## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Method(s) 300.0: The following samples were diluted to bring the concentration of target analytes within the calibration range: GWC-9 (400-130301-2), GWC-7 (400-130301-3) and DUP-2 (400-130301-9). Elevated reporting limits (RLs) are provided.

**Metals**

Method(s) 6020: The method blank for preparation batch 331989 and analytical batch 332368 contained Chromium above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
*	LCS or LCSD is outside acceptance limits.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Method(s) 9315: Radium-226 Prep Batch 160-281400: The RPD/RER for the sample duplicate (400-130400-A-7-A DU) is outside acceptance criteria (40%/1; 357%/1.12). However, the activity for both the sample (400-130400-C-7-A) and the duplicate is below the MDC. Batch precision is demonstrated by a passing RER for sample duplicate 400-130400-A-2-A DU (0.82). The data have been qualified and reported. ## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

### Metals

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-7 (400-132829-24). Elevated reporting limits (RLs) are provided.

**Metals**

Method(s) 6020: The method blank for preparation batch 340230 and analytical batch 340403 contained Antimony and Vanadium above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 6020: The matrix spike (MS) recoveries for preparation batch 340230 and analytical batch 340403 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

## Narrative

### Job Narrative 400-133486-1

#### HPLC/IC

Method(s) 300.0: The laboratory control sample (LCS) for analytical batch 341315 recovered outside control limits for the following analytes: Fluoride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

#### Metals

Method(s) 6020: The post digestion spike % recovery for Calcium associated with batch 341398 was outside of control limits.

Method(s) 7470A: The method blank for prep batch 341212 contained Mercury above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

## Narrative

### Job Narrative 400-135240-3

#### Metals

Method(s) 6020: The following sample was diluted to bring the concentration of target analytes within the calibration range: (400-135255-B-2-B ^25). Elevated reporting limits (RLs) are provided.

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 347015 recovered above the upper control limit for Lead. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: GWA-29 (400-135240-25) and (400-135255-B-2-B ^5).

Method(s) 6020: The serial dilution performed for the following sample associated with batch 347015 was outside control limits for Chromium: (400-135255-B-2-B SD)

Method(s) 6020: The post digestion spike % recovery for Lead associated with batch 347015 was outside of control limits.

Method(s) 6020: The native sample and post digestion spike associated with preparation batch 346573 and analytical batch 347015 were performed at the same dilution. Due to the additional level of analyte present in the spiked sample, the concentration of Calcium in the PDS was above the instrument calibration range. The data have been reported and qualified.

Method(s) 7470A: The method blank for prep batch 346429 contained Mercury above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

## Qualifiers

### Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

## Narrative

### Job Narrative 400-135367-1

#### Metals

Method(s) 6020: The following sample was diluted to bring the concentration of target analytes within the calibration range: (400-135255-B-2-B ^25). Elevated reporting limits (RLs) are provided.

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 347015 recovered above the upper control limit for Lead. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: GWA-28 (400-135367-1), GWA-4 (400-135367-2), GWC-26 (400-135367-3), GWA-1 (400-135367-4), GWC-27 (400-135367-5), FB-1 (400-135367-6), GWA-2 (400-135367-7), GWC-30 (400-135367-8), DUP-1 (400-135367-9), FERB-1 (400-135367-10) and (400-135255-B-2-B ^5).

Method(s) 6020: The serial dilution performed for the following sample associated with batch 347015 was outside control limits for Chromium: (400-135255-B-2-B SD)

Method(s) 6020: The post digestion spike % recovery for Lead associated with batch 347015 was outside of control limits.

Method(s) 6020: The native sample and post digestion spike associated with preparation batch 346573 and analytical batch 347015 were performed at the same dilution. Due to the additional level of analyte present in the spiked sample, the concentration of Calcium in the PDS was above the instrument calibration range. The data have been reported and qualified.

Method(s) 7470A: The method blank for prep batch 346429 contained Mercury above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Narrative

### Job Narrative 400-135669-1

#### HPLC/IC

Method(s) 300.0: The following samples were diluted to bring the concentration of target analytes within the calibration range: GWC-7 (400-135669-5) and GWC-14 (400-135669-15). Elevated reporting limits (RLs) are provided.

#### Metals

Method(s) 6020: The serial dilution performed for the following sample associated with batch 348533 was outside control limits for Arsenic and Cobalt: (400-135667-A-10-B SD)

Method(s) 6020: The native sample and post digestion spike (PDS) associated with preparation batch 347599 and 348184 and analytical batch 348533 were performed at the same dilution. Due to the additional level of analyte present in the post digestion spike, the concentration of Molybdenum in the PDS was above the instrument calibration range. The data have been reported and qualified.

Method(s) 6020: The native sample and post digestion spike (PDS) associated with preparation batch 348297 and analytical batch 348836 were performed at the same dilution. Due to the additional level of analyte present in the post digestion spike, the concentration Molybdenum in the PDS was above the instrument calibration range. The data has been reported and qualified.

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Method(s) 6020: The native sample and post digestion spike (PDS) associated with preparation batch 348297 and analytical batch 348836 were performed at the same dilution. Due to the additional level of analyte present in the post digestion spike, the concentration Molybdenum in the PDS was above the instrument calibration range. The data has been reported and qualified.

## Narrative

### Job Narrative 400-137272-3

#### HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-7 (400-137272-18). Elevated reporting limits (RLs) are provided.

#### Metals

Method(s) 6020: The continuing calibration blank (CCB) for analytical batch 353529 contained Selenium above the reporting limit (RL). All reported samples associated with this CCB were ND for this analyte; therefore, re-analysis of samples was not performed.

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 353673 recovered above the upper control limit for Lithium. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data has been reported. The following samples are impacted: GWC-16 (400-137272-29), GWC-17 (400-137272-31), GWC-13 (400-137272-33), GWC-14 (400-137272-34), GWC-18 (400-137272-35), GWC-22 (400-137272-36), FB-3 (400-137272-38), FERB-3 (400-137272-39), GWC-23 (400-137272-41), GWC-20 (400-137272-42), GWC-24 (400-137272-43), GWC-21 (400-137272-44) and (MB 400-353556/1-A ^5).

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

### Metals

^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

## Narrative

### Job Narrative 400-137272-4

#### RAD

Method(s) 9315: Radium-226 Prep Batch 160-308387: The following sample has a low barium carrier recovery (38.6%): GWC-5 (400-137272-16). Matrix interference is suspected as the QC samples associated with the batch have acceptable carrier and spike recoveries demonstrating acceptable sample preparation and instrument performance.

Method(s) 9320: Radium-228 Prep Batch 160-308395: The following sample did not meet the radium-228 detection goal due to the low carrier recovery (38.6%): GWC-5 (400-137272-16) . Matrix interference is suspected as the QC samples associated with the batch have acceptable carrier and spike recoveries demonstrating acceptable sample preparation and instrument performance.

Method(s) PrecSep\_0: Radium-228 Prep Batch 160-308395: The barium carrier recovery is outside the lower control limit (40%) for the following sample: GWC-5 (400-137272-16). There was physical evidence of matrix interference apparent during the initial preparation of the sample. During the out of ingrowth process, the pellet was noted as small. The sample was pHed to ensure proper pH range for precipitation. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method(s) PrecSep-21: Radium-226 Prep Batch 160-308387: The barium carrier recovery is outside the lower control limit (40%) for the following sample: GWC-5 (400-137272-16). There was physical evidence of matrix interference apparent during the initial preparation of the sample. During the out of ingrowth process, the pellet was noted as small. The sample was pHed to ensure proper pH range for precipitation. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

## Narrative

### Job Narrative 400-141402-1

#### Metals

Method(s) 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 363937 and analytical batch 365481 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 365481 recovered above the upper control limit for Cobalt. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: FB-1 (400-141402-1), GWA-29 (400-141402-2), GWA-28 (400-141402-3), GWA-3 (400-141402-4), DUP-1 (400-141402-5), SWA-1 (400-141402-6), SWA-6 (400-141402-7), SWC-7 (400-141402-8) and (MB 400-363937/1-A ^5).

Method(s) 6020: The laboratory control sample (LCS) for preparation batch 363937 and analytical batch 365481 recovered outside control limits for the following analytes:Cobalt. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

## Qualifiers

### Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Qualifiers

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

## Narrative

### Job Narrative 400-142989-1

#### HPLC/IC

Method(s) 300.0: The following samples were diluted due to the low pH of the nitric acid preserved sample: GWC-31 (400-142989-1), GWC-33 (400-142989-2), FB-1 (400-142989-3) and FERB-1 (400-142989-4). Elevated reporting limits (RL) are provided.

Method(s) 300.0: For the following samples, three containers are required and routinely received at the lab for each event: 1 x 250mL w/ nitric (metals); 1 x 1L unpreserved (anions and dissolved solids); 1 x 2L w/ nitric (radium- subcontracted to TA-St. Louis). For job 142989 only the first two referenced bottles were rec'd for the field samples and QC. TestAmerica Pensacola staff removed a portion of the 1L unpreserved prior to shipping the container to the radiological lab in St. Louis, MO where the container was then preserved w/ nitric acid for radium testing. However, the aliquot removed was insufficient to support both dissolved solids and anion testing. A portion of the now preserved St. Louis sample was returned for anion analysis, but required significant dilution in order to maintain instrument integrity.

In order to preclude a recurrence of this circumstance, Pensacola sample control staff have been instructed to ship only the designated container to the subcontract lab unless they receive written authorization with specific instructions including sub-sampling requirements, if any. It is also recommended that all containers for the event be filled, if possible, and submitted for analysis in order to preclude analytical issues. GWC-31 (400-142989-1), GWC-33 (400-142989-2), FB-1 (400-142989-3) and FERB-1 (400-142989-4)

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

## Narrative

### Job Narrative 400-144243-1

#### HPLC/IC

Method(s) 300.0: The following samples were diluted to bring the concentration of target analytes within the calibration range: GWA-3 (400-144243-1), GWC-7 (400-144243-11) and GWC-14 (400-144243-20). Elevated reporting limits (RLs) are provided.

#### Metals

Method(s) 6020: The post digestion spike % recovery for Boron and Calcium associated with batch 371403 was outside of control limits.

Method(s) 6020: The post digestion spike % recovery for Calcium associated with batch 371403 was outside of control limits.

Method(s) 7470A: The matrix spike duplicate (MSD) recoveries for preparation batch 371303 and analytical batch 371483 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

## Qualifiers

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

### Metals

## Narrative

### Job Narrative 400-144243-3

#### HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWA-3 (400-144243-1). Elevated reporting limits (RLs) are provided.

#### Metals

Method(s) 6020: The post digestion spike % recovery for Boron and Calcium associated with batch 371403 was outside of control limits.

Method(s) 6020: The reporting limit check (CRI) for analytical batch 371403 contained Lithium above acceptance criteria. All reported samples associated with this CRI were ND for this analyte; therefore, re-analysis of samples was not performed. GWA-3 (400-144243-1) and (MB 400-371122/1-A ^5)

Method(s) 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 371122 and analytical batch 371403 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 7470A: The matrix spike duplicate (MSD) recoveries for preparation batch 371303 and analytical batch 371483 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 300.0: The following samples were diluted to bring the concentration of target analytes within the calibration range: GWC-14-20171201-01 (400-146736-2) and DUP-1-20171201-01 (400-146736-7). Elevated reporting limits (RLs) are provided.

Method(s) 300.0: Due to the high concentration of Chloride, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 378315 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

(1) - Maximum purge rate of 250 mL/min  
(2) - Sample rate to be between 100 mL/min and 250 mL/min  
(3) - Collect sample from pump discharge without tubing contacting sample container  
(4) - Field parameter measurements to be recorded every 3 to 5 minutes.  
(5) - Stabilization criteria based on three most recent consecutive measurements.  
(6) - Monitor depth to water every 3 to 5 minutes. Well drawdown to be 0.33 ft or less within 3 consecutive readings. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.33 ft per 3 readings.  
(7) - Contact field team lead if drawdown > 0.33 ft - do not switch to 3 well volume method until instructed  
(8) - Preserve all samples as appropriate immediately following collection  
(9) - DO 0.2 mg/L or 10% whichever is greater (no criteria apply if DO < 0.5 mg/L)

- (1) - Maximum purge rate of 250 mL/min
- (2) - Sample rate to be between 100 mL/min and 250 mL/min
- (3) - Collect sample from pump discharge without tubing contacting sample container
- (4) - Field parameter measurements to be recorded every 3 to 5 minutes.
- (5) - Stabilization criteria based on three most recent consecutive measurements.
- (6) - Monitor depth to water every 3 to 5 minutes. Well drawdown to be 0.33 ft or less. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.33 ft.
- (7) - Contact field team lead if drawdown > 0.33 ft - do not switch to 3 well volume method until instructed
- (8) - Preserve all samples as appropriate immediately following collection
- (9) - DO 0.2 mg/L or 10% whichever is greater (no criteria apply if DO < 0.5 mg/L)

(1) - Maximum purge rate of 250 mL/min  
 (2) - Sample rate to be between 100 mL/min and 250 mL/min  
 (3) - Collect sample from pump discharge without tubing contacting sample container  
 (4) - Field parameter measurements to be recorded every 3 to 5 minutes.  
 (5) - Stabilization criteria based on three most recent consecutive measurements.  
 (6) - Monitor depth to water every 3 to 5 minutes. Well drawdown to be 0.33 ft or less within 3 consecutive readings. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.33 ft per 3 readings.  
 (7) - Contact field team lead if drawdown > 0.33 ft - do not switch to 3 well volume method until instructed  
 (8) - Preserve all samples as appropriate immediately following collection  
 (9) - DO 0.2 mg/L or 10% whichever is greater (no criteria apply if DO < 0.5 mg/L)

Sampling										
Stabilizing Criteria <sup>4,5</sup>										

(1) - Maximum purge rate of 250 mL/min  
 (2) - Sample rate to be between 100 mL/min and 250 mL/min  
 (3) - Collect sample from pump discharge without tubing contacting sample container  
 (4) - Field parameter measurements to be recorded every 3 to 5 minutes.  
 (5) - Stabilization criteria based on three most recent consecutive measurements.  
 (6) - Monitor depth to water every 3 to 5 minutes. Well drawdown to be 0.33 ft or less. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.33 ft.  
 (7) - Contact field team lead if drawdown > 0.33 ft - do not switch to 3 well volume method until instructed  
 (8) - Preserve all samples as appropriate immediately following collection  
 (9) - DO 0.2 mg/L or 10% whichever is greater (no criteria apply if DO < 0.5 mg/L)

- (1) - Maximum purge rate of 250 mL/min
- (2) - Sample rate to be between 100 mL/min and 250 mL/min
- (3) - Collect sample from pump discharge without tubing contacting sample container
- (4) - Field parameter measurements to be recorded every 3 to 5 minutes.
- (5) - Stabilization criteria based on three most recent consecutive measurements.
- (6) - Monitor depth to water every 3 to 5 minutes. Well drawdown to be 0.33 ft or less within 3 consecutive readings. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.33 ft per 3 readings.
- (7) - Contact field team lead if drawdown > 0.33 ft - do not switch to 3 well volume method until instructed
- (8) - Preserve all samples as appropriate immediately following collection
- (9) - DO 0.2 mg/L or 10% whichever is greater (no criteria apply if DO < 0.5 mg/L)

(1) - Maximum purge rate of 250 mL/min  
 (2) - Sample rate to be between 100 mL/min and 250 mL/min  
 (3) - Collect sample from pump discharge without tubing contacting sample container  
 (4) - Field parameter measurements to be recorded every 3 to 5 minutes.  
 (5) - Stabilization criteria based on three most recent consecutive measurements.  
 (6) - Monitor depth to water every 3 to 5 minutes. Well drawdown to be 0.33 ft or less within 3 consecutive readings. Purge/sampling rate to be lowered as necessary to keep drawdown below 0.33 ft per 3 readings.  
 (7) - Contact field team lead if drawdown > 0.33 ft - do not switch to 3 well volume method until instructed  
 (8) - Preserve all samples as appropriate immediately following collection  
 (9) - DO 0.2 mg/L or 10% whichever is greater (no criteria apply if DO < 0.5 mg/L)

### Prediction Limit Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 49 background values. 2.041% NDs. Annual per-constituent alpha = 0.04111. Individual comparison alpha = 0.0007236 (1 of 2). Comparing 29 points to limit.

### Prediction Limit Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 8 background values. Well-constituent pair annual alpha = 0.02358. Individual comparison alpha = 0.01182 (1 of 3).
