## CERTIFICATION STATEMENT

This 2024 *Semiannual Groundwater Monitoring and Corrective Action Report, Plant Hammond Huffaker Road Landfill* has been prepared in accordance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management, Rule 391-3-4-.10 Coal Combustion Residuals and Rule 391-3-4-.14 Groundwater Monitoring and Corrective Action by a qualified groundwater scientist or engineer with Geosyntec Consultants, Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

## SUMMARY

This summary of the *2024 Semiannual Groundwater Monitoring and Corrective Action Report* provides the status of groundwater monitoring and corrective action program for the reporting period of January through July 2024 (referred to herein as the “semiannual reporting period”) at Georgia Power Company’s (Georgia Power’s) Plant Hammond Huffaker Road Landfill (the landfill or the site). This summary was prepared by Geosyntec Consultants, Inc. (Geosyntec) on behalf of Georgia Power to meet the requirements listed in Part A, Section 6<sup>1</sup> of the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (federal CCR Rule) (40 Code of Federal Regulations [CFR] 257 Subpart D).

Plant Hammond Huffaker Road Landfill is located at 2181 Huffaker Road, approximately five miles northeast of Plant Hammond in Floyd County, Georgia. The landfill is comprised of constructed Parcels A, B, and E, with Parcels C, D, and F proposed for future expansion. CCR material resulting from power generation have historically been transferred and stored at the site. Currently, Parcels A and B are active, and Parcel E is temporarily inactive and covered with an intermediate closure system. The landfill is located on the western portion of Georgia Power’s property.

Plant Hammond Huffaker Road Landfill

The groundwater monitoring program for the landfill is managed in accordance with the landfill’s solid waste permit number 057-022D (LI), as issued by the Georgia Environmental Protection Division (GA EPD), and in accordance with Georgia Solid Waste Management Rules for Groundwater Monitoring and Corrective Action of a municipal solid waste landfill, Rule 391-3-4.14. The landfill is also subject to the federal CCR Rule and the GA EPD Rules for Solid Waste Management 391-3-4-.10. Groundwater at the site is monitored using a comprehensive monitoring system of wells installed to meet federal and state monitoring requirements. Groundwater monitoring in accordance with the permit-issued Design and Operations (D&O) Plan began in 2007,

<sup>1</sup> 80 FR 21468, Apr. 17, 2015, as amended at 81 FR 51807, Aug. 5, 2016; 83 FR 36452, July 30, 2018; 85 FR 53561, Aug. 28, 2020

prior to disposal activities, and continues to date. Routine sampling and reporting in accordance with the federal CCR Rule began after the background groundwater conditions were established between March 2016 to March 2017. Based on groundwater conditions at the landfill, a detection monitoring program has been established since October 2017.

During the semiannual reporting period, Geosyntec conducted one groundwater sampling event in February 2024. Groundwater samples were submitted to Pace Analytical Services, LLC, for analysis. Per the federal CCR Rule, groundwater results for the February 2024 data set were evaluated in accordance with the certified statistical methods. That evaluation showed no statistically significant values of Appendix III<sup>2</sup> constituents.

Based on review of the Appendix III statistical results completed for the groundwater monitoring and corrective action program for the semiannual reporting period, the site will continue in detection monitoring. Georgia Power will continue routine groundwater monitoring and reporting at the landfill. Reports will be posted to the website and provided to GA EPD semiannually.

## 1.0 INTRODUCTION

Groundwater monitoring is currently conducted at the Georgia Power Company (Georgia Power) Plant Hammond, Huffaker Road Landfill (the landfill or the site) to comply with the landfill's solid waste permit number 057-022D (LI), as issued by the Georgia Environmental Protection Division (GA EPD), and in accordance with Georgia Solid Waste Management Rules for Groundwater Monitoring and Corrective Action of a municipal solid waste landfill, Rule 391-3-4.14. The landfill is also subject to the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (federal CCR Rule) (40 Code of Federal Regulations [CFR] 257 Subpart D) and the GA EPD Rules for Solid Waste Management 391-3-4.10. Geosyntec Consultants, Inc. (Geosyntec) has prepared this *2023 Annual Groundwater Monitoring and Corrective Action Report* to document groundwater monitoring activities at the landfill. This report documents groundwater monitoring activities conducted at the landfill for the reporting period of January through July 2024 (referred to herein as the “semiannual reporting period”). This report satisfies the reporting requirements of applicable federal and state CCR Rule [§ 257.90(e), 391-3-4.10] and GA EPD Solid Waste Management Rules (391-3-4.14). For ease of reference when discussing aspects of the CCR Rule, only the federal CCR Rule is cited within this report.

### 1.1 Site Description and Background

The landfill is a Georgia Power-owned property located in Floyd County approximately five miles northeast of Plant Hammond (**Figure 1**). The physical address of the site is 2181 Huffaker Road, Rome, Georgia, 30165. The landfill was built between 2005 and 2007 over a closed surface clay mine, previously owned by Boral Bricks, Inc. The landfill is comprised of constructed Parcels A, B, and E, with Parcels C, D, and F proposed for future expansion. The three existing parcels were permitted and constructed with a minimum 24-inch compacted clay liner with a maximum hydraulic conductivity of  $1 \times 10^{-6}$  centimeters per second (cm/sec) underlain with a compacted soil barrier designed to provide a minimum five-foot thick barrier between the bottom of the clay liner and seasonal high groundwater levels. GA EPD approved solid waste permit no. 057-022D (LI) in a letter dated May 26, 2006, and disposal operations commenced on May 5, 2008. No CCR materials were stored in the landfill prior to May 2008 (Environmental Resource Management, 2018). In 2016, Parcels A and B were retrofitted with a leachate collection system and a 60-millimeter high-density polyethylene geomembrane overlaying the 24-inch clay liner, which was recompacted to obtain a maximum hydraulic conductivity of  $1 \times 10^{-7}$  cm/sec (Georgia Power, 2016).

Parcels A and B have historically received coal ash whereas Parcel E has typically received gypsum. Currently, Parcels A and B are active, and Parcel E is temporarily

inactive and covered with an intermediate closure system of 18-inches of soil compacted to obtain a maximum hydraulic conductivity of  $1 \times 10^{-6}$  cm/sec.

To accommodate the disposal of CCR material excavated from Ash Pond 4 located at Plant Hammond, Georgia Power proposes an expansion of the existing landfill to include the construction of Parcel F located south of Parcels A, B, and E. To this end, Georgia Power is preparing a permit application. The proposed lateral expansion of Parcel F will increase the total permitted area of the landfill by approximately 214 acres, for a total of 413 acres. Infrastructure installed in support of the Parcel F expansion is documented in the Site Acceptability Report submitted to GA EPD in July 2023.

A groundwater monitoring plan was developed as part of the landfill's pre-construction Design and Operations (D&O) Plan and approved in September 2004 with subsequent modifications submitted to GA EPD in September 2005, April 2009, and May 2013. Groundwater monitoring in accordance with the D&O Plan began in 2007, prior to disposal activities, and continues to date.

Groundwater monitoring and reporting activities in accordance with § 257.90 through § 257.94 of the federal CCR Rule were initiated in 2016. Pursuant to § 257.94(b), the eight baseline sampling events were conducted between March 2016 and March 2017, with the initial detection monitoring event occurring October 2017.

Groundwater samples from wells in the detection monitoring system are collected from each monitoring well and analyzed for:

- Appendix III constituents according to § 257.94(a); and
- A state-modified Appendix I list of detection constituents according to GA EPD Rules for Solid Waste Management 391-3-4-.14 and the approved D&O plan. The state-modified analyte list includes antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, thallium, vanadium, and zinc.
- Field parameters that are to be recorded include: pH, temperature, turbidity, dissolved oxygen, specific conductance, and oxidation-reduction potential.

## **1.2 Regional Geology and Hydrogeologic Setting**

The regional geology was summarized in the Southern Company Services (SCS) prepared Site Acceptability Report (SAR) (SCS, 2002) based on the work of Cressler (1970). The landfill is located in the Floyd Shale member of the Judy Mountain Syncline. The Floyd

Shale is Mississippian in age and ranges from 200 to 1,200 feet thick in Floyd County. The unit is composed of clay and shale, transitioning to limestone at its base.

Boring logs presented in the SAR indicate sandy clayey silt and silty clay with rock fragments described as shale extending to depths of up to approximately 30 feet below ground surface. Underlying this material is a medium gray to dark gray and dark olive gray, heavily to moderately weathered shale. Rock cores collected at the site are described as slightly weathered to unweathered, thinly bedded shale. Descriptions provided in the boring logs are representative of recorded observations on the Floyd Shale.

The landfill is underlain by a regional unconfined groundwater aquifer that occurs within the overburden. Groundwater recharge at the landfill is from infiltration of precipitation. Prior site investigations indicate groundwater within the unconfined aquifer flows predominantly through the heavily to moderately weathered shale layer (SCS, 2002). Groundwater occurring in bedrock below the site is controlled by the degree of enhanced secondary permeability. In general, groundwater occurring in the bedrock is a result of water infiltrating through areas in the overburden where enhanced permeability exists. Review of the available boring logs does not identify a confined aquifer beneath the landfill.

### **1.3 Groundwater Monitoring Well Network**

The existing groundwater monitoring system meets the requirements listed in § 257.91 and 391-3-4.14; a groundwater monitoring system was installed at the landfill that consists of a sufficient number of wells installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer to represent the groundwater quality both upgradient of the unit (i.e., background conditions) and passing the waste boundary of the unit. The number, spacing, and depths of the groundwater monitoring wells were selected based on the characterization of site specific hydrogeologic conditions. The locations of the detection monitoring wells are presented on **Figure 2**; well construction details are listed in **Table 1**.

### **1.4 Landfill Underdrain Monitoring Point**

In addition to the groundwater monitoring well network, the D&O Plan requires collecting a water sample from the landfill underdrain monitoring point, SWC-1, during each semiannual monitoring event. The water sample is analyzed for the same constituents monitored in groundwater. The monitoring point is located west of Parcels A and B, as shown on **Figure 2**. Historically, there has been no liquid discharge from this underdrain monitoring point to collect a sample, as was the case for the semiannual

reporting period. The discharge status of the monitoring point is confirmed during each sampling event.

## **2.0 GROUNDWATER MONITORING ACTIVITIES**

In accordance with § 257.90(e), the following describes monitoring-related activities performed during the semiannual reporting period and discusses any change in status of the monitoring program. Groundwater sampling was performed in accordance with § 257.93 and the D&O Plan.

### **2.1 Monitoring Well Installation and Maintenance**

Monitoring wells are inspected semiannually to evaluate if any repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). In February 2024, monitoring wells were inspected, necessary corrective actions were identified and subsequently completed, as documented in **Appendix A**. This documentation was performed under the direction of a professional geologist or engineer registered in the State of Georgia.

### **2.2 Detection Monitoring**

Georgia Power currently monitors groundwater associated with the landfill under the detection groundwater monitoring program in accordance with federal CCR Rule § 257.94 and Solid Waste Management Rule 391-3-4-.14(22). The semiannual detection monitoring event occurred in February 2024(**Table 2**). Groundwater samples were collected from each detection monitoring well shown on **Figure 2** and analyzed for the state-modified list of Appendix I constituents and Appendix III constituents stipulated by the August 2017 permit modification (GA EPD, 2017) (list of constituents presented in Section 1.1 of this report). The analytical and statistical results of the event conducted during the semiannual reporting period are discussed in Sections 3 and 4, respectively.

### 3.0 SAMPLE METHODOLOGY AND ANALYSIS

The following section presents a summary of the field sampling procedures that were implemented, and the groundwater sampling results that were obtained in connection with the compliance monitoring program conducted at the landfill during the semiannual reporting period.

#### 3.1 Groundwater Level Measurement

A synoptic round of depth-to-groundwater-level measurements were recorded from the monitoring well network during the February 2024 detection monitoring event and used to calculate the corresponding groundwater elevations, which are presented in **Table 3**. The February 2024 reported elevations are consistent with groundwater elevations reported for prior monitoring events.

The groundwater elevation data were used to prepare a potentiometric surface map for the February 2024 event, which is presented on **Figure 3**. Interpretation of the potentiometric surface contours indicate that groundwater flow beneath the landfill is generally to the southeast in vicinity of Parcels A and B, and then south-southwest beneath Parcel E. These observed flow directions are consistent with previous observations.

#### 3.2 Groundwater Gradient and Flow Velocity

The horizontal groundwater hydraulic gradients beneath the landfill were calculated using the groundwater elevation data from the February 2024 event, and between two pairs of data points located approximately along interpreted groundwater flow paths to account for changing flow directions across the site, as discussed in Section 3.1. For Parcels A and B, the horizontal hydraulic gradient was calculated between GWA-1 and GWC-7; for Parcel E, GWC-9 and GWC-20 were used for the gradient calculation. The gradient calculations are presented in **Table 4**. The general trajectories of the flow paths used in the calculations are shown on **Figure 3**.

As presented in **Table 4**, the hydraulic gradient underneath Parcels A and B applying the data from February 2024, was calculated to be 0.021 feet per foot (ft/ft), whereas the hydraulic gradient underneath Parcel E was calculated to be 0.016 ft/ft.

The approximate horizontal flow velocities associated with the Site were calculated using the following derivative of Darcy's Law. The calculations are presented on **Table 4**.

$$V = \frac{K_h * i}{n_e}$$

where:

$V$  = Groundwater flow velocity  $\left(\frac{\text{feet}}{\text{day}}\right)$

$K_h$  = Horizontal Hydraulic Conductivity  $\left(\frac{\text{feet}}{\text{day}}\right)$

$i$  = Horizontal hydraulic gradient  $\left(\frac{\text{feet}}{\text{foot}}\right) = \frac{h_1 - h_2}{L}$

$h_1$  and  $h_2$  = Groundwater elevation at location 1 and 2

$L$  = distance between location 1 and 2

$n_e$  = Effective porosity

Prior site investigations indicate groundwater within the unconfined aquifer flows predominantly through the heavily to moderately weathered shale layer (SCS, 2002). The average hydraulic conductivity for this zone (0.248 feet per day [ft/day]) was computed from slug test data derived from five locations across the site (SCS, 2002). An estimated effective porosity of 0.20 is used for the flow rate calculation, based on interpreted values for weathered shale (Freeze/Cherry, 1979). With these variables determined, and accounting for the hydraulic gradients discussed above, the groundwater flow velocity underneath Parcels A and B was calculated to be 0.026 ft/day. Similarly, the flow velocity underneath Parcel E was calculated to be 0.020 ft/day. Calculated groundwater velocities across the Site are generally consistent with historical calculations and site specific geology, therefore, confirming the groundwater monitoring network as properly located to monitor the uppermost aquifer.

### **3.3 Groundwater Sampling Procedures**

Groundwater samples were collected from the detection monitoring well network in accordance with § 257.93(a) and the D&O Plan using low-flow purging techniques performed with a peristaltic pump with disposable polyethylene tubing. The intake point of the tubing was lowered to the midpoint of the well screen. Each well was sampled with a new segment of tubing; all tubing was disposed of following the sampling event. All non-disposable equipment was decontaminated before use and between well locations.

An in-situ water quality field meter (Aqua TROLL400) was used to monitor and record field water quality parameters [i.e., pH, conductivity, dissolved oxygen (DO), temperature, and oxidation reduction potential (ORP)] during well purging to verify stabilization prior to sampling. Turbidity was monitored using a portable turbidity meter (i.e., LaMotte 2020we or similar). Groundwater samples were collected once the following stabilization criteria were met:

- pH  $\pm$  0.1 standard units (s.u.).
- Conductivity  $\pm$  5%.
- $\pm$  0.2 milligrams per liter (mg/L) or  $\pm$  10% (whichever is greater) for DO > 0.5 mg/L. No criterion applies if DO < 0.5 mg/L, record only.
- Turbidity measured less than 5 nephelometric turbidity units (NTU) or measured between 5 and 10 NTU following three hours of purging.

Following purging, and once stabilization was achieved, unfiltered samples were collected into appropriately preserved laboratory-supplied sample containers. Sample bottles were placed in ice-packed coolers and submitted to Pace Analytical Services, LLC (Pace Analytical) in Peachtree Corners, Georgia, following chain-of-custody protocol. The field sampling and equipment calibration forms generated during the semiannual reporting period are provided in **Appendix B**.

### **3.4 Laboratory Analyses**

Laboratory analyses were performed by Pace Analytical, which is accredited by the National Environmental Laboratory Accreditation Program (NELAP). Pace Analytical maintains a NELAP certification for the permit specified constituents analyzed for this project. Analytical methods used for groundwater sample analysis, and associated results, are listed in the analytical laboratory reports included in **Appendix B**. The groundwater results from the February 2024 detection monitoring event are summarized in **Table 5**.

### **3.5 Quality Assurance and Quality Control**

Quality assurance/quality control (QA/QC) samples were collected during the detection monitoring event at the minimum rate of one QA/QC sample per 10 groundwater samples and included the following: field duplicates, equipment blanks, and field blank samples. QA/QC samples were collected in appropriately preserved laboratory-supplied sample

containers and submitted under the same chain of custody as the primary samples for analysis of the same constituents by Pace Analytical.

In addition to collecting QA/QC samples, the data were validated based on the pertinent methods referenced in the laboratory reports, professional and technical judgment, and applicable federal guidance documents (USEPA, 2011; USEPA, 2017). Where necessary, the data were qualified with supporting documentation and justifications. The validated data meet project objectives and the associated data validation reports are provided in **Appendix B**, along with the laboratory reports.

## 4.0 STATISTICAL ANALYSES

The following section summarizes the statistical approach applied to assess the groundwater data for this semiannual reporting period for potential statistically significant increases (SSIs) of permit stipulated constituents reported in downgradient detection wells relative to the available historical dataset. Because the landfill is currently independently managed under both Georgia’s Solid Waste Management Rule 391-3-4.14 and Georgia’s CCR Rule 391-3-4.10, which references the federal CCR Rule, two datasets are statistically evaluated per monitoring event. One dataset contains Appendix III constituents, which is applicable to both of the beforementioned rule sets. The other dataset contains the D&O-specified state-modified list of Appendix I constituents, applicable to Rule 391-3-4.14. The February 2024 data were analyzed by Groundwater Stats Consulting (GSC); the report generated from the analyses is provided in **Appendix C**.

### 4.1 Statistical Methods

Statistical analysis of the February 2024 groundwater data for Appendix III constituents was performed pursuant to § 257.93 and in accordance with the PE-certified statistical method. Statistical analysis of the February 2024 groundwater data for the D&O Appendix I constituents was performed pursuant to Rule 391-3-4-.14 and in accordance with the *Background Data Screening & Recommended Statistical Methods* report prepared by GSC (GSC, 2019) and the USEPA document *Statistical Analysis of Groundwater Data at RCRA Facilities Unified Guidance* (Unified Guidance) (USEPA, 2009).

On February 26, 2021, Georgia Power submitted a minor modification to implement a two-step statistical approach for the detection monitoring program to address initial SSIs over background for constituents currently using an intrawell statistical approach. This approach was approved by GA EPD in a letter dated April 19, 2021. The two-step analysis is similar in concept to the procedure used in detection monitoring programs where an interwell statistical limit is used to determine “background” (Unified Guidance, Chapter 7, Section 7.5).

The Sanitas groundwater statistical software was used to perform the statistical analyses. Sanitas is a decision-support software package that incorporates the statistical tests required of Subtitle C and D facilities by USEPA regulations and guidance as recommended in the Unified Guidance. Detailed statistical methods used for Appendix III and D&O Appendix I constituents are discussed in statistical analysis reports provided in **Appendix C** and summarized in Sections 4.1.1 and 4.1.2.

#### 4.1.1 Statistical Methods – Appendix III Constituents

The PE-certified statistical approach used to evaluate groundwater data for the landfill for Appendix III constituents is the intrawell prediction limit (PL) method combined with a 1-of-2 resample plan. The intrawell PLs utilize historical data from within a given well to establish a statistical limit for comparison of compliance data at the same well. In this case, the data from the monitoring events conducted between March 2016 and February 2024 were used to establish background conditions. An “initial exceedance” occurs when any data from the well exceeds the PL. Intrawell statistical methods are a conservative first step that may be overly sensitive to natural variation, particularly for nonparametric limits with small background sample sizes. Therefore, for instances where an apparent exceedance over the PL is identified by intrawell statistical methods, interwell statistical methods may be used as a reasonable second step to determine if the initial exceedance is below sitewide background based on pooled upgradient well data.

The 1-of-2 resample plan allows for collection of an independent resample. Once again, the most recent sample from each downgradient well (in this case, the resample) is compared to the PL to evaluate exceedances over background. A confirmed exceedance is noted only when the resample confirms the initial exceedance by also exceeding the statistical limit. If the resample falls within its respective prediction limit, no exceedance is declared.

#### 4.1.2 Statistical Methods – Appendix I D&O Constituents

The intrawell PL statistical approach was also used to evaluate groundwater data for the landfill for Appendix I D&O constituents with a 1-of-2 resample plan (GSC, 2019). As with the Appendix III methodology, instances where an intrawell statistical exceedance is identified, interwell statistical methods may be used to determine sitewide background for comparison prior to SSI identification.

### 4.2 Statistical Analysis Results

The February 2024 groundwater data were analyzed by GSC, with the results from these analyses presented in the statistical analysis report included in **Appendix C**. Summaries of the statistical analysis are presented below for the semiannual reporting period.

#### 4.2.1 February 2024 Semiannual Event

No confirmed SSI was observed for either Appendix III or Appendix I D&O constituents during the February 2024 sampling event.

## **5.0 MONITORING PROGRAM STATUS**

Groundwater monitoring at the landfill is currently being conducted under a detection monitoring program pursuant to the federal CCR Rule § 257.94 and Georgia's Solid Waste Management Rule 391-3-4.14(21).

## 6.0 CONCLUSIONS AND FUTURE ACTIONS

This *2024 Semiannual Groundwater Monitoring and Corrective Action Report* for Georgia Power's Plant Hammond Huffaker Road Landfill was prepared to fulfill the requirements of both the federal CCR Rule (§ 257.90(e)) and Georgia's Solid Waste Management Rules (391-3-4-.14). No SSIs were verified during the February 2024 groundwater monitoring event. Groundwater monitoring at the landfill will continue under a detection monitoring program pursuant to the federal CCR Rule § 257.94 and Georgia's Solid Waste Management Rule 391-3-4.14(21-23). The next routine semiannual assessment monitoring event is scheduled for August 2024.

**Table 4**  
Horizontal Groundwater Gradient and Flow Velocity Calculations  
Plant Hammond, Huffaker Road Landfill, Floyd County, Georgia

Horizontal Hydraulic Gradient - February 12, 2024				
Landfill Parcels	$h_1$ (ft)	$h_2$ (ft)	L (ft)	i (ft/ft)
A & B (GWA-1 to GWC-7)	690.91	641.93	2,300	0.021
E (GWC-9 to GWC-20)	645.85	622.30	1,450	0.016

February 2024				
Landfill Parcels	$K_h$ (ft/day)	$n_e$	i (ft/ft)	V (ft/day) <sup>(1)</sup>
A & B	0.248	0.20	0.021	0.026
E			0.016	0.020

Notes:

ft = feet

ft/day = feet per day

ft/ft = feet per foot

$h_1$  and  $h_2$  = groundwater elevation at location 1 and 2

$i = h_1 - h_2 / L$  = horizontal hydraulic gradient

$K_h$  = horizontal hydraulic conductivity

L = distance between location 1 and 2 along the flow path

$n_e$  = effective porosity

V = groundwater flow velocity

(1) Groundwater flow velocity equation:  $V = [K_h * i] / n_e$

Notes:  
-- = Parameter was not analyzed.  
< = Indicates the parameter was not detected above the analytical method detection limit (MDL).  
J = Indicates the parameter was estimated and detected between the MDL and the reporting limit (RL).  
TDS = Total dissolved solids  
(1) Parameters are reported in units of milligrams per liter (mg/L), except for pH reported as s.u. (standard units).  
(2) Metals were analyzed by EPA Method 6010D and 6020B, anions were analyzed by EPA Method 300.0, TDS was analyzed by SM2540C, and sulfide was analyzed by SM4500-S2D.  
(3) The pH value presented was recorded at the time of sample collection in the field.

## APPENDIX A

# Well Maintenance and Repair Documentation Memorandum

**MEMORANDUM**

**DATE:** May 17, 2024

**TO:** Kristen Jurinko, P.G., Southern Company Services, Inc.

**CC:** Ben Hodges, P.G. Georgia Power Company

**FROM:** Geosyntec Consultants

**SUBJECT:** **Plant Hammond Huffaker Road Landfill – Well Maintenance and Repair Documentation, Georgia Power Company**

---

Geosyntec Consultants has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at the Plant Hammond Huffaker Road Landfill during the 2024 semiannual reporting period. All repairs and maintenance were completed in accordance with the Georgia Environmental Protection Division (GA EPD) guidance on routine visual inspections of groundwater monitoring wells. Documentation of the well inspections are provided as an attachment to this memorandum.

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/ Repair Performed
Hammond/Huffaker	2/12/2024	All Wells	Checked and cleared weep holes of debris.

# Attachment

## Well Inspection Summary Table

## Well Inspection

Site Name: Huffaker

Date: 2/12/2024

Permit Number: 057-022D (LI)

Field Conditions: Rainy, 50° F

	Location/Identification			
	Visible and accessible	Properly identified with correct well ID	Located in high traffic area; does the well require protection from traffic	Acceptable drainage around well (no standing water, not located in obvious drainage flow path)

241 Ralph McGill Blvd NE  
Bin 10160  
Atlanta, GA 30308

RE: Project: Huffaker Road Landfill  
Pace Project No.: 92715006

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on February 22, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

Revision 1: Arsenic RDL limit was updated to report 0.005 mg/L.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang  
bonnie.vang@pacelabs.com

## QUALIFIERS

Project: Huffaker Road Landfill  
Pace Project No.: 92715006

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.  
A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

BC	The same analyte was detected in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit.
D6	The precision between the sample and sample duplicate exceeded laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

# VALIDATION REPORTS

## **Memorandum**

Date: 31 May 2024  
To: Caroline Nelson  
Christine Hug  
From: Ashley Wilson  
CC: Kristoffer Henderson  
Subject: **Stage 2A Data Validation - Level II Data Deliverable – Pace Analytical Project Services, Project Number: 92715006 Revision 1**

**SITE: Huffaker Road Landfill**

### **INTRODUCTION**

This report summarizes the findings of the Stage 2A data validation of seventeen aqueous samples, two field duplicates, two field blanks and two equipment blanks, collected 19-21 February 2024, as part of the Plant Hammond sampling event.

The samples were analyzed at Pace Analytical Services – Peachtree Corners, Peachtree Corners, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B
- Metals by US EPA Method 3010A/6010D

The samples were analyzed at Pace Analytical Services - Asheville, Asheville, North Carolina, for the following analytical tests:

- Anions (chloride, fluoride and sulfate) by US EPA Method 300.0 Rev 2.1 1993
- Alkalinity as CaCO<sub>3</sub> (total, bicarbonate and carbonate) by SM 2320B-2011
- Sulfide by SM 4500-S2D-2011
- Total Dissolved Solids (TDS) by Standard Method (SM) 2540C-2015

### **EXECUTIVE SUMMARY**

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications. If there are results with two or more different qualifications due to multiple QC

failures, the final qualification is reconciled in the electronic data deliverable (EDD) with qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory reports, professional and technical judgment, and the following documents:

- US EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- American National Standard, Verification and Validation of Radiological Data for use in Waste Management and Environmental Remediation, February 15, 2012 (ANSI/ANS- 41.5-2012).

The following samples were analyzed and reported in the laboratory report:

Laboratory IDs	Client IDs
92715006001	HAM-GWA-1
92715006002	HAM-GWA-2
92715006003	HAM-GWA-3
92715006004	HAM-GWA-4
92715006005	HAM-GWA-11
92715006006	HAM-GWC-10
92715006007	HAM-GWC-5
92715006008	HAM-GWC-9
92715006009	HAM-GWC-18
92715006010	HAM-HLF-GWC-19
92715006011	HAM-GWC-20
92715006012	HAM-GWC-21

Laboratory IDs	Client IDs
92715006013	HAM-GWC-22
92715006014	HAM-GWC-23
92715006015	HAM-HLF-EB-01
92715006016	HAM-HLF-FB-01
92715006017	HAM-HLF-FD-02
92715006018	HAM-HLF-GWC-6
92715006019	HAM-GWC-7
92715006020	HAM-HLF-GWC-8
92715006021	HAM-HLF-EB-02
92715006022	HAM-HLF-FB-02
92715006023	HAM-HLF-FD-01

The chain of custody (COC) indicates the samples were received between 0-6 °C. No preservation issues were noted by the laboratory.

The laboratory report was revised to update the reporting limit (RL) for arsenic. The revised report was identified as 92715006 Revision 1.

## 1.0 METALS

The samples were analyzed for metals by US EPA methods 3005A/6020B and 3010A/6010D.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues

were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ⊗ Overall Assessment
- ✓ Holding Time
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ⊗ Equipment Blank
- ✓ Field Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

### 1.1 **Overall Assessment**

The metals data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this dataset is 100%.

#### 1.1.1 **Analysis Anomaly**

The laboratory flagged the boron concentrations in samples HAM-GWA-2, HAM-GWA-3 and HAM-GWA-4 with “BC” due to a detection in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit. Therefore, the concentration of boron in samples HAM-GWA-2, HAM-GWA-3 and HAM-GWA-4 were J+ qualified as estimated.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
HAM-GWA-2	Boron	0.083	BC	0.083	J+	BC
HAM-GWA-3	Boron	0.082	BC	0.082	J+	BC
HAM-GWA-4	Boron	0.059	BC	0.059	J+	BC

mg/L- milligram per liter

BC- detection in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit

\* Validation qualifiers are defined in Attachment 1 at the end of this report

\*\*Reason codes are defined in Attachment 2 at the end of this report

## **1.2 Holding Time**

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding times were met for the sample analyses.

## **1.3 Method Blank**

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The metals were not detected in the method blanks at or above the method detection limits (MDLs), with the following exception.

Vanadium (0.00078 mg/L) was detected in the method blank in batch 835235 at an estimated concentration greater than the MDL and less than the RL. Since vanadium was not detected in the associated samples, no qualifications were applied to the data.

## **1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)**

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Sample set specific MS/MSD pairs were reported for metals by US EPA methods 6020B and 6010D, using samples HAM-GWA-3 and HAM-GWC-21. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

One or both recoveries of calcium, magnesium and sodium in the MS/MSD pair using sample HAM-GWA-3 were high and outside of laboratory specified acceptance criteria. Since the calcium, magnesium and sodium concentrations in sample HAM-GWA-3 were greater than four times the spiked concentrations, no qualifications were applied to the data based on the MS/MSD recovery results.

Batch MS/MSDs were also reported for both methods. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

## **1.5 Laboratory Control Sample (LCS)**

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCSs were reported with each batch. The recovery results were within the laboratory specified acceptance criteria.

### 1.6 Equipment Blank

Two equipment blanks were collected with the sample set, HAM-HLF-EB-01 and HAM-HLF-EB-02. Metals were not detected in the equipment blanks at or above the MDLs, with the following exception.

Copper (0.00083 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in HAM-HLF-EB-02. Therefore, the estimated concentration of copper in HAM-GWC-21 was U qualified as not detected at or above the RL.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
HAM-GWC-21	Copper	0.00075	J	0.0050	U	BEL

mg/L- milligram per liter

J-the result is less than RL but greater than the MDL and the concentration is an approximate value

\* Validation qualifiers are defined in Attachment 1 at the end of this report

\*\*Reason codes are defined in Attachment 2 at the end of this report

### 1.7 Field Blank

Two field blanks were collected with the sample set, HAM-HLF-FB-01 and HAM-HLF-FB-02. Metals were not detected in the field blanks at or above the MDLs.

### 1.8 Field Duplicate

Two field duplicate samples were collected with the sample set, HAM-HLF-FD-01 and HAM-HLF-FD-02. Acceptable precision (RPD < 30%) was demonstrated between the field duplicate and the original samples, HAM-GWC-7 and HAM-HLF-GWC-19, respectively.

### 1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported for metals.

### 1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

## 2.0 WET CHEMISTRY

The samples were analyzed for chloride, fluoride and sulfate by US EPA method 300.0 Rev 2.1 1993, TDS by SM 2540C-2015, alkalinity as CaCO<sub>3</sub> (total, bicarbonate and carbonate) by SM 2320B-2011 and sulfide by SM 4500-S2D-2011.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Laboratory Duplicate
- ✓ Equipment Blank
- ⊗ Field Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverable Review

### 2.1 Overall Assessment

The wet chemistry data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for these analyses, for this dataset is 100%.

### 2.2 Holding Times

The holding times for water samples are listed below. The holding times were met for the sample analyses.

Analysis	Holding Time
Anions (fluoride, chloride and sulfate)	28 days from collection to analysis
TDS	7 days from collection to analysis
Alkalinity	14 days from collection to analysis
Sulfide	7 days from collection to analysis

### **2.3     Method Blank**

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

### **2.4     Matrix Spike/Matrix Spike Duplicate**

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two sample set specific MS/MSD pairs were reported for chloride, fluoride and sulfate using samples HAM-GWA-4 and HAM-GWC-23. One sample set specific MS/MSD pair was reported for sulfide using sample HAM-GWC-22. Two sample set specific MS/MSD pairs were reported for alkalinity using samples HAM-GWA-1 and HAM-GWA-2. The recovery and RPD results were within the laboratory specified acceptance criteria.

### **2.5     Laboratory Control Sample**

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCSs were reported for each analysis and batch. The recovery results were within the laboratory specified acceptance criteria.

### **2.6     Laboratory Duplicate**

Two laboratory duplicates were reported for TDS using samples HAM-GWA-1 and HAM-GWC-9. The RPD results were within the laboratory specified acceptance criteria.

### **2.7     Equipment Blank**

Two equipment blanks were collected with the sample set, HAM-HLF-EB-01 and HAM-HLF-EB-02. The wet chemistry parameters were not detected in the equipment blank at or above the MDLs, with the following exception.

TDS (148 and 41.0 mg/L) was detected in HAM-HLF-EB-01 and HAM-HLF-EB-02, respectively, at concentrations greater than the RL. Since these were qualified due to field blank contamination, no additional qualifications were applied to the data.

### **2.8     Field Blank**

Two field blanks were collected with the sample set, HAM-HLF-FB-01 and HAM-HLF-FB-02. The wet chemistry parameters were not detected in the field blank at or above the MDLs, with the following exceptions.

TDS (213 and 253 mg/L) was detected in HAM-HLF-FB-01 and HAM-HLF-FB-02, respectively, at concentrations greater than the RL. Therefore, the concentrations of TDS in samples HAM-GWA-1, HAM-GWA-11, HAM-GWC-10, HAM-GWC-18, HAM-GWC-21, HAM-GWC-22, HAM-HLF-EB-01 and HAM-HLF-EB-02 were U qualified as not detected at the reported concentration and the concentrations of TDS in samples HAM-GWA-2, HAM-GWA-3, HAM-GWA-4, HAM-GWC-20, HAM-GWC-23, HAM-GWC-5, HAM-GWC-7, HAM-GWC-9, HAM-HLF-FD-01, HAM-HLF-FD-02, HAM-HLF-GWC-19 and HAM-HLF-GWC-6 were J+ qualified as estimated with high bias.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
HAM-GWA-1	TDS	107	NA	107	U	FBC2
HAM-GWA-11	TDS	193	NA	193	U	FBC2
HAM-GWA-2	TDS	370	NA	370	J+	FBC2
HAM-GWA-3	TDS	380	NA	380	J+	FBC2
HAM-GWA-4	TDS	433	NA	433	J+	FBC2
HAM-GWC-10	TDS	198	NA	198	U	FBC2
HAM-GWC-18	TDS	250	NA	250	U	FBC2
HAM-GWC-20	TDS	369	NA	369	J+	FBC2
HAM-GWC-21	TDS	126	NA	126	U	FBC2
HAM-GWC-22	TDS	220	NA	220	U	FBC2
HAM-GWC-23	TDS	263	NA	263	J+	FBC2
HAM-GWC-5	TDS	407	NA	407	J+	FBC2
HAM-GWC-7	TDS	310	NA	310	J+	FBC2
HAM-GWC-9	TDS	301	NA	301	J+	FBC2
HAM-HLF-EB-01	TDS	148	NA	148	U	FBC2
HAM-HLF-EB-02	TDS	41.0	NA	41.0	U	FBC2
HAM-HLF-FD-01	TDS	338	NA	338	J+	FBC2
HAM-HLF-FD-02	TDS	290	NA	290	J+	FBC2
HAM-HLF-GWC-19	TDS	306	NA	306	J+	FBC2
HAM-HLF-GWC-6	TDS	275	NA	275	J+	FBC2

mg/L- milligram per liter

NA-not applicable

## 2.9 Field Duplicate

Two field duplicate samples were collected with the sample set, HAM-AP4-FD-01 and HAM-AP4-FD-02. Acceptable precision (RPD < 30%) was demonstrated between the field duplicate and the original samples, HAM-GWC-7 and HAM-HLF-GWC-19, respectively.

## 2.10 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

## **2.11 Electronic Data Deliverable Review**

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

**DATA VALIDATION QUALIFIER DEFINITIONS**  
**AND INTERPRETATION KEY**  
**Assigned by Geosyntec's Data Validation Team**

**DATA QUALIFIER DEFINITIONS**

- U The analyte was analyzed for but was not detected at or above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to “not detected at or above the reported result.”
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.
- J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

BT2	assoc. result > RL < mult.
BT3	assoc. result > RL > mult.
BTH	Contamination detected in the Trip Blank greater than or equal to the Quantitation Limit.
BTL	Contamination detected in the Trip Blank less than the Quantitation Limit.
CA1	Column difference
CC1	CCV %D
CC2	CCV %R
CC3	CCV RRF
CI1	IC RSD
CI2	IC RRF
CR1	Calibration range

<b>DQM Reason Code</b>	<b>Description</b>
CV1	ICV or CCV %D
CV2	ICV or CCV %R
CV3	ICV CCV RRF
DF1	Dilution Factor > 1
DL	Dilution Factor > 1
DVT1	The Dissolved Result > Total Result and the absolute difference > the AD_MULTIPLIER_CL * Detection Limit
DVT2	The Dissolved Result > Total Result and the absolute difference > AD_MULTIPLIER_UCO * Detection Limit
DVT3	The Dissolved Result > Total Result and the relative percent difference (RPD) > RPD_CL
DVT4	The Dissolved Result > Total Result and the relative percent difference (RPD) > RPD_UCO
ER1	MDL=<RESULT<RL (INORGANIC)
ER2	MDL=<RESULT<RL (ORGANIC)
FBC1	BLANK CONTAMINATION
FBC2	RESULT < BLANK * MULTIPLIER
FBC3	RESULT > BLANK * MULTIPLIER
FD1	Field duplicate RPD
FD2	Field duplicate abs. diff.
GHT1	GROSS_QUALIFIER_HIT
GHT2	GROSS_QUALIFIER_NON_DETECT
HP1	Hydrocarbon pattern
HT1	Holding time samp. to preservation
HT2	Holding time samp. to analysis
HT3	Holding time gros. samp. to pres.
HT4	Holding time gros. samp. to analysis
IS1	Internal standard
LBC1	BLANK CONTAMINATION
LBC2	RESULT < BLANK * MULTIPLIER
LBC3	RESULT > BLANK * MULTIPLIER
LD1	Lab duplicate RPD
LD2	Lab duplicate abs. diff.
LS1	LS %R
LS2	LS RPD
MS1	MS %R
MS2	MS RPD
MS3	Parent >4x spike
MS4	Spike diluted out

<b>DQM Reason Code</b>	<b>Description</b>
NP1	Non-Preferred Result
NR1	NUMERIC RESULTS
OT1	Other quality issue
PS1	BETWEEN CONTROL AND WARNING LIMITS
PS2	INVALID
PS3	LESS THAN LOWER CONTROL LIMIT
PS4	LESS THAN LOWER WARNING LIMIT
PT1	The preservative for this test id does not match the required preservative in RT_HOLDING_TIME.
RDL1	EXCEEDS REQUIRED DETECTION LIMIT
RL1	ND > project limit
RO1	Other rad. issue
RPD1	LCS/LCSD
RPD2	LCS/LCSD_NON_DETECT
RPD3	MS/MSD
RPD4	MS/MSD_NON_DETECT
RPD5	Orig/Dup
RPD6	Orig/Dup_NON_DETECT
RPDF1	FIELD DUPLICATE
RPDF2	FIELD DUPLICATE_NON_DETECT
RQ1	Rad. quantitation issue
RR1	Repeated result same method
RR2	Repeated result diff. method
RSD1	RSD exceeds CL for LCS sample
RSD2	RSD exceeds CL for MS sample
RSD3	RSD exceeds CL for Lab sample
RSD4	RSD exceeds CL for Field sample
RY1	Tracer or carrier
SD1	Serial dilution
SO1	High moisture
SO2	Wet weight
SP1	Preservation, temp
SP2	Preservation, pH
SP3	Preservation, headspace
SPR1	BLANK SPIKE > UCL
SPR10	EarthSoft.DQM.SpikeRecovery2
SPR11	EarthSoft.DQM.SpikeRecovery2
SPR12	EarthSoft.DQM.SpikeRecovery2
SPR2	INORGANIC SPIKE > UCL

<b>DQM Reason Code</b>	<b>Description</b>
SPR3	ORGANIC SPIKE > UCL
SPR4	LCL > BLANK > LOW_CUTOFF
SPR5	LCL > INORG > LOW_CUTOFF
SPR6	LCL > ORG > LOW_CUTOFF
SPR7	BLANK SPIKE < LOW_CUTOFF
SPR8	INORGANIC SPIKE < LOW_CUTOFF
SPR9	ORGANIC SPIKE < LOW_CUTOFF
SU	Surrogate outlier
SU1	Surrogate
SU2	Surrogate diluted out
SURR1	ASSO. DETECTS OF LCL > REC > LOW_CUTOFF
SURR10	EarthSoft.DQM.SurrogateRecovery
SURR11	EarthSoft.DQM.SurrogateRecovery
SURR12	EarthSoft.DQM.SurrogateRecovery
SURR2	ASSO. DETECTS OF REC < LOW_CUTOFF
SURR3	ASSO. DETECTS OF REC > UCL
SURR4	ASSO. NDS OF LCL > REC > LOW_CUTOFF
SURR5	ASSO. NDS OF REC < LOW_CUTOFF
SURR6	ASSO. NDS OF REC > UCL
SURR7	LCL > REC > LOW_CUTOFF
SURR8	REC < LOW_CUTOFF
SURR9	REC > UCL
TBC1	BLANK CONTAMINATION
TBC2	RESULT < BLANK * MULTIPLIER
TBC3	RESULT > BLANK * MULTIPLIER
TR	Trace Detection
TR1	Trace detection
TRA1	Tracer is outside of UCL or LCL
TRA2	Associated result of a tracer less than the LCL
TRA3	Associated detect result of a tracer greater than the UCL
VC1	Canister vacuum
VC2	Canister contamination
VSU1	INVALID SAMPLE UNIT TYPE
VSU2	MISSING SAMPLE UNIT TYPE
VSU3	NON-DEFAULT RESULT UNIT

# FIELD SAMPLING REPORTS

# Low-Flow Test Report:

Test Date / Time: 2/19/2024 2:25:58 PM  
Project: GP-Plant Hammond  
Operator Name: Thomas Kessler

Location Name: GWA-1 Well Diameter: 2 in Casing Type: PVC Screen Length: 10 ft Top of Screen: 29.3 ft Total Depth: 39.3 ft Initial Depth to Water: 11 ft	Pump Type: Peri Tubing Type: Poly Pump Intake From TOC: 34.3 ft Estimated Total Volume Pumped: 11 liter Flow Cell Volume: 90 ml Final Flow Rate: 200 ml/min Final Draw Down: 0.45 ft	Instrument Used: Aqua TROLL 400 Serial Number: 883530
--	--	--

Test Notes:  
Five bottles; Metals, TDS, Inorganics, and Major Ions

Weather Conditions:  
Clear, 60 degrees F

## Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Flow
		+/- 0.1	+/- 0.5	+/- 5 %	+/- 0.2	+/- 5	+/- 10	+/- 0.3

# Statistical Analysis Report

## GROUNDWATER STATS CONSULTING

August 30, 2024

Southern Company Services  
Attn: Ms. Kristen Jurinko  
241 Ralph McGill Blvd NE, Bin 10160  
Atlanta, Georgia 30308

Re: Plant Hammond's Huffaker Road Landfill  
Background Update and Statistical Analysis – February 2024

Dear Ms. Jurinko,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the background update and February 2024 Semi-Annual Groundwater Detection Monitoring statistical analysis of groundwater data for Georgia Power Company's Plant Hammond's Huffaker Road Landfill. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10 and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling began for the Georgia EPD parameters in 2007 and for the CCR program in 2016. At least 8 background samples have been collected at each of the groundwater monitoring wells. Semi-annual sampling for select constituents has been performed for several years in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations; and all available data are screened in this report.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient:** GWA-1, GWA-11, GWA-2, GWA-3, and GWA-4
- **Downgradient:** GWC-10, GWC-18, GWC-19, GWC-20, GWC-21, GWC-22, GWC-23, GWC-5, GWC-6, GWC-7, GWC-8, and GWC-9

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was prepared according to the recommended statistical methodology provided in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance. The analysis was reviewed by Kristina Rayner, Senior Statistician and Founder of Groundwater Stats Consulting.

The following constituents were evaluated:

- **Georgia EPD Appendix I** – antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, thallium, vanadium, and zinc
- **CCR Appendix III** – boron, calcium, chloride, fluoride, pH, sulfate, and TDS

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of well/constituent pairs with 100% non-detects follows this letter. Note that no Appendix III well/constituent pairs contained 100% non-detects.

A substitution of the most recent reporting limit is used for non-detect data. Reporting limits often decrease over time due to improved laboratory practices, which sometimes results in more conservative statistical limits compared to the previous statistical analysis. Such changes in reporting limits have occurred for beryllium, cadmium, chromium, cobalt, copper, fluoride, lead, nickel, selenium, silver, and zinc; therefore, prediction limits for these constituents have decreased over time at some of the wells. Note that due to elevated historic reporting limits, the current reporting limit for arsenic of 0.005 mg/L was substituted across all wells in order to maintain statistical limits that are conservative from a regulatory perspective.

The most recent reporting limit is substituted on a well-by-well basis for computing intrawell prediction limits. Therefore, individual wells can have different substitutions for a given parameter depending on what the laboratory has reported for each well.

Time series plots for all well/constituent pairs are provided and are particularly useful for screening parameters detected in downgradient wells which require statistical analyses (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

In earlier analyses, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided in the previous background update to demonstrate that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. During the initial background screening of the Appendix III parameters, the 1-of-2 resample plan did not provide sufficient power; therefore, a 1-of-3 resample plan was initially recommended due to the limited background sample sizes in each of the wells at that time.

During the March 2020 background update for the Appendix III parameters, however, the background sample sizes increased in each of the wells, and power curves were provided to demonstrate that the 1-of-2 resample plan provides sufficient power to meet the EPA recommendation mentioned above. Power Curves were based on the following:

#### **Georgia EPD Appendix I Constituents:**

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan
- # Constituents: 15 (all Appendix I parameters)
- # Downgradient wells: 12

#### **CCR Appendix III Constituents:**

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan
- # Constituents: 7 (all Appendix III parameters)
- # Downgradient wells: 12

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality.

After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Nondetects are handled as follows.

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In the intrawell case, data for all wells and constituents may re-evaluated when a minimum of 4 new data points are available to determine whether earlier concentrations are representative of present-day groundwater quality. In some cases, an earlier portion of data is deselected prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

### Two-Step Statistical Analysis

Intrawell statistical methods, combined with a 1-of-2 resample plan, may be used as a conservative first step for identifying potential facility impacts in downgradient wells. Intrawell methods use background data for individual wells and may be overly sensitive to spatial variation. In particular for nonparametric limits with small background sample sizes, the probability of a false positive is much higher than the desired annual sitewide rate of 10%. Therefore, a large number of exceedances may occur as a result of spatial variation rather than facility impacts. A second step can be used to further evaluate those exceedances and reduce the overall number of SSIs that result from spatial variation. In instances where intrawell statistical methods identify an apparent SSI, a second step of

interwell statistical evaluation may be used to determine whether the measurement exceeds the sitewide background limit based on pooled upgradient well data. This is similar in concept to the procedure used in compliance monitoring programs where an interwell statistical limit is used to determine “background” (USEPA Unified Guidance (2009), Chapter 7, Section 7.5). For the detection monitoring program, if the result does not exceed sitewide (interwell) background, an SSI is not declared.

When the result exceeds the sitewide (interwell) background, the 1-of-2 resample plan allows for collection of an independent resample to confirm the apparent exceedance or declare the initial finding a false positive result. A statistically significant increase is not declared unless the resample also exceeds the intrawell prediction limit (United States Environmental Protection Agency (USEPA) Unified Guidance, March 2009, Chapter 19). When the resample confirms the initial exceedance, further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). When any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. In cases where intrawell and interwell exceedances are noted and no resamples are collected, the initial exceedance will be considered a confirmed statistically significant increase (SSI).

Trend tests, in addition to interwell prediction limits, are recommended for well/constituent pairs found to have an initial intrawell SSI. Trend analysis will provide for detection of long-term changes and potential facility impacts at a given well in cases where the concentrations at that well remain below the sitewide upgradient limits. Thus, the two-step approach, with trend testing for intrawell exceedances, has additional capability to detect long-term changes at downgradient wells compared to interwell methods alone. While a trend may be identified by visual inspection, a quantification of the trend and its significance is needed to identify whether concentrations are statistically significantly increasing, decreasing, or remaining stable over time. The absence of a statistically significant increasing trend indicates that an initial intrawell exceedance is short-term and may be the result of spatial variation rather than facility impact to groundwater. If a facility impact has occurred, it will likely result in additional exceedances in future sampling events. When a statistically significant increasing trend is noted, additional data may be needed to determine whether the initial intrawell statistical exceedance is a result of spatial variation or an impact to groundwater quality downgradient of the facility.

## **Georgia EPD Appendix I Background Screening Summary – Conducted in August 2019**

### Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers for all wells and parameters are formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits.

Using the Tukey box plot method, several outliers were identified. When the most recent values were identified as outliers, values were not flagged in the database (except in cases where they would cause background limits to be elevated) as they may represent a possible trend. If future values do not remain at similar concentrations, these values will be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers. Due to changing reporting limits for many constituents, when the non-detects were replaced with the most recent reporting limit, previously flagged "J" values (or estimated values) required flagging as outliers because they were much higher than current reporting limits.

Of the outliers identified by Tukey's method, several values were flagged in the database, and the remaining values were similar to other measurements within a given well or neighboring wells or were reported non-detects. In some cases, values were flagged in addition to those identified by Tukey's because the values were higher than all remaining concentrations and would cause the statistical limits to be elevated. These values are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages display the flagged values in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data.

### Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

## Trend Testing

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test, which tests for statistically significant increasing or decreasing trends, was used to evaluate data at all upgradient and downgradient wells with detections.

In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different from current reported concentrations, and earlier data will be deselected as necessary. Several statistically significant decreasing trends were noted, as well as a few statistically significant increasing trends for barium. The magnitudes of most of these trends were low relative to the average concentrations and, therefore, required no adjustments to the record.

However, background adjustments were made for barium in wells GWA-2, GWC-19, GWC-22, GWC-6, GWC-7, and GWC-9; and cobalt, nickel, and zinc in well GWC-7. Earlier data for each of these well/constituent pairs were deselected to reduce variation and utilize samples that were more representative of current groundwater concentrations. For those cases with increasing trends in barium, the assumption is that the increase is a result of spatial variation and not the result of the facility. Under that assumption, the more recent data would represent unimpacted conditions. Thorough evaluation of that assumption requires a separate geochemical investigation that is beyond the scope of services provided by Groundwater Stats Consulting. However, increasing barium concentrations were noted in both upgradient and downgradient wells, suggesting that the groundwater quality is changing due to spatial variation. The trends for cobalt, nickel and zinc are decreasing, and using only the more recent data results in more conservative prediction limits. Complete trend analysis results were presented with the August 2019 screening report. A date range summary table is provided with this report to show the adjusted date ranges used in construction of the statistical limits.

## Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells for constituents detected in downgradient wells. The ANOVA assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled

upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter.

The ANOVA identified statistically significant variation among upgradient well data for: arsenic, barium, cobalt, and nickel. The ANOVA did not identify variation for antimony, beryllium, cadmium, chromium, copper, lead, selenium, and zinc. The ANOVA could not test the following constituents because the data had no variation among the upgradient wells: silver, thallium, and vanadium.

Where significant spatial variation is not identified, this suggests that interwell analysis would be the most appropriate statistical method for these constituents. However, because this is a lined landfill with pre-waste data showing that metals occur naturally in low level detections, intrawell methods are recommended as the primary statistical method for all detected well/constituent pairs. Intrawell methods are generally based on an assumption of no existing impacts of the facility in background data. While the assumption is supported by pre-waste data, thorough evaluation of that assumption requires a separate geochemical investigation, especially for the cases of increasing trends in concentration following waste placement. That study is beyond the scope of services provided by Groundwater Stats Consulting.

## **CCR Appendix III Background Update Summary – Conducted in March 2020**

### Outlier Testing

Prior to updating background data, Tukey's outlier test and visual screening were used to evaluate Appendix III data from both upgradient and downgradient wells through November 2019. Tukey's test noted potential outliers in downgradient wells for all parameters, but not all of these values were flagged as some appeared to be representative of spatial variation. Any flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages

### Mann Whitney Testing

For constituents requiring intrawell prediction limits (all constituents in this instance), the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the medians of historical

data through March 2017 to the new compliance samples at each well through November 2019. If the medians of the two groups are not significantly different at the 99% confidence level, background data are typically updated to include the newer compliance data. Statistically significant differences were found between the two groups for the following well/constituent pairs: boron in downgradient wells GWC-19 and GWC-7; chloride in downgradient well GWC-8; pH in downgradient wells GWC-20 and GWC-22; sulfate in downgradient well GWC-20; and TDS in downgradient wells GWC-6 and GWC-8.

Although not statistically significant at the 99% confidence level, the increase in median concentrations between background and compliance data for boron at GWC-8 was significant at the 98% confidence level.

Typically, when the test concludes that the medians of the two groups are significantly different, particularly in the downgradient wells, the background data are not updated to include the newer data unless it can be reasonably justified that the change in concentrations reflects a shift unrelated to practices at the site. In studies in which at least one of the segments being compared is of short duration, the comparison is complicated by the fact that normal short-term variation may be mistaken for long-term change in medians. In this analysis, all but one of the cases with statistically significant Mann-Whitney results were updated. The individual cases are discussed below.

Boron in wells GWC-19 and GWC-7 trended over time toward more stable concentrations at slightly lower levels. Boron at GWC-8 had higher values recently, but the higher concentrations were similar to those in upgradient wells. The measured pH in downgradient wells GWC-20 and GWC-22 stabilized at slightly lower levels, closer to a neutral pH of 7. Chloride in GWC-8 and TDS in both GWC-6 and GWC-8 showed moderate increases in median concentrations due to a short-term spike with the most recent concentrations similar to those in one or more background wells.

In light of these considerations, the only case that was not updated at the time of the update was sulfate at well GWC-20, which has a marked and steadily increasing trend that was not present in the upgradient wells. However, it was later determined through an alternate source demonstration that this trend is either short-term or not the result of the facility, and this record was appropriately updated. Since the update, the upward trend in sulfate has continued and will continue to be evaluated. Concentrations remain below those in upgradient wells GWA-3 and GWA-4. A list of well/constituent pairs that use a truncated portion of their record follows this report in the date range table mentioned above.

## **Appendix I and Appendix III Background Update Summary – Conducted in 2024**

### Outlier Testing

Prior to updating background data, Tukey's outlier test and visual screening were used to evaluate Appendix III constituents from both upgradient and downgradient wells through August 2023, except for pH at downgradient well GWC-6 which was resampled in November 2023. Tukey's test noted potential outliers in downgradient wells for all parameters, but not all of these values were flagged as some measurements appeared to be representative of spatial variation. Visual screening and Tukey's outlier test confirmed previously flagged values. Values not identified by Tukey's test but flagged in the data base (such as high values for sulfate at upgradient well GWA-3 and downgradient wells GWC-5 and GWC-23, and TDS at upgradient wells GWA-3 and GWA-4), were flagged in order to maintain conservative statistical limits. Any flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. A summary of flagged outliers follows this letter (Figure C).

### Mann-Whitney Testing

For constituents requiring intrawell prediction limits (all constituents in this instance), the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the medians of historical data through August 2021 for Appendix I and III constituents and to the new compliance samples at each well through August 2023, except for pH at downgradient well GWC-6 (Figure D). Previously truncated data sets discussed above were also compared to the most recent set of measurements through August 2023. If the medians of the two groups are not significantly different at the 99% confidence level, background data are typically updated to include the newer compliance data.

Several statistically significant differences were found between the two groups for the Appendix I and II constituents. Typically, when the test concludes that the medians of the two groups are significantly different, particularly in the downgradient wells, the background data are not updated to include the newer data unless it can be reasonably justified that the change in concentrations reflects a shift unrelated to practices at the site. In studies in which at least one of the segments being compared is of short duration, the comparison is complicated by the fact that normal short-term variation may be mistaken for long-term change in medians.

In most cases with significant differences, either the current reported measurements were similar to those reported historically, or the changes to resulting statistical limits were

marginal. Additionally, recorded observations for well/constituent pairs with significant differences were similar to or lower than concentrations found upgradient of the facility. Exceptions where compliance concentrations were outside the range of historic observations include barium and chloride at upgradient well GWA-3. Since these concentrations are upgradient of the facility, the measurements are assumed to represent background conditions unrelated to the facility.

Although not identified by the Mann-Whitney test to have a statistically significant decrease in median concentrations, the following records had earlier portions of the record truncated to reduce variability among background data and construct a statistical limit that is both more conservative from a regulatory perspective and representative of present-day groundwater quality conditions:

- Barium: GWA-4 (upgradient)
- Beryllium: GWC-7

All records were updated through August 2023. A summary of special cases with background data sets utilizing a truncated portion of their record follows this letter. Any adjustments are shown in the Date Range Table in addition to adjustments listed from previous updates.

## **Evaluation of Georgia EPD Appendix I and CCR Appendix III Constituents – February 2024**

### Prediction Limits

Intrawell limits constructed from screened background data from within each well serve to provide statistical limits that are representative of the background data population, and that will rapidly identify a change in more recent compliance data from within a given well. The most recent sample from the same well is compared to its respective background. This statistical method removes the element of variation from across wells and eliminates the chance of mistaking spatial variation for a release from the facility.

In cases where downgradient average concentrations are higher than observed upgradient concentrations for a given constituent where intrawell analyses are recommended, the current assumption is that this is due to spatial variation rather than a result of practices at the landfill. Validation of this assumption requires a separate analysis or investigation that is beyond the scope of this data screening study.

## **Evaluation of Georgia EPD Appendix I Parameters – February 2024**

For all Georgia EPD Appendix I parameters, intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed using all available data for each well through August 2023, except for the cases mentioned above (Figure E). The February 2024 compliance data were compared to these intrawell background limits. No statistical analyses were included for well/constituent pairs with 100% non-detects.

A summary of the Georgia EPD Appendix I intrawell prediction limits follows this report and no exceedances were identified.

### Two-Step Approach

Following the Two-Step approach, interwell prediction limits are constructed for any apparent intrawell prediction limit exceedances using pooled upgradient well data to further evaluate the exceedance. No intrawell prediction limit exceedances were noted; therefore, no further action was required for the Appendix I parameters.

### Trend Analysis

When prediction limit exceedances occur in any of the downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level. Upgradient wells are included in the trend analyses to identify whether increasing or decreasing patterns exist upgradient of the site which is an indication of variability in groundwater unrelated to practices at the site. Because no exceedances were identified among downgradient wells for Appendix I parameters, no trend tests were required.

## **Evaluation of CCR Appendix III Parameters – February 2024**

For all CCR Appendix III parameters, intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical data through August 2023 (Figure F). The February 2024 sample from each downgradient well is compared to the background limit to determine whether there are exceedances over background. A summary of the Appendix III prediction limits follows this report. Exceedances were noted for the following well/constituent pairs:

- Chloride: GWC-21
- Sulfate: GWC-19
- TDS: GWA-11, GWA-2 (both upgradient), GWC-19, GWC-20, and GWC-9

When exceedances are identified in upgradient wells, such as TDS, it may be an indication that groundwater quality is changing due to spatial variation or off-site influences unrelated to practices at the site.

### Two-Step Approach

When interwell prediction limits were constructed for the apparent intrawell prediction limit exceedances in downgradient wells, no exceedances were identified (Figure G).

### Trend Tests

Data from downgradient well/constituent pairs found to exceed their respective intrawell prediction limit were further evaluated using the Sen's Slope/Mann Kendall trend test using a 99% confidence level, along with upgradient wells for the same constituents. A summary of the trend test results follows this letter (Figure H). The following statistically significant trends were identified:

Increasing:

- Sulfate: GWA-2 (upgradient)
- TDS: GWA-2 (upgradient) and GWC-20

Decreasing:

- Chloride: GWA-3 and GWA-4 (both upgradient)
- Sulfate: GWA-11 and GWA-4 (both upgradient)

### **Summary**

#### Georgia EPD Appendix I Constituents

Based on the result of the Appendix I intrawell prediction limit results followed by the two-step approach, no statistically significant exceedances were identified.

#### CCR Appendix III Constituents

Based on the results of the Appendix III intrawell prediction limit results followed by the two-step approach and the resample data, no statistically significant exceedances were identified.

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Hammond's Huffaker Road Landfill. If you have any questions or comments, please feel free to contact us.

## Tukey's Outlier Screening

GWA-1 (bg)

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were x<sup>6</sup> transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWA-11 (bg)

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWA-2 (bg)

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 41

No outliers found.  
Tukey's method selected by user.

Data were x<sup>4</sup> transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWA-3 (bg)

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Ladder of Powers transformations did not improve normality; analysis run on raw data.

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWA-4 (bg)

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-10

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were cube root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-18

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were x<sup>6</sup> transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-19

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were x<sup>5</sup> transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-20

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 41

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-21

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 40

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-22

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-23

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-5

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-6

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were cube root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-7

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 41

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-8

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 41

No outliers found.  
Tukey's method selected by user.

Ladder of Powers transformations did not improve normality; analysis run on raw data.

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-9

n = 42

No outliers found.  
Tukey's method selected by user.

Ladder of Powers transformations did not improve normality; analysis run on raw data.

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Antimony Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWA-1 (bg)

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Arsenic Analysis Run 2/29/2024 4:01 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWA-11 (bg)

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWA-2 (bg)

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWA-3 (bg)

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

Outliers are drawn as solid.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.02522, low cutoff = 0.000578, based on IQR multiplier of 3.

## Tukey's Outlier Screening

GWA-4 (bg)

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were cube transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-10

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-18

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

n = 42

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 41

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 40

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Arsenic Analysis Run 2/29/2024 4:02 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 42

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

## Tukey's Outlier Screening

GWC-20

n = 21

Outlier is drawn as solid.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.03505,  
low cutoff = 0.008398,  
based on IQR multiplier of 3.

Constituent: Boron Analysis Run 2/29/2024 4:03 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-21

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.2952,  
low cutoff = 0.003353,  
based on IQR multiplier of 3.

Constituent: Boron Analysis Run 2/29/2024 4:03 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-22

n = 21

No outliers found.  
Tukey's method selected by user.

Ladder of Powers transformations did not improve normality; analysis run on raw data.

High cutoff = 0.09495,  
low cutoff = 0.0365,  
based on IQR multiplier of 3.

Constituent: Boron Analysis Run 2/29/2024 4:03 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-23

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.6682,  
low cutoff = 0.001613,  
based on IQR multiplier of 3.

Constituent: Boron Analysis Run 2/29/2024 4:03 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-5

n = 21

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.1261,  
low cutoff = 0.01508,  
based on IQR multiplier of 3.

Constituent: Boron Analysis Run 2/29/2024 4:03 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-6

n = 23

Outlier is drawn as solid.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.05671,  
low cutoff = 0.02814,  
based on IQR multiplier of 3.

Constituent: Boron Analysis Run 2/29/2024 4:03 PM

Constituent: Sulfate Analysis Run 2/29/2024 4:07 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-5

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 163.2, low cutoff = 41.18, based on IQR multiplier of 3.

Constituent: Sulfate Analysis Run 2/29/2024 4:07 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-6

## Tukey's Outlier Screening

GWA-11 (bg)

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 247.7, low cutoff = 57.01, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWA-2 (bg)

n = 21

No outliers found.  
Tukey's method selected by user.

Data were square transformed to achieve best W statistic (graph shown in original units).

High cutoff = 334.9, low cutoff = -97.37, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWA-3 (bg)

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 706.3, low cutoff = 278.5, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWA-4 (bg)

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 1161, low cutoff = 207.8, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-10

n = 21

No outliers found.  
Tukey's method selected by user.

Ladder of Powers transformations did not improve normality; analysis run on raw data.

High cutoff = 345, low cutoff = 23, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-18

n = 21

Outlier is drawn as solid.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 361.7, low cutoff = 118.9, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-19

n = 21

Outlier is drawn as solid.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 330.1, low cutoff = 162.3, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-20

n = 21

No outliers found.  
Tukey's method selected by user.

Data were cube root transformed to achieve best W statistic (graph shown in original units).

High cutoff = 513.2, low cutoff = 89.38, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-21

n = 23

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 2393, low cutoff = 12.53, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-22

n = 21

Outlier is drawn as solid.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 270.4, low cutoff = 168, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-23

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 411.6, low cutoff = 88.48, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-5

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 529.3, low cutoff = 273.6, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-6

n = 23

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 542.7, low cutoff = 200.2, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-7

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 520.7, low cutoff = 131.8, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-8

n = 23

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 817.9, low cutoff = 92.91, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

GWC-9

n = 21

No outliers found.  
Tukey's method selected by user.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 400.4, low cutoff = 123, based on IQR multiplier of 3.

Constituent: Total Dissolved Solids Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 37

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 37

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 37

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 37

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 37

No outliers found.  
Tukey's method selected by user.

Data were cube transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 37

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 36

No outliers found.  
Tukey's method selected by user.

Data were cube root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM  
Plant Hammond Data: Huffaker Road Landfill

## Tukey's Outlier Screening

n = 36

No outliers found.  
Tukey's method selected by user.

Data were square root transformed to achieve best W statistic (graph shown in original units).

The results were invalidated, because the lower and upper quartiles are equal.

Constituent: Vanadium Analysis Run 2/29/2024 4:08 PM

### Prediction Limit Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. All background values (n = 37) were censored; limit is most recent reporting limit. Well-constituent pair annual alpha = 0.002721. Individual comparison alpha = 0.001361 (1 of 2).

Constituent: Vanadium Analysis Run 4/28/2024 4:58 PM View: Appendix I  
Plant Hammond Data: Huffaker Road Landfill

Within Limit

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 35 background values. 94.29% NDs. Well-constituent pair annual alpha = 0.002991. Individual comparison alpha = 0.001497 (1 of 2).

Constituent: Vanadium Analysis Run 4/28/2024 4:58 PM View: Appendix I  
Plant Hammond Data: Huffaker Road Landfill

Within Limit

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 37 background values. 97.3% NDs. Well-constituent pair annual alpha = 0.002721. Individual comparison alpha = 0.001361 (1 of 2).

Constituent: Vanadium Analysis Run 4/28/2024 4:58 PM View: Appendix I  
Plant Hammond Data: Huffaker Road Landfill

Within Limit

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 37 background values. 97.3% NDs. Well-constituent pair annual alpha = 0.002721. Individual comparison alpha = 0.001361 (1 of 2).

Constituent: Vanadium Analysis Run 4/28/2024 4:58 PM View: Appendix I  
Plant Hammond Data: Huffaker Road Landfill

Within Limit

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 36 background values. 86.11% NDs. Well-constituent pair annual alpha = 0.002856. Individual comparison alpha = 0.001429 (1 of 2).

Constituent: Vanadium Analysis Run 4/28/2024 4:58 PM View: Appendix I

Within Limit

## Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 110 background values. Annual per-constituent alpha = 0.003911. Individual comparison alpha = 0.0001633 (1 of 2). Assumes 11 future values.

Within Limit

## Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 108 background values. Annual per-constituent alpha = 0.004049. Individual comparison alpha = 0.000169 (1 of 2). Assumes 11 future values.

Plant Hammond Data: Huffaker Road Landfill

Within Limit

## Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 103 background values. Annual per-constituent alpha = 0.004393. Individual comparison alpha = 0.0001834 (1 of 2). Comparing 3 points to limit. Assumes 9 future values.
