Qualifiers

Metals

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

Method(s) 9315: Radium-226 Prep Batch 160-274225: The matrix spike and matrix spike duplicate (MS/MSD) have an RPD/RER that is outside of the QC limits of 40%/1. The associated samples are non-detect for the analyte (activity below the RL). The MSD was inadvertently not spiked causing a significant difference between the MS and MSD activity. The associated LCS has a passing spike recovery demonstrating acceptable sample preparation and instrument performance. The data have been qualified and reported. GWC-12 (400-128382-1), FB-1 (LF) (400-128382-2), GWA-17 (400-128382-3), EB-1 (LF) (400-128382-4), GWC-19 (400-128382-5), GWC-11 (400-128382-6), FD-1 (LF) (400-128382-7), FD-2 (LF) (400-128382-8), GWC-18 (400-128382-9), GWC-10 (400-128382-10), (LCS 160-274225/2-A), (MB 160-274225/1-A), (400-128435-A-6-A), (400-128435-A-6-B MS) and (400-128435-A-6-C MSD)

Method(s) 9315: Radium-226 Prep Batch 160-274225: The matrix spike duplicate (MSD) recovery is outside the lower control limits due to the sample inadvertently not getting spiked. The associated laboratory control sample (LCS) recovery is within acceptance limits demonstrating acceptable sample preparation and instrument performance. This was an apparent anomaly isolated to the MSD. The data have been qualified and reported. GWC-12 (400-128382-1), FB-1 (LF) (400-128382-2), GWA-17 (400-128382-3), EB-1 (LF) (400-128382-4), GWC-19 (400-128382-5), GWC-11 (400-128382-6), FD-1 (LF) (400-128382-7), FD-2 (LF) (400-128382-8), GWC-18 (400-128382-9), GWC-10 (400-128382-10), (LCS 160-274225/2-A), (MB 160-274225/1-A), (400-128435-A-6-A), (400-128435-A-6-B MS) and (400-128435-A-6-C MSD)

Method(s) 9320: Radium-228 Prep Batch 160-274239: The matrix spike and matrix spike duplicate (MS/MSD) have an RPD/RER that is outside of the QC limits of 40%/1. The associated samples are non-detect for the analyte (activity below the RL). The MSD was inadvertently not spiked causing a significant difference between the MS and MSD activity. The associated LCS has a passing spike recovery demonstrating acceptable sample preparation and instrument performance. The data have been qualified and reported. Method(s) 9320: Radium-228 Prep Batch 160-274239: The matrix spike duplicate (MSD) recovery is outside the lower control limits due to the sample inadvertently not getting spiked. The associated laboratory control sample (LCS) recovery is within acceptance limits demonstrating acceptable sample preparation and instrument performance. This was an apparent anomaly isolated to the MSD. The data have been qualified and reported. GWC-12 (400-128382-1), FB-1 (LF) (400-128382-2), GWA-17 (400-128382-3), EB-1 (LF) (400-128382-4), GWC-19 (400-128382-5), FD-1 (LF) (400-128382-7), FD-2 (LF) (400-128382-8), GWC-18 (400-128382-9), GWC-10 (400-128382-10), (LCS 160-274239/2-A), (MB 160-274239/1-A), (400-128435-A-6-D), (400-128435-A-6-E MS) and (400-128435-A-6-F MSD)

Method(s) PrecSep_0: Radium-228 Prep Batch 160-278230: Insufficient sample volume was available to perform a sample duplicate (DUP) for the following samples: GWC-11 (400-128382-6). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision. Sample 400-128382-C-6 was prepared at a reduced aliquot due to limited volume from re-analysis.

HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-5 (400-128405-4). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 7470A: The matrix spike (MS) recoveries for prep batch 326415 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 327609 recovered above the upper control limit for Antimony. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (MB 400-327246/1-A ^5).

Method(s) 7470A: The method blank for prep batch 326756 contained Mercury above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWA-45 (400-128474-1). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 327609 recovered above the upper control limit for Antimony. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (MB 400-327246/1-A ^5).

Method(s) 7470A: The method blank for prep batch 326756 contained Mercury above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

Metals

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 327609 recovered above the upper control limit for Antimony. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (MB 400-327246/1-A ^5).

Method(s) 7470A: The method blank for prep batch 326756 contained Mercury above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Narrative

Job Narrative 400-130915-1

HPLC/IC

Method(s) 300.0: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 334239 recovered outside control limits for the following analytes: Fluoride. These analytes were biased high in the LCS and were not detected above the reporting limit in the associated samples; therefore, the data have been reported.

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-5 (400-130915-10). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 333650 and analytical batch 334147 were outside control limits (Barium, Calcium). Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

Metals

Narrative

Job Narrative 400-130914-1

HPLC/IC

Method(s) 300.0: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 334239 recovered outside control limits for the following analytes: Fluoride. These analytes were biased high in the LCS and were not detected above the reporting limit in the associated samples; therefore, the data have been reported.

Method(s) 300.0: The following samples were diluted to bring the concentration of target analytes within the calibration range: GWA-45 (400-130914-4), (400-130914-A-4 MS) and (400-130914-A-4 MSD). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 6020: The method blank for preparation batch 333643 and analytical batch 333893 contained Barium above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 6020: Due to the high concentration of Boron and Calcium, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 333643 and analytical batch 333893 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Narrative

Job Narrative 400-131172-1

HPLC/IC

Method(s) 300.0: The laboratory control sample (LCS) for analytical batch 334961 recovered outside control limits for the following analytes: Fluoride. These analytes were biased high in the LCS and were not detected above the RL in the associated samples; therefore, the data have been reported.

Method(s) 300.0: The continuing calibration verification (CCV) associated with batch 334961 recovered above the upper control limit for Fluoride. The samples associated with this CCV were non-detects above the RL for the affected analytes; therefore, the data have been reported. The following sample is impacted: (CCV 400-334961/26).

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-53 (400-131172-10). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 7470A: The method blank for prep batch 335122 contained Mercury above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
*	LCS or LCSD is outside acceptance limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.

Method(s) 903.0, 9315: Radium-226 Prep Batch 160-285914: The matrix spike duplicate (MSD) recoveries for radium-226 are outside the upper control limits of 138% (440-171019-B-1-C MSD: 143%; 490-119070-F-3-B MSD: 142%). Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits. The data have been qualified and reported. GWA-48 (400-131913-1), (LCS 160-285914/2-A), (MB 160-285914/1-A), (490-119070-F-3-A), (490-119070-G-3-A MS), (490-119070-F-3-B MSD), (440-171019-B-1-A), (440-171019-B-1-B MS) and (440-171019-B-1-C MSD)

Method(s) PrecSep_0: Radium-228 Prep Batch 160-285926: The following samples were prepared at a reduced aliquot due to sediment and excessive cloudiness. GWA-48 (400-131913-1).

Method(s) PrecSep_0: Radium-228 Prep Batch 160-285926: Insufficient sample volume was available to perform a sample duplicate (DUP) for the following samples: GWA-48 (400-131913-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method(s) PrecSep-21: Radium-226 Prep Batch 160-285914: Insufficient sample volume was available to perform a sample duplicate (DUP) for the following samples: GWA-48 (400-131913-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-5 (400-133606-24). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 6020: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-5 (400-133606-24). Elevated reporting limits (RLs) are provided.

Method(s) 6020: The low level continuing calibration verification (CCVL) associated with batch 343208 recovered above the upper control limit for Selenium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Narrative

Job Narrative 400-133856-1

HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-45 (400-133856-1). Elevated reporting limits (RLs) are provided.

Method(s) 300.0: The CCB for analytical batch 342511 contained Sulfate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Metals

Method(s) 6020: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 341971 and analytical batch 342964 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Method(s) 6020: The continuing calibration verification (CCV) associated with batch 349542 recovered above the upper control limit for Copper, Nickel, and Zinc. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: FD-1(LF) (400-136235-7).

Method(s) 6020: The native sample and post digestion spike (PDS) associated with preparation batch 349401 and analytical batch 349542 were performed at the same dilution. Due to the additional level of analyte present in the post digestion spike, the concentration of Molybdenum in the PDS was above the instrument calibration range. The data has been reported and qualified.

Report revised to add Copper.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWA-45 (400-136341-17). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 6020: The native sample and post digestion spike (PDS) associated with preparation batch 349589 and analytical batch 349695 were performed at the same dilution. Due to the additional level of analyte present in the post spike, the concentration of Molybdenum in the PDS was above the instrument calibration range. The data has been reported and qualified.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Method(s) 300.0: The following sample was diluted to bring the concentration of target analytes within the calibration range: GWC-53 (400-136341-31). Elevated reporting limits (RLs) are provided.

Metals

Method(s) 6020: The native sample and post digestion spike (PDS) associated with preparation batch 350105 and analytical batch 350346 were performed at the same dilution. Due to the additional level of analyte present in the post spike, the concentration of Molybdenum in the PDS was above the instrument calibration range. The data has been reported accordingly.
