RE: Project: Plant McD AP-1234 Assessme-RAD
Pace Project No.: 92711290

Dear Lauren Hartley:

Enclosed are the analytical results for sample(s) received by the laboratory between February 01, 2024 and February 02, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-1234 Assessme-RAD
Pace Project No.: 92711290

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

DC#_Title: ENV-FRM-HUN1-0083 v03_Sample Condition Upon Receipt

Effective Date: 11/29/2023

Laboratory receiving samples:
Asheville ☐ Eden ☐ Greenwood ☐ Huntersville ☐ Raleigh ☐ Mechanicsville ☐ Atlanta ☑ Kernersville ☐

Sample Condition Upon Receipt

Client Name: Ga Power

Project # WO#: 92711290

PM: BV Due Date: 02/22/24

CLIENT: 92-GA Power

Courier: ☐ Commercial ☐ Fed Ex ☐ Pace ☐ UPS ☐ USPS ☐ Other: ☑ Client

Custody Seal Present? ☑ Yes ☐ No Seals Intact? ☑ Yes ☐ No ☐ N/A

Date/Initials Person Examining Contents: 2/12/24 SR

Packing Material: ☑ Bubble Wrap ☐ Bubble Bags ☐ None ☐ Other

Biological Tissue Frozen? ☐ Yes ☐ No ☑ N/A

Thermometer: ☑ IR Gun ID: 230 Type of Ice: ☑ Wet ☐ Blue ☐ None

Cooler Temp: 1.1 Correction Factor: Add/Subtract (°C) +0.1

Temp should be above freezing to 6°C
☐ Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 1.2

USDA Regulated Soil (☐ N/A, water sample)
Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.
Sufficient Volume?	☑ Yes	☐ No	☐ N/A	5.
Correct Containers Used?	☑ Yes	☐ No	☐ N/A	6.
-Pace Containers Used?	☑ Yes	☐ No	☐ N/A	
Containers Intact?	☑ Yes	☐ No	☐ N/A	7.
Dissolved analysis: Samples Field Filtered?	☐ Yes	☐ No	☑ N/A	8.
Sample Labels Match COC?	☑ Yes	☐ No	☐ N/A	9.
-Includes Date/Time/ID/Analysis Matrix: W				
Headspace in VOA Vials (>5-6mm)?	☐ Yes	☐ No	☑ N/A	10.
Trip Blank Present?	☐ Yes	☐ No	☑ N/A	11.
Trip Blank Custody Seals Present?	☐ Yes	☐ No	☑ N/A	

COMMENTS/SAMPLE DISCREPANCY

Field Data Required? ☐ Yes ☐ No

RE: Project: Cobb- Assessment- RAD
Pace Project No.: 92711292

Dear Lauren Hartley:

Enclosed are the analytical results for sample(s) received by the laboratory between January 31, 2024 and February 01, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: Cobb- Assessment- RAD
Pace Project No.: 92711292

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant McD Cobb County
Pace Project No.: 92710878

Dear Lauren Hartley:

Enclosed are the analytical results for sample(s) received by the laboratory between January 31, 2024 and February 01, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: Plant McD Cobb County
Pace Project No.: 92710878

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant McDonough-CCR Ash Pond
Pace Project No.: 92711943

Dear Kelley Sharpe:

Enclosed are the analytical results for sample(s) received by the laboratory on February 06, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Maiya Parks

QUALIFIERS

Project: Plant McDonough-CCR Ash Pond
Pace Project No.: 92711943

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1g	Constant weight could not be achieved for this sample after four drying cycles. The final weight change was 0.0022g
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Data Validation Summary September 2023

Quality Control Review of Analytical Data- Ash Pond AP-2 and 3/4
Submitted by Pace Analytical Services, LLC
September 2023

This narrative presents results of the quality control (QC) data review performed on analytical data submitted by Pace Analytical Services, LLC. for groundwater samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 (Site) between September 6 and September 13, 2023. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1. In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D - Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detection monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Groundwater samples were also analyzed for alkalinity, sulfide, and total iron. Test methods included Inductively Coupled Plasma- Mass Spectrometry (ICP-MS) (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Inductively Coupled Plasma (ICP) (6010D), Determination of Inorganic Anions By Ion Chromatography (USEPA Method 300.0), Total Dissolved Solids (TDS) (Standard Methods 2540C), Radium-226 (USEPA Method 9315), Radium-228 (USEPA Method 9320), Alkalinity by Titration (Standard Methods 2320B), and Sulfide (Standard Methods SM 4500-S2D). Additional surface water samples were collected and analyzed for USEPA Method 6020B, 6010D, 300.0, TDS, and Alkalinity by Titration through Standard Method 2320B (SM2320B).

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program (CLP) Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0), US EPA Region IV Data Validation Standard Operating Procedures for CLP Mercury Data by Cold Vapor Atomic Absorption (September 2011, Rev. 2.0), the National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020), and US Department of Energy, Evaluation of Radiochemical Data Usability (April 1997). The review included an assessment of the results for completeness, precision (laboratory and field duplicates, matrix spike/matrix spike duplicates), accuracy (laboratory control samples and matrix spike samples), and blank contamination (including field and laboratory blanks). Additionally, sample procedures, holding times and chains-of-custody were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytic methodology, method-specific criteria or professional judgment was used.

DATA QUALITY OBJECTIVES

Laboratory Precision: Laboratory goals for precision were met with the exception of TDS, as described in the qualification sections below.

Field Precision: Field goals for precision were met with the exception of sulfate, calcium, iron, magnesium, potassium, sodium, and mercury, as described in the qualification sections below.

Accuracy: Laboratory goals for accuracy were met with the exception of calcium, sodium, magnesium, potassium, and sulfate as described in the qualification sections below.

Detection Limits and Blanks: Project goals for detection limits were met. Certain samples were diluted due to elevated concentrations of target analytes. Dilutions do not require

qualifications based on USEPA guidelines. Detection and reporting limits of non-detect compounds are elevated proportional to the dilution when undiluted sample results are not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of site-wide characterization. Detections were found in certain blank results, as described in the qualification sections below.

Completeness: There were no rejected analytical results for this event, resulting in a completion of 100%.

Representativeness: All holding time and sample preservation requirements were met in accordance with specific analytical methods except total dissolved solids, alkalinity, chloride, fluoride, and sulfate for surface water samples as described in the qualification section below.

QUALIFICATIONS

In general, chemical results for the samples collected at the Site were qualified on the basis of precision or accuracy, or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data by the laboratory during the data validation process.

J	The analyte was reported above the method detection limit and below the reporting limit. The concentration reported is an estimated value.
J-	The analyte was reported above the method detection limit; however, the concentration reported is an estimated value that may be biased low.
U	The analyte was not detected above the method detection limit.
UJ	The analyte was not detected at a level greater than or equal to the reporting limit. However, the reporting limit is approximate and may be inaccurate or imprecise.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. Although these qualifications were applied to some data from samples collected at the site (see Table 1), qualifications may not have been required or applied to all samples collected. A summary of sample qualifications can be found in Table 2.

- In SDG 92686679, a project-specific laboratory duplicate for sample MCD-B-98 exceeded the RPD criteria for TDS. The result was qualified as estimated, J.

- Field duplicate RPD values were outside of QC for select analytes in SDG 92686679. Both primary and duplicate samples' sulfate result was qualified as estimated, J due to both results being greater than 5x the RL. The primary and/or duplicate sample results for calcium, iron, magnesium, potassium, and sodium were less than 5x the RL. Additionally, the absolute difference between the results was greater than the maximum of the corresponding RLs and the associated results were qualified as estimated, J.

- Field duplicate RPDs exceeded criteria in SDG 92686947 for select iron and mercury results. Qualification was not required because the primary and/or duplicate sample result was less than 5x the RL and the difference between the results was less than the RL.

- Certain calcium and sodium results from SDG 92686676 and calcium from SDG 92687817 had matrix spike duplicate (MSD) recoveries below the lower QC criteria. All corresponding sample results were greater than 4x the added spike concentration and therefore no qualification was required.

- In SDG 92686679, certain calcium, magnesium, and potassium results had matrix spike and matrix spike duplicate (MS/MSD) recoveries outside of the QC criteria. All sample results were greater than 4x the added spike concentration and therefore no qualification was required.

- Certain sulfate results from SDG 92686947 had MS/MSD recoveries below QC criteria. The associated sample was qualified as estimated, bias low (J-).

- Certain antimony, boron, molybdenum, chromium, and magnesium results from SDGs 92686679 and 92686947 were detected at a similar level in the associated blank sample. As shown in Table 2, if the original sample results were below the RL, the results were qualified U and the results were raised to the RL. When the associated sample being non-detect or having a concentration 10x greater than the blank concentration, no qualification was required.

- TDS was detected in the equipment blank from SDG 92686947, and sample MCD-DGWC-11 was qualified as U, non-detect, and the RL was raised to the sample result.

- All results except metals from SDG 92687817 were qualified as estimated (J/UJ) due to arriving to the laboratory outside of temperature criteria.

WSP reviewed the data from samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 between September 6 and September 23, 2023 in accordance with the analytical methods, the laboratory specific QC criteria, and the guidelines. As described above, 100% of the results were acceptable for project use.

Abbreviations:
RL : Reporting limit
MDC : Minimum detectable concentration
MDL: Method detection limit
SDG : Sample delivery group
RPD: Relative percent difference

Qualifier
U: Non-detect
J+: Estimated, bias high
J-: Estimated, bias low
UJ: Non-detect, estimated

APPENDIX B

Data Validation Summary January-February 2024

Quality Control Review of Analytical Data- Ash Pond AP-2 and 3/4
Submitted by Pace Analytical Services, LLC
January - February 2024

This narrative presents results of the quality control (QC) data review performed on analytical data submitted by Pace Analytical Services, LLC. for groundwater samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 (Site) between January 30 and February 6, 2024. The chemical data were reviewed to identify quality issues which could affect the use of the data for decision making purposes.

Information regarding the primary sample locations, analytical parameters, QC samples, sampling dates, and laboratory sample delivery group (SDG) designations is summarized in Table 1. In accordance with groundwater monitoring and corrective action procedures discussed in Title 40 CFR, Subpart D - Standards for the Disposal of Coal Combustion Residuals in Landfills and Surface Impoundments, the samples were analyzed for detection monitoring constituents listed in 40 CFR, Part 257, Appendix III and assessment monitoring constituents listed in 40 CFR, Part 257, Appendix IV. Groundwater samples were also analyzed for cations (magnesium, sodium, and potassium), alkalinity, sulfide, and total iron. Test methods included Inductively Coupled Plasma- Mass Spectrometry (ICP-MS) (USEPA Method 6020B), Mercury in Liquid Wastes (USEPA Method 7470A), Inductively Coupled Plasma (ICP) (6010D), Determination of Inorganic Anions By Ion Chromatography (USEPA Method 300.0), Total Dissolved Solids (TDS) (Standard Methods 2540C), Radium-226 (USEPA Method 9315), Radium-228 (USEPA Method 9320), Alkalinity by Titration (Standard Methods 2320B), and Sulfide (Standard Methods SM 4500-S2D). Additional surface water samples were collected and analyzed for USEPA Method 6020B, 6010D, 300.0, and Standard Methods 2540C, and SM2320B.

Data were reviewed in accordance with the US EPA Region IV Data Validation Standard Operating Procedures for Contract Laboratory Program (CLP) Inorganic Data by Inductively Coupled Plasma – Atomic Emission Spectroscopy and Inductively Coupled Plasma – Mass Spectroscopy (September 2011, Rev. 2.0), US EPA Region IV Data Validation Standard Operating Procedures for CLP Mercury Data by Cold Vapor Atomic Absorption (September 2011, Rev. 2.0), the National Functional Guidelines for Inorganic Superfund Methods Data Review (November 2020), and US Department of Energy, Evaluation of Radiochemical Data Usability (April 1997). The review included an assessment of the results for completeness, precision (laboratory and field duplicates, matrix spike/matrix spike duplicates), accuracy (laboratory control samples and matrix spike samples), and blank contamination (including field and laboratory blanks). Additionally, sample procedures, holding times and chains-of-custody were reviewed. Where there was a discrepancy between the QC criteria in the guidelines and the QC criterion established in the analytic methodology, method-specific criteria or professional judgment was used.

DATA QUALITY OBJECTIVES

Laboratory Precision: Laboratory goals for precision were met.

Field Precision: Field goals for precision were met.

Accuracy: Laboratory goals for accuracy were met with the exception of total alkalinity and fluoride as described in the qualification sections below.

Detection Limits and Blanks: Project goals for detection limits were met. Certain samples were diluted due to elevated concentrations of target analytes. Dilutions do not require qualifications based on USEPA guidelines. Detection and reporting limits of non-detect compounds are elevated proportional to the dilution when undiluted sample results are not provided by the laboratory. The data usability of diluted results was evaluated by the data user in the context of

site-wide characterization. Detections were found in certain blank results, as described in the qualification sections below.

Completeness: There were no rejected analytical results for this event, resulting in a completion of 100%.

Representativeness: All holding time and sample preservation requirements were met in accordance with specific analytical methods.

QUALIFICATIONS

In general, chemical results for the samples collected at the Site were qualified on the basis of precision or accuracy, or on the basis of professional judgment. The following definitions provide brief explanations of the qualifiers which may have been assigned to data during the data validation process.

J	The analyte was reported above the method detection limit and below the reporting limit. The concentration reported is an estimated value.
J+	The analyte was reported above the method detection limit; however, the concentration reported is an estimated value that may be biased high.
U	The analyte was not detected above the method detection limit.
UJ	The analyte was not detected at a level greater than or equal to the reporting limit. However, the reporting limit is approximate and may be inaccurate or imprecise.

The data generated as part of this sampling event met the QC criteria established in the respective analytical methods and data validation guidelines except as specified below. Although these qualifications were applied to some data from samples collected at the site (see Table 1), qualifications may not have been required or applied to all samples collected. A summary of sample qualifications can be found in Table 2.

- Certain total alkalinity as CaCO3 results from SDG 92710886, had MS/MSD recoveries below QC criteria. The associated sample was qualified as estimated, non-detect (UJ).
- Certain fluoride results from SDG 92710886 had MS/MSD recoveries exceeding QC criteria. The associated sample was qualified as estimated, bias high (J+).
- Certain isotope, radium-228, results from SDGs 92711292 and 92710974 were detected at a similar level in the associated blank sample. As shown in Table 2, the results were qualified U, and the Minimum Detectable Concentrations (MDCs) were raised to the result value.
- As shown on table 2, certain total radium results from SDG 92710974 were qualified U when isotope radium-228 was qualified U for blank contamination and radium-226 concentrations were below the MDC. The Minimum Detectable Concentrations (MDCs) were raised to the result value.
- As shown on table 2, certain total radium results from SDGs 92711292 and 92710974 were qualified J+ when isotope radium-228 was qualified U for blank contamination and radium-226 concentrations were above the MDC.

WSP reviewed the data from samples collected at Plant McDonough CCR Ash Pond AP-2 and 3/4 between January 30 and February 6, 2024, in accordance with the analytical methods, the laboratory specific QC criteria, and the guidelines. As described above, 100% of the results were acceptable for project use.

APPENDIX B

Laboratory Accreditation

June 13, 2023

RE: Georgia Commercial Laboratory Accreditation Rule

Stipulation Requirements for Analysis of Non-Potable Water and Solid and Chemical Materials
Georgia state law requires any person submitting data to the GA Environmental Protection Division for regulatory purposes to stipulate that the laboratory responsible for preparing the data is approved or accredited to perform analysis of environmental samples. This stipulation must be included within each report or may be submitted in a separate document with the first report of the calendar year; alternatively, the attached scope of accreditation may be submitted in lieu of a stipulation.

The information provided below may be used to generate a stipulation for data reporting purposes:

Name of Laboratory:	Pace Analytical Services, LLC – Asheville, NC
Name of Accrediting Agency:	Commonwealth of Virginia Department of General Services Division of Consolidated Laboratory Services [Primary NELAP Accreditation]
Accreditation Number:	460222
Scopes of Accreditation:	Non-Potable Water Solid and Chemical Materials
Accreditation Effective Date:	June 15, 2023
Accreditation Expiration Date:	June 14, 2024

For additional information regarding the Georgia Commercial Laboratory Accreditation Rule, please contact the Georgia Environmental Protection Division at 404-656-4713.

Sincerely,

Jacob Cottrell
Quality Manager

PEOPLE ADVANCING SCIENCE

Stipulation of Approval for Commercial Environmental Laboratories

Pursuant to the *Rules and Regulations of the State of Georgia* (O.C.G.A. 12-2-9) and *Rule 391-3-26.05* for "Commercial Environmental Laboratories", any person submitting data prepared by a commercial analytical laboratory to the Division for regulatory purposes shall stipulate that the laboratory is approved.

The stipulations for which Pace-Atlanta is approved, is as follows:

Laboratory:	**Pace Analytical Services, LLC – Atlanta GA** 110 Technology Parkway Peachtree Corners, GA 30092 Phone: (770) 734-4200 Fax: (770) 734-4201
Accredited By:	Authority Florida Department of Health (FL - DOH) Program Florida Environmental Laboratory Certification Program (TNI/NELAP)
Accreditation ID:	E87315
Scope of Accreditation:	Non-Potable Water (NPW) -General Chemistry (Wet Chemistry) -Metals -Microbiology Solid and Chemical Materials (SCM) -General Chemistry -Metals - Microbiology
Effective Dates:	July 1, 2023 – June 30, 2024

Any question regarding this stipulation of approval may be directed to Pace-Atlanta at (770) 734-4200. Thank you for your business and please do not hesitate to contact us if we can be of further assistance.

Sincerely,

Kyle Henderson
Quality Manager – Atlanta Laboratory

RE: Certification by Reciprocity
Pace Analytical Services, Inc. - Pittsburgh
Georgia ID #C040

Dear Ms. Miller:

The Georgia Department of Natural Resources, Environmental Protection Division (EPD) is in receipt of all required data necessary to fulfill your laboratory's request for Certification by Reciprocity in Georgia for the analysis of the parameters listed in the attached certificate. Therefore, in accordance with the Georgia Safe Drinking Water Act of 1977 (Sections 12-5-170 through 12-5-193, O.C.G.A.) and the Rules for Safe Drinking Water (Chapter 391-3-5), this certification is valid until March 31, 2024. This certificate is contingent upon continued Certification by the Commonwealth of Pennsylvania's Department of Environmental Protection and is non-transferable. This certificate is also contingent upon continued acceptable semi-annual Proficiency Testing results.

If Pace Analytical Services, LLC – Pittsburgh's certification status is downgraded for any analyte/method by your Primary Accrediting Agency, the GA Certification Program must be notified. Any downgrade will result in the withdrawal of reciprocity for that analyte.

Prior to the expiration of this certification, please contact your accrediting/certifying authority and request that the following information be forwarded to me at lynne.grubb@dnr.ga.gov.

1. Copies of the most current on-site report, and proposed and accepted corrective actions
2. Copies of the Certificate and scope of accreditation listing analytes

For additional information please feel free to contact Lynne Grubb at 470-604-9528.

Sincerely,

Lynne Grubb

Lynne Grubb

Well Maintenance and Repair Documentation

TECHNICAL MEMORANDUM

DATE July 31, 2024

TO Joju Abraham, PG
Southern Company Services

CC Ben Hodges, Georgia Power Company

FROM WSP USA Inc

PLANT MCDONOUGH ASH POND 1, ASH POND 2, AND ASH POND 3/4
WELL MAINTENANCE AND REPAIR DOCUMENTATION
GEORGIA POWER COMPANY

WSP USA Inc. (WSP) has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at Plant McDonough Ash Pond 1, and Ash Pond 2 and 3/4 on February 8, 2024. Repairs and maintenance were completed in accordance with 12-5-134 (5)(D)vii of the Georgia Well Standards Act (1985) for routine visual inspections of groundwater monitoring wells (i.e., at least once every five years) under the direction of a Georgia licensed professional engineer or geologist.

APPENDIX D

Piezometer Decommissioning and Abandonment Report (B-31 and B-74)

November 13, 2023 Project No.31406640.McD23

Ms. Lauren Hartley, Senior Geologist
Southern Company Services
241 Ralph McGill Boulevard NE
Atlanta, GA 30308
laucoker@southernco.com

SUBJECT: PIEZOMETER DECOMMISSIONING AND ABANDONMENT (B-31 AND B-74) REPORT GEORGIA POWER COMPANY - PLANT MCDONOUGH-ATKINSON, SMYRNA, GEORGIA

Dear Ms. Hartley:

WSP USA Inc. (WSP) is submitting this *Piezometer Decommissioning and Abandonment (B-31 and B-74) Report* to Southern Company Services, Inc. (SCS) and Georgia Power Company (Georgia Power), to document the decommissioning and abandonment of two piezometers at Plant McDonough-Atkinson in Smyrna, Georgia (Site). The two Site piezometers (B-31 and B-74) required abandonment to allow for a local infrastructure project (a watermain project along Maner road) in the area of Plant McDonough-Atkinson.

Piezometer abandonment activities were performed using industry-accepted practices and following the Manual for Groundwater Monitoring (1991) and Georgia Water Well Standards Act of 1985 [Official Code of Georgia Annotated (O.C.G.A.) 12-5-120, 1985] as guides. The decommissioning and abandonment of the piezometers was conducted under the oversight and direction of a Georgia Registered Professional Geologist (PG).

The field activities for the abandonment were performed on October 4, 2023. The field work consisted of the decommissioning and abandonment of two Site piezometers (B-31 and B-74). A summary of the activities is presented below. Figure 1 presents the former locations of the abandoned piezometers.

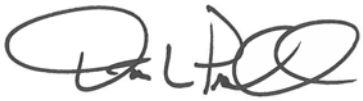
Piezometer Decommissioning and Abandonment Activities

On October 4th, Site piezometers B-31 and B-74 were abandoned by Southern Company Civil Field Services (CFS). CFS has a current and valid bond with the Water Wells Standards Advisory Council for the State of Georgia (Appendix A). An experienced WSP professional geologist registered to practice in the state of Georgia was present on site to oversee and record the piezometer decommissioning and abandonment.

Piezometer Decommissioning and Abandonment

Prior to piezometer decommissioning, WSP utilized a water level probe to confirm the total depth of the well. As piezometers B-31 and B-74 were located outside the footprint of the waste unit, decommissioning and abandonment procedures included removal of the piezometer's protective cover and concrete pad. The piezometers were then tremie-grouted from the bottom to 10' below top of casing with care taken to remove the column of water within the well. The initial grout mixture for B-74 was 17 lbs. AquaGuard bentonite powder and 4 gallons of potable water. The initial grout mixture for B-31 was 25 lbs AquaGuard bentonite powder and 7 gallons of water. The top 10 feet of the piezometers were then overdrilled, and the PVC pipe destroyed or removed. The driller then grouted the remaining borehole of each piezometer to the ground surface. The final grout mixture for B-74 was 38 lbs Quikrete non-shrink precision grout, 10 lbs AquaGuard bentonite powder, and 6.5 gallons of

water. The final grout mixture for B-31 was 38 lbs Quikrete non-shrink precision grout 10 lbs AquaGuard bentonite powder and 6.5 gallons of water.



A summary of piezometer decommissioning data is presented in Table 1, and the former locations of the abandoned piezometers are provided in Figure 1. The original construction logs and the abandonment logs for B-31 and B-74 documenting pipe removal and grouting details are included in Appendix B.

Certification

We appreciate the opportunity to assist Southern Company Services, Inc. and Georgia Power with this project. Should you have any questions or require additional information, please contact the undersigned at (770) 496-1893.

Sincerely,

WSP USA INC.

Dawn L. Prell, CPG
Senior Consultant, Hydrogeologist

I certify that I am a qualified ground-water scientist who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and have sufficient training and experience in groundwater hydrology and related fields, as demonstrated by state registration and completion of accredited university courses, that enable me to make sound professional judgments regarding groundwater monitoring and contaminant fate and transport. I further certify that this report was prepared by myself or by a subordinate working under my direction. We certify that the information included is to the best of our knowledge and belief, true, accurate and complete. In preparing this report, we have relied on information provided by Southern Company Services and Georgia Power.

This Power of Attorney is made and executed pursuant to and by authority of the following By-law and Authorizations of American States Insurance Company, First National Insurance Company of America, General Insurance Company of America, and Safeco Insurance Company of America, which are now in full force and effect reading as follows:

ARTICLE IV – OFFICERS: Section 12. Power of Attorney.
Any officer or other official of the Corporation authorized for that purpose in writing by the Chairman or the President, and subject to such limitation as the Chairman or the President may prescribe, shall appoint such attorneys-in-fact, as may be necessary to act in behalf of the Corporation to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations. Such attorney-in-fact, subject to the limitations set forth in their respective powers of attorney, shall have full power to bind the Corporation by their signature and executed, such instruments shall be as binding as if signed by the President and attested to by the Secretary. Any power or authority granted to any representative or attorney-in-fact under the provisions of this article may be revoked at any time by the Board, the Chairman, the President or by the officer or officers granting such power or authority.

Certificate of Designation – The President of the Company, acting pursuant to the Bylaws of the Company, authorizes David M. Carey, Assistant Secretary to appoint such attorneys-in-fact as may be necessary to act on behalf of the Company to make, execute, seal, acknowledge and deliver as surety any and all undertakings, bonds, recognizances and other surety obligations.

Authorization – By unanimous consent of the Company's Board of Directors, the Company consents that facsimile or mechanically reproduced signature of any assistant secretary of the Company, wherever appearing upon a certified copy of any power of attorney issued by the Company in connection with surety bonds, shall be valid and binding upon the Company with the same force and effect as though manually affixed.

I, Renee C. Llewellyn, the undersigned, Assistant Secretary, of American States Insurance Company, First National Insurance Company of America, General Insurance Company of America, and Safeco Insurance Company of America do hereby certify that the original power of attorney of which the foregoing is a full, true and correct copy of the Power of Attorney executed by said Companies, is in full force and effect and has not been revoked.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed the seals of said Companies this 22nd day of May, 2023

This Power of Attorney is granted under and by the authority of the following resolutions adopted by the Boards of Directors of each of the Companies, which resolutions are now in full force and effect, reading as follows:

RESOLVED, that the Chairman, the President, any Vice Chairman, any Executive Vice President, any Senior Vice President, any Vice President, any Second Vice President, the Treasurer, any Assistant Treasurer, the Corporate Secretary or any Assistant Secretary may appoint Attorneys-in-Fact and Agents to act for and on behalf of the Company and may give such appointee such authority as his or her certificate of authority may prescribe to sign with the Company's name and seal with the Company's seal bonds, recognizances, contracts of indemnity, and other writings obligatory in the nature of a bond, recognizance, or conditional undertaking, and any of said officers or the Board of Directors at any time may remove any such appointee and revoke the power given him or her; and it is

FURTHER RESOLVED, that the Chairman, the President, any Vice Chairman, any Executive Vice President, any Senior Vice President or any Vice President may delegate all or any part of the foregoing authority to one or more officers or employees of this Company, provided that each such delegation is in writing and a copy thereof is filed in the office of the Secretary; and it is

FURTHER RESOLVED, that any bond, recognizance, contract of indemnity, or writing obligatory in the nature of a bond, recognizance, or conditional undertaking shall be valid and binding upon the Company when (a) signed by the President, any Vice Chairman, any Executive Vice President, any Senior Vice President or any Vice President, any Second Vice President, the Treasurer, any Assistant Treasurer, the Corporate Secretary or any Assistant Secretary and duly attested and sealed with the Company's seal by a Secretary or Assistant Secretary; or (b) duly executed (under seal, if required) by one or more Attorneys-in-Fact and Agents pursuant to the power prescribed in his or her certificate or their certificates of authority or by one or more Company officers pursuant to a written delegation of authority; and it is

FURTHER RESOLVED, that the signature of each of the following officers: President, any Executive Vice President, any Senior Vice President, any Vice President, any Assistant Vice President, any Secretary, any Assistant Secretary, and the seal of the Company may be affixed by facsimile to any Power of Attorney or to any certificate relating thereto appointing Resident Vice Presidents, Resident Assistant Secretaries or Attorneys-in-Fact for purposes only of executing and attesting bonds and undertakings and other writings obligatory in the nature thereof, and any such Power of Attorney or certificate bearing such facsimile signature or facsimile seal shall be valid and binding upon the Company and any such power so executed and certified by such facsimile signature and facsimile seal shall be valid and binding on the Company in the future with respect to any bond or understanding to which it is attached.

I, **Kevin E. Hughes**, the undersigned, Assistant Secretary of each of the Companies, do hereby certify that the above and foregoing is a true and correct copy of the Power of Attorney executed by said Companies, which remains in full force and effect.

Dated this **31st** day of **May**, **2023**.

Re: Plant McDonough Ash Pond (AP-2,3,4)
September 2023 Statistical Analysis

Dear Mr. Abraham,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the September 2023 Semi-Annual Groundwater Monitoring and Corrective Action Statistical summary of groundwater data for Georgia Power Company's Plant McDonough AP-2,3,4. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for Appendix III parameters began in 2016, and at least 8 background samples were collected at each of the groundwater monitoring wells. Semi-annual sampling of the majority of Appendix IV constituents has been performed for several years in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** DGWA-53, DGWA-70A, DGWA-71
- **Downgradient wells:** DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-9, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-14, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, and DGWC-48

- **Assessment Wells:** B-56, B-62, B-63, B-66, B-77, B-82, B-83, B-88, B-92, B-93, B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, B-111D, B-120D, B-122D, and B-125D

The assessment wells were installed at various times during 2016-2020 as follows:

- **2016** - B-56, B-62, B-63, and B-66
- **2019** - B-77, B-82, B-83, B-88, B-92, and B-93
- **2020** – B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, and B-111D
- **2021** – B-120D
- **2022** – B-122D
- **2023** – B-125D

Well DGWC-9 was dry during the September 2023 event and was not sampled; therefore, this well is included on time series and box plots, but is not analyzed with prediction limits. Note that well B-109D was classified as an assessment well previously but has been redesignated as a piezometer. Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology prepared in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance.

The Coal Combustion Residuals (CCR) program consists of the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient and assessment well/constituent pairs containing 100% non-detects follows this letter.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between

all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the previous screening and demonstrated that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests that the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

Summary of Statistical Methods – Appendix III Parameters

Based on the earlier evaluation described above, the following methods were selected:

- Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique

adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after screening for any new outliers. In some cases, earlier data may require deselection prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Summary of Background Screening – Conducted in March 2019

Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits.

Using the Tukey box plot method, several outliers were identified. In cases where the most recent value was identified as an outlier, values were not flagged in the database as they may represent a possible trend. If future values do not remain at similar concentrations, these values may be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

Of the outliers identified by Tukey's method, only a few of these values were flagged in the database as all other values are similar to other measurements.

Additionally, when any values are flagged in the database as outliers, they are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each well to identify statistically significant increasing or decreasing trends. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses were included with the previous screening and showed two statistically significant decreasing trends for the Appendix III parameters. The only significant trend identified in the upgradient wells was a statistically significant decreasing trend for sulfate in well DGWA-71. All trends noted were relatively low in magnitude when compared to average concentrations; therefore, no adjustments were made to the data sets.

Appendix III – Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells, which assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter.

The ANOVA identified no variation among upgradient well data for fluoride, making this constituent eligible for interwell analyses. Variation was noted for boron, calcium, chloride, pH, sulfate, and TDS, which would indicate intrawell analyses may be most appropriate for these parameters. While data were further tested for intrawell eligibility during the screening, interwell methods will be used for all Appendix III constituents in accordance with Georgia EPD requirements.

Statistical Analysis of Appendix III Parameters – September 2023

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through September 2023 (Figure D). Background (upgradient) well data were reassessed for potential outliers during this analysis and no new values were flagged. Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The September 2023 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result. Therefore, no exceedance is noted, and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. Several prediction limit exceedances were noted for Appendix III parameters. A summary table of the interwell prediction limits follows this letter.

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. Similar patterns that are present in both upgradient and downgradient wells are an indication of variability in groundwater quality unrelated to practices at the site. A summary of the trend test results follows this letter. Statistically significant trends were noted for the following well/constituent pairs:

Increasing trends

- Boron: DGWC-4, DGWC-11, and DGWC-17
- Calcium: DGWC-4, DGWC-5, DGWC-11, DGWC-19, DGWC-21, and DGWC-23
- Chloride: DGWC-71 (upgradient) and DGWC-20
- pH: DGWC-19
- Sulfate: DGWC-19
- TDS: DGWC-4, DGWC-5, DGWC-11, DGWC-17 and DGWC-19

Decreasing trends

- Boron: DGWA-53 (upgradient), DGWC-2, DGWC-8, DGWC-10, DGWC-12, DGWC-13, DGWC-19, DGWC-20, and DGWC-48
- Calcium: DGWA-53 (upgradient) and DGWC-48
- Chloride: DGWA-53 (upgradient), DGWC-4, DGWC-19, DGWC-21, DGWC-22, DGWC-23, and DGWC-42
- Fluoride: DGWC-47 and DGWC-48
- pH: DGWC-20, DGWC-42, and DGWC-47
- Sulfate: DGWA-71 (upgradient), DGWC-2, DGWC-8, DGWC-12, DGWC-13, DGWC-15, DGWC-20, DGWC-42, DGWC-47, and DGWC-48
- TDS: DGWA-53 (upgradient), DGWC-10, DGWC-12, DGWC-20, DGWC-22, and DGWC-48

Statistical Analysis of Appendix IV Parameters – September 2023

For Appendix IV parameters, confidence intervals for each downgradient and assessment well/constituent pair with four or more samples were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. As mentioned above, downgradient and assessment well/constituent pairs that contain 100% non-detects do not require analysis. Data from upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis prior to constructing statistical limits. No additional values were flagged during this analysis and a complete list of flagged outliers follows this report (Figure C).

Interwell Upper Tolerance Limits

Interwell upper tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through September 2023 for Appendix IV constituents (Figure F). Parametric tolerance limits are used when data follow a normal or transformed-normal distribution such as for combined radium 226 + 228. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were used.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed for each of the Appendix IV constituents in accordance with the state requirements in each downgradient well (Figure H). Note that confidence intervals require a minimum of 4 samples and, in many cases, the assessment wells had insufficient samples at this time.

The Sanitas software was used to calculate the tolerance limits and the confidence intervals. These intervals were constructed as either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. Nonparametric confidence intervals were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The confidence level associated with nonparametric confidence intervals is dependent upon the number samples available.

Due to the sample size, the lower confidence limits resulted in negative numbers for some well/constituent pairs. Therefore, non-parametric confidence intervals, which are bound by reported high and low measurements within a given well, were constructed for these particular cases and may be found at the end of Figure H. This is a more conservative approach in that the lower confidence limit reflects the lowest reported measurement in the data set rather than a negative number.

Confidence intervals were compared to the GWPS prepared as described above. Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. A summary of the confidence intervals follows this letter. Exceedances were noted for the following well/constituent pairs:

- Arsenic: DGWC-9
- Beryllium: DGWC-5, DGWC-9, DGWC-10, DGWC-47, DGWC-48, B-92, and B-93
- Cobalt: DGWC-9, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-92, B-93, and B-104D
- Combined Radium 226 + 228: B-104D and B-111D
- Lithium: DGWC-47, DGWC-48, and B-120D

Trend Test Evaluation – Appendix IV

Data at wells with confidence interval exceedances are further evaluated using the Sen's Slope/Mann Kendall trend test at the 95% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure I). Although the trend tests for Assessment monitoring pairs were previously evaluated using 99% confidence, the 95% confidence level more rapidly identifies statistically significant trends. Additionally, the 95% confidence is recommended in cases with limited sample sizes and, particularly, for new assessment wells. Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability in groundwater quality unrelated to practices at the site. A summary of the Appendix IV trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing

- Beryllium: DGWC-5
- Cobalt: DGWA-71 (upgradient), DGWC-9, DGWC-20, and B-56

Decreasing

- Beryllium: DGWA-70A (upgradient), DGWC-47, and DGWC-48
- Cobalt: DGWA-53 (upgradient), DGWC-8, DGWC-10, DGWC-47, and DGWC-48
- Combined Radium 226 + 228: DGWA-53 (upgradient)
- Lithium: DGWA-71 (upgradient), DGWC-47, DGWC-48, and B-120D

Note that while the trend test identified statistically significant increasing trend for cobalt in upgradient well DGWA-71, the slope is displayed as zero which represents the median slopes of all the possible pairwise slopes. The zero median slopes result from the large number of non-detects in the record, and the positive test statistics result from a few trace values being recorded in the earlier part of the record.

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for McDonough AP-2,3,4. If you have any questions or comments, please feel free to contact us.

Exceeds Limit: DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-2, DGWC-20, DGWC-21...

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 53 background values. 24.53% NDs. Annual per-constituent alpha = 0.02558. Individual comparison alpha = 0.0006476 (1 of 2). Comparing 19 points to limit. Assumes 1 future value.

Constituent: Boron Analysis Run 2/14/2024 9:14 AM View: AP 234 Appendix III

Plant McDonough Data: McDonough AP

DGWC-4

n = 18

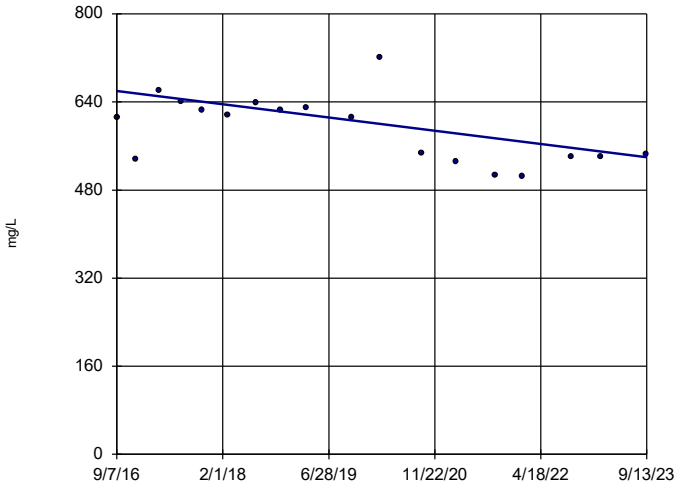
Slope = 66.91 units per year.

Mann-Kendall statistic = 92 critical = 68

Increasing trend significant at 99% confidence level (α = 0.005 per tail).



Constituent: Total Dissolved Solids [TDS] Analysis Run 2/14/2024 9:19 AM View: AP 234 Appendix III Tre

Plant McDonough Data: McDonough AP

Sanitas™ v.10.0.16 Software licensed to . UG

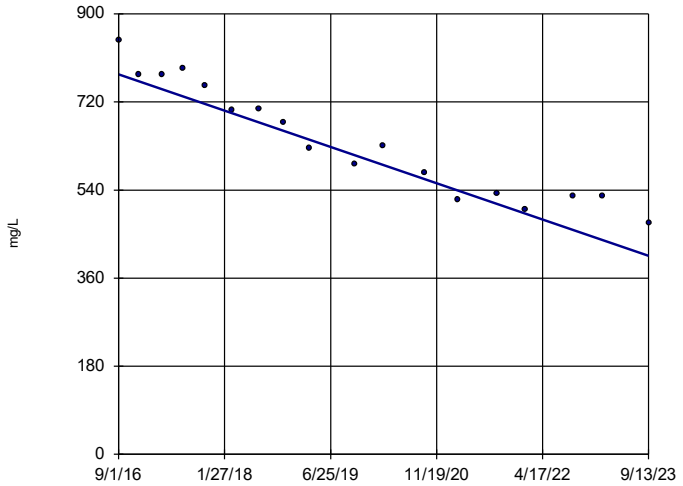
Sen's Slope Estimator

DGWC-42

n = 18

Slope = -17.14 units per year.

Mann-Kendall statistic = -56
critical = -68



Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: Total Dissolved Solids [TDS] Analysis Run 2/14/2024 9:19 AM View: AP 234 Appendix III Tre
Plant McDonough Data: McDonough AP

Sanitas™ v.10.0.16 Software licensed to . UG

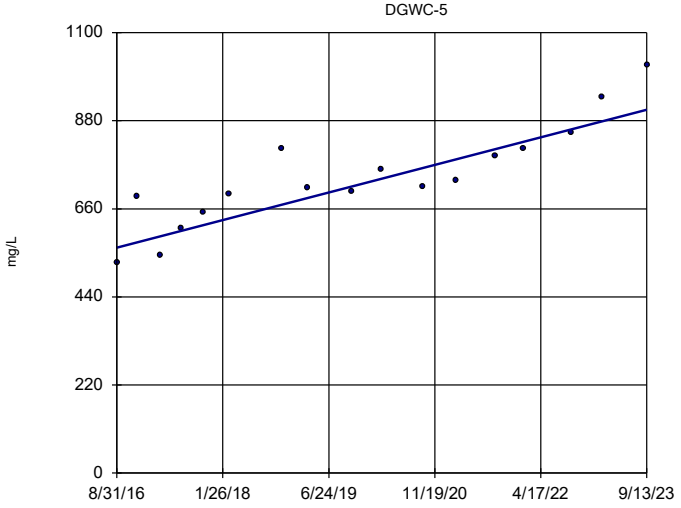
Sen's Slope Estimator

DGWC-48

n = 18

Slope = -52.69 units per year.

Mann-Kendall statistic = -132
critical = -68



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Total Dissolved Solids [TDS] Analysis Run 2/14/2024 9:19 AM View: AP 234 Appendix III Tre
Plant McDonough Data: McDonough AP

Sanitas™ v.10.0.16 Software licensed to . UG

Sen's Slope Estimator

DGWC-5

n = 17

Slope = 48.86 units per year.

Mann-Kendall statistic = 112
critical = 63

Increasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Total Dissolved Solids [TDS] Analysis Run 2/14/2024 9:19 AM View: AP 234 Appendix III Tre

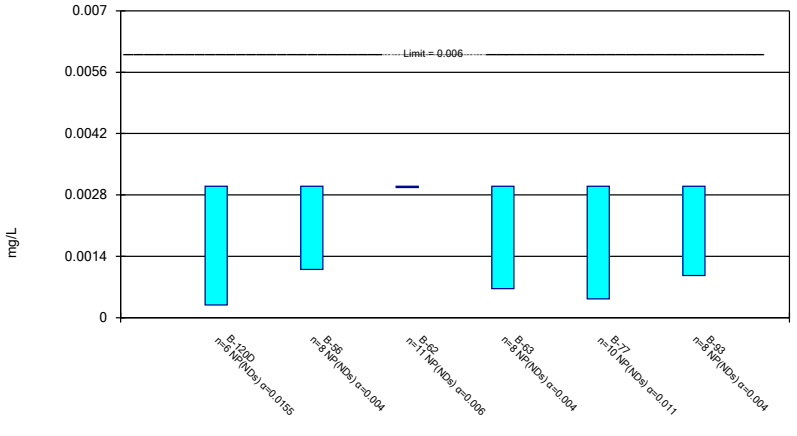
Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

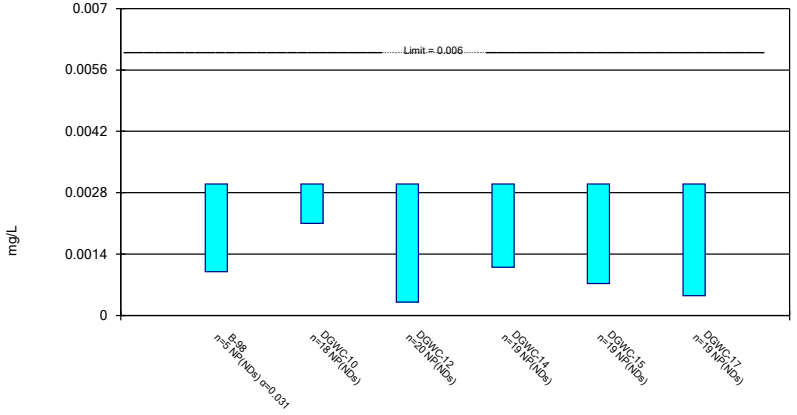


Constituent: Antimony Analysis Run 1/16/2024 2:16 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

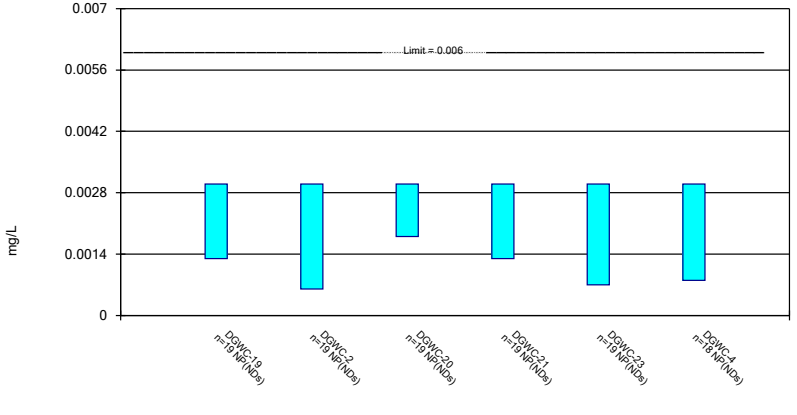


Constituent: Antimony Analysis Run 1/16/2024 2:16 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.

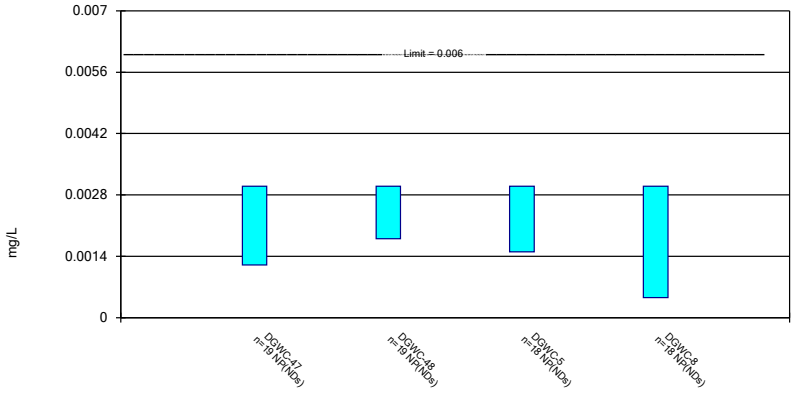


Constituent: Antimony Analysis Run 1/16/2024 2:16 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

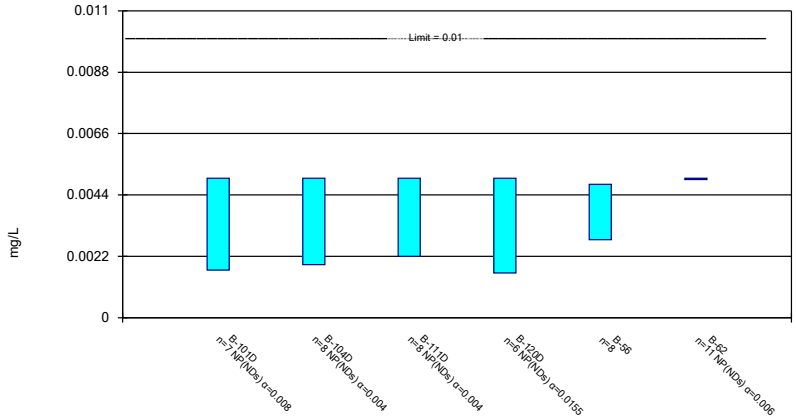


Constituent: Antimony Analysis Run 1/16/2024 2:16 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

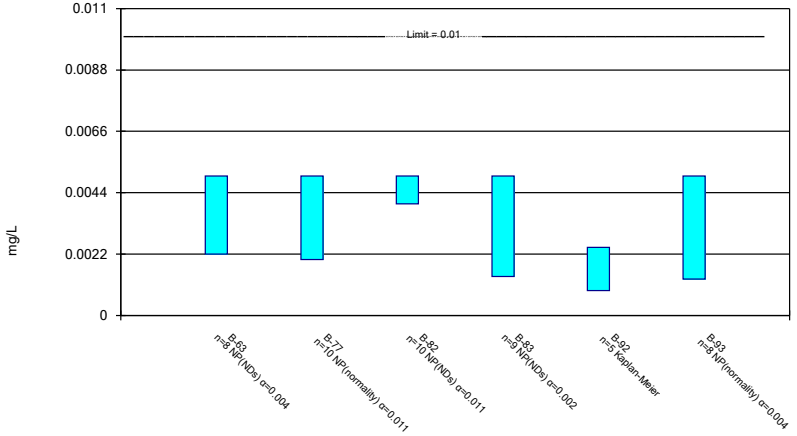


Constituent: Antimony Analysis Run 1/16/2024 2:16 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

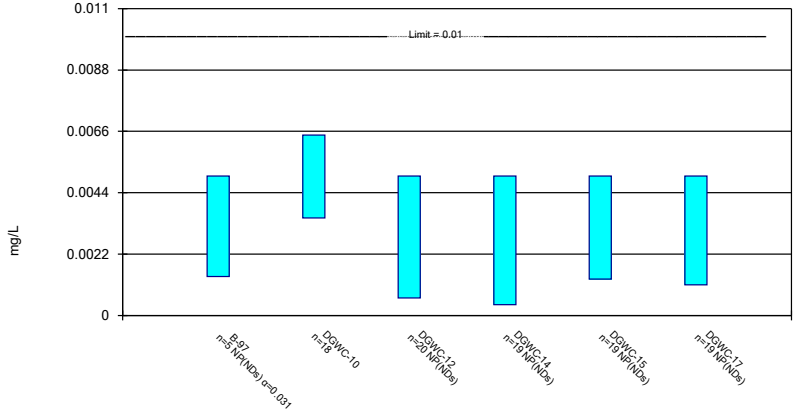


Constituent: Arsenic Analysis Run 1/16/2024 2:16 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Arsenic Analysis Run 1/16/2024 2:16 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

Constituent: Lead Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.

Constituent: Lead Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Lead Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lead Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Lead Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lithium Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lithium Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lithium Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Lithium Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Lithium Analysis Run 1/16/2024 2:17 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Hollow symbols indicate censored values.

Sen's Slope Estimator

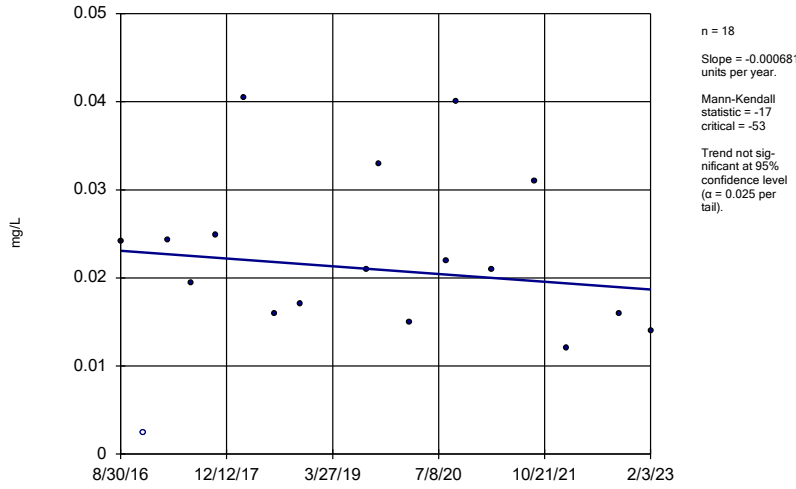
DGWA-71 (bg)

n = 18

Slope = 0 units per year.

Mann-Kendall statistic = 26
critical = 53



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Arsenic Analysis Run 1/16/2024 2:36 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.15 Software licensed to . UG
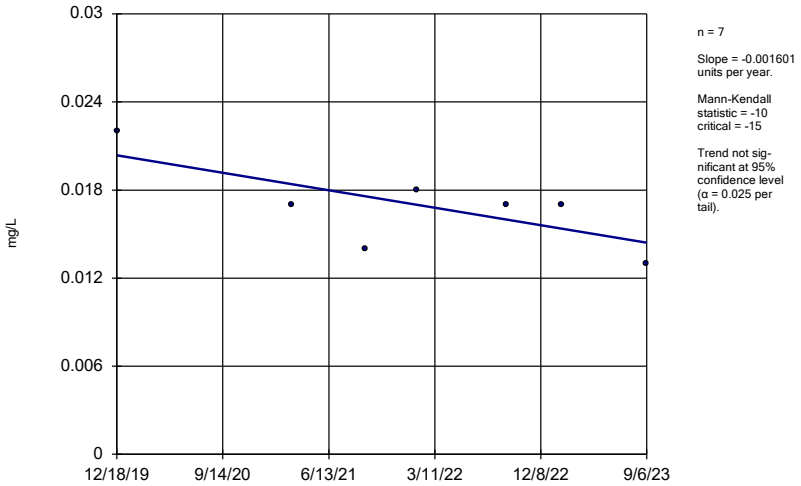
Hollow symbols indicate censored values.

Sen's Slope Estimator

DGWC-9

n = 18

Slope = -0.0006814 units per year.



Mann-Kendall statistic = -17
critical = -53

Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Arsenic Analysis Run 1/16/2024 2:36 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

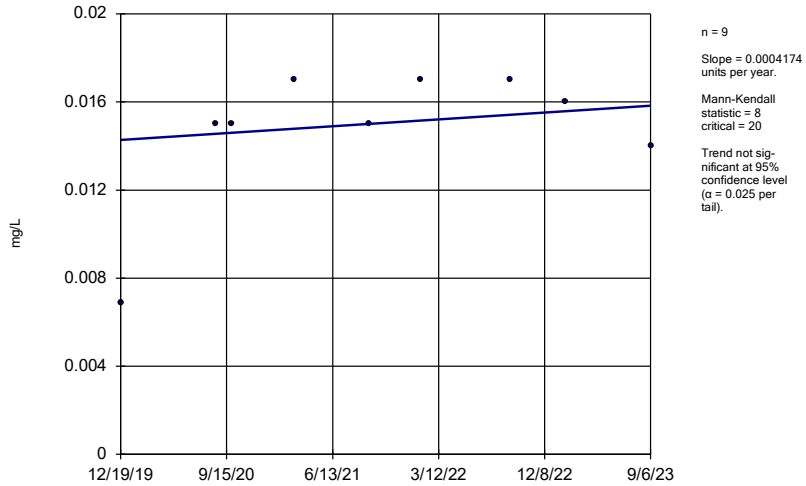
Sen's Slope Estimator

B-92

n = 7

Slope = -0.001601 units per year.



Mann-Kendall statistic = -10
critical = -15

Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Beryllium Analysis Run 1/16/2024 2:36 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

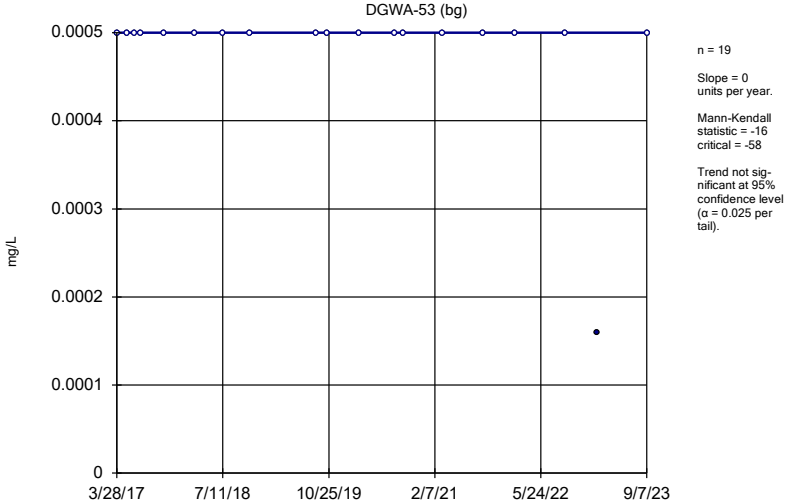
Sen's Slope Estimator

B-93

n = 9

Slope = 0.0004174 units per year.

Mann-Kendall statistic = 8
critical = 20



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Beryllium Analysis Run 1/16/2024 2:36 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Hollow symbols indicate censored values.

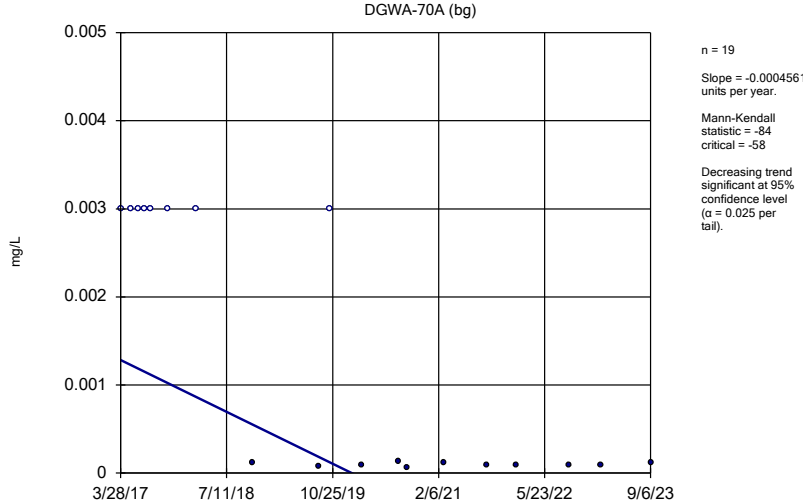
Sen's Slope Estimator

DGWA-53 (bg)

n = 19

Slope = 0 units per year.

Mann-Kendall statistic = -16
critical = -58



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Beryllium Analysis Run 1/16/2024 2:36 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Hollow symbols indicate censored values.

Sen's Slope Estimator

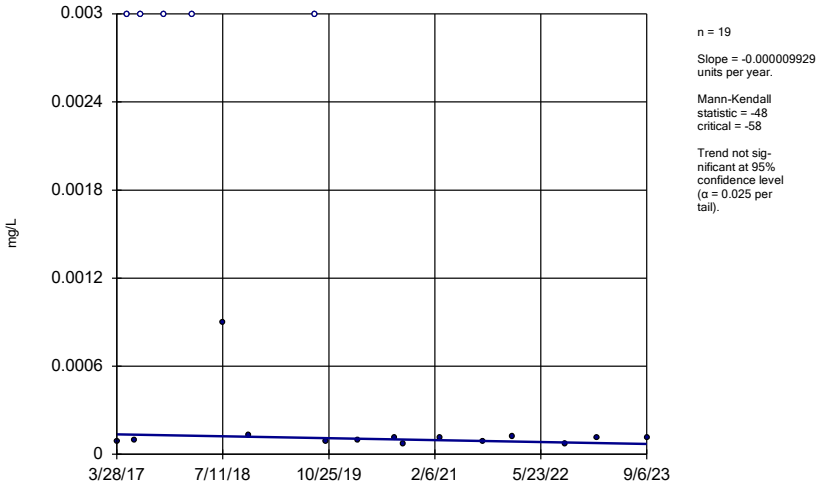
DGWA-70A (bg)

n = 19

Slope = -0.0004561 units per year.

Mann-Kendall statistic = -84
critical = -58

Decreasing trend significant at 95% confidence level (α = 0.025 per tail).



Constituent: Beryllium Analysis Run 1/16/2024 2:36 PM View: AP 234 Appendix IV Trend Tests

Re: Plant McDonough Ash Pond (AP-2,3,4)
January/February 2024 Statistical Analysis

Dear Mr. Abraham,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the January/February 2024 Semi-Annual Groundwater Monitoring and Corrective Action Statistical summary of groundwater data for Georgia Power Company's Plant McDonough AP-2,3,4. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for Appendix III parameters began in 2016, and at least 8 background samples were collected at each of the groundwater monitoring wells. Semi-annual sampling of the majority of Appendix IV constituents has been performed for several years in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** DGWA-53, DGWA-70A, DGWA-71
- **Downgradient wells:** DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-9, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-14, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, and DGWC-48

- **Assessment Wells:** B-56, B-62, B-63, B-66, B-77, B-82, B-83, B-88, B-92, B-93, B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, B-111D, B-120D, B-122D, and B-125D

The assessment wells were installed at various times during 2016-2020 as follows:

- **2016** - B-56, B-62, B-63, and B-66
- **2019** - B-77, B-82, B-83, B-88, B-92, and B-93
- **2020** – B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, and B-111D
- **2021** – B-120D
- **2022** – B-122D
- **2023** – B-125D

Downgradient well DGWC-9 was dry during the January/February 2024 event and was not sampled; therefore, this well is included on time series and box plots, but is not analyzed with prediction limits. Upgradient well DGWA-70A was not sampled during this event due to restricted access, but the historical data from this upgradient well provides context for the groundwater quality upgradient of the facility. Therefore, this well is plotted on time series and box plots and is used in constructing statistical limits. Note that well B-109D was classified as an assessment well previously but has been redesignated as a piezometer. Per request of Georgia Power Company, both Appendix III and Appendix IV constituents among downgradient wells will be evaluated using interwell prediction limits and confidence intervals, respectively, when a minimum of 8 samples are available.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology prepared in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance.

The Coal Combustion Residuals (CCR) program consists of the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient and assessment well/constituent pairs containing 100% non-detects follows this letter.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the previous screening and demonstrated that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests that the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

Summary of Statistical Methods – Appendix III Parameters

Based on the earlier evaluation described above, the following methods were selected:

- Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after screening for any new outliers. In some cases, earlier data may require deselection prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Summary of Background Screening – Conducted in March 2019

Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits.

Using the Tukey box plot method, several outliers were identified. In cases where the most recent value was identified as an outlier, values were not flagged in the database as they may represent a possible trend. If future values do not remain at similar concentrations, these values may be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

Of the outliers identified by Tukey's method, only a few of these values were flagged in the database as all other values are similar to other measurements.

Additionally, when any values are flagged in the database as outliers, they are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each well to identify statistically significant increasing or decreasing trends. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses were included with the previous screening and showed two statistically significant decreasing trends for the Appendix III parameters. The only significant trend identified in the upgradient wells was a statistically significant decreasing trend for sulfate in well DGWA-71. All trends noted were relatively low in magnitude when compared to average concentrations; therefore, no adjustments were made to the data sets.

Appendix III – Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells, which assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical

limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter.

The ANOVA identified no variation among upgradient well data for fluoride, making this constituent eligible for interwell analyses. Variation was noted for boron, calcium, chloride, pH, sulfate, and TDS, which would indicate intrawell analyses may be most appropriate for these parameters. While data were further tested for intrawell eligibility during the screening, interwell methods will be used for all Appendix III constituents in accordance with Georgia EPD requirements.

Statistical Analysis of Appendix III Parameters – January/February 2024

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February 2024 (Figure D). Background (upgradient) well data were reassessed for potential outliers during this analysis and no new values were flagged. Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The January/February 2024 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result. Therefore, no exceedance is noted, and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. Several prediction limit exceedances were noted for Appendix III parameters. A summary table of the interwell prediction limits follows this letter.

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. Similar patterns that are present in both upgradient and downgradient wells are an indication of variability in groundwater quality unrelated to practices at the site. A summary of the trend test results follows this letter. Statistically significant trends were noted for the following well/constituent pairs:

Increasing trends

- Boron: DGWC-4, DGWC-11, and DGWC-17
- Calcium: DGWC-4, DGWC-5, DGWC-11, DGWC-19, DGWC-21, and DGWC-23
- Chloride: DGWA-71 (upgradient), DGWC-5, and DGWC-20
- pH: DGWC-19
- Sulfate: DGWC-19
- TDS: DGWC-4, DGWC-5, DGWC-11, DGWC-17 and DGWC-19

Decreasing trends

- Boron: DGWC-2, DGWC-8, DGWC-10, DGWC-12, DGWC-13, DGWC-19, DGWC-20, and DGWC-48
- Calcium: DGWA-53 (upgradient) and DGWC-48
- Chloride: DGWA-53 (upgradient), DGWC-4, DGWC-19, DGWC-21, DGWC-22, DGWC-23, and DGWC-42
- Fluoride: DGWC-47 and DGWC-48
- pH: DGWC-20, DGWC-42, and DGWC-47
- Sulfate: DGWA-71 (upgradient), DGWC-2, DGWC-8, DGWC-12, DGWC-13, DGWC-15, DGWC-42, DGWC-47, and DGWC-48
- TDS: DGWA-53 (upgradient), DGWC-8, DGWC-12, DGWC-22, and DGWC-48

Statistical Analysis of Appendix IV Parameters – January/February 2024

For Appendix IV parameters, confidence intervals for each downgradient and assessment well/constituent pair with four or more samples were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. As mentioned above, downgradient and assessment well/constituent pairs that contain 100% non-detects do not require analysis. Data from upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis prior to constructing statistical

limits. No additional values were flagged during this analysis and a complete list of flagged outliers follows this report (Figure C).

Trend Test Analysis

Earlier concentrations collected during baseline sampling for cobalt at upgradient well DGWA-53 were noted to be elevated compared to present-day groundwater quality conditions for this well. The Sen's Slope/Mann-Kendall trend test was used to determine whether concentrations have statistically significantly decreased at the 95% confidence level (Figure F). A statistically significant decreasing trend was identified; therefore, the earlier concentrations were truncated from the record in order to eliminate the significant trend (USEPA Unified Guidance, 2009, Chapter 5). The resulting statistical limit is representative of present-day groundwater quality conditions and is more conservative (i.e., lower) from a regulatory perspective. A list of the date ranges used for cobalt at upgradient well DGWA-53 follows this report.

Interwell Upper Tolerance Limits

Interwell upper tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through January/February 2024 for Appendix IV constituents (Figure G). Parametric tolerance limits are calculated, with a target of 95% confidence and 95% coverage, when data follow a normal or transformed-normal distribution, such as for combined radium 226 + 228. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were constructed using the highest background measurement. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title

- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure H).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed for each of the Appendix IV constituents in accordance with the state requirements in each downgradient well (Figure I). Note that confidence intervals require a minimum of 4 samples for assessment wells, and in some cases, the assessment wells had insufficient samples at this time.

The Sanitas software was used to calculate the confidence intervals. These intervals were constructed as either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. Nonparametric confidence intervals were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The confidence level associated with nonparametric confidence intervals is dependent upon the number samples available.

Confidence intervals were compared to the GWPS prepared as described above. Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. A summary of the confidence intervals follows this letter. Exceedances were noted for the following well/constituent pairs:

- Arsenic: DGWC-9 and DGWC-20
- Beryllium: DGWC-5, DGWC-9, DGWC-10, DGWC-47, DGWC-48, B-92, and B-93

- Cobalt: DGWC-8, DGWC-9, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-92, B-93, and B-104D
- Combined Radium 226 + 228: B-104D and B-122D
- Lithium: DGWC-47, DGWC-48, and B-120D

Trend Test Evaluation – Appendix IV

Data at wells with confidence interval exceedances are further evaluated using the Sen's Slope/Mann Kendall trend test at the 95% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure J). Although the trend tests for Assessment monitoring pairs were previously evaluated using 99% confidence, the 95% confidence level more rapidly identifies statistically significant trends. Additionally, the 95% confidence level is recommended in cases with limited sample sizes and, particularly, for new assessment wells. All available data for upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability in groundwater quality unrelated to practices at the site. A summary of the Appendix IV trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing
- Arsenic: DGWC-20
- Cobalt: DGWA-71 (upgradient), DGWC-9, DGWC-20, and B-56

Decreasing
- Beryllium: DGWA-70A (upgradient), DGWC-47, and DGWC-48
- Cobalt: DGWA-53 (upgradient), DGWC-8, DGWC-10, DGWC-47, DGWC-48, and B-93
- Combined Radium 226 + 228: DGWA-53 (upgradient)
- Lithium: DGWC-47, DGWC-48, and B-120D

Note that while the trend test identified a statistically significant increasing trend for cobalt in upgradient well DGWA-71, the slope is displayed as zero which represents the median slopes of all the possible pairwise slopes. The zero median slope results from the large number of non-detects in the record, and the positive test statistic results from a few recorded trace values in the earlier part of the record.

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for McDonough AP-2,3,4. If you have any questions or comments, please feel free to contact us.

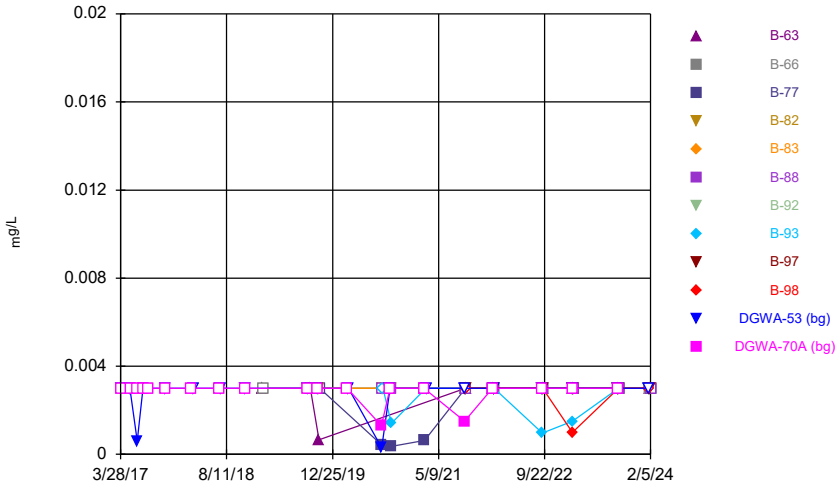
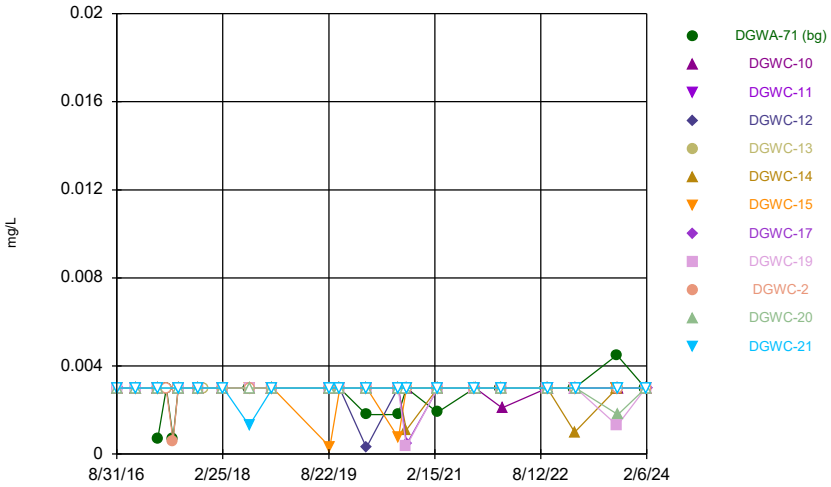
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

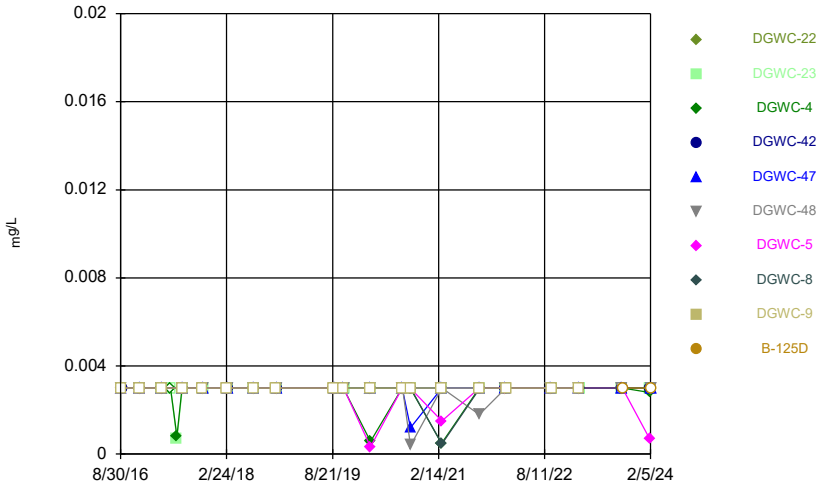
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

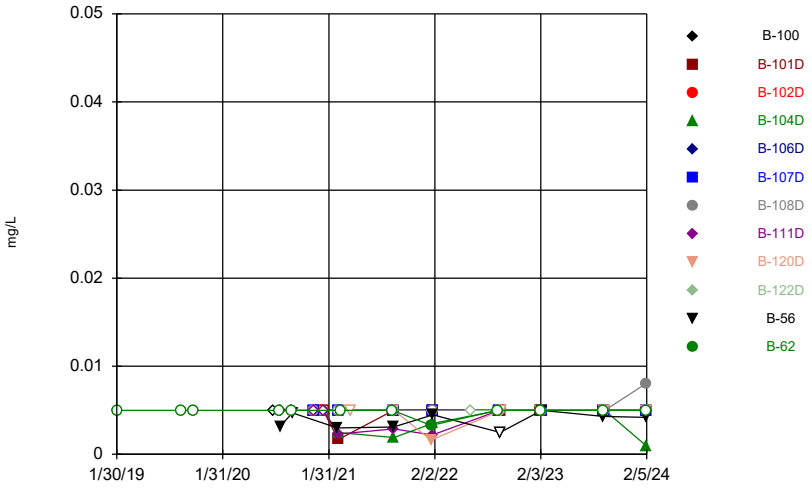
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

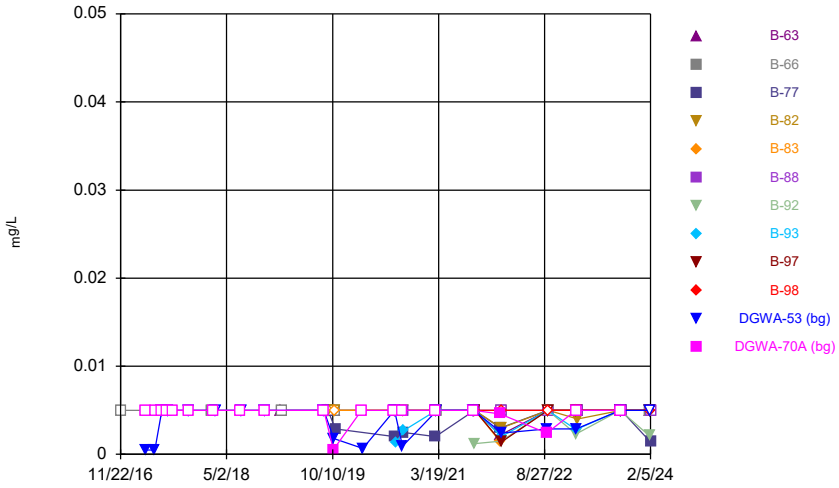
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

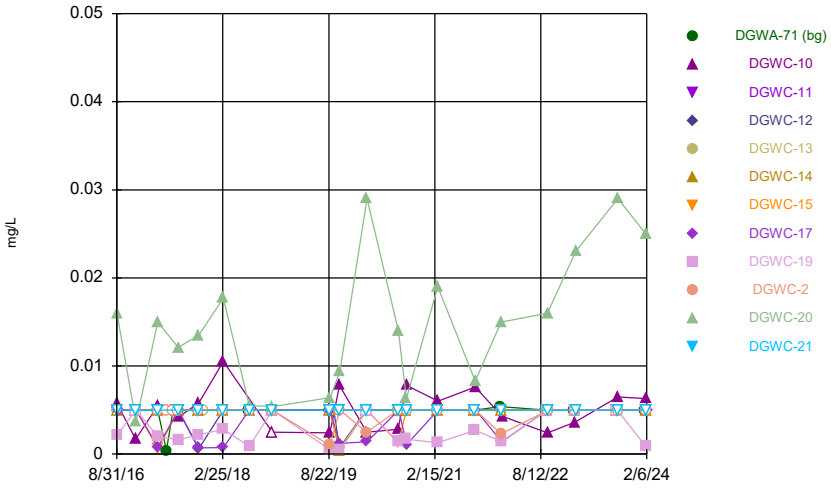
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

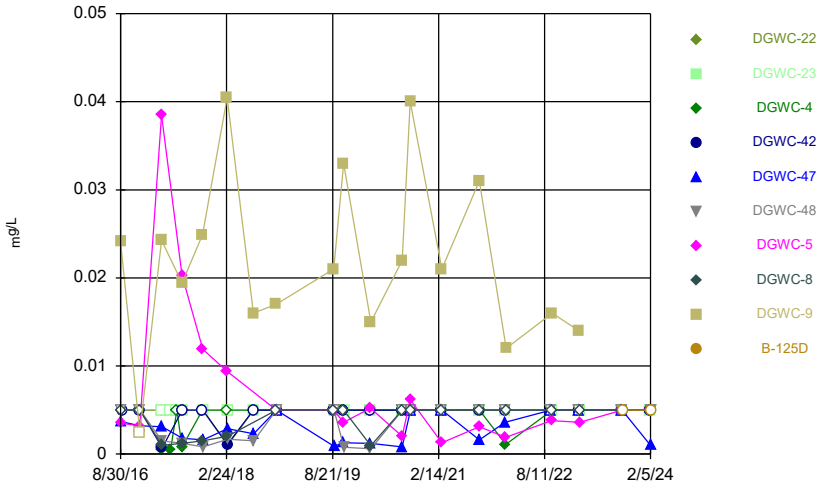
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

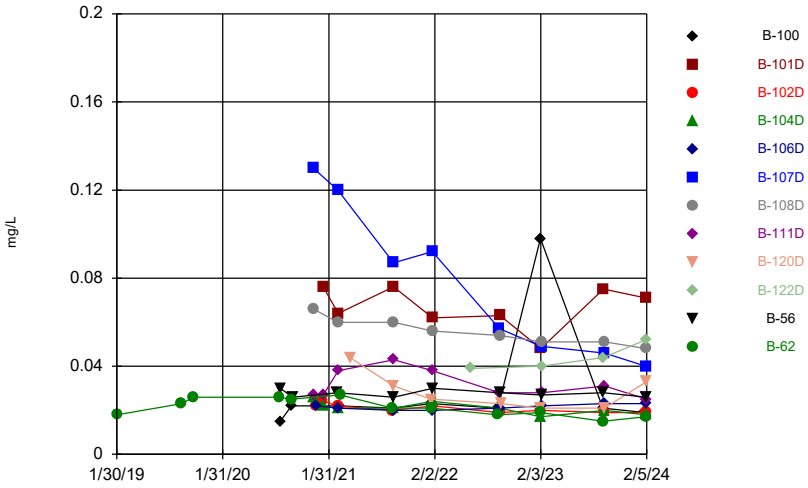
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

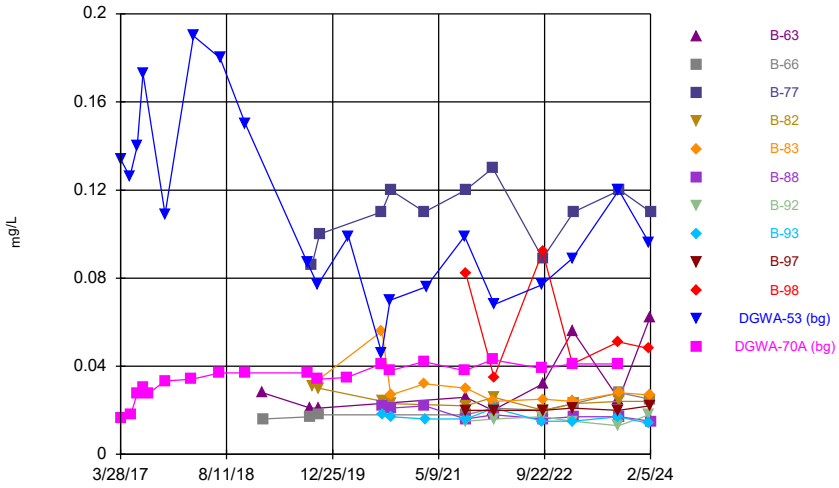
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

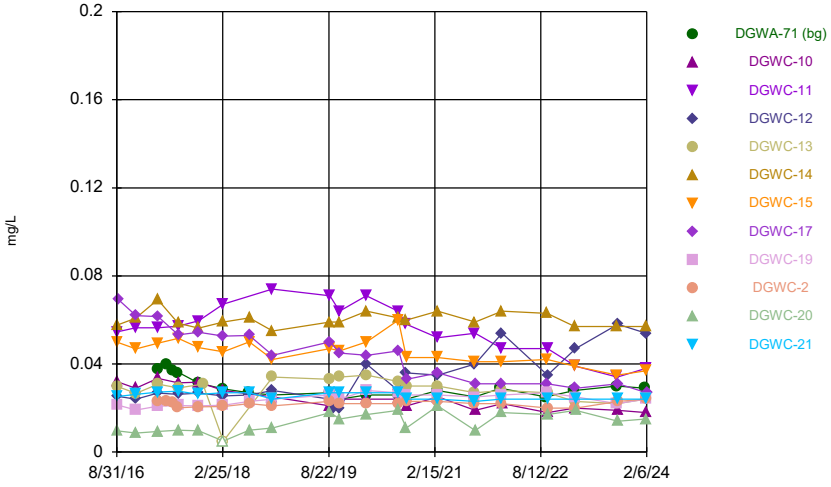
Sanitas™ v.10.0.16 . UG



Time Series

Constituent: Barium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

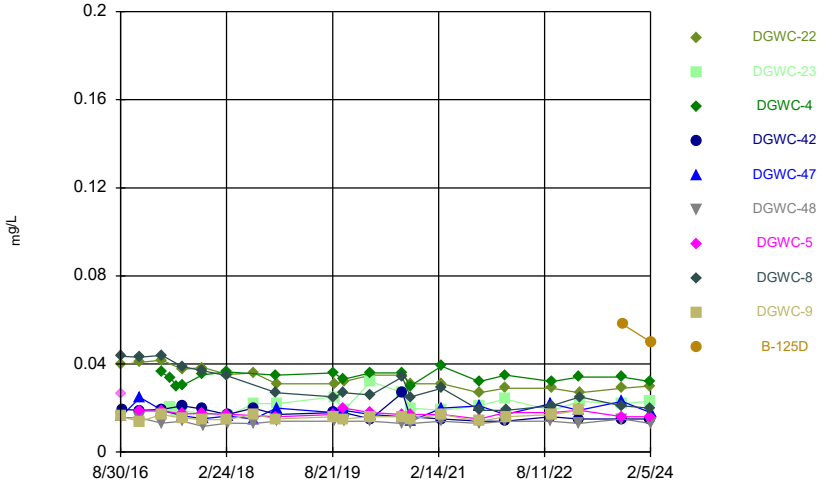
Sanitas™ v.10.0.16 . UG



Time Series

Constituent: Barium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

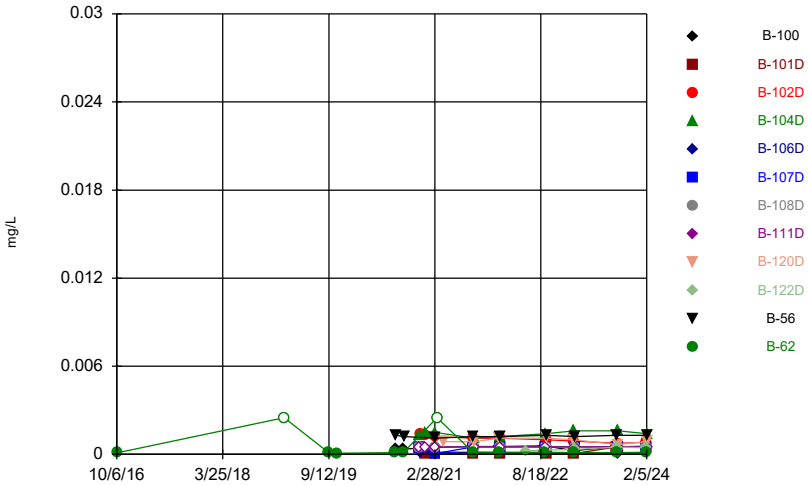
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Barium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

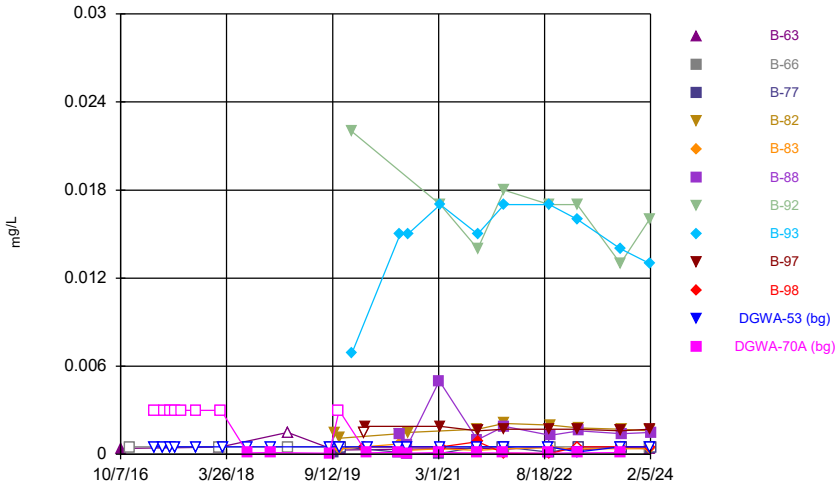
Sanitas™ v.10.0.16 . UG



Time Series

Constituent: Barium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

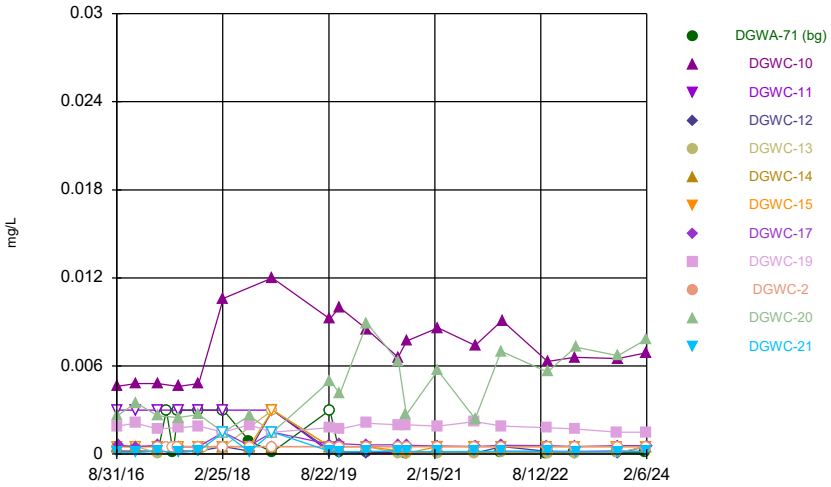
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

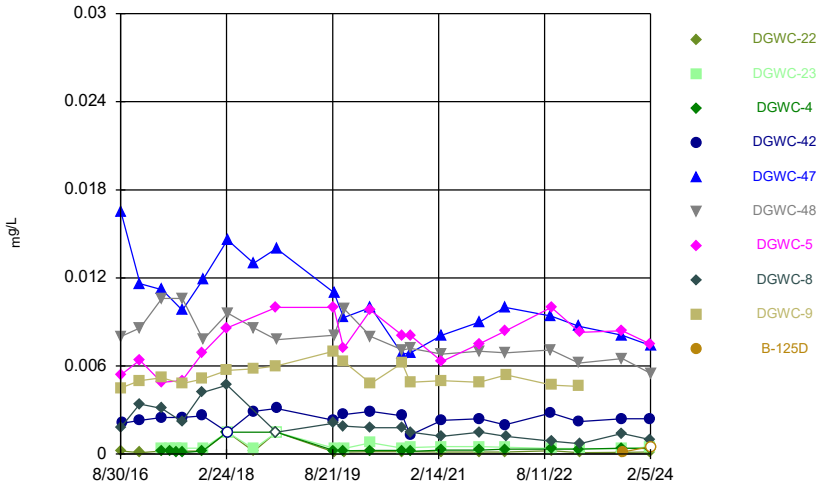
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

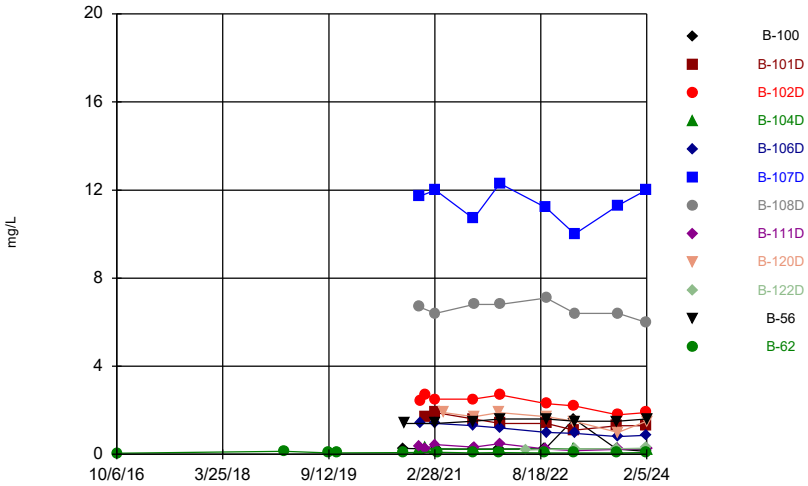
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

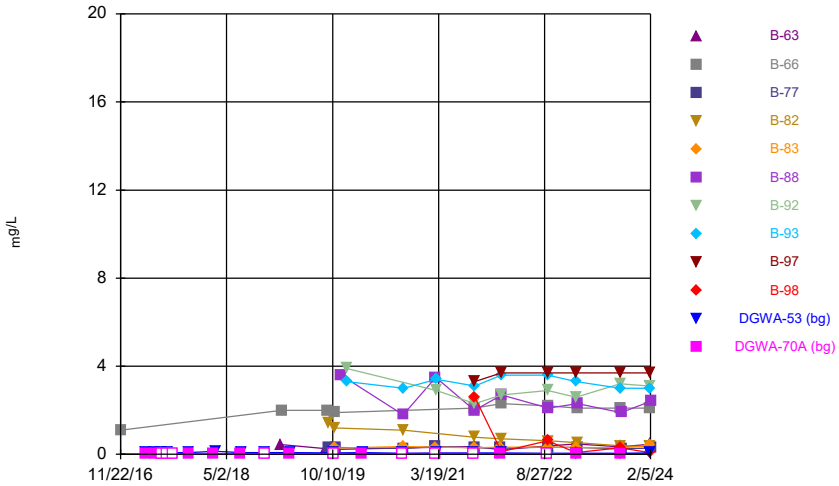
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

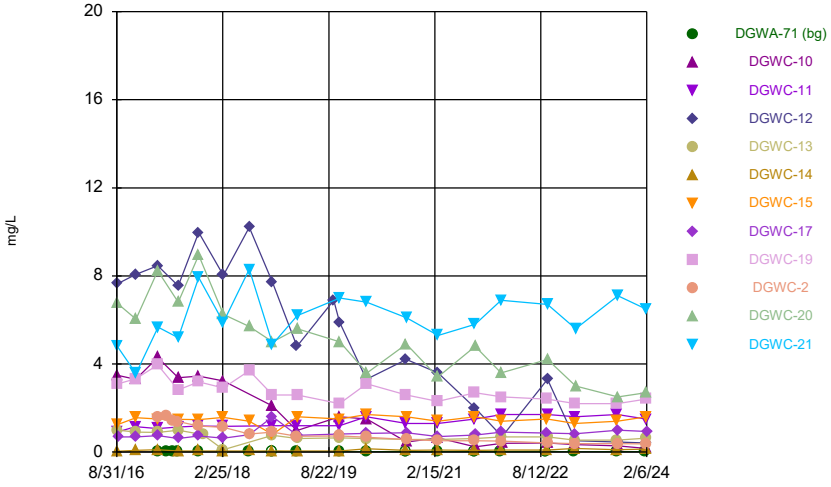
Sanitas™ v.10.0.16 . UG



Time Series

Constituent: Boron Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

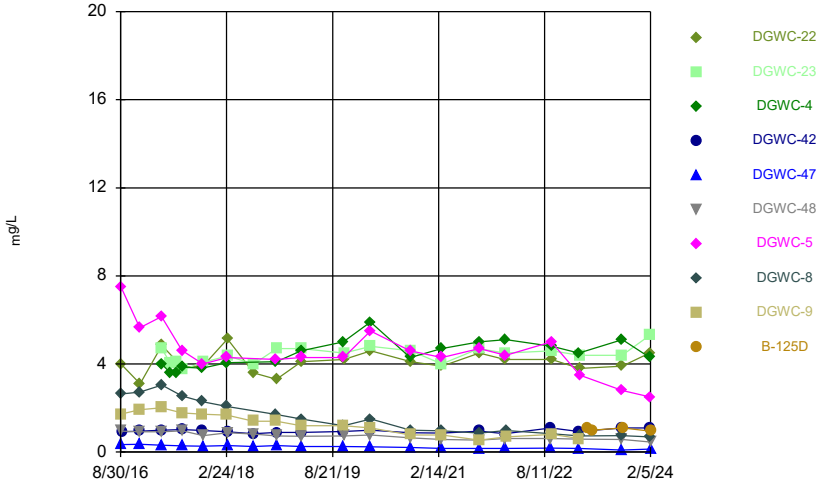
Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 4/3/2024 4:05 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 4/3/2024 4:05 PM View: AP 234

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

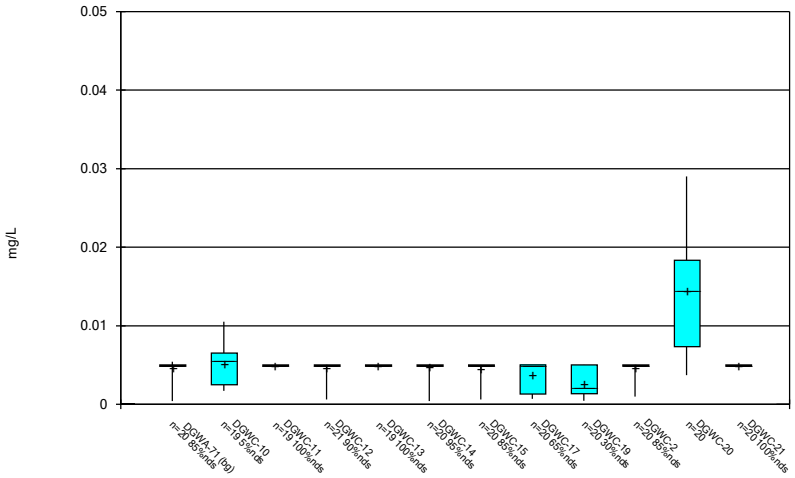
Constituent: Arsenic Analysis Run 4/3/2024 4:11 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

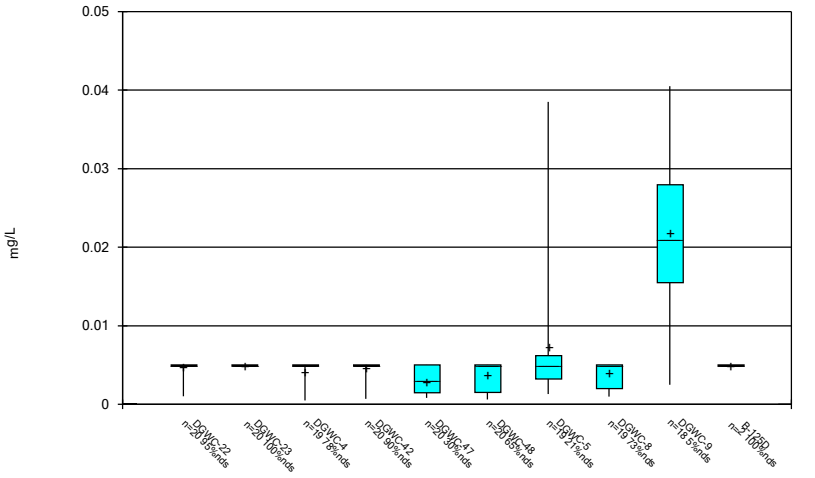
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Arsenic Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

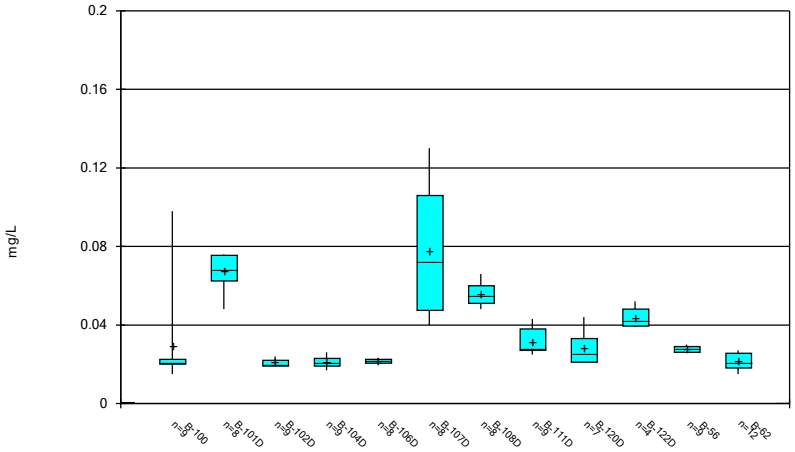
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Arsenic Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

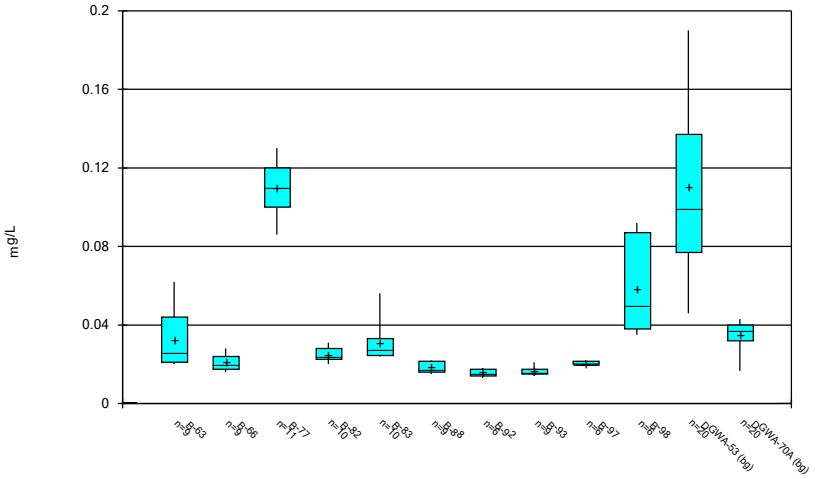
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Arsenic Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

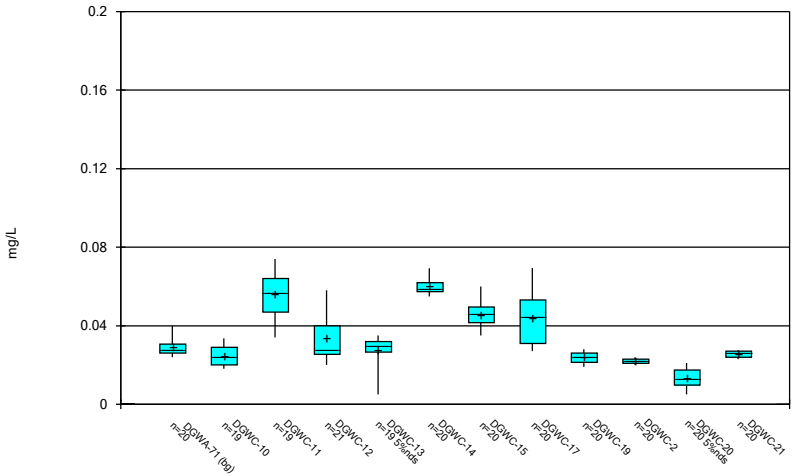
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Barium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

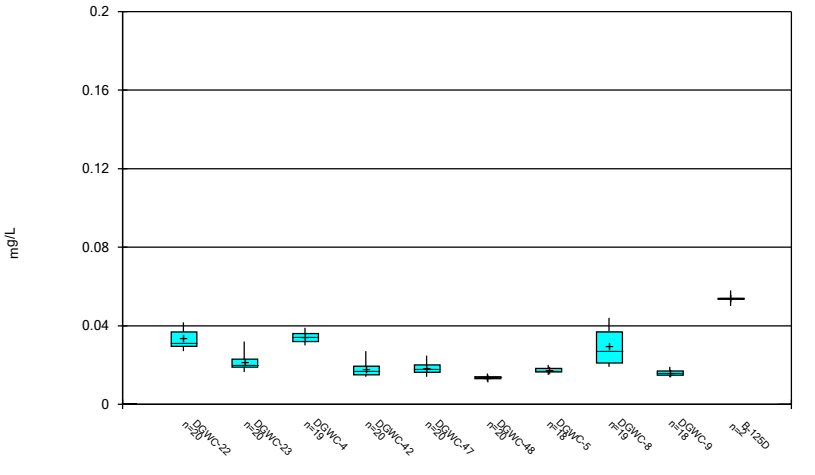
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Barium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

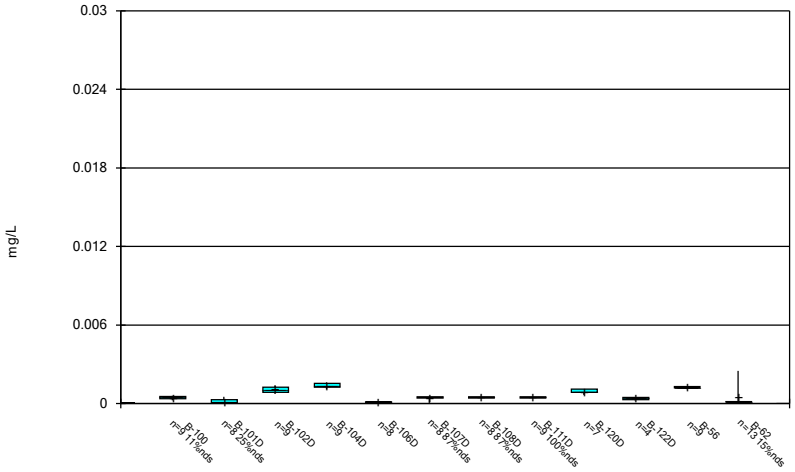
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Barium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

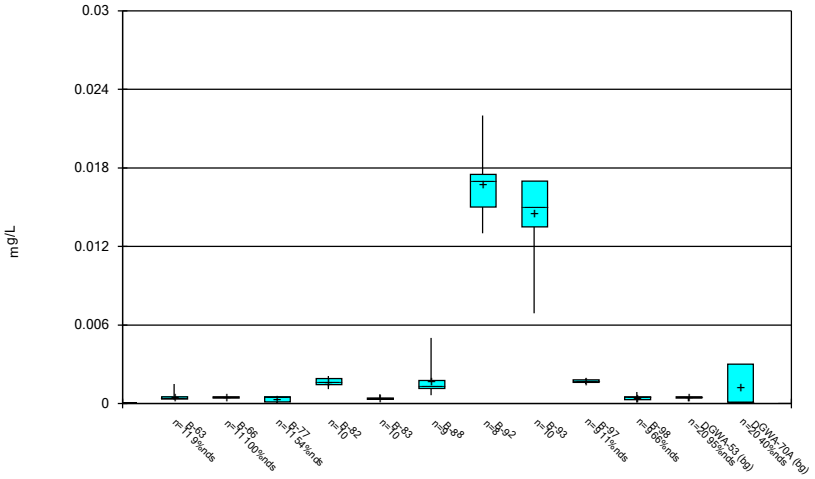
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Barium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

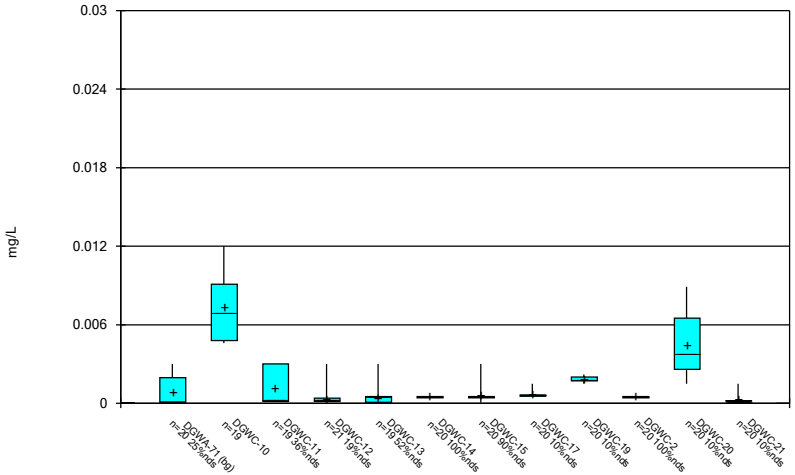
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Beryllium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

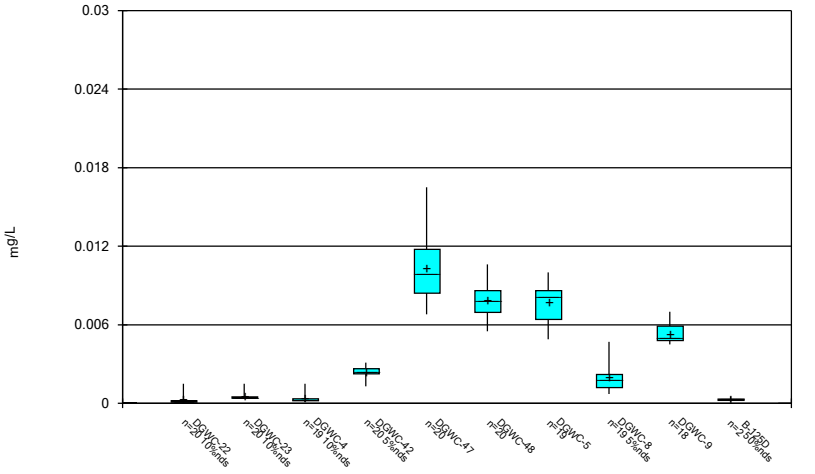
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Beryllium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

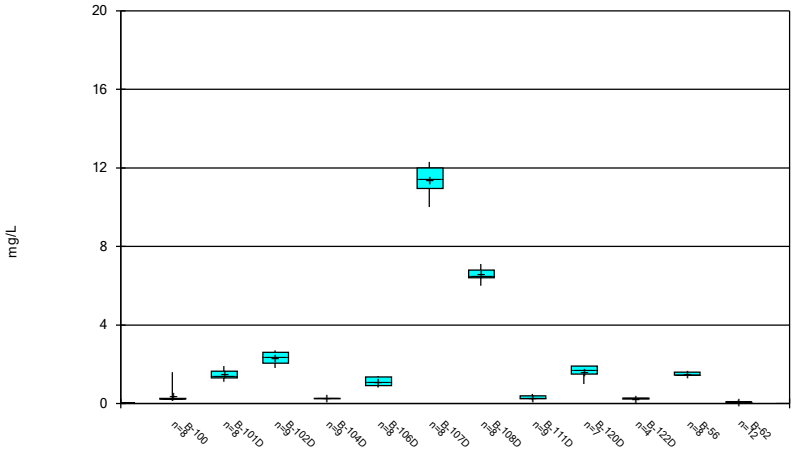
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Beryllium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

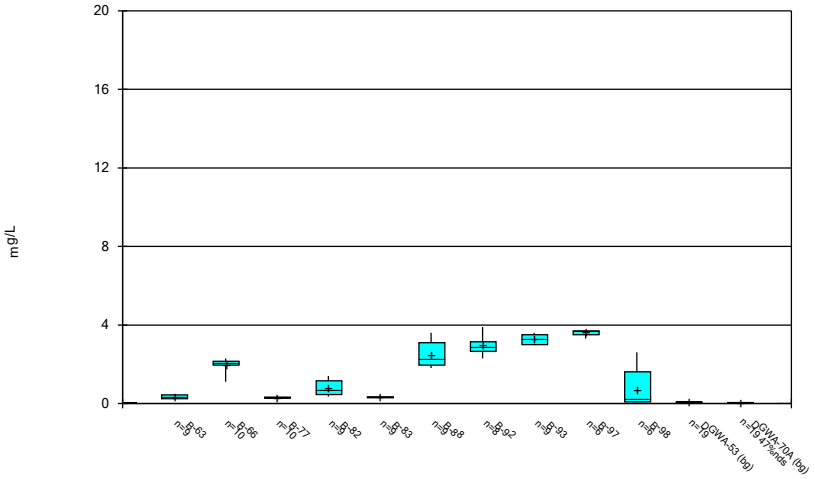
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Beryllium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

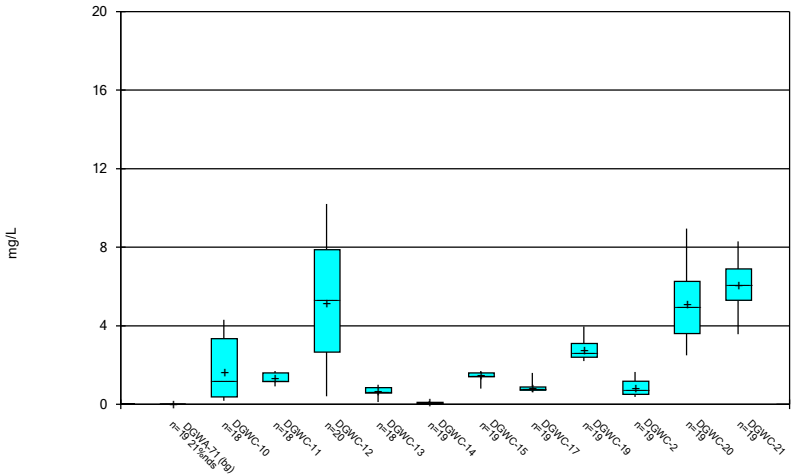
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Boron Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

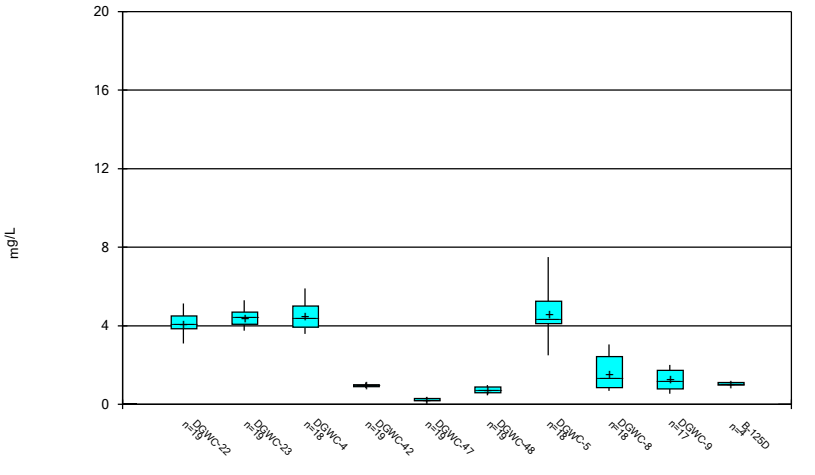
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Boron Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

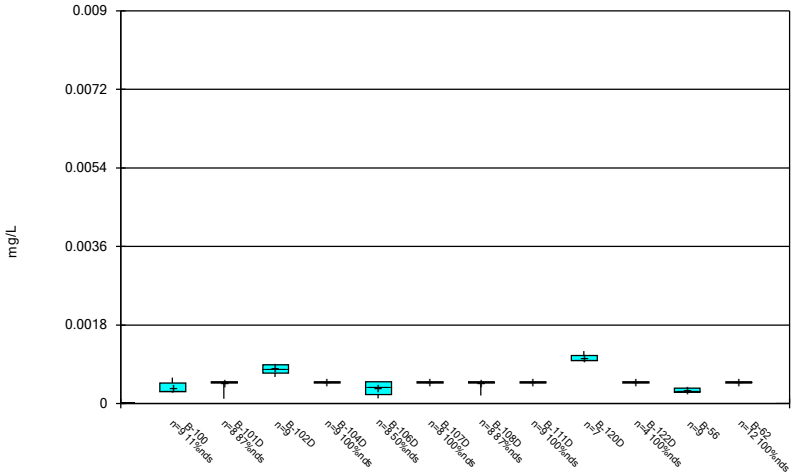
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Boron Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

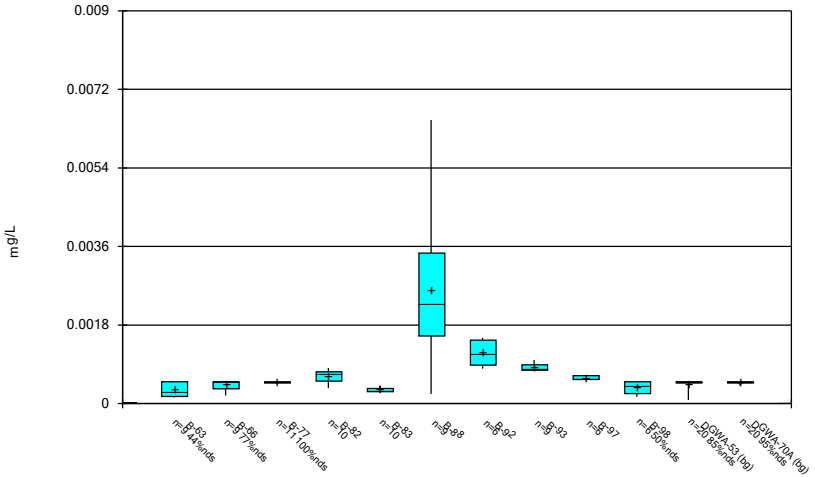
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Boron Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

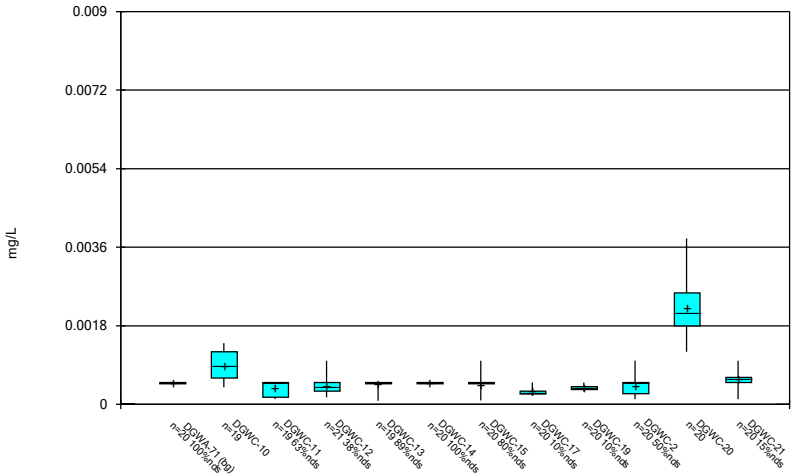
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Cadmium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

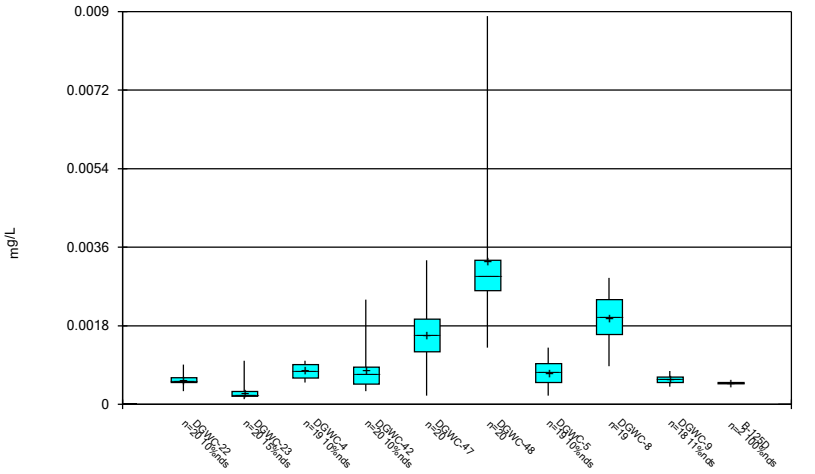
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Cadmium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

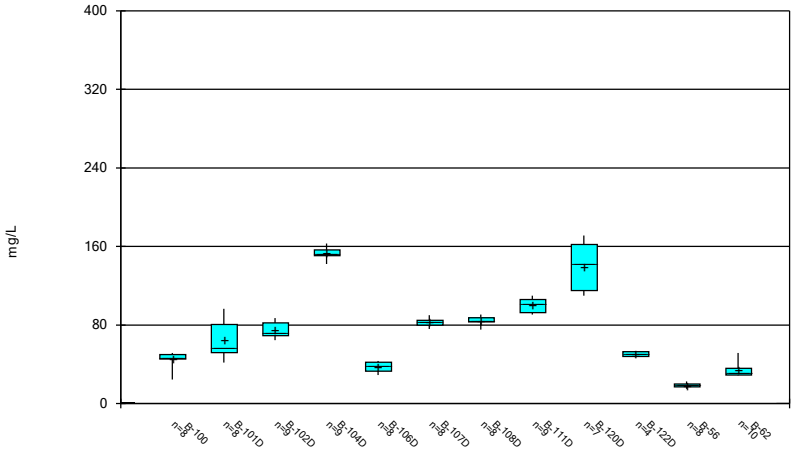
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Cadmium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

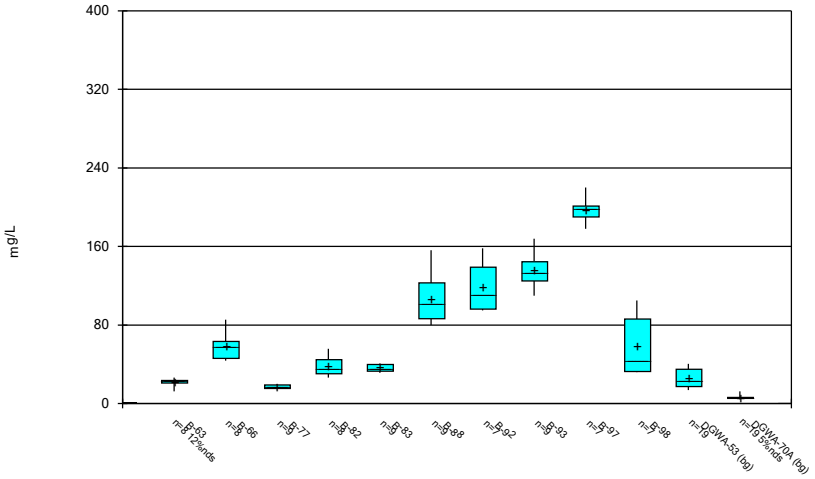
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Cadmium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

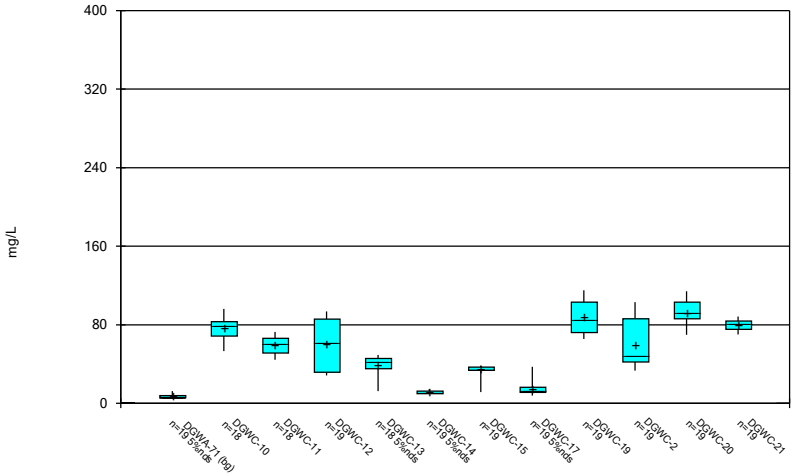
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Calcium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

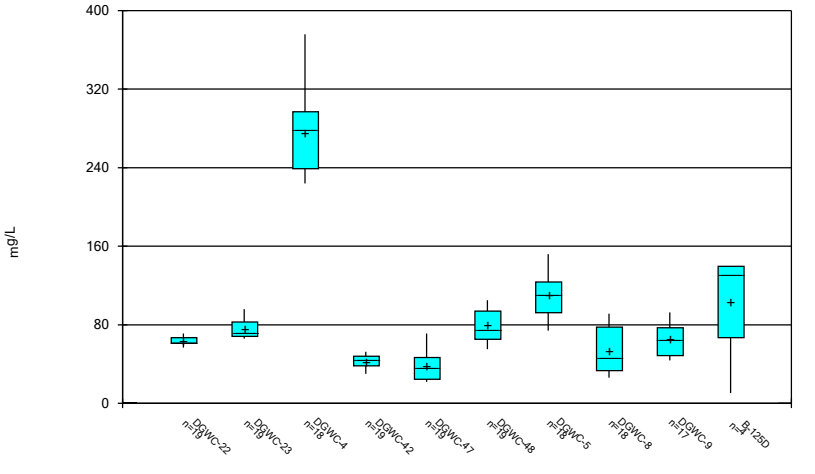
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Calcium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

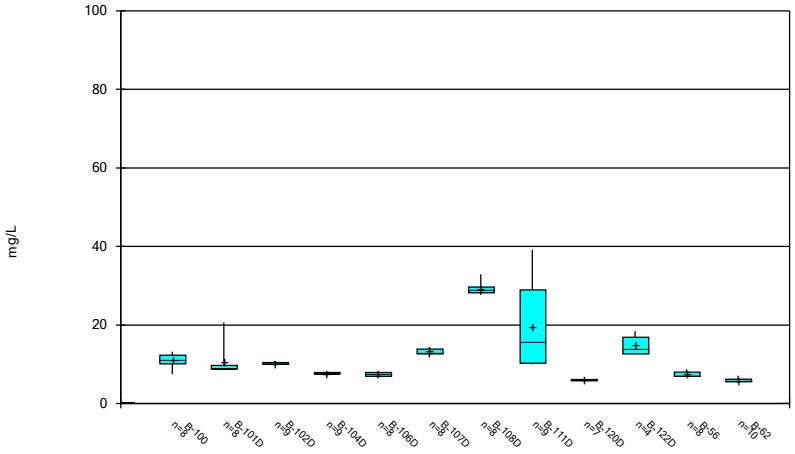
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Calcium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

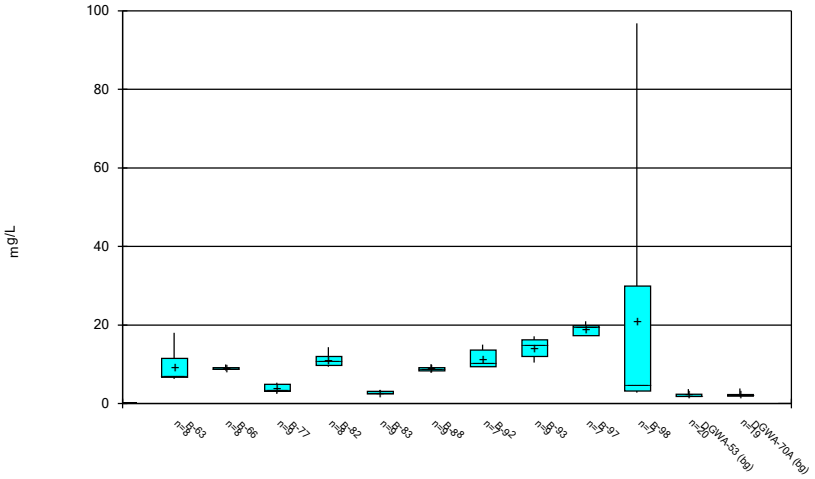
Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Calcium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG



Box & Whiskers Plot

Constituent: Chloride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lithium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lithium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lithium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Lithium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Molybdenum Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 4/3/2024 4:12 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Box & Whiskers Plot

Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:13 PM View: AP 234
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Exceeds Limit: DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-2, DGWC-20, DGWC-21...

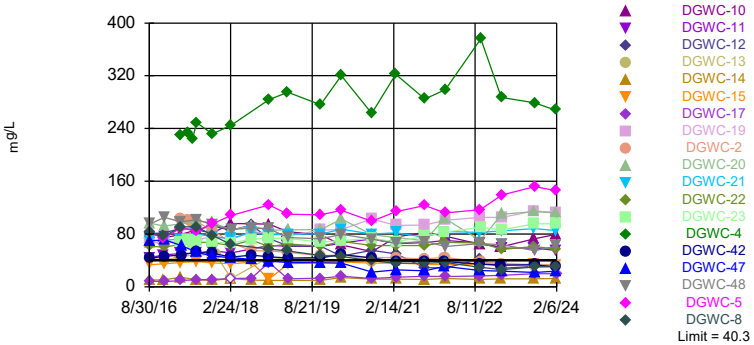
Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 57 background values. 22.81% NDs. Annual per-constituent alpha = 0.0224. Individual comparison alpha = 0.0005663 (1 of 2). Comparing 19 points to limit. Assumes 1 future value.

Constituent: Boron Analysis Run 4/3/2024 4:17 PM View: AP 234 Appendix III

Plant McDonough Client: Southern Company Data: McDonough AP



Sanitas™ v.10.0.16 . UG

Hollow symbols indicate censored values.

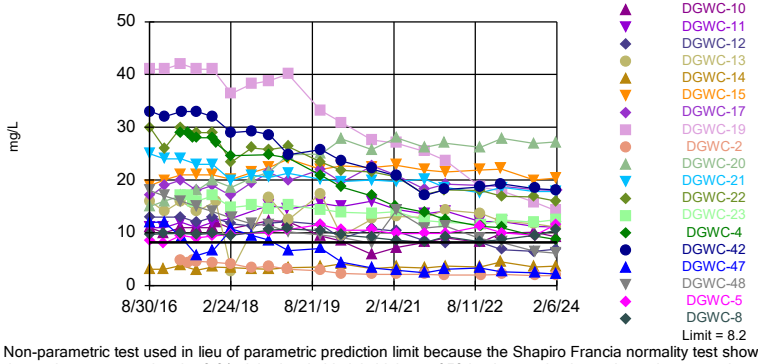
Exceeds Limit: DGWC-10, DGWC-11, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-4, DGWC-48, DGWC-5

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 57 background values. 3.509% NDs. Annual per-constituent alpha = 0.0224. Individual comparison alpha = 0.0005663 (1 of 2). Comparing 19 points to limit. Assumes 1 future value.

Constituent: Calcium Analysis Run 4/3/2024 4:17 PM View: AP 234 Appendix III



Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Exceeds Limit: DGWC-10, DGWC-11, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23...

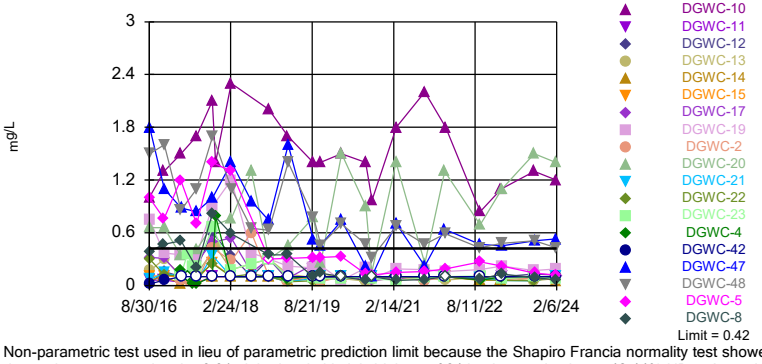
Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 59 background values. Annual per-constituent alpha = 0.02081. Individual comparison alpha = 0.0005257 (1 of 2). Comparing 19 points to limit. Assumes 1 future value.

Constituent: Chloride Analysis Run 4/3/2024 4:17 PM View: AP 234 Appendix III

Plant McDonough Client: Southern Company Data: McDonough AP



Sanitas™ v.10.0.16 . UG

Hollow symbols indicate censored values.

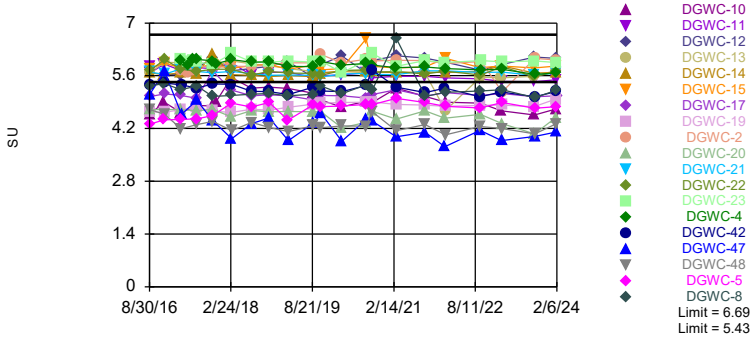
Exceeds Limit: DGWC-10, DGWC-20, DGWC-47, DGWC-48

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 64 background values. 48.44% NDs. Annual per-constituent alpha = 0.01802. Individual comparison alpha = 0.0004544 (1 of 2). Comparing 19 points to limit. Assumes 1 future value.

Constituent: Fluoride Analysis Run 4/3/2024 4:17 PM View: AP 234 Appendix III



Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

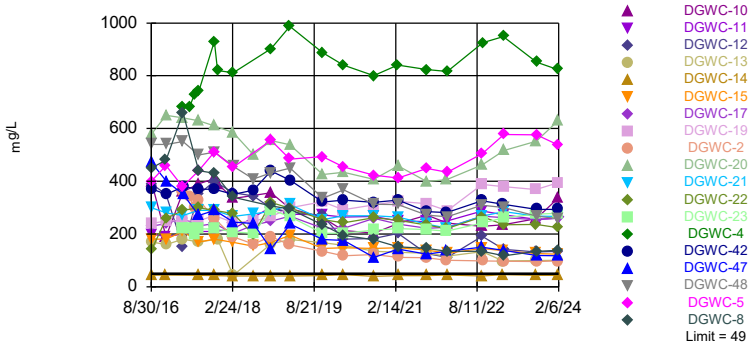
Exceeds Limits: DGWC-10, DGWC-17, DGWC-19, DGWC-20, DGWC-42, DGWC-47, DGWC-48, DGWC-5, DGWC-8

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 64 background values. Annual per-constituent alpha = 0.03603. Individual comparison alpha = 0.0009088 (1 of 2). Comparing 19 points to limit. Assumes 1 future value.

Constituent: pH, Field Analysis Run 4/3/2024 4:17 PM View: AP 234 Appendix III



Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

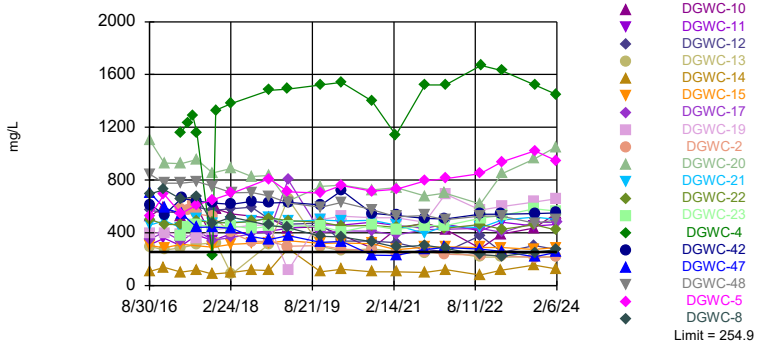
Exceeds Limit: DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-2, DGWC-20, DGWC-21...

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 59 background values. 15.25% NDs. Annual per-constituent alpha = 0.02081. Individual comparison alpha = 0.0005257 (1 of 2). Comparing 19 points to limit. Assumes 1 future value.

Constituent: Sulfate Analysis Run 4/3/2024 4:17 PM View: AP 234 Appendix III



Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Exceeds Limit: DGWC-10, DGWC-11, DGWC-12, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23...

Prediction Limit

Interwell Parametric

Background Data Summary (based on square root transformation): Mean=9.835, Std. Dev.=2.801, n=58. Normality test: Shapiro Francia @alpha = 0.01, calculated = 0.9594, critical = 0.944. Kappa = 2.189 (c=7, w=20, 1 of 2, event alpha = 0.05132). Report alpha = 0.007498. Individual comparison alpha = 0.0003762. Comparing 19 points to limit. Assumes 1 future value.

Sanitas™ v.10.0.16 . UG

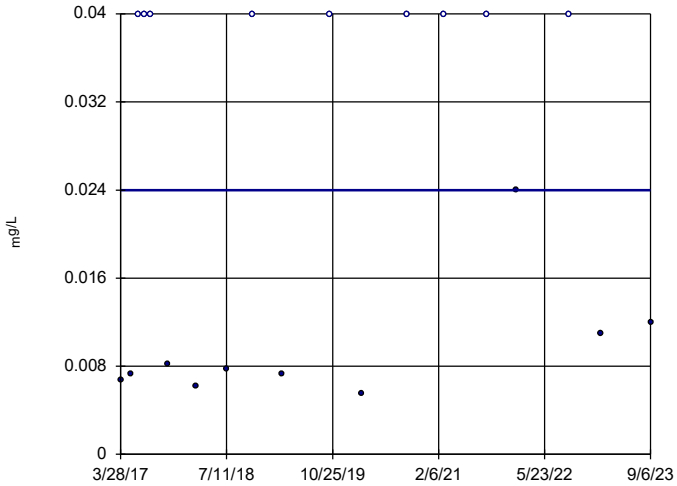
Sen's Slope Estimator

DGWA-53 (bg)

n = 19

Slope = -0.003408 units per year.

Mann-Kendall statistic = -71
critical = -74



Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.

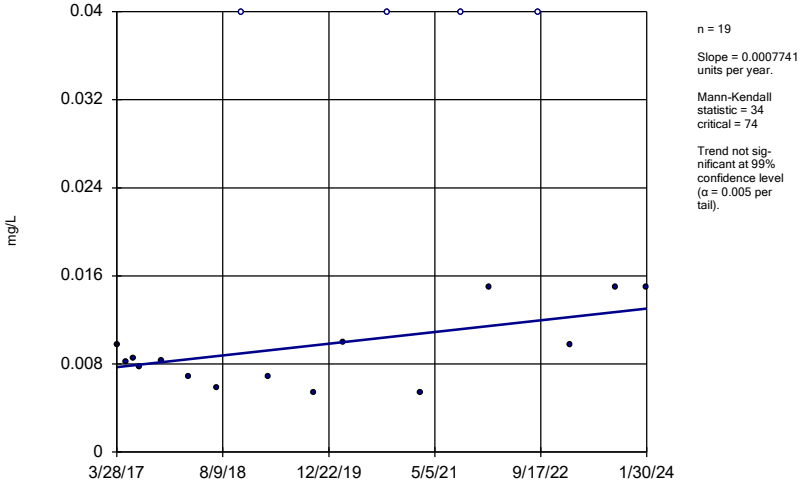
Sen's Slope Estimator

DGWA-70A (bg)

n = 19

Slope = 0 units per year.

Mann-Kendall statistic = 18
critical = 74



Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.

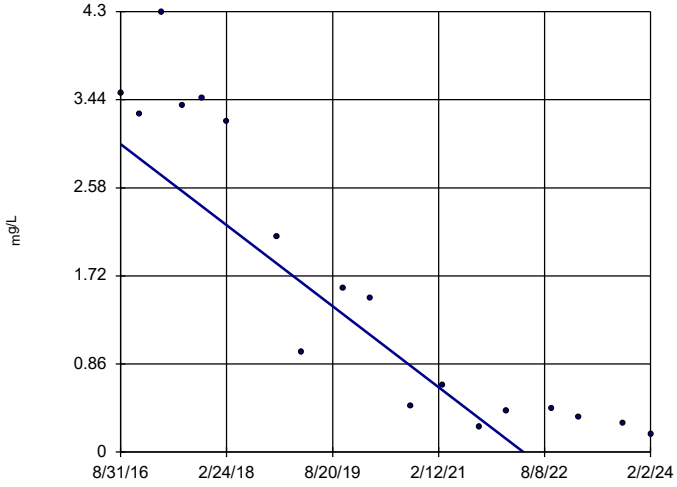
Sen's Slope Estimator

DGWA-71 (bg)

n = 19

Slope = 0.0007741 units per year.

Mann-Kendall statistic = 34
critical = 74



Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

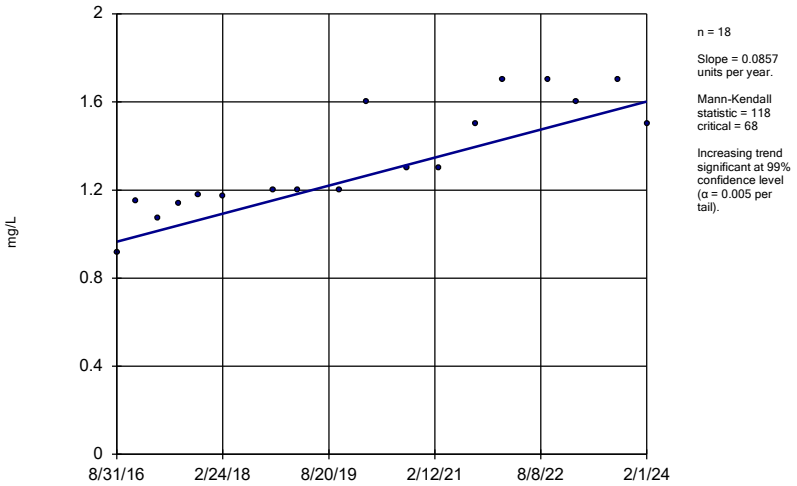
Sen's Slope Estimator

DGWC-10

n = 18

Slope = -0.5325 units per year.

Mann-Kendall statistic = -127
critical = -68



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

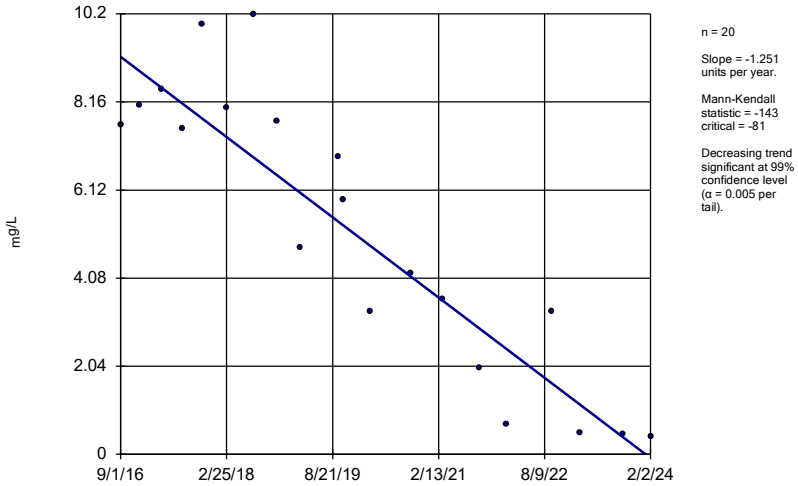
Sen's Slope Estimator

DGWC-11

n = 18

Slope = 0.0857 units per year.

Mann-Kendall statistic = 118
critical = 68



Increasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

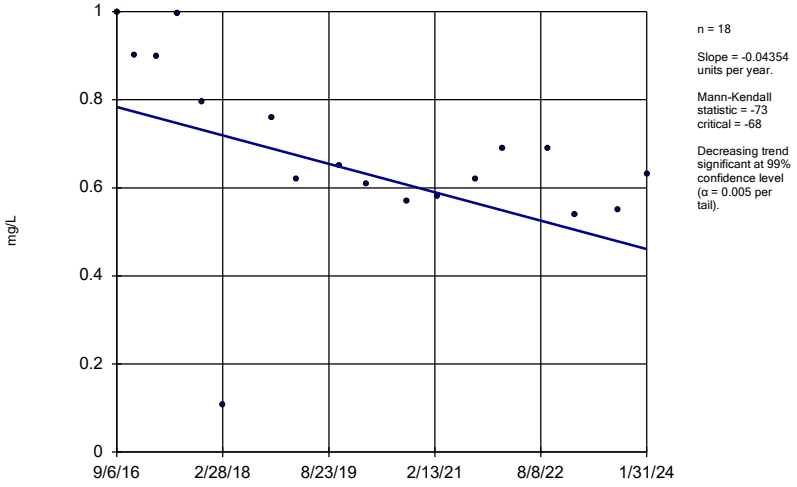
Sen's Slope Estimator

DGWC-12

n = 20

Slope = -1.251 units per year.

Mann-Kendall statistic = -143
critical = -81



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

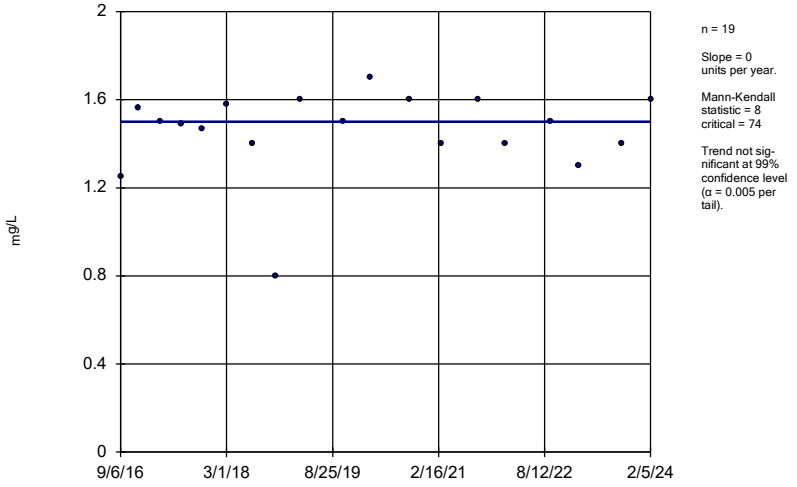
Sen's Slope Estimator

DGWC-13

n = 18

Slope = -0.04354 units per year.

Mann-Kendall statistic = -73
critical = -68



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

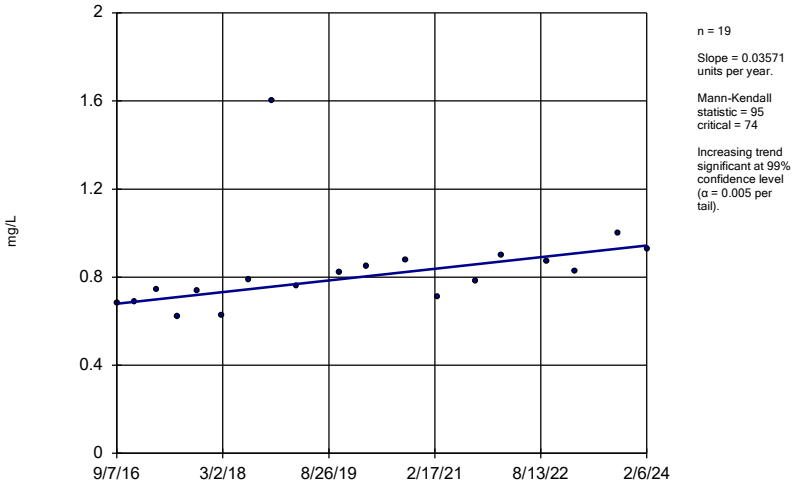
Sen's Slope Estimator

DGWC-15

n = 19

Slope = 0 units per year.

Mann-Kendall statistic = 8
critical = 74



Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

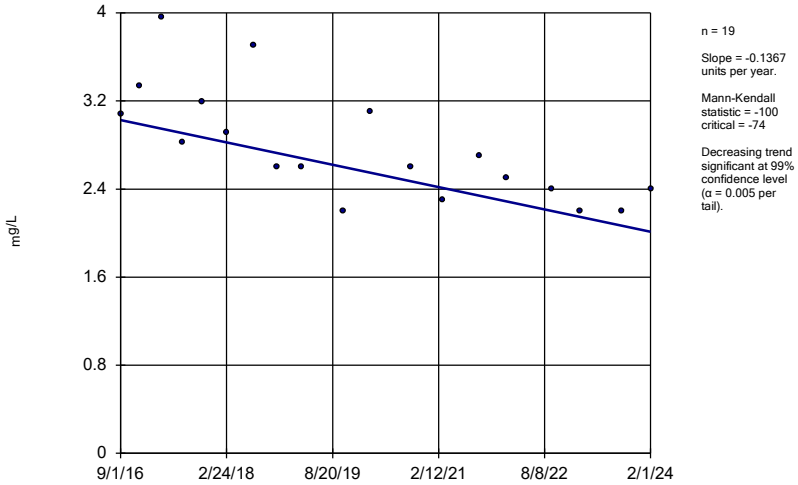
Sen's Slope Estimator

DGWC-17

n = 19

Slope = 0.03571 units per year.

Mann-Kendall statistic = 95
critical = 74



Increasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

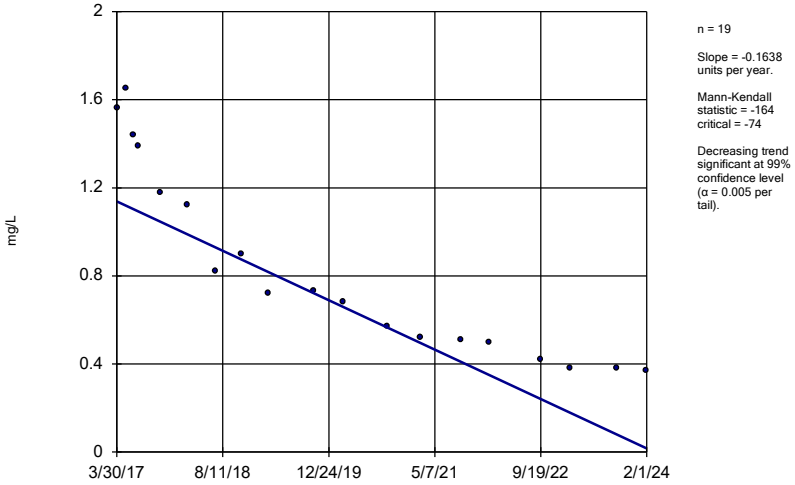
Sen's Slope Estimator

DGWC-19

n = 19

Slope = -0.1367 units per year.

Mann-Kendall statistic = -100
critical = -74



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

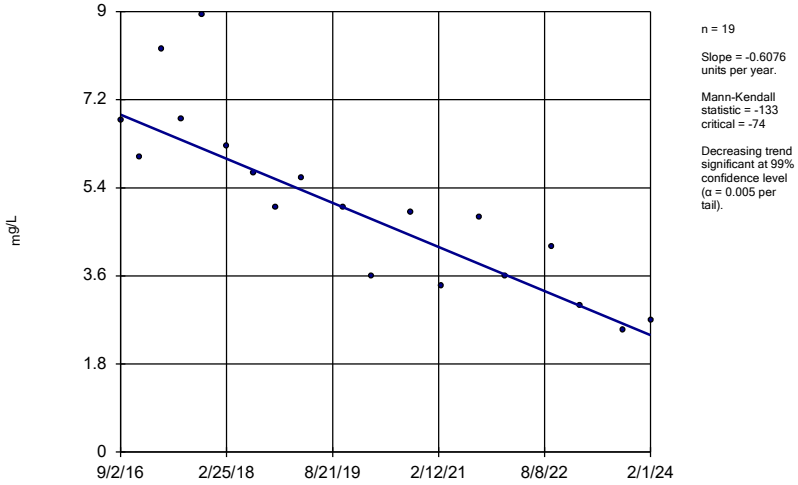
Sen's Slope Estimator

DGWC-2

n = 19

Slope = -0.1638 units per year.

Mann-Kendall statistic = -164
critical = -74



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

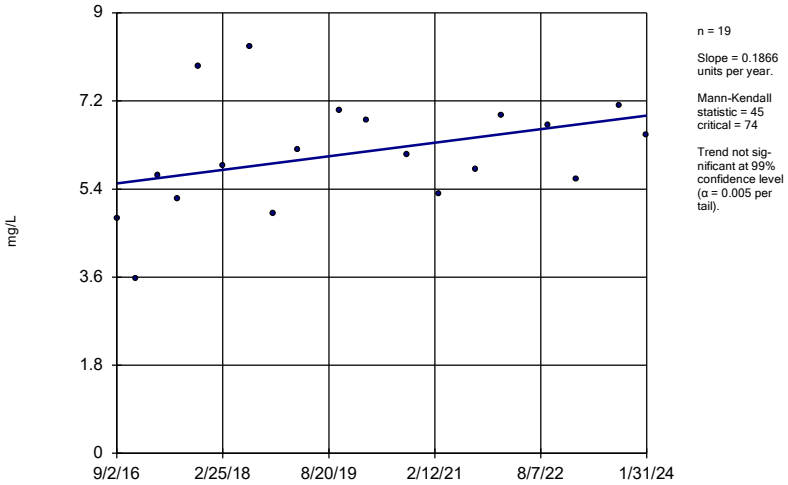
Sen's Slope Estimator

DGWC-20

n = 19

Slope = -0.6076 units per year.

Mann-Kendall statistic = -133
critical = -74



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Boron Analysis Run 4/3/2024 4:21 PM View: AP 234 Appendix III Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

DGWC-10

n = 19

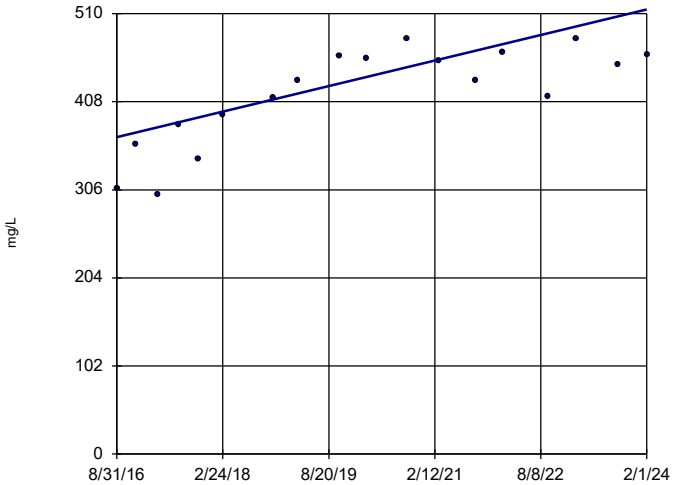
Slope = -23.07 units per year.

Mann-Kendall statistic = -63
critical = -74



Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:23 PM View: AP 234 Appendix III Tren
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

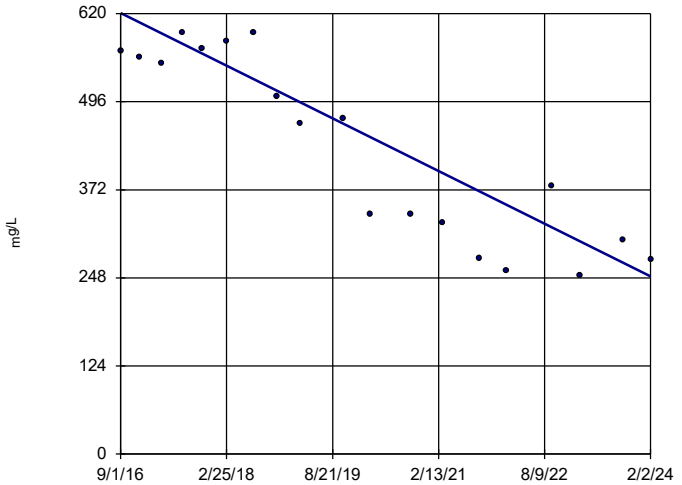
Sen's Slope Estimator

DGWC-11

n = 18

Slope = 19.93 units per year.

Mann-Kendall statistic = 93
critical = 68



Increasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:23 PM View: AP 234 Appendix III Tren
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

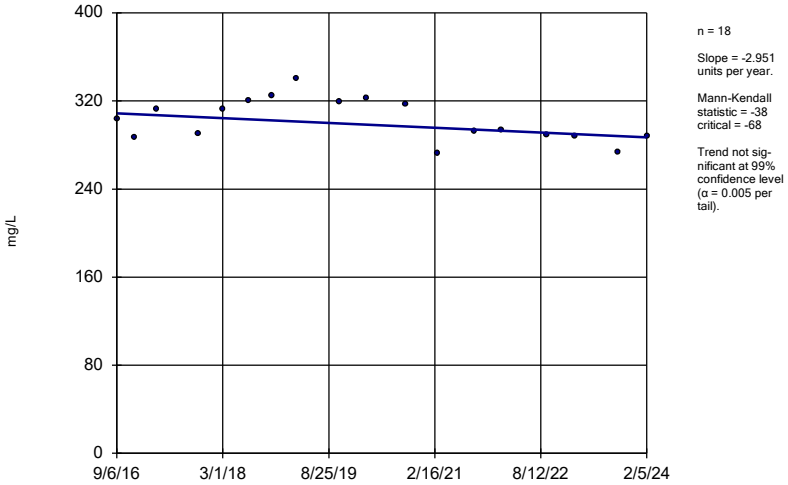
Sen's Slope Estimator

DGWC-12

n = 19

Slope = -49.92 units per year.

Mann-Kendall statistic = -118
critical = -74



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:23 PM View: AP 234 Appendix III Tren
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Sen's Slope Estimator

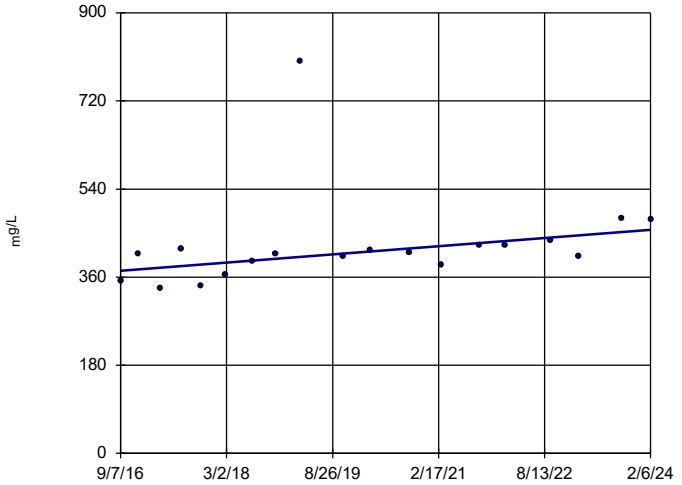
DGWC-15

n = 18

Slope = -2.951 units per year.

Mann-Kendall statistic = -38 critical = -68

Trend not significant at 99% confidence level (α = 0.005 per tail).



Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:23 PM View: AP 234 Appendix III Tren

Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Sen's Slope Estimator

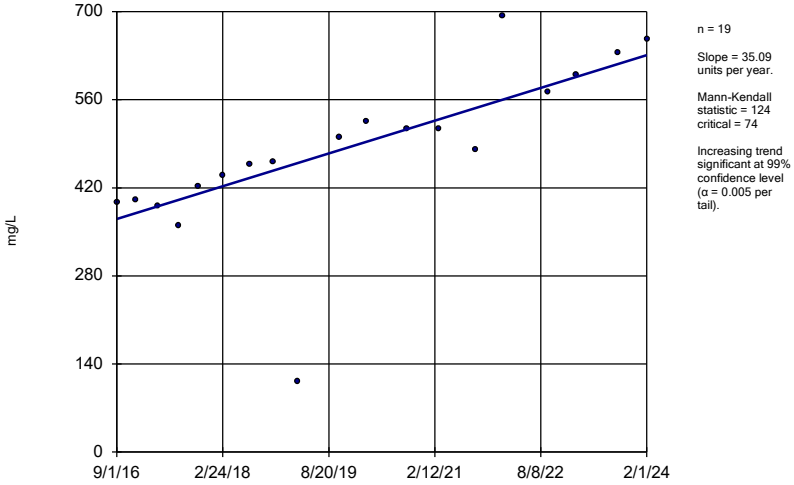
DGWC-17

n = 19

Slope = 11.35 units per year.

Mann-Kendall statistic = 85 critical = 74

Increasing trend significant at 99% confidence level (α = 0.005 per tail).



Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:23 PM View: AP 234 Appendix III Tren

Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Sen's Slope Estimator

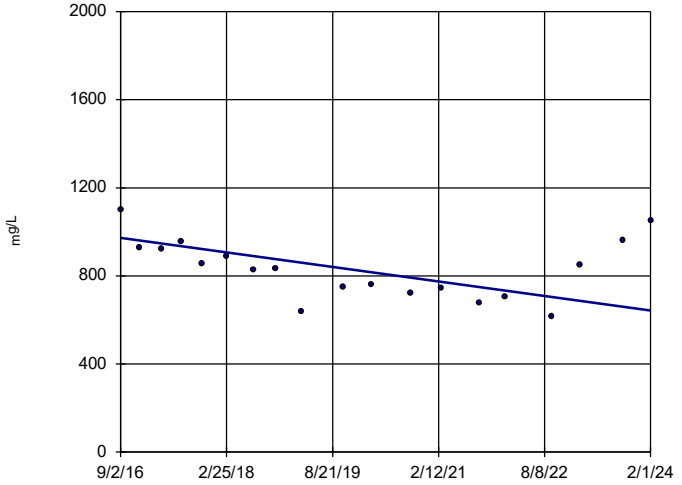
DGWC-19

n = 19

Slope = 35.09 units per year.

Mann-Kendall statistic = 124 critical = 74

Increasing trend significant at 99% confidence level (α = 0.005 per tail).



Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:23 PM View: AP 234 Appendix III Tren

Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Sen's Slope Estimator

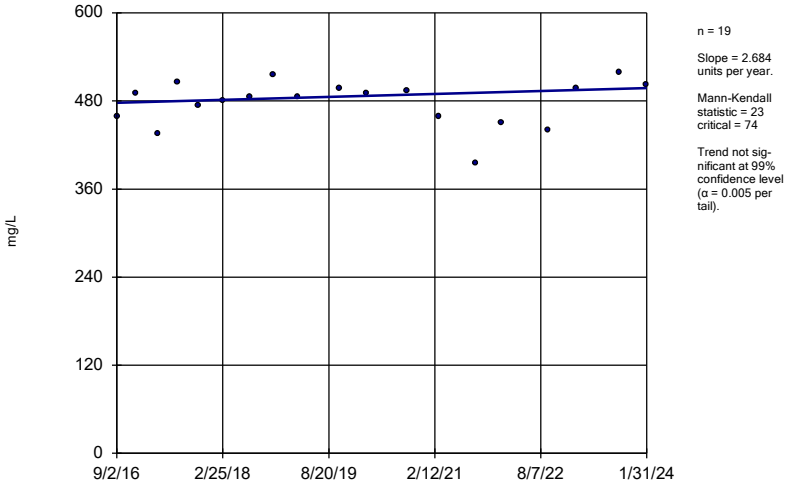
DGWC-20

n = 19

Slope = -44.39 units per year.

Mann-Kendall statistic = -59 critical = -74

Trend not significant at 99% confidence level (α = 0.005 per tail).



Constituent: Total Dissolved Solids [TDS] Analysis Run 4/3/2024 4:23 PM View: AP 234 Appendix III Tren

Sanitas™ v.10.0.16 . UG

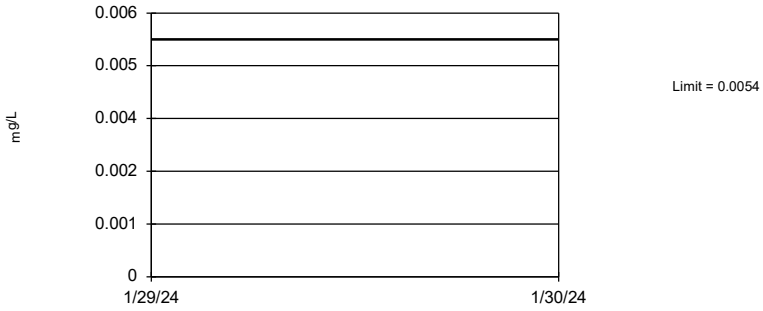
Tolerance Limit

Interwell Non-parametric



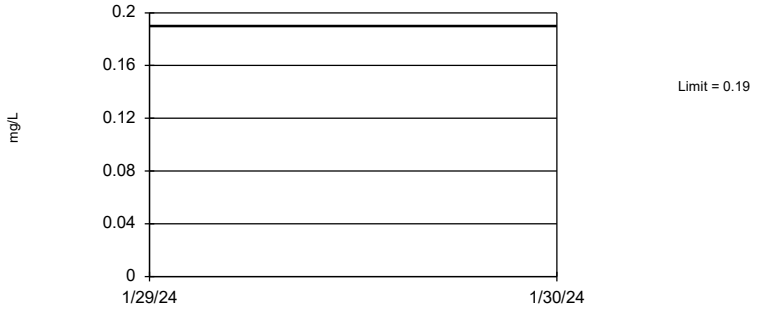
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 60 background values. 83.33% NDs. 92.77% coverage at alpha=0.01; 95.12% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.04607.

Constituent: Antimony Analysis Run 4/3/2024 4:27 PM View: AP 234 UTLs
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Tolerance Limit

Interwell Non-parametric



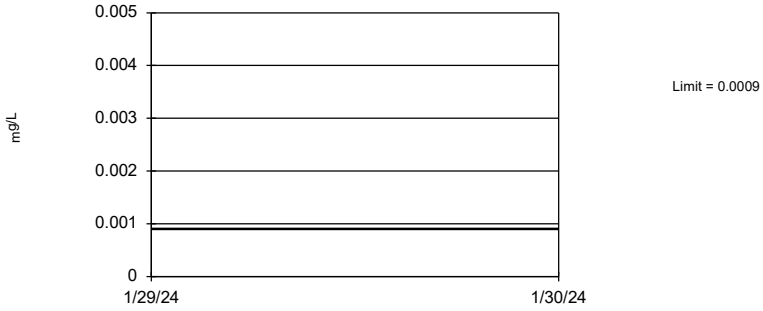
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 60 background values. 76.67% NDs. 92.77% coverage at alpha=0.01; 95.12% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.04607.

Constituent: Arsenic Analysis Run 4/3/2024 4:27 PM View: AP 234 UTLs
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Tolerance Limit

Interwell Non-parametric



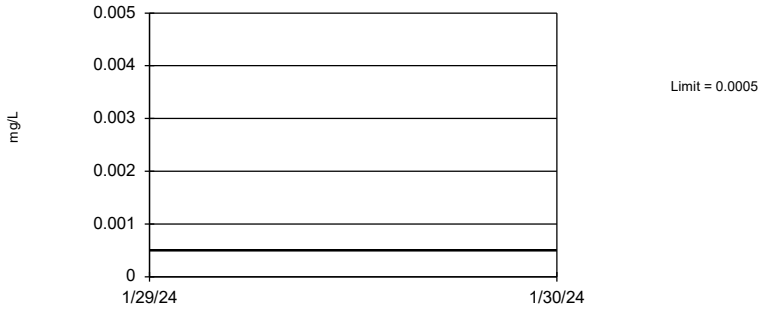
Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 60 background values. 92.77% coverage at alpha=0.01; 95.12% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.04607.

Constituent: Barium Analysis Run 4/3/2024 4:27 PM View: AP 234 UTLs
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Tolerance Limit

Interwell Non-parametric



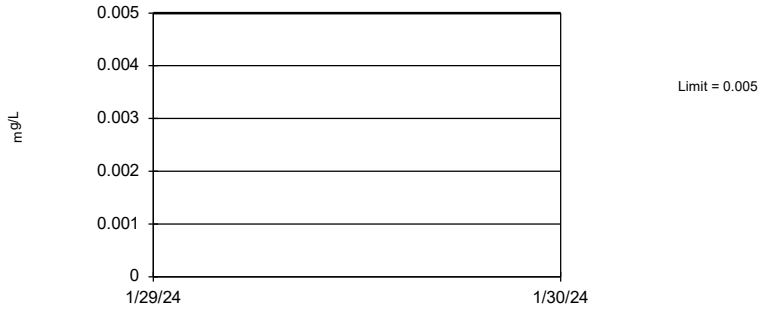
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 60 background values. 53.33% NDs. 92.77% coverage at alpha=0.01; 95.12% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.04607.

Constituent: Beryllium Analysis Run 4/3/2024 4:27 PM View: AP 234 UTLs
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 60 background values. 93.33% NDs. 92.77% coverage at alpha=0.01; 95.12% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.04607.

Sanitas™ v.10.0.16 . UG

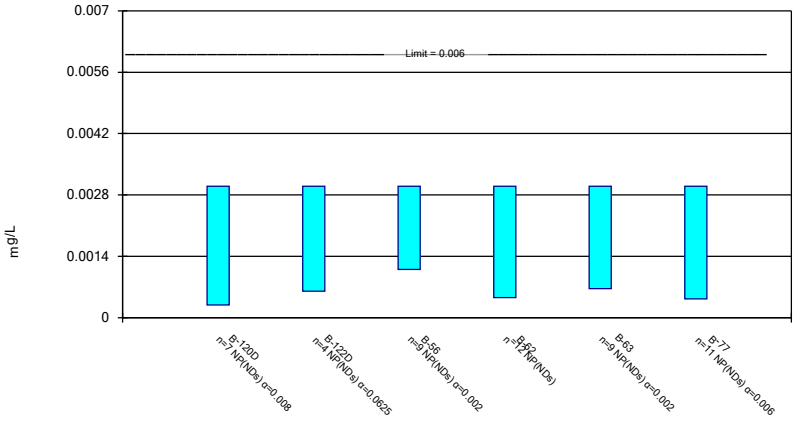
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

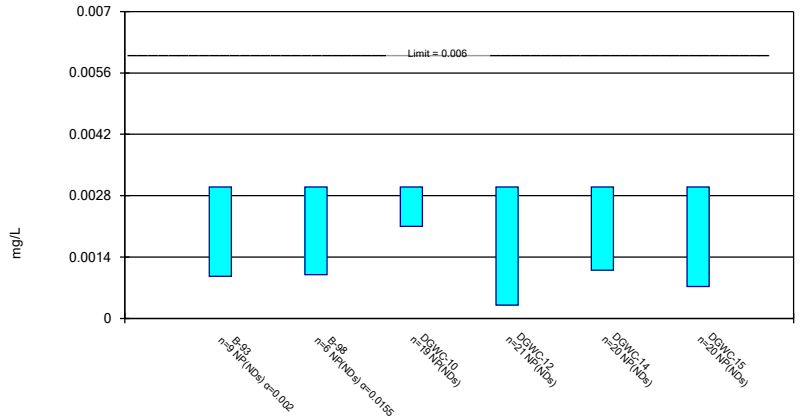


Constituent: Antimony Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.

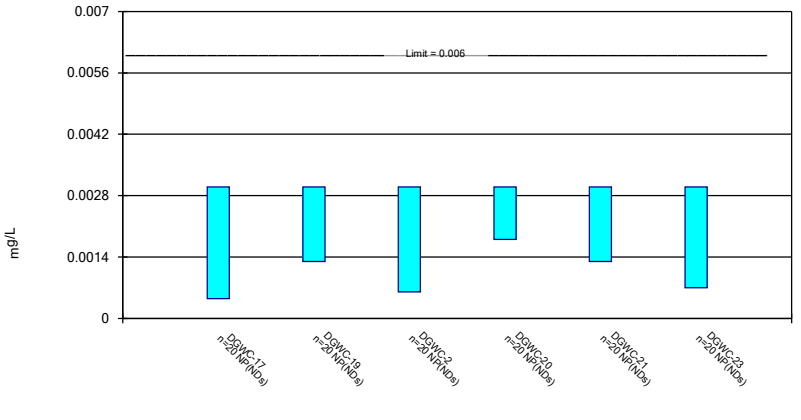


Constituent: Antimony Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Non-Parametric Confidence Interval

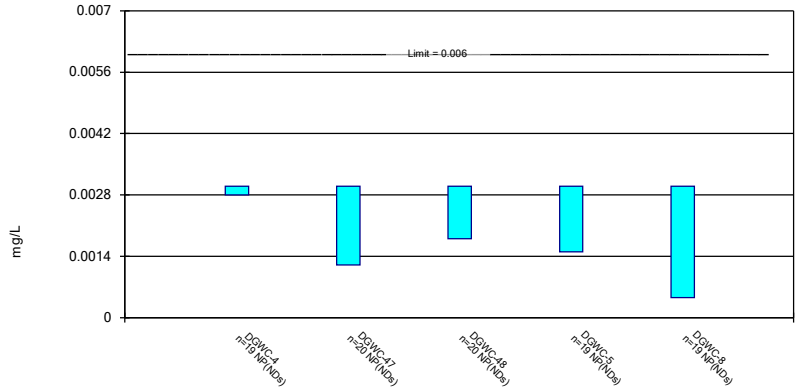
Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Antimony Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

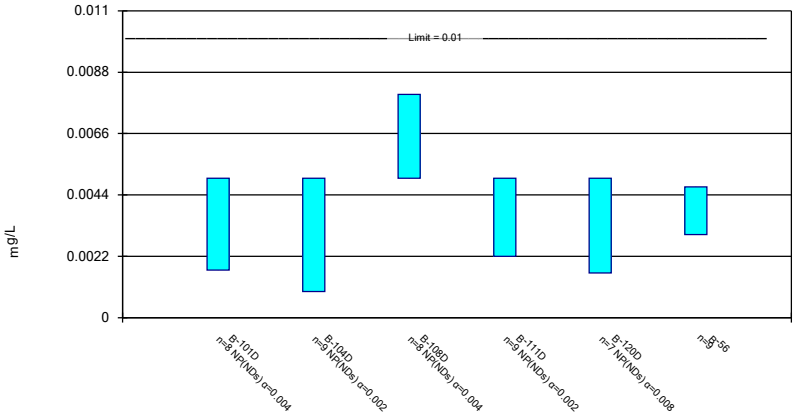
Non-Parametric Confidence Interval



Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Antimony Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

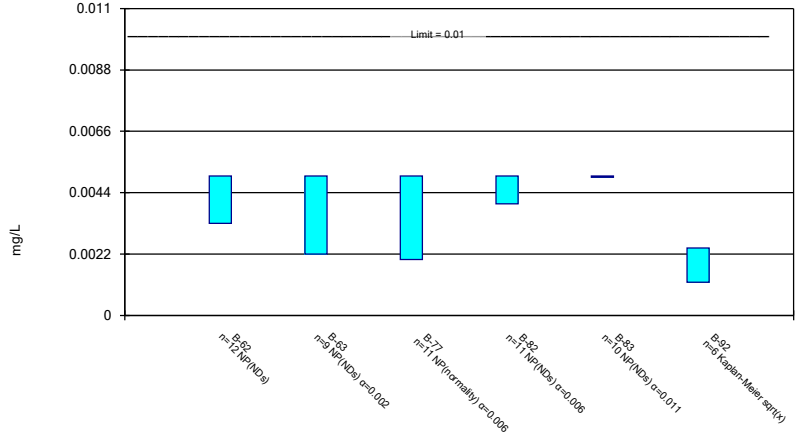
Non-Parametric Confidence Interval



Compliance Limit is not exceeded. Per-well alpha = 0.01.

Constituent: Antimony Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

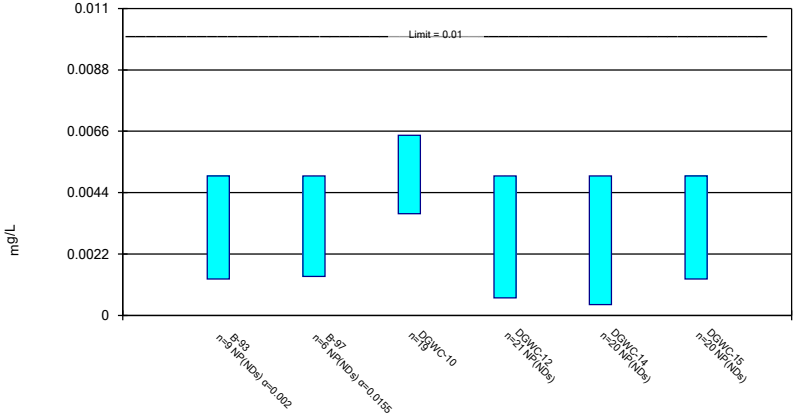
Parametric and Non-Parametric (NP) Confidence Interval



Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

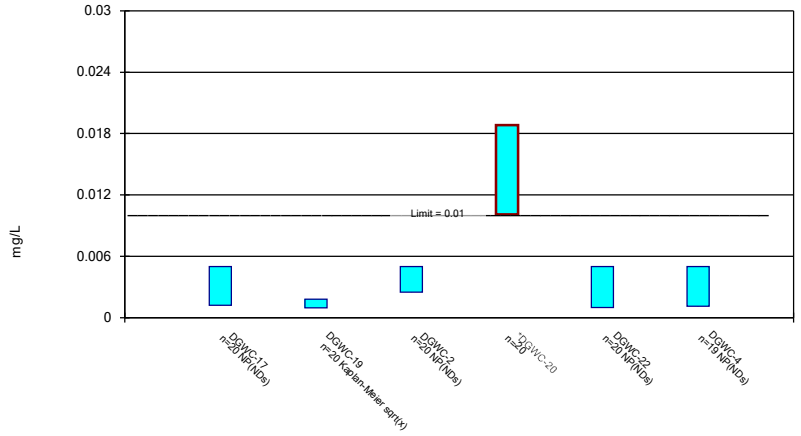
Parametric and Non-Parametric (NP) Confidence Interval



Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Parametric and Non-Parametric (NP) Confidence Interval

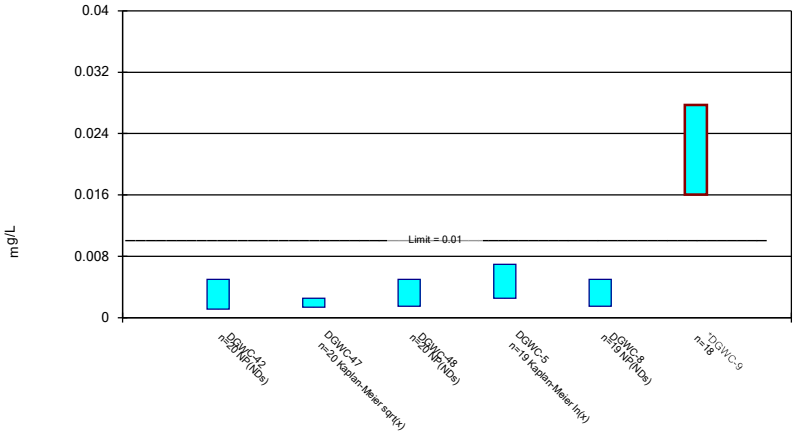


Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Arsenic Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

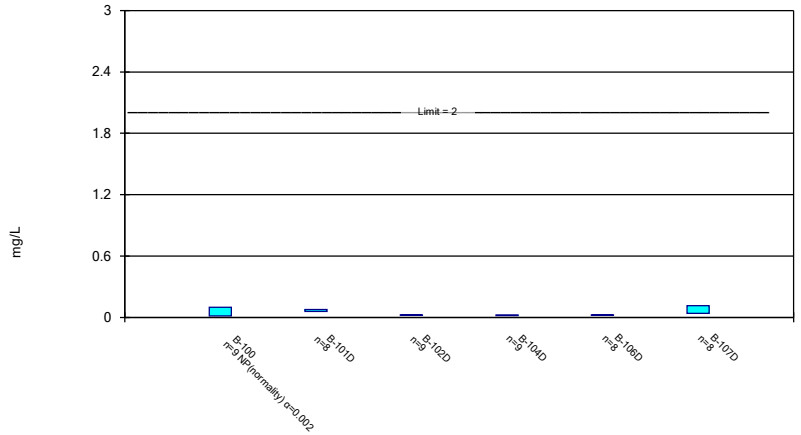


Constituent: Arsenic Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

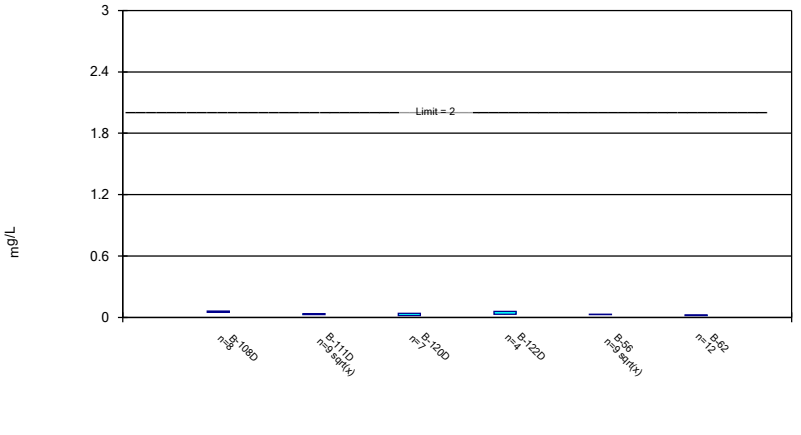


Constituent: Arsenic Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

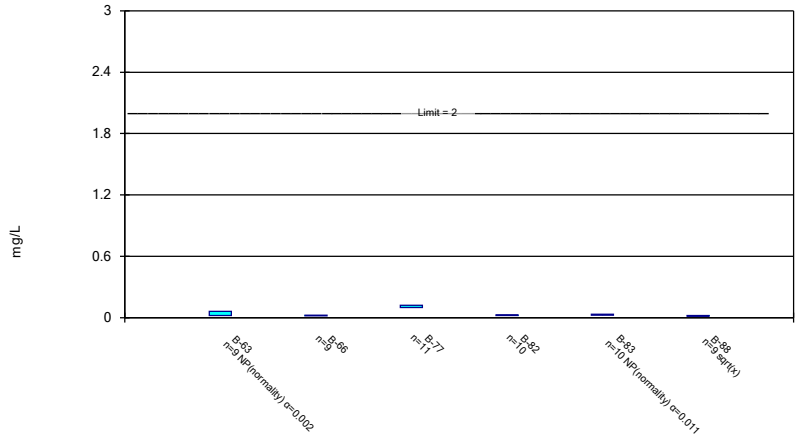


Constituent: Barium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

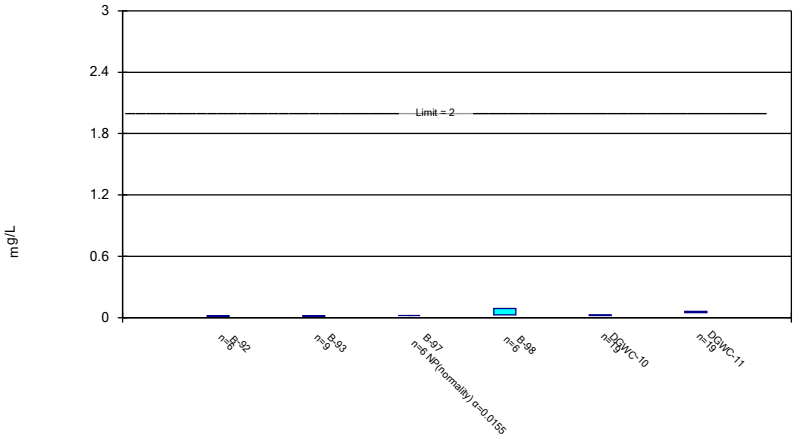


Constituent: Barium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

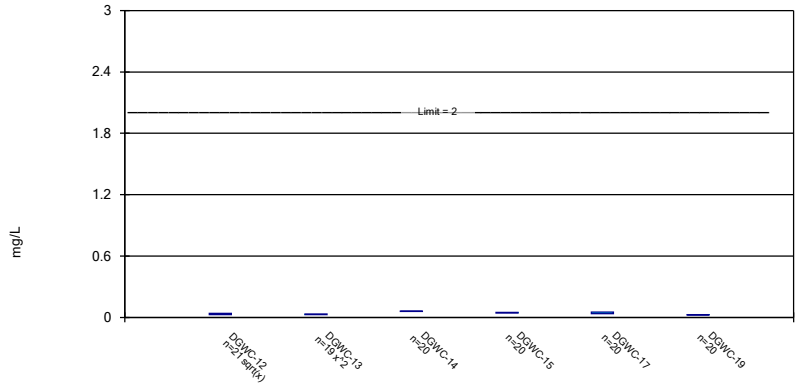


Constituent: Barium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

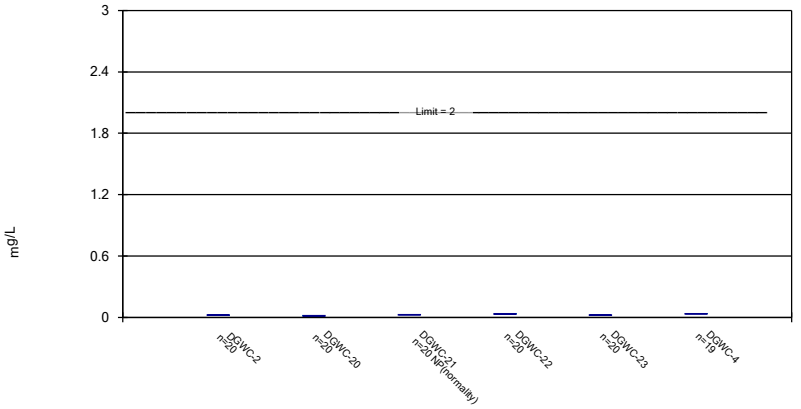
Sanitas™ v.10.0.16 . UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

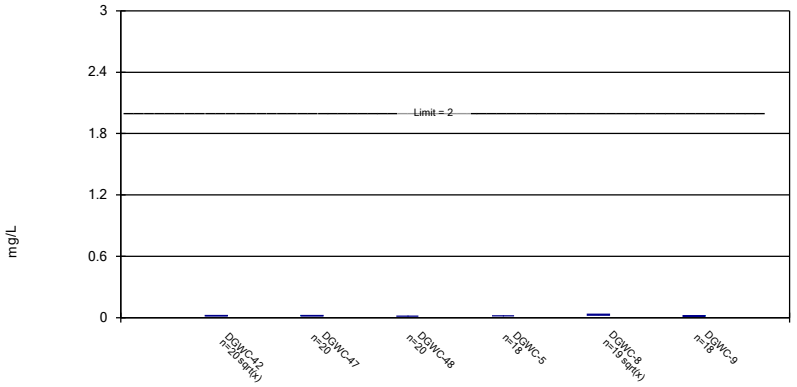
Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

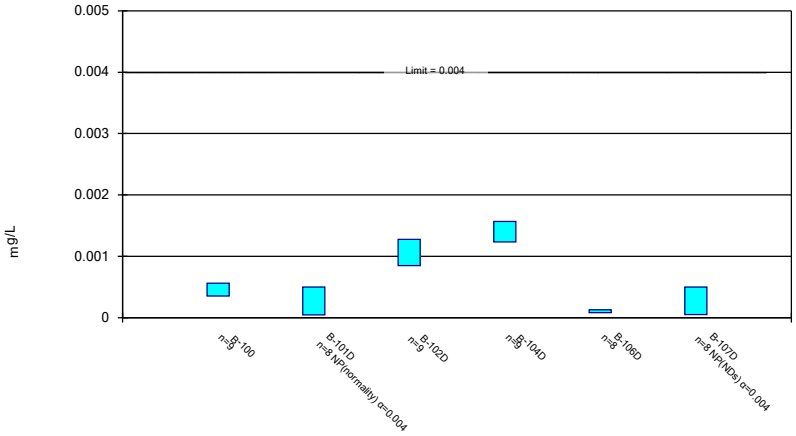
Sanitas™ v.10.0.16 . UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

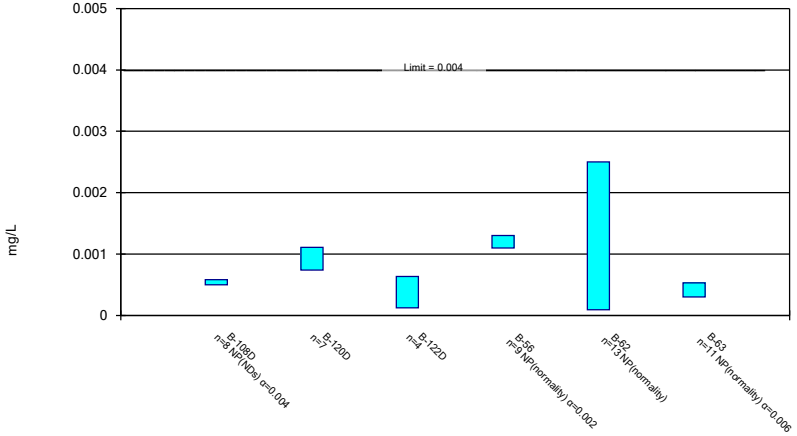
Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

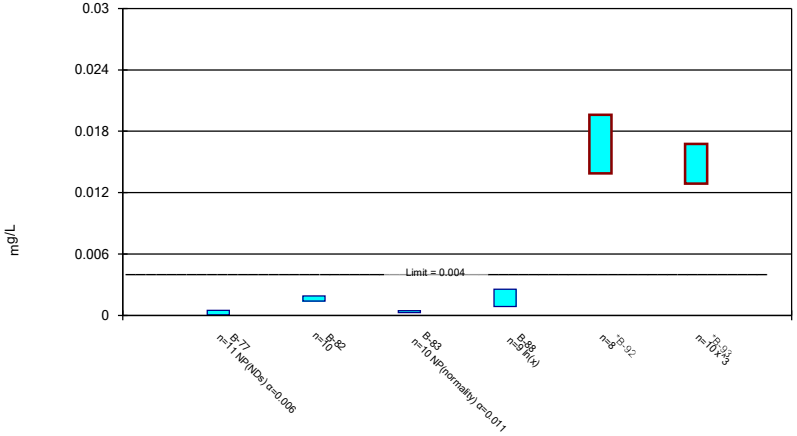
Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

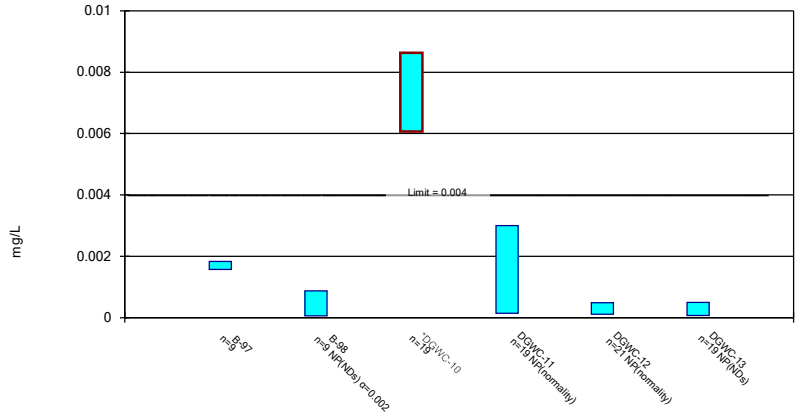
Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

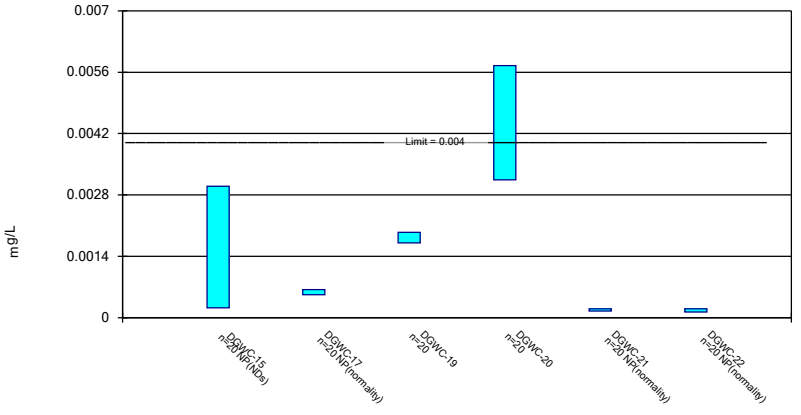
Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

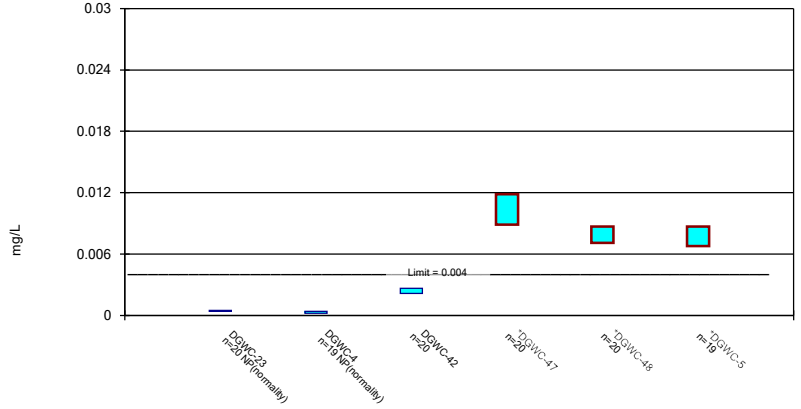
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

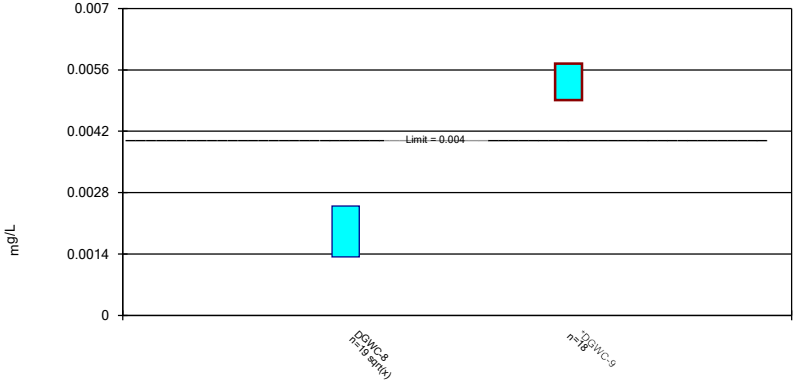
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

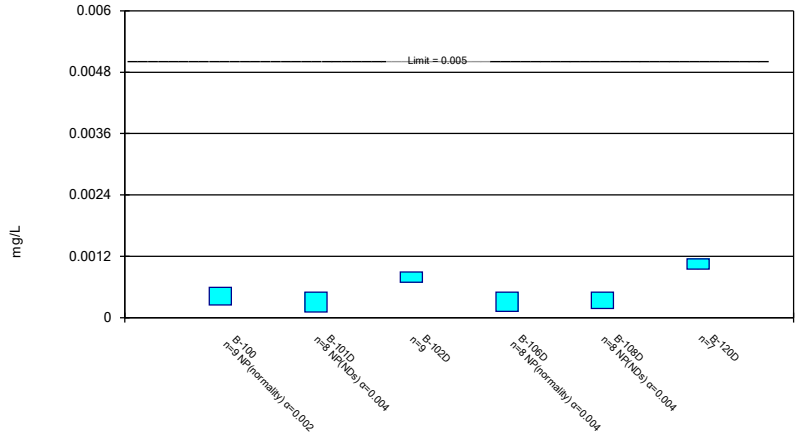
Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

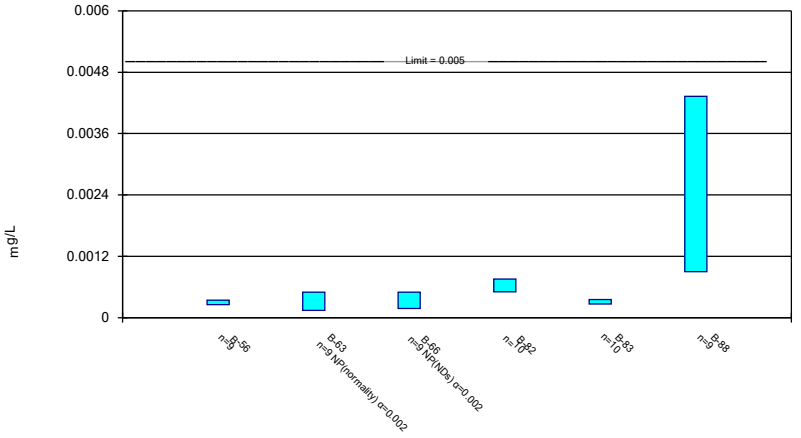
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

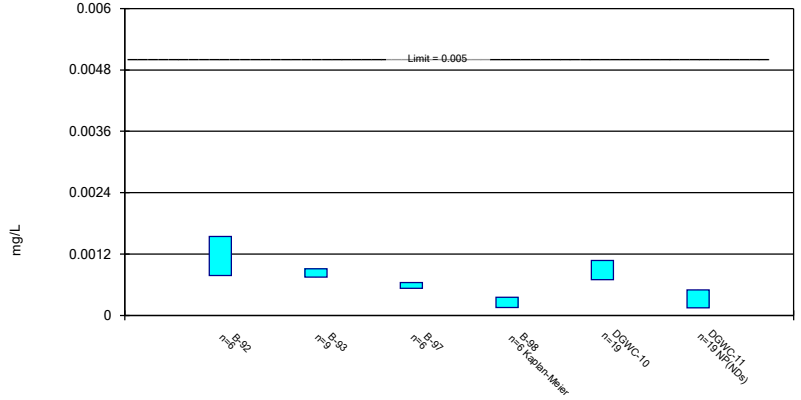
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

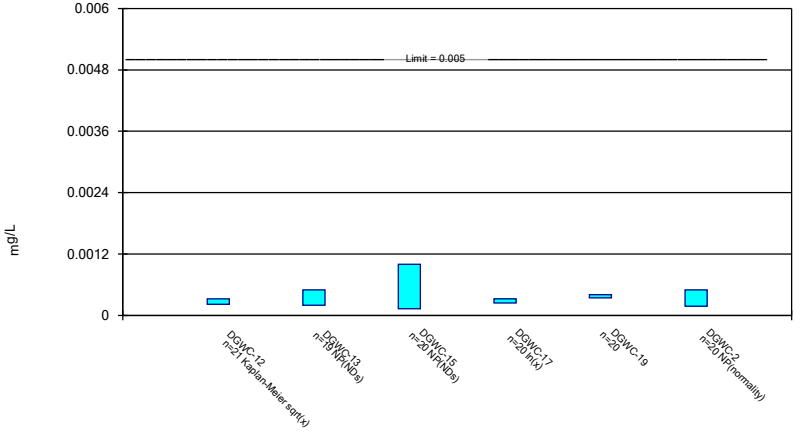
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

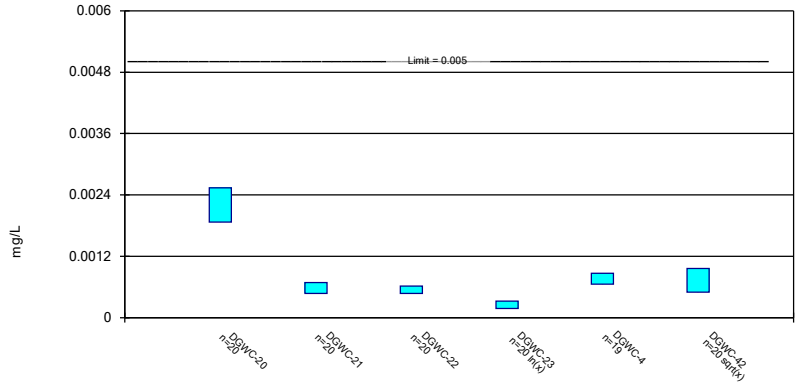
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

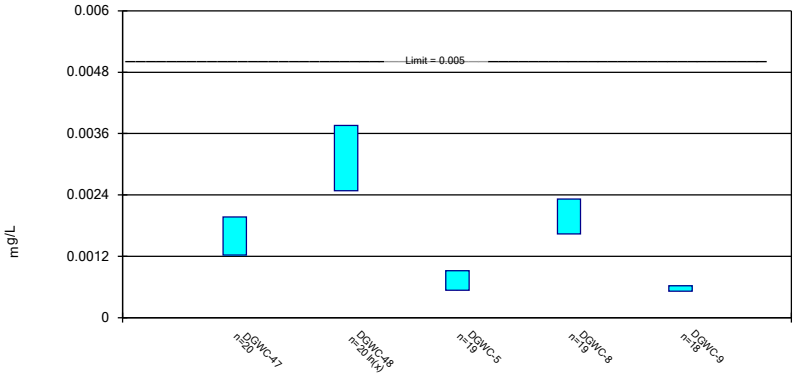
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

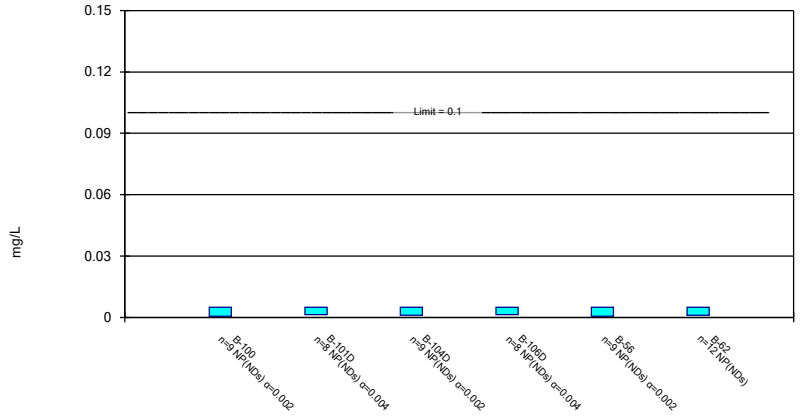
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

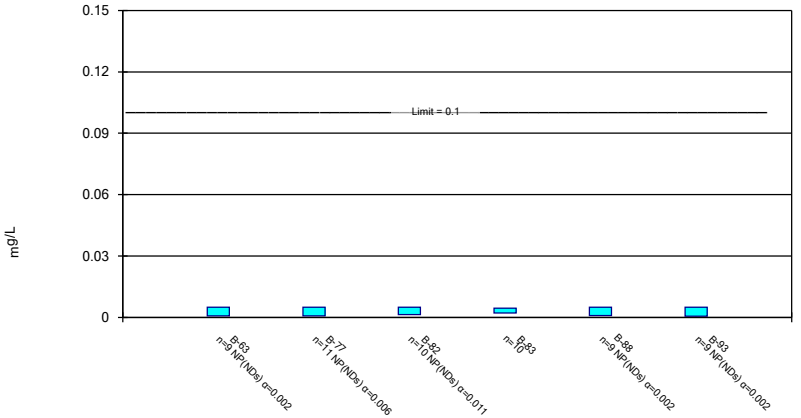
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Chromium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

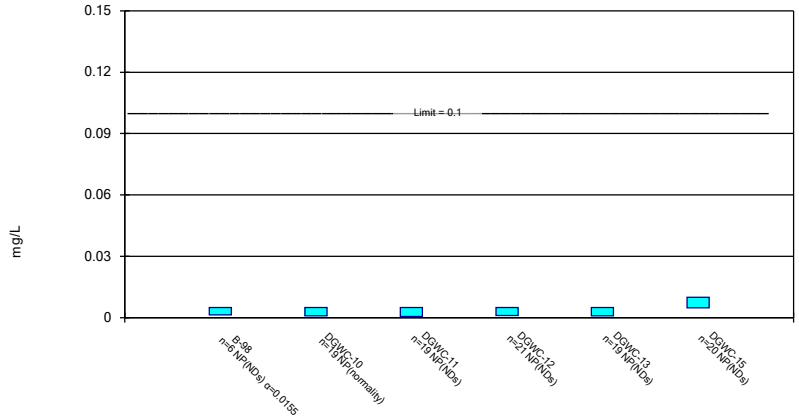
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Chromium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

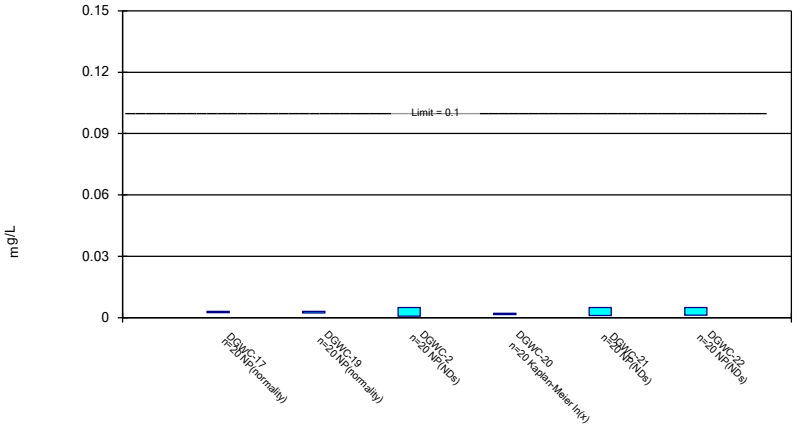
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Chromium Analysis Run 4/3/2024 4:32 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

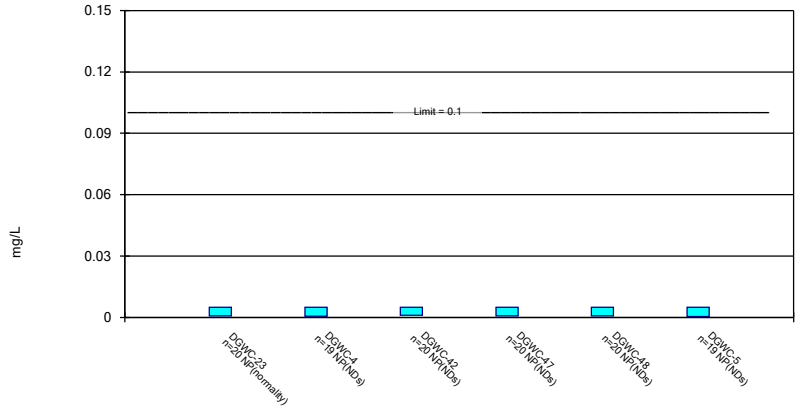
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Chromium Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

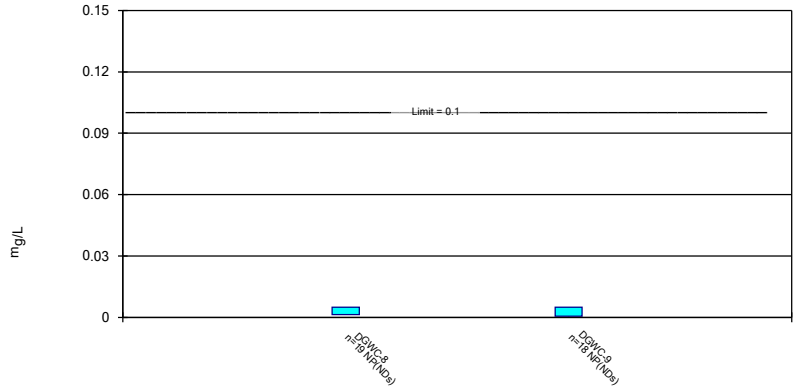
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Chromium Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

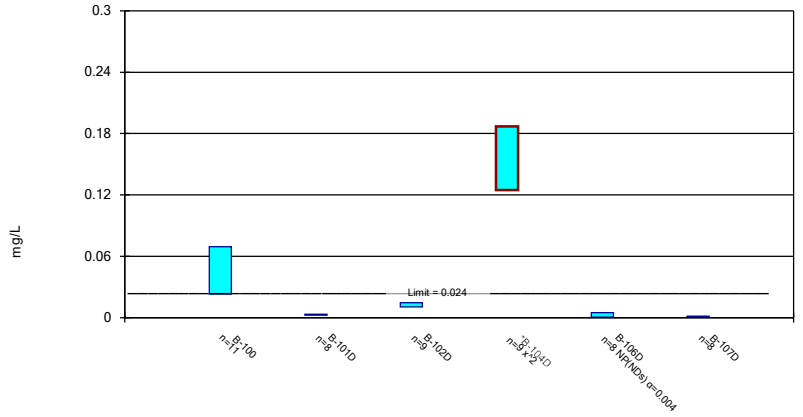
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Chromium Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

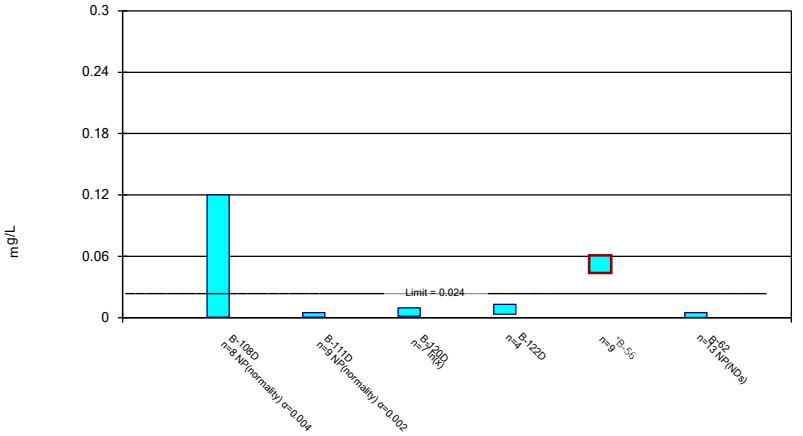
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

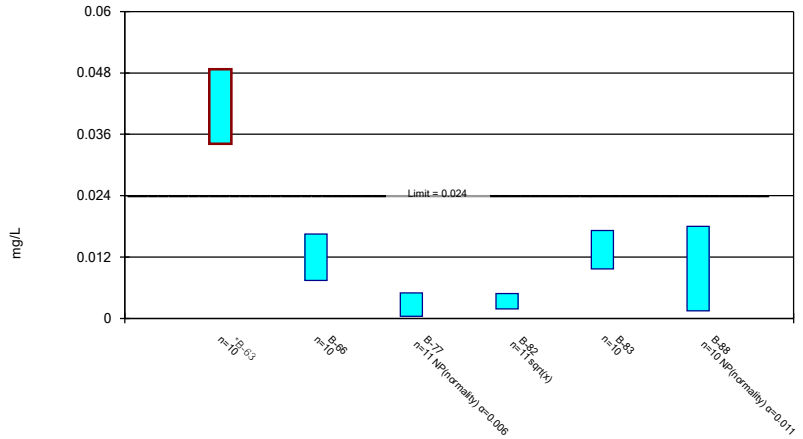
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

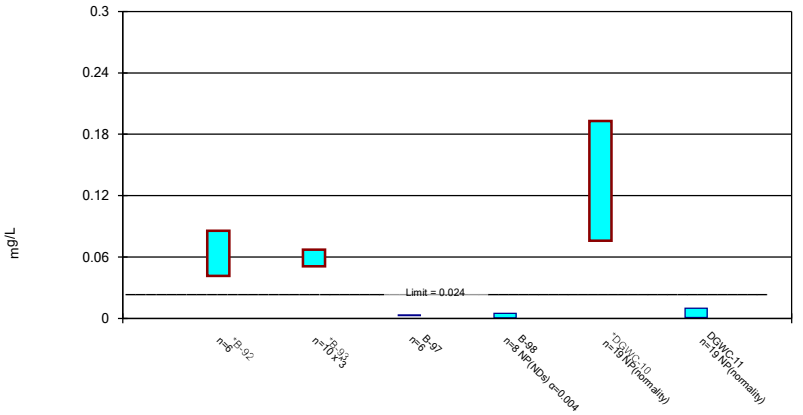
Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

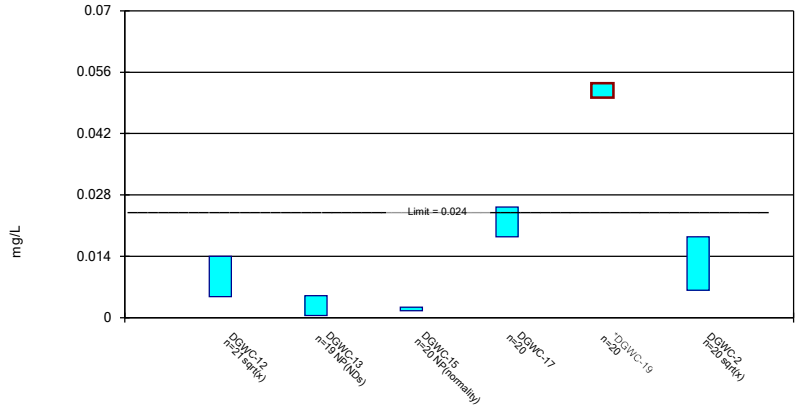
Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

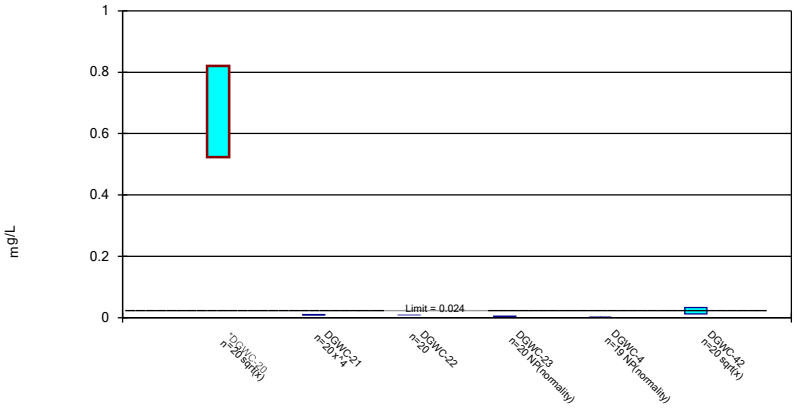
Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

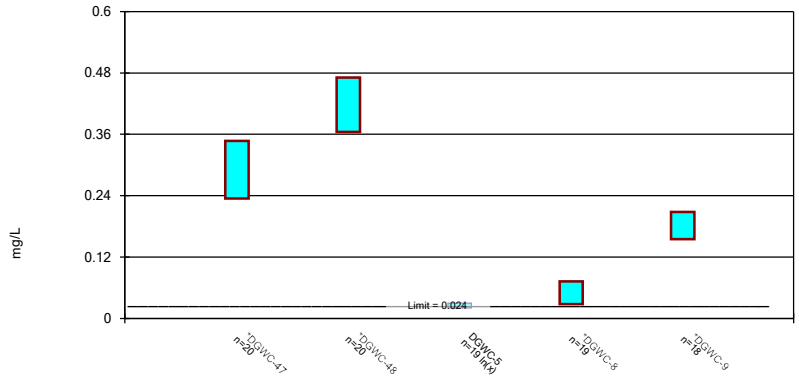
Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

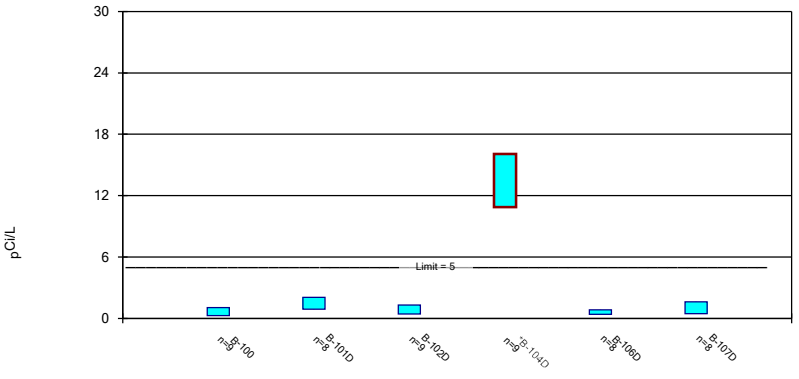
Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

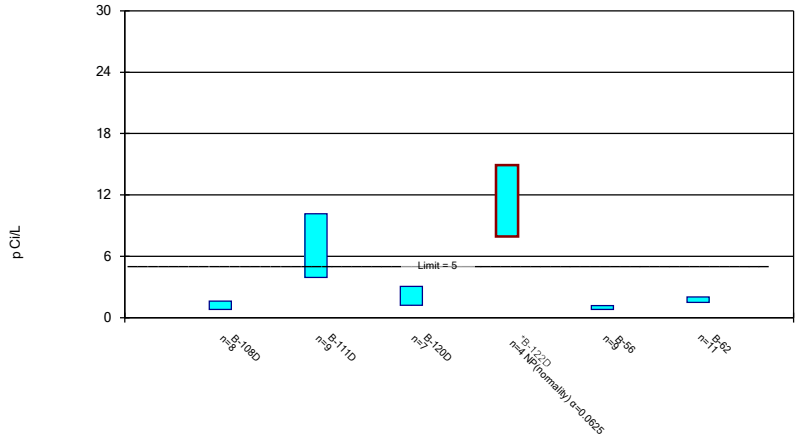
Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Inter
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

Parametric and Non-Parametric (NP) Confidence Interval

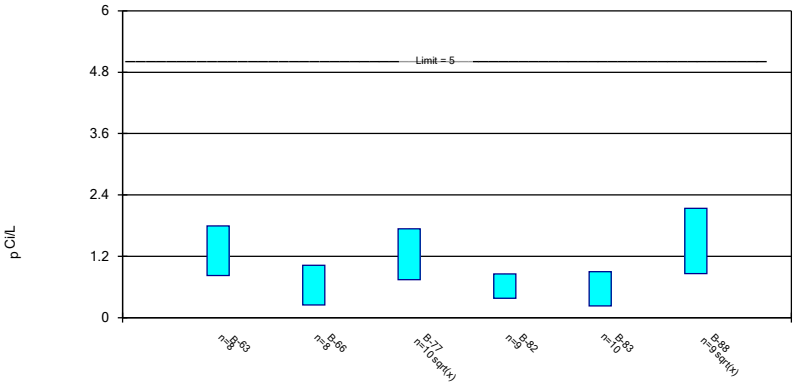
Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Inter

Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

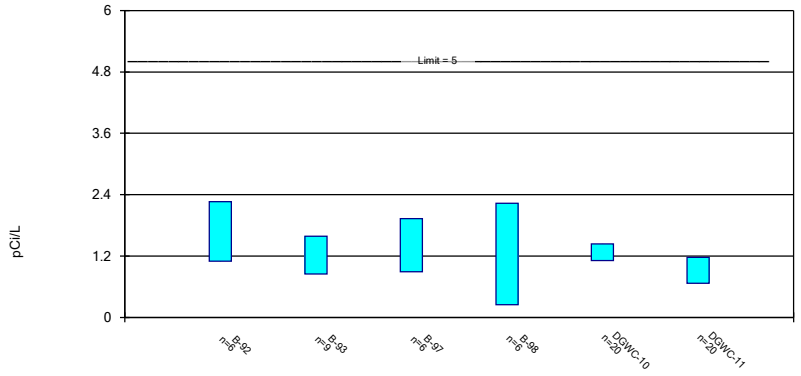
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Inter

Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

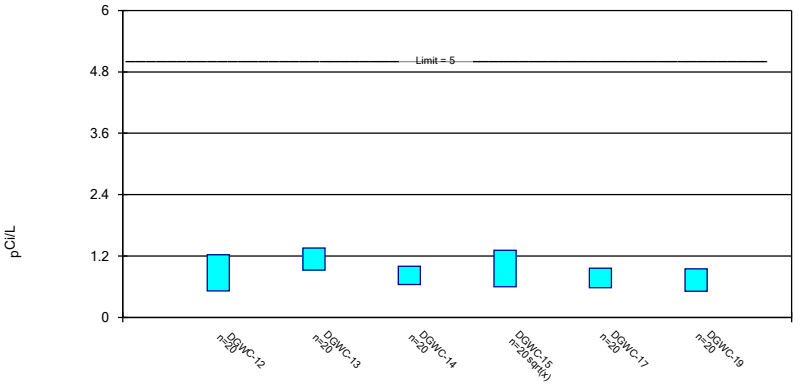
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/3/2024 4:33 PM View: AP 234 Confidence Inter

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.

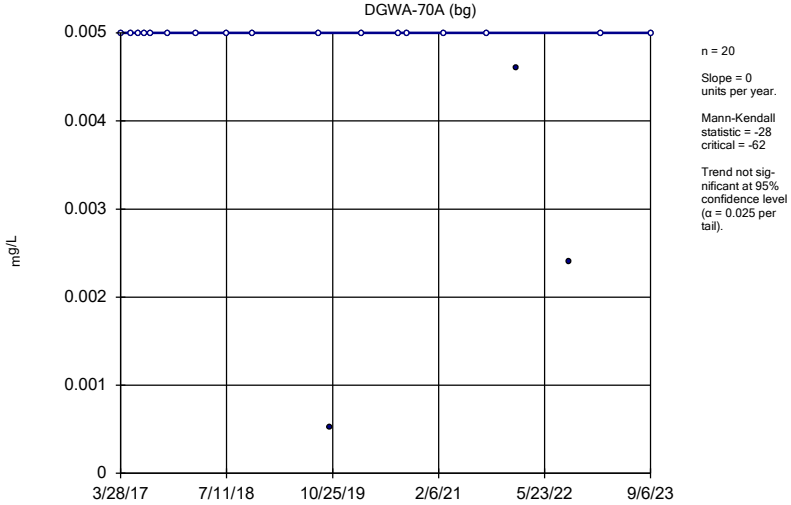
Sen's Slope Estimator

DGWA-53 (bg)

n = 20

Slope = 0 units per year.

Mann-Kendall statistic = 14
critical = 62



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Arsenic Analysis Run 4/3/2024 4:43 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.

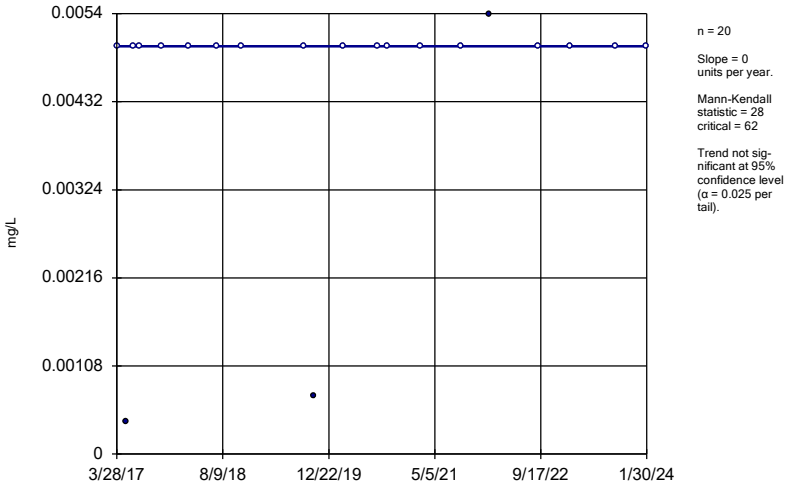
Sen's Slope Estimator

DGWA-70A (bg)

n = 20

Slope = 0 units per year.

Mann-Kendall statistic = -28
critical = -62



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Arsenic Analysis Run 4/3/2024 4:43 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.

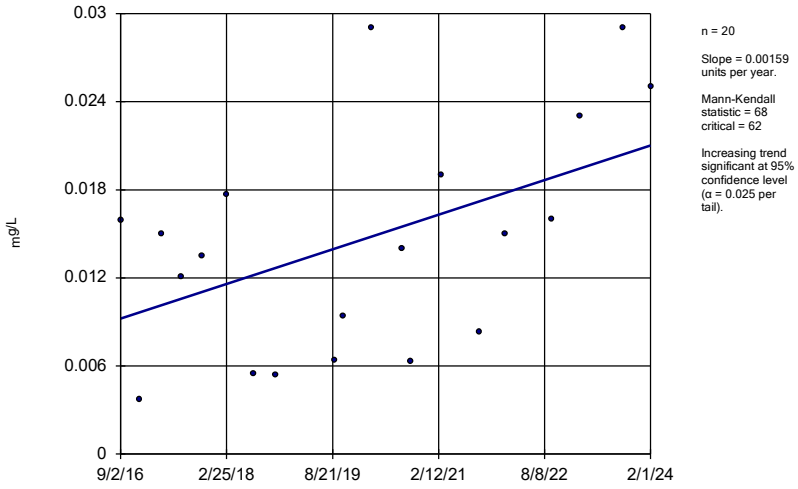
Sen's Slope Estimator

DGWA-71 (bg)

n = 20

Slope = 0 units per year.

Mann-Kendall statistic = 28
critical = 62



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Arsenic Analysis Run 4/3/2024 4:43 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

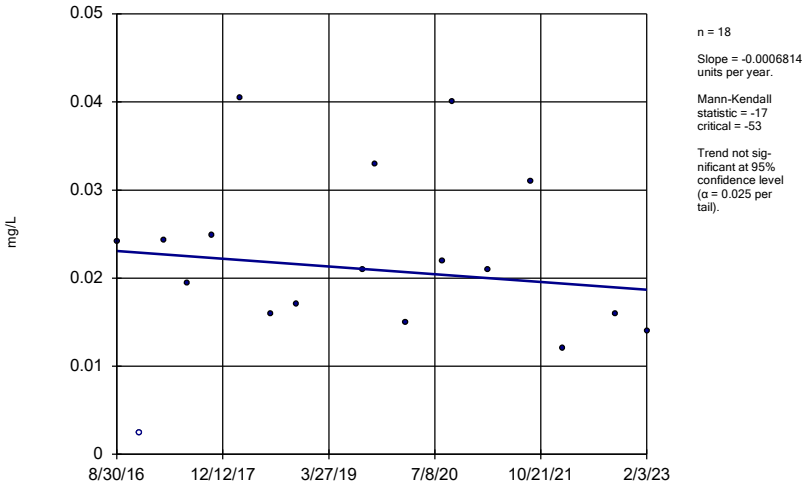
Sen's Slope Estimator

DGWC-20

n = 20

Slope = 0.00159 units per year.

Mann-Kendall statistic = 68
critical = 62



Increasing trend significant at 95% confidence level (α = 0.025 per tail).

Constituent: Arsenic Analysis Run 4/3/2024 4:43 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.

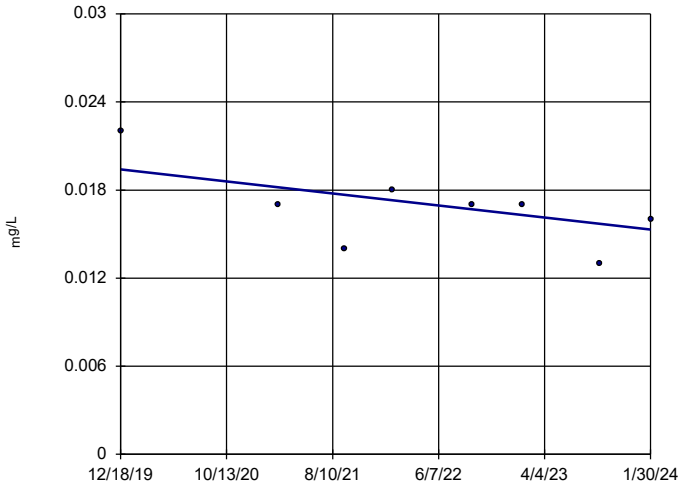
Sen's Slope Estimator

DGWC-9

n = 18

Slope = -0.0006814 units per year.

Mann-Kendall statistic = -17
critical = -53



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Arsenic Analysis Run 4/3/2024 4:43 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

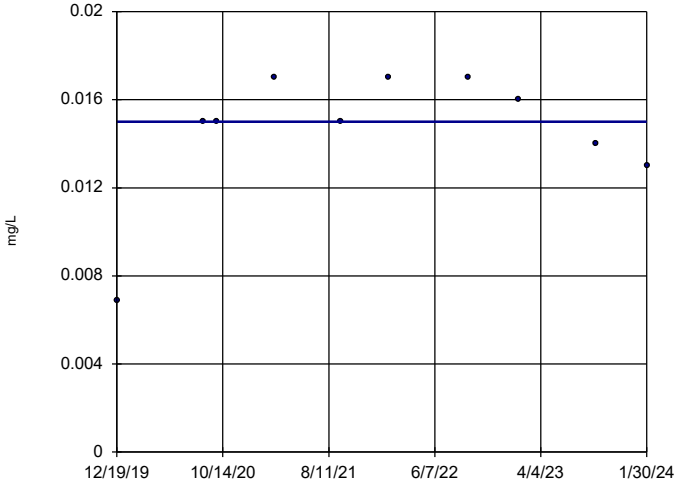
Sen's Slope Estimator

B-92

n = 8

Slope = -0.0009986 units per year.

Mann-Kendall statistic = -13
critical = -17



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Beryllium Analysis Run 4/3/2024 4:43 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG

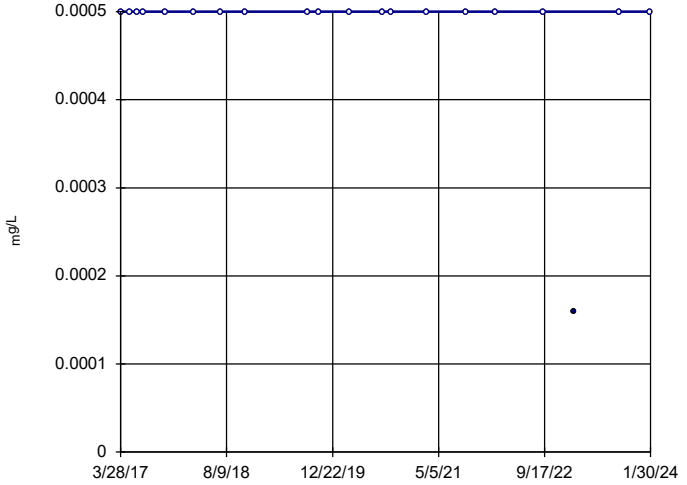
Sen's Slope Estimator

B-93

n = 10

Slope = 0 units per year.

Mann-Kendall statistic = 1
critical = 23



Trend not significant at 95% confidence level (α = 0.025 per tail).

Constituent: Beryllium Analysis Run 4/3/2024 4:43 PM View: AP 234 Appendix IV Trend Tests
Plant McDonough Client: Southern Company Data: McDonough AP

Sanitas™ v.10.0.16 . UG
Hollow symbols indicate censored values.

Sen's Slope Estimator

DGWA-53 (bg)

n = 20

Slope = 0 units per year.

Mann-Kendall statistic = -15
critical = -62

Trend not significant at 95% confidence level (α = 0.025 per tail).

This *Alternate Source Demonstration for Combined Radium at B-111D and B-122D*, Georgia Power Company Plant McDonough-Atkinson, Ash Pond 2 and 3/4, has been prepared in compliance with applicable United States Environmental Protection Agency (USEPA) coal combustion residual (CCR) rule (40 Code of Federal Regulations [CFR] 257 Subpart D; published in 80 FR 21302-21501, April 17, 2015) and Georgia Environmental Protection Division Rule 391-3-4-.10(6)(a-c) under the direction of a licensed professional engineer with WSP USA Inc.

I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management, and 40 CFR Part 258.50(g) and that this Alternate Source Demonstration, Georgia Power Company Plant McDonough-Atkinson, located at 5551 S. Cobb Drive, Smyrna, Georgia, has been prepared to meet the requirements of 40 CFR §257.95(g)(3)(ii).

1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (US EPA) coal combustion residual (CCR) rule (40 Code of Federal Regulations [CFR] 257 Subpart D; published in 80 FR 21302-21501, April 17, 2015) (CCR Rule or the Rule), this Alternate Source Demonstration (ASD) for Plant McDonough Ash Pond 2 and 3/4 (AP-2 and 3/4) has been prepared to document that a natural source has caused Statistically Significant Levels (SSLs) of combined radium (radium 226 + radium 228) identified in wells B-111D and B-122D at Georgia Power Company's Plant McDonough AP-2 and 3/4 (Site) during assessment monitoring. This document satisfies the requirements of § 257.95(g)(3)(ii) and § 391-3-4-.14(23)(c) which allows the owner or operator to demonstrate that a source other than the CCR Unit has caused an SSL.

A prior ASD for combined radium in Site monitoring wells DGWA-53, B-104D, B-105D, B-109D, B-111D, B-115D, and B-122D was submitted to Georgia Environmental Protection Division (GA EPD) on May 24, 2023. That ASD reported the results of an investigation performed to evaluate the presence of naturally occurring combined radium in soils and rock (i.e., aquifer solids) at Georgia Power Company (Georgia Power)'s Plant McDonough-Atkinson in the vicinity of Ash Pond 1 (AP-1) and Ash Pond 2 and 3/4. The prior documents provide information supporting the natural occurrence of radionuclides in groundwater at the Site through analysis of rock and soil samples from the Site. At the time of the ASD submittal, only B-104D and B-109D exhibited statistically significant levels (SSLs) of combined radium under the assessment monitoring program. As such, GA EPD approved the ASD, but for only the wells then relevant: B-104D and B-109D.

Following the second semi-annual monitoring event in 2023, an SSL of combined radium was identified for monitoring well B-111D. A probable SSL was identified following the first semi-annual monitoring event in 2024 for B-122D, though those results have not yet been reported. Analytical results reported here for monitoring wells B-111D and B-122D affirm the natural occurrence and mobility of radium in the aquifer media at AP-2 and 3/4 and support the prior demonstration of an alternate source for radium in groundwater at monitoring wells B-111D and B-122D. Combined radium at B-111D and B-122D has ranged from 1.33 to 14.9 pCi/L, while background well DGWA-53 has generally had a lower concentration (Table 1; Figure 1).

Table 1: Combined Radium (226 + 228) Concentrations at Select Locations at AP-2 and 3/4

Well ID	Range of Concentrations of Radium 226 + 228 (pCi/L)
DGWA-53 (background)	0.478 U - 6.36
B-111D (downgradient)	1.33 – 12.3
B-122D (downgradient)	7.94 – 14.9
B-104D (downgradient) [1]	9.12 – 17.0
B-109D (downgradient) [1]	9.45 – 17.7

Note:
[1] The range of combined radium concentrations at wells B-104D and B-109D are provided for reference. An ASD for the occurrence of radium at these wells has previously been approved by GA EPD.

This document satisfies the requirements of § 257.95(g)(3)(ii) and § 391 3-4-.14(23)(c) which allows the owner or operator to demonstrate that a source other than the CCR Unit has caused an SSL. This ASD provides the

following lines of evidence as supported by previous Site studies. These are substantially the same lines of evidence accepted by EPD when approving the previously submitted ASD for wells B-104D and B-109D.

- Combined radium SSLs at the Site have been measured only in isolated downgradient bedrock wells and have not been observed in any of the shallow monitoring wells, including those shallow wells adjacent to the deep delineation wells.
- The wells with elevated radium concentrations have low concentrations of CCR indicator parameters.
- Results of petrographic analyses from bedrock samples (including upgradient location B-53/DGWA-53) indicate presence of accessory minerals including pyrite, zircon, epidote, apatite, ilmenite, sphene (titanite), monazite, and allanite. These minerals are known to carry radioactive isotopes such as uranium, thorium, and their related daughter products including radium.
- Scanning electron microscopy (SEM) analysis of the bedrock samples identified the minerals allanite, thorite and monazite in the granitic gneiss. Energy dispersive spectroscopy (EDS) spectra from monazite show characteristic uranium and thorium peaks indicating a possible source material for uranium, thorium, and associated decay products.
- Whole-rock geochemistry analysis detected the radiogenic elements uranium, thorium, and potassium in all of the rock samples collected from the Long Island Creek Gneiss, button schist, and metagraywacke.
- Radionuclides are known to be present in regional aquifer materials and regional groundwater, based on multiple sources/references.

This information has been prepared to document that the SSL and MCL exceedance noted at well B-111D and B-122D are the result of natural occurrences of radionuclides in the subsurface and not the CCR Unit.

2.0 HYDROGEOLOGIAL AND GEOLOGICAL SETTING

A regional, unconfined surficial aquifer system is present at the Site, existing within the overburden and weathered and fractured upper bedrock (i.e., approximately the first 30 feet), depending on topographic location. Recharge primarily occurs through precipitation and subsequent infiltration. Generally, groundwater flow occurs through intergranular pore spaces in the overburden and is controlled by topography and top of rock variations. However, a relatively higher transmissive zone is interpreted to occur at the base of the overburden, at the interface of weathered bedrock and competent bedrock and is believed to be the primary groundwater flow path.

A limited and localized bedrock aquifer system also occurs beneath the Site. The upper bedrock is fractured and weathered, connected hydraulically with the overburden groundwater, and is considered part of the uppermost aquifer. The overlying silt/clay-rich overburden may act to retard recharge into the bedrock aquifer system. However, deeper bedrock (i.e., approximately greater than 30 feet into the bedrock) is unweathered with few discontinuities (e.g., fractures) available to store groundwater.

The Site is situated in the Piedmont province, in a regional zone of geologic deformation, referred to as the Brevard Zone, which extends from Alabama to Virginia. Figure 2 presents the geologic map for the area around Plant McDonough. The plant property northwest of the faulted contact is underlain by the Long Island Creek Gneiss, which is a medium to coarse-grained felsic rock. Near faults and shear zones, the gneiss is locally intruded by another felsic rock, i.e., granitic pegmatites. Pegmatites are coarse-grained igneous rocks formed in

the late stage of magma crystallization and noted for their high textural and compositional variability and enrichment of trace elements such as uranium, thorium, rare-earth elements (Adams et al. 1980). Numerous studies have evaluated the presence of the radionuclides radium, uranium, and thorium in aquifer solids and groundwater in principal aquifers in the US and abroad (e.g., Chapman et al. 2013; Ranger 1995; Rosson et al. 1991; Szabo et al. 2012; Stackelberg et al. 2018; Vinson et al. 2013) and specifically in Georgia, granite and gneiss aquifers in the Piedmont were identified to have the highest concentrations of naturally occurring radionuclides (Coker and Olive 1989).

Uranium and thorium are naturally occurring in the soils, rock, and groundwater of the aquifers in the U.S. at varying levels and decay to form radium (Hem 1985; Langmuir 1997; Nolan et al. 2021). Felsic rock types, i.e., rock types containing abundant silicate minerals such as feldspar and quartz, are naturally enriched in uranium and thorium, the parent elements of radium. For reference, average uranium and thorium concentrations in the earth's crust are 3 and 10 milligrams per kilogram (mg/kg). In basalt (a mafic rock) uranium and thorium average 0.6 and 2.2 mg/kg, respectively, and in granite (a felsic rock) 4.8 and 17 mg/kg, respectively (Smith and Huyck 1999). Concentrations of daughter elements such as radium show a similar distribution between the various rock types.

Groundwater in the Piedmont Physiographic Province (Piedmont) can occur as perched water within residual soils, as an unconfined regional aquifer within residual soils and transitionally weathered materials, and as a series of confined to semi-confined, discrete, but locally interconnected aquifer systems within the bedrock. Groundwater within the overburden, which is comprised of residual soils, saprolite, and transitionally weathered rock (TWR), is generally unconfined and the groundwater surface is generally a subdued reflection of topography. In areas where bedrock is relatively shallow and when water levels are seasonally depressed, the regional groundwater potentiometric surface also occurs within the upper zones of weathered bedrock. Groundwater elevation data from September 5, 2023 were used to develop Figure 3. Site potentiometric maps indicate that groundwater generally flows southeast across the Site from the topographic high northwest of AP-3/4 towards AP-2 and the Chattahoochee River, consistent with historical observations.

3.0 CHARACTERIZATION OF AQUIFER MATERIALS

Radium exists in nature as one of four isotopes: Ra-223, Ra-224, Ra-226, and Ra-228. Most of these naturally occurring radionuclides are derived from radioactive isotopes of uranium and thorium (parent element), whose daughter products yield Ra-226 and Ra-228, respectively. These parent radioactive elements are concentrated in certain minerals that are commonly found in igneous, metamorphic and sedimentary rocks across the United States including this part of Georgia. Zircon, monazite, and apatite are the most common accessory minerals in which uranium and thorium occur, primarily associated with felsic igneous and metamorphic rocks such as granite, gneissic granite, granitic gneiss, granitic pegmatite, and to a lesser extent vein quartz. Groundwater in the igneous and metamorphic rocks of Piedmont and Blue Ridge regions of Georgia are known to contain uranium, thorium, radium, and radon at relatively higher concentrations due to the occurrence of these radionuclides in the source rocks (Szabo et al., 2012).

3.1 Sample Collection

In October 2016, rock core samples from upgradient and downgradient areas representative of Site lithologies were collected for laboratory analyses. Rock core samples were collected from upgradient borehole B-53 which later was converted to a monitoring well (DGWA-53). This location represents a background location in the Long

Island Creek gneiss lithology. Two other downgradient samples from locations representing Long Island Creek Gneiss and button schist lithologies were also sampled and analyzed.

Samples were cut from each of the core samples for use in petrographic and laboratory analysis. Cuts were made perpendicular to foliation so that the samples would reflect a greater representation of metamorphic layers, and consequently, greater exposure of mineralogy and geochemistry. Uncoated, polished thin- or thick-sections were used for the petrographic and SEM analyses, and the remaining core ground to a powder for use in the whole-rock geochemical analyses. Photographs of the core samples that were collected for geochemical and petrographic analysis are presented in Appendix A.

In 2023, aquifer solids were retrieved from cores previously collected during monitoring well installation in December 2020 through April 2021. The aquifer materials were analyzed by Pace Analytical Services, LLC for radium parent elements uranium and thorium as well as radium using the methods described in Section 3.5.

3.2 Petrographic Analysis

Representative rock core samples were collected from B-53/DGWA-53, B-54, and B-57 (locations shown on Figure 2). The selected core samples were cut perpendicular to the metamorphic foliation to get the most representative mineralogy and textures for each sample. Thin section billets were then cut and sent to National Petrographic for preparation of polished thin sections. Each thin section billet was encased in clear epoxy to make a regular sample that could be used by the thin section preparation equipment.

After encasing in clear epoxy, the samples were cut using a water-based cutoff saw. After cutting, the cut surface was ground and then epoxied to a microscope slide. After drying the epoxy at 130°C for 35 minutes, the billets were cut off from the microscope slides and the epoxied material was ground to approximately 35 microns (µm). After reaching 35µm, the samples were then polished using a roto-polishing system.

Photomicrographs of the thin sections were taken using plane-polarized light (PPL) or cross-polarized light (XPL) using a Leica DM 2500P petrographic microscope and Leica DFC 420 digital camera in the microscopy lab at the University of West Georgia. Unless otherwise indicated, all images were taken at 2.5x magnification; the long edge of the field of view in the photographs is approximately 4.0 millimeters (mm) in length. Representative photomicrographs are shown in Appendix A.

3.3 Scanning Electron Microscopy – SEM

Qualitative backscattered electron imaging (BSE) and identification of potential uranium/thorium-bearing accessory minerals in uncoated, polished thin-sections were performed using the FEI Quanta 200 SEM instrument and attached Bruker EDX detector for semi-quantitative analysis. Analyses were completed using a 20 kV accelerating voltage on the filament and a partial vacuum of 0.45 Torr in the sample chamber. Images and spectra were collected, processed, and annotated using the Bruker ESPRIT software package. Images resulting from the SEM analyses are presented in Appendix A.

3.4 Whole-Rock Geochemistry

Samples were inspected visually for weathering, and weathered portions were removed with a rock saw prior to grinding. Samples were placed in a drying oven at 90°C. After drying, samples were crushed in a jaw crusher with steel grinding plates to prepare the sample to 90% passing a 10-mesh screen. After jaw crushing, the samples were split using a Jones riffle splitter to obtain a statistically representative reduce volume aliquot. The split

samples were then transferred into ring and puck shatterbox where samples were reduced to a fine powder (200 mesh). A 0.5-gram sample is then weighed and placed into Teflon sample tubes for acid digestion with HNO_3+HCl+HF+$HClO_4$ for 1 hour. Major, minor and trace element concentrations of the samples were determined by Inductively Coupled Plasma-Atomic Emission Spectrometer (ICP-AES) and ICP-Mass Spectrometry (MS) by American Assay Laboratory in Sparks, Nevada using their ICP-4B-UT and ICP-NF protocols.

3.5 Radiochemical Analysis of Core Sampling B-111D

The aquifer materials from boring B-111D were analyzed by Pace Analytical Services, LLC for radium parent elements uranium and thorium as well as radium, using EPA Method 901.1: Gamma Emitting Radionuclides in Drinking Water. The analytical results are attached as Appendix B and are summarized in Table 3 in Section 5.4. The isotopes for the elements tested included:

- Uranium: U-235 and U-238
- Radium: Ra-226 and Ra-228
- Thorium: Th-232 and Th-234

4.0 ANALYTICAL RESULTS

4.1 Petrographic Analysis

Petrographic analysis conducted on Long Island Creek gneiss samples collected in B-53 and B-54 indicates thin folia of biotite and less abundant muscovite in a quartzofeldspathic matrix that consists of porphyroclastic, partially recrystallized alkali feldspar, ribbon quartz, and plagioclase. Accessory minerals observed include pyrite, zircon, epidote, apatite, ilmenite, sphene (titanite), monazite, and allanite. Indication of shearing was observed in these photomicrographs, including elongated feldspar porphyroclasts and ribbon quartz.

Results of petrographic analysis of core B-57 indicates a singular button schist interlayered with metagraywacke that occur in fault contact southeast of the Long Island Creek Gneiss, occupying roughly one-half of the Site, with a foliated matrix of quartz, muscovite and biotite, and shearing within this lithology.

4.2 Scanning Electron Microscopy - SEM

Radiogenic minerals identified from SEM analyses in representative core samples from the Long Island Creek Gneiss include the following:

- Zircon
- Apatite
- Titanite
- Thorite
- Epidote
- IImenite
- Monazite
- Allanite

Energy dispersive spectroscopy (EDS) and backscattered electron (BSE) images of core samples are presented as Appendix A. In the BSE images, minerals that contain elements with low atomic numbers are shown in gray tones. Minerals that contain elements with large atomic numbers, generally show up as “bright” spots on the BSE image. Because uranium and thorium have atomic numbers of 92 and 90 respectively, minerals that contain these elements are “brighter” than the surrounding matrix.

Once a mineral with high atomic number elements was identified in the BSE image, the mineral was analyzed using EDS. EDS is an analytical technique for elemental analysis based on x-ray emission caused by electrons that are dislodged from the inner orbitals by an x-ray beam from the instrument. When an electron is ejected from

an inner shell, the electron “hole” is filled by electrons from higher-energy shells. The transformation of an electron from an outer to an inner shell releases energy in form of an x-ray that can be detected and quantified. The energy of the x-ray is characteristic for different elements and can be displayed on an EDS spectrum as a function of electron volts (KeV). EDS and BSE plots for each sample analyzed is presented in Appendix A.

4.3 Whole-Rock Geochemistry

A summary of the elemental analysis of rock core samples from B-53, B-54, and B-57 is presented in Appendix A. The ICP-4B-UT protocol was selected because of the lower detection limit (0.1 ppm) for both uranium and thorium.

As indicated in these results, the radiogenic elements uranium, thorium, and potassium were detected in all of the rock samples collected from the Long Island Creek Gneiss, button schist and metagraywacke.

5.0 SOURCE EVALUATION

Each of these lines of evidence is supported by geochemical characterization of aquifer solids, analysis of groundwater samples, and review of published data, as discussed in detail in the sections that follow:

1) Groundwater results for the shallow monitoring wells adjacent to the deep delineation wells have never reported a combined radium SSL, nor have any other shallow monitoring wells at the Site.

The combined radium concentrations in samples from shallow wells at the waste boundary located immediately adjacent to the delineation wells with elevated combined radium concentrations, range from below detection (0.348 U) to 2.49 pCi/L (Table 2). For comparison, combined radium concentrations in samples from the deeper bedrock wells B-111D and B-122D with SSLs and/or elevated combined radium concentrations range from 1.33 to 14.90 pCi/L (Table 1). The range in concentrations for wells with a prior approved ASD is 9.2 to 17.7 pCi/L. These shallow monitoring wells are screened in the uppermost unconfined aquifer, in closer proximity to the Units than the deeper delineation wells at which the elevated combined radium concentrations were noted. The groundwater elevations in the paired wells also reflect a downward vertical gradient, indicating groundwater movement from shallow/lower radium concentration zones to deeper groundwater zones where the radium SSLs have been observed. Furthermore, no detection monitoring network well at the Site has exhibited a combined radium SSL since the start of monitoring in 2016. Only the deep vertical delineation wells screened in bedrock, which were installed to delineate constituents other than combined radium, have shown SSLs for combined radium. These observations demonstrate that the combined radium SSLs in the B-111D and B-122D are isolated local conditions not due to migration in groundwater and are not a result of a release from the Units.

Table 2: Combined Radium Concentrations at Shallow Wells Adjacent to Deep Delineation Wells Where Elevated Combined Radium Concentrations are Identified

Deep Well	Nearest Shallow Detection Monitoring Well	Combined Radium Results (pCi/L) (range of concentration)
B-111D	DGWC-5	0.348 U - 2.49
B-122D	B-63	0.846 U – 2.14 U

Note: U = Radium data are a combination of radium isotopes 226 and 228. When results are reported below the MDC (Minimum Detectable Concentration), data is displayed with an accompanying U. The MDC varies depending upon the sample amount and elapsed time of the measurement.

2) Combined radium concentrations in groundwater samples collected from the deep delineation well B-111D has decreased since well installation.

Groundwater with a long residence time in a rock matrix can develop relatively high concentrations of radionuclides due to decay of parent elements. With continued and adequate extraction of that water, radionuclide concentrations tend to decline as the formation of the daughter elements cannot 'keep up' with further groundwater extraction. This is generally consistent with the elevated measurements in the first samples collected immediately after well installation, followed by a decline in concentrations upon subsequent sampling events. While variable, the overall combined radium concentrations at B-111D have exhibited considerable decline in concentration since the initial sampling (Figure 1). At well B-111D, the combined radium concentration is below the GWPS for the most recent sampling event (2/05/2024) at 1.33 pCi/L. A limited dataset is available for delineation well B-122D (4 data points). While a decline in concentrations is observed between the August 2023 and January 2024 samples, an overall upward trend can be observed, though not significant. Should the aquifer conditions change or groundwater remain stagnant (not significantly disturbed by low flow sampling), radium concentrations may gradually increase again due to the ongoing natural uranium and thorium decay. Based on this key line of evidence, the combined radium observed in groundwater at the deep delineation wells is due to residence time in the rock matrix and not due to release from the Units.

3) The wells with elevated radium concentrations show no correlation with CCR indicator parameters.

The concentrations of typical CCR associated parameters, such as boron, are low (<0.49 mg/L) in deep wells B-111D and B-122D–less than one-third of the average concentration at shallower monitoring wells (WSP 2024). Historically, the deep delineation wells also have exhibited, on average, lower total dissolved solids (TDS) and sulfate concentrations, indicating no apparent CCR influence. Thus, the observed geochemical variability in TDS and sulfate concentrations in groundwater is related to water rock interactions in the heterogeneous subsurface lithological composition.

Since 2016, the observed groundwater pH in site-wide (shallow and deep) groundwater at Plant McDonough has ranged from 3.7 to 8.4 and the oxidation reduction potential (ORP) from -147 to +785 millivolts (mV), respectively. Under these conditions, boron and sulfate can often be used as conservative tracers of CCR influence, with very low to low partitioning coefficients of 0.0 L/kg (boron) and 0.19 to 1.3 L/kg (sulfate; dependent on sorbent content; Strenge and Peterson 1989). Generally, dissolved oxygen (DO) and ORP has been much lower in deep wells B-111D and B-122D than shallow wells. Therefore, if a groundwater pathway exists from the Units to these wells, high levels of boron and sulfate should be present, but are not. Groundwater sampling data for these wells are publicly available in the posted annual compliance reports (WSP 2024), while the February 2024 sampling data is included in Appendix C and will be submitted to GA EPD in July 2024 with the semi-annual groundwater monitoring report.

In contrast, radium in groundwater forms a charged divalent cation (Ra^{+2}) which has been shown to effectively adsorb on metal hydroxides at a groundwater pH range of 4 to 10 and also co-precipitate readily with minerals such as barite (Sajih et al. 2014). For a groundwater pH range of 5 to 9, the partitioning coefficient of radium is between 24.3 to 124.0 L/kg depending on sorbent content, indicating radium will not act conservatively in typical groundwater systems (Strenge and Peterson 1989). Therefore, it is geochemically improbable for radium to travel from a Unit to a deep delineation well without being accompanied by boron and sulfate. It should also be noted that elevated radium levels in the deep wells due to a release from the CCR Unit are unlikely to occur without

corresponding elevated levels in the adjacent shallow wells. As described above, no radium SSLs have been noted in overburden wells at the Site throughout its monitoring history.

4) Naturally occurring radium parent elements have been identified in bedrock samples collected from the screened intervals of the deep/bedrock delineation well B-111D.

Elevated groundwater concentrations of decay products such as radium typically are related to elevated concentrations of parent elements in associated aquifer solids. Total uranium and thorium concentrations in the deep bedrock aquifer samples taken from B-111D during the previously reported ASD were measured at 0.263 and 375 mg/kg, respectively (Table 3). The concentration of thorium in the sample was well above the average crustal rock concentrations of 10 mg/kg, and also above the average concentrations in granitic rocks (presence confirmed at the Site in line of evidence #5), which are naturally elevated in thorium (4.8 mg/kg) relative to many other rock types, as reported in a compilation of crustal rock concentrations by Smith and Huyck (1999). As such, the parent elements for radium are present at elevated levels in Site samples (and in the region, based on literature in line of evidence #6) relative to average concentrations for crustal and felsic rocks, demonstrating the presence of a natural source for radium at the Site.

Table 3. Occurrence of Total Uranium, Thorium and Radium in Core Sample B-111D[1]

Well ID[2]	Core Depth (ft)	Total Radium (mg/kg)	Total Uranium (mg/kg)	Total Thorium (mg/kg)
B-111D	82-82.5’	1.30×10^{-06}	0.263	375

[1] Concentrations converted from activities for comparison to average abundances by rock type
[2] Core sample collected from the screened interval at the identified location

5) Surface mapping and boring logs from Plant McDonough indicate the presence of granitic gneiss, a rock type known to contain a naturally high concentration of minerals that carry radioactive isotopes such as uranium, thorium, and their related daughter products including radium.

According to the USGS and EPA, naturally occurring radioactive material is present everywhere in North America. The concentration of resultant radioactivity measured in groundwater wells varies significantly, depending upon rock type and groundwater conditions. Surface mapping and boring logs from Plant McDonough indicate the presence of granitic gneiss, a rock type known to contain a naturally high concentration of minerals that carry radioactive isotopes such as uranium, thorium, and their related daughter products including radium. Furthermore, accessory minerals observed in the augen gneiss such as sphene are known to contain radionuclides and are commonly used for age dating purposes due to the presence of uranium in the crystal structure.

Based on surface geologic mapping and core logging, both B-53 and B-54 were advanced through lithologies of the Long Island Creek Gneiss, which is comprised of moderately foliated, felsic, granitic gneiss (meta-granite) with the ubiquitous occurrence of sphene and epidote occurring as accessory minerals. The mineralogy identified during petrographic analysis from samples collected in this unit is consistent with this lithology. The accessory minerals identified include zircon, apatite, titanite, pyrite, chalcopyrite, ilmenite, epidote, allanite, and monazite. Boring logs for wells B-111D indicate the presence of granitic gneiss while the boring log for B-122D indicate the presence of a muscovite biotite schist thus correlating the concentrations observed at B-111D and B-122D with the natural bedrock aquifer materials.

Locally, pleochroic halos around inclusions within biotite crystals support the presence of radioactive minerals in the rock. This interpretation is supported by results of SEM analysis, which identified the minerals allanite, thorite and monazite in the granitic gneiss. EDS spectra from monazite show characteristic uranium and thorium peaks indicating a possible source material for uranium, thorium, and associated decay products. This is further supported by the detection of uranium and thorium in the whole rock geochemistry. Additionally, allanite is enriched in light rare earth elements (LREE) which are commonly associated with uranium and/or thorium. Allanite is very unstable in a weathering environment and is one of the first minerals to undergo chemical weathering when located below the water table. Based on the rock mineralogy and whole rock geochemistry, the granitic gneiss bears naturally occurring, radioactive minerals in the bedrock upgradient of the Units at Plant McDonough. The uranium and thorium-bearing minerals in the granitic gneiss and similar lithologies are the source of radium in groundwater at the Site.

6) Radionuclides are known to be present in regional aquifer materials and regional groundwater, based on multiple sources/references.

As noted in Section 2.0, numerous studies have evaluated the presence of the radionuclides radium, uranium, and thorium in aquifer solids and groundwater in principal aquifers in the US and abroad (e.g., Chapman et al. 2013; Ranger 1995; Rosson et al. 1991; Szabo et al. 2012; Stackelberg et al. 2018; Vinson et al. 2013). Highlights of several of these papers are presented in the next paragraphs.

In Rosson et al. (1991), the authors reported evaluated radium and uranium levels in public water systems in Georgia. They concluded that the observed radium and uranium levels in public water systems were related to geologic conditions, with the highest levels occurring in groundwater from the Piedmont physiographic region. Albertson (2003) also found that out of 955 samples from public water supplies in the Piedmont, Blue Ridge, and Coastal Plains physiographic provinces, regionally, 476 (49.8%) samples had a combined radium level greater than 5 pCi/L, demonstrating widespread natural occurrence of radium in groundwater above the MCL[1] (Figure 4). Specifically, in Georgia, granite and gneiss aquifers in the Piedmont were identified to have the highest concentrations of naturally occurring radionuclides of any other aquifer types in the state (Coker and Olive 1989).

Radon, a gas byproduct of radium decay, is prevalent in the greater Atlanta area (Ranger 1995). Granites and faulted areas of high metamorphism produced the highest levels of radon in homes, with gneisses of granitic origin being of particular concern. This includes the Brevard Zone, the regional geologic zone in which Plant McDonough is located.

Szabo et al. (2012) concluded that radium concentrations in groundwater were controlled by the geochemical properties of the 15 major aquifer systems they studied, with highest radium levels occurring when radium adsorption was less effective. The Piedmont region was again identified as one where natural exceedances of the radium MCL occur.

In summary, there is ample supporting evidence for the presence of naturally occurring parent elements in regional aquifers in the Site area, the presence of elevated levels of radium in regional groundwater, and the presence of radon, a decay product of radium. Thus, there are multiple lines of evidence for naturally occurring

[1] Albertson (2003) presents a regional analysis of the Piedmont, without a specific focus on Cobb County. The Cobb County, Georgia, samples included in the study consisted of surface water only.

radium in the regional granitic gneiss, and this is also confirmed through testing of the site-specific rock formations. As such, combined radium represents a natural occurrence in the groundwater at Plant McDonough.

6.0 ASD SUMMARY

In summary, this document satisfies the requirements of § 257.95(g)(3)(ii) and § 391 3-4-.14(23)(c) which allows the owner or operator to demonstrate that a source other than the CCR Unit has caused an SSL at monitoring wells B-111D and B-122D. As presented here and in the prior ASD (WSP Golder 2022), multiple lines of evidence supporting the natural source of combined radium are as follows:

- Combined radium SSLs at the Site have been measured only in isolated downgradient bedrock wells and have not been observed in any of the shallow monitoring wells, including those shallow wells adjacent to the deep delineation wells.
- The wells with elevated radium concentrations have low concentrations of CCR indicator parameters.
- Results of petrographic analyses from bedrock samples (including B-111D and upgradient location B-53/DGWA-53) indicate the presence of accessory minerals including pyrite, zircon, epidote, apatite, ilmenite, sphene (titanite), monazite, and allanite. These minerals are known to carry radioactive isotopes such as uranium, thorium, and their related daughter products including radium. Similar mineral composition is expected at B-122D given the similar geology.
- Results of SEM analysis of the bedrock samples identified the minerals allanite, thorite and monazite in the granitic gneiss. EDS spectra from monazite show characteristic uranium and thorium peaks indicating a possible source material for uranium, thorium, and associated decay products.
- Whole-rock geochemistry analyses detected the radiogenic elements uranium, thorium, and potassium in all of the rock samples collected from the Long Island Creek Gneiss, button schist and metagraywacke. Thus, detections of combined radium at the Site are heavily influenced by the natural bedrock aquifer materials.
- Radionuclides are known to be present in regional aquifer materials and regional groundwater, based on multiple sources/references.

This ASD has been prepared to document that the radium SSLs noted at wells B-111D and B-122D are the result of natural occurrences of radionuclides in the subsurface and not a release from the CCR Units.

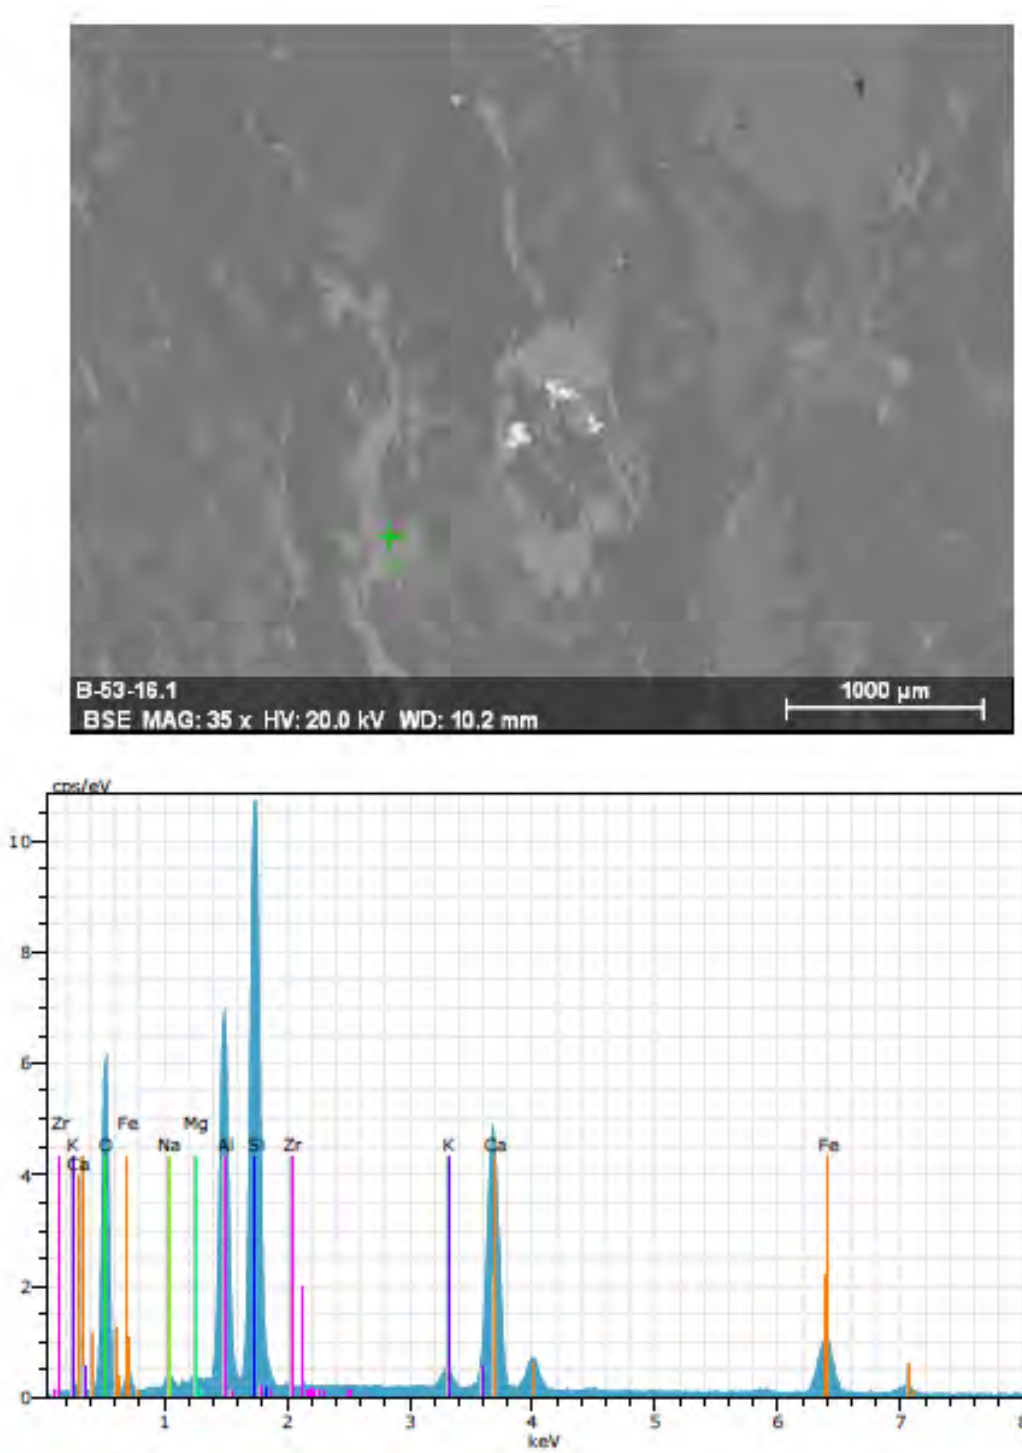
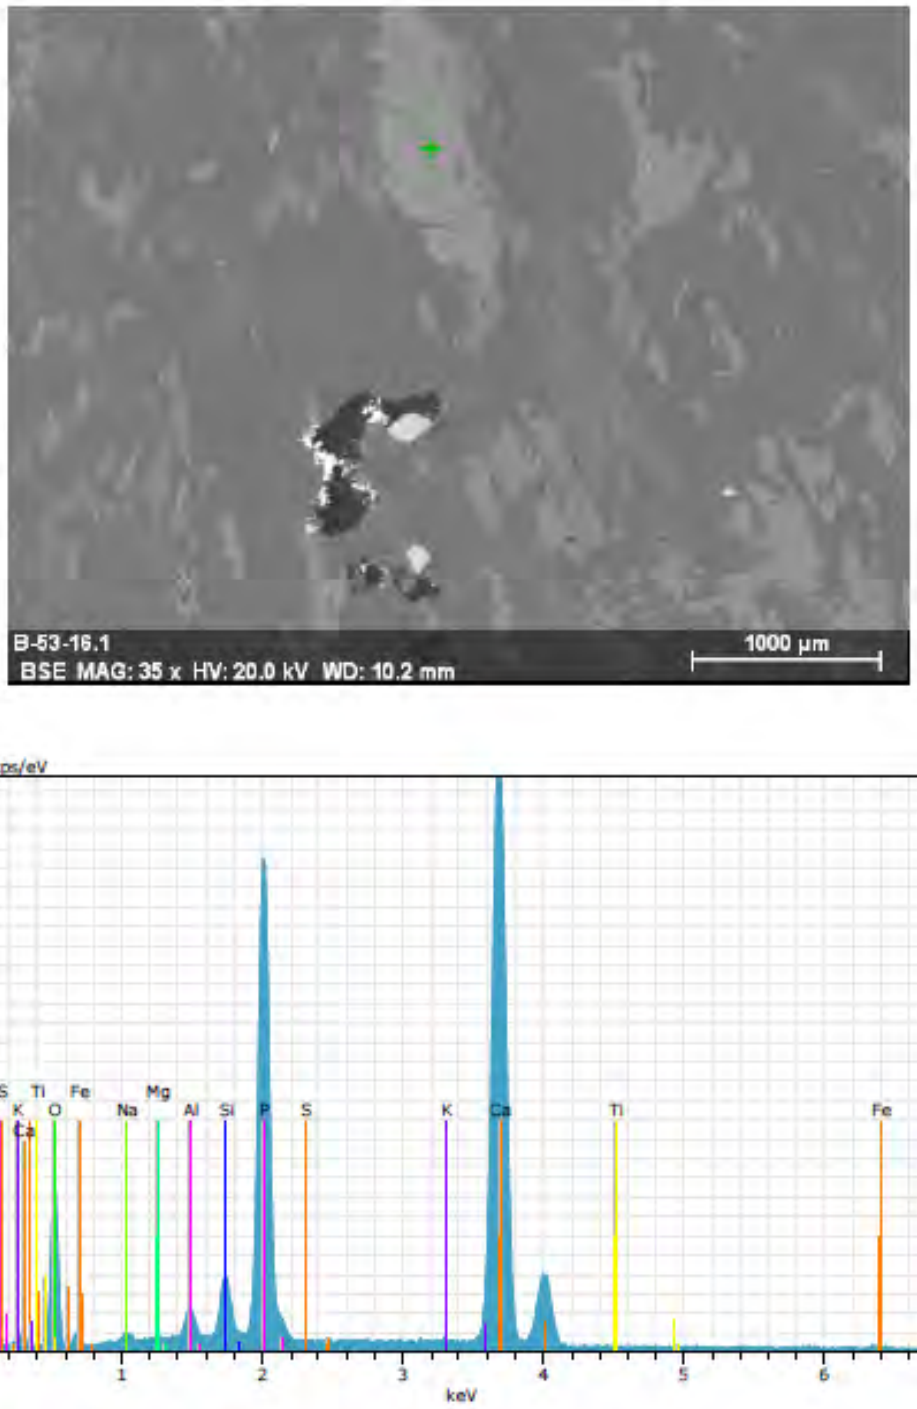
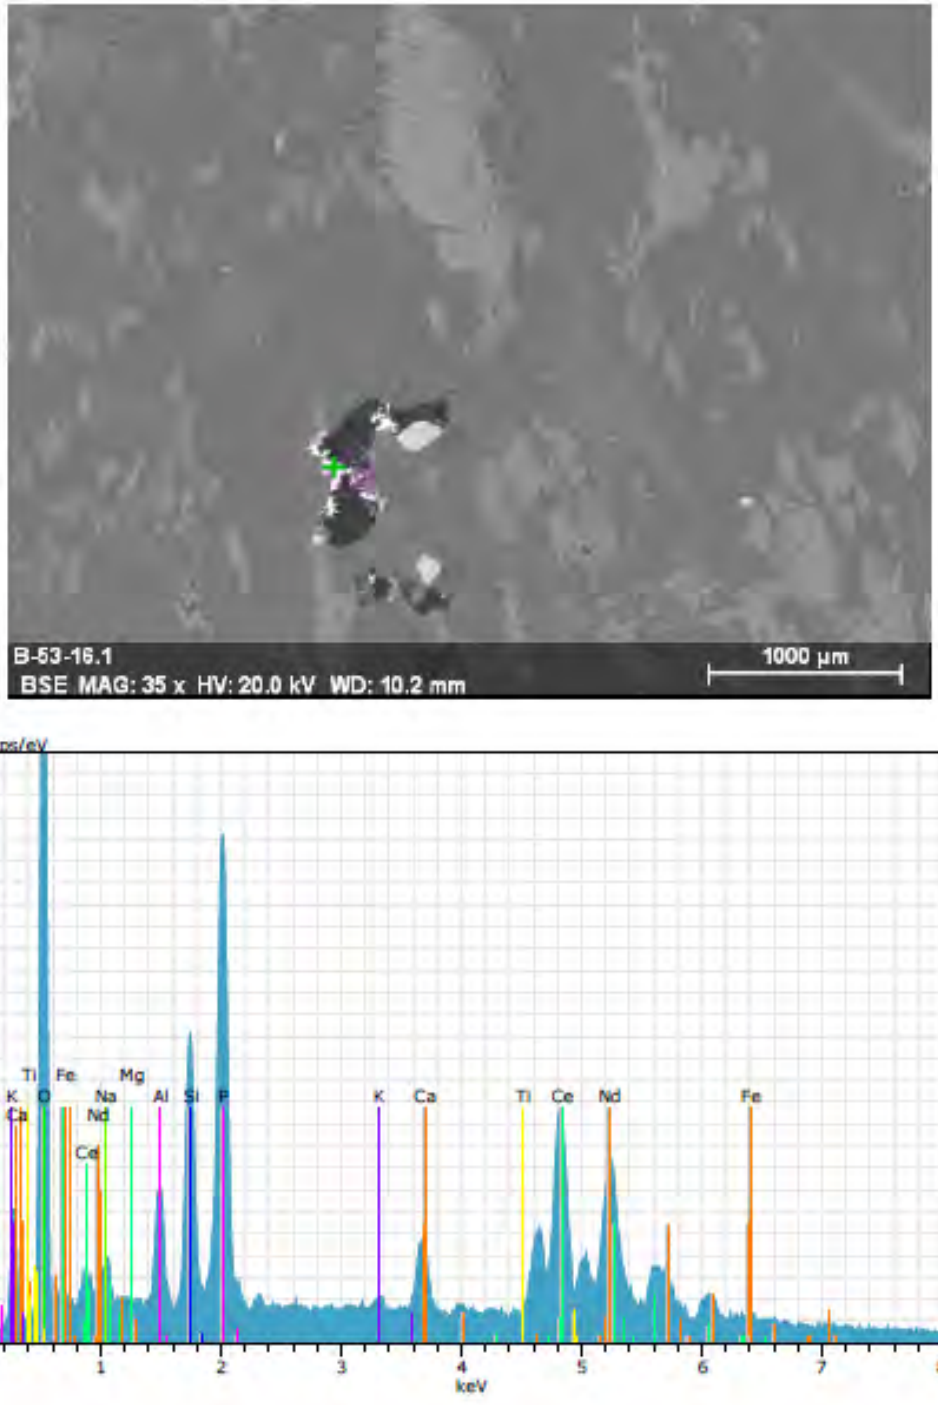
PHOTOMICROGRAPH SAMPLE B-53
16.1 feet



B-53 16.1': Representative photomicrograph of matrix of sample. Thin folia of biotite (dark brown) in a quartzofeldspathic matrix that includes porphyroclastic and partially recrystallized alkali feldspars. High-relief minerals include epidote and zircon.



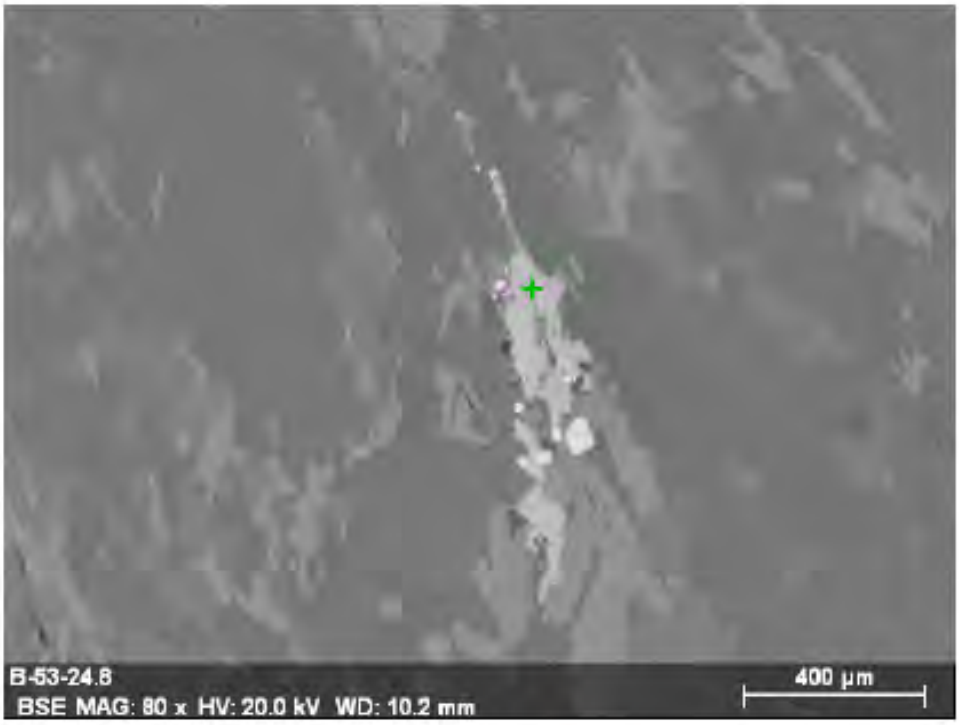
Accessory phases in this sample include pyrite, zircon, epidote, apatite, and monazite.



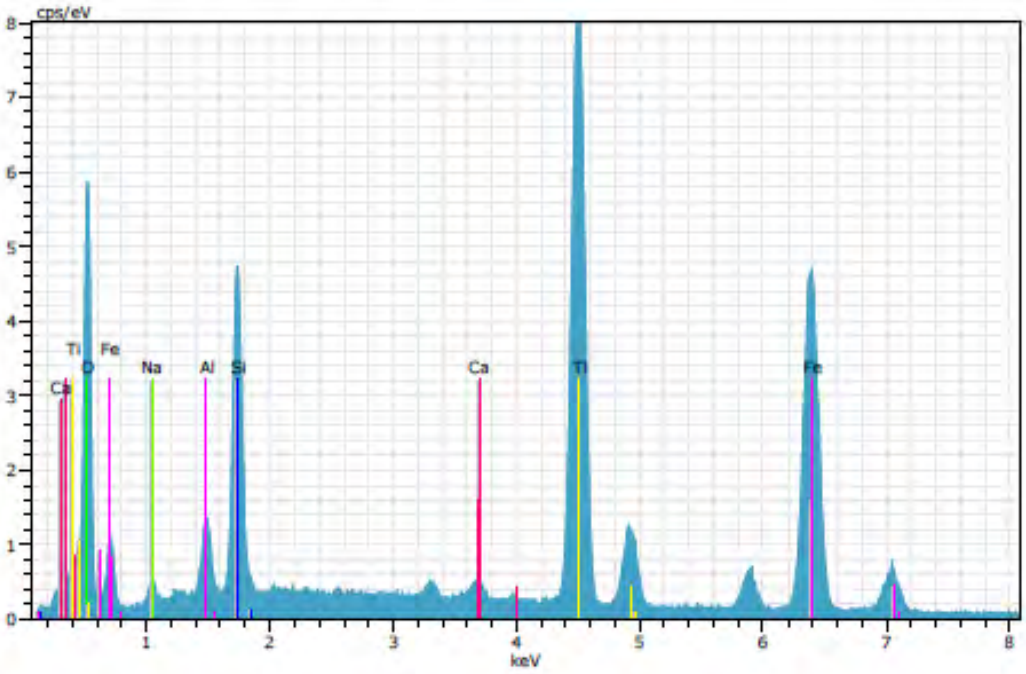
B-53 16.1': BSE image (top) and EDS spectrum (bottom) for **zircon in Long Island Creek Gneiss**; green crosshair on BSE image marks analysis location.

B-53 16.1': BSE image (top) and EDS spectrum (bottom) for **epidote in Long Island Creek Gneiss**; green crosshair on BSE image marks analysis location.

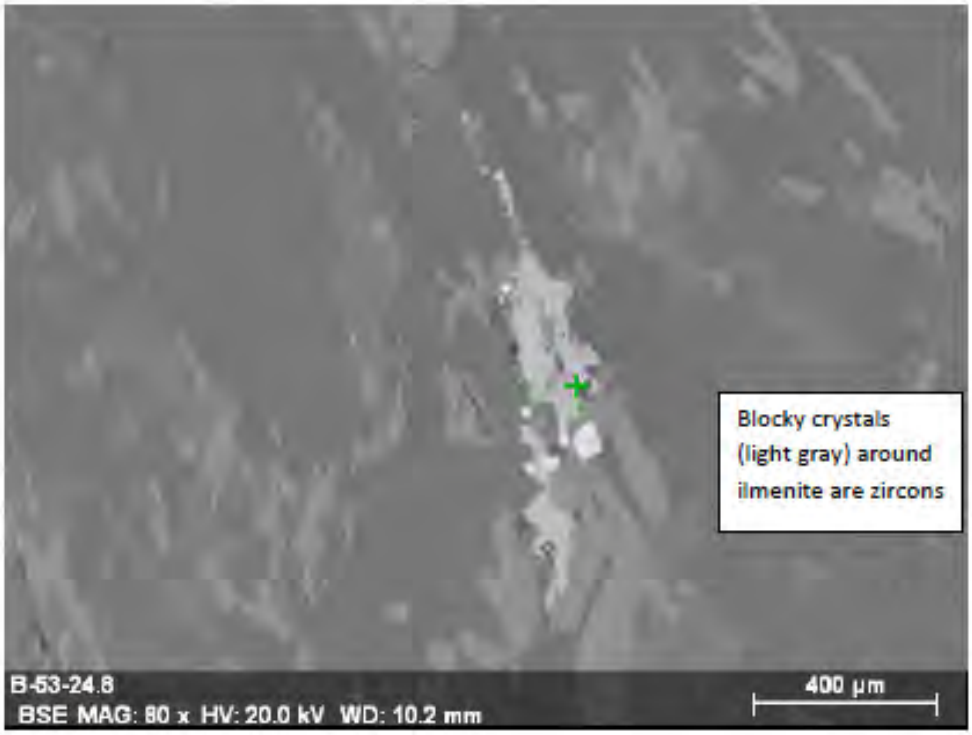
B-53 16.1': BSE image (top) and EDS spectrum (bottom) for **apatite in Long Island Creek Gneiss**; green crosshair on BSE image marks analysis location.



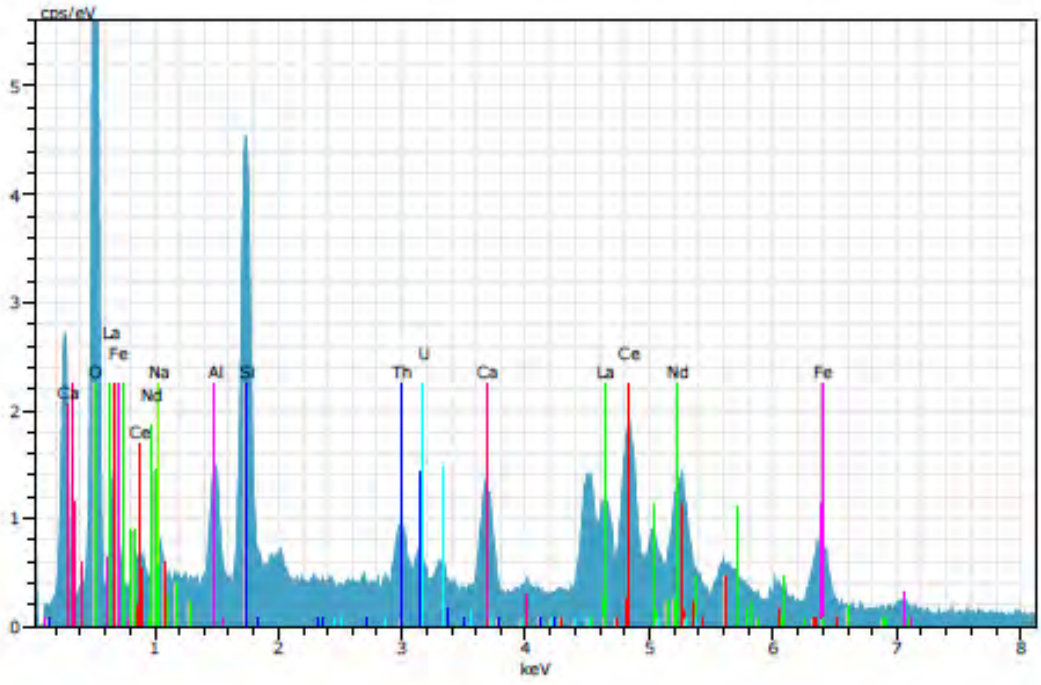
B-53 16.1': BSE image (top) and EDS spectrum (bottom) for **monazite in Long Island Creek Gneiss**; green crosshair on BSE image marks analysis location.



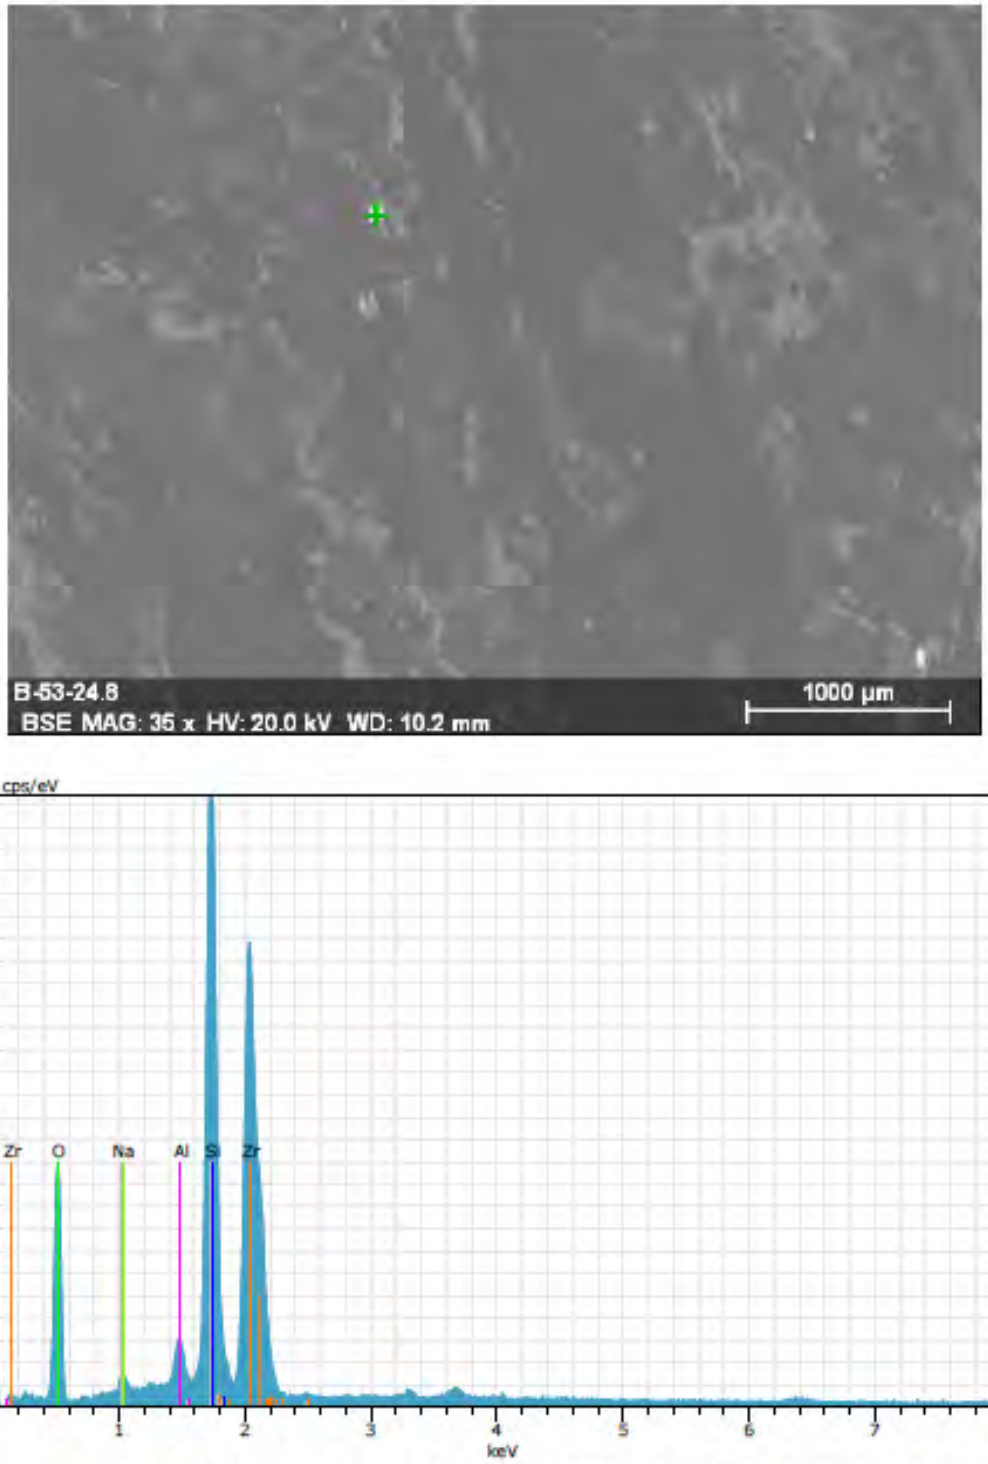
PHOTOMICROGRAPH SAMPLE B-53
24.8 feet



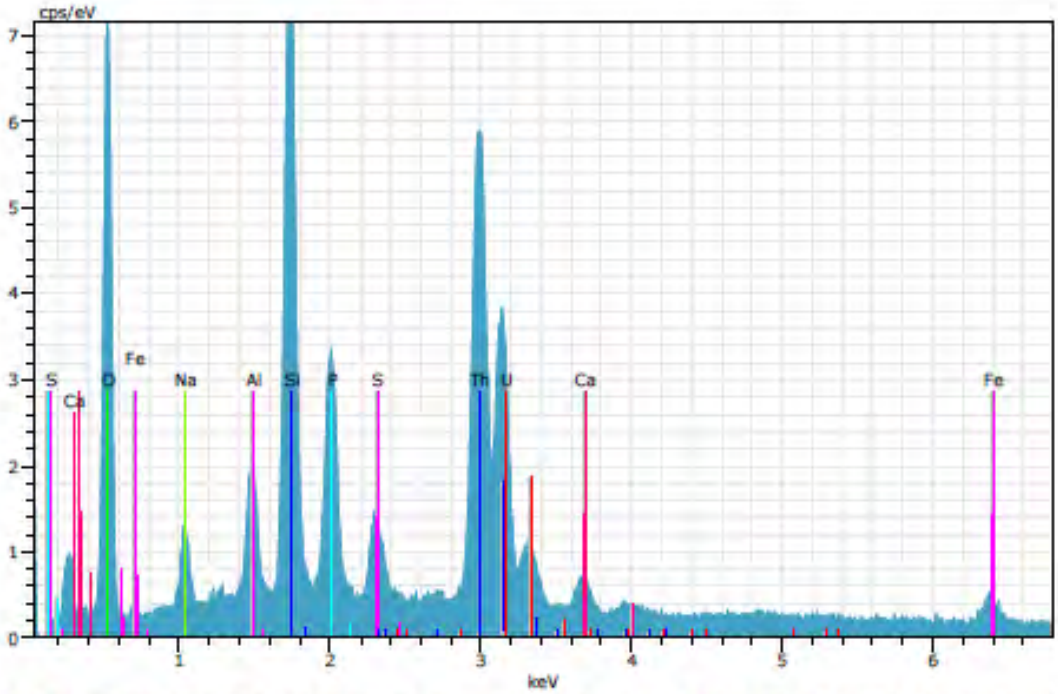
B-53 24.8': Representative photomicrograph of sample matrix, with thin folia of biotite mica (and less abundant muscovite) wrapping around porphyroclastic, partially recrystallized alkali feldspars, ribbon quartz, and small plagioclase.



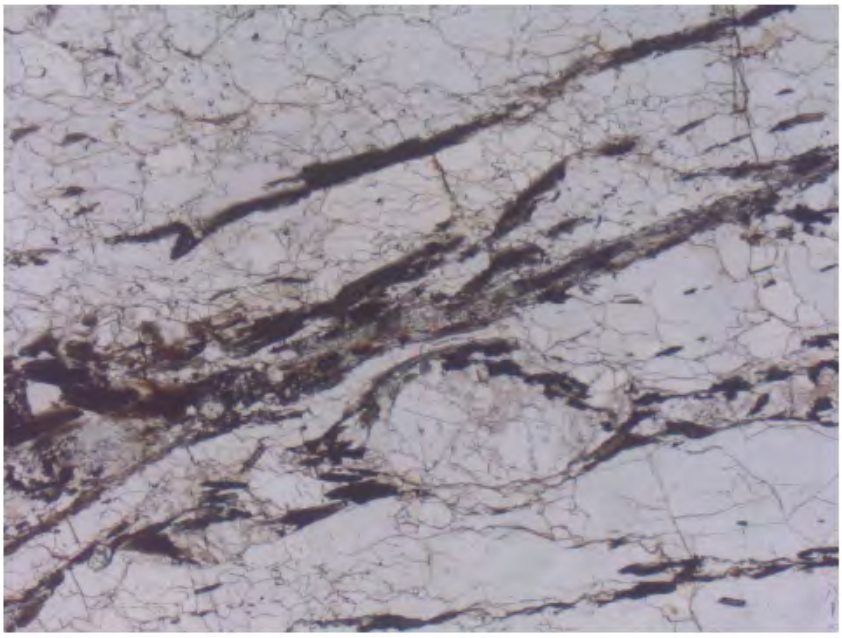
Accessory minerals in this sample include ilmenite, zircon, apatite, and allanite.



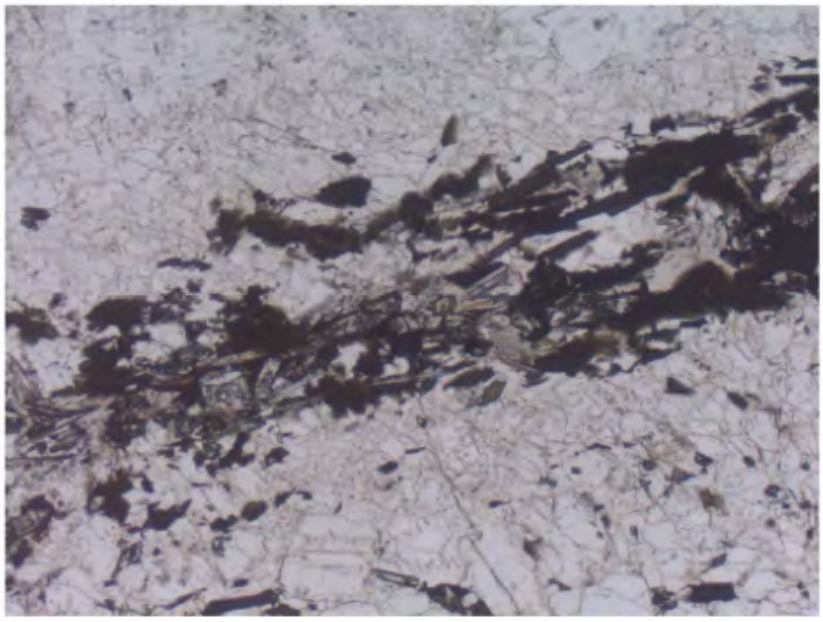
B-53 24.8′: BSE image (top) and EDS spectrum (bottom) for **illmenite in Long Island Creek Gneiss**; green crosshair on BSE image marks analysis location.



B-53 24.8': BSE image (top) and EDS spectrum (bottom) for **allanite in Long Island Creek Gneiss**; green crosshair on BSE image marks analysis location.

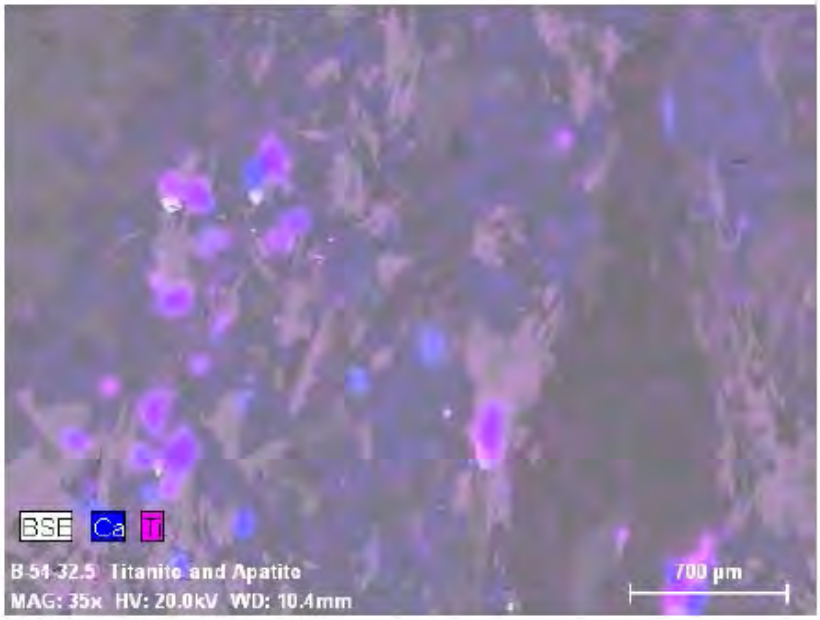


B-53 24.8': BSE image (top) and EDS spectrum (bottom) for **zircon in Long Island Creek Gneiss**; green crosshair on BSE image marks analysis location.

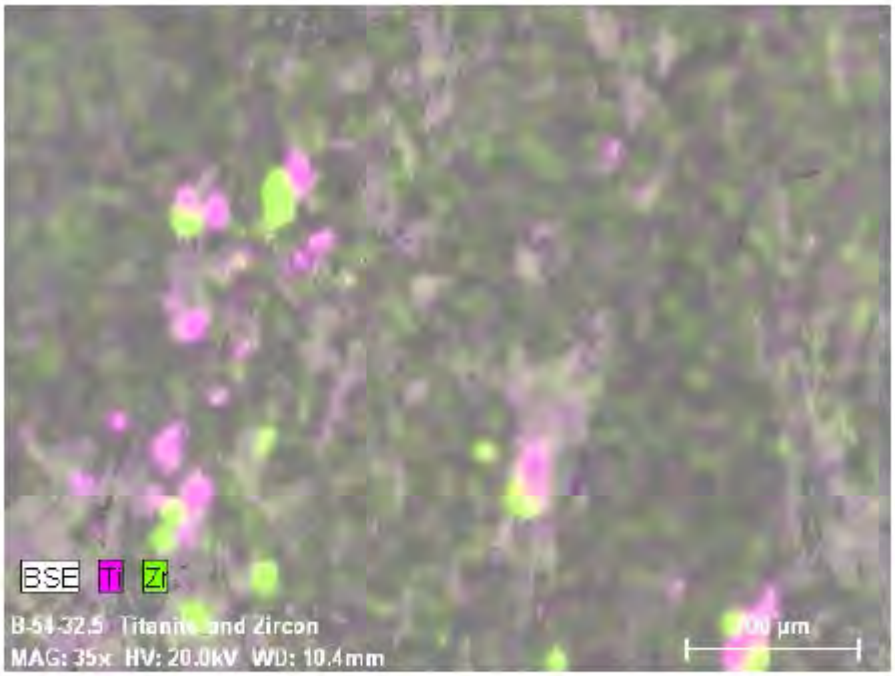


B-53 24.8': BSE image (top) and EDS spectrum (bottom) for **thorite in Long Island Creek Gneiss** (appears metamict); green crosshair on BSE image marks analysis location.

PHOTOMICROGRAPH SAMPLE B-54
32.5 feet

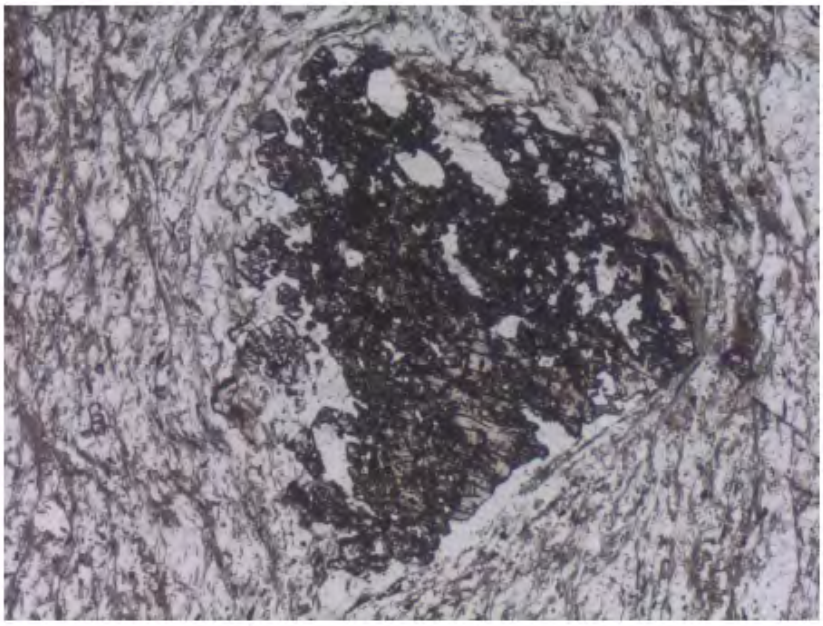


B-54 32.5': This sample contains sheared porphyroclasts of feldspar (small example at center of photo), hosted in a matrix of recrystallized quartz ribbons, biotite, and accessory epidote, titanite, and zircon.

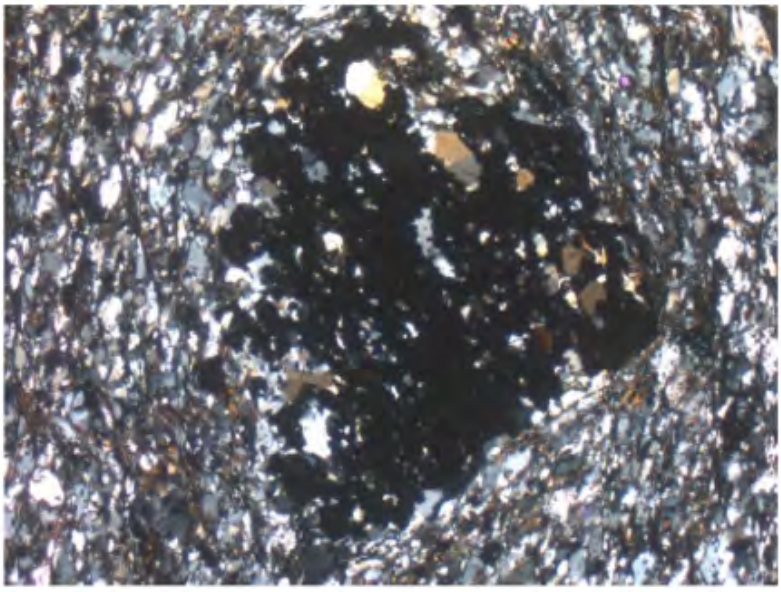


PHOTOMICROGRAPH SAMPLE B-54
32.5 feet

B-54 32.5': This sample contains a small cluster of high-relief titanite and epidote within mica-defined foliation.

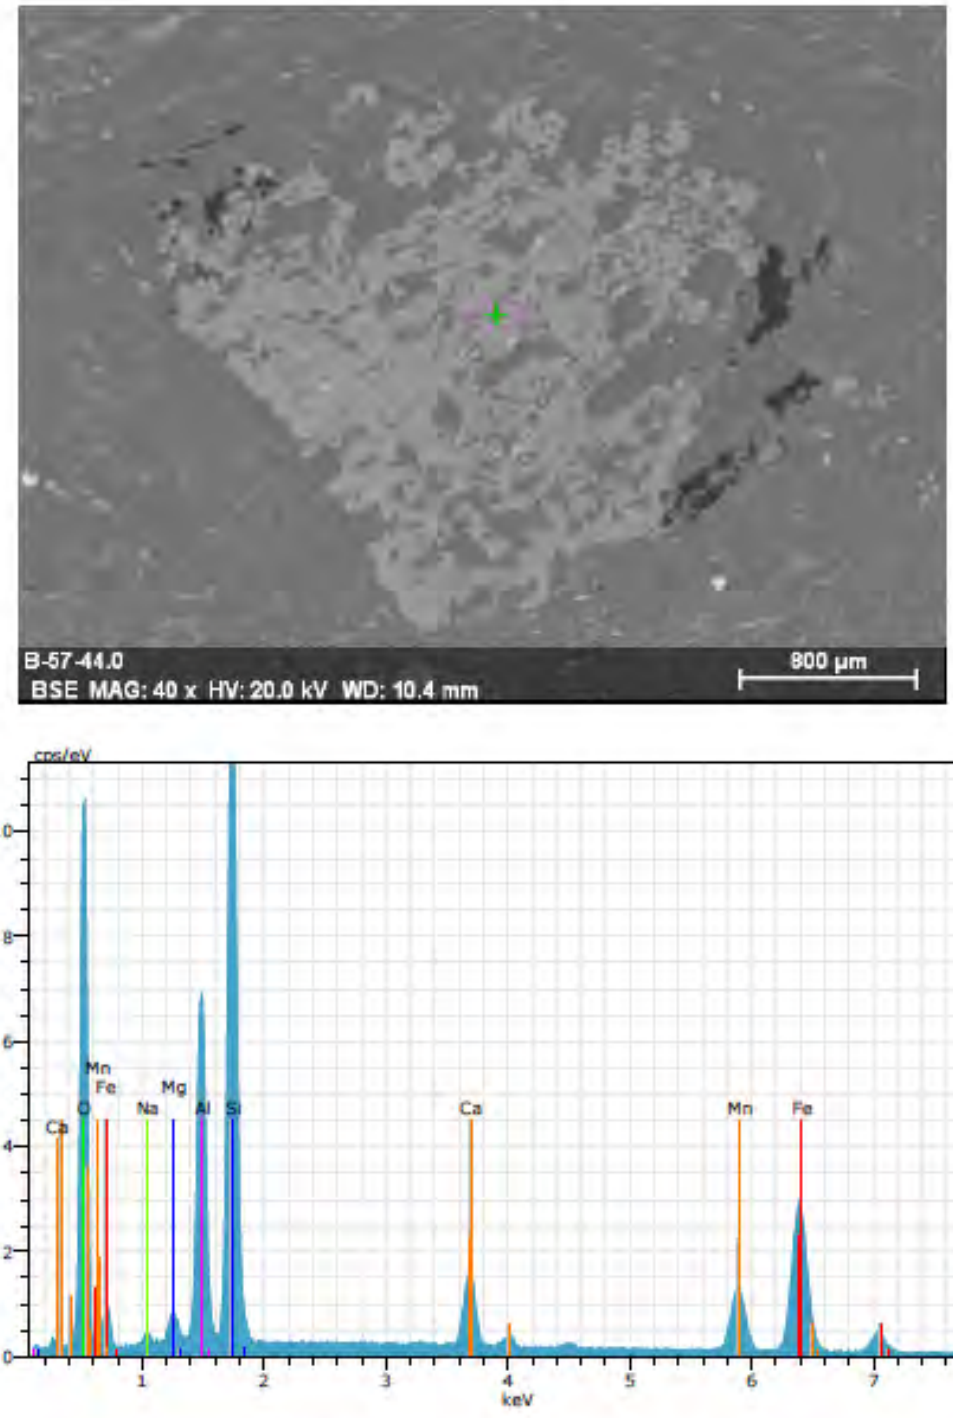


B-54 32.5': False color SEM-EDS chemical map of Ca (blue) and Ti (purple) superimposed on BSE base image; element maps highlight the locations of Apatite (blue) and Titanite (violet) within this area of the sample.



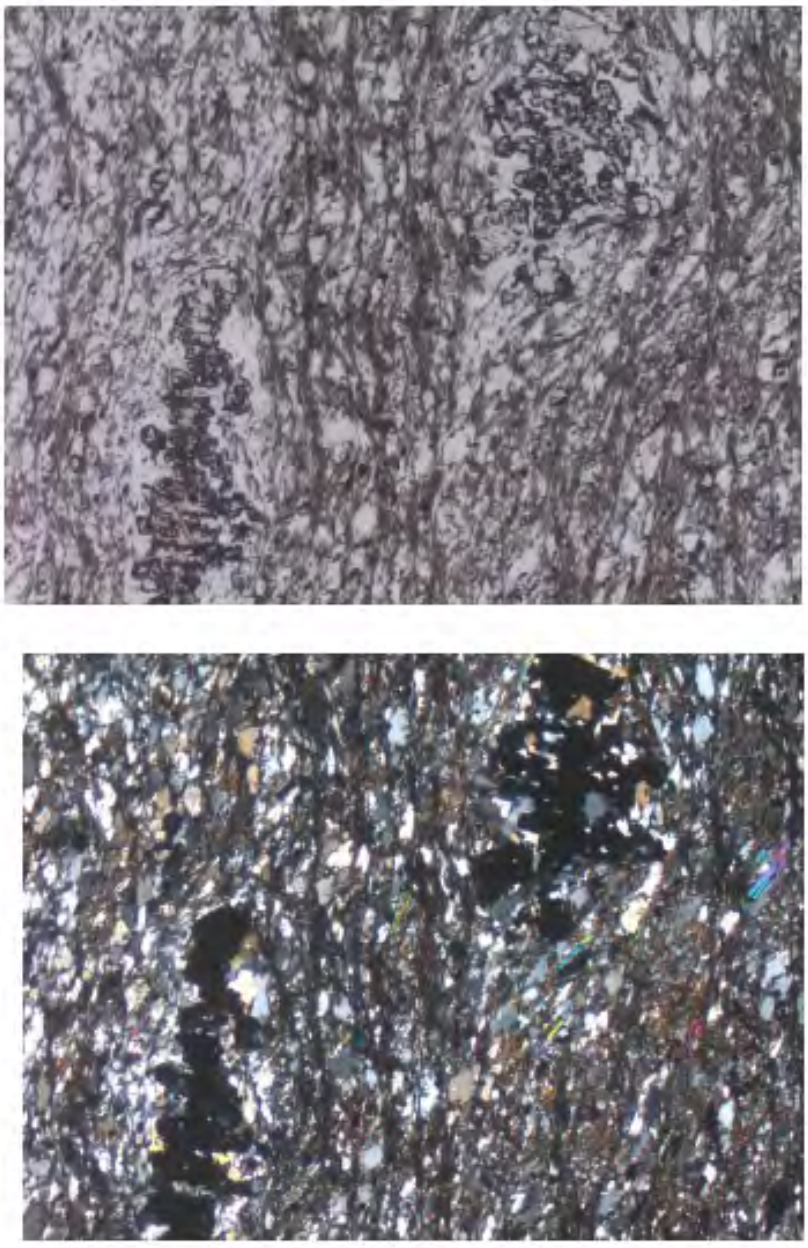
B-54 32.5': False color SEM-EDS chemical map of Ti (purple) and Zr (light green) superimposed on BSE base image; element maps highlight the locations of Titanite (purple) and Zircon (light green and small – note that due to co-location of Zr and P within the energy spectrum, larger apatites are also highlighted) within this area of the sample.

PHOTOMICROGRAPH SAMPLE B-57
44.0 feet

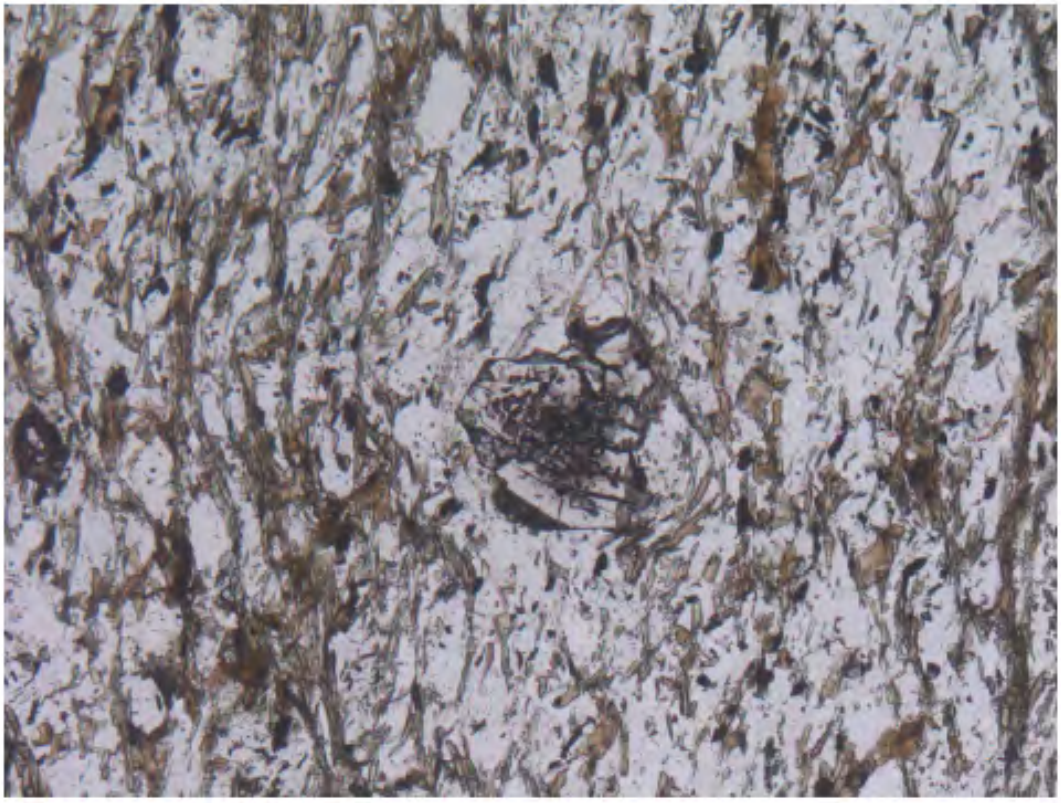


B-57 44.0': Poikiloblastic, anhedral garnet; matrix foliation defined by alignment of fine-grained micas wraps around garnet crystal.

PHOTOMICROGRAPH SAMPLE B-57
44.0 feet

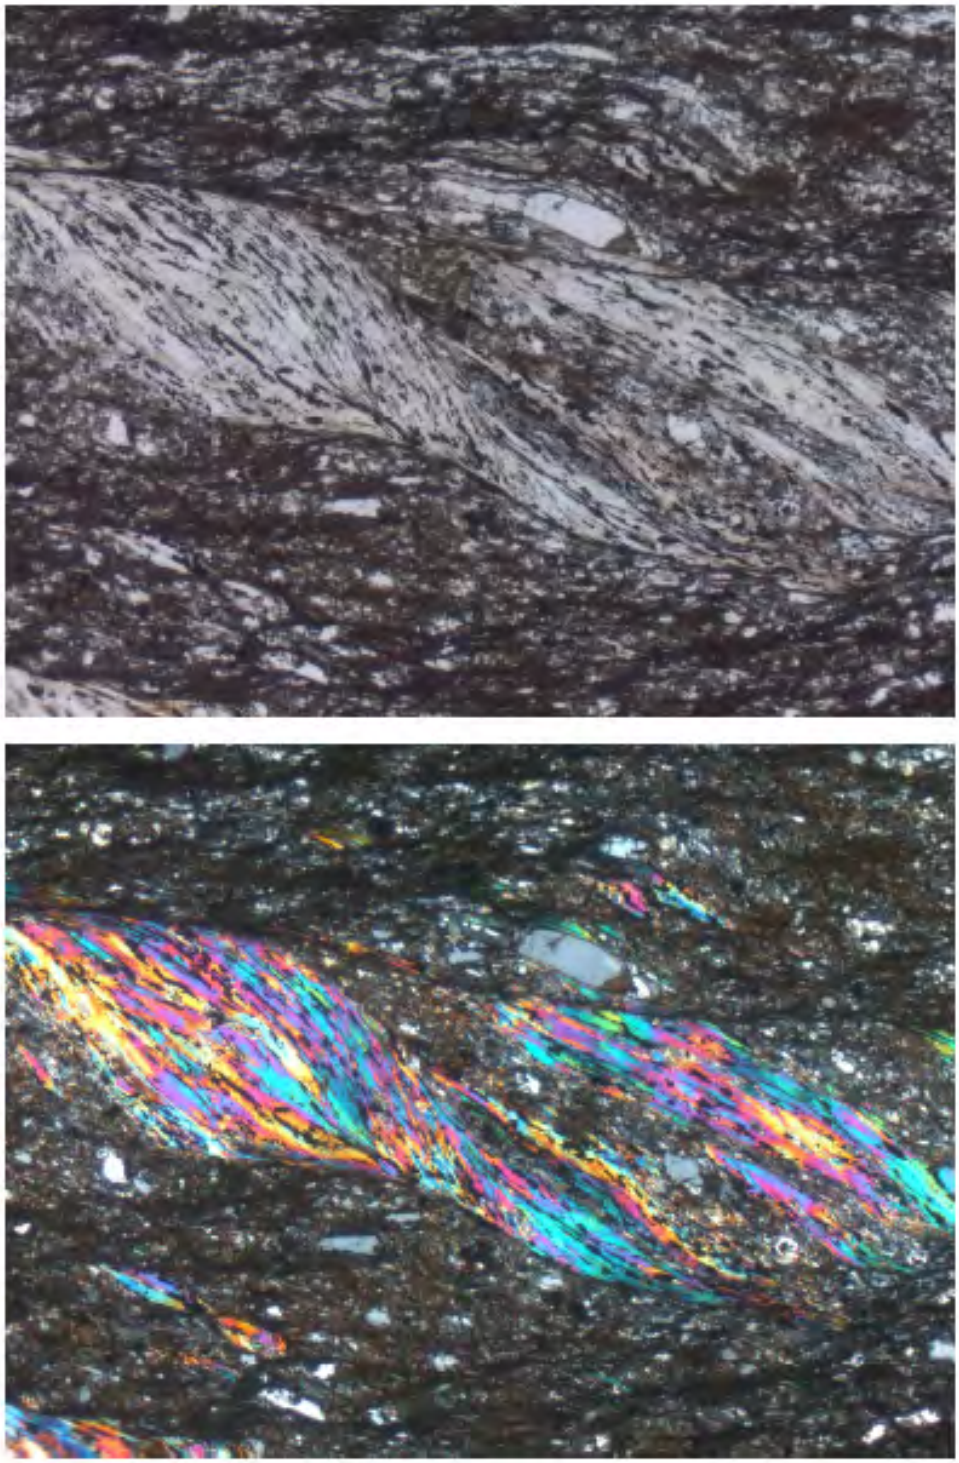


B-57 44.0': Same garnet as above; cross-polarization. Possible alignment of quartz inclusions within garnet defines a fabric that is oblique to matrix foliation.



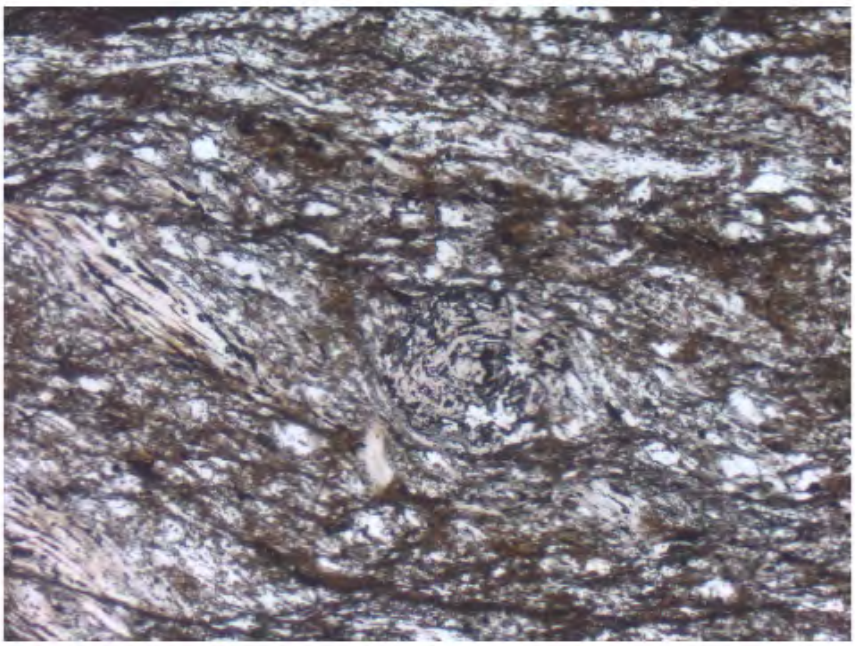
B-57 44.0': BSE (top) and EDS spectrum (bottom) of **garnet** core, green crosshair on BSE image marks analysis location.. Garnet composition is almandine-rich, with significant grossular and spessartine component.

PHOTOMICROGRAPH SAMPLE B-57
44.0 feet



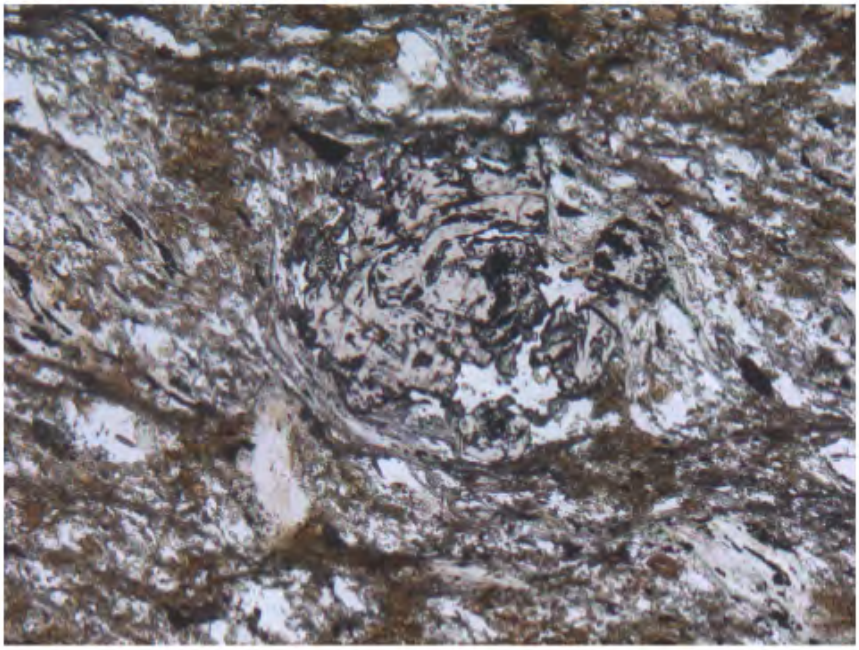
PPL (top) and XPL (bottom) of two anhedral, poikiloblastic garnets. Note increase in abundance of quartz and lack of micas in proximity of garnet, which may suggest local depletion of Al and other nutrients consumed during garnet-forming reaction.

PHOTOMICROGRAPH SAMPLE B-57
44.0 feet



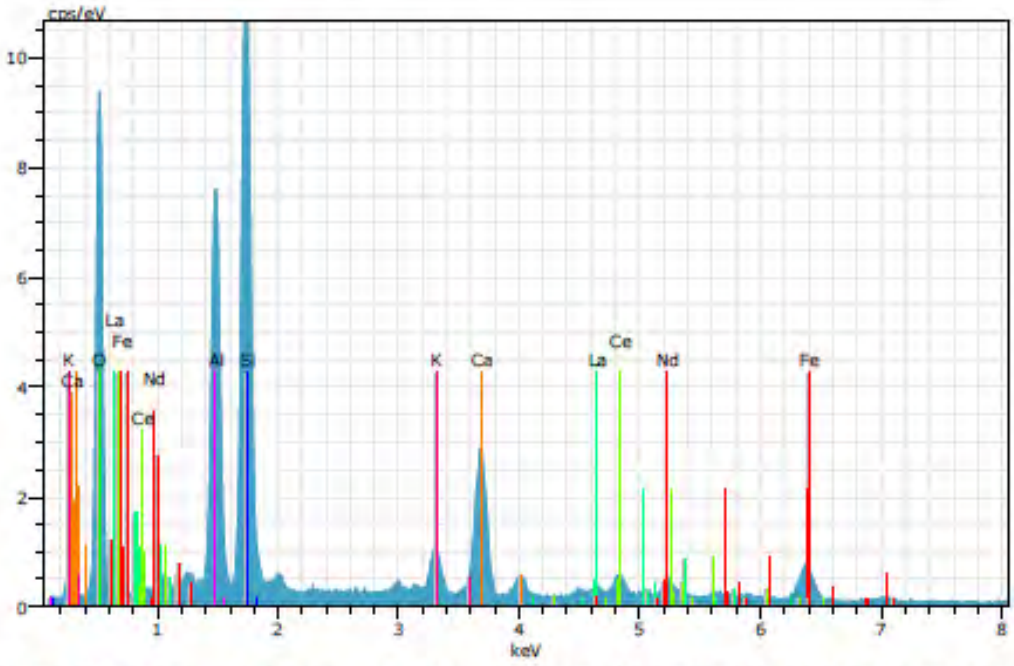
PPL image (5X magnification) of small (sub-mm) subhedral garnet poikiloblast. Note change in inclusion density from core-to-rim.

PHOTOMICROGRAPH SAMPLE B-57
50.5 feet



PPL (top) and XPL (bottom) of mica "fish" in sheared button schist.

PHOTOMICROGRAPH SAMPLE B-57
50.5 feet



Small (< 1 mm) garnet (center of photo).

B-57 50.5': 5X magnification image of garnet in previous image. Note high density of fine-grained inclusions (quartz, opaques) that appear to define a complex, rotated internal fabric. This suggests syndeformational growth of the garnet in this sample.

B-57 50.5': BSE and EDS spectrum of Epidote with allanite component (presence of LREE). Also note apparent sheared apatite (lower center-left) and Epidote (with LREE) rimmed by apatite (top-center). Other bright minerals in BSE include ilmenite, zircon, pyrite, and chalcopyrite.

RE: Project: PLANT MCDONOUGH AP-1
Pace Project No.: 92532118

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on April 08, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

QUALIFIERS

Project: PLANT MCDONOUGH AP-1
Pace Project No.: 92532118

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

Ra	The reported Ra-226 results were determined by hermetically sealing the dried, processed sample in an appropriate-sized can. Each sample was stored for a minimum of 21 days to ensure that equilibrium between Ra-226 and daughters Bi-214 and Pb-214 was achieved. Reported Ra-226 results were inferred from gamma peaks attributable to Bi-214 and Pb-214.

This report shall not be reproduced, except in full,

Notes:
1. mg/L - milligrams per Liter
2. pCi/L - picocuries per Liter
3. S.U. - Standard Units
4. < indicates the substance was not detected above the analytical method detection limit (MDL). The value displayed is the method detection limit.
5. J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value. Therefore, the value displayed is qualified by the laboratory as an estimated number.
6. -- indicates substance not analyzed. DGWC-9 was dry during the January-February 2024 Sampling Event. DGWA-70A was not sampled due to access restriction at the time of sampling.
7. Radium data are a combination of radium isotopes 226 and 228. When results are reported below the MDC (Minimum Detectable Concentration), data is displayed with an accompanying U. The MDC varies depending upon the sample amount and elapsed time of the measurement

Notes:
1. mg/L - milligrams per Liter
2. pCi/L - picocuries per Liter
3. S.U. - Standard Units
4. < indicates the substance was not detected above the analytical method detection limit (MDL). The value displayed is the method detection limit.
5. J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value. Therefore, the value displayed is qualified by the laboratory as an estimated number.
6. -- indicates substance not analyzed. DGWC-9 was dry during the January-February 2024 Sampling Event. DGWA-70A was not sampled due to access restriction at the time of sampling.
7. Radium data are a combination of radium isotopes 226 and 228. When results are reported below the MDC (Minimum Detectable Concentration), data is displayed with an accompanying U. The MDC varies depending upon the sample amount and elapsed time of the measurement.

APPENDIX C
GROUNDWATER ANALYTICAL DATA SUMMARY
January-February 2024
Georgia Power Company
Plant McDonough - Ash Pond 2 and 3/4
Cobb County, Georgia
