CERTIFICATION STATEMENT

This 2023 Annual Groundwater Monitoring and Corrective Action Report, Plant Bowen Ash Pond 1 (AP-1) has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Geosyntec Consultants, Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

SUMMARY

This summary of the *2023 Annual Groundwater Monitoring and Corrective Action Report* provides the status of groundwater monitoring and corrective action program for the reporting period of January through December 2023 (referred to herein as the “annual reporting period”) at Georgia Power Company’s (Georgia Power’s) Plant Bowen Ash Pond 1 (AP-1) (the Site). This summary was prepared by Geosyntec Consultants, Inc. (Geosyntec) on behalf of Georgia Power to meet the requirements listed in Part A, Section 6¹ of the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (federal CCR Rule) (40 Code of Federal Regulations [CFR] 257 Subpart D).

Plant Bowen is located at 317 Covered Bridge Rd SW, nine miles southwest of Cartersville in Bartow County, Georgia. Plant Bowen is a four-unit, coal-fired, electric-generating facility that commenced operations in the 1970s. CCR material resulting from power generation have historically been transferred and stored at the Site. In preparation for AP-1 closure, the plant completed the conversion to dry ash handling in early 2019 and AP-1 no longer receives ash. The Site is located on the western portion of the Plant Bowen property. The Georgia Environmental Protection Division (GA EPD) approved closure permit no. 008-021D(CCR) for AP-1 on February 17, 2022.

Plant Bowen and the Site

Groundwater at the Site is monitored using a comprehensive well network system that meets federal and state monitoring requirements. Routine sampling and reporting began after the background groundwater conditions were established between June 2016 and August 2017. Based on groundwater conditions at the Site, an assessment monitoring program and assessment of corrective measures (ACM) program were established in

¹ 80 FR 21468, Apr. 17, 2015, as amended at 81 FR 51807, Aug. 5, 2016; 83 FR 36452, July 30, 2018; 85 FR 53561, Aug. 28, 2020

January 2018 and January 2019, respectively. During the annual reporting period, the Site remained in assessment monitoring as corrective measures are being evaluated.

During the annual reporting period, Geosyntec conducted groundwater sampling events in January and August 2023 in support of the assessment monitoring program. Groundwater samples were submitted to Pace Analytical Services, LLC (Pace Analytical), for analysis. Per the federal CCR Rule, groundwater data from the semiannual assessment monitoring events conducted during the annual reporting period were evaluated in accordance with the certified statistical methods. The evaluations identified statistically significant values of select Appendix III² and Appendix IV³ constituents in excess of established groundwater protection standards (GWPS) in select monitoring wells, as summarized in the table below for the annual reporting period.

Based on a review of the Appendix III and Appendix IV statistical results completed for the groundwater monitoring and corrective action program for the annual reporting period, the Site will continue in assessment monitoring. Georgia Power will continue routine groundwater monitoring and reporting at the Site. Reports will be posted to Georgia Power's CCR Rule Compliance website and provided to GA EPD semiannually. A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD in February 2023.

² Boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids

³ Antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, fluoride, lead, lithium, mercury, molybdenum, selenium, thallium, and radium 226 + 228

Appendix III Constituent	January 2023	August 2023
Boron	BGWC-7, BGWC-8, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-19, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-30	BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-19, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, BGWC-52,
Calcium	BGWC-7, BGWC-12, BGWC-16, BGWC-20, BGWC-22, BGWC-23, BGWC-24	BGWC-7, BGWC-12, BGWC-14A, BGWC-16, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-51,
Chloride	BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-30	BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-18, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-25, BGWC-30, BGWC-51, BGWC-52
pH	BGWC-7, BGWC-16, BGWC-18, BGWC-19, BGWC-22	BGWC-14A, BGWC-16, BGWC-18, BGWC-19, BGWC-22, BGWC-24
Sulfate	BGWC-7, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24	BGWC-7, BGWC-9, BGWC-10, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-51, BGWC-52
Total Dissolved Solids	BGWC-7, BGWC-12, BGWC-14A, BGWC-16, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-30	BGWC-7, BGWC-12, BGWC-14A, BGWC-16, BGWC-17, BGWC-20, BGWC-22, BGWC-23, BGWC-24, BGWC-30, BGWC-51, BGWC-52
Appendix IV Constituent ⁴	January 2023	August 2023
Arsenic ⁵	BGWC-34D	BGWC-34D
Cobalt	BGWC-22	BGWC-22
Molybdenum	BGWC-43D	BGWC-43D

⁴ A statistically significant level (SSL)-related constituent is determined by comparing the confidence intervals developed to either the constituent's maximum contaminant level (MCL), if available; where an MCL has not been established, then a CCR-rule specific GWPS; or background concentrations for constituents where the concentration is greater than the MCL or rule-specified GWPS.

⁵ Alternate Source Demonstration (ASD) submitted and approved by GA EPD.

1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (federal CCR Rule) (40 Code of Federal Regulations [CFR] Part 257, Subpart D) and the Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10, Geosyntec Consultants, Inc. (Geosyntec) has prepared this *2023 Annual Groundwater Monitoring and Corrective Action Report* to document groundwater monitoring activities conducted at Georgia Power Company (Georgia Power) Plant Bowen (Site) Ash Pond 1 (AP-1) for the reporting period of January through December 2023 (referred to herein as the “annual reporting period”).

Groundwater monitoring and reporting for the CCR unit is performed in accordance with the monitoring requirements of § 257.90 through § 257.95 of the federal CCR Rule, and GA EPD Rules for Solid Waste Management 391-3-4-.10(6). To specify groundwater monitoring requirements, GA EPD rule 391-3-4-.10(6)(a) incorporates by reference the federal CCR Rule. For ease of reference, the federal CCR Rule is cited within this report in lieu of citing both sets of regulations. Also, the closure permit issued by GA EPD (i.e., no. 008-021D(CCR)) stipulates that Georgia Power must maintain the groundwater monitoring system and monitor the groundwater in accordance with the approved site-specific groundwater monitoring plan and GA EPD rule 391-3-4-.10 as part of the closure and post-closure care programs.

Due to statistically significant levels (SSLs) of cobalt and molybdenum reported in the *2018 Annual Groundwater Monitoring and Corrective Action Report* (Geosyntec, 2019a), Georgia Power initiated an assessment of corrective measures (ACM) for AP-1 in January 2019. Pursuant to § 257.96(b), Georgia Power continues to monitor groundwater associated with AP-1 in accordance with the assessment monitoring program established for the unit in 2018, including semiannual monitoring and reporting pursuant to § 257.90 through § 257.95 of the federal CCR Rule and GA EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD on February 28, 2023, (Geosyntec, 2023b) and is currently under review.

The current reporting period groundwater data indicate that the identified SSLs of arsenic, cobalt, and molybdenum are horizontally and vertically delineated to below their corresponding groundwater protection standards (GWPS) and contained within the

property boundary, or resolved with a previously approved or recently submitted alternate source demonstration (ASD) (Geosyntec, 2021b; Geosyntec, 2023c).

1.1 Site Description and Background

Plant Bowen is a four-unit, coal-fired, electric-generating facility that commenced operations in the 1970s. The plant is located nine miles southwest of Cartersville in Bartow County, Georgia. The plant is bordered by the Etowah River to the north and east, and sparsely populated, forested, rural and industrial land on the south and west (**Figure 1**).

AP-1 at the Site occupies an area of approximately 254 acres. In preparation for AP-1 closure, the plant completed the conversion to dry ash handling in early 2019, and AP-1 no longer receives ash. Georgia Power submitted to GA EPD a notice of intent (NOI) stating that waste stream flows are no longer directed to AP-1, effective December 31, 2020. Georgia Power began closure of AP-1 in 2021 by excavation and consolidation of CCR material into an approximately 144-acre lined, multi-cell storage facility situated within the current footprint of AP-1. Closure activities are conducted in accordance with § 257.102 and corresponding Rule 391-3-4-.10(7)(b). The proposed closure approach provides a source control measure that reduces the potential for migration of CCR constituents to groundwater. Details of the closure approach have been summarized in the Amended Written Closure Plan and published in 2018 to Georgia Power's CCR Rule Compliance website. On February 17, 2022, GA EPD issued a CCR Permit (008-021D(CCR)) for the closure of Plant Bowen AP-1.

1.2 Regional Geology and Hydrogeologic Setting

The following section summarizes the geologic and hydrogeologic conditions at AP-1 as described in the *Hydrogeologic Assessment Report (Revision 3) – AP-1* (HAR Rev 3) (Geosyntec, 2021c) prepared in support of the AP-1 solid waste handling permit.

1.2.1 Regional and Site Geology

The Site is located within the Great Valley District of the Valley and Ridge Physiographic Province (Valley and Ridge) in northwest Georgia. The Valley and Ridge is characterized by Paleozoic sedimentary rocks that have been folded and faulted into the ridges and valleys that gave this region its name. The floor of the valley is underlain by shales, dolomites, and limestones of Cambrian and Ordovician age. Geologic mapping performed by Lawton et al. (1976) indicates that the Site is underlain by the Ordovician-

Cambrian age Knox Dolomite and the Ordovician age Newala Limestone. Based on review of subsurface investigations at the Site, the bedrock is described as predominantly dolomite. The overall Site is underlain primarily by residuum and competent dolomite/limestone bedrock. AP-1 is underlain primarily by three units: (i) fill material consisting of earthen embankments and CCR material; (ii) residuum; and (iii) competent dolomite/limestone bedrock.

Based on subsurface investigations, the residuum at the Site is the result of in-place weathering of the underlying dolomite/limestone bedrock. The residuum consists mainly of mottled light brown to red to yellow, low to high plasticity, stiff to very stiff clay, silt, and silty clay. Most soils contain varying amounts of black chert nodules and chert gravel. The bedrock beneath the Site is described as light to dark gray, fine to medium-grained, thinly bedded to massive, dense, and hard dolomite, limestone, and dolomitic limestone. Some evidence of weathering along fracture or bedding surfaces is observed, with some manganese or iron oxide staining. Abundant calcite veins and occasional zones of healed dolomite breccia are observed throughout the bedrock. Solution features such as voids in the underlying limestone/dolomite bedrock have formed in the bedrock over geological timeframes, primarily along pre-existing discontinuities such as joints and bedding planes. At the Site, these solution features are typically filled with residuum from the in-place weathering of the bedrock or the downward migration of the overlying residuum, but they may also be open, or water filled.

1.2.2 Hydrogeologic Setting

The uppermost aquifer at the Site occurs near the interface of the residuum and the fractured and solutioned bedrock. Groundwater recharge is by precipitation infiltrating through the residuum to bedrock, or in bedrock outcrop areas through direct infiltration into the bedrock. Groundwater flow in bedrock is under unconfined to semi-confined conditions from the mantle of overlying lower-permeability residuum and is controlled by secondary porosity along fractures and solution-enhanced features that are typically filled with residuum. Based on observations of residuum soil types, horizontal hydraulic conductivity values, and boring logs and geophysical evaluations, the movement of groundwater in the clay-rich residuum and upper weathered bedrock zone is slow and likely behaves as flow through low-permeability porous media. Groundwater flow in the dolomite/limestone bedrock is likely controlled by the secondary porosity features that are typically filled with residuum.

1.3 Groundwater Monitoring Well Network

In accordance with § 257.91, a groundwater monitoring system was installed at AP-1 that consists of a sufficient number of wells installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer to represent the groundwater quality both upgradient of the unit (i.e., background conditions) and passing the waste boundary of the unit. The number, spacing, and depths of the groundwater monitoring wells were selected based on the characterization of site-specific hydrogeologic conditions.

As part of the assessment monitoring program, assessment monitoring wells have been installed since 2018 to supplement the pre-existing detection monitoring wells and characterize the nature and extent of SSLs in groundwater downgradient of AP-1. Pursuant to § 257.195(g)(1)(iv), the wells classified as “assessment monitoring wells” will continue to be sampled concurrently with the detection monitoring well network as part of the ongoing assessment groundwater monitoring program.

An on-site network of piezometers is used in combination with the detection and assessment monitoring well networks to gauge water levels to define groundwater flow direction and gradients.

The locations of the detection monitoring wells, assessment monitoring wells, and piezometers are shown on **Figure 2**; well and piezometer construction details are listed in **Table 1**.

2.0 GROUNDWATER MONITORING ACTIVITIES

In accordance with § 257.90(e), the following describes monitoring-related activities performed during the annual reporting period and discusses any change in status of the monitoring program. Groundwater sampling was performed in accordance with § 257.93.

2.1 Monitoring Well Installation and Maintenance

Two piezometers (PT-02 and PT-03) were installed in July and December 2023, respectively, in support of the high-resolution site characterization activities described in Section 2.4. The locations of the piezometers are shown on **Figure 2**. A well installation report that includes detailed boring and well construction logs for the installation of PT-02 and PT-03 is provided in **Appendix A**.

The well and piezometer networks are inspected semiannually to evaluate if any repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). In January and August 2023, the networks were inspected and necessary corrective actions were identified and subsequently completed, as documented in **Appendix B**. This documentation was prepared under the direction of a professional geologist or engineer registered in the State of Georgia.

2.2 Assessment Monitoring

Georgia Power initiated an assessment monitoring program for groundwater at AP-1 in January 2018 based on statistically significant increases (SSIs) of Appendix III constituents documented in the *2017 Annual Groundwater Monitoring and Corrective Action Report* (Anchor QEA, 2018). A notice of assessment monitoring was placed in the operating record on May 15, 2018. Currently identified SSLs of Appendix IV constituents exceeding their respective GWPS at AP-1 are cobalt in BGWC-22, arsenic in BGWC-34D, and molybdenum in BGWC-43D. Monitoring well BGWC-38D exhibited an SSL of molybdenum in the past. Concentrations of molybdenum have decreased to less than the GWPS and the statistical analysis no longer indicates an SSL in this well.

Pursuant to § 257.96, an ACM was initiated for AP-1 in January 2019. An *Assessment of Corrective Measures Report – Plant Bowen Ash Pond 1 (AP-1)* (ACM Report) was subsequently prepared for AP-1 (Geosyntec, 2019b) and submitted to GA EPD in June 2019 and posted to the CCR compliance website in July 2019. In accordance with §

257.96(b), groundwater continues to be monitored at AP-1 under the assessment monitoring program while the ACM phase is implemented.

In support of the routine assessment monitoring program, the annual assessment monitoring events were conducted in January and August 2023. Due to suspect data for antimony reported for BGWC-23, this well was resampled on May 10, 2023; the resample result is more consistent with historical values. The wells sampled and the dates the samples were collected at AP-1 during the annual reporting period are summarized in **Table 2**. Details of these events and analytical results are discussed in Section 3.

2.3 Additional Groundwater Evaluations

Supplemental groundwater samples were collected from the entire AP-1 detection and assessment well networks during the January 2023 event and were analyzed for major cations (calcium, magnesium, potassium, and sodium), major anions (chloride, sulfate, and alkalinity [i.e., bicarbonate, carbonate, total]), iron, and manganese. The data were collected in support of evaluating the geochemical composition of the groundwater in conjunction with the ACM activities. Additionally, a supplemental groundwater sample was collected from piezometer PZ-7 during the January 2023 event to characterize the groundwater quality downgradient of BGWC-16. The PZ-7 groundwater sample was analyzed for the complete list of Appendix III and Appendix IV constituents. The laboratory reports associated with the data are provided in **Appendix C**.

2.4 Assessment of Corrective Measures

To support remedial design and pilot study planning, a pre-design investigation (PDI) including a high-resolution site characterization and treatability study was initiated in June 2023. High-resolution site characterization activities were initiated to characterize and refine the proposed in-situ injection treatment area proximal to BGWC-22. Three boreholes (PDI-01, PDI-02, and PDI-03) were advanced in the vicinity of BGWC-22 using high-speed wireline coring to further characterize the lithology. During investigation activities, an aquifer solids sample was obtained. Borehole geophysical logging and hydraulic testing was subsequently performed, and discrete screening-level groundwater samples were collected from the boreholes in June and July 2023. Borehole PDI-02 was completed as a piezometer (reclassified as PT-02) in July 2023 and groundwater samples subsequently collected in September and October 2023. Borehole PDI-03 was completed as a piezometer (reclassified as PT-03) and borehole PDI-01 was abandoned to ground surface with bentonite in December 2023. The laboratory reports

associated with the high-resolution site characterization activities are provided in **Appendix C**.

Groundwater samples and aquifer solid samples were collected in December 2023 to support a laboratory treatability study. Separate groundwater samples were collected from wells BGWC-22 and BGWC-43D. An aquifer solids sample was collected using a roto-sonic drill rig to advance soil borings located near BGWC-22 at depths approximately coinciding with the screened interval of BGWC-22. Because the primary route of groundwater is secondary porosity features that coincide with the approximate screen interval of BGWC-43D, no aquifer solids were collected from the BGWC-43D location, and the treatability study will be conducted with groundwater only from BGWC-43D.

The results of the high-resolution site characterization and treatability study will be summarized under separate cover in a pilot study workplan.

3.0 SAMPLING METHODOLOGY AND ANALYSES

The following section presents a summary of the field sampling procedures that were implemented, and the groundwater sampling results that were obtained in connection with the assessment monitoring program conducted at AP-1 during the annual reporting period.

3.1 Groundwater and Surface Water Level Measurement

A synoptic round of depth-to-groundwater-level measurements were recorded from the AP-1 wells and piezometers during the January and August 2023 assessment monitoring events and used to calculate the corresponding groundwater elevations, which are presented in **Table 3**. The January and August 2023 elevations are generally representative of the groundwater elevations reported for prior monitoring events.

Surface water elevations were recorded along the Etowah River, Euharlee Creek, and General Service Water Pond (GSWP) using transducers installed at the locations indicated on **Figure 2**. A survey certification for GSWP completed by GEL solutions was obtained on November 20, 2023, and is included in **Appendix A**.

The groundwater and surface water elevation data were used to prepare a potentiometric surface map for the January and August 2023 events, which are presented on **Figure 3** and **Figure 4**, respectively. Groundwater flow pathways at the Site are expected to be influenced by solution features, fractures, and weathered zones in the upper bedrock. Interpretation of the potentiometric surface contours indicates that groundwater generally flows to the north, northwest, and west. A component of flow in the southernmost portion of AP-1 is to the south and west, likely due to groundwater mounding related to historical free water storage at the former recycle pond at the southern end of AP-1 (now decommissioned), the influence of which has reduced since closure activities began in 2021. Under post-closure conditions, the groundwater flow direction is anticipated to resemble the regional flow regime more closely (south to north).

3.2 Groundwater Gradient and Flow Velocity

The horizontal groundwater hydraulic gradients within the residuum and fractured and solutioned bedrock of the uppermost aquifer beneath AP-1 were calculated using groundwater elevation data recorded during the January and August 2023 gauging events, and along three main interpreted groundwater flow paths to account for changing flow directions underlying AP-1, as discussed in Section 3.1 (i.e., northwest, west, and

south/southwest). Horizontal hydraulic gradients were calculated between the following well pairs: APPZ-5R/BGWC-14A, APPZ-3R/BGWC-25, and BGWC-24/BGWC-40. The supporting calculations are presented in **Table 4**; the locations of the flow paths used in the calculations and associated potentiometric contour lines are shown on **Figure 3** and **Figure 4**. The calculated average hydraulic gradient along the northwest, west, and south/southwest flow paths for the annual reporting period are 0.012 feet per foot (ft/ft), 0.012 ft/ft, and 0.025 ft/ft, respectively.

Because of lithologic heterogeneity and anisotropic groundwater flow, groundwater velocity calculations using derivations of Darcy's Law, or other methods, may not capture the full range and distribution of flow velocities beneath and around AP-1 (Geosyntec, 2021c). Groundwater flow velocity calculations are provided as a general estimate of groundwater flow velocity at the site based on available information and assumptions described below.

The approximate horizontal flow velocities along the northwest, west, and south/southwest flow paths were calculated using the following derivative of Darcy's Law. The calculations are presented on **Table 4**.

$$V = \frac{K_h * i}{n_e}$$

Where:

V = Groundwater flow velocity $\left(\frac{feet}{day}\right)$

K_h = Horizontal Hydraulic Conductivity $\left(\frac{feet}{day}\right)$

i = Horizontal hydraulic gradient $\left(\frac{feet}{foot}\right) = \frac{h_1 - h_2}{L}$

h_1 and h_2 = Groundwater elevation at location 1 and 2

L = distance between location 1 and 2

n_e = Effective porosity

Groundwater flow in bedrock is controlled by secondary porosity features that are typically filled with residuum. Based on the range of hydraulic conductivity measurements from wells and piezometers screened in the upper bedrock at AP-1, flow

velocities were calculated using: (i) the geometric mean and the highest of the observed horizontal hydraulic conductivity (K_h) values as presented in the HAR Rev 3 (Geosyntec, 2021c); (ii) the average hydraulic gradients presented at the beginning of Section 3.2; and (iii) an estimated effective porosity (n_e) of 0.3 for the fractured and solutioned dolomite/limestone bedrock (Geosyntec, 2021c).

Horizontal hydraulic conductivity values measured for bedrock ranged from 3.0×10^{-2} to 33.0 feet per day (ft/day), with a geometric mean of 2.4 ft/day. Using the geometric mean K_h value of 2.4 ft/day for the bedrock, the calculated flow velocities along the northwest, west, and south/southwest flow paths are 0.09 ft/day, 0.10 ft/day, and 0.20 ft/day, respectively. Using the highest observed K_h in the bedrock of 33 ft/day, the calculated flow velocities along the northwest, west, and south/southwest flow paths are 1.28 ft/day, 1.37 ft/day, and 2.75 ft/day, respectively. This variability in calculated groundwater flow velocity is consistent with groundwater flow in dolomite/limestone bedrock controlled by secondary porosity features that are typically filled with residuum.

3.3 Groundwater Sampling Procedures

Groundwater samples were collected using low-flow sampling procedures in accordance with § 257.93(a). Purging and sampling was performed using dedicated bladder pumps with dedicated tubing, non-dedicated bladder pumps, and peristaltic pumps. For wells sampled with non-dedicated bladder and peristaltic pumps, the pump intake was lowered to the midpoint of the well screen (or as appropriate based on the groundwater level). Non-dedicated bladder pump and peristaltic pump samples were collected using new disposable polyethylene tubing; all non-dedicated tubing was disposed of following the sampling event. All non-disposable equipment was decontaminated before use and between well locations.

An in-situ water quality field meter (Aqua TROLL 400) was used to monitor and record field water quality parameters [i.e., pH, conductivity, dissolved oxygen (DO), temperature, and oxidation reduction potential (ORP)] during well purging to verify stabilization prior to sampling. Turbidity was monitored using a LaMotte 2020we (or similar) portable turbidity meter. Groundwater samples were collected once the following stabilization criteria were met:

- pH \pm 0.1 standard units (s.u.).
- Conductivity \pm 5%.

- ± 0.2 milligrams per liter (mg/L) or $\pm 10\%$ (whichever is greater) for DO > 0.5 mg/L. No criterion applies if DO < 0.5 mg/L, record only.
- Turbidity measured less than 5 nephelometric turbidity units (NTU) or measured between 5 and 10 NTU following three hours of purging.

Following purging, and once stabilization was achieved, unfiltered samples were collected into appropriately preserved laboratory-supplied sample containers. Sample bottles were placed in ice-packed coolers and submitted to Pace Analytical Services, LLC (Pace Analytical) in Peachtree Corners, Georgia, following chain-of-custody protocol. The field sampling and equipment calibration forms generated during the annual reporting period are provided in **Appendix C**.

3.4 Laboratory Analyses

Laboratory analyses were performed by Pace Analytical, which is accredited by the National Environmental Laboratory Accreditation Program (NELAP). Pace Analytical maintains a NELAP certification for the Appendix III and Appendix IV constituents and the geochemical parameters analyzed for this project. Analytical methods used for groundwater sample analysis are listed in the analytical laboratory reports included in **Appendix C**. The groundwater results from the annual reporting period are summarized in **Table 5**.

3.5 Quality Assurance and Quality Control Summary

Quality assurance/quality control (QA/QC) samples were collected during the groundwater monitoring events at the minimum rate of one QA/QC sample per 10 groundwater samples and included the following: field duplicates, equipment blanks, and field blank samples. QA/QC samples were collected in appropriately preserved laboratory-provided sample containers and submitted under the same chain of custody as the primary samples for analysis of the same constituents by Pace Analytical.

In addition to collecting QA/QC samples, the data were validated based on the pertinent methods referenced in the laboratory reports, professional and technical judgment, and applicable federal and site-specific guidance documents (USEPA, 2011; USEPA, 2017). Where necessary, the data were qualified with supporting documentation and justifications. The validated data meet project objectives and the associated data validation reports are provided in **Appendix C**, along with the laboratory reports.

4.0 STATISTICAL ANALYSIS

The following section summarizes the statistical analysis of Appendix III groundwater monitoring data performed pursuant to § 257.93. In addition, pursuant to § 257.95(d)(2), Georgia Power established GWPS for the Appendix IV constituents and completed statistical analyses of the Appendix IV groundwater monitoring data obtained during the annual reporting period. The data were analyzed by Groundwater Stats Consulting (GSC); the reports generated from the analyses are provided in **Appendix D**.

4.1 Statistical Methods

Groundwater data from the annual reporting period were statistically analyzed in accordance with the Professional Engineer-certified (PE-certified) Statistical Analysis Method Certification (October 2017, revised January 2020) (Anchor QEA, 2017; Geosyntec, 2020). The Sanitas groundwater statistical software was used to perform the statistical analyses. Sanitas is a decision-support software package that incorporates the statistical tests required of Subtitle C and D facilities by USEPA regulations and guidance as recommended in the USEPA document *Statistical Analysis of Groundwater Data at RCRA Facilities Unified Guidance* (Unified Guidance) (USEPA, 2009).

Appendix III statistical analysis was performed to assess if Appendix III constituents have returned to background levels. Appendix IV constituents were evaluated to assess if concentrations statistically exceeded the established state and federal GWPS. Detailed statistical methods used for Appendix III and Appendix IV constituents are discussed in the statistical analysis reports provided in **Appendix D** and summarized in Sections 4.1.1 and 4.1.2. The GWPS were finalized pursuant to § 257.95(d)(2) and presented in **Table 6**.

4.1.1 Appendix III Statistical Methods

Based on guidance from GA EPD, statistical tests used to evaluate the groundwater monitoring data consist of interwell prediction limits (PLs) combined with a 1-of-2 verification resample plan for each of the Appendix III constituents. Interwell PLs pool upgradient well data to establish a background limit for an individual constituent, and the most recent sample from each downgradient well is compared to the same limit for each constituent to assess whether there are SSIs. An "initial exceedance" occurs when an Appendix III constituent reported in the groundwater of a downgradient detection monitoring well exceeds the constituent's associated PL. The 1-of-2 resample plan allows for collection of an independent resample. A confirmed exceedance is noted only

when the resample confirms the initial exceedance by also exceeding the statistical limit. If the resample falls within its respective PL, no exceedance is declared.

4.1.2 Appendix IV Statistical Methods

To statistically compare groundwater data to GWPS, confidence intervals are constructed for each of the detected Appendix IV constituents in each downgradient detection and assessment monitoring well with a minimum of four samples. In accordance with Section 21.1.1 of the Unified Guidance (USEPA, 2009), four independent data are the minimum population size recommended to construct confidence intervals required to assess SSLs for Appendix IV constituents. Due to previous non-routine (or ACM investigation) sampling, some Appendix IV constituents at a well location have differing number of analytical data points.

The confidence intervals are compared to the GWPS. Only when the entire confidence interval is above a GWPS is the well/constituent pair considered to exceed its GWPS. If a confidence interval exceeds a GWPS, an SSL exceedance is identified.

USEPA revised the federal CCR Rule on July 30, 2018, updating GWPS for cobalt, lead, lithium, and molybdenum. As described in § 257.95(h)(1-3), the GWPS is defined by the below criteria. These criteria were adopted into the GA EPD Rules for Solid Waste Management 391-3-4-.10 on February 22, 2022.

- (1) The maximum contaminant level (MCL) established under § 141.62 and § 141.66.
- (2) Where an MCL has not been established:
 - (i) Cobalt 0.006 mg/L;
 - (ii) Lead 0.015 mg/L;
 - (iii) Lithium 0.04 mg/L; and
 - (iv) Molybdenum 0.1 mg/L.
- (3) Background levels for constituents where the background level is higher than the MCL or rule-specified GWPS.

Following the above requirements, GWPS have been established for statistical comparison of Appendix IV constituents and are presented in **Table 6**.

4.2 Statistical Analyses Results

Based on review of the Appendix III statistical analysis discussion presented in **Appendix D**, groundwater conditions have not returned to background and assessment monitoring should continue. Based on the statistical analysis of Appendix IV constituents, select Appendix IV constituents exceeded the GWPS during the annual reporting period:

4.2.1 January 2023 Data

- Arsenic: BGWC-34D
- Cobalt: BGWC-22
- Molybdenum: BGWC-43D

Wells with SSLs were further evaluated using the Sen's Slope/Mann Kendall trend test (**Appendix D**). A statistically significant increasing trend of cobalt was identified in BGWC-22 during the January 2023 period. No statistically significant trends were identified for arsenic in BGWC-34D and molybdenum in BGWC-43D.

4.2.2 August 2023 Data

- Arsenic: BGWC-34D
- Cobalt: BGWC-22
- Molybdenum: BGWC-43D

Wells with SSLs were further evaluated using the Sen's Slope/Mann Kendall trend test (**Appendix D**). A statistically significant increasing trend of cobalt was identified in BGWC-22 during the August 2023 period. No statistically significant trends were identified for arsenic in BGWC-34D and molybdenum in BGWC-43D.

4.2.3 Summary of Statistical Analyses

The SSLs identified for the annual reporting period are generally consistent with the 2022 annual reporting period, with the following exceptions:

- No SSL of arsenic was identified in BGWC-37D. The SSL of arsenic in BGWC-37D was first identified after the July/August 2022 semiannual event and was determined to be caused by an error in statistical evaluation instead of a release from AP-1. An ASD was submitted on May 1, 2023, to address this SSL. The concentration of arsenic was below the GWPS during the January and August 2023 semiannual events.

The arsenic SSL in BGWC-34D is addressed with the ASD submitted with the *2020 Annual Groundwater Monitoring and Corrective Action Report* (Geosyntec, 2021a) and approved by GA EPD on August 18, 2021, as explained in Section 5 below.

5.0 NATURE AND EXTENT

Based on the groundwater data presented herein, the SSL of cobalt associated with BGWC-22 is horizontally and vertically delineated to below the GWPS as calculated by confidence intervals (statistical analysis) prepared for assessment wells BGWC-32 and BGWC-35D, respectively. Similarly, the SSL of molybdenum identified in BGWC-43D is horizontally and vertically delineated by BGWC-50D and BGWC-49D, respectively. The groundwater data from the January and August 2023 semiannual assessment monitoring events were used to generate the cobalt and molybdenum iso-concentration maps presented on **Figures 5, 6, 7, and 8**.

Georgia Power will continue to monitor the assessment wells and adaptively manage the Site as new data become available. At this time, concentrations of Appendix IV constituents above the GWPS are delineated to within the property boundary.

5.1 Alternate Source Demonstration

An ASD was prepared and submitted to GA EPD on January 29, 2021, to address the SSL of arsenic in assessment well BGWC-34D (Geosyntec, 2021b). The ASD presented multiple lines of evidence that the arsenic groundwater concentrations detected in BGWC-34D are not associated with a release from AP-1 but are instead caused by a natural source of arsenic in the site-specific rock formation. The arsenic ASD was approved by GA EPD on August 18, 2021.

A second ASD was prepared and submitted to GA EPD on May 1, 2023, to address the arsenic SSL reported for BGWC-37D. The ASD presented multiple lines of evidence that the SSL of arsenic is not associated with a release from AP-1 but is instead caused by an error in statistical evaluation. The ASD is provided in **Appendix E**. Furthermore, the concentration of arsenic was below the GWPS during the last two semiannual assessment monitoring events (January and August 2023).

6.0 MONITORING PROGRAM STATUS

6.1 Assessment Monitoring Status

Pursuant to § 257.96(b), Georgia Power will continue to monitor the groundwater at AP-1 in accordance with the assessment monitoring program regulations of § 257.95 while ACM efforts are implemented to address SSL concentrations of cobalt and molybdenum in select AP-1 wells. Pursuant to § 257.95(g)(1)(iv), the additional assessment wells will continue to be sampled as part of the ongoing assessment groundwater monitoring program.

6.2 Assessment of Corrective Measures

A *Draft Remedy Selection Report* was submitted to GA EPD on February 28, 2023 (Geosyntec, 2023b), in lieu of the *Semiannual Remedy Selection and Design Progress Reports* (semiannual progress reports) previously included in the appendix of the routine annual groundwater monitoring and corrective action reports. The *Draft Remedy Selection Report* was submitted under separate cover and is currently being reviewed by GA EPD. The report summarizes:

- The current groundwater conceptual site model applicable to evaluating groundwater corrective measures proposed in the ACM Report (Geosyntec, 2019b);
- An evaluation of each corrective measure retained for further consideration following the completed investigations; and
- An evaluation of corrective measure options using the comparative criteria such as long- and short-term effectiveness and protectiveness, source control effectiveness, and ease of implementation. The *Draft Remedy Selection Report* presents geochemical approaches (in-situ injections) coupled with monitored natural attenuation as the proposed groundwater remedy for AP-1.

In the interim of GA EPD's review of the *Draft Remedy Selection Report*, Georgia Power initiated a PDI in June 2023 to characterize and refine the proposed in-situ injection treatment area proximal to BGWC-22. Data collected during the PDI will inform the injection pilot study and support remedy selection. Georgia Power will submit a pilot study workplan to GA EPD that summarizes the PDI results and any additional data to support corrective action design. Updates concerning the pilot study and any additional

data to support corrective action design will be reported to GA EPD as brief summaries included as part of semiannual groundwater monitoring and corrective action reporting.

6.3 Annual Potable Well Survey

An updated potable well survey of potential groundwater wells within a two-mile radius of AP-1 was conducted in November 2023 and consisted of reviewing federal, state, county records, and online sources. A survey conducted by Environmental Data Resources (EDR) is included in **Appendix F**. Additional federal, state, county records and online sources outside of the EDR survey were also reviewed by Geosyntec. The Bartow County Health Department does not maintain records of private wells, and therefore had no update to provide for the survey. The findings from the 2023 well survey are consistent with the 2022 well survey (Geosyntec, 2023a).

7.0 CONCLUSIONS AND FUTURE ACTIONS

This *2023 Annual Groundwater Monitoring and Corrective Action Report* for Plant Bowen AP-1 was prepared to fulfill the requirements of the federal CCR Rule and GA EPD Rules for Solid Waste Management 391-3-4-.10. Statistical analyses of the groundwater monitoring data for AP-1 for the annual reporting period identified the continued presence of SSLs of arsenic in BGWC-34D, cobalt in BGWC-22, and molybdenum in BGWC-43D. Based on the most current groundwater quality, the SSLs are vertically and horizontally delineated to below their respective GWPS within the property boundary, or resolved with a previously approved or recently submitted ASD (Geosyntec, 2021b; Geosyntec, 2023c).

Georgia Power will continue to monitor AP-1 groundwater under the assessment monitoring program as aspects of the ACM program are implemented to address the Appendix IV SSLs. A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD in February 2023 (Geosyntec, 2023b). The next routine semiannual assessment monitoring event for AP-1 is tentatively scheduled for February 2023. Progress made regarding the corrective action design evaluation will be documented in the next groundwater monitoring and corrective action report.

Notes:

- = Not applicable

ft = feet

ft BTOC = feet below top of casing

(1) Elevations referenced to the North American Vertical Datum of 1988 (NAVD88). Survey completed by GEL Solutions obtained June 10, 2020. Survey for wells BGWC-51 and BGWC-52 was obtained January 28, 2021. Survey for wells BGWC-49D and BGWC-50D was obtained March 25, 2021. Survey for piezometers PZ-7, PZ-8, and Euharlee Creek was obtained April 7, 2022. Survey completed by Gunnin Land Surveying for piezometer Euharlee Creek was obtained March 10, 2023.

(2) BGWA-4 was not gauged due to being inaccessible with 6-8 inches of standing water at the time of the gauging event.

(3) Piezometers APPZ-3R, APPZ-5R, MW-108, and MW-4A are not part of the monitoring well network. These piezometers are gauged on a routine basis to supplement data for groundwater contour development.

(4) Surface water elevations of Etowah River, Euharlee Creek, and General Service Water Pond are recorded using In-Situ® Instruments, Inc.'s Win-Situ® or HydroVu® reporting software and Level Troll 500® pressure transducers. The transducer that recorded data for Euharlee Creek is located in a tributary with surface elevations representative of Euharlee Creek conditions.

(5) The Euharlee Creek piezometer was reinstalled by Resolute on 16 February 2023 after being dislodged from the creek bed in January 2023. The Top of Casing Elevations listed are for January 23, 2023, and August 14, 2023, respectively.

Table 4
Horizontal Groundwater Gradient and Flow Velocity Calculations
Plant Bowen AP-1, Bartow County, Georgia

South/Southwest Flow Path (BGWC-24 to BGWC-40)	688.45	667.43	770	0.027	681.90	664.47	770	0.023	0.025

Flow Path Direction ⁽¹⁾	Geometric Mean K _h (ft/day)	Maximum K _h (ft/day)	n _e	Average i (ft/ft)	V with Geometric Mean K _h (ft/day) ⁽²⁾	Maximum V (ft/day) ⁽²⁾
Northwest Flow Path (APPZ-5R to BGWC-14A)	2.4	33	0.3	0.012	0.09	1.28
West Flow Path (APPZ-3R to BGWC-25)	2.4	33	0.3	0.012	0.10	1.37
South/Southwest Flow Path (BGWC-24 to BGWC-40)	2.4	33	0.3	0.025	0.20	2.75

Notes:

ft = feet

ft/day = feet per day

ft/ft = feet per foot

h₁ and h₂ = groundwater elevation at location 1 and 2

i = h₁-h₂/L = horizontal hydraulic gradient

K_h = horizontal hydraulic conductivity

L = distance between location 1 and 2 along the flow path

n_e = effective porosity

V = groundwater flow velocity

(1) Flow path direction relative to the orientation of AP-1 and illustrated on Figure 3 of associated report.

(2) Groundwater flow velocity equation: $V = [K_h * i] / n_e$

Notes:

-- = Parameter was not analyzed

J = Indicates the parameter was estimated and detected between the method detection limit (MDL) and the reporting limit (RL)

< = Indicates the parameter was not detected above the analytical MDL

TDS = total dissolved solids

U = Indicates the parameter was not detected above the analytical minimum detectable concentration (MDC) (Specific to combined radium 226/228)

(1) Appendix III/IV parameter per 40 CFR 257 Subpart D. Parameters are reported in units of milligrams per liter (mg/L), except for pH reported as s.u. (standard units) and combined radium reported as picocuries per liter (pCi/L).

(2) Metals were analyzed by EPA Method 6010D, 6020B, and 7470A, anions were analyzed by EPA Method 300.0, TDS was analyzed by SM2540C-2015, alkalinity was analyzed by Standard Method 2320B-2011, and combined radium 226/228 was analyzed by EPA Method 9315 and 9320.

(3) The pH value presented was recorded at the time of sample collection in the field.

Notes:

CCR = Coal Combustion Residuals

GWPS = Groundwater Protection Standard

MCL = Maximum Contaminant Level

mg/L = milligrams per liter

N/A = Not Applicable

pCi/L = picocuries per liter

- (1) On February 22, 2022, the Georgia Environmental Protection Division (GA EPD) adopted the federally promulgated GWPS for cobalt, lithium, lead, and molybdenum.
- (2) The background limits were used when determining the GWPS under 40 CFR 257.95(h) and GA EPD Rule 391-3-4-.10(6)(a).
- (3) Under 40 CFR 257.95(h)(1-3) the GWPS is: (i) the maximum contaminant level (MCL) established under §§141.62 and 141.66 of this title; (ii) where an MCL has not been established a rule-specific GWPS; or (iii) background levels for constituents where the background level is higher than the MCL or rule-specified GWPS.
- (4) The GWPS apply to the January and August 2023 sampling events.

CERTIFICATION PAGE

I hereby certify that this *Well Design, Installation, and Development Report – Addendum No. 7, Plant Bowen Ash Pond 1 (AP-1)* has been prepared by, or under the direct supervision of, a Qualified Groundwater Scientist with Geosyntec Consultants, Inc. and is in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule [40 Code of Federal Regulations 257 Subpart D], specifically §257.91(e)(1), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10.

According to 391-3-4-.01, a Qualified Groundwater Scientist is “a professional engineer or geologist registered to practice in Georgia who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields that enable individuals to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.”

Martin Crook P.G.

1. INTRODUCTION

This report provides details regarding the design, installation, and development of two piezometers, PT-02 and PT-03, installed in July and December 2023, respectively, in support of the high-resolution site characterization activities at Georgia Power Company (Georgia Power) Plant Bowen (Site) Ash Pond 1 (AP-1). This report was prepared as an addendum to previously issued well certification reports prepared for the Site (Anchor QEA, 2017; Geosyntec, 2019, 2020a, 2020b, 2021a, 2021b, and 2022), and meets the requirements promulgated in the United States Environmental Protection Agency (USEPA) coal combustion residual (CCR) rule [40 Code of Federal Regulations (CFR) Part 257, Subpart D], specifically 40 CFR §257.91(e)(1) and Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10.

Plant Bowen is a four-unit, coal-fired, electric-generating facility located nine miles southwest of Cartersville in Bartow County, Georgia. The current groundwater monitoring system at AP-1 includes a network of compliance monitoring wells, delineation wells, and piezometers. The locations of these wells and piezometers are shown on **Figure 1**.

2. DRILLING AND WELL INSTALLATION

Well installation and development activities were performed according to accepted industry standards and following guidelines within the *Manual for Groundwater Monitoring* (GA EPD, 1991). Soil boring and high-speed wireline coring were performed by Civil Field Services (CFS). Well drilling, installation, and surface completion activities were performed by Cascade Drilling, Inc of Midland, North Carolina. In accordance with the Georgia Water Well Standards Act, the drillers were required to have an insurance bond on file with the State of Georgia at the time of drilling. A copy of these bonds is provided in **Appendix A**. A geologist under the supervision of a professional geologist (PG) registered to practice in the State of Georgia, both of whom are employed with Geosyntec Consultants, Inc. (Geosyntec), documented the drilling and installation efforts to record observations, soil and rock descriptions, subsurface stratigraphy, water elevations, and other field activities. Well development was completed by Resolute Environmental & Water Resources Consulting, LLC (Resolute).

PT-02 was installed and completed in July 2023. PT-03 was installed and completed in December 2023. The locations of PT-02 and PT-03 are shown on **Figure 1**. Well construction details are provided in **Table 1**; boring and well construction logs are included in **Appendix B**.

2.1 Drilling Method

Soil borings were advanced from existing ground surface to bedrock using hollow-stem auger drilling methods. Samples of the unconsolidated residuum were collected every 5 feet using a split spoon sampler. Permanent 6-inch polyvinyl chloride (PVC) casings were installed through unconsolidated residuum and set into the upper bedrock to maintain borehole stability. The permanent surface casings were grouted in place using a bentonite grout slurry and were allowed to set for 24 hours before further bedrock drilling.

Boreholes were advanced into the bedrock using high-speed wireline coring equipped with an HQ-size core bit. Continuous rock cores were collected and logged by a Geosyntec field geologist.

Care was taken so that the drilling methods minimized the disturbance of subsurface materials and did not introduce contamination of the groundwater from surface activities. Prior to well installation, the boreholes were reamed out using rotosonic drilling

techniques. The drill rig and the downhole equipment were steam cleaned prior to drilling.

2.2 Borehole Geophysics

Borehole geophysical logging of boreholes drilled into rock units was conducted by Earth Data Northeast, Inc. (EDN) of Exton, Pennsylvania, under the supervision of a Geosyntec geologist. The purpose of the geophysical logging was to characterize and evaluate potential water-bearing bedrock fractures and groundwater flow in the open-hole sections of the boreholes to support decisions on the appropriate screen interval for each bedrock piezometer. The geophysical logging consisted of a combination of:

- Acoustic televiewer;
- Three-arm caliper;
- Natural gamma;
- Fluid temperature and fluid resistivity under ambient flow and induced flow (pumping) conditions; and
- spontaneous potential and single point resistance.

Borehole geophysical logging was conducted prior to installation of piezometers PT-02 and PT-03. Borehole geophysical logs prepared by EDN are included in **Appendix B**.

2.3 Screened Interval

Details regarding the well screen intervals are provided in **Table 1**. Wells are screened in the upper portion of the limestone bedrock unit with PT-02 screened from approximately 661.63 to 651.63 feet [referenced to the North American Vertical Data of 1988 (NAVD88)] and PT-03 screened from approximately 663.24 to 653.24 feet. All wells are constructed with 10 feet of well screen.

2.4 Well Casings and Screens

The wells were constructed of 2-inch inner diameter Schedule 40 PVC casing with flush-threaded fittings. Each well was installed with a 10-foot nominal pre-packed dual-wall well screen with 0.010-inch slots. The casings and screens arrived pre-cleaned and packaged by the manufacturer. Well construction materials are sufficiently durable to resist chemical and physical degradation and not interfere with the quality of groundwater samples. Casing and screens are flush-threaded. Solvent or glue was not used to construct the wells. A 4-inch long threaded bottom cap was attached to the bottom of the

screen. The PVC products used were American Society for Testing and Materials (ASTM) and National Sanitation Foundation (NSF) rated. Well screen interval details are provided in **Table 1**.

2.5 Well Intake Design

Wells were designed and constructed to: (1) allow sufficient groundwater flow to the well for sampling; (2) minimize the passage of formation materials (turbidity) into the wells; and (3) ensure sufficient structural integrity to prevent collapse of the wells. The annular space between the face of the formation and the screen was filled to minimize passage of formation materials into the wells. A filter pack of clean, well-rounded, quartz sand was installed in each well. The 0.01-inch slot size was selected to minimize the inflow of formation material without impairing influent groundwater flow.

2.6 Filter Pack

Highly Pure Quartzite of Southern Products & Silica Co. silica sand filter pack was used as the appropriate gradation for all wells. Highly Pure Quartzite meets the ASTM D5092 uniformity coefficient specification of 2.5 or less, with a uniformity coefficient of 1.6.

Filter pack material was placed within the pre-packed dual-wall well screens and in the annular space between the outside of the pre-pack screen and borehole wall to ensure an adequate thickness of filter pack material between the well and the formation. Placement of the filter pack between the borehole wall and PVC was placed via gravity-pouring. Filter pack material placed in the annular space outside of the well screen extended approximately 2 to 3 feet above the top of screen. No bridging occurred during filter pack placement.

Upon placement of the filter pack, each well was pumped with a submersible pump to assure settlement of the filter pack. The top of filter pack depth was measured following pumping to ensure appropriate extension of filter sand above the screen. The depth of top of filter pack was measured and recorded on the well construction logs provided in **Appendix B**.

2.7 Annular Seal

A minimum of two feet of bentonite pellets (PelPlug non-coated 3/8-inch bentonite pellets) were placed immediately above the filter pack by gravity-pouring into the annular space and hydrated per manufacture's specifications. A tremie pipe was used to probe

the annular space to ensure that no bridging occurred. The bentonite was hydrated with groundwater for a duration meeting or exceeding the manufacture's specifications prior to grouting the remaining annulus.

The annulus above the bentonite seal was grouted with AquaGuard® bentonite grout placed via tremie pipe. During grouting, care was taken to assure that the bentonite seal was not disturbed by locating the base of the tremie pipe approximately 2 feet above the bentonite seal and injecting grout at low pressure/velocity. A cement apron 4-feet by 4-feet by 4-inches was poured around each well. The pad is mounded slightly outward to direct surface drainage away from the well.

2.8 Cap and Protective Casing

The well risers were fitted with a locking cap and a lockable cover. A one-quarter inch vent hole was drilled into the PVC riser pipe to provide an avenue for the escape of gas. The protective cap guards the casing from damage and the locking cap serves as a security device to prevent well tampering. Bollards were installed around the four corners of the concrete pad to protect the well.

A weep hole was drilled in the outer protective casing near the bottom above the concrete pad. Pea gravel was placed inside the protective casing between the riser pipe and the outer casing. Wells are clearly marked with the proper well identification number on the stand-up casing.

3. WELL DEVELOPMENT

Resolute developed PT-02 in August 2023 and PT-03 in January 2024 using a combination of surging and pumping to (1) restore the natural hydraulic conductivity of the formation, and (2) to remove fine-grained sediment to ensure low-turbidity groundwater samples. Wells were alternately surged and purged until visually clear of particulates. Turbidity, pH, temperature, conductivity, oxidation-reduction potential (ORP), and dissolved oxygen (DO) measurements were recorded to ensure that each well was fully developed and field parameters were stabilized following low-flow sampling procedures in accordance with the approved Groundwater Monitoring Plan for Plant Bowen Ash Pond 1 (AP-1) Closure (Geosyntec, 2021). The well development forms are included in **Appendix C**.

All equipment and tubing placed in the well was decontaminated or disposed of between wells.

4. SURVEY

Upon completion of the well installation, the horizontal locations and vertical elevations were surveyed by a Georgia-licensed surveyor. The top of the PVC well casing [top of casing (TOC) elevation] and the survey pin installed at each well pad were surveyed to within 0.5-foot horizontal accuracy and to 0.01-foot vertical accuracy. The horizontal location (i.e., northings and eastings) was recorded in feet relative to the North America Datum of 1983 (NAD) with the vertical elevation recorded in feet relative to the North American Vertical Datum of 1988. Certified survey data are provided in the well construction table (**Table 1**). A copy of the certified well survey data for PT-02 and PT-03 is provided in **Appendix D**.

This Power of Attorney is made and executed pursuant to and by authority of the following By-law and Authorizations of American States Insurance Company, First National Insurance Company of America, General Insurance Company of America, and Safeco Insurance Company of America, which are now in full force and effect reading as follows:

ARTICLE IV - OFFICERS: Section 12. Power of Attorney

Any officer or other official of the Corporation authorized for that purpose in writing by the Chairman or the President, and subject to such limitation as the Chairman or the President may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Corporation to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorney-in-fact, subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Corporation by their signature and executed, such instruments shall be as binding as if signed by the President and attested to by the Secretary. Any power or authority granted to any representative or attorney-in-fact under the provisions of this article may be revoked at any time by the Board, the Chairman, the President or by the officer or officers granting such power or authority.

Certificate of Designation - The President of the Company, acting pursuant to the Bylaws of the Company, authorizes David M. Carey, Assistant Secretary to appoint such attorneys-in-fact as may be necessary to act on behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations.

Authorization - By unanimous consent of the Company's Board of Directors, the Company consents that facsimile or mechanically reproduced signature of any assistant secretary of the Company, whenever appearing upon a certified copy of any power of attorney issued by the Company in connection with surety bonds, shall be valid and binding upon the Company with the same force and effect as though manually affixed.

I, Renee C. Llewellyn, the undersigned, Assistant Secretary, of American States Insurance Company, First National Insurance Company of America, General Insurance Company of America, and Safeco Insurance Company of America do hereby certify that the original power of attorney of which the foregoing is a full, true and correct copy of the Power of Attorney executed by said Companies, is in full force and effect and has not been revoked.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed the seals of said Companies this 22nd day of May, 2023.

CONTINUATION
CERTIFICATE

Atlantic Specialty Insurance Company

Surety upon

a certain Bond No. 800033976

dated effective September 27, 2017
(MONTH-DAY-YEAR)

on behalf of Ricky Davis / Cascade Drilling, L.P.
(PRINCIPAL)

and in favor of Department of Natural Resources, State of Georgia
(OBLIGEE)

does hereby continue said bond in force for the further period

beginning on June 30, 2023
(MONTH-DAY-YEAR)

and ending on June 30, 2025
(MONTH-DAY-YEAR)

Amount of bond Thirty Thousand and 00/100 Dollars (\$30,000.00)

Description of bond Performance Bond for Water Well Contractors

Premium:

PROVIDED: That this continuation certificate does not create a new obligation and is executed upon the express condition and provision that the Surety's liability under said bond and this and all Continuation Certificates issued in connection therewith shall not be cumulative and that the said Surety's aggregate liability under said bond and this and all such Continuation Certificates on account of all defaults committed during the period (regardless of the number of years) said bond had been and shall be in force, shall not in any event exceed the amount of said bond as hereinbefore set forth.

Signed and dated on April 13, 2023
(MONTH-DAY-YEAR)

Atlantic Specialty Insurance Company

By 
ATTORNEY-IN-FACT Carlos A. Albelo

Power of Attorney

KNOW ALL MEN BY THESE PRESENTS, that ATLANTIC SPECIALTY INSURANCE COMPANY, a New York corporation with its principal office in Plymouth, Minnesota, does hereby constitute and appoint: Megan Skelley, Melissa Haddick, Sandra Parker, Orlando Aguirre, Stacy Killebrew, Carlos A. Albela, each individually if there be more than one named, its true and lawful Attorney-in-Fact, to make, execute, seal and deliver for and on its behalf as surety, any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, provided that no bond or undertaking executed under this authority shall exceed in amount the sum of: unlimited and the execution of such bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof in pursuance of these presents, shall be as binding upon said Company as if they had been fully signed by its authorized officer of the Company and sealed with the Company seal. This Power of Attorney is made and executed by authority of the following resolutions adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-Eighth day of September, 2012:

Resolved: That the President, any Senior Vice President or Vice-President (each an "Authorized Officer") may execute for and in behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and affix the seal of the Company thereto, and that the Authorized Officer may appoint and authorize an Attorney-in-Fact to execute on behalf of the Company any and all such instruments and to affix the Company seal thereto; and that the Authorized Officer may at any time remove any such Attorney-in-Fact and revoke all power and authority given in any such Attorney-in-Fact.

Resolved: That the Attorney-in-Fact may be given full power and authority to execute for and in the name and on behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and any such instrument executed by any such Attorney-in-Fact shall be as binding upon the Company as if signed and sealed by an Authorized Officer and, further, the Attorney-in-Fact is hereby authorized to verify any affidavit required to be attached to bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof.

This power of attorney is signed and sealed by facsimile under the authority of the following Resolution adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-Eighth day of September, 2012:

Resolved: That the signature of an Authorized Officer, the signature of the Secretary or the Assistant Secretary, and the Company seal may be affixed by facsimile to any power of attorney or to any certificate relating thereto appointing an Attorney-in-Fact for purposes only of executing and sealing any bond, undertaking, recognizance or other written obligation in the nature thereof, and any such signature and seal where so used, being hereby adopted by the Company as the original signature of such officer and the original seal of the Company, to be valid and binding upon the Company with the same force and effect as though manually affixed.

IN WITNESS WHEREOF, ATLANTIC SPECIALTY INSURANCE COMPANY has caused these presents to be signed by an Authorized Officer and the seal of the Company to be affixed this first day of January, 2023.

By *Sarah A. Kolar*
Sarah A. Kolar, General Counsel

STATE OF MINNESOTA
HENNEPIN COUNTY

On this first day of January, 2023, before me personally came Sarah A. Kolar, General Counsel of ATLANTIC SPECIALTY INSURANCE COMPANY, to me personally known to be the individual and officer described in and who executed the preceding instrument, and she acknowledged the execution of the same, and being by me duly sworn, that she is the said officer of the Company aforesaid, and that the seal affixed to the preceding instrument is the seal of said Company and that the said seal and the signature as such officer was duly affixed and subscribed to the said instrument by the authority and at the direction of the Company.

Alison Nash-Trout
Notary Public

I, the undersigned, Secretary of ATLANTIC SPECIALTY INSURANCE COMPANY, a New York Corporation, do hereby certify that the foregoing power of attorney is in full force and has not been revoked, and the resolutions set forth above are now in force.

Signed and sworn to: 13th day of April, 2023.

This Power of Attorney expires
January 31, 2025

APPENDIX B

Well Maintenance and Repair Documentation Memoranda

February 2023

MEMORANDUM

Date: January 31, 2023
To: Kristen Jurinko – Georgia Power
CC: Ben Hodges
From: Resolute Environmental
Subject: Plant Bowen Ash Pond - Well Maintenance and Repair Documentation
Georgia Power Company

Resolute Environmental has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at PLANT BOWEN during the semiannual reporting period. All repairs and maintenance were completed in accordance with the Georgia Environmental Protection Division (GAEPD) guidance on routine visual inspections of groundwater monitoring wells.

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/ Repair Performed
Plant Bowen Ash Pond	1/30/23	BGWC-22	Developed Well
Plant Bowen Ash Pond	1/31/23	BGWC-38D	Developed Well
Plant Bowen Ash Pond	1/31/23	BGWC-43D	Developed Well

All maintenance and repairs are also documented in the 2023 annual/semiannual groundwater monitoring report.

 Well ID BGWA-1
 Date 1/23/23

	yes	no	n/a
1 Location/Identification			
a Is the well visible and accessible?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well properly identified with the correct well ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well in a high traffic area and does the well require protection from traffic?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only			
a Does well recharge adequately when purged?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

1 Location/Identification			
a Is the well visible and accessible?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well properly identified with the correct well ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well in a high traffic area and does the well require protection from traffic?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?			
	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?			
	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

		yes	no	n/a
1 Location/Identification				
a	Is the well visible and accessible?	✓		
b	Is the well properly identified with the correct well ID?	✓		
c	Is the well in a high traffic area and does the well require protection from traffic?		✓	
d	Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	✓		
2 Protective Casing				
a	Is the protective casing free from apparent damage and able to be secured?	✓		
b	Is the casing free of degradation or deterioration?	✓		
c	Does the casing have a functioning weep hole?	✓		
d	Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	✓		
e	Is the well locked and is the lock in good condition?	✓		
3 Surface pad				
a	Is the well pad in good condition (not cracked or broken)?	✓		
b	Is the well pad sloped away from the protective casing?	✓		
c	Is the well pad in complete contact with the protective casing?	✓		
d	Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	✓		
e	Is the pad surface clean (not covered with sediment or debris)?	✓		
4 Internal casing				
a	Does the cap prevent entry of foreign material into the well?	✓		
b	Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	✓		
c	Is the well properly vented for equilibration of air pressure?	✓		
d	Is the survey point clearly marked on the inner casing?	✓		
e	Is the depth of the well consistent with the original well log?	✓		
f	Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	✓		
5 Sampling: Groundwater Wells Only:				
a	Does well recharge adequately when purged?	✓		
b	If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	✓

		yes	no	n/a
1 Location/Identification				
a	Is the well visible and accessible?	✓		
b	Is the well properly identified with the correct well ID?	✓		
c	Is the well in a high traffic area and does the well require protection from traffic?		✓	
d	Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	✓		
2 Protective Casing				
a	Is the protective casing free from apparent damage and able to be secured?	✓		
b	Is the casing free of degradation or deterioration?	✓		
c	Does the casing have a functioning weep hole?	✓		
d	Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	✓		
e	Is the well locked and is the lock in good condition?	✓		
3 Surface pad				
a	Is the well pad in good condition (not cracked or broken)?	✓		
b	Is the well pad sloped away from the protective casing?	✓		
c	Is the well pad in complete contact with the protective casing?	✓		
d	Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	✓		
e	Is the pad surface clean (not covered with sediment or debris)?	✓		
4 Internal casing				
a	Does the cap prevent entry of foreign material into the well?	✓		
b	Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	✓		
c	Is the well properly vented for equilibration of air pressure?	✓		
d	Is the survey point clearly marked on the inner casing?	✓		
e	Is the depth of the well consistent with the original well log?	✓		
f	Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	✓

c	Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d	Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e	Is the pad surface clean (not covered with sediment or debris)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
4 Internal casing				
a	Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b	Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c	Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d	Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e	Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f	Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:				
a	Does well recharge adequately when purged?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b	If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c	Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6	Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Groundwater Monitoring Well Integrity Form

Site Name Baker AP
 Permit Number _____
 Well ID PZ-4
 Date 1/23/23

	yes	no	n/a
1 Location/Identification			
a Is the well visible and accessible?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well properly identified with the correct well ID?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well in a high traffic area and does the well require protection from traffic?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d Is the drainage around the well acceptable? (no standing water, nor is well located in obvious drainage flow path)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7 Corrective actions as needed, by date:

2 Protective Casing			
a Is the protective casing free from apparent damage and able to be secured?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of degradation or deterioration?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Does the casing have a functioning weep hole?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the annular space between casings clear of debris and water, or filled with pea gravel/sand?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the well locked and is the lock in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3 Surface pad			
a Is the well pad in good condition (not cracked or broken)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the well pad sloped away from the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well pad in complete contact with the protective casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the well pad in complete contact with the ground surface and stable? (not undermined by erosion, animal burrows, and does not move when stepped on)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the pad surface clean (not covered with sediment or debris)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4 Internal casing			
a Does the cap prevent entry of foreign material into the well?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b Is the casing free of kinks or bends, or any obstructions from foreign objects (such as bailers)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c Is the well properly vented for equilibration of air pressure?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d Is the survey point clearly marked on the inner casing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e Is the depth of the well consistent with the original well log?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f Is the casing stable? (or does the pvc move easily when touched or can it be taken apart by hand due to lack of grout or use of slip couplings in construction)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5 Sampling: Groundwater Wells Only:			
a Does well recharge adequately when purged?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b If dedicated sampling equipment installed, is it in good condition and specified in the approved groundwater plan for the facility?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c Does the well require redevelopment (low flow, turbid)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6 Based on your professional judgement, is the well construction / location appropriate to 1) achieve the objectives of the Groundwater Monitoring Program and 2) comply with the applicable regulatory requirements?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Resolute

Environmental & Water Resources Consulting

MEMORANDUM

Date: November 15, 2023

To: Kristen Jurinko – Georgia Power

CC: Ben Hodges

From: Resolute Environmental

Subject: Plant Bowen Ash Pond - Well Maintenance and Repair Documentation
Georgia Power Company

Resolute Environmental has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at PLANT BOWEN during the semiannual reporting period. All repairs and maintenance were completed in accordance with the Georgia Environmental Protection Division (GAEPD) guidance on routine visual inspections of groundwater monitoring wells.

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/ Repair Performed
Plant Bowen Ash Pond	8/10/23	BGWC-35D	Developed Well
Plant Bowen Ash Pond	8/10/23	BGWC-37D	Developed Well
Plant Bowen Ash Pond	8/25/23	BGWC-24	Re-Install Dedicated Pump
Plant Bowen Ash Pond	8/25/23	BGWC-51	Re-Install Dedicated Pump
Plant Bowen Ash Pond	8/30/23	PT-02	Developed Well

All maintenance and repairs are also documented in the 2023 annual/semiannual groundwater monitoring report.

Atlanta, GA 30339

RE: Project: Bowen AP-1
Pace Project No.: 92649235

Dear Joju Abraham:

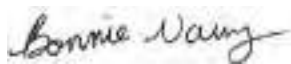

Enclosed are the analytical results for sample(s) received by the laboratory between January 27, 2023 and February 10, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Bowen AP-1
Pace Project No.: 92649235

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1g	Sample residue exceeded method SM 2540C recommended 200 mg.
B	Analyte was detected in the associated method blank.
CL	The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.
D6	The precision between the sample and sample duplicate exceeded laboratory control limits.
H1	Analysis conducted outside the EPA method holding time.
H2	Extraction or preparation conducted outside EPA method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

DC# Title: ENV-FRM-HUN1-0083 v02_Sample Condition Upon Receipt

Effective Date: 11/14/2022

Laboratory receiving samples:

Asheville Eden Greenwood Huntersville Raleigh Mechanicsville Atlanta Kernersville

Sample Container Type: Other:

Client Name: GA Power

Project #: **WO# : 92649235**

Courier: Fed Ex UPS USPS Client Commercial Pace Other: _____

Custody Seal Present? Yes No Seals Intact? Yes No

Date/Initials Person Examining Contents: 1/27/23
CSW

Packing Material: Bubble Wrap Bubble Bags None Other

Biological Tissue Frozen?

Yes No N/A

Thermometer:

Part No: 230

Type of Use: Direct Indirect None

Cooler Temp: 5.4/31/48 Correction Factor: 0.0
Add/Subtract (°C)

Temp should be above freezing to 6°C
 Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 5.4 5.4/31/48/5.1

USDA Regulated Soil? N/A, water sample

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? Yes No

Did samples originate in a quarantine zone within the United States, CA, NY, or SC (check maps)? Yes No

			Comments/Discurrency

Submitting a sample for the study of metals, nutrients, sedimentation and organics and requires all the following information to be completed accurately.

CHAIN-OF-CUSTODY / Analytical Request Document

Section A
Submitter Client Information: **Project No. 1210**
Project Name: **William Leader**
Address: **241 Poplar Ave NE Atlanta GA 30306**
Phone: **404-525-1336**

Section B
Applicable Project Information: **Project No. 1210**
Project Name: **William Leader**
Address: **241 Poplar Ave NE Atlanta GA 30306**
Phone: **404-525-1336**

Section C
Analytical Information: **Project No. 1210**
Project Name: **William Leader**
Address: **241 Poplar Ave NE Atlanta GA 30306**
Phone: **404-525-1336**

RE: Project: Bowen AP-1 - RADS
Pace Project No.: 92649233

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between January 27, 2023 and February 10, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen AP-1 - RADS

Pace Project No.: 92649233

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

DC# Title: ENV-FRM-HUN1-0083 v02_Sample Condition Upon Receipt

Effective Date: 11/14/2021

Laboratory receiving samples:

Asheville Eden Greenwood Huntersville Raleigh Mechanicsville Atlanta Kernersville

Sample Location: _____
Labor Receiver: _____

Client Name:

GA Power

Project #: **WO#: 92649233**

Courier: Fed Ex UPS USPS Other: _____
 Pace Other: _____

Custody Seal Present? Yes No Septic Intact? Yes No

Packing Material: Bubble Wrap Bubble Bags None Other

Thermometer: _____
Type of Ice: White Blue None

Cooler Temp: 54/31/48 Correction Factor: 0.0
Add/Subtract (°C)

Temp should be above freezing to 6°C.
 Samples out of temp range. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 54/31/48/51

USA Registered Soil N/A, water sample?
Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? Yes No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? Yes No

				Comments/Discrepancy:

Kristen Jurinko
Southern Co.

RE: Project: Bowen AP
Pace Project No.: 92667104

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on May 11, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: Bowen AP

Pace Project No.: 92667104

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Bowen AP-1
Pace Project No.: 92683381

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between August 17, 2023 and August 28, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

For WO 92683381-014, Sb required a re-analysis due to possible carryover from previous samples performed and the result is reported from the re-run at non-detect.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALITY CONTROL DATA

Project: Bowen AP-1

Pace Project No.: 92683381

QC Batch: 797129

Analysis Method: EPA 6020B

QC Batch Method: EPA 3005A

Analysis Description: 6020 MET

Laboratory: Pace Analytical Services - Peachtree Corners, GA

Associated Lab Samples: 92683381013, 92683381014, 92683381015, 92683381016, 92683381017, 92683381018, 92683381019, 92683381020, 92683381021, 92683381022, 92683381023, 92683381024, 92683381025, 92683381026, 92683381027, 92683381028, 92683381029, 92683381030, 92683381031, 92683381032

METHOD BLANK: 4129459

Matrix: Water

Associated Lab Samples: 92683381013, 92683381014, 92683381015, 92683381016, 92683381017, 92683381018, 92683381019, 92683381020, 92683381021, 92683381022, 92683381023, 92683381024, 92683381025, 92683381026, 92683381027, 92683381028, 92683381029, 92683381030, 92683381031, 92683381032

Table with 7 columns: Parameter, Units, Blank Result, Reporting Limit, MDL, Analyzed, Qualifiers. Lists various elements like Antimony, Arsenic, Barium, etc.

LABORATORY CONTROL SAMPLE: 4129460

Table with 7 columns: Parameter, Units, Spike Conc., LCS Result, LCS % Rec, % Rec Limits, Qualifiers. Lists various elements like Antimony, Arsenic, Barium, etc.

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

QUALIFIERS

Project: Bowen AP-1

Pace Project No.: 92683381

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

- | | |
|----|---|
| 1g | Sample residue exceeded method SM 2540C recommended 200 mg |
| D3 | Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference. |
| D6 | The precision between the sample and sample duplicate exceeded laboratory control limits. |
| M1 | Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. |

DC# Title: ENV-FRM-HUN1-0083 v02_Sample Condition Upon Receipt

Effective Date: 11/14/2021

Laboratory receiving samples:

Asheville Eden Greenwood Huntersville Raleigh Mechanicsville Atlanta Knoxville

Sample Condition Upon Receipt

Client Name:

G A Power

Project #:

WO#: 92683381

Carrier: Fed Ex UPS USPS Client Commercial Pace Other: _____

Custody Seal Present? Yes No Seals Intact? Yes No

Date/Initials Person Examining Contents *8/15/23*

Packing Material: Bubble Wrap Bubble Bags Foam Other: _____

Biological Tissue Frozen? Yes No N/A

Thermometer: N/A ID: 230 Type of Ice: Wet Blue None

Cooler Temp: 2.1 Correction Factor: Add/Subtract: 0.0 °C

Temp should be above freezing to 5°C Sample out of temp or a sample on ice cooling process has begun

Cooler Temp Corrected [°C]: 2.1

USDA Regulated Soil N/A, water sample

Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? Yes No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? Yes No

	Comments/Discrepancy
Chain of Custody Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	1.
Samples Arrived within Hold Time? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	2.
Short Hold Time Analysis (<72 hr.)? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	3.
Rush Turn Around Time Requested? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	4.
Sufficient Volume? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	5.
Correct Containers Used? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	6.
-Pace Containers Used? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	
Containers Intact? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	7.
Dispensed analysis: Samples Field Filtered? <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	8.
Sample Labels Match CDC? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	9.
-Includes Date/Time/ID/Analysis Matrix: <i>W</i>	
Headspace in NDA Vials (>5-6mm)? <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	10.
Trip Blank Present? <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	11.
Trip Blank Custody Seals Present? <input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	

COMMENTS/SAMPLE DISCREPANCY

Field Data Required? Yes No

Lot ID of split containers

PH: BV

Due Date: 08/01/23

CLIENT: 92-GP-BOWLF

*Check mark top half of box if pH and/or dechlorination is verified and within the acceptance range for preservation samples.

Exceptions: VOA, Coliform, FOC, Oil and Grease, D60/B015 (water), DOC, Uhg

**Bottom half of box is to list number of bottles

***Check all unpreserved Nitrates for chlorite

Item#	Description	1	2	3	4	5	6	7	8	9	10	11	12
BP4U-125 mL Plastic Unpreserved (N/A) (C-)													
QP30-250 mL Plastic Unpreserved (N/A)													
QP20-500 mL Plastic Unpreserved (N/A)													
BP30-1 liter Plastic Unpreserved (N/A)													
BP4S-125 mL Plastic H2SO4 (pH < 2) (C+)													
BP3N-250 mL Plastic HNO3 (pH < 2)													
BP4E-125 mL Plastic 2N Acetate & NaOH (>8)													
BP4B-125 mL Plastic NaOH (pH > 12) (C-)													
WGFL-Wide-mouthed Glass Jar Unpreserved													
AQ10-1 liter Amber Unpreserved (N/A) (C-)													
AQ2H-1 liter Amber HD (pH < 2)													
AG3U-250 mL Amber Unpreserved (N/A) (C-)													
AG15-1 liter Amber B-250M (pH < 2)													
AG3S-250 mL Amber H2SO4 (pH < 2)													
DG9M-10 mL Amber N-44Cl (N/A)(C-)													
DG9H-10 mL VOA HCl (N/A)													
VG9T-40 mL VOA Na2SO3 (N/A)													
VG9U-40 mL VOA Unpreserved (N/A)													
DK9H-10 mL VOA H3PO4 (N/A)													
RP7U-50 mL Plastic Unpreserved (N/A)													
V7BK (3 vials per kit) V7H/Gas kit (N/A)													
SP13-125 mL Sterile Plastic (N/A - ab)													
SP2F-250 mL Sterile Plastic (N/A - lab)													
	APIN												
BP3B-250 mL Plastic (N/A) 2504 (9-3-9-7)													
AG6U-100 mL Amber Unpreserved (N/A) (C-)													
V56M-20 mL Scrubbing Wals (N/A)													
DG9U-40 mL Amber Unpreserved vials (N/A)													

pH Adjustment Log for Preserved Samples

Sample ID	Type of Preservative	pH upon receipt	Date preservation adjusted	Time preservation adjusted	Amount of Preservative added	Lot #

Note: Whenever there is a discrepancy affecting North Carolina compliant samples, a copy of this form will be sent to the North Carolina DENR Certification Office (i.e. Out of hold, incorrect preservative, out of temp, incorrect containers).

Effective Date: 11/14/2022

*Check mark top half of box if pH and/or dechlorination is verified and within the acceptance range for preservation samples.

Exceptions: VOA, Coliform, *OC, Oil and Grease, DRD/BO15 (water) DOC, LLHg

**Bottom half of box is to list number of bottles

***Check all unpreserved Nitrates for chlorine

pH Adjustment Log for Preserved Samples

Sample ID	Type of Preservative	pH upon receipt	Date preservation adjusted	Time preservation adjusted	Amount of Preservative added	Lot #

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DENR Certification Office. E. Out of hold, incorrect preservative, out of time, incorrect containers.

CHAIN-OF-CUSTODY / Analytical Request Document

The Chain-of-Custody is a LEGAL DOCUMENT. All relevant fields must be completed accurately.

Submitting a sample via the chain of custody constitutes acknowledgment and acceptance of the Pace Terms and Conditions found at <http://info.pacelabs.com/files/chain-of-custody-standards-terms.pdf>.

RE: Project: Bowen AP-1- RADs
Pace Project No.: 92683382

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between August 17, 2023 and August 28, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen AP-1- RADs

Pace Project No.: 92683382

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

DC# Title: ENV-FRM-HUN1-0083 v02_Sample Condition Upon Receipt

Effective Date: 11/14/2022

laboratory receiving samples:

Asheville Eden Greenwood Huntersville Raleigh Mechanicsville Atlanta Knoxville

Sample Condition Upon Receipt

Client Name: GA Power

Project # **WO# : 92683382**

PH: BY _____ Due Date: 09/11/23
CLIENT: 02-CP-BOWLF

Courier: Commercial Fed Ex UPS USPS Other _____ Client

Custody Seal Present? Yes No Seal Intact? Yes No

Date/Initials Person Examining Container: 8/23/23
CSZ

Packing Material: Bubble Wrap Bubble Bags None Other _____

Biological Tissue Frozen? Yes No N/A

Thermometer: In Sun ID: 230 Type of Ice: Wet Blue None

Cooler Temp: 5.6 Correction Factor: Add/Subtract (°C): 0.0

Temp should be above freezing to 6°C
 Samples out of temp entire. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 5.6

USDA Regulated Soil (N/A, water sample)
Did samples originate in a quarantined zone within the United States, CA, NY, or SC (check map)? Yes No

Do samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? Yes No

		Comments/Discrepancy:
Chain of Custody Present?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	1.
Samples Arrived within Hold Time?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	2.
Short Hold Time Analysis (<72 hr.)?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	3.
Rush Turn Around Time Requested?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	4.
Sufficient Volume?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	5.
Correct Containers Used?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	6.
-Pace Containers Used?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	
Container Intact?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	7.
Dissolved analytes: Samples Field Filtered?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	8.
Sample Labels Match COC?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	9.
Includes Date/Time/ID/Analysis Match: <u>W</u>		
Headpack in VOA Vials (>5-6mm)?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	10.
Trip Blank Present?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	11.
Trip Blank Custody Seals Present?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	

COMMENTS/SAMPLE DISCREPANCY _____ Field Data Required? Yes No

RE: Project: Plant Bowen PDI June 2023
Pace Project No.: 92673015

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on June 16, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angela Baioni for
Bonnie Vang

QUALIFIERS

Project: Plant Bowen PDI June 2023

Pace Project No.: 92673015

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant Bowen PDI July 2023
Pace Project No.: 92679362

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on July 26, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

RE: Project: Bowen AP-1
Pace Project No.: 92690624

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on September 28, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: Bowen AP-1

Pace Project No.: 92690624

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

QUALIFIERS

Project: Bowen AP-1

Pace Project No.: 92696416

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Data Validation Reports

February 2023

Memorandum

Date: June 20, 2023
To: Whitney Law
From: Amani Royce
CC: K. Henderson
Subject: **Stage 2A Data Validation - Level II Data Deliverables – Pace Analytical Services, LLC Project Numbers 92649233, 92649235, and 92667104**

SITE: Plant Bowen Ash Pond

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of forty-two aqueous samples, six field duplicates, five equipment blanks, and ten field blanks collected 24-27 and 30-31 January 2023, 1-2 and 7 February 2023, and 10 May 2023, as part of the Plant Bowen Ash Pond on-site sampling event.

The samples were analyzed at Pace Analytical Services, LLC, Peachtree Corners, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3010A/6010D
- Metals by US EPA Methods 3005A/6020B
- Mercury by US EPA Method 7470A
- Total Dissolved Solids (TDS) by Standard Method 2540C

The samples were analyzed at Pace Analytical Services, LLC, Asheville, North Carolina, for the following analytical tests:

- Anions (Chloride, Fluoride and Sulfate) by US EPA Method 300.0
- Alkalinity by Standard Method 2320B

The samples were analyzed at Pace Analytical Services, LLC, Greensburg, Pennsylvania, for the following analytical tests:

- Radium-226 by US EPA Method 9315

- Radium-228 by US EPA Method 9320
- Total Radium by Calculation

EXECUTIVE SUMMARY

Based on the Stage 2A data validation covering the quality control (QC) parameters listed below and the information provided, the data as qualified are usable for supporting project objectives, with the following exceptions.

Since samples BOW-BGWC-30, BOW-BGWC-36D, BOW-BGWC-41D, BOW-BGWC-49D, BOW-API-EB-02, and BOW-API-FB-07 were prepared and analyzed outside of the method specified holding times for mercury, the non-detect mercury results were R qualified as rejected.

Since samples BOW-BGWC-12 and BOW-BGWC-14A were analyzed outside of the method specified holding times for alkalinity, the non-detect alkalinity, carbonate (CaCO₃) results in samples BOW-BGWC-12 and BOW-BGWC-14A were R qualified as rejected.

Rejected data should not be used and qualified data that was not rejected should be used within the limitation of the qualification. If there are results with two or more different qualifications due to multiple QC failures, the final qualification is reconciled in the electronic data deliverable (EDD) with qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, January 2017 (EPA 540-R-2017-001); and
- American National Standard, Verification and Validation of Radiological Data for use in Waste Management and Environmental Remediation, February 15, 2012 (ANSI/ANS-41.5-2012).

The following samples were analyzed and reported in the laboratory reports:

92667104003	BOW-AP1-FB-03
92667104004	BOW-AP1-EB-01

The samples were received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

Collection times were not listed on the chain of custody (COC) form for the field duplicates. The field duplicates were logged in with the collection time of 00:00.

Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

1.0 METALS

The samples were analyzed for metals by US EPA methods 3010A/6010D and 3005A/6020B. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Overall Assessment

- ✓ Laboratory Control Sample
- ⊗ Field Blank
- ✓ Equipment Blank
- ⊗ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

1.1 Overall Assessment

The metals data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

The beryllium and chromium recoveries in the continuing calibration verification (CCV) associated with the sample BOW-BGWC-18 were low and outside the laboratory specified acceptance criteria. Therefore, the estimated beryllium concentration in sample BOW-BGWC-18 was J qualified as estimated, and the non-detect chromium result was UJ qualified as estimated less than the method detection limit (MDL).

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
BOW-BGWC-18	Beryllium	0.00010	J CL	0.00010	J	9
BOW-BGWC-18	Chromium	0.0011	U CL	0.0011	UJ	9

mg/L-milligrams per liter

CL- Laboratory flag indicating the CCV was low and outside the laboratory specified acceptance criteria.

J - The result is less than the RL, but greater than or equal to the MDL, and the concentration is an approximate value.

U- The analyte was analyzed for but was not detected at or above the reported sample quantitation limit.

* Validation qualifiers are defined in Attachment 1 at the end of this report.

**Reason codes are defined in Attachment 2 at the end of this report.

1.2 Holding Time

The holding time for the metals analysis of a preserved water sample is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Ten method blanks were reported (batches 752954, 757480, 757680, 757805, 753120, 753122, 758264, 758321, 758324, and 774314) with the sample set. Metals were not detected in the method blanks above the MDLs, with the following exceptions.

92649235: Chromium was detected at estimated concentrations greater than the MDLs and less than the reporting limits (RLs) in the method blanks in batches 758321 and 758324. Therefore, the estimated chromium concentrations in samples BOW-BGWC-40 and BOW-BGWC-52 were U

qualified as not detected at the RL. Since chromium was not detected in the remaining associated samples, no additional qualifications were applied to the data.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-40	Chromium	0.0050	J B	0.0050	U	3
BOW-BGWC-52	Chromium	0.0016	J B	0.0050	U	3

mg/L-milligrams per liter

B- Laboratory flag indicating the analyte was detected in the associated method blank.

J - The result is less than the RL, but greater than or equal to the MDL, and the concentration is an approximate value.

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Nine sample set specific MS/MSD pairs were reported, using samples BOW-BGWA-29, BOW-BGWC-10, BOW-BGWC-30, BOW-API-FB-08, BOW-BGWC-18, BOW-API-FD-01, BOW-API-FD-03, BOW-API-EB-03, and BOW-BGWC-23. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

92649235: The recoveries of calcium and magnesium in the MD/MSD pair using samples BOW-BGWA-29 were high and the recoveries of calcium and magnesium in the MS/MSD pair using sample BOW-BGWC-30 were low and outside of the laboratory specified acceptance criteria. Since the calcium and magnesium concentrations in samples BOW-BGWA-29 and BOW-BGWC-30 were greater than four times the spike concentration, no qualifications were applied to the data.

92649235: The recoveries of calcium, sodium, and magnesium in the MS/MSD pair using sample BOW-BGWC-10 were low and outside of the laboratory specified acceptance criteria. Since the calcium, sodium, and magnesium concentrations in sample BOW-BGWC-10 were greater than four times the spike concentration, no qualifications were applied to the data.

92649235: The MS recovery and MS/MSD RPD of calcium in the MS/MSD pair using sample BOW-API-FB-08 were high and outside of the laboratory specified acceptance criteria. Since calcium was not detected in the sample, no qualifications were applied to the data.

One batch MS/MSD pair was reported for metals by US EPA method 6020B. Since this was a batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Ten LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Blank

Ten field blanks BOW-API-FB-01, BOW-API-FB-02, BOW-API-FB-03, BOW-API-FB-04, BOW-API-FB-05, BOW-API-FB-06, BOW-API-FB-07, BOW-API-FB-08, and BOW-API-FB-9 were collected with the sample set. Two field blanks were identified as BOW-API-FB-03. Metals were not detected in the field blanks above the MDLs, with the following exceptions.

92649235: Iron was detected in field blank BOW-API-FB-03 at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated iron concentrations in samples BOW-BGWC-12 and BOW-BGWC-17 were U qualified as not detected at the RLs. Since iron was not detected or detected above the RLs in the remaining associated samples, no additional qualifications were applied to the data.

92649235: Iron, antimony, and boron were detected in field blank BOW-API-FB-05 at estimated concentrations greater than the MDLs and less than the RLs. Since iron, antimony, and boron were not detected or detected greater than the RLs in the associated sample, no qualification was applied to the data.

92649235: Boron was detected in field blank BOW-API-FB-9 at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated boron concentration in equipment blank BOW-API-EB-04 was U qualified as not detected at the RL. Since boron was detected above the RLs in the remaining associated samples, no additional qualifications were applied to the data.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-12	Iron	0.026	J	0.040	U	3
BOW-BGWC-17	Iron	0.030	J	0.040	U	3
BOW-API-EB-04	Boron	0.036	J	0.040	U	3

mg/L-milligrams per liter

J- The result is less than the RL, but greater than or equal to the MDL, and the concentration is an approximate value.

1.7 Equipment Blank

Five equipment blanks BOW-API-EB-01, BOW-API-EB-02, BOW-API-EB-03, and BOW-API-EB-04 were collected with the sample set. Two equipment blanks were identified as BOW-

AP1-EB-01. Metals were not detected in the equipment blanks above the MDLs, with the following exceptions.

92649235: Boron was detected in BOW-AP1-EB-04 at an estimated concentration greater than the MDL and less than the RL. Since boron was U qualified as not detected at the RL in the equipment blank due to field blank contamination, no qualifications were applied to the data.

1.8 Field Duplicate

Six field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, BOW-AP1-FD-04, and BOW-AP1-FD-05, were collected with the sample set. Two field duplicate samples were identified as BOW-AP1-FD-03. Acceptable precision ($RPD \leq 20\%$ or difference $< RL$) was demonstrated between the field duplicates and the original samples BOW-BGWA-48D, BOW-BGWC-17, BOW-BGWC-37D (BOW-AP1-FD-03), BOW-BGWC-24, BOW-BGWC-43D, and BOW-BGWC-23 (BOW-AP1-FD-03), respectively, with the following exceptions.

92649235: The RPD of potassium and sodium in field duplicate pair BOW-BGWA-48D/ BOW-AP1-FD-01 were greater than 20%. Therefore, the potassium and sodium concentrations in samples BOW-BGWA-48D and BOW-AP1-FD-01 were J qualified as estimated.

92649235: Iron was detected at an estimated concentration greater than the MDL and less than the RL in sample BOW-BGWC-17, and iron was not detected in field duplicate BOW-AP1-FD-02, resulting in a noncalculable RPD. Since the iron concentration in sample BOW-BGWC-17 was U qualified as not detected at the RL due to field blank contamination, no additional qualifications were applied to the data.

92649235: Beryllium and thallium were detected at estimated concentrations greater than the MDLs and less than the RLs in field duplicate BOW-AP1-FD-03 and were not detected in sample BOW-BGWC-37D, resulting in noncalculable RPDs. Therefore, the estimated beryllium and thallium concentrations in field duplicate BOW-AP1-FD-03 were J qualified as estimated, and the non-detect beryllium and thallium results in sample BOW-BGWC-37D were UJ qualified as estimated less than the MDLs.

92649235: Arsenic was detected at an estimated concentration greater than the MDL and less than the RL in sample BOW-BGWC-24 and was detected greater than the RL in field duplicate BOW-AP1-FD-04, resulting in a noncalculable RPD. Therefore, the arsenic concentrations in samples BOW-BGWC-24 and BOW-AP1-FD-04 were J qualified as estimated.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	RPD	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-AP1-FD-01	Potassium	1.0	NA	26	1.0	J	7

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	RPD	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWA-48D	Potassium	1.3	NA		1.3	J	7
BOW-API-FD-01	Sodium	44.1	NA	21%	44.1	J	7
BOW-BGWA-48D	Sodium	54.2	NA		54.2	J	7
BOW-API-FD-03	Beryllium	0.00006	J	NC	0.00006	J	7
BOW-BGWC-37D	Beryllium	0.000054	U		0.000054	UJ	7
BOW-API-FD-03	Thallium	0.00023	J	NC	0.00023	J	7
BOW-BGWC-37D	Thallium	0.00018	U		0.00018	UJ	7
BOW-API-FD-04	Arsenic	0.0054	NA	NC	0.0054	J	7
BOW-BGWC-24	Arsenic	0.0042	J		0.0042	J	7

mg/L-milligrams per liter

J - The result is less than the RL, but greater than or equal to the MDL, and the concentration is an approximate value.

U- The analyte was analyzed for but was not detected at or above the reported sample quantitation limit.

NA- Not Applicable

NC- Not Calculable

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 MERCURY

The samples were analyzed for mercury by US EPA method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Overall Assessment
- ⊗ Holding Time
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate

- ✓ Laboratory Control Sample
- ⊗ Field Blank
- ✓ Equipment Blank

- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

2.1 Overall Assessment

The mercury data reported in this data set are considered usable for supporting project objectives, with the following exceptions.

Since samples BOW-BGWC-30, BOW-BGWC-36D, BOW-BGWC-41D, BOW-BGWC-49D, BOW-API-EB-02, and BOW-API-FB-07 were prepared and analyzed outside of the method specified holding times for mercury, the non-detect mercury results were R qualified as rejected.

The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 86%.

2.2 Holding Time

The holding time for the mercury analysis of a water sample is 28 days from sample collection to analysis. The holding times were met for the sample analyses, with the following exceptions.

Samples BOW-BGWC-30, BOW-BGWC-36D, BOW-BGWC-41D, BOW-BGWC-49D, BOW-API-FD-04, BOW-API-EB-02, and BOW-API-FB-07 were prepared and analyzed outside the method specified holding time. Therefore, the non-detect mercury results in samples BOW-BGWC-30, BOW-BGWC-36D, BOW-BGWC-41D, BOW-BGWC-49D, BOW-API-EB-02, and BOW-API-FB-07 were R qualified as rejected and the mercury concentration in sample BOW-API-FD-04 was J qualified as estimated.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-30	Mercury	0.00013	U H2 H1	0.00013	R	2
BOW-BGWC-36D	Mercury	0.00013	U H2 H1	0.00013	R	2
BOW-BGWC-41D	Mercury	0.00013	U H2 H1	0.00013	R	2
BOW-BGWC-49D	Mercury	0.00013	U H2 H1	0.00013	R	2
BOW-API-FD-04	Mercury	0.00053	H2 H1	0.00053	J	2
BOW-API-EB-02	Mercury	0.00013	U H2 H1	0.00013	R	2

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-AP1-FB-07	Mercury	0.00013	U H2 H1	0.00013	R	2

mg/L- milligrams per liter

H1- Laboratory flag indicating analysis conducted outside the method specified holding time.

H2- Laboratory flag indicating extraction or preparation conducted outside the method specified holding time.

U- The analyte was analyzed for but was not detected at or above the reported sample quantitation limit.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported with the data set (batches 756331, 756332, 758957, and 758958). Mercury was not detected in the method blanks above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four sample set specific MS/MSD pairs were reported using samples BOW-BGWA-2, BOW-BGWC-10, BOW-BGWC-30, and BOW-BGWC-23. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.5 Laboratory Control Sample

LCSs were analyzed at the frequency for the number and types of samples analyzed (one per batch of 20 samples). Four LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Field Blank

Nine field blanks BOW-AP1-FB-01, BOW-AP1-FB-02, BOW-AP1-FB-03, BOW-AP1-FB-04, BOW-AP1-FB-05, BOW-AP1-FB-06, BOW-AP1-FB-07, BOW-AP1-FB-08, and BOW-AP1-FB-9 were collected with the sample set. Mercury was not detected in the field blanks above the MDL, with the following exception.

92649235: Mercury was detected in field blank BOW-AP1-FB-04 at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated mercury concentrations in samples BOW-BGWC-10, BOW-BGWC-19, BOW-BGWC-25, and BOW-BGWC-31 were U qualified as not detected at the RL. Since mercury was detected above the RL in sample BOW-BGWC-21, no qualifications were applied to the data.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-10	Mercury	0.00018	J	0.00020	U	3
BOW-BGWC-19	Mercury	0.00018	J	0.00020	U	3
BOW-BGWC-25	Mercury	0.00015	J	0.00020	U	3
BOW-BGWC-31	Mercury	0.00014	J	0.00020	U	3

mg/L-milligrams per liter

J - The result is less than the RL, but greater than or equal to the MDL, and the concentration is an approximate value.

2.7 Equipment Blank

Four equipment blanks BOW-AP1-EB-01, BOW-AP1-EB-02, BOW-AP1-EB-03, and BOW-AP1-EB-04 were collected with the sample set. Mercury was not detected in the equipment blanks above the MDL.

2.8 Field Duplicate

Five field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, BOW-AP1-FD-04, and BOW-AP1-FD-05, were collected with the sample set. Acceptable precision ($RPD \leq 20\%$ or difference $< RL$) was demonstrated between the field duplicates and the original samples BOW-BGWA-48D, BOW-BGWC-17, BOW-BGWC-37D, BOW-BGWC-24, and BOW-BGWC-43D, respectively.

2.9 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

2.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

3.0 WET CHEMISTRY

The samples were analyzed for TDS by Standard Method 2540C, alkalinity by Standard Method 2320B, and anions (chloride, fluoride, and sulfate) by US EPA method 300.0.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Overall Assessment
- ⊗ Holding Times
- ✓ Method Blank
- ⊗ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ⊗ Laboratory Duplicate
- ⊗ Field Blank
- ⊗ Equipment Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

3.1 Overall Assessment

The wet chemistry data reported in this data set are considered usable for supporting project objectives, with the following exceptions.

Since samples BOW-BGWC-12 and BOW-BGWC-14A were analyzed outside of the method specified holding times for alkalinity, the non-detect alkalinity, carbonate (CaCO₃) results in samples BOW-BGWC-12 and BOW-BGWC-14A were R qualified as rejected.

The analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for these analyses, for this data set is 99%.

The sample residue exceeded the method specified limits for TDS in sample BOW-BGWC-23. Therefore, the TDS concentration in sample BOW-BGWC-23 was J qualified as estimated.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-23	TDS	2680	NA	2680	J	13

mg/L-milligrams per liter

NA- Not Applicable

3.2 Holding Times

The holding time for the TDS analysis of a water sample is 7 days from sample collection to analysis. The holding time for the anions (chloride, fluoride, and sulfate) analysis of a water sample is 28 days from sample collection to analysis. The holding time for the alkalinity analysis of a

water sample is 14 days from sample collection to analysis. The holding times were met for the sample analyses, with the following exceptions.

Samples BOW-BGWC-12 and BOW-BGWC-14A were analyzed outside of the method specified holding time for alkalinity. Therefore, the non-detect alkalinity, carbonate (CaCO₃) results in samples BOW-BGWC-12 and BOW-BGWC-14A were R qualified as rejected and the alkalinity, bicarbonate (CaCO₃) and alkalinity, total as CaCO₃ concentrations in samples BOW-BGWC-12 and BOW-BGWC-14A were J qualified as estimated.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-12	Alkalinity, Bicarbonate (CaCO ₃)	318	H1	318	J	2
BOW-BGWC-12	Alkalinity, Carbonate (CaCO ₃)	5.0	U H1	5.0	R	2
BOW-BGWC-12	Alkalinity, Total as CaCO ₃	318	H1	318	J	2
BOW-BGWC-14A	Alkalinity, Bicarbonate (CaCO ₃)	243	H1	243	J	2
BOW-BGWC-14A	Alkalinity, Carbonate (CaCO ₃)	5.0	U H1	5.0	R	2
BOW-BGWC-14A	Alkalinity, Total as CaCO ₃	243	H1	243	J	2

mg/L- milligrams per liter

H1- Laboratory flag indicating analysis conducted outside the method specified holding time.

U- The analyte was analyzed for but was not detected at or above the reported sample quantitation limit.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Eight method blanks were reported for TDS (batches 752586, 752849, 753439, 753440, 753781, 754576, 754074, and 755437). Twelve method blanks were reported for alkalinity (batches 752818, 753106, 752821, 757176, 753731, 753922, 753923, 754305, 755290, 754978, 755965, and 755971). Eight method blanks were reported for anions (batches 752806, 752813, 753396, 753659, 753994, 754806, 755677, and 755682). The wet chemistry parameters were not detected in the method blanks above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples).

Four sample set specific MS/MSD pairs were reported for alkalinity using BOW-BGWC-40, BOW-BGWC-51, BOW-API-FD-05, and BOW-API-EB-04. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

92649235: The recoveries of total alkalinity as CaCO₃ in the MS and/or MSD using samples BOW-BGWC-40, BOW-BGWC-51, and BOW-API-FD-05 were high and outside of the laboratory specified acceptance criteria. Therefore, the total alkalinity and bicarbonate alkalinity as CaCO₃ concentrations in samples BOW-BGWC-40, BOW-BGWC-51, and BOW-API-FD-05 were J qualified as estimated.

Six sample set specific MS/MSD pairs were reported for anions using samples BOW-BGWC-12, BOW-API-FB-02, BOW-BGWC-20, BOW-API-EB-01, BOW-API-EB-02, and BOW-BGWC-38D. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exception.

92649235: The recoveries of fluoride in the MS/MSD pair using sample BOW-BGWC-38D were high and outside the laboratory specified acceptance criteria. Therefore, the fluoride concentration in sample BOW-BGWC-38D was J qualified as estimated.

Batch MS/MSD pairs were also reported for alkalinity and the anions. Since these were batch QC there was no impact on the data and qualifications were not applied.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-40	Alkalinity, Total as CaCO ₃	214	M1	214	J	4
BOW-BGWC-51	Alkalinity, Total as CaCO ₃	160	M1	160	J	4
BOW-API-FD-05	Alkalinity, Total as CaCO ₃	149	M1	149	J	4
BOW-BGWC-40	Alkalinity, Bicarbonate (CaCO ₃)	214	M1	214	J	4
BOW-BGWC-51	Alkalinity, Bicarbonate (CaCO ₃)	160	M1	160	J	4
BOW-API-FD-05	Alkalinity, Bicarbonate (CaCO ₃)	149	M1	149	J	4
BOW-BGWC-38D	Fluoride	0.11	M1	0.11	J	4

mg/L-milligrams per liter

M1- Laboratory flag indicating the matrix spike recovery exceeded laboratory specified acceptance criteria.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Eight LCSs were reported for TDS, twenty-four LCSs were reported for

alkalinity, and eight LCSs were reported for anions. The recovery results were within the laboratory specified acceptance criteria.

3.6 Laboratory Duplicate

Eight sample set specific laboratory duplicates were reported using samples BOW-BGWA-2, BOW-AP1-FB-02, BOW-BGWC-17, BOW-BGWC-31, BOW-BGWC-20, BOW-BGWC-24, BOW-AP1-FD-04, and BOW-BGWC-49D. The RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

92649235: The RPD results of the laboratory duplicate pair using samples BOW-BGWC-49D and BOW-BGWC-24 were high and outside the laboratory specified acceptance criteria. Therefore, the TDS concentration in samples BOW-BGWC-49D was J qualified as estimated. Since the RPD result using sample BOW-BGWC-24 was within the data validation specified acceptance criteria, based on professional and technical judgement, no qualifications were applied to the data.

Eight batch laboratory duplicates were also reported for TDS. Since these were batch QC there was no impact on these data and qualifications were not applied.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-49D	TDS	1820	D6	1820	J	12

mg/L-milligrams per liter

D6- Laboratory flag indicating the precision between the sample and laboratory duplicate exceeded the laboratory specified acceptance criteria.

3.7 Field Blank

Nine field blanks BOW-AP1-FB-01, BOW-AP1-FB-02, BOW-AP1-FB-03, BOW-AP1-FB-04, BOW-AP1-FB-05, BOW-AP1-FB-06, BOW-AP1-FB-07, BOW-AP1-FB-08, and BOW-AP1-FB-9 were collected with the sample set. The wet chemistry parameters were not detected in the field blanks above the MDLs, with the following exceptions.

92649235: TDS was detected in field blanks BOW-AP1-FB-01 and BOW-AP1-FB-04 at concentrations greater than the RLs. Therefore, the TDS concentrations in samples BOW-BGWA-2, BOW-BGWA-47D, BOW-AP1-FD-01, BOW-BGWA-48D, BOW-BGWC-10, BOW-BGWC-19, BOW-BGWC-21, BOW-BGWC-25, and BOW-BGWC-31 were J+ qualified as estimated with high biases and the TDS concentration in sample BOW-BGWA-29 was U qualified as not detected at the sample concentration.

92649235: TDS was detected in field blank BOW-AP1-FB-09 at a concentration greater than the RL. Therefore, the TDS concentrations in samples BOW-BGWC-38D, BOW-AP1-FD-05, and

BOW-BGWC-43D were J+ qualified as estimated with high biases and the TDS concentration in equipment blank BOW-API-EB-04 was U qualified as not detected at the sample concentration. Since the TDS concentration in sample BOW-BGWC-22 was greater than 10x the field blank contamination, no qualifications were applied to the data.

92649235: TDS was detected in field blank BOW-API-FB-07 at a concentration greater than the RL. Therefore, the TDS concentration in equipment blank BOW-API-EB-02 was U qualified as not detected at the sample concentration. Since the TDS concentrations in the remaining associated samples were greater than 10x the field blank contamination, no qualifications were applied to the data.

92649235: TDS was detected in field blanks BOW-API-FB-05 and BOW-API-FB-08 at concentrations greater than the RLs. Since TDS was not detected or detected at concentrations greater than 10x the field blank contamination, no qualifications were applied to the data.

92649235: Sulfate was detected in field blank BOW-API-FB-02 at an estimated concentration greater than the MDL and less than the RL. Since sulfate was detected in the associated samples at concentrations greater the RLs, no qualifications were applied to the data.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWA-2	TDS	223	NA	223	J+	3
BOW-BGWA-29	TDS	129	NA	129	U	3
BOW-BGWA-47D	TDS	391	NA	391	J+	3
BOW-API-FD-01	TDS	262	NA	262	J+	3
BOW-BGWA-48D	TDS	280	NA	280	J+	3
BOW-BGWC-10	TDS	380	NA	380	J+	3
BOW-BGWC-19	TDS	200	NA	200	J+	3
BOW-BGWC-21	TDS	342	NA	342	J+	3
BOW-BGWC-25	TDS	310	NA	310	J+	3
BOW-BGWC-31	TDS	433	NA	433	J+	3
BOW-API-EB-02	TDS	29	NA	29	U	3
BOW-BGWC-38D	TDS	348	NA	348	J+	3
BOW-API-FD-05	TDS	897	NA	897	J+	3
BOW-BGWC-43D	TDS	992	NA	992	J+	3
BOW-API-EB-04	TDS	59	NA	59	U	3

mg/L-milligrams per liter

NA- Not Applicable

3.8 Equipment Blank

Four equipment blanks BOW-AP1-EB-01, BOW-AP1-EB-02, BOW-AP1-EB-03, and BOW-AP1-EB-04 were collected with the sample set. The wet chemistry parameters were not detected in the equipment blanks above the MDLs, with the following exceptions.

92649235: TDS was detected in equipment blank BOW-AP1-EB-01 at a concentration greater than the RL. Therefore, the TDS concentration in sample BOW-BGWC-52 was J+ qualified estimated with a high bias. Since the TDS concentrations in the remaining associated samples were greater than 10x the equipment blank contamination, no additional qualifications were applied to the data.

92649235: TDS was detected in equipment blanks BOW-AP1-EB-02 and BOW-AP1-EB-04 at concentrations greater than the RLs. Since TDS was U qualified as not detected at the sample concentrations due to field blank contamination in equipment blanks BOW-AP1-EB-02 and BOW-AP1-EB-04, no additional qualifications were applied to the data.

Sample ID	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-52	TDS	286	NA	286	J+	3

mg/L-milligrams per liter

NA- Not Applicable

3.9 Field Duplicate

Five field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, BOW-AP1-FD-04, and BOW-AP1-FD-05, were collected with the sample set. Acceptable precision (RPD \leq 20% or difference $<$ RL) was demonstrated between the field duplicates and the original samples BOW-BGWA-48D, BOW-BGWC-17, BOW-BGWC-37D, BOW-BGWC-24, and BOW-BGWC-43D, respectively.

3.10 Sensitivity

The samples were reported to the MDLs for anions and to the RLs for alkalinity and TDS. Elevated non-detect results were not reported.

3.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

4.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA method 9315, radium-228 by US EPA method 9320 and total radium by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

4.1 Overall Assessment

The radium-226 and radium-228 data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.2 Holding Times

The holding times for the radium-226 and radium-228 analyses of a water sample are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six method blanks were reported for the radium-228 data (batches 564421, 565148, 565150, 566526, 565967, and 567129). Six method blanks were reported for the radium-226 data (batches 564420, 565147, 565151, 566525, 565966, and 567128).

Radium-226 and radium-228 were not detected in the method blanks above the minimum detectable concentrations (MDCs), with the following exception.

92649233: Radium-226 (0.221 pCi/L) was detected at a concentration at the MDC in the method blank in batch 565966. Since radium-226 was not detected greater than the MDC in the associated samples, no qualifications were applied to the data.

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported with data.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Six LCS/LCS duplicate (LCSD) pairs were reported for radium-226, and six LCS/LCSD pairs were reported for radium-228. The recovery and replicate error ratio (RER) [2 sigma (2σ)] results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

Two sample set specific laboratory duplicates were reported for radium-226 using samples BOW-BGWA-2 and BOW-BGWC-10. The RER results were within the laboratory specified acceptance criteria.

Four batch laboratory duplicates were also reported for radium-226. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

4.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses and a tracer was reported for the radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

4.8 Field Blank

Nine field blanks BOW-AP1-FB-01, BOW-AP1-FB-02, BOW-AP1-FB-03, BOW-AP1-FB-04, BOW-AP1-FB-05, BOW-AP1-FB-06, BOW-AP1-FB-07, BOW-AP1-FB-08, and BOW-AP1-FB-9 were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks above the MDCs.

4.9 Equipment Blank

Four equipment blanks BOW-AP1-EB-01, BOW-AP1-EB-02, BOW-AP1-EB-03, and BOW-AP1-EB-04 were collected with the sample set and analyzed for radiochemistry. Radium-226 and Radium-228 were not detected in the equipment blanks above the MDCs.

4.10 Field Duplicate

Five field duplicates BOW-AP1-FD-01, BOW-AP1-FD-02, BOW-AP1-FD-03, BOW-AP1-FD-04, and BOW-AP1-FD-05 were collected with the sample set and analyzed for radiochemistry. Acceptable precision (RER (2σ) < 3) was demonstrated between the field duplicates and the original samples BOW-BGWA-48D, BOW-BGWC-17, BOW-BGWC-37D, BOW-BGWC-24, and BOW-BGWC-43D, respectively.

4.11 Sensitivity

The samples were reported to the MDCs. No elevated non-detect results were reported.

4.12 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS
AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

- U The analyte was analyzed for, but was not detected at or above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to “not detected at or above the reported result”.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
- J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
- UJ The analyte was not detected at or above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Memorandum

Date: 10 January 2023
To: Anthony Szwast
From: Derek Yeadon
CC: Kristoffer Henderson
Subject: **Stage 2A Data Validation - Level II Data Deliverable – Pace Analytical Services, LLC Project Number 92683381**

SITE: Plant Bowen AP-1

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of forty aqueous samples, four field duplicates, nine field blanks and four equipment blanks, collected 15-18 and 21-25 August 2023, as part of the Plant Bowen AP on-site sampling event.

The samples were analyzed at Pace Analytical Services Atlanta, Peachtree Corners, Georgia, for the following analytical tests:

- Calcium by United States Environmental Protection Agency (USEPA) Methods 3010A/6010D
- Metals by USEPA Methods 3005A/6020B
- Mercury by USEPA Method 7470A
- Total Dissolved Solids (TDS) by Standard Method 2540C

The samples were analyzed at Pace Analytical Services Asheville, North Carolina, for the following analytical test:

- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory reports, professional and technical judgment, and the following documents:

- US EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- American National Standard, Verification and Validation of Radiological Data for use in Waste Management and Environmental Remediation, February 15, 2012 (ANSI/ANS-41.5-2012).

The following samples were analyzed and reported in the laboratory reports:

Laboratory ID	Client ID
92683381001	BOW-BGWA-29
92683381002	BOW-BGWA-48D
92683381003	BOW-BGWC-8

92683381045	BOW-AP1-FB-17
92683381046	BOW-AP1-EB-03
92683381047	BOW-BGWC-51
92683381048	BOW-AP1-FD-10
92683381049	BOW-AP1-FB-16
92683381050	BOW-AP1-EB-02
92683381051	BOW-BGWC-24
92683381052	BOW-BGWC-35D
92683381053	BOW-BGWC-37D
92683381054	BOW-BGWC-42D
92683381055	BOW-AP1-FB-19
92683381056	BOW-AP1-EB-05
92683381057	BOW-AP1-FB-20

The samples were received within 0-6 degrees Celsius (°C). Sample temperature on sample condition form dated 21 August 2023 is illegible and the laboratory did not indicate the samples were received outside specified temperature range. No sample preservation issues were noted by the laboratory.

Sample collection times for the field duplicates were not documented on the chain of custody (COC). The field duplicates were logged by the laboratory with the collection time of 00:00.

Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

The “ND” results were changed to U by the data validator in the electronic data deliverable (EDD).

The field pH data included in the laboratory report were not validated. However, it was noted that the pH meter calibration check was outside of the acceptable range but within 10% of the true value on August 25, 2023. No qualifications were applied to the data based on professional and technical judgment.

1.0 METALS

The samples were analyzed for metals by USEPA methods 3010A/6010D and USEPA methods 3005A/6020B. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

The metals data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.2 Holding Time

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Eight method blanks were reported (batches 796802, 797094, 797104, 797592, 795012, 797129, 797144, and 797729). Metals were not detected in the method blanks above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four sample set specific MS/MSD pairs were reported for calcium by US EPA method 6010D, using samples BOW-BGWC-14A, BOW-AP1-FB-13, BOW-BGWA-33, and BOW-AP1-FB-16. The recovery and relative percent deviation (RPD) results were within the laboratory specified acceptance criteria except as noted below.

The recovery of calcium in the MS/MSD pair using BOW-BGWC-14A were high and outside of the laboratory specified acceptance criteria. Since the calcium concentration in sample BOW-BGWC-14A was greater than four times the spiked amounts, no qualifications were applied to the data.

The recovery of calcium in the MS using BOW-BGWA-33 was low and outside of the laboratory specified acceptance criteria, and the MSD recovery in the MSD using BOW-BGWA-33 was high and outside of the laboratory specified acceptance criteria. Since the calcium concentration in sample BOW-BGWA-33 was greater than four times the spiked amounts, no qualifications were applied to the data.

Three sample set specific MS/MSD pairs were reported for metals by US EPA method 6020B, using samples BOW-BGWC-7, BOW-BGWC-39, and BOW-BGWC-37D. The recovery and RPD results were within the laboratory specified acceptance criteria except as noted below.

The recoveries of boron in the MS/MSD pair using BOW-BGWC-39 were high and outside of the laboratory specified acceptance criteria. Since the boron concentration in sample BOW-BGWC-39 was greater than four times the spiked amounts, no qualifications were applied to the data.

One batch MS/MSD pair was reported for metals by US EPA method 6020B. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Eight LCSs were reported. The recovery results were within the laboratory specified acceptance criteria.

1.6 Equipment Blank

Four equipment blanks, BOW-AP1-EB-02, BOW-AP1-EB-03, BOW-AP1-EB-04 and BOW-AP1-EB-05, were collected with the sample set. Metals were not detected in the equipment blanks above the MDLs, with the following exceptions.

Boron (0.031 mg/L) was detected in equipment blank BOW-AP1-EB-02 at an estimated concentration greater than the MDL and less than the RL. Since the boron concentrations in the associated samples were greater than the RL and 5 times the field blank concentration and based on professional and technical judgment, no qualifications were applied to the data.

Boron (0.023 mg/L) was detected in equipment blank BOW-AP1-EB-05 at an estimated concentration greater than the MDL and less than the RL. Since the boron concentrations in the associated samples were greater than the RL and 5 times the field blank concentration and based on professional and technical judgment, no qualifications were applied to the data.

1.7 Field Blank

Nine field blanks, BOW-AP1-FB-12, BOW-AP1-FB-13, BOW-AP1-FB-14, BOW-AP1-FB-15, BOW-AP1-FB-16, BOW-AP1-FB-17, BOW-AP1-FB-18, BOW-AP1-FB-19, and BOW-AP1-FB-20 were collected with the sample set. Metals were not detected in the field blanks above the MDLs, with the following exceptions.

Boron (0.015 mg/L) was detected in field blank BOW-AP1-FB-14 at an estimated concentration greater than the MDL and less than the RL. Since the boron concentrations in the associated samples were greater than the RL and 5 times the field blank concentration and based on professional and technical judgment, no qualifications were applied to the data.

Antimony (0.0017 mg/L) was detected in field blank BOW-AP1-FB-19 at an estimated concentration greater than the MDL and less than the RL. Since antimony was not detected in the associated samples, no qualifications were applied to the data.

Boron (0.014 mg/L) was detected in field blank BOW-AP1-FB-20 at an estimated concentration greater than the MDL and less than the RL. Since the boron concentrations in the associated samples were greater than the RL and 5 times the field blank concentration and based on professional and technical judgment, no qualifications were applied to the data.

1.8 Field Duplicate

Four field duplicate samples were collected with the sample set, BOW-AP1-FD-08, BOW-AP1-FD-09, BOW-AP1-FD-10, and BOW-AP1-FD-11. Acceptable precision ($RPD \leq 30\%$) was demonstrated between the field duplicates and the original samples, BOW-BGWC-50D, BOW-BGWC-17, BOW-BGWC-36D, and BOW-BGWC-43D, respectively, with the following exceptions.

Beryllium was detected in primary sample BOW-BGWC-17 at an estimated concentration greater than the MDL and less than the RL and was not detected in field duplicate BOW-AP1-FD-09, resulting in a noncalculable RPD. Therefore, the beryllium concentration in the field duplicate pair was J qualified as estimated and the non-detect result was UJ qualified as estimated less than the MDL, based on professional and technical judgment.

Boron was detected in primary sample BOW-BGWC-50D at an estimated concentration greater than the MDL and less than the RL and was detected in field duplicate BOW-AP1-FD-08 at a concentration greater than the RL, resulting in a noncalculable RPD. Therefore, the boron concentrations in the field duplicate pair were J qualified as estimated, based on professional and technical judgment.

Molybdenum was detected in primary sample BOW-BGWC-36D at a concentration greater than the RL and was detected in field duplicate BOW-AP1-FD-10 at an estimated concentration greater than the MDL and less than the RL, resulting in a noncalculable RPD. Therefore, the molybdenum concentrations in the field duplicate pair were J qualified as estimated, based on professional and technical judgment.

Sample	Analyte	Laboratory Result (mg/L)	Laboratory Flag	RPD	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
BOW-BGWC-17	Beryllium	0.000057	J	NC	0.000057	J	7
BOW-AP1-FD-09	Beryllium	0.000054	U		0.000054	UJ	7
BOW-BGWC-50D	Boron	0.040	J	NC	0.040	J	7
BOW-AP1-FD-08	Boron	0.041	NA		0.041	J	7
BOW-BGWC-36D	Molybdenum	0.010	NA	NC	0.010	J	7

Sample	Analyte	Laboratory Result (mg/L)	Laboratory Flag	RPD	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
BOW-API-FD-10	Molybdenum	0.0099	J		0.0099	J	7

mg/L-milligrams per liter

J-estimated concentration greater than the MDL and less than the RL

U-not detected at or above the MDL

NA-not applicable

NC-not calculable

* Validation qualifiers are defined in Attachment 1 at the end of this report

**Reason codes are defined in Attachment 2 at the end of this report

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 MERCURY

The samples were analyzed for mercury by USEPA method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Time
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Equipment Blank
- ✓ Field Blank
- ⊗ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverables Review

2.1 Overall Assessment

The mercury data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

2.2 Holding Time

The holding time for mercury analysis of a water sample is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported (batches 795037, 798693, 798694, and 798695). Mercury was not detected in the method blanks above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three sample set specific MS/MSD pairs were reported, using samples BOW-AP1-FB-13, BOW-BGWA-33, and BOW-AP1-FB-16. The recovery and RPD results were within the laboratory specified acceptance criteria.

One batch MS/MSD pair was reported for mercury. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One LCS was reported. The recovery results were within the laboratory specified acceptance criteria.

2.6 Equipment Blank

Four equipment blanks, BOW-AP1-EB-02 BOW-AP1-EB-03 BOW-AP1-EB-04 and BOW-AP1-EB-05, were collected with the sample set. Mercury was not detected in the equipment blanks above the MDLs, with the following exception.

Mercury (0.00014 mg/L) was detected in equipment blank BOW-AP1-EB-03 at an estimated concentration greater than the MDL and less than the RL. Since the mercury concentration in the

equipment blank was U qualified and based on professional and technical judgment, no additional qualifications were applied to the data.

2.7 Field Blank

Nine field blanks, BOW-AP1-FB-12, BOW-AP1-FB-13, BOW-AP1-FB-14, BOW-AP1-FB-15, BOW-AP1-FB-16, BOW-AP1-FB-17, BOW-AP1-FB-18, BOW-AP1-FB-19, and BOW-AP1-FB-20 were collected with the sample set. Mercury was not detected in the field blanks above the MDLs.

2.8 Field Duplicate

Four field duplicate samples were collected with the sample set, BOW-AP1-FD-08, BOW-AP1-FD-09, BOW-AP1-FD-10, and BOW-AP1-FD-11. Acceptable precision (RPD ≤ 30%) was demonstrated between the field duplicates and the original samples, BOW-BGWC-50D, BOW-BGWC-17, BOW-BGWC-36D, and BOW-BGWC-43D, respectively.

Mercury was detected in primary sample BOW-BGWC-43D at an estimated concentration greater than the MDL and less than the RL and was not detected in field duplicate BOW-AP1-FD-11, resulting in a noncalculable RPD. Therefore, the mercury concentration in the field duplicate pair was J qualified as estimated and the non-detect result was UJ qualified as estimated less than the MDL, based on professional and technical judgment.

Sample	Analyte	Laboratory Result (mg/L)	Laboratory Flag	RPD	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-43D	Mercury	0.00015	J	NC	0.00015	J	7
BOW-AP1-FD-11	Mercury	0.00012	U		0.00012	UJ	7

mg/L-milligrams per liter

J-estimated concentration greater than the MDL and less than the RL

U-not detected at or above the MDL

NC-not calculable

2.9 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

2.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

3.0 WET CHEMISTRY

The samples were analyzed for TDS by Standard method 2540C and anions by USEPA method 300.0.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Overall Assessment
- ✓ Holding Times

3.1 Overall Assessment

3.1.1 Completeness

The wet chemistry data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for these analyses, for this data set is 100%.

3.1.2 Analysis Anomaly

The TDS concentrations for samples BOW-BGWC-22, BOW-BGWC-24 and BOW-BGWC-35D were 1g-flagged to indicate the sample residue exceeded method SM 2540C recommended 200 mg. Therefore, based on professional and technical judgment, the TDS concentration for samples BOW-BGWC-22, BOW-BGWC-24 and BOW-BGWC-35D were J qualified as estimated.

Sample	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-22	TDS	3940	1g	3940	J	13

Sample	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-24	TDS	2120	1g	2120	J	13
BOW-BGWC-35D	TDS	2730	1g	2730	J	13

mg/L-milligrams per liter

1g-Sample residue exceeded method SM 2540C recommended 200 mg

3.2 Holding Times

The holding time for the TDS analysis of a water sample is 7 days from sample collection to analysis. The holding time for the anions (chloride, fluoride, and sulfate) analysis of a water sample is 28 days from sample collection to analysis. The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five method blanks were reported for TDS (batches 795115, 795387, 795987, 796395, and 796832) and six method blanks were reported for the anions (batches 794766, 795066, 795339, 795909, 795915, and 796480). The wet chemistry parameters were not detected in the method blanks above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four sample set specific MS/MSD pairs were reported for anions, using samples BOW-BGWC-50D, BOW-AP1-FB-15, BOW-BGWC-23 and BOW-AP1-EB-04. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of fluoride and sulfate in the MSD using sample BOW-BGWC-50D were low and outside of the laboratory specified acceptance criteria. Therefore, the fluoride concentration in sample BOW-BGWC-50D was J- qualified as estimated with a low bias. Since the sulfate concentration in the sample was greater than four times the spiked amount, no qualifications were applied to the data.

The recoveries of chloride and sulfate in the MS/MSD pair using sample BOW-BGWC-23 were low and outside of the laboratory specified acceptance criteria. Since the chloride and sulfate concentration in the sample were greater than four times the spiked amounts, no qualifications were applied to the data.

Sample	Analyte	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
BOW-BGWC-50D	Fluoride	0.14	M1	0.14	J-	4

mg/L-milligrams per liter

J- estimated concentration greater than the MDL and less than the RL

M1-laboratory flag indicating MS recovery exceeded QC limits

Six batch MS/MSD pairs were reported for anions. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five LCSs were reported for TDS and six LCSs were reported for the anions. The recovery results were within the laboratory specified acceptance criteria.

3.6 Laboratory Duplicate

Nine sample set specific laboratory duplicates were reported for TDS, using samples BOW-BGWC-8, BOW-BGWC-47D, BOW-BGWC-7, BOW-BGWC-20, BOW-BGWC-34D, BOW-BGWC-22, BOW-BGWC-23, BOW-AP1-EB-04, and BOW-AP1-EB-05. The RPD results were within the laboratory specified acceptance criteria.

One batch laboratory duplicate was reported for TDS. Since this was a batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

3.7 Equipment Blank

Four equipment blanks, BOW-AP1-EB-02 BOW-AP1-EB-03 BOW-AP1-EB-04 and BOW-AP1-EB-05, were collected with the sample set. The wet chemistry parameters were not detected in the equipment blanks above the MDLs.

3.8 Field Blank

Nine field blanks, BOW-AP1-FB-12, BOW-AP1-FB-13, BOW-AP1-FB-14, BOW-AP1-FB-15, BOW-AP1-FB-16, BOW-AP1-FB-17, BOW-AP1-FB-18, BOW-AP1-FB-19, and BOW-AP1-FB-20 were collected with the sample set. The wet chemistry parameters were not detected in the field blanks above the MDL, with the following exceptions.

TDS was detected in the field blank BOW-AP1-FB-19 (49 mg/L) at concentrations greater than or equal to the RL. Since TDS was detected in the associated samples at concentrations greater than ten times the field blank concentration, no qualifications were applied to the data.

3.9 Field Duplicate

Four field duplicate samples were collected with the sample set, BOW-AP1-FD-08, BOW-AP1-FD-09, BOW-AP1-FD-10, and BOW-AP1-FD-11. Acceptable precision (RPD < 30%) was demonstrated between the field duplicates and the original samples, BOW-BGWC-50D, BOW-BGWC-17, BOW-BGWC-36D, and BOW-BGWC-43D, respectively.

3.10 Sensitivity

The samples were reported to the MDLs. No elevated non-detect results were reported.

3.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS
AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

- U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to “not detected at or above the reported result.”
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
- J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Valid Value	Description
1	Preservation requirement not met
2	Analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS or RPD recovery outside limits (LCS/LCSD)
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other
14	Lab flag removed or modified: no validation qualification required

LCS - Laboratory Control Sample
 LCSD - Laboratory Control Sample duplicate
 RPD - Relative percent difference

Memorandum

Date: 8 January 2024
To: Anthony Szwast
From: Matthew Richardson
CC: J. Caprio
Subject: **Stage 2A Data Validation - Level II Data Deliverable – Pace Analytical Services, LLC Project Number 92683382**

SITE: Plant Smith

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of forty aqueous samples, four field duplicates, nine field blanks and four equipment blanks, collected 15-18 and 21-25 August 2023, as part of the Plant Bowen AP on-site sampling event.

The samples were analyzed at Pace Analytical Services Pennsylvania, Greensburg, Pennsylvania, for the following analytical tests:

- Radium-226 by United States (US) Environmental Protection Agency (EPA) Method 9315
- Radium-228 by US EPA Method 9320
- Combined Radium 226 + 228 by Calculation

EXECUTIVE SUMMARY

Based on the Stage 2A data validation covering the quality control (QC) parameters listed below and the information provided, the data as qualified are usable for supporting project objectives. Qualified data should be used within the limitation of the qualification.

The data were reviewed based on the pertinent methods referenced in the laboratory reports, professional and technical judgment and the following documents:

- United States Environmental Protection Agency (US EPA) Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011) and
- American Nuclear Society Verification and Validation of Radiological Data for Use in Management and Environmental Remediation, ANSI/ANS-41.5-2012, February 15, 2012.

The following samples were analyzed and reported in the laboratory reports:

Laboratory ID	Client ID

1.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA method 9315, radium-228 by US EPA method 9320 and combined radium 226+228 by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

The radium-226 and radium-228 data reported in this sample set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this sample set is 100%.

1.2 Holding Times

The holding time for the radium-226 and radium-228 analyses of a water sample is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four method blanks were reported for radium-226 (batches 612655, 613520, 613519 and 615171) and five method blanks were reported for radium-228 (batches 614488, 611588, 614497, 611593 and 614486). The radiochemistry parameters were not detected in the method blanks above the minimum detectable concentrations (MDCs), with the following exceptions.

Radium-226 was detected in the method blanks in batches 613520 (0.368 pCi/L) and 615171 (0.329 pCi/L) at concentrations greater than the MDCs. Therefore, the concentrations of radium-226 in the associated samples with mean differences (MDs) less than two were UJ qualified as estimated less than the reported concentration, and the concentrations of radium-226 in the associated samples with MDs greater than two and blank activity difference less than a factor of ten were J qualified as estimated. Additionally, the concentrations of combined radium-226 and radium-228 in these samples were J qualified as estimated.

pCi/L-picocuries per liter

NA-not applicable

* Validation qualifiers are defined in Attachment 1 at the end of this report

**Reason codes are defined in Attachment 2 at the end of this report

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSD pairs were not reported.

1.5 Laboratory Duplicate

Two laboratory duplicates were reported for radium-226 using samples BOW-BGWC-23 and BOW-BGWC-35D. The replicate error ratio (RER) results were within the laboratory specified acceptance criteria.

One batch laboratory duplicate were also reported for radium-226. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

1.6 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Four LCS/laboratory control sample duplicate (LCSD) pairs were reported for radium-226 and three LCSs and three LCS/LCSD pairs were reported for radium-228. The recovery and RER results were within the laboratory specified acceptance criteria, with the following exceptions.

The LCS recovery of radium-228 in batch 611593 was low and outside of the laboratory specified acceptance criteria. Therefore, the non-detect results of radium-228 and total radium in the associated samples were UJ qualified as estimated less than the MDCs. Additionally, the concentration of combined radium-226 and radium-228 in sample BOW-BGWC-7 were J qualified as estimated.

The LCS recovery of radium-226 in batch 613519 was low and outside of the laboratory specified acceptance criteria. Therefore, the non-detect results of radium-226 in the associated samples were UJ qualified as estimated less than the MDCs, and the radium-226 concentrations in the associated samples were J qualified as estimated. Additionally, the non-detect results of combined radium-226 and radium 228 in these samples were UJ qualified as estimated less than the MDCs, and the concentrations of combined radium-226 and radium-228 in these samples were J qualified as estimated.

Sample	Analyte	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code

pCi/L-picocuries per liter

NA-not applicable

U-not detected at a concentration greater than or equal to the MDC

1.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

1.8 Equipment Blank

Four equipment blanks, BOW-AP1-EB-02, BOW-AP1-EB-03, BOW-AP1-EB-04 and BOW-AP1-EB-05, were collected with the sample set. The radiochemistry parameters were not detected in the equipment blanks above the MDCs.

1.9 Field Blank

Nine field blanks, BOW-AP1-FB-12, BOW-AP1-FB-13, BOW-AP1-FB-14, BOW-AP1-FB-15, BOW-AP1-FB-16, BOW-AP1-FB-17, BOW-AP1-FB-18, BOW-AP1-FB-19 and BOW-AP1-FB-20, were collected with the sample set. The radiochemistry parameters were not detected in the field blanks above the MDCs, with the following exceptions.

Radium-228 was detected in the field blank BOW-AP1-FB-15 at a concentration greater than the MDC. Therefore, the radium-228 concentrations samples BOW-BGWC-19 and BOW-BGWC-31 were UJ qualified as estimated. Additionally, the concentration of combined radium-226 and radium-228 in sample BOW-BGWC-31 was J qualified as estimated.

Radium-226 was detected in the field blank BOW-AP1-FB-18 at a concentration greater than the MDC. No additional qualifications were applied to the radium-226 data qualified for method blank contamination. However, the radium-226 concentration sample BOW-BGWA-33 was J qualified

as estimated. Additionally, the concentration of combined radium-226 and radium-228 in sample BOW-BGWA-33 was J qualified as estimated.

Radium-226 was detected in the field blank BOW-AP1-FB-20 at a concentration greater than the MDC. Since radium-226 was not detected in the associated samples and the MD was less than three, no qualifications were applied to the data.

Sample	Analyte	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
BOW-BGWC-19	Radium-228	1.02	NA	1.02	UJ	3
BOW-BGWC-31	Radium-228	1.06	NA	1.06	UJ	3
BOW-BGWC-31	Combined Radium 226 + 228	1.82	NA	1.82	J	3
BOW-BGWA-33	Radium-228	1.06	NA	1.06	J	3
BOW-BGWA-33	Combined Radium 226 + 228	1.19	NA	1.19	J	3

pCi/L-picocuries per liter

NA-not applicable

1.10 Field Duplicate

Four field duplicate samples were collected with the sample set, BOW-AP1-FD-08, BOW-AP1-FD-09, BOW-AP1-FD-10, and BOW-AP1-FD-11. Acceptable precision ($RER \leq 3$) was demonstrated between the field duplicates and the original samples, BOW-BGWC-50D, BOW-BGWC-17, BOW-BGWC-36D, and BOW-BGWC-43D, respectively, with the following exceptions.

Radium-228 was detected in parent sample BOW-BGWC-50D at a concentration greater than the MDC and not detected in the field duplicate sample BOW-AP1-FD-08, resulting in a noncalculable RPD. Since the RER was less than three, no qualifications were applied to the data.

Radium-228 was detected in parent sample BOW-BGWC-17 at a concentration greater than the MDC and not detected in field duplicate sample BOW-AP1-FD-09, resulting in a noncalculable RPD. Since the RER was less than three, no qualifications were applied to the data.

Radium-228 was detected in field duplicate sample BOW-AP1-FD-10 at a concentration greater than the MDC and not detected in parent sample BOW-BGWC-36D, resulting in a noncalculable RPD. Since the RER was less than three, no qualifications were applied to the data.

Radium-228 was detected in parent sample BOW-BGWC-43D at a concentration greater than the MDC and not detected in field duplicate sample BOW-AP1-FD-11, resulting in a noncalculable RPD. Since the RER was less than three, no qualifications were applied to the data.

1.11 Sensitivity

The samples were reported to the MDCs. Elevated non-detect results were not reported.

1.12 Electronic Data Deliverables (EDDs) Review

The results and sample IDs in the EDDs were reviewed against the information provided by the associated level II reports at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II reports and the EDDs.

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

- U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to “not detected at or above the reported result.”
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
- J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
- N There is presumptive evidence that the analyte is present; the analyte is reported as a tentative identification.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

ATTACHMENT 2
DATA VALIDATION REASON CODES
Assigned by Geosyntec’s Data Validation Team

Valid Value	Description
1	Preservation requirement not met
2	Extraction or analysis holding time exceeded
3	Blank contamination (i.e., method, trip, equipment, etc.)
4	Matrix spike/matrix spike duplicate recovery or RPD outside limits
5	LCS recovery outside limits or RPD outside limits (LCS/LCSD)
6	Surrogate recovery outside limits
7	Field Duplicate RPD exceeded
8	Serial dilution percent difference exceeded
9	Calibration criteria not met
10	Linear range exceeded
11	Internal standard criteria not met
12	Lab duplicates RPD exceeded
13	Other
14	Lab flag removed: no validation qualification required

LCS - Laboratory Control Sample

LCSD - Laboratory Control Sample duplicate

RPD - Relative percent difference

Samples

Sample ID:	Description:
BGWC-37D	Metals, Inorganics, TDS, Radium
DUP-3	Metals, Inorganics, TDS, Radium

Low-Flow Test Report:

Test Date / Time: 2/7/2023 1:20:09 PM

Project: Plant Bowen AP January 2023

Operator Name: William Laaker

Location Name: BGWC-38D Well Diameter: 2 in Casing Type: PVC Screen Length: 10 ft Top of Screen: 118.11 ft Total Depth: 128.11 ft Initial Depth to Water: 20.43 ft	Pump Type: Solinst Model 408 Tubing Type: LDPE Pump Intake From TOC: 123.11 ft Estimated Total Volume Pumped: 14520 ml Flow Cell Volume: 90 ml Final Flow Rate: 110 ml/min Final Draw Down: 0.01 ft	Instrument Used: Aqua TROLL 400 Serial Number: 789301
---	--	--

Test Notes:

Prepurged 2 L

Prepurged water started with sulfur odor and a dark grayish-brown color with >1000 NTU. At the start of trolling, water was a cloudy white. Turbidity stabilized around 0.20 NTU.

Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Salinity	Flow

Low-Flow Test Report:

Test Date / Time: 2/7/2023 10:11:30 AM

Project: Plant Bowen AP January 2023

Operator Name: William Laaker

Location Name: BGWC-43D Well Diameter: 2 in Casing Type: PVC Screen Length: 10 ft Top of Screen: 156.01 ft Total Depth: 166.01 ft Initial Depth to Water: 20.26 ft	Pump Type: Solinst Model 408 Tubing Type: LDPE Pump Intake From TOC: 161.01 ft Estimated Total Volume Pumped: 9240 ml Flow Cell Volume: 90 ml Final Flow Rate: 110 ml/min Final Draw Down: 0.01 ft	Instrument Used: Aqua TROLL 400 Serial Number: 789301
---	---	--

Test Notes:

Prepurged 2 L

Prepurged water started with sulfur smell and grayish tan color with turbidity >1000 NTU. Start of trolling, water contained a very fine white sediment. Water still had sulfur smell at the end of trolling. Turbidity stabilized between 0.60-0.70.

Samples

Sample ID:	Description:
BGWC-38D	Metals, Inorganics, TDS, Radium

Low-Flow Test Report:

Test Date / Time: 8/22/2023 2:34:45 PM

Project: Plant Bowen AP August 2023

Operator Name: William Laaker

Location Name: BGWC-39 Well Diameter: 2 in Casing Type: PVC Screen Length: 10 ft Top of Screen: 18.27 ft Total Depth: 28.27 ft Initial Depth to Water: 20.63 ft	Pump Type: GeoTech Peristaltic Tubing Type: LDPE Pump Intake From TOC: 23.27 ft Estimated Total Volume Pumped: 3840 ml Flow Cell Volume: 90 ml Final Flow Rate: 160 ml/min Final Draw Down: 2.64 ft	Instrument Used: Aqua TROLL 400 Serial Number: 789310
--	--	--

Test Notes:

Prepurged 2 L

DTW historically starts in screen interval and purges dry before 3 well volumes. DTW started in screen. Complete evac performed.

Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Salinity	Flow
		+/- 0.1	+/- 1000 %	+/- 5 %	+/- 10 %	+/- 5	+/- 1000 %	+/- 0.3	+/- 1000 %	
8/22/2023 2:34 PM	00:00	6.66 pH	21.27 °C	2,985.1 µS/cm	2.46 mg/L	0.49 NTU	140.0 mV	21.65 ft	1.57 PSU	160.00 ml/min
8/22/2023 2:38 PM	04:00	6.67 pH	21.45 °C	2,962.3 µS/cm	2.47 mg/L	0.76 NTU	146.2 mV	21.85 ft	1.56 PSU	160.00 ml/min
