

Grid Investment Plan

Equipment Details

About the Grid Investment

Georgia Power's Grid Investment Plan is a multi-year initiative to enhance service and reliability in communities across Georgia. Our plan focuses on upgrading transmission and distribution infrastructure across the power grid.

About the Undergrounding Project

We will be placing targeted portions of overhead power lines underground, so they are less prone to damage from trees or vehicles. As a result, we expect fewer and shorter outages in your area once work is complete. During construction, you may see construction equipment, line crews, and traffic closures in your area.

Typical Equipment Installed

Undergrounding of overhead lines requires additional equipment to be installed to support the new underground system. The type of equipment, design, and logistics will be discussed with you by a community land agent. Provided below are examples of the type of equipment that may be installed to improve power reliability.

Single Phase Transformer

Location: Residential (every few homes)

Approximate size: 34" L x 31" W x 26" H (in)

Clearance area: Approx. 10' (feet) from the center of equipment on all sides

Purpose: Power delivery to customers

Single Phase Terminating Cabinet

Location: Residential (as needed)

Approximate size: 30" L x 18" W x 33" H (in)

Clearance area: Approx. 10' (feet) from the center of equipment on all sides

Purpose: Run service to a side street or property off the direct path of the line

See next page for more information...

Grid Investment Plan

Equipment Details

Typical Equipment Continued

Three Phase Terminating Cabinet

Location: Residential or Commercial (as needed)

Approximate size: 70" L x 24" W x 30" H (in)

Clearance area: Approx. 10' (feet) from the center of equipment on all sides

Purpose: Run service to a side street or property off the direct path of the line

Three Phase Transformer

Location: Commercial or Apartment

Approximate size: 72" L x 54" W x 70" H (in)

Clearance area: Approx. 10' (feet) from the center of equipment on all sides

Purpose: Power delivery to customers

Switching Cubicle

Location: Residential or Commercial (as needed along path of main line)

Approximate size: 81" L x 78" W x 60" H (in)

Clearance area: Approx. 15' (feet) from the center of equipment on all sides

Purpose: Allows connection and switching between lines

Padmount Recloser

Location: Residential or Commercial (as needed along path of main line)

Approximate size: 91" L x 71" W x 55" H (in)

Clearance area: Approx. 15' (feet) from the center of equipment on all sides

Purpose: Allows power to return quickly after a small fault
