1. Introduction

Plant McIntosh is a coal-fired power generation plant owned and operated by Georgia Power Company (GPC), and is located in southeast Effingham County, Georgia, approximately 4 miles northeast of the city of Rincon, Georgia and 20 miles north-northwest of the city of Savannah, Georgia.

The plant property is on the west bank of the Savannah River at Big Kiffer Point (Figure 1). Inactive Coal Combustion Residuals (CCR) Landfill No. 3 (Landfill No. 3, the Site) received CCR from the generating process but was closed in 2008 and is now inactive. The Site is on the southwestern corner of the plant property, approximately 1.5 miles west of the Savannah River and approximately 800 feet south of Lockner Creek.

The first semiannual groundwater monitoring event for 2019 was conducted in January by GEI Consultants, Inc. (GEI) at Inactive CCR Landfill No. 3 to comply with Georgia Department of Natural Resources, Environmental Protection Division (GA EPD) Solid Waste Permit No. 051-008D(L)(I). GEI has prepared this semiannual groundwater monitoring report to summarize the January 2019 sampling results and statistical analyses on behalf of GPC. The following observations are described in this report based on review of the January 2019 sampling data and statistical analysis:

- No exceedances of the GA EPD primary or secondary drinking water standards were reported.
- Concentrations of analytes from all samples collected from downgradient monitoring wells were below the respective upper prediction limits (UPLs) except for barium in well GWC-5. An Alternate Source Demonstration (ASD) was submitted to GA EPD in August 2017 identifying natural variation as the source of elevated barium in this well. A Sen's Slope/Mann-Kendall trend test was performed to graphically and statistically to evaluate the barium concentrations in GWC-5. Barium in GWC-5 does not exhibit a statistically significant trend. Elevated barium concentrations in GWC-5 are attributable to natural variation and are not associated with impacts from the facility.

The analytical data with reference to upgradient concentration data, Georgia primary and secondary drinking water standards (maximum contaminant levels [MCLs]), and the results of statistical analyses are presented and summarized in this report. Sampling data sheets, measured depths to groundwater and calculated groundwater elevations, calculated groundwater flow rates, a potentiometric surface contour map, laboratory analyses, and statistical analyses are also included in this report.

1.1 Site History

Inactive CCR Landfill No. 3, Permit No. 051-008D(L)(I), was permitted in 1984, before the current solid waste management regulations of 1993 came into effect. The *Plant McIntosh Ash Disposal Site No. 3 Revised Design-Operation Plan Groundwater Monitoring Plan* (Groundwater Monitoring Plan [GMP]) (GPC, 1999, revised 2010) was submitted and approved in August 1999 and modified in February 2010 as part of the facility Design & Operation (D&O) Plan.

Inactive CCR Landfill No. 3 was closed in 2008. The closure certification was issued by GA EPD on March 21, 2008. Semiannual groundwater monitoring activities are performed in accordance with the facility D&O Plan and the approved August 2017 minor modification.

On August 1, 2017, GPC submitted a minor modification request to add Appendix III sampling parameters contained in 40 CFR 257, Subpart D, 80 Fed Reg. 21468 (April 17, 2015) to the routine semiannual groundwater monitoring program for Landfill No. 3. This minor modification request also included sampling for the Appendix IV parameters contained in 40 CFR 257, Subpart D, 80 Fed. Reg. 21468 (April 17, 2015) to Landfill No. 3's groundwater monitoring program if an assessment monitoring program is triggered. GPC received approval of this modification on August 9, 2017. Appendix III parameters are reported, along with parameters specific to the facility D&O Plan. For past semiannual reports, analytical results for Appendix III and IV parameters were reported to establish background data for future statistical analyses. Appendix III parameters will be statistically evaluated as part of the semiannual groundwater monitoring activities completed in April 2019. Results of the statistical analysis will be provided in a report to GA EPD on August 1, 2019. Appendix IV parameters will only be sampled in the event an assessment monitoring program is initiated.

1.2 Groundwater Monitoring

The groundwater monitoring program evaluates the aquifer immediately underlying Landfill No. 3. Sixteen wells (nine upgradient and seven downgradient) were sampled during this event (Table 1). Monitoring wells GWA-1 and GWA-2 were not sampled as replacement monitoring wells have been installed (GWA-1A, GWA-2A, and GWA-2B); GWA-1 and GWA-2 are currently only used for groundwater level measurements. Monitoring well GWC-4B was dry in January 2019 and was not sampled. Therefore, no statistical analyses are included for this well in this report. The location of each well is presented on Figure 2.

2. Field Methods

GEI conducted all the field work described herein, following the facility D&O Plan. GEI has summarized the field activities and results of the groundwater sampling event in this report.

2.1 Sampling and Chemical Analysis

Potentiometric groundwater elevations were collected from each well with an electronic water level indicator and measured to the nearest 0.01 foot on January 28, 2019 (Table 2). Wells were purged using a peristaltic pump with disposable tubing. While the well was purged, water level data and purge volumes were recorded, and the following field parameters were collected.

pH (field)	Oxidation Reduction Potential (ORP)	Temperature
Specific Conductivity	Dissolved Oxygen (DO)	Turbidity

Wells were purged using low-flow techniques until field parameters stabilized within limits established in the facility D&O Plan. No exceptions to the stabilization criteria were noted during the January 2019 event. Due to the consistent high turbidity in well GWA-7, GPC proposes to abandon GWA-7. A Southern Company Services (SCS)-contracted driller, with GEI oversight services, installed replacement well GWA-7A on August 29, 2018 in an attempt to intercept an interval with less fines than the existing well. GPC will continue to monitor and sample GWA-7 until an approval for abandonment is obtained. Field sampling data are included in Appendix A.

Once the wells were purged, samples were collected in laboratory-supplied plastic bottles. One bottle containing nitric acid preservative was collected for analysis of metals. Samples were placed in coolers with ice and shipped to the TestAmerica laboratory in Pittsburgh, Pennsylvania, under chain of custody control for analysis. TestAmerica is National Environmental Laboratory Accreditation Program (NELAP) certified by the State of Pennsylvania Department of Health (certification number 02-00416). Laboratory analytical data are included in Appendix B.

Groundwater samples were collected from all wells and analyzed according to the approved GMP (GPC, 2010) and the August 2017 minor modification request (GPC, 2017). The metals were analyzed using United States Environmental Protection Agency (EPA) SW846 Method 6020, inorganic anions (chloride, fluoride, sulfate) using EPA Method 300.0, and total dissolved solids (TDS) using Standard Method 2540C-2011.

2.2 Groundwater Flow Velocity

Horizontal flow velocity was calculated using the formulas from *Criteria for Performing Site Acceptability Studies for Solid Waste Landfills in Georgia – Circular 14* (GA EPD, 1991).

$$v = \text{linear velocity} = \frac{Ki}{\eta_e}$$

where :

K = hydraulic conductivity

$$i = \text{hydraulic gradient} = \frac{(h_1 - h_2)}{L}$$

η_e = effective porosity

h_1 and h_2 = groundwater elevation at locations 1 and 2

L = distance between locations 1 and 2

As used in previous reports and originally specified in GMP (GPC, 2010) the average hydraulic conductivity of the shallow aquifer used in the calculations is 2.24 feet per day (ft/day). Soils at the screened intervals of the wells are generally classified as silty sands (SM). The default value for effective porosity given for this type soil in EPA 530/SW-89-031 is 0.20. To calculate an average hydraulic gradient and groundwater velocity across the Site, the hydraulic gradient was calculated between three separate well pairs: GWA-1A/PZ-2 and GWA-7A/GWC-3, and GWA-3A/GWC-2 (Table 3). The average calculated groundwater flow velocity for January 2019 is 0.058 ft/day or 21.17 feet per year (ft/year).

3. Statistical Approach

The statistical approach used for data analysis is consistent with the facility D&O Plan and the Georgia Solid Waste Management Rules §391-3-4 for identifying statistically significant increases (SSIs) in constituent concentrations in downgradient wells relative to upgradient wells. Specifically, the facility D&O Plan requires an interwell prediction interval method of statistical analysis with a one of two resample plan. Statistical decisions not defined in the facility D&O Plan follow the recommendations in the EPA *Unified Guidance, Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities* (Unified Guidance) (EPA, 2009). The EPA Unified Guidance recommends an annual site-wide false positive rate of 10 percent, which is distributed equally among the total number of sampling events. A site-wide false positive rate of 5 percent is targeted for each semiannual sampling event.

The Sanitas™ Groundwater statistical software was used to perform the statistical analyses. Sanitas™ is a proprietary decision support software package, developed in 1991, that incorporates the statistical tests required of Subtitle C and D facilities by EPA regulations and guidance as recommended in the EPA Unified Guidance document (EPA, 2009) (Sanitas™, 2017). A flow diagram showing the decision logic of the statistical procedures utilized in the Sanitas™ software is presented in Statistical Procedure Flow Chart, Figure 3. Additional details regarding the statistical approach are included as Appendix C.

Nine upgradient wells and seven downgradient groundwater quality monitoring wells (GWC-4B was dry) of Inactive CCR Landfill No. 3 were sampled and analyzed during the January 2019 event for approved GMP parameters, Appendix III parameters, and six field parameters.

4. Groundwater Monitoring Results

Groundwater samples were collected from nine upgradient wells and seven downgradient wells (GWC-4B was dry) in accordance with the prescribed sampling methods. Laboratory analyses of the samples are summarized in Table 4. A historical summary of groundwater data for the Site is included in Appendix D.

4.1 Data Validation

Values followed by a "J" flag indicate that the value is an estimated analyte (trace) concentration detected between the method detection limit (MDL) and the practical quantitation limit (PQL). Sanitas™ uses the reported trace value in the statistical analyses. All other values are either reported as detections or not detected (NDs). ND values are preceded with "<".

The relative percent difference (RPD) results for analytes with detections above the reporting limit (estimated, or "J" values were not included) are based on the equation below and results from the calculations are included in Appendix B.

$$RPD = \frac{Conc1 - Conc2}{(Conc1 + Conc2)/2} \times 100\%$$

Sample and sample duplicate GWC-1 and DUP-LF3-01 and GWC-2 and DUP-LF3-02 analyte concentrations were above the reporting limits for all constituents. The calculated RPD for each sample pair were within acceptable levels, except for barium. The positive results for barium in samples GWC-1 and DUP-LF3-01 were qualified as estimated (J). Therefore, the direction of the bias could not be determined from this nonconformance in field samples associated with the 180-86243-2 sample delivery group. Note that the data presented in Table 4 are representative of the validated data, and not necessarily that which is included in the laboratory reports.

For the field quality analysis/quality control (QA/QC) samples FB-LF3-01/FERB-LF3-01 and FB-LF3-02/FERB-LF3-02, low level laboratory contamination was detected in select method blanks. In the associated metals method blank, laboratory blank contamination was evaluated prior to possible field blank contamination. Low level laboratory contamination was detected in the metals field blanks after evaluation of method blank contamination. Therefore, laboratory contamination was not detected in the associated field blank samples after application of laboratory blank contamination qualifications.

Based on the identification of low-level laboratory contamination in the method blanks during data validation, select sample results from the entire data set were qualified as either an estimated (J) value above the reporting limit as a high bias for chromium, vanadium, and zinc or changed

to nondetect (U) at the reporting limit for chromium, lead, and vanadium. The qualified data result is shown in Table 4.

The table in Appendix B summarizes the contamination and validation actions taken. No constituents were detected at concentrations over the laboratory reporting limit in field blanks or field equipment rinse blank samples. Copies of the laboratory analytical reports are included in Appendix B along with a copy of the GEI validation report.

4.2 Groundwater Levels

Groundwater levels were measured January 28, 2019, prior to conducting groundwater sampling, and are listed in Table 2. Potentiometric surface elevation contours and estimated groundwater flow direction developed using the January 2019 sampling event data are shown on Figure 4. The groundwater level measurements indicate groundwater flows from the southwest to the northeast across the Site (Figure 4), which is consistent with previous observations.

Monitoring wells GWA-3B and GWC-4B appear to be screened in a shallow perched zone and the groundwater elevation data from these wells were not used to create the potentiometric surface map as they are not considered to be representative of the groundwater conditions at the Site. GPC will seek approval to abandon these wells as they do not provide representative groundwater levels.

In addition, the groundwater elevations from monitoring well GWA-1 and GWA-2A were not used in the current potentiometric surface contour map due to a difference in groundwater elevations between the original wells (GWA-1 and GWA-2) and replacement wells (GWA-1A and GWA-2A). The screened lithologies for GWA-1 and GWA-2 or its replacement well (GWA-2A) do not appear to be representative of Site groundwater levels. A SCS-contracted driller, with GEI oversight services, installed GWA-2B on August 29, 2018 in the area of GWA-2/GWA-2A to determine if a screened interval can be identified that is more representative of Site groundwater (within the first water-bearing aquifer that is not perched). GPC proposes to abandon GWA-1, GWA-2, and GWA-2A upon approval from GA EPD. In the meantime, GEI will continue with the routine monitoring activities on the wells proposed for abandonment until GA EPD approves the request.

5. Statistical Results

A summary of groundwater statistical analysis of January 2019 semiannual monitoring data is included with the Sanitas™ statistical outputs in Appendix E. Results from these analyses are summarized in the following sections.

5.1 Preliminary Data Screening and Evaluation

Background data were screened using descriptive statistics to characterize the detection frequencies and data distributions, which inform subsequent analyses. The descriptive statistics (Table 5) for upgradient wells show several relevant characteristics about the data, including:

- A high rate of non-detect values in upgradient wells. Only barium, chromium, and zinc had greater than a 50 percent detection rate in pooled upgradient wells.
- Most of the well-analyte pairs had no discernable data distribution.

Background data were screened using descriptive statistics to characterize the detection frequencies and data distributions which inform subsequent analyses. Table 5 presents a summary of descriptive statistics for upgradient and downgradient monitoring wells, as well as a summary of pooled upgradient descriptive statistical results. Upgradient monitoring wells exhibit a high frequency of non-detect values for most analytes. Barium, chromium, cobalt (GWA-5 only), vanadium (GWA-1A only), and zinc were detected at a frequency of 50 percent or greater at upgradient monitoring locations. The distribution of data for most well-analyte pairs could not be determined based on this high frequency of non-detect values. A statistically increasing trend in barium concentration was identified at monitoring locations GWA-2A, GWA-3A, and GWA-4 using the Mann-Kendall analysis. Sen's Slope/Mann-Kendall plots of barium in time-series format are presented in Appendix E.

5.2 Calculating the UPLs and Screening

Upper Prediction Limits were generated in Sanitas™, following the decision rules outlined in Section 3.0 (Appendix E). A summary of the UPLs are provided in Table 6. The most recent measured concentration for each downgradient well and analyte at Landfill No. 3 was compared to the corresponding interwell UPL. All wells and analytes were below their respective UPL except for barium in well GWC-5 (Table 7).

The Sen's Slope/Mann-Kendall trend test was conducted on barium concentrations in well GWC-5. No statistically significant trend was determined.

UPLs were generated for the January 2019 groundwater data using Sanitas™, following the decision rules previously outlined in Section 3.0 of this report. Interwell UPLs are summarized on Table 6. Per the approved facility D&O Plan, upgradient monitoring well data were pooled for the construction of interwell UPLs. Barium was detected at downgradient monitoring well GWC-5 above the UPL of 0.30 milligrams per liter (mg/L) at a concentration of 0.45 mg/L (Table 7) during the January 2019 sampling event. All other analytical parameters were below the respective UPLs at each downgradient monitoring location.

Barium concentrations above the UPL in well GWC-5 were first reported in the *First 2017 Semi-Annual Groundwater Monitoring Report* (Environmental Resource Management [ERM], 2017) for the facility. An ASD was prepared by ERM in August 2017 to address the SSI in barium at this location. The ASD identified natural variability as the cause of the increase in barium concentrations. Groundwater elevation, concentration of barium, and measured specific conductivity recorded at GWC-5 are consistent with measurements collected at GWC-5 since June 2016.

To evaluate barium concentrations in GWC-5, a Sen's Slope/Mann-Kendall trend test was performed to graphically and statistically evaluate the barium concentrations in GWC-5 and is provided in Appendix E. No statistically significant increasing barium concentration trend was identified in well GWC-5 for the last 42 sampling events. As described in Section 5.1, upgradient monitoring wells GWA-2A, GWA-3A, and GWA-4 all exhibit a statistically significant increasing barium concentration trend. Additionally, the Boxplots analysis (Appendix E) indicates spatially variable barium concentrations in upgradient samples. The January 2019 barium results in GWC-5 are consistent with the findings of the August 2017 ASD; therefore, barium concentrations in GWC-5 are attributed to variability in background concentrations and are not associated with impacts from the facility.

Constituent concentrations detected during the January 2019 monitoring event in each downgradient well were also compared with the GA EPD primary and secondary MCLs on Table 4. There were no reported concentrations above the primary or secondary MCLs.

6. Summary and Recommendations

GEI conducted a groundwater sampling event in January 2019 for Plant McIntosh Inactive CCR Landfill No. 3. GEI has prepared this report summarizing field activities and the results of the groundwater sampling event. Nine upgradient wells and seven downgradient groundwater quality monitoring wells of the Site were sampled and analyzed during the January 2019 event for approved GMP parameters, Appendix III parameters, and six field parameters. All wells and analytes were below their respective UPL except for barium in well GWC-5 (Table 7).

The January 2019 barium results in GWC-5 are consistent with the findings of the August 2017 ASD; barium concentrations in GWC-5 are attributed to variability in background concentrations and are not associated with impacts from the facility.

No exceedances of the Georgia primary or secondary drinking water standards were reported. Therefore, GEI recommends the following:

- Perform semiannual groundwater monitoring in spring and fall 2019.
- Continue semiannual reporting. Submit a semiannual report evaluating data collected during the first half of the year to the GA EPD on July 31st. Submit a comprehensive annual report for data collected throughout the entire year on January 31st.
- Adopt statistical methodologies, as recommended in the EPA Unified Guidance (EPA, 2009). This includes prediction limits with retesting (interwell and/or intrawell), as well as other methods for testing data, outlier screening, and non-detect adjustment; and
- Evaluate replacement of monitoring wells GWA-3B and GWC-4B, which appear to be screened in a shallow perched zone and therefore, these wells are not considered to be representative of the groundwater conditions at the Site. In addition, GWC-4B has been dry since January 2018. GPC proposed to abandon GWA-3B and GWC-4B. In addition, the screened lithologies for GWA-1 and GWA-2 or its replacement well (GWA-2A) do not appear to be representative of Site groundwater levels. A SCS-contracted driller, with GEI oversight services, installed GWA-2B on August 29, 2018 in the area of GWA-2/GWA-2A to determine if a screened interval can be identified that is more representative of Site groundwater (within the first water-bearing aquifer that is not perched). GPC proposes to abandon GWA-1, GWA-2, and GWA-2A. Finally, due to the consistent high turbidity in well GWA-7, GPC proposes to abandon GWA-7. A SCS-contracted driller, with GEI oversight services,

installed GWA-7A on August 29, 2018 in the area of GWA-7 in an attempt to intercept an interval with less fines than the existing well. The attempt was successful with the installation of GWA-7A.

- GPC is seeking approval to abandon these wells as they do not provide representative groundwater conditions for the Site. In the meantime, GEI will continue with the routine monitoring activities on the wells proposed for abandonment until GA EPD approves the request to abandon the wells.

Notes:

bTOC - below top of casing

ft - feet

All monitoring wells are 2 inches in diameter and casing material is polyvinyl chloride (PVC)

Elevations are in feet relative to North American Vertical Datum (NAVD)88

Northing and easting are in feet North American Datum (NAD)83, State Plane Georgia East Zone

GWA-1A and GWA-2A were installed as replacement wells for GWA-1 and GWA-2, respectively

GWC-7 was originally installed 5/6/1998 and was replaced with a new well (also called GWC-7) in November 2000

GWA-7 is the same well as GWC-7, but the name was modified in February 2010 as a part of the Minor Modification Request to the D&O plan

GWA-2B is proposed as a replacement well for GWA-2/GWA-2A in the November 2018 submittal

GWA-7A is proposed as a replacement well for GWA-7 in the November 2018 submittal

Notes:

All monitoring wells were gauged and depth to bottom measured on January 28, 2019

bTOC - below top of casing

Depth to water measurements made from top of casing

Elevations are in feet relative to North American Vertical Datum (NAVD)88

ft - feet

NI - not installed at time of measurement

Previous depth to water measurements collected on July 9, 2018 and recorded in the Semiannual Groundwater Report – July 2018

Table 3. Groundwater Velocity Calculations

Semiannual Groundwater Monitoring Report - January 2019

Georgia Power Company

Plant McIntosh Inactive CCR Landfill No. 3

Effingham County, Georgia

Monitoring Wells	h_1	h_2	K (ft/day)	n_e	dh (ft)	dl (ft)	i (ft/ft)	Velocity (ft/day)	Velocity (ft/year)		
GWA-1A and PZ-2	56.88	50.52	2.24	0.20	6.36	915	0.0070	0.078	28.47		
GWA-7A and GWC-3	52.32	48.32			4.00	541	0.0074	0.083	30.30		
GWA-3A and GWC-2	51.98	50.86			1.12	899	0.0012	0.014	5.11		
								Avg. (ft/day)	Avg. (ft/year)		
								0.058	21.17		

Notes:

ft - feet

 h_1 and h_2 - groundwater elevation at location 1 and 2

K - hydraulic conductivity

 n_e - effective porositydh - difference between h_1 and h_2

dl - distance between locations 1 and 2

i - hydraulic gradient (dh/dl)Velocity = linear velocity = Ki/n_e

General Notes:

Bolded - detected value

* EPA Action Level; **Georgia secondary drinking water standard established by EPA as a general guideline only (not enforced)

µS/cm - microsiemens per centimeter

Appendix III parameters were added to the semiannual groundwater monitoring program in the approved August 2017 minor modification request.

MCL -Maximum Contaminant Level

mg/L - milligrams per liter

mV - millivolts

NE - not established

ntu - nephelometric turbidity units

s.u. - Standard Units

State-required parameters required by the Georgia EPD per MPM on Design & Operation Plan for Landfill No. 3, dated August 1999.

Total metals analysis was performed. Temperature, specific conductance, pH, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity were measured and recorded in the field.

Validator Qualifiers:

The data presented in this table are representative of the validated data, and not necessarily that which is included in the laboratory reports.

< The analyte was not detected at a concentration above the specified laboratory reporting limit.

J - The result is an estimated value.

Notes:

N - number of samples in a well/analyte pair

N/A - not applicable

0

Table 6. Calculated Upper Prediction Limits
Semiannual Groundwater Monitoring Report - January 2019
Georgia Power Company
Plant McIntosh - Inactive CCR Landfill No. 3
Effingham County, Georgia

Constituent	Well	Upper Limit (mg/L)	Background Number of Samples	Number of Detected Values	% Non-Detect Values	Transform	Alpha	Method
Barium	Pooled Upgradient	0.300	305	305	0	n/a	0.0000492	NP Inter (normality) 1 of 2
Beryllium	Pooled Upgradient	0.004	308	55	82	n/a	0.0000492	NP Inter (NDs) 1 of 2
Chromium	Pooled Upgradient	0.097	304	170	44	n/a	0.0000492	NP Inter (normality) 1 of 2
Cobalt	Pooled Upgradient	0.017	304	94	69	n/a	0.0000492	NP Inter (NDs) 1 of 2
Copper	Pooled Upgradient	0.019	263	29	89	n/a	0.0000492	NP Inter (NDs) 1 of 2
Lead	Pooled Upgradient	0.044	307	53	83	n/a	0.0000492	NP Inter (NDs) 1 of 2
Vanadium	Pooled Upgradient	0.110	260	78	70	n/a	0.0000492	NP Inter (NDs) 1 of 2
Zinc	Pooled Upgradient	0.150	260	185	29	n/a	0.0000492	NP Inter (normality) 1 of 2

Notes:

% - percent

* indicates the upper prediction limits was constructed with a one or two retesting strategy

mg/L - milligrams per liter

n/a - not applicable

NDs - non-detects

NP - non-parametric

Table 7. Downgradient Concentrations in Excess of UPL
Semiannual Groundwater Monitoring Report - January 2019
Georgia Power Company
Plant McIntosh - Inactive CCR Landfill No. 3
Effingham County, Georgia

Constituent	Well	Calculated UPL (mg/L)	Date	Observation (mg/L)	Trend ⁽¹⁾
Barium	GWC-5	0.30	1/31/2019	0.45	Stable

Notes:

mg/L - milligrams per liter

UPL - upper prediction limit

1. Concentration trend calculated using Mann-Kendall/Sen's Estimate of Slope analysis at 98% confidence interval.

Product Name: Low-Flow System

Date: 2019-01-30 13:03:02

Project Information:

Operator Name L Coker
 Company Name GEI
 Project Name LF3
 Site Name McIntosh
 Latitude 0° 0' 0"
 Longitude 0° 0' 0"
 Sonde SN 369370
 Turbidity Make/Model Lamotte2020we

Pump Information:

Pump Model/Type Alexis Peristaltic
 Tubing Type LDPE
 Tubing Diameter 0.17 in
 Tubing Length 33 ft

Pump placement from TOC 3 ft

Well Information:

Well ID GWA-1A
 Well diameter 2 in
 Well Total Depth 37.3 ft
 Screen Length 10 ft
 Depth to Water 10.00 ft

Pumping Information:

Final Pumping Rate 200 mL/min
 Total System Volume 0.237293 L
 Calculated Sample Rate 300 sec
 Stabilization Drawdown 0 in
 Total Volume Pumped 7.6 L

Product Name: Low-Flow System

Date: 2019-01-30 16:03:07

Project Information:

Operator Name J Adcock
 Company Name GEI
 Project Name LF3
 Site Name Plant McIntosh
 Latitude 0° 0' 0"
 Longitude 0° 0' 0"
 Sonde SN 369555
 Turbidity Make/Model LaMotte 2020we

Pump Information:

Pump Model/Type Alexis Peristaltic
 Tubing Type LDPE
 Tubing Diameter 0.17 in
 Tubing Length 30 ft

Pump placement from TOC 3 ft

Well Information:

Well ID GWA-4
 Well diameter 2 in
 Well Total Depth 29.16 ft
 Screen Length 5 ft
 Depth to Water 10.39 ft

Pumping Information:

Final Pumping Rate 150 mL/min
 Total System Volume 0.2239027 L
 Calculated Sample Rate 300 sec
 Stabilization Drawdown 51.96 in
 Total Volume Pumped 6 L

Receipt Checklists	33

Case Narrative

Client: Southern Company
Project/Site: CCR - Plant McIntosh Ash Landfill #3

TestAmerica Job ID: 180-86243-2
SDG: L3 State Compliance

Job ID: 180-86243-2

Laboratory: TestAmerica Pittsburgh

Narrative

Job Narrative 180-86243-2

Revision 2 ; to set RL to those in SOW

Revised: to change RLs for B and Ca to routine

Comments

No additional comments.

Receipt

The samples were received on 1/31/2019 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.6° C and 2.8° C.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. One out of four COC's does not have a relinquished by time listed.

Anions

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Method(s) 6020: The serial dilution performed for the following sample associated with batch 180-269787 was outside control limits for barium : GWA-3A (180-86243-6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Southern Company

Project/Site: CCR - Plant McIntosh Ash Landfill #3

TestAmerica Job ID: 180-86243-2

SDG: L3 State Compliance

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: Southern Company

Project/Site: CCR - Plant McIntosh Ash Landfill #3

TestAmerica Job ID: 180-86243-2

SDG: L3 State Compliance

Laboratory: TestAmerica Pittsburgh

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Login Sample Receipt Checklist

Client: Southern Company

Job Number: 180-86243-2

SDG Number: L3 State Compliance

Login Number: 86243

List Source: TestAmerica Pittsburgh

List Number: 1

Creator: Watson, Debbie

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A		1
The cooler's custody seal, if present, is intact.	True		2
Sample custody seals, if present, are intact.	True		3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	True		5
Cooler Temperature is acceptable.	True		6
Cooler Temperature is recorded.	True		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	False		10
Is the Field Sampler's name present on COC?	True		11
There are no discrepancies between the containers received and the COC.	True		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		
Containers are not broken or leaking.	True		
Sample collection date/times are provided.	True		
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	True		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A

Narrative

Job Narrative 180-86297-2

Revision 2 ; to set RL to those in SOW

Revised: to change RLs for B and Ca to routine

Comments

No additional comments.

Receipt

The samples were received on 2/1/2019 3:55 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.8° C.

Anions

Samples 3,5 and 6 were reanalyzed as initial results did not match historical results; The reanalysis confirmed that the samples were switched when at the instrument for analysis. These samples were reanalyzed on 2/22/19 . Only the results obtained from the reanalysis for these three samples are being reported.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Southern Company

Project/Site: CCR - Plant McIntosh Ash Landfill #3

TestAmerica Job ID: 180-86297-2

SDG: L3 State Compliance

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

QC Samples: Field/Equipment blanks: FB-LF3-01, FERB-LF3-01
 Field Duplicate pairs: GWC-1/DUP-LF3-01

The above-listed aqueous samples, equipment blank, and field blank sample were collected on January 30, 2019 and were analyzed for select total recoverable metals by SW-846 method 6020, total dissolved solids (TDS) by Standard Methods SM 2540C, and anions (chloride, fluoride, and sulfate) by EPA method 300. The data were reviewed based on the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Inorganic Methods Data Review, January 2017 (USEPA-540-R-2017-001), as well as by the methods referenced and professional and technical judgment.

The data were evaluated based on the following parameters:

- Data Completeness
- Holding Times and Sample Preservation
- Method and Field Blanks
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
- Laboratory Duplicate Results
- Laboratory Control Sample (LCS) Results
- Field Duplicate Results
- Quantitation Limits

Site: Georgia Power Plant, Inactive Landfill No. 3 State Compliance

Report No.: 180-86243-2

Date: March 14, 2019

All results are usable as reported or usable with minor qualification due to sample matrix or laboratory quality control outliers.

The validation findings were based on the following information.

Data Completeness

The level 2 (reduced deliverable) data package was complete as received by the laboratory and included sample results, method blank, MS/MSD, laboratory duplicate, and LCS results. A revision of this report was received for review which included the correction of reporting limits.

Holding Times and Sample Preservation

All criteria were met.

Method and Field Blanks

Field Blank Results

Contamination was not detected in the associated field blank samples.

Laboratory Blank Results

Low level laboratory contamination was detected in select laboratory method blank samples. The following table summarizes the contamination and validation actions taken.

Analyte	Blank ID/ Associated Samples	Maximum Contaminant Level (mg/L)	10x Action Level (mg/L)	Validation Actions
Chromium	Method MB180-269611: GWC-1, GWA-1A, GWA-2A, GWA-2B, GWC-3, GWA-3A, GWA-3B	0.00117	0.0117	Qualify results for chromium in sample GWC-1 and GWA-2A as nondetect (U) at the RL. Estimate (J) the positive results for chromium in samples GWA-1A, GWA-2B, GWC-3, GWA-3A, and GWA-3B; High bias.
Vanadium		0.000971	0.0097	Qualify results for vanadium in samples GWA-1A, GWA-2A, GWA-2B, GWC-3, and GWA-3A as nondetect (U) at the RL. Estimate (J) the positive result for vanadium in sample GWA-3B; High bias.

Blank Actions:

If the sample result is < reporting limit (RL); report the result as nondetect (U) at the RL.

If the sample result is \geq RL and $< 2 \times$ blank contamination detected; professional judgment was taken to report the result as nondetect (U) at the reported value.

If the sample result is $\geq 2 \times$ blank and $< 10 \times$ Action Level; report the sample result as estimated (J); biased high.

If the sample result is nondetect or $> 10 \times$ Action Level; validation action is not required.

Report No.: 180-86243-2

Date: March 14, 2019

MS/MSD Results

MS/MSD analyses were performed on samples GWC-3 and GWA-7 for anions and sample GWA-3A for metals. All criteria were met.

Laboratory Duplicate Results

MSD analyses were performed for anions and metals in lieu of laboratory duplicate analyses.

LCS Results

All criteria were met.

Field Duplicate Results

Samples GWC-1 and DUP-LF3-01 were submitted as the field duplicate pair with this sample set. The following table summarizes the RPDs of the detected analytes in the field duplicate pair, which were within the acceptance criteria except for barium. The positive results for barium in samples GWC-1 and DUP-LF3-01 were qualified as estimated (J). The direction of the bias cannot be determined from this nonconformance.

Analyte	GWC-1 (mg/L)	DUP-LF3-01 (mg/L)	RPD (%)
Chloride	4.9	4.8	2.1
Sulfate	0.58 J	0.74 J	24.2
Barium	0.018	0.013	32.3
Beryllium	0.000090 J	0.0025 U	NC, Within the RL
Cobalt	0.00023 J	0.00013 J	55.6, Within the RL
Chromium	0.025 U	0.00092 J	NC, Within the RL
Calcium	0.24 J	0.21 J	13.3
Total Dissolved Solids	24	34	34.5, Within the RL

NC – Not calculable
Criteria: When both results are ≥ 5 x the RL, RPDs must be $< 30\%$.
When results are < 5 x the RL, professional judgement was taken to estimate results if the absolute difference between the original and field duplicate $>$ RL.

Quantitation Limits

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL). These results were qualified as estimated (J) by the laboratory.

Report No.: 180-86243-2

Date: March 14, 2019

DATA VALIDATION QUALIFIERS

- U - The analyte was analyzed for, but due to blank contamination was flagged as nondetect (U). The result is usable as a nondetect.
- J - Data are flagged (J) when a QC analysis fails outside the primary acceptance limits. The qualified "J" data are not excluded from further review or consideration. However, only one flag (J) is applied to a sample result, even though several associated QC analyses may fail. The 'J' data may be biased high or low or the direction of the bias may be indeterminable.
- UJ - The analyte was not detected above the reported sample quantitation limit. Data are flagged (UJ) when a QC analysis fails outside the primary acceptance limits. The qualified "UJ" data are not excluded from further review or consideration. However, only one flag is applied to a sample result, even though several associated QC analyses may fail. The 'UJ' data may be biased low.
- NJ - The analysis indicates the presence of a compound that has been "tentatively identified" (N) and the associated numerical value represents its approximate (J) concentration.
- R - Data rejected (R) on the basis of an unacceptable QC analysis should be excluded from further review or consideration. Data are rejected when associated QC analysis results exceed the expanded control limits of the QC criteria. The rejected data are known to contain significant errors based on documented information. The data user must not use the rejected data to make environmental decisions. The presence or absence of the analyte cannot be verified.

Site: Georgia Power Plant, Inactive Landfill No. 3 State Compliance
Report No.: 180-86297-2
Date: March 14, 2019

The validation findings were based on the following information.

Data Completeness

The level 2 (reduced deliverable) data package was complete as received by the laboratory and included sample results, method blank, MS/MSD, laboratory duplicate, and LCS results with the following exception: the reporting limits for boron and calcium were incorrect. Upon initial review, as the anion field duplicate results did not match and anion results for samples GWC-5 and GWC-2 were not consistent with historical results, the laboratory was requested to reanalyze anion samples GWC-5, GWC-2, and DUP-LF3-02. The reanalysis confirmed that the samples were switched when at the instrument for analysis. The anion reanalysis results were reported for these samples. A revision of this report was received for review which included the correction of reporting limits and anion results.

Holding Times and Sample Preservation

All criteria were met.

Blank Results

Laboratory Blank Results

Low level laboratory contamination was detected in the associated metals method blank. Laboratory blank contamination was evaluated prior to possible field blank contamination. The following table summarizes the contamination and validation actions taken.

Analyte	Blank ID/ Associated Samples	Concentration (mg/L)	10x Action Level (mg/L)	Validation Actions
Lead	Method blank	0.000279 J	0.00279	Qualify results for lead in samples FB-LF3-02, FERB-LF3-02, GWC-5, GWC-6, GWC-2, and DUP-LF3-02 as nondetect (U) at the RL.
Zinc	MB180-269614: All samples	0.00397 J	0.0397	Qualify results for zinc in samples GWC-6, GWC-2, and DUP-LF3-02 as nondetect (U) at the reporting limit. Estimate (J) the positive result for zinc in sample GWC-5; High bias.

Blank Actions:

If the sample result is < reporting limit (RL); report the result as nondetect (U) at the RL.

If the sample result is \geq RL and <2x blank contamination detected; report the result as nondetect (U) at the reported value.

If the sample result is \geq 2x blank contamination and < 10x Action Level; report the sample result as estimated (J); biased high.

If the sample result is nondetect or > 10x Action Level; validation action is not required.

Field Blank Results

Low level laboratory contamination was detected in the metals field blanks after evaluation of method blank contamination. The following table summarizes the highest level of contamination and validation actions taken.

Site: Georgia Power Plant, Inactive Landfill No. 3 State Compliance**Report No.: 180-86297-2****Date: March 14, 2019**

Analyte	Blank ID/ Associated Samples	Maximum Contaminant Level (mg/L)	10x Action Level (mg/L)	Validation Actions
Chromium	FB-LF3-02/FERB-LF3-02: All samples	0.0014	0.014	Qualify results for chromium in samples GWC-5 and GWC-6 as nondetect (U) at the RL. Estimate (J) the positive results for chromium in samples GWC-2 and DUP-LF3-02; High bias.
Calcium		0.16	1.6	Validation actions were not required.
Vanadium		0.00091	0.0091	Qualify results for vanadium in samples GWC-5, GW-6, and GWC-2 as nondetect (U) at the reporting limit.

Blank Actions:

If the sample result is < reporting limit (RL); report the result as nondetect (U) at the RL.

If the sample result is \geq RL and <2x blank contamination detected; report the result as nondetect (U) at the reported value.If the sample result is \geq 2x blank contamination and < 10x Action Level; report the sample result as estimated (J); biased high.

If the sample result is nondetect or > 10x Action Level; validation action is not required.

MS/MSD Results

MS/MSD analyses were performed on sample GWC-2 for anions. All criteria were met.

Laboratory Duplicate Results

MSD analyses were performed for anions in lieu of laboratory duplicate analyses.

LCS Results

All criteria were met.

Field Duplicate Results

Samples GWC-2 and DUP-LF3-02 were submitted as the field duplicate pair with this sample set. The following table summarizes the RPDs of the detected analytes in the field duplicate pair, which were within the acceptance criteria.

Analyte	GWC-2 (mg/L)	DUP-LF3-02 (mg/L)	RPD (%)
Chloride	5.2	5.2	0
Fluoride	0.10 U	0.026 J	NC, Within the RL
Sulfate	0.57 J	0.48 J	17.1
Barium	0.067	0.067	0
Beryllium	0.000065 J	0.000087 J	28.9
Cobalt	0.00092 J	0.00088 J	4.4
Chromium	0.0061	0.0057	6.8
Calcium	4.8	4.5	6.5
Boron	0.040 J	0.038 J	5.1
Total Dissolved Solids	45	45	0

NC – Not calculable

Criteria: When both results are \geq 5x the RL, RPDs must be <30%.

When results are < 5x the RL, professional judgement was taken to estimate results if the absolute difference between the original and field duplicate >RL.

Description of the Statistical Approach

Memo

To: Lauren M. Petty, P.G.
From: Michael Cummings
C:
Date: April 30, 2019
Re: Description of Statistical Approach
Georgia Power Company
Plant McIntosh Inactive CCR Landfill No. 3
Effingham County, Georgia

Handling of Non-Detects and Flagged Data

Non-detect values (NDs) were substituted with the most recent practical quantitation limits (PQLs, or reporting limits) as reported by the laboratory due to detection limit variations over the course of the sampling periods. Substitution of the most recent PQL generally results in a lower and more conservative prediction limit (United States Environmental Protection Agency [USEPA] 2009, Chapter 15). Handling of censored values in prediction limit calculations followed the USEPA Unified Guidance (2009):

- When data contained less than 15 percent NDs in background, simple substitution of the PQL is utilized in the statistical analysis.
- When data contained between 15 to 50 percent NDs the Kaplan-Meier non-detect adjustment was applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the PQL.
- When data contained greater than 50 percent NDs, non-parametric prediction limits were used.
- When data were 100 percent ND, no statistical analyses are required (USEPA Unified Guidance, 2009, Chapter 6).

Establishing the Upgradient Data Set

Spatial heterogeneity in background (upgradient) monitoring wells was checked visually using boxplots and statistically using the Kruskal-Wallis test (USEPA Unified Guidance, 2009). Any spatial heterogeneity was noted in the results and discussion; however, data from all upgradient wells were pooled regardless of these findings since interwell prediction limits are required by the Design and Operation (D&O) Plan.

The USEPA Unified Guidance (2009) recommends that testing of outliers be performed on background data sets. No outliers have been identified in the historical upgradient data set.

Calculating Upper Prediction Limits

The Statistical Procedure Flow Chart (Figure 3) presents the process for establishing upper prediction limits (UPLs). Specific procedures used for calculating UPLs included:

- Time series plots on all wells to examine the data visually for seasonal and directional trends.
- Sen's Slope/Mann Kendall tests for trends to confirm directional trends for wells individually and for pooled upgradient wells.
- The Shapiro-Wilk/Shapiro-Francia test for normality to test the distribution of data. After performing any needed data transformations, UPLs were constructed with at least 95 percent confidence, a 1-of-2 retesting scheme and an annual site-wide false positive rate of 10 percent. UPLs were calculated using the recommended data ladder of powers transformation and ND handling from Sanitas™.

When data followed a normal or transformed-normal distribution and detection rates were at least 50 percent, parametric prediction limits were constructed. Nonparametric prediction limits were constructed on data sets with greater than 50 percent NDs, for small datasets (five samples or fewer, per USEPA Unified Guidance), or when data did not follow a transformed normal distribution. All UPLs were constructed using pooled upgradient well data at Plant McIntosh Inactive CCR Landfill No. 3 for interwell comparisons per the approved D&O Plan for the facility.

Comparison to UPL

If the most recent downgradient concentration exceeded its respective UPL, it was flagged as an initial exceedance. Exceptions to this were as follows:

- If the upgradient wells were 100 percent ND, any detected downgradient measurement was considered a Statistically Significant Increase (SSI).
- If the most recent downgradient well result is a ND, it is assumed to be below the upgradient UPL even if the upgradient wells are 100 percent ND. As a result, the downgradient well is assumed to comply.

The most recent sample from each downgradient well was also compared to the Georgia primary or secondary drinking water standards (Table 4). Per the 1 of 2 resampling scheme for the prediction limits, any well with an initial exceedance is eligible to be resampled to confirm the initial finding (USEPA 2009).

Trend Testing

The Sen's Slope/Mann Kendall trend test was run on any downgradient wells found to exceed their respective interwell prediction limit (and which do not currently have a successful Alternative Source Demonstration established) to determine if trends in concentrations were increasing, decreasing, or stable over time. No trend tests were calculated if the dataset had fewer than five detected values and 50 percent detected values because insufficient data was available to reliably test for trends (USEPA 2009).

Appendix D

Historical Groundwater Analytical Results

**Appendix D. Groundwater Analytical Results - Historic
Semiannual Groundwater Monitoring Report - January 2019
Georgia Power Company
Plant McIntosh Inactive CCR Landfill No. 3
Effingham County, Georgia**

General Notes:

-- not available or not collected for analysis of this parameter

Bolded - detected value

MCL - Maximum Contaminant Level

µS/cm - microsiemens per centimeter

mg/L - milligrams per liter

mV - millivolts

ND - none detected

NE - not established

NTU - nephelometric turbidity units

SU - Standard Units

TDS - total dissolved solids

*Georgia secondary drinking water standard established by EPA as a general guideline only (not enforced)

Total metals analysis was performed. Temperature, specific conductance, pH, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity were measured and recorded in the field during well vacuumation.

State-required parameters required by the Georgia EPD per minor modification request on Design & Operation Plan for LF3, dated August 1999. Appendix III parameters were added to the semiannual groundwater monitoring program in the approved August 2017 minor modification request.

Laboratory Qualifiers:

The data presented in this table are representative of the validated data, and not necessarily that which is included in the laboratory reports.

< - The analyte was not detected at a concentration above the specified laboratory reporting limit.

J - The result is an estimated value.

Validator Qualifiers:

< - The analyte was not detected at a concentration above the specified laboratory reporting limit.

F2F1 - Field duplicate results were outside the control limit.

H - Holding times were exceeded

J - The result is an estimated value

V - Surrogate recovery is not within method control limits

Appendix D. Groundwater Analytical Results - Historic
 Semiannual Groundwater Monitoring Report - January 2019

Exceeds Limit: GWC-5

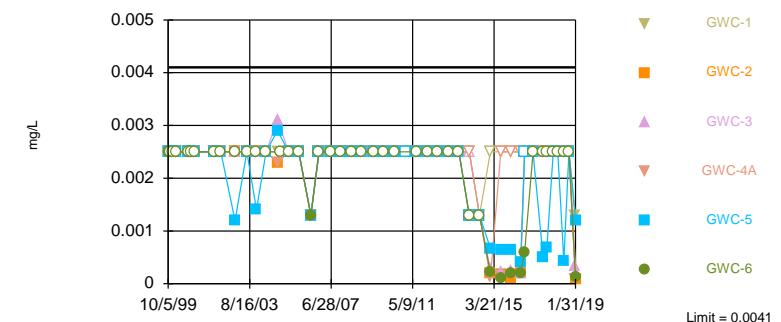

Prediction Limit
Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 305 background values. Annual per-constituent alpha = 0.0005902. Individual comparison alpha = 0.0000492 (1 of 2). Comparing 6 points to limit.

Within Limit

Prediction Limit
Interwell Non-parametric

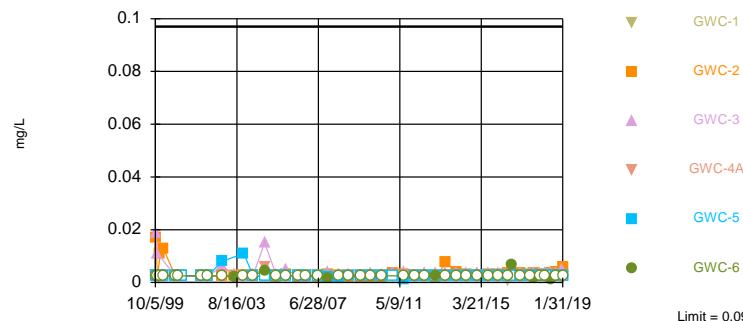

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 308 background values. 81.82% NDs. Annual per-constituent alpha = 0.0005902. Individual comparison alpha = 0.0000492 (1 of 2). Comparing 6 points to limit.
