

Electric Water Heater Conversion Program

Single Family Existing Market

Georgia Power Customers that currently use fossil fuel as the primary source for heating water may be eligible for a \$100 rebate for converting to an electric water heating system.

Qualifying Conversions

- The conversion to an electric water heating system must be in conjunction with an electric heat application. The electric heating system may be installed at the same time as the electric water heater or may have been previously installed. The customer must cancel natural gas service to qualify.
- The single family unit must have all space heating provided by an electric heating system in order for the customer to qualify for the water heating conversion incentive.
- Water heating conversions qualifying for the incentive must be rated with an Energy Factor (EF) that meets the minimum efficiency requirements for the State of Georgia.
- Advanced water heating systems such as heat pump water heaters, heat recovery units, and solar collectors, may be installed in conjunction with the electric water storage tank that replaces the gas water heating system.
- The water heating incentive is available for multiple conversions on a per unit basis.

Non-Qualifying Conversion Guidelines

- An electric water heating system not tied to an electric heating system which provides 100% of the space heating for the unit.
- The electric water heating incentive is not available for units that do not meet the minimum Energy Efficiency (EF) set by the State of Georgia.
- When multiple fossil fuel water heaters provide the water heating, all must be converted in order for the customer and the contractor to qualify for the energy grant payments.

Additional Program Information

- The rebate is not taxable to the owner.
- A duplex is considered “single family” in an electric water heating conversion program.
- Owner occupied condominiums are considered “single family” in the electric water heating conversion program.

Benefits of Electric Water Heating

- Flameless
- Flexible installation
- Low maintenance
- No flues
- High life expectancy
- No Gas piping
- Safe, no combustion
- No carbon monoxide
- Easy installation
