

1

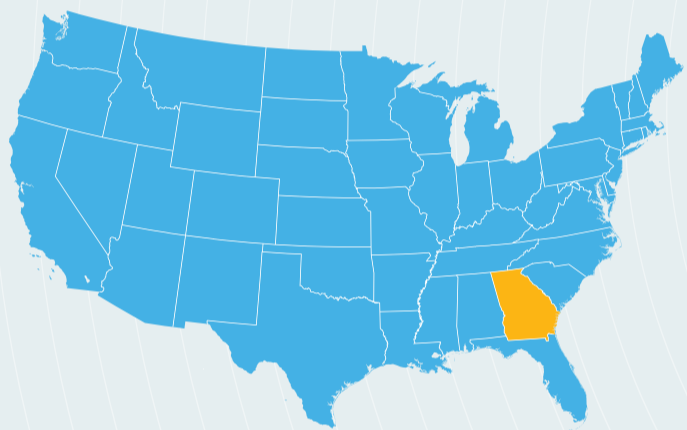

Energy is produced.

2

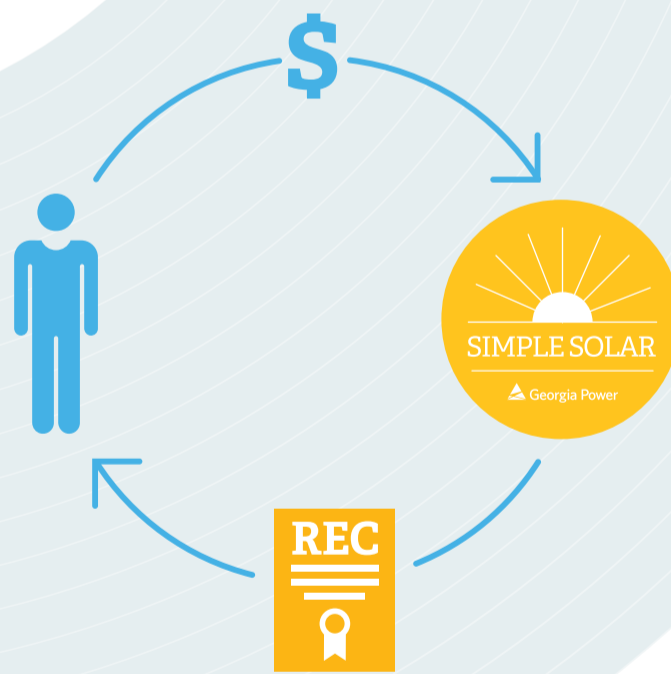

RECs are created.

# What is a REC?

3

Get more from the sun.

1

## Energy is produced.

Solar panels convert rays from the sun into electric energy. This energy is added to the grid to power homes & businesses throughout Georgia.

2

## RECs are created.

The solar energy produced is represented by renewable energy credits (RECs). A REC is created for each megawatt-hour of renewable energy added to the power grid. Through the Simple Solar Program, all customers can easily support solar by purchasing RECs.

3

## Get more from the sun.

By purchasing RECs, customers can claim the usage of solar energy by pairing their energy purchase with a solar renewable energy credit. The purchase of RECs encourages current and future demand for renewable energy and helps build up solar production for future generations.
