

We are working in your area.

Georgia Power is making long-term investments in Georgia's statewide transmission system to support growing energy needs. The Grassy Hollow - Great Valley 230 kV Transmission Project is part of this effort.

This project has been developed to serve the electricity needs of an industrial customer while also adding capacity and strengthening reliability for the local electric grid.

PROJECT NAME: Grassy Hollow - Great Valley 230 kV Transmission Line

Here's what you can expect:

- ▶ We are working to build a new transmission line and substation in your area. You may see temporary flagging or staking in work areas and an increase in crew members and vehicles, such as trucks and construction equipment.
- ▶ Pre-construction and construction activities may include soil boring, vegetation management, tree clearing, and installation of transmission-related facilities. You will see bucket trucks and cranes and may experience intermittent traffic lane closures. We will work to minimize traffic disruptions.
- ▶ Impacted areas will be restored to their original condition once the work is complete.
- ▶ Communication updates will be sent periodically. We are committed to working with you throughout this project.
