Within Limits

Prediction Limit

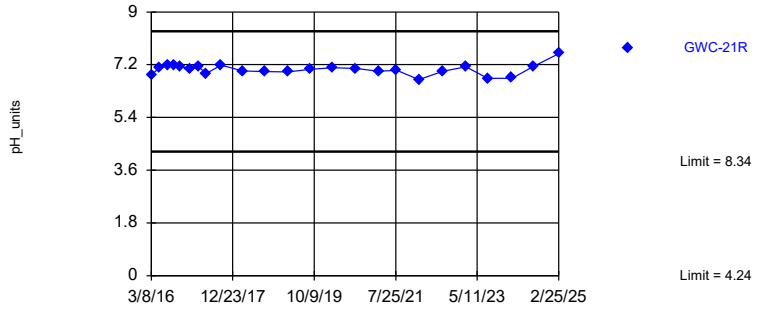
Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 510 background values. Annual per-constituent alpha = 0.002944. Individual comparison alpha = 0.0000982 (1 of 2). Assumes 14 future values.

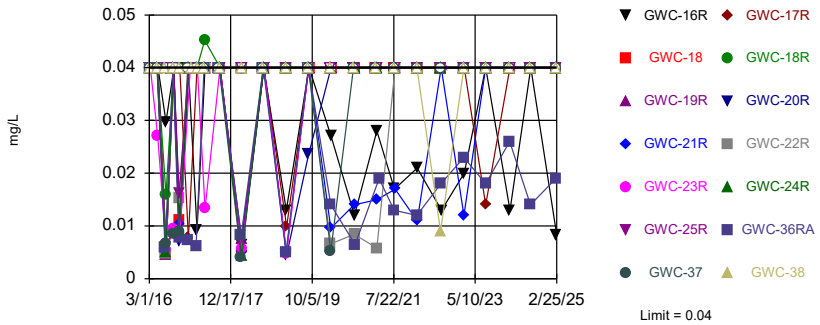
Hollow symbols indicate censored values.
Within Limit

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 511 background values. 67.32% NDs. Annual per-constituent alpha = 0.001472. Individual comparison alpha = 0.0000491 (1 of 2). Comparing 14 points to limit. Assumes 1 future value.

Constituent: Boron Analysis Run 5/20/2025 6:19 PM View: Appendix III Interwell

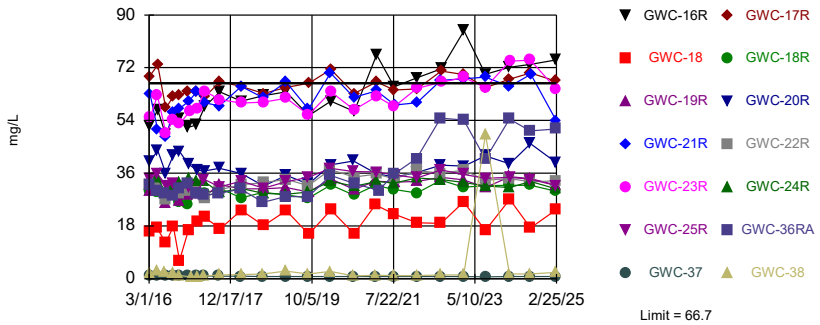
Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG
Exceeds Limit: GWC-16R, GWC-17R

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 512 background values. Annual per-constituent alpha = 0.001472. Individual comparison alpha = 0.0000491 (1 of 2). Comparing 14 points to limit. Assumes 1 future value.

Constituent: Calcium Analysis Run 5/20/2025 6:19 PM View: Appendix III Interwell

GROUNDWATER STATS CONSULTING

January 30, 2026

Southern Company Services
Attn: Ms. Kristen Jurinko
241 Ralph McGill Blvd. NE, Bin 10160
Atlanta, Georgia 30308-3374

Re: Plant Bowen Landfill Cells 1, 2, 9, and 10
Statistical Analysis – August/September 2025 Sample Event

Dear Ms. Jurinko,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the statistical analysis of groundwater quality for the August/September 2025 sample event for Georgia Power Company's Plant Bowen Landfill Cells 1, 2, 9, and 10. The analysis complies with the United States Environmental Protection Agency (USEPA) Coal Combustion Residuals (CCR) Rule 40 Code of Federal Regulations (CFR) 257 Subpart D, the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10 and follows the USEPA Unified Guidance (2009).

Semi-annual sampling is conducted for USEPA's CCR Appendix III parameters, in addition to 16 parameters in accordance with the Georgia EPD's Solid Waste Permit. The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** GWA-1, GWA-2, GWA-2R, GWA-3A, GWA-4RZ, GWA-39RZ, GWA-39Z, GWA-40, GWA-41, GWA-41R, GWA-42, GWA-43, GWA-43R, GWA-50, and GWA-50R
- **Downgradient wells:** GWC-5, GWC-6, GWC-6RZ, GWC-7Z, GWC-8RR, GWC-8Z, GWC-9, GWC-10, GWC-10R, GWC-11, GWC-11R, GWC-12, GWC-13, GWC-13RZ, GWC-14Z, GWC-15R, GWC-15Z, GWC-44, GWC-45, GWC-45R, GWC-46R, GWC-47, GWC-47R, GWC-48, GWC-49R, and GWC-49Z

Note that upgradient well GWA-3 was replaced with GWA-3A, which was first sampled in March 2021. Data from well GWA-3 have been combined with data from replacement well

GWA-3A. A minimum of 8 samples has been collected from new well GWA-3A; therefore, the Mann-Whitney test of medians is used to compare newer observations collected only from well GWA-3A to historical observations collected from well GWA-3 for Appendix I and III constituents evaluated with intrawell prediction limits to determine whether the medians of data are statistically significantly different. For Appendix I and III constituents evaluated with interwell prediction limits, since these limits are constructed using pooled upgradient well data, trend tests are used on the full record for well GWA-3A to determine if statistically significant increasing or decreasing trends in groundwater quality are present. This analysis is discussed further below.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Kristina Rayner, Founder and Senior Statistician for Groundwater Stats Consulting. The analysis was prepared according to the recommended statistical methodology provided in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting and primary author of the USEPA Unified Guidance. In 2024, Georgia Power Company completed a data audit and migration of all CCR related groundwater data to the EarthSoft EQuIS Database Management Program (EQuIS). Data were then exported from EQuIS to Groundwater Stats Consulting (GSC) for use in completing this statistical analysis. Georgia Power Company contracted an independent third-party consultant, Environmental Resources Management (ERM), to support the data audit and migration to EQuIS. Based on the results of the audit and statistical analysis results from GSC, EQuIS will now be used by Georgia Power Company and its third-party geologists and engineers for management of data imported by independent third-party laboratories and data exported by Georgia Power Company and its Consultants. The data will be used in preparation of report submittals, modeling, strategic planning, and other purposes appropriate and consistent with EQuIS's data management and reporting tools and capabilities.

The following constituents are evaluated:

- **CCR Appendix III:** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Georgia EPD Appendix I:** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc

Note that the terms "parameters" and "constituents" are interchangeable throughout this report. When there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of well/constituent pairs with 100% non-detects follows this letter.

Time series plots for all well/constituent pairs are provided and are particularly useful for screening parameters detected in downgradient wells which require statistical analyses (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs.

Due to varying detection limits in background data sets, a substitution of the most recent reporting limit is used for all non-detects. Note that for calculation of intrawell prediction limits, substitution of the most recent reporting limit is performed separately for each well/parameter pair. In some cases, the reporting limit provided by the laboratory contains varying limits for a given parameter; therefore, the substitution may differ from well to well. This generally gives the most conservative limit in each case.

Reporting limit changes may occur depending on laboratory capabilities. In the cases of beryllium, mercury, and selenium, a change in laboratories resulted in a decrease in the respective reporting limits. The historic reporting limits of 0.003 mg/L for beryllium, 0.0005 mg/L for mercury, and 0.01 mg/L for selenium were substituted in place of the most recent reporting limits of 0.0004 mg/L for beryllium, 0.0002 mg/L for mercury, and 0.005 mg/L for selenium, as discussed with Stantec.

Note that observations early in the record were noted to be several standard deviations above all remaining measurements and were flagged as outliers during this analysis for the following well/constituent pairs in order to maintain statistical limits that are conservative from a regulatory perspective:

- Arsenic: GWC-7Z, GWC-8RR, GWC-8Z, and GWC-12
- Barium: GWC-7Z, GWC-8RR, GWC-8Z, GWC-13, and GWC-45
- Cadmium: GWC-8RR
- Calcium: GWC-8Z
- Chromium: GWC-7Z, GWC-8Z, and GWC-45
- Cobalt: GWC-45
- Copper: GWC-45
- Lead: GWC-8RR, GWC-13RZ, and GWC-45
- Nickel: GWC-7Z and GWC-45
- pH: GWC-8Z and GWC-15Z
- Selenium: GWC-7Z
- Vanadium: GWC-8RR

- Zinc: GWC-7Z, GWC-8RR, and GWC-45

In earlier analyses, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the screening to demonstrate that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. A few well/constituent pairs have a limited background data set due either to sampling or truncation of background date ranges. As more samples are collected, these well/constituent pairs will meet the minimum power requirements. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. Power curves were based on the following statistical methods:

Georgia EPD Appendix I Constituents:

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan (antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, vanadium, and zinc)
- Interwell Prediction Limits with 1-of-2 resample plan (beryllium, mercury, and thallium)
- # Constituents: 16
- # Downgradient wells: 26

CCR Appendix III Constituents:

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan – (boron, calcium, fluoride, sulfate, TDS)
- Interwell Prediction Limits with 1-of-2 resample plan – (chloride and pH)
- # Constituents: 7
- # Downgradient wells: 26

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background

sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects.
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric prediction limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In the intrawell case, data for all wells and constituents may be re-evaluated when a minimum of 4 new data points is available to determine whether earlier concentrations are representative of present-day groundwater quality. In some cases, the earlier portion of data are deselected prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Two-Step Statistical Analysis

Intrawell statistical methods, combined with 1-of-2 resample plan, may be used as a conservative first step for identifying potential facility impacts in downgradient wells. Intrawell methods use background data for individual wells and may be overly sensitive to variation in groundwater quality. In particular for nonparametric limits with small background sample sizes, the probability of a false positive is higher than the desired annual sitewide rate of 10%. Therefore, exceedances may occur as a result of variation in groundwater quality rather than facility impacts. A second step can be used to further

evaluate those exceedances and reduce the overall number of statistically significant increases (SSIs) that result from variation in groundwater quality. In instances where intrawell statistical methods identify an apparent SSI, a second step of interwell statistical evaluation may be used to determine whether the measurement exceeds the sitewide background limit based on pooled upgradient well data. This is similar in concept to the procedure used in compliance monitoring programs where an interwell statistical limit is used to determine "background" (USEPA Unified Guidance (2009), Chapter 7, Section 7.5). For the detection monitoring program, if the result does not exceed sitewide (interwell) background, an SSI is not declared.

When the result exceeds the sitewide (interwell) background, the 1-of-2 resample plan allows for collection of an independent resample to confirm or disconfirm the initial finding. A statistically significant increase is not declared unless the resample exceeds the intrawell prediction limit (United State Environmental Protection Agency (USEPA) Unified Guidance, March 2009, Chapter 19). When the resample confirms the initial exceedance, further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). When any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. In cases where intrawell and interwell exceedances are noted and no resamples are collected, the initial exceedance will be considered a confirmed statistically significant increase (SSI).

Trend tests, in addition to interwell prediction limits, are recommended for well/constituent pairs found to have an apparent intrawell SSI. Trend analysis will provide for detection of long-term changes and potential facility impacts at a given well in cases where the concentrations at that well remain below the sitewide upgradient limits. Thus, the two-step approach has additional capability to detect long-term changes at downgradient wells compared to interwell methods alone. While a trend may be identified by visual inspection, a quantification of the trend and its significance is needed to identify whether concentrations are statistically significantly increasing, decreasing, or remaining stable over time. The absence of a statistically significant increasing trend indicates that an initial intrawell exceedance is short-term and may be the result of spatial variation rather than facility impact to groundwater. If a facility impact has occurred, it will likely result in additional exceedances in future sampling events. When a statistically significant increasing trend is noted, additional data may be needed to demonstrate that there is reasonable evidence that the initial intrawell statistical exceedance is a result of spatial variation rather than a result of impact to groundwater quality downgradient of the facility.

Historical Summary of Appendix I & Appendix III Background Screening & Update – Conducted in April 2022

Outlier Analysis

Prior to updating prediction limits, Tukey's outlier test and visual screening were used to evaluate data at all wells through February 2022. Tukey's test identified several potential outliers and confirmed previously flagged values. Some identified values were not flagged because they appeared to be representative of spatial variation. High values that were not identified by Tukey's test, but flagged as outliers, reduced variation among background datasets and resulted in statistical limits that are conservative (in most cases, lower) from a regulatory perspective. Note that previously flagged values for antimony at upgradient wells GWA-1 and GWA-2 along with downgradient well GWC-11R were unflagged during the background update as more recent values were of similar concentration. As mentioned above, any flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. Summary tables of all flagged values follow this report (Figure C).

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells for constituents detected in downgradient wells. The ANOVA assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter. The ANOVA identified variation for all Appendix I & III parameters except for mercury and thallium; therefore, mercury and thallium will be tested with interwell statistical methods.

All parameters were further evaluated as described for the appropriateness of intrawell testing to accommodate the groundwater quality. A summary table of the ANOVA results is included with the reports.

Eligibility of Intrawell Methods

Intrawell limits constructed from carefully screened background data from within each well serve to provide statistical limits that are conservative (i.e., lower) from a regulatory perspective, and that will rapidly identify a change in more recent compliance data from within a given well. This statistical method removes the element of variation from across wells and eliminates the chance of mistaking spatial variation for a release from the facility. Prior to performing intrawell prediction limits, several steps are required to reasonably demonstrate downgradient water quality does not have existing impacts from the practices of the facility.

Exploratory data analysis was used as a general comparison of concentrations in downgradient wells for all Appendix I and III parameters recommended for intrawell analyses to concentrations reported in upgradient wells. Upper tolerance limits are used in conjunction with confidence intervals to determine whether the estimated averages in downgradient wells are higher than observed levels upgradient of the facility. Upper tolerance limits estimate an upper percentile (in this case the 99^{th} percentile) with known confidence level and thus represent the upper range of likely background values. Tolerance limits are similar to prediction limits that are used for detection monitoring, but tolerance limits are constructed to contain a given fraction of the background population whereas prediction limits are constructed to contain a given number of future observations with known confidence level.

In cases where downgradient average concentrations are higher than observed concentrations upgradient for a given constituent, an independent study and hydrogeological investigation would be required to identify local geochemical conditions and expected groundwater quality for the region to justify an intrawell approach. Such an assessment is beyond the scope of services provided by Groundwater Stats Consulting. When there is not an obvious explanation for observed concentration differences in downgradient wells relative to reported concentrations in upgradient wells, interwell prediction limits will initially be selected for the statistical method until further evidence shows that concentrations are due to spatial variation rather than a result of the facility.

Upper Tolerance Limits

Parametric tolerance limits were constructed with a target of 99% confidence and 95% coverage using pooled upgradient well data for each of the Appendix III parameters. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples. As more data are collected, the background population is better represented and the confidence and coverage levels for nonparametric tolerance limits increase.

Confidence Intervals

Confidence intervals were constructed on downgradient wells for each of the Appendix I & III parameters, using the tolerance limits discussed above, to determine intrawell eligibility. When the entire confidence interval is above a background standard for a given parameter, interwell methods are initially recommended as the statistical method. Therefore, only parameters with confidence intervals which did not exceed background standards are eligible for intrawell prediction limits. Note that well/constituent pairs with 100% non-detects were deselected prior to construction of confidence intervals.

Confidence intervals for Appendix I & III parameters exceeded their respective background limits for beryllium, chloride, and pH. Therefore, for Appendix I parameters, interwell methods are recommended for: beryllium, mercury, and thallium. Intrawell methods are recommended for antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, vanadium, and zinc. For Appendix III parameters, interwell methods are recommended for chloride and pH. Intrawell methods are recommended for boron, calcium, fluoride, sulfate, and TDS.

Mann-Whitney - Intrawell

For constituents requiring intrawell prediction limits, the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the medians of historical data through September 2018 for Appendix I constituents and through September 2019 for Appendix III constituents to the medians of the new compliance samples at each well through August 2021. Previously truncated data sets discussed above were also compared to the most recent set of measurements through August 2021. If the medians of the two groups are not significantly different at the 99% confidence level, background data are typically updated to include the newer compliance data. Note that no reports were produced for several well/constituent pairs as there was no variation in the data. Additionally, no Mann-Whitney test was run for barium at downgradient well GWC-13RZ since this

well/constituent pair has been historically evaluated with a trend test in lieu of prediction limits due to due to steadily increasing data since early 2016.

Several statistically significant differences were found between the two groups for the Appendix I and III constituents. Typically, when the test concludes that the medians of the two groups are significantly different, particularly in the downgradient wells, the background data are not updated to include the newer data unless updating results in the similar or more conservative limits, or it can be reasonably justified that the change in concentrations is unrelated to practices at the site. In studies in which at least one of the segments being compared is of short duration, the comparison is complicated by the fact that normal short-term variation may be mistaken for long-term change in medians.

Statistically significant increasing medians were found for the following well/constituent pairs:

Appendix I:

- Barium: GWA-2R, GWA-4RZ (both upgradient), GWC-11R, and GWC-49R
- Cobalt: GWA-4RZ (upgradient)
- Zinc: GWC-47 and GWC-47R

Appendix III:

- Sulfate: GWC-14Z

Each respective record for these well/constituent pairs were updated with compliance data and are discussed below.

For upgradient well/constituent pairs with significant increases in medians (barium in wells GWA-2R and GWA-4RZ and cobalt in well GWA-4RZ), the increases in concentrations are, reportedly, not related to the facility and represent background conditions. For barium in downgradient well GWC-11R and sulfate in downgradient well GWC-14Z, the concentrations are relatively low, and updating the records does not result in high limits compared to limits at upgradient wells for the same constituents. For barium in downgradient well GWC-49R, the compliance samples remain within range of concentrations upgradient of the facility and the pattern is very similar to that of upgradient well GWA-4RZ which has higher reported concentrations; therefore, this well/constituent pair was updated. Regarding zinc in downgradient wells GWC-47 and GWC-47R, the most recent concentrations in these wells are, reportedly, due to variation in groundwater quality, are somewhat similar to historical concentrations detected in these wells, are marginally higher than the current reporting limit, and remain within the

range of upgradient concentrations. Therefore, the records for these well/constituent pairs were updated.

A large number of well/constituent pairs for Appendix I and Appendix III constituents had statistically significant decreasing medians in more recent data. The significant cases are listed in the summary tables for Appendix I and Appendix III Mann-Whitney results. In most cases with significant results, the differences were relatively small, the most recent measurements were similar to measurements in the early part of the record, or the update resulted in similar or more conservative limits. Therefore, the majority of these records were updated. With the exception of pH, which has both an upper and lower prediction limit, decreasing differences will generally result in more conservative limits. For parametric limits, however, a decreasing difference can result in higher variance, which tends to increase the limit. For the following cases, earlier portions of the records were truncated to reduce variability among background data, utilize concentrations that appear to have stabilized, and deselect elevated historical concentrations:

Appendix I:

- Vanadium: GWC-15Z
- Zinc: GWC-5

Appendix III:

- Calcium: GWC-49Z
- Sulfate: GWC-49Z

Any adjustments are shown in the Date Range Table in addition to adjustments listed for chromium, copper, and nickel from previous analysis.

Upgradient Well Trend Tests – Interwell

The Sen's Slope/Mann Kendall trend test was used to evaluate data at upgradient wells for each of the parameters tested using interwell prediction limits--beryllium, mercury, and thallium (Appendix I), and chloride and pH (Appendix III) to identify statistically significant increasing or decreasing trends in background. The results of the trend analyses showed no statistically significant increasing or decreasing trends for Appendix I constituents. For the Appendix III constituents, no statistically significant increasing trends were identified. The following statistically significant decreasing trends were noted:

- Chloride: GWA-1, GWA-39Z, GWA-41, and GWA-41R
- pH: GWA-2R, GWA-41R, GWA-43, GWA-50, and GWA-50R

Truncation of upgradient well records to remove decreasing trends should be done with caution since the higher concentrations could appear in future years at downgradient wells in the absence of facility impacts. Therefore, no adjustments were made at this time. While no statistically significant trend was identified for pH in upgradient well GWA-3A, it was noted that the more recent reported measurements since March 2021 are higher than those reported historically. No truncation of the record was required since interwell prediction limits, which pool upgradient well data, are used to evaluate pH and reported measurements are similar to those reported in neighboring upgradient wells.

Summary of Appendix I & Appendix III Background Update – Conducted in April 2024

Outlier Analysis

Prior to updating prediction limits during the Spring 2024 statistical analysis, Tukey's outlier test and visual screening were used to evaluate data at all wells through August 2023. Tukey's test identified several potential outliers and confirmed previously flagged values. A high value for barium at downgradient well GWC-12 was additionally flagged during the update. Some identified values were not flagged because the measurements appeared to be representative of variation in groundwater quality. High values that were not identified by Tukey's test (such as the highest value for calcium at upgradient well GWA-43, the highest value for TDS at downgradient well GWC-13, the second highest value for chromium at downgradient well GWC-12, and the two lowest values for sulfate at downgradient well GWC-13RZ) were flagged as outliers to reduce variation among background datasets which results in statistical limits that are conservative (in most cases, lower) from a regulatory perspective.

Previously flagged outliers for antimony at upgradient well GWA-1 and downgradient well GWC-45 were unflagged as the measurements were similar to more recent concentrations. Additionally, a previously flagged non-detect measurement for beryllium at well GWA-42 was unflagged since the reporting limit was equal to the most recent reporting limit at that time. As mentioned above, any flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages.

Mann-Whitney - Intrawell

For constituents requiring intrawell prediction limits, the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the medians of historical data through August 2021 for Appendix I & III constituents to the medians of the new compliance samples at each well

through August 2023. Previously truncated data sets discussed above were also compared to the most recent set of measurements through August 2023. If the medians of the two groups are not significantly different at the 99% confidence level, background data are typically updated to include the newer compliance data. Note that no reports were produced for several well/constituent pairs as there was no variation in the data. Additionally, the Mann-Whitney test was not included for barium at downgradient well GWC-13RZ since this well/constituent pair has been historically evaluated with a trend test in lieu of prediction limits. Further discussion is provided below for this well/constituent pair.

Several statistically significant differences were found between the two groups for the Appendix I and III constituents. Typically, when the test concludes that the medians of the two groups are significantly different, particularly in the downgradient wells, the background data are not updated to include the newer data unless updating results in the similar or more conservative limits, or it can be reasonably justified that the change in concentrations is unrelated to practices at the site. In studies where at least one of the segments being compared is of short duration, the comparison is complicated by the fact that normal short-term variation may be mistaken for long-term change in medians.

For well/constituent pairs with significant increases in medians among upgradient wells, the increases in concentrations are, reportedly, not related to the facility and represent background conditions. Records for downgradient well/constituent pairs with statistically significant increases in median concentrations were updated through July/August 2023 since the compliance measurements were similar to or within the range of historic concentrations. Compliance observations for barium and nickel in downgradient well GWC-48 were above historic concentrations within each record, but the increases to resulting statistical limits were marginal and recorded observations for these well/constituent pairs were similar to or lower than concentrations found upgradient of the facility. Therefore, records for these well/constituent pairs were updated.

In previous analyses, barium at downgradient well GWC-13RZ was evaluated using trend tests in lieu of prediction limits due to the increase in concentrations from 2016 – 2017. Since late 2017, reported measurements at this well/constituent pair have stabilized at levels an order of magnitude lower than the MCL of 2.0 mg/L; therefore, a prediction limit was constructed for this well/constituent pair by truncating the earlier portion of the record to use the more recent and stable data that is representative of current groundwater quality conditions.

Several statistically significant decreasing medians were identified in more recent data for Appendix I and Appendix III constituents. The significant cases were submitted with the

report in the summary tables for Appendix I and Appendix III Mann-Whitney results. In most cases, the differences were relatively small, the more recent measurements were similar to measurements in the early part of the record, or updating the records resulted in similar or more conservative (i.e., lower) limits. Therefore, all records were updated.

The following well/constituent pairs identified with decreasing medians, however, had earlier portions of their records truncated in order to reduce variability among background data, remove the influence of any possible trends, utilize concentrations that appear to have stabilized, and remove elevated historic concentrations:

- Barium: GWC-6
- Calcium: GWC-49Z
- Chromium: GWC-13

Although not identified with statistically significantly decreasing medians by the Mann-Whitney test at the 99% confidence level, elevated concentrations early in the record for calcium at downgradient well GWC-14Z, chromium at downgradient well GWC-11R, copper at downgradient well GWC-5, and sulfate at downgradient well GWC-13 were similarly truncated. Lower concentrations early in the record for sulfate at downgradient well GWC-13RZ were truncated from the record to reduce variation. This step resulted in a conservative (i.e., lower) parametric intrawell prediction limit capable of identifying future changes in groundwater quality for these well/constituent pairs.

Any adjustments are shown in the Date Range Table in addition to adjustments listed from previous updates.

Upgradient Well Trend Tests – Interwell

The Sen's Slope/Mann Kendall trend test was used to evaluate data through February 2024 at upgradient wells for each of the parameters tested using interwell prediction limits--beryllium, mercury, and thallium (Appendix I), and chloride and pH (Appendix III) to identify statistically significant increasing or decreasing trends in background at the 99% confidence level. The results of the trend analyses showed no statistically significant increasing or decreasing trends for Appendix I constituents. For the Appendix III constituents, no statistically significant increasing trends were identified. The following statistically significant decreasing trends were noted:

- Chloride: GWA-1, GWA-39RZ, GWA-39Z, GWA-41, GWA-41R, GWA-43R, GWA-50, and GWA-50R

- pH: GWA-1, GWA-2R, GWA-40, GWA-41R, GWA-42, GWA-43, GWA-50, and GWA-50R

Truncation of upgradient well records to remove decreasing trends should be done with caution since the higher concentrations could appear in future years at downgradient wells in the absence of facility impacts. Additionally, resulting statistical limits are representative of current groundwater quality conditions. Therefore, no adjustments were made at this time. As mentioned earlier, while no statistically significant trend was identified for pH in upgradient well GWA-3A, it was noted that the more recent reported measurements since March 2021 are higher than those reported historically. No truncation of the record was required since interwell prediction limits, which pool upgradient well data, are used to evaluate pH and reported measurements are similar to those reported in neighboring upgradient wells.

Mann-Whitney Test & Trend Tests – GWA-3A – Spring 2025

During the Spring 2025 report, a minimum of 8 background samples had been collected from new well GWA-3A since March 2021; therefore, the Mann-Whitney test was used to compare historical observations through March 2020 collected from well GWA-3 to newer observations through August 2024 from replacement well GWA-3A for Appendix I and III constituents. The Mann-Whitney test is a two-sample test which evaluates the medians of the background and compliance data to determine whether the medians are statistically significantly different. Statistically significant differences were identified for the following constituents:

- barium, calcium, copper, fluoride, nickel, sulfate, TDS, and zinc

In the cases where statistically significant differences were identified at the 99% confidence level, the historical record was truncated so that only data from the new well is used in construction of intrawell prediction limits for Appendix I and III constituents. Exceptions include the records for barium and fluoride at well GWA-3A because while the Mann-Whitney test identified statistically significant differences in medians, the more recent concentrations are within the range of historic concentrations from well GWA-3. Additionally, higher measurements earlier in the record remain flagged as outliers for barium at well GWA-3A and are not included in construction of statistical limits. A list of well/constituent pairs using a truncated portion of their record follows this report.

For Appendix I and III constituents evaluated with interwell prediction limits, since these limits are constructed using pooled upgradient well data, trend tests were used on the full record through March 2025 for well GWA-3A to determine if statistically significant

increasing or decreasing trends in groundwater quality are present. No statistically significant trends were identified; therefore, no further action was required.

Evaluation of Georgia EPD Appendix I Constituents – September 2025

Intrawell Prediction Limits

Intrawell prediction limits, combined with a 1-of-2 resample plan, for antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, selenium, silver, vanadium, and zinc were constructed using all available historical data through August 2023, except for the cases mentioned above and listed in the Date Range Table. During this analysis, the earlier portion of the records for barium at downgradient well GWC-8RR and cobalt at downgradient well GWC-45 were truncated to construct intrawell prediction limits that are readily capable of detecting changes in groundwater quality.

Compliance data from the August/September 2025 sample event were compared to these limits (Figure D). No statistical analyses were included for well/constituent pairs with 100% non-detects. A list of those well/constituent pairs follows this letter.

As discussed earlier, the most recent reporting limit is substituted on a well-by-well basis for computing intrawell prediction limits. Therefore, individual wells can have different substitutions for a given parameter depending on what the laboratory has reported for each well.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. Summaries of the Georgia EPD Appendix I prediction limits follow this report. Exceedances were identified for the following well/constituent pairs:

- Barium: GWC-48
- Nickel: GWC-48

Two-Step Approach

When interwell prediction limits were constructed using pooled upgradient well data through August/September 2025 for the apparent intrawell prediction limit exceedances in downgradient wells, no exceedances were identified (Figure E).

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed for beryllium, mercury, and thallium using all historical upgradient well data through August/September 2025 (Figure F). As mentioned above, upgradient well data were reassessed for potential outliers during this analysis. When values in background are flagged as outliers, the measurements may be seen in a lighter font and as a disconnected symbol on the graphs. Previously flagged values were confirmed and no additional values were flagged as outliers at any of the upgradient wells.

Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The August/September 2025 sample from each downgradient well was compared to the background limit to determine whether exceedances over background are present. An exceedance was identified for the following well/constituent pair:

- Mercury: GWC-48

Trend Tests

When an exceedance occurs in a downgradient well, the exceedance is further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level--whether or not the exceedance is confirmed as an SSI--in addition to interwell prediction limits in accordance with the two-step analysis (Figure G). Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site. Statistically significant trends were identified for the following well/constituent pairs:

Increasing trend:

- Barium: GWA-2R, GWA-4RZ (both upgradient), and GWC-48
- Nickel: GWC-48

Decreasing trend:

- Barium: GWA-1, GWA-40, GWA-41, GWA-43, GWA-43R, GWA-50, and GWA-50R (all upgradient)
- Nickel: GWA-50R (upgradient)

Evaluation of CCR Appendix III Parameters – August/September 2025

Intrawell Prediction Limits

Intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed for boron, calcium, fluoride, sulfate, and TDS using all historical data at each well through July/August 2023, (Figure H). Results and a summary table follow this report. The August/September 2025 sample from each downgradient well was compared its respective background limit to determine whether exceedances over background are present. Apparent exceedances were identified for the following well/constituent pairs:

- Calcium: GWA-43R (upgradient)
- Fluoride: GWC-48
- Sulfate: GWC-9

When prediction limit exceedances are identified upgradient of the facility, it is an indication of changing groundwater quality unrelated to practices at the landfill.

Two-Step Approach

When interwell prediction limits were constructed using pooled upgradient well data through August/September 2025 for the apparent intrawell prediction limit exceedances in downgradient wells, no exceedances were identified (Figure I). Values that exceed intrawell background limits are further evaluated using trend tests as discussed below.

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed for chloride and pH using all historical upgradient well data through August/September 2025 (Figure J). Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. Results and a summary table follow this report.

Upgradient well data were reassessed for potential outliers during this analysis. When values in background are flagged as outliers, the measurements may be seen in a lighter font and as a disconnected symbol on the graphs. No values were flagged as outliers at any of the upgradient wells for Appendix III constituents.

When the August/September 2025 samples from each downgradient well were compared to the interwell prediction limits for chloride and pH, a statistically significant exceedance was identified for the following well/constituent pair:

- pH (lower limit): GWC-44

Trend Tests

Data from downgradient well/constituent pairs found to exceed their respective prediction limits were further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level along with upgradient wells for the same constituents. A summary of the trend test results follows this letter (Figure K). Statistically significant trends were identified for the following well/constituent pairs:

Increasing
- None

Decreasing
- Fluoride: GWA-4RZ (upgradient)
- pH: GWA-1, GWA-2R, GWA-4RZ, GWA-40, GWA-41R, GWA-42, GWA-43, GWA-50, GWA-50R (all upgradient), and GWC-44
- Sulfate: GWA-1, GWA-39RZ, GWA-39Z, GWA-43R, and GWA-50R (all upgradient)

Resample Reports – October 2025

A resample was collected in October 2025 for the initial interwell prediction limit exceedance for mercury at downgradient well GWC-48. Resamples were also collected for pH at downgradient wells GWC-48 and GWC-49R. When interwell prediction limits were constructed using pooled upgradient well data through August/September 2025 to evaluate the resamples for mercury and pH (Figures L and M), an exceedance was identified for the following well/constituent pair:

- Mercury: GWC-48

Summary

Georgia EPD Appendix I

Based on the results of the Appendix I prediction limits and the two-step approach, an exceedance was identified for the following well/constituent pair:

- Mercury: GWC-48

CCR Appendix III

Based on the results of the Appendix III prediction limits, an exceedance was identified for the following well/constituent pair:

- pH: GWC-44

Trend tests were performed for all apparent intrawell and interwell exceedances and corresponding upgradient wells. Results are presented in the corresponding tables.

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Bowen Landfill Cells 1, 2, 9 and 10. If you have any questions or comments, please feel free to contact us.

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cadmium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cadmium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cadmium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cadmium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium Analysis Run 12/15/2025 1:45 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Calcium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chloride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 12/15/2025 1:46 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 12/15/2025 1:46 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 12/15/2025 1:46 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 12/15/2025 1:46 PM
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Chromium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Cobalt Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Copper Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Copper Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Copper Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Copper Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Copper Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Copper Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Fluoride Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Lead Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Mercury Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Nickel Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Nickel Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Nickel Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Nickel Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Nickel Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Nickel Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: pH, Field Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Selenium Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Silver Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Silver Analysis Run 12/15/2025 1:46 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Silver Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Silver Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Silver Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Silver Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Sulfate Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: TDS Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Thallium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Vanadium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Vanadium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Box & Whiskers Plot

Constituent: Vanadium Analysis Run 12/15/2025 1:47 PM

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Within Limit

Prediction Limit

Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 37 background values. 72.97% NDs. Well-constituent pair annual alpha = 0.002721. Individual comparison alpha = 0.001361 (1 of 2).

Constituent: Copper Analysis Run 12/15/2025 1:57 PM View: Appendix I Intrawell

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 40 background values. 82.5% NDs. Well-constituent pair annual alpha = 0.002316. Individual comparison alpha = 0.001159 (1 of 2).

Constituent: Copper Analysis Run 12/15/2025 1:57 PM View: Appendix I Intrawell

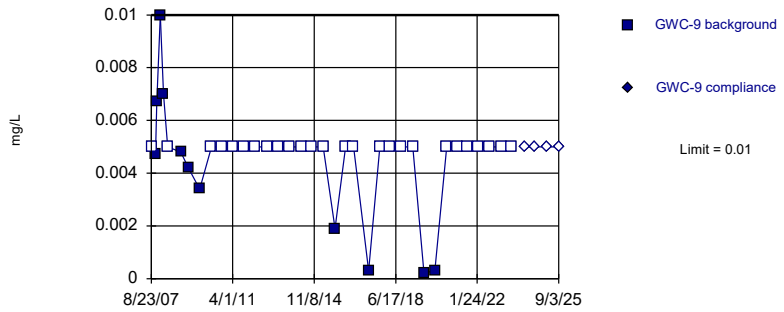
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Intrawell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 37 background values. 70.27% NDs. Well-constituent pair annual alpha = 0.002721. Individual comparison alpha = 0.001361 (1 of 2).

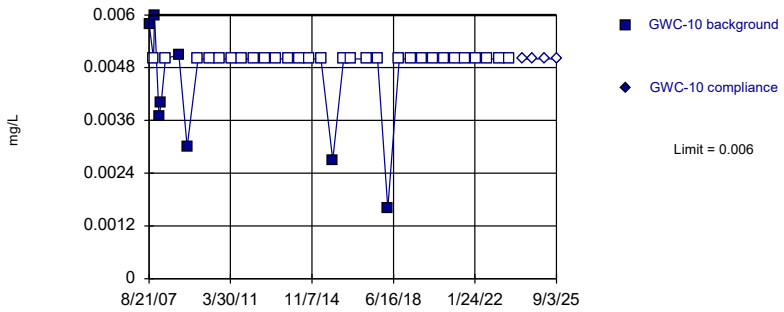
Constituent: Copper Analysis Run 12/15/2025 1:57 PM View: Appendix I Intrawell
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Intrawell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 37 background values. 78.38% NDs. Well-constituent pair annual alpha = 0.002721. Individual comparison alpha = 0.001361 (1 of 2).

Constituent: Copper Analysis Run 12/15/2025 1:57 PM View: Appendix I Intrawell
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, & 10

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
