radium-228, total radium, sodium, sulfate, and TDS, as described in the qualification sections below.
<b>Detection Limits:</b>	Project goals for detection limits were met. Certain samples were diluted due to elevated concentrations of target analytes. Dilutions do not require qualifications based on USEPA guidelines. Detection and reporting limits of non-detect compounds are elevated proportional to the dilution when undiluted sample results are not provided by the laboratory. The data

usability of diluted results was evaluated by the data user in the context of site-wide characterization.

**Completeness:** There were no rejected analytical results for this event, resulting in a completion of 100%.

**Holding Times:** All holding time requirements were met in accordance with specific analytical methods.

## QUALIFICATIONS

In general, chemical results for the samples collected at the Site were qualified on the basis of precision or accuracy, or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data by the laboratory during the data validation process.

- J** The analyte was reported above the method detection limit and below the reporting limit. The concentration reported is an estimated value.
- J+** The analyte was reported above the method detection limit; however, the concentration reported is an estimated value that may be biased high.
- U** The analyte was not detected above the method detection limit.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. Although these qualifications were applied to some data from samples collected at the site (see Table 1), qualifications may not have been required or applied to all samples collected. A summary of sample qualifications can be found in Table 2.

- Certain TDS results from SDG 92633523 were unable to achieve a constant weight due to matrix interference during analysis. The TDS results were qualified as J, estimated.
- Certain radium-228 results from SDG 92625212 had laboratory control samples/laboratory control sample duplicate (LCS/LCSD) recoveries outside of QC criteria. The associated samples were non-detect and did not require qualification. Radium-228 results from SDGs 92625627 and 92625219 were qualified as J+ as the associated LCSD recoveries were above the QC criteria. Total radium also received the J+ qualifier since an individual isotope was qualified.
- Certain calcium, magnesium, sodium, and sulfate results from SDGs 92624373, 92628215, 92625623 and 92625189 had matrix spike and matrix spike duplicate (MS/MSD) recoveries outside of the QC criteria. All sample results were greater than 4x the added spike concentration, and no qualification was required.
- Fluoride from SDG 92628215 was qualified as J+ as the associated MS and MSD recoveries were above the QC criteria.
- Certain barium, TDS, radium-226, and radium-228 in SDGs 92624378, 92625623, 92624383, 92625627, 92625178, and 92625631 were qualified as non-detect (U) when the analyte was

detected at a similar level in an associated blank sample. As shown in Table 2, if the original sample results were above the reporting limit (RL), the results were qualified as non-detect (U) and the RL was raised to the sample result.

- Certain total radium results from SDGs 92624378, 92624383, 92625627, and 92625631 were qualified as estimated, bias high (J+) due to one of the radium isotopes being U qualified from blank contamination and the other isotope being a non-detect.
- Iron from SDG 92625623 was qualified as U, non-detect, when the analyte was detected at a similar level in an associated blank sample. As shown in Table 2, if the original sample results were below the RL, the results were qualified as non-detect (U) and the results were raised to the RL.

Golder reviewed the data from samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 between September 7, 2022 and October 27, 2022 in accordance with the analytical methods, the laboratory specific QC criteria, and the guidelines. As described above, 100% of the results were acceptable for project use.

**Abbreviations:**

RL : Reporting limit

MDC : Minimum detectable concentration

MDL: Method detection limit

SDG : Sample delivery group

TDS: Total Dissolved Solids

**Qualifier**

U: Non-detect

J: Estimated

J+: Estimated, bias high

**APPENDIX B**

Data Validation Summary, January-April 2023

**Quality Control Review of Analytical Data- Ash Pond AP-2 and 3/4  
Submitted by Pace Analytical Services, LLC  
January-April 2023**

This narrative presents results of the quality control (QC) data review performed on analytical data submitted by Pace Analytical Services, LLC. for groundwater samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 (Site) between January 31, 2023, and April 10, 2023. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1. In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D - Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detection monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Additional analysis included alkalinity, cations (magnesium, potassium, and sodium) and total, ferrous, and ferric Iron. Test methods included Inductively Coupled Plasma- Mass Spectrometry (ICP-MS) (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Inductively Coupled Plasma (ICP) (6010D), Determination of Inorganic Anions By Ion Chromatography (USEPA Method 300.0), Total Dissolved Solids (Standard Methods 2540C), Radium-226 (USEPA Method 9315), Radium-228 (USEPA Method 9320), Alkalinity by Titration (Standard Methods 2320B) and Iron (Standard Methods SM 3500-Fe).

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program (CLP) Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0), US EPA Region IV Data Validation Standard Operating Procedures for CLP Mercury Data by Cold Vapor Atomic Absorption (September 2011, Rev. 2.0), the National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020), and US Department of Energy, Evaluation of Radiochemical Data Usability (April 1997). The review included an assessment of the results for completeness, precision (laboratory and field duplicates, matrix spike/matrix spike duplicates), accuracy (laboratory control samples and matrix spike samples), and blank contamination (including field and laboratory blanks). Additionally, sample procedures, holding times and chains-of-custody were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytic methodology, method-specific criteria or professional judgment was used.

## **DATA QUALITY OBJECTIVES**

- Laboratory Precision:** Laboratory goals for precision were met.
- Field Precision:** Field goals for precision were met.
- Accuracy:** Laboratory goals for accuracy were met with the exception of total alkalinity and sulfate, as described in the qualification sections below.
- Detection Limits and Blanks:** Project goals for detection limits were met with the exception of TDS. Certain samples were diluted due to elevated concentrations of target analytes. Dilutions do not require qualifications based on USEPA guidelines. Detection and reporting limits of non-detect compounds are elevated proportional to the dilution when undiluted sample results are not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of site-wide characterization.

**Completeness:** There were no rejected analytical results for this event, resulting in a completion of 100%.

**Holding Times:** All holding time requirements were met in accordance with specific analytical methods.

## QUALIFICATIONS

In general, chemical results for the samples collected at the Site were qualified on the basis of precision or accuracy, or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data by the laboratory during the data validation process.

- J** The analyte was reported above the method detection limit and below the reporting limit. The concentration reported is an estimated value.
- U** The analyte was not detected above the method detection limit.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. Although these qualifications were applied to some data from samples collected at the site (see Table 1), qualifications may not have been required or applied to all samples collected. A summary of sample qualifications can be found in Table 2.

- Sulfate in AP234-FD-4, from SDG 92650181, was qualified J- as associated MS and MSD recoveries were below the QC criteria.
- Total alkalinity in DGWC-9, from SDG 92650181, was qualified UJ as associated MS and MSD recoveries were below the QC criteria.
- Certain potassium, TDS, sodium, calcium, cobalt, chromium, magnesium, barium, and boron in SDGs 92650181, 92650182, and 92650426 were qualified as U, non-detect, when the analyte was detected at a similar level in an associated blank sample. As shown in Table 2, if the original sample results were below the reporting limit (RL), the results were qualified as non-detect (U) and the RL was reported as the new results. If the original sample results were greater than the RL, the results were qualified U and the RL was raised to the sample result.
- Certain radium-226 and radium-228 results, from SDGs 92650188 and 92650189, were qualified as non-detect (U) due to an associated blank contamination. As shown in Table 2, if the original sample results were above the Minimum Detectable Concentration (MDC), the results were qualified as non-detect (U) and the MDC was raised to the sample result.
- Certain total radium results, from SDGs 92650188 and 92650189, were qualified as non-detect (U) due to one of the radium isotopes being U qualified from blank contamination and the other isotope being a non-detect.
- Certain total radium results, from SDG 92650188, were qualified as estimated, bias high (J+) due to one of the radium isotopes being U qualified from blank contamination and the other isotope being greater than the MDC.
- Certain dissolved metal concentrations, from SDG 92650184, were qualified as estimated values, J, when dissolved concentrations were greater than total concentrations.

Golder reviewed the data from samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 between January 31, 2023, and April 10, 2023, in accordance with the analytical methods, the laboratory specific QC criteria, and the guidelines. As described above, 100% of the results were acceptable for project use.

# Laboratory Accreditation

July 14, 2022

RE: Georgia Commercial Laboratory Accreditation Rule

Stipulation Requirements for Analysis of Non-Potable Water and Solid and Chemical Materials  
Georgia state law requires any person submitting data to the GA Environmental Protection Division for regulatory purposes to stipulate that the laboratory responsible for preparing the data is approved or accredited to perform analysis of environmental samples. This stipulation must be included within each report or may be submitted in a separate document with the first report of the calendar year; alternatively, the attached scope of accreditation may be submitted in lieu of a stipulation.

The information provided below may be used to generate a stipulation for data reporting purposes:

<b>Name of Laboratory:</b>	Pace Analytical Services, LLC – Asheville, NC
<b>Name of Accrediting Agency:</b>	Commonwealth of Virginia Department of General Services Division of Consolidated Laboratory Services [Primary NELAP Accreditation]
<b>Accreditation Number:</b>	460222
<b>Scopes of Accreditation:</b>	Non-Potable Water Solid and Chemical Materials
<b>Accreditation Effective Date:</b>	June 15, 2022
<b>Accreditation Expiration Date:</b>	June 14, 2023

For additional information regarding the Georgia Commercial Laboratory Accreditation Rule, please contact the Georgia Environmental Protection Division at 404-656-4713.

Sincerely,

**Jacob Cottrell**  
Quality Manager

### Stipulation of Approval for Commercial Laboratory

According to Georgia State Law (O.C.G.A. 12-2-9) Commercial Rules for Commercial Laboratory Accreditation, any person submitting data to EPD prepared by a commercial laboratory shall stipulate that the laboratory is approved (Chapter 391-3-26-.05). The following information is provided as requested.

Laboratory	<b>Pace Analytical Services, LLC</b> 9800 Kinsey Avenue, Suite 100 Huntersville, NC 28078 Phone: 704.875.9092
Accredited By:	Commonwealth of Virginia, Department of General Services: Accrediting NELAP Authority
Accreditation ID:	Laboratory ID#: 460221
Scope:	Clean Water Act - Extractable Organics, Pesticides, PCB's, Volatile Organics  RCRA/CERCLA - Extractable Organics, Pesticides, PCB's, Volatile Organics
Effective:	June 15, 2022
Expires:	June 14, 2023

Any question regarding this stipulation of approval may be directed to Pace Analytical at 704.875.9092. Thank you for your business and please do not hesitate to contact us if we can be of further assistance.

Sincerely,

**Ross Simmons**

Quality Assurance Manager

### Stipulation of Approval for Commercial Environmental Laboratories

Pursuant to the *Rules and Regulations of the State of Georgia* (O.C.G.A. 12-2-9) and *Rule 391-3-26.05* for “Commercial Environmental Laboratories”, any person submitting data prepared by a commercial analytical laboratory to the Division for regulatory purposes shall stipulate that the laboratory is approved.

The stipulations for which Pace-Atlanta is approved, is as follows:

<b>Laboratory:</b>	<b>Pace Analytical Services, LLC – Atlanta GA</b> 110 Technology Parkway Peachtree Corners, GA 30092  Phone: (770) 734-4200 Fax: (770) 734-4201
<b>Accredited By:</b>	<u>Authority</u> Florida Department of Health (FL - DOH)  <u>Program</u> Florida Environmental Laboratory Certification Program (TNI/NELAP)
<b>Accreditation ID:</b>	E87315
<b>Scope of Accreditation:</b>	<u>Non-Potable Water (NPW)</u> -General Chemistry (Wet Chemistry) -Metals -Microbiology  <u>Solid and Chemical Materials (SCM)</u> -General Chemistry -Metals - Microbiology
<b>Effective Dates:</b>	July 1, 2022 – June 30, 2023

Any question regarding this stipulation of approval may be directed to Pace-Atlanta at (770) 734-4200. Thank you for your business and please do not hesitate to contact us if we can be of further assistance.

Sincerely,

Ross Simmons  
Quality Manager – Atlanta Laboratory

RE: Certification by Reciprocity  
Pace Analytical Services, Inc. - Pittsburgh  
Georgia ID #C040

Dear Mr. Billings:

The Georgia Department of Natural Resources, Environmental Protection Division (EPD) is in receipt of all required data necessary to fulfill your laboratory's request for Certification by Reciprocity in Georgia for the analysis of the parameters listed in the attached certificate. Therefore, in accordance with the Georgia Safe Drinking Water Act of 1977 (Sections 12-5-170 through 12-5-193, O.C.G.A.) and the Rules for Safe Drinking Water (Chapter 391-3-5), this certification is valid until March 31, 2023. This certificate is contingent upon continued Certification by the Commonwealth of Pennsylvania's Department of Environmental Protection and is non-transferable. This certificate is also contingent upon continued acceptable semi-annual Proficiency Testing results.

If Pace Analytical Services, LLC – Pittsburgh's certification status is downgraded for any analyte/method by your Primary Accrediting Agency, the GA Certification Program must be notified. Any downgrade will result in the withdrawal of reciprocity for that analyte.

Prior to the expiration of this certification, please contact your accrediting/certifying authority and request that the following information be forwarded to me at [lynne.grubb@dnr.ga.gov](mailto:lynne.grubb@dnr.ga.gov).

1. Copies of the most current on-site report, and proposed and accepted corrective actions
2. Copies of the Certificate and scope of accreditation listing analytes

For additional information please feel free to contact Lynne Grubb at 470-604-9528.

Sincerely,

Lynne Grubb  
Laboratory Certification Officer  
Drinking Water Compliance Unit

Sean Earley  
Program Manager  
Drinking Water Compliance Unit

# Groundwater Monitoring Well Integrity Form

Site Name: Plant McDonough

Permit Number:

Well ID: DGWA-53

Date: 9/6/2022

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Is the well visible and accessible?  | X |  |
| <b>B</b> | Is the well properly identified with correct well ID?  | X |  |
| <b>C</b> | Is the well in a high traffic area and does the well require protection from traffic?                              | X |  |
| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |  |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date: Access overgrown vegetation

| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |  |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

Date: 9/6/2022

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |          |  |   |   |
|----------|--|---|---|
| <b>A</b> | Is the well visible and accessible?  | X |   |
| <b>B</b> | Is the well properly identified with correct well ID?  | X |   |
| <b>C</b> | Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |   |
|----------|--|---|---|
| <b>A</b> | Does water recharge adequately when purged?  | X |   |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |

| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

Date: 9/6/2022

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Is the well visible and accessible?  | X |  |
| <b>B</b> | Is the well properly identified with correct well ID?  | X |  |
| <b>C</b> | Is the well in a high traffic area and does the well require protection from traffic?                              | X |  |
| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |  |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |   |
|----------|--|---|---|
| <b>A</b> | Does water recharge adequately when purged?  | X |   |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |   |
|----------|--|---|---|
| <b>A</b> | Does water recharge adequately when purged?  | X |   |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

1) Location/Identification

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Is the well visible and accessible?  | X |  |
| <b>B</b> | Is the well properly identified with correct well ID?  | X |  |
| <b>C</b> | Is the well in a high traffic area and does the well require protection from traffic?                              | X |  |
| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |  |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

-----	----	-----

1) Location/Identification

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Is the well visible and accessible?  | X |  |
| <b>B</b> | Is the well properly identified with correct well ID?  | X |  |
| <b>C</b> | Is the well in a high traffic area and does the well require protection from traffic?                              | X |  |
| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |  |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |  |
|----------|--|---|--|
| <b>A</b> | Does water recharge adequately when purged?  | X |  |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |   |
|----------|--|---|---|
| <b>A</b> | Does water recharge adequately when purged?  | X |   |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

--	-----	----	-----

1) Location/Identification

- |  |   |   |  |
|--|---|---|--|
| A Is the well visible and accessible?  | X |   |  |
| B Is the well properly identified with correct well ID?  | X |   |  |
| C Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |  |
| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |  |

2) Protective Casing

- |   |   |  |  |
|---|---|--|--|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |  |  |
| B Is the casing free of degradation or deterioration?   | X |  |  |
| C Does the casing have a functioning weep hole?   | X |  |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |  |
| E Is the well locked and is the lock in good condition?   | X |  |  |

3) Surface Pad

- |   |   |  |  |
|---|---|--|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |  |

4) Internal Casing

- |   |   |  |  |
|---|---|--|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |  |

|----------|---|--|---|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          |  | X |
| <b>B</b> | Is the casing free of degradation or deterioration?   |  | X |
| <b>C</b> | Does the casing have a functioning weep hole?   |  | X |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? |  | X |
| <b>E</b> | Is the well locked and is the lock in good condition?   |  | X |

3) Surface Pad

- |          |   |  |   |
|----------|---|--|---|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 |  | X |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 |  | X |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? |  | X |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         |  | X |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         |  | X |

4) Internal Casing

- |          |   |  |   |
|----------|---|--|---|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   |  | X |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  |  | X |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  |  | X |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   |  | X |
| <b>E</b> | Is the depth of the well consistent with the original well log?   |  | X |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) |  | X |

5) Sampling: Groundwater Wells Only

- |          |  |  |   |
|----------|--|--|---|
| <b>A</b> | Does water recharge adequately when purged?  |  | X |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? |  | X |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  |  | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

| B Is the casing free of degradation or deterioration?   | X |  |
| C Does the casing have a functioning weep hole?   | X |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| E Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |   |   |  |
|---|---|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

| A Is the well visible and accessible?  | X |   |
| B Is the well properly identified with correct well ID?  | X |   |
| C Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |   |   |  |
|---|---|--|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| B Is the casing free of degradation or deterioration?   | X |  |
| C Does the casing have a functioning weep hole?   | X |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| E Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |   |   |  |
|---|---|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

Date: 1/30/2023

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |  |   |   |
|--|---|---|
| A Is the well visible and accessible?  | X |   |
| B Is the well properly identified with correct well ID?  | X |   |
| C Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |   |   |  |
|---|---|--|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| B Is the casing free of degradation or deterioration?   | X |  |
| C Does the casing have a functioning weep hole?   | X |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| E Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |   |   |   |
|---|---|---|
| A Is the well pad in good condition (not cracked/broken)?                 | X |   |
| B Is the well pad sloped away from the protective casing?                 | X |   |
| C Is the well pad in complete contact with the ground surface and stable? | X |   |
| D Is the well pad in complete contact with the protective casing?         | X |   |
| E Is the pad surface clean (not covered with sediment or debris)?         |   | X |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |

|--|---|--|
| <b>A</b> Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |  |   |  |
|--|---|--|
| <b>A</b> Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |   |   |   |
|---|---|---|
| <b>A</b> Does water recharge adequately when purged?  | X |   |
| <b>B</b> If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| <b>C</b> Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date:

| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |   |   |  |
|---|---|--|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| B Is the casing free of degradation or deterioration?   | X |  |
| C Does the casing have a functioning weep hole?   | X |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| E Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |   |   |  |
|---|---|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date: \_\_\_\_\_

Date: 1/30/2023

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |  |   |   |
|--|---|---|
| A Is the well visible and accessible?  | X |   |
| B Is the well properly identified with correct well ID?  | X |   |
| C Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |   |   |  |
|---|---|--|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| B Is the casing free of degradation or deterioration?   | X |  |
| C Does the casing have a functioning weep hole?   | X |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| E Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |   |   |  |
|---|---|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date: \_\_\_\_\_

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |  |   |   |
|--|---|---|
| A Is the well visible and accessible?  | X |   |
| B Is the well properly identified with correct well ID?  | X |   |
| C Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |   |   |  |
|---|---|--|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| B Is the casing free of degradation or deterioration?   | X |  |
| C Does the casing have a functioning weep hole?   | X |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| E Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |   |   |  |
|---|---|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

| <b>C</b> Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |  |   |  |
|--|---|--|
| <b>A</b> Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |   |   |  |
|---|---|--|
| <b>A</b> Does water recharge adequately when purged?  | X |  |
| <b>B</b> If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |  |
| <b>C</b> Does the well require redevelopment (low flow/turbidity)?  | X |  |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date: Needs label

Date: 1/30/2023

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |  |   |   |
|--|---|---|
| A Is the well visible and accessible?  | X |   |
| B Is the well properly identified with correct well ID?  | X |   |
| C Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |   |   |   |
|---|---|---|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |   |
| B Is the casing free of degradation or deterioration?   | X |   |
| C Does the casing have a functioning weep hole?   | X |   |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |   |
| E Is the well locked and is the lock in good condition?   |   | X |

3) Surface Pad

- |   |   |  |
|---|---|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date: Lock needs replacement

| E Is the pad surface clean (not covered with sediment or debris)?         |   | X |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements?

X

7) Corrective actions as needed, by date:

| B Is the well properly identified with correct well ID?  | X |   |
| C Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| D Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |   |   |  |
|---|---|--|
| A Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| B Is the casing free of degradation or deterioration?   | X |  |
| C Does the casing have a functioning weep hole?   | X |  |
| D Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| E Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |   |   |  |
|---|---|--|
| A Is the well pad in good condition (not cracked/broken)?                 | X |  |
| B Is the well pad sloped away from the protective casing?                 | X |  |
| C Is the well pad in complete contact with the ground surface and stable? | X |  |
| D Is the well pad in complete contact with the protective casing?         | X |  |
| E Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |   |   |  |
|---|---|--|
| A Does the cap prevent entry of foreign material into the well?   | X |  |
| B Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| C Is the well properly vented for equilibration of air pressure?  | X |  |
| D Is the survey point clearly marked on the inner casing?   | X |  |
| E Is the depth of the well consistent with the original well log?   | X |  |
| F Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |  |   |   |
|--|---|---|
| A Does water recharge adequately when purged?  | X |   |
| B If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| C Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

7) Corrective actions as needed, by date: \_\_\_\_\_

Permit Number:

Well ID: B-122D

Date: 1/30/2023

Yes	No	N/A
-----	----	-----

1) Location/Identification

- |          |  |   |   |
|----------|--|---|---|
| <b>A</b> | Is the well visible and accessible?  | X |   |
| <b>B</b> | Is the well properly identified with correct well ID?  | X |   |
| <b>C</b> | Is the well in a high traffic area and does the well require protection from traffic?                              |   | X |
| <b>D</b> | Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path) | X |   |

2) Protective Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the protective casing free from apparent damage and able to be secured?                          | X |  |
| <b>B</b> | Is the casing free of degradation or deterioration?   | X |  |
| <b>C</b> | Does the casing have a functioning weep hole?   | X |  |
| <b>D</b> | Is the annular space between the casings clear of debris and water, or filled with pea gravel/sand? | X |  |
| <b>E</b> | Is the well locked and is the lock in good condition?   | X |  |

3) Surface Pad

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Is the well pad in good condition (not cracked/broken)?                 | X |  |
| <b>B</b> | Is the well pad sloped away from the protective casing?                 | X |  |
| <b>C</b> | Is the well pad in complete contact with the ground surface and stable? | X |  |
| <b>D</b> | Is the well pad in complete contact with the protective casing?         | X |  |
| <b>E</b> | Is the pad surface clean (not covered with sediment or debris)?         | X |  |

4) Internal Casing

- |          |   |   |  |
|----------|---|---|--|
| <b>A</b> | Does the cap prevent entry of foreign material into the well?   | X |  |
| <b>B</b> | Is the casing free of kinks/bends, or any obstructions from foreign objects (such as bailers)?  | X |  |
| <b>C</b> | Is the well properly vented for equilibration of air pressure?  | X |  |
| <b>D</b> | Is the survey point clearly marked on the inner casing?   | X |  |
| <b>E</b> | Is the depth of the well consistent with the original well log?   | X |  |
| <b>F</b> | Is the casing stable? (Does PVC move easily when touched or can be taken apart by hand due to lack of grout or use of slip couplings in construction) | X |  |

5) Sampling: Groundwater Wells Only

- |          |  |   |   |
|----------|--|---|---|
| <b>A</b> | Does water recharge adequately when purged?  | X |   |
| <b>B</b> | If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater monitoring plan for the facility? | X |   |
| <b>C</b> | Does the well require redevelopment (low flow/turbidity)?  |   | X |

6) Based on professional judgement, is the well construction / location appropriate to **1)** achieve the objectives of the Groundwater Monitoring Program and **2)** comply with the applicable regulatory requirements? X

**PLANT MCDONOUGH ASH POND 1, ASH POND 2, AND ASH POND 3/4  
WELL MAINTENANCE AND REPAIR DOCUMENTATION  
GEORGIA POWER COMPANY**

WSP USA Inc. (WSP) has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at Plant McDonough Ash Pond 1, and Ash Pond 2 and 3/4 on March 30, and April 3 and 4, 2023. Repairs and maintenance were completed in accordance with 12-5-134 (5)(D)vii of the Georgia Well Standards Act (1985) for routine visual inspections of groundwater monitoring wells (i.e., at least once every five years) under the direction of a Georgia licensed professional engineer or geologist.

**Table 1: Plant McDonough Ash Pond 1 – Well Maintenance Summary**

Well ID	Date Performed	Maintenance/Repair Performed
DGWA-53	March and April 2023	Vegetation cleared to improve access and visibility
DGWC-9	March and April 2023	Vegetation cleared to improve access and visibility
DGWC-21	March and April 2023	Ant bed removed to improve access
B-62	March and April 2023	Bolts reinstalled
DGWC-8	March and April 2023	Vegetation cleared to improve access and visibility
B-64	March and April 2023	Locking bar repaired
B-82	March and April 2023	Weep hole added
B-94	March and April 2023	Well cap replaced
B-95	March and April 2023	Locking bar installed
B-96	March and April 2023	Locking bar installed
B-97	March and April 2023	Locking bar installed
B-98	March and April 2023	Locking bar installed

Well ID	Date Performed	Maintenance/Repair Performed
WT-6	March and April 2023	Gauge straightened up
B-122D	March and April 2023	Demolished cracked well pad and replaced
B-89	March and April 2023	Bolt holes retapped in manhole, locking bar added
B-63	March and April 2023	Old well pad and manhole demolished, new manhole and well pad installed
B-65	March and April 2023	Old well pad and manhole demolished, new well pad and 5" manhole installed, locking bar reinstalled

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

DGWA-53 – Cut weeds back from around well pad.

DGWC-9 – Removed bee's nest, installed locking cap.

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

DGWC-21 – Removed ant bed.

DGWC-42 – Removed ant bed.

B-62 – Reinstalled bolts. (Notes indicated broken bracket. After inspection bracket was not broken, bolts laying inside the cover.)

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

B-6 – Inspected B-6 and did not need maintenance. (Notes indicated needed locking bar but B-6 is a stickup well, not flush mount.)

B-64 – Repaired locking bar.

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

B-82 – Drilled weep hole.

B-94 – replaced well cap so the protective cover will lock.

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

B-95 – Installed locking bar.

B-96 – Installed Locking bar.

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

B-97 – Installed locking bar.

B-98 – Installed locking bar.

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

B-102D – No ant beds on pad currently

WT-6 – Straightened the gauge up, however the wires connecting the gauge to the tree (yellow wire seen in picture) was ripped out of the gauge by whatever hit the gauge. The wiring will need to be repaired/reinstalled, and the gauge needs to be resurveyed.

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

B-122D – Demolished cracked well pad and replaced.

B-89 – Retapped bolt holes in manhole, added bar.

**Southern Company CFS**  
**Plant McDonough March/April 2023 Well O&M**  
**(Mar 30<sup>th</sup>, April 3-4)**

B-63 – Demolished old pad and manhole, installed new manhole and pad.

B-65 – Demolished old pad and manhole, Installed new 5" manhole (to try to take pressure off the manhole from the concrete trucks), reinstalled bar.

## GROUNDWATER STATS CONSULTING

February 28, 2023

Southern Company Services  
Attn: Mr. Joju Abraham  
241 Ralph McGill Blvd NE, Bin 10160  
Atlanta, Georgia 30308-3374

Re: Plant McDonough Ash Pond (AP-2,3,4)  
September 2022 Statistical Analysis

Dear Mr. Abraham,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the September 2022 Semi-Annual Groundwater Monitoring and Corrective Action Statistical summary of groundwater data for Georgia Power Company's Plant McDonough AP-2,3,4. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for Appendix III parameters began in 2016, and at least 8 background samples were collected at each of the groundwater monitoring wells. Semi-annual sampling of the majority of Appendix IV constituents has been performed for several years in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** DGWA-53, DGWA-70A, DGWA-71
- **Downgradient wells:** DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-9, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-14, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, and DGWC-48

- **Assessment wells:** B-56, B-62, B-63, B-66, B-77, B-82, B-83, B-88, B-92, B-93, B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, B-109D, B-111D, B-115D, and B-120D

The assessment wells were installed at various times during 2016-2020 as follows:

- **2016** - B-56, B-62, B-63, and B-66
- **2019** - B-77, B-82, B-83, B-88, B-92, and B-93
- **2020** – B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, B-109D, and B-111D
- **2021** – B-115D and B-120D
- **2022** – B-122D

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology prepared in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance.

The Coal Combustion Residuals (CCR) program consists of the constituents listed below. The terms “parameters” and “constituents” are used interchangeably.

- **Appendix III** (Detection Monitoring) - boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) – antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient and assessment well/constituent pairs containing 100% non-detects follows this letter.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the previous screening and demonstrated that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests that the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

### **Summary of Statistical Methods – Appendix III Parameters**

Based on the earlier evaluation described above, the following methods were selected:

- Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects in background, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In some cases, earlier data may require deselection prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

## **Summary of Background Screening – Conducted in March 2019**

### Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits.

Using the Tukey box plot method, several outliers were identified. In cases where the most recent value was identified as an outlier, values were not flagged in the database as they may represent a possible trend. If future values do not remain at similar concentrations, these values will be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

Of the outliers identified by Tukey's method, only a few of these values were flagged in the database as all other values are similar to other measurements.

Additionally, when any values are flagged in the database as outliers, they are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data.

## Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

## Trend Test Evaluation

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each well to identify statistically significant increasing or decreasing trends. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses were included with the previous screening and showed two statistically significant decreasing trends for the Appendix III parameters. The only trend identified in the upgradient wells was a statistically significant decreasing trend for sulfate in well DGWA-71. All trends noted were relatively low in magnitude when compared to average concentrations; therefore, no adjustments were made to the data sets.

## Appendix III – Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells, which assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter.

The ANOVA identified no variation among upgradient well data for fluoride, making this constituent eligible for interwell analyses. Variation was noted for boron, calcium, chloride, pH, sulfate, and TDS, which would indicate intrawell analyses may be most appropriate for these parameters. While data were further tested for intrawell eligibility during the screening, interwell methods will be used for all Appendix III constituents in accordance with Georgia EPD requirements.

## **Statistical Analysis of Appendix III Parameters – September 2022**

### Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through September 2022 (Figure D). Background (upgradient) well data were re-assessed for potential outliers during this analysis and no new values were flagged. Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The September 2022 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result. Therefore, no exceedance is noted, and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. Several prediction limit exceedances were noted for Appendix III parameters. A summary table of the interwell prediction limits follows this letter.

### Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. Similar patterns that are present in both upgradient and downgradient wells are an indication of natural variability in groundwater quality unrelated to practices at the site. A summary of the trend test results follows this letter. Statistically significant trends were noted for the following well/constituent pairs:

#### Increasing trends

- Boron: DGWC-4, DGWC-11, DGWC-17
- Calcium: DGWC-4, DGWC-5, DGWC-11, DGWC-19, DGWC-21, and DGWC-23
- Chloride: DGWC-5, DGWC-9, DGWC-15, and DGWC-20
- pH: DGWC-5 and DGWC-19
- Sulfate: DGWC-19
- TDS: DGWC-4, DGWC-5, DGWC-11, DGWC-17, and DGWC-19

#### Decreasing trends

- Boron: DGWC-2, DGWC-8, DGWC-9, DGWC-10, DGWC-12, DGWC-19, DGWC-20, DGWC-47, and DGWC-48
- Calcium: DGWC-12, DGWC-48, and DGWA-53 (upgradient)
- Chloride: DGWC-4, DGWC-19, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-48, and DGWA-53 (upgradient)
- Fluoride: DGWC-47 and DGWC-48
- pH: DGWC-9 and DGWC-47
- Sulfate: DGWC-2, DGWC-8, DGWC-12, DGWC-15, DGWC-20, DGWC-21, DGWC-42, DGWC-47, DGWC-48, DGWA-70A (upgradient), and DGWA-71 (upgradient)
- TDS: DGWC-12, DGWC-20, DGWC-48, and DGWA-53 (upgradient)

### **Statistical Analysis of Appendix IV Parameters – September 2022**

For Appendix IV parameters, confidence intervals for each downgradient and assessment well/constituent pair with four or more samples were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. As mentioned above, downgradient and assessment well/constituent pairs that contain 100% non-detects do not require analysis. Data from upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis prior to constructing statistical limits. No new values were flagged during this analysis and a complete list of flagged outliers follows this report (Figure C).

#### Interwell Upper Tolerance Limits

Interwell upper tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through September 2022 for Appendix IV constituents (Figure F). Parametric tolerance limits are used when data follow a normal or transformed-normal distribution such as for combined radium. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were used. Note that in order to maintain

conservative limits from a regulatory perspective, non-parametric tolerance limits were used for cobalt.

### Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

### Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed for each of the Appendix IV constituents in accordance with the state requirements in each downgradient well (Figure H). Note that confidence intervals require a minimum of 4 samples and, in many cases, the assessment wells had insufficient samples at this time. The Sanitas software was used to calculate the tolerance limits and the confidence intervals.

Due to the required transformations to fit the data to a transformed normal distribution, the lower confidence limits resulted in negative numbers for some well/constituent pairs. Therefore, non-parametric confidence intervals, which are bound by reported high and low measurements within a given well, were constructed for these particular cases and may be found at the end of Figure H. This is a more conservative approach in that the lower confidence limit reflects the lowest reported measurement in the data set rather than a negative number.

Confidence intervals were compared to the GWPS prepared as described above. Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. A summary of the confidence intervals follows this letter. Exceedances were noted for the following well/constituent pairs:

- Arsenic: DGWC-9
- Beryllium: DGWC-5, DGWC-9, DGWC-10, DGWC-47, DGWC-48, B-92, B-93, and B-115D
- Cobalt: DGWC-8, DGWC-9, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-93, B-104D, B-109D, and B-115D
- Combined Radium 226 + 228: B-104D and B-109D
- Lithium: DGWC-47, DGWC-48, B-115D, and B-120D

#### Trend Test Evaluation – Appendix IV

Data at wells with confidence interval exceedances are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable (Figure I). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site. When trends are present in upgradient trends, it is an indication of natural variability in groundwater quality unrelated to practices at the site. Note that trend tests were not included for beryllium at well B-115D, cobalt at well B-115D, combined radium 226 + 228 at well B-109D, and lithium at wells B-115D and B-120D because trend tests require a minimum of 5 samples and these well/constituent pairs do not yet meet the minimum sample requirement. A summary of the Appendix IV trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

#### Increasing

- Cobalt: DGWC-9

#### Decreasing

- Beryllium: DGWA-70A (upgradient) and DGWC-48
- Cobalt: DGWA-53 (upgradient), DGWC-8, DGWC-9, DGWC-10, DGWC-47, and DGWC-48
- Combined Radium 226 + 228: DGWA-53 (upgradient)
- Lithium: DGWC-47 and DGWC-48

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for McDonough AP-2,3,4. If you have any questions or comments, please feel free to contact us.

Exceeds Limit: DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-2, DGWC-20, DGWC-21...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 47 background values. 27.66% NDs. Annual per-constituent alpha = 0.03204. Individual comparison alpha = 0.0008139 (1 of 2). Comparing 20 points to limit.

Constituent: Boron, total Analysis Run 10/19/2022 2:41 AM View: Constituents View  
Plant McDonough Client: Southern Company Data: McDonough AP

Hollow symbols indicate censored values.

Exceeds Limit: DGWC-10, DGWC-11, DGWC-12, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-4, DGWC-48...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 47 background values. 4.255% NDs. Annual per-constituent alpha = 0.03204. Individual comparison alpha = 0.0008139 (1 of 2). Comparing 20 points to limit.

Constituent: Calcium, total Analysis Run 10/19/2022 2:41 AM View: Constituents View  
Plant McDonough Client: Southern Company Data: McDonough AP

Exceeds Limit: DGWC-11, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-4...

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 49 background values. 50% NDs. Annual per-constituent alpha = 0.02932. Individual comparison alpha = 0.0007437 (1 of 2). Comparing 20 points to limit.

Constituent: Chloride, Total Analysis Run 10/19/2022 2:41 AM View: Constituents View  
Plant McDonough Client: Southern Company Data: McDonough AP

Hollow symbols indicate censored values.

Exceeds Limit: DGWC-10, DGWC-20, DGWC-47, DGWC-48, DGWC-9

Prediction Limit  
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 54 background values. 50% NDs. Annual per-constituent alpha = 0.02478. Individual comparison alpha = 0.0006272 (1 of 2). Comparing 20 points to limit.

Constituent: Fluoride, total Analysis Run 10/19/2022 2:41 AM View: Constituents View
