(IF YES, DESCRIBE): ANY OTHER CHANGE(S) WHICH MAY HAVE AFFECTED THE STABILITY OR OPERATION SINCE THE PREVIOUS ANNUAL INSPECTION?	

⁽¹⁾ AP-3 is currently undergoing closure construction, and no longer has the ability to impound water. Dry ash is being stacked and compacted within the original AP-3 footprint.

⁽³⁾ Cubic yard estimates are derived by qualified personnel from available information. Ash Pond B' and Ash Pond 3 are being combined into the "Ash Management Area" for closure in place. With consolidation ongoing, it is not currently possible to differentiate how much ash went into the former AP-B' footprint and the former AP-3 footprint. Increased ash storage volumes from the previous annual report are indicated in the AP-3 volume totals and are from ash removal in Ash Pond 2.

⁽²⁾ Due to ongoing closure activities, stormwater may temporarily pool within AP-3 in temporary constructed detention ponds.
