

# Ductless Mini-split

HVAC Systems | Heat Pumps | Air Conditioners/Systems

## Split your costs, not your comfort

What if you could adjust your home temperature room by room? Well, you're in luck, because thanks to a ductless mini-split, you can. Instead of changing the thermostat and cooling/heating your entire home, a ductless mini-split lets you manage the temperature in specific rooms or areas. Adding a ductless mini-split saves you money, reduces wasted energy, and gives you more control over your home and energy usage.

### What is a ductless mini-split?

Think of them like individual air conditioning units integrated into a specific room or area of your home. With this cost-saving upgrade, you get to decide where your heated or cooled air goes. Imagine, instead of having to cool your whole house just to drop the temperature in your bedroom at night, you could program your bedroom unit to cool just that room. So you're not just getting the bedroom temperature you want—you're also saving money and energy.

It gets better: you can choose either a multi- or single-zone system. With a multi-zone mini-split system, a single condenser is installed outside of your home and can then be connected to multiple indoor units, letting you control the temperature in many areas of your home. A single-zone mini-split connects one outdoor air condenser to just one indoor unit, keeping the temperature in that area just right.

Mini-split upgrades allow you to maximize temperature control while minimizing wasted energy, resulting in significant savings on your heating and cooling costs. And since mini-split systems don't require ductwork, installation is usually quick. Indoor units are quiet and inconspicuous, and come in a variety of mounting options with low-profile finishes—most even come with a remote!

### Why a ductless mini-split is worth every penny

#### COST SAVING

Installing a ductless mini-split saves an average of more than 30% on heating and cooling costs every month! Leaky ducts are common and lose lots of conditioned air—accounting for significant energy (and money) waste. With no ductwork, you can get major savings from this mini upgrade.

#### COMFORT

You control the temperature in specific rooms or zones of your home, suggesting your comfort is likely. Ductless mini-splits work quickly, quietly, and efficiently to ensure your maximum cooling (or heating) satisfaction.

#### SAFETY/HEALTH

In typical ducted HVAC systems, leaky ducts may let mold, allergens, and even pests enter your home. The unit's conduit only requires a tiny opening versus a large opening or window gap (like a window A/C unit). This keeps your home sealed from outdoor air leakage.

## Let's talk about rebates!

Because ductless mini-splits are tailored to your home based on your preferences, a licensed HVAC professional can walk you through the considerations specific to your home. Typically, this means determining what mounting options are best, ensuring compatibility, meeting local building codes, and choosing ideal locations.

A complete system, made up of outdoor and indoor units, is eligible for rebates.

## Before You Start

Be sure you are working with a licensed HVAC professional.
