Hollow symbols indicate censored values.

Within Limit

Prediction Limit

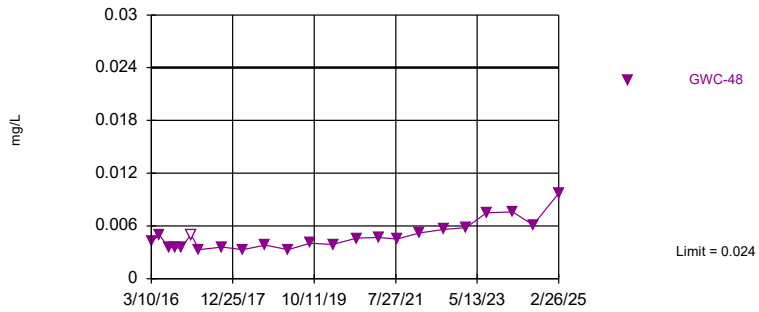
Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 389 background values. 63.75% NDs. Annual per-constituent alpha = 0.002543. Individual comparison alpha = 0.00004896 (1 of 2). Assumes 25 future values.

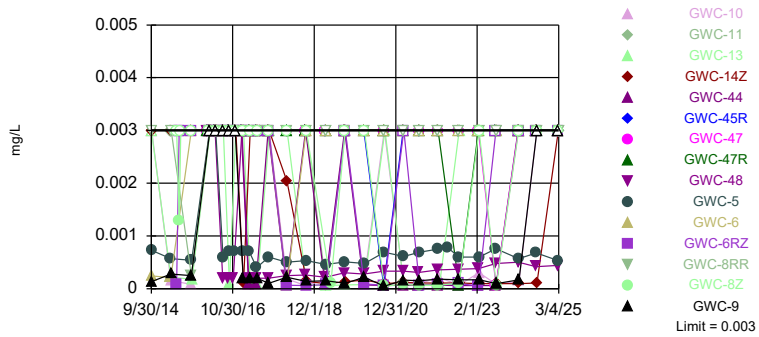
Within Limit

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 376 background values. 92.02% NDs. Annual per-constituent alpha = 0.002543. Individual comparison alpha = 0.00004896 (1 of 2). Comparing 15 points to limit. Assumes 11 future values.

Constituent: Beryllium Analysis Run 6/23/2025 2:23 PM View: Appendix I Interwell
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 21 background values. 38.1% NDs. Well-constituent pair annual alpha = 0.007982. Individual comparison alpha = 0.003999 (1 of 2).

Constituent: Boron, total Analysis Run 5/14/2025 3:30 PM View: Appendix III Intrawell
Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 347 background values. 7.781% NDs. Annual per-constituent alpha = 0.002543. Individual comparison alpha = 0.00004896 (1 of 2). Assumes 25 future values.

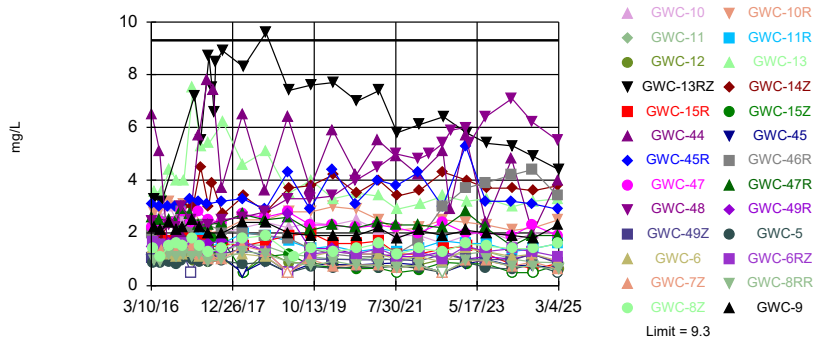
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 360 background values. 2.222% NDs. Annual per-constituent alpha = 0.002543. Individual comparison alpha = 0.00004896 (1 of 2). Comparing 26 points to limit.

Constituent: Chloride, Total Analysis Run 5/13/2025 1:44 PM View: Appendix III Interwell

Plant Bowen Client: Southern Company Data: Bowen 1, 2, 9, and 10

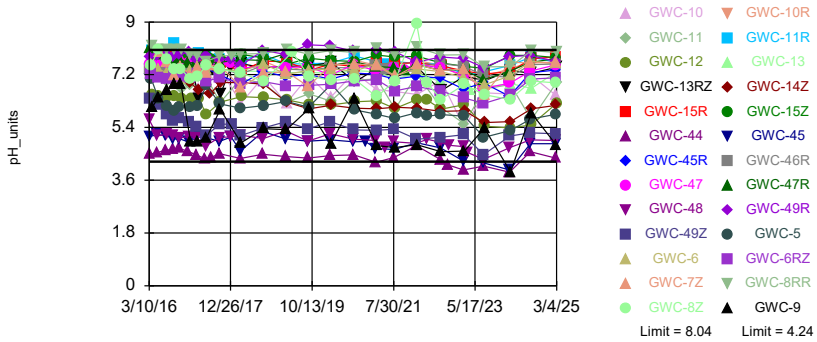
Within Limits

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 370 background values. Annual per-constituent alpha = 0.005086. Individual comparison alpha = 0.00009793 (1 of 2). Comparing 26 points to limit.

Within Limits

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 370 background values. Annual per-constituent alpha = 0.005086. Individual comparison alpha = 0.00009793 (1 of 2). Assumes 25 future values.

GROUNDWATER STATS CONSULTING

August 29, 2025

Southern Company Services
Attn: Ms. Kristen Jurinko
241 Ralph McGill Blvd NE, Bin 10160
Atlanta, Georgia 30308-3374

Re: Plant Bowen Landfill Cells 3 & 4
February 2025 Statistical Analysis

Dear Ms. Jurinko,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the statistical analysis of groundwater quality for the February 2025 sample event for Georgia Power Company's Plant Bowen Landfill Cells 3 & 4. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Semi-annual sampling is conducted for USEPA's CCR Appendix III parameters, in addition to 16 parameters in accordance with the Georgia EPD's Solid Waste Permit. The monitoring well network, as provided by Southern Company Services, consists of the following:

The current monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient**: GWA-1, GWA-2, GWA-2R, GWA-3A, GWA-4RZ, GWA-39RZ, GWA-39Z, GWA-40, GWA-41, GWA-41R, GWA-42, GWA-43, GWA-43R, GWA-50, GWA-50R,
  - **Abandoned Upgradient**: GWA-51RZ, GWA-52, GWA-53, GWA-53R, GWA-54, GWA-55, GWA-55R, and GWA-56

- **Downgradient**: GWC-16R, GWC-17R, GWC-18, GWC-18R, GWC-19R, GWC-20R, GWC-21R, GWC-22R, GWC-23R, GWC-24R, GWC-25R, and GWC-36A, GWC-36RA, GWC-37, and GWC-38 (formerly GWA-36A, GWA-36RA, GWA-37, and GWA-38, respectively)

Note that upgradient well GWA-3 was replaced with well GWA-3A, which was first sampled in March 2021. As discussed, data from well GWA-3 have been combined with data from replacement well GWA-3A. A minimum of 8 samples has been collected from new well GWA-3A; therefore, the Mann-Whitney test of medians is used to compare newer observations collected only from well GWA-3A to historical observations collected from well GWA-3 for Appendix I and III constituents evaluated with intrawell prediction limits to determine whether the medians of data are statistically significantly different. In cases where statistically significant differences are identified at the 99% confidence level, the historical record is truncated so that only data from the new well is evaluated for the Appendix I and III constituents with intrawell prediction limits. This process is described below. For Appendix III constituents evaluated with interwell prediction limits, since these limits are constructed using pooled upgradient well data, trend tests will be used on the full record for well GWA-3A to determine if statistically significant increasing or decreasing trends in groundwater quality are present.

As described in the Minor Modification demonstration, data from upgradient wells GWA-51RZ, GWA-52, GWA-53, GWA-53R, GWA-54, GWA-55, GWA-55R, and GWA-56 (50-series upgradient wells), which represent historical groundwater quality upgradient of Cells 3 & 4 based on groundwater flow, are pooled with existing upgradient wells for the purpose of combining data for construction interwell prediction limits. While the 50-series upgradient wells are no longer sampled, data from these wells are included in the construction of interwell statistical limits, but are not evaluated with intrawell prediction limits.

Note that downgradient wells GWA-36A, GWA-36RA, GWA-37, and GWA-38 are referenced as GWC wells, as mentioned above, similar to neighboring downgradient wells. Well GWC-36A was originally installed as a replacement well for upgradient well GWA-36, which was abandoned due to a damaged well casing in 2022, but has been redesignated as a downgradient well, as discussed earlier. Well GWC-36A will be evaluated with intrawell prediction limits once the required minimum 8 samples are available.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Kristina Rayner, Senior Statistician and Founder of Groundwater Stats Consulting. The analysis was prepared according to the recommended statistical

methodology provided in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting and primary author of the USEPA Unified Guidance.

The constituents listed below are evaluated in this report. The terms "parameters" and "constituents" are interchangeable.

- **CCR Appendix III:** boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids (TDS)
- **Georgia Appendix I EPD:** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix I well/constituent pairs with 100% non-detects follows this letter.

Time series plots for all well/constituent pairs are provided and are particularly useful for screening parameters detected in downgradient wells which require statistical analyses (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Due to varying detection limits in background data sets, a substitution of the most recent reporting limit is used for all non-detects. Note that for calculation of intrawell prediction limits, substitution of the most recent reporting limit is performed separately for each well/parameter pair. In some cases, the reporting limit provided by the laboratory contains varying limits for a given parameter; therefore, the substitution may differ from well to well. This generally gives the most conservative limit in each case.

Reporting limit changes may occur depending on laboratory capabilities. In the cases of beryllium, mercury, and selenium, a change in laboratories resulted in a decrease in the reporting limits. The historic reporting limits of 0.003 mg/L for beryllium, 0.0005 mg/L for mercury, and 0.01 mg/L for selenium were substituted in place of the most recent reporting limits of 0.0005 mg/L for beryllium, 0.0002 mg/L for mercury, and 0.005 mg/L for selenium, as discussed with Stantec.

In earlier analyses, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the update to demonstrate that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations. Power curves were based on the following statistical methods:

Georgia EPD Appendix I Constituents:

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan (all parameters)
- # Constituents: 16
- # Downgradient wells: 15

CCR Appendix III Constituents:

- Semi-Annual Sampling
- Intrawell Prediction Limits with 1-of-2 resample plan – (chloride, pH, sulfate, and TDS)
- Interwell Prediction Limits with 1-of-2 resample plan – (boron, calcium, fluoride)
- # Constituents: 7
- # Downgradient wells: 15

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique

adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In the intrawell case, data for all wells and constituents may be re-evaluated when a minimum of 4 new data points are available to determine whether earlier concentrations are representative of present-day groundwater quality. In some cases, the earlier portion of data are deselected prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Two-Step Statistical Analysis

Intrawell statistical methods, combined with a 1-of-2 resample plan, may be used as a conservative first step for identifying potential facility impacts in downgradient wells. Intrawell methods use background data for individual wells and may be overly sensitive to spatial variation. In particular for nonparametric limits with small background sample sizes, the probability of a false positive is much higher than the desired annual sitewide rate of 10%. Therefore, a large number of exceedances may occur as a result of spatial variation rather than facility impacts. A second step can be used to further evaluate those exceedances and reduce the overall number of statistically significant increases (SSIs) that result from spatial variation. In instances where intrawell statistical methods identify an apparent SSI, a second step of interwell statistical evaluation may be used to determine whether the measurement exceeds the sitewide background limit based on pooled upgradient well data. This is similar in concept to the procedure used in compliance monitoring programs where an interwell statistical limit is used to determine "background" (USEPA Unified Guidance (2009), Chapter 7, Section 7.5). For the detection monitoring program, if the result does not exceed sitewide (interwell) background, an SSI is not declared.

When the result exceeds the sitewide (interwell) background, the 1-of-2 resample plan allows for collection of an independent resample to confirm or disconfirm the initial finding. A statistically significant increase is not declared unless the resample also exceeds the intrawell prediction limit (United States Environmental Protection Agency (USEPA)

Unified Guidance, March 2009, Chapter 19). When the resample confirms the initial exceedance, further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). When any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. In cases where intrawell and interwell exceedances are noted and no resamples are collected, the initial exceedance will be considered a confirmed statistically significant increase (SSI).

Trend tests, in addition to interwell prediction limits, are recommended for well/constituent pairs found to have an initial intrawell SSI. Trend analysis will provide for detection of long-term changes and potential facility impacts at a given well in cases where the concentrations at that well remain below the sitewide upgradient limits. Thus, the two-step approach has additional capability to detect long-term changes at downgradient wells compared to interwell methods alone. While a trend may be identified by visual inspection, a quantification of the trend and its significance is needed to identify whether concentrations are statistically significantly increasing, decreasing, or remaining stable over time. The absence of a statistically significant increasing trend indicates that an initial intrawell exceedance is short-term and may be the result of spatial variation rather than facility impact to groundwater. If a facility impact has occurred, it will likely result in additional exceedances in future sampling events. When a statistically significant increasing trend is noted, additional data may be needed to demonstrate that there is reasonable evidence that the initial intrawell statistical exceedance is a result of variation rather than a result of impact to groundwater quality downgradient of the facility.

Summary of Background Screening Georgia EPD Constituents – Conducted in August 2019

A summary of the initial background screening is provided below for historical purposes. As mentioned earlier, the current monitoring well network is in accordance with the 2024 Minor Modification demonstration.

Outliers Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers for all wells and parameters are formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits. The results of Tukey's outlier test as well as a discussion of potential outliers and flagged values were included with the background screening report.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Testing

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test, which tests for statistically significant increasing or decreasing trends, was used to evaluate data at all upgradient wells and downgradient wells with detections.

In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the influence of the trend and reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different from current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

Several statistically significant decreasing trends were noted, but adjustments were required only for barium in well GWA-53, copper in well GWA-37, and nickel in well GWC-16R. The magnitudes of all other trends were low relative to the average concentrations at each respective well. However, the decreasing trend for the zinc record at well GWC-16R may require adjustment in the future, if it persists, in order to obtain a more conservative prediction limit. Statistically significant increasing trends were also noted but adjustments to eliminate the trends were required only for barium and zinc in upgradient well GWA-36 because the magnitudes of trends identified for all other well/constituent pairs were low relative to the average concentrations. Truncation of earlier data was based on the assumption that the increasing trend was not the result of the facility. A summary of the background date ranges used for well/constituent pairs was submitted with the screening.

Summary of Appendix I & Appendix III Background Update – Conducted in 2024

Outlier Analysis

Prior to updating background data, all Appendix I and III data were evaluated for the purpose of updating background data sets. Tukey's outlier test and visual screening were used to evaluate data for all wells and constituent through August 2023. Tukey's test identified several potential outliers and confirmed previously flagged values. A high measurement for TDS in downgradient well GWC-22R was flagged during the update to construct statistical limits that are conservative (i.e., lower) from a regulatory perspective. Additionally, high values that were not identified by Tukey's test (such as the highest value for calcium at upgradient well GWA-43) were flagged as outliers to reduce variation among background datasets which results in statistical limits that are conservative (in most cases, lower) from a regulatory perspective. Previously flagged outliers for antimony at upgradient well GWA-1 and beryllium at upgradient well GWA-42 were unflagged as the measurements were similar to more recent concentrations.

Any flagged data are displayed in a lighter font and as a disconnected symbol on the time series reports, as well as in a lighter font on the accompanying data pages. The Appendix I and III outliers are included in the outlier summary following this letter (Figure C).

Mann-Whitney

For all Appendix I and III constituents evaluated with intrawell prediction limits (calcium, pH, sulfate, and TDS), the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the medians of historical data through August 2021 to the new compliance samples at each well through August 2023. When the medians of the two groups are not statistically significantly different at the 99% confidence level, background data sets are updated to include the newer compliance data. Several well/constituent pairs with statistically significant results were identified.

Typically, when the test concludes that the medians of the two groups are significantly different, particularly in the downgradient wells, the background data sets are not updated to include the newer data unless it can be reasonably justified that the change in concentrations reflects an occurring shift unrelated to practices at the site.

For the cases identified by the Mann-Whitney with statistically significant higher medians in more recent data compared to the historical medians, the more recent medians were either within the range of historic concentrations or were slightly higher than the background medians and would have minimal increases on resulting statistical limits.

Note that while a statistically significant increase in median was identified for sulfate at downgradient well GWC-23R due to the variation within this record, the statistical limit remains similar to previous limits when updating the background data set with more recent data. For chloride and TDS at upgradient well GWA-3A, these records were also updated as a result of similar concentrations within the historic record and concentrations at upgradient wells which represent groundwater quality upgradient of the facility, and are assumed to be unimpacted by practices at the facility.

In order to maintain a conservative (i.e., lower) statistical limit, the record for TDS at downgradient well GWC-23R was not updated since the more recent compliance concentrations were elevated above historic concentrations within the same well and were above reported concentrations upgradient of the facility.

Earlier portions of the record were truncated for copper and nickel at upgradient well GWA-50R, copper at downgradient well GWC-37, and nickel at downgradient well GWC-16R during previous updates and remain truncated in order to construct statistical limits that are more conservative (i.e., lower) and representative of present-day groundwater quality conditions.

For the cases identified by the Mann-Whitney with statistically significant lower medians in more recent data compared to the historical medians, the more recent concentrations were also similar to those reported historically or resulted from more recent trace measurements compared to historical non-detect measurements.

All records, except for TDS at downgradient well GWC-23R, were updated through August 2023. Additionally, the previously truncated records, which continue to use the more recent portion of data, were updated with newer data through August 2023. All records for Appendix I and III constituents will be re-evaluated during the next background update.

Upgradient Well Trend Tests – Interwell

The Sen's Slope/Mann Kendall trend test was used to evaluate data at upgradient wells for each of the parameters tested using interwell prediction limits (boron, calcium, and fluoride) to identify statistically significant increasing or decreasing trends in background at the 99% confidence level. Several statistically significant trends were identified and a summary of the results follows this report.

Increasing

- Boron: GWA-4RZ

- Calcium: GWA-2R, GWA-42, GWA-43R, GWA-51RZ, GWA-55, and GWA-55R

Decreasing

- Boron: GWA-41R, GWA-43R, and GWA-56
- Calcium: GWA-43, GWA-50, and GWA-50R
- Fluoride: GWA-4RZ

Truncation of earlier data reported in upgradient well records to remove trends should be done with caution since similar concentrations could appear in future years at downgradient wells in the absence of facility impacts. No adjustments were required for the significant trends for boron as the trends are an artifact of laboratory censoring at a higher level than detected values. For calcium, wells identified with significant increasing and decreasing trends exhibit similar patterns at other upgradient wells across the site. Although the statistically significant increasing trend noted for calcium in upgradient well GWA-3A results from an abrupt increase in concentrations, all observations at this well are lower than or equal to surrounding upgradient well data and truncation of earlier data would not impact resulting statistical limits. Regarding fluoride at well GWA-4RZ, concentrations throughout the record are of similar magnitude to those found at other upgradient wells. Additionally, resulting statistical limits for boron, calcium, and fluoride are representative of current groundwater quality conditions. Therefore, no adjustments were required for these records.

All well/constituent pairs were updated using all available data from upgradient wells through March 2024. Interwell prediction limits pool upgradient well data to establish background limits for boron, calcium, and fluoride and will be used to evaluate future semi-annual compliance samples at each downgradient well.

Evaluation of Georgia EPD Appendix I Constituents – February 2025

Mann-Whitney Test & Trend Tests – GWA-3A

As mentioned above, data from well GWA-3 have been combined with data from replacement well GWA-3A. A minimum of 8 samples has been collected from new well GWA-3A since March 2021; therefore, the Mann-Whitney test was used to compare newer observations through August 2024 to historical observations through March 2020 for Appendix I and III constituents evaluated with intrawell prediction limits to determine whether the medians of data are statistically significantly different (Figure D). Statistically significant differences were identified for the following constituents:

- barium, chloride, copper, pH, nickel, sulfate, TDS, and zinc

In the cases where statistically significant differences were identified at the 99% confidence level, the historical record was truncated so that only data from the new well is used in construction of intrawell prediction limits for Appendix I and III constituents. An exception includes the record for barium at well GWA-3A because while the Mann-Whitney test identified statistically significant differences in medians, the more recent concentrations are within the range of historic concentrations from well GWA-3. Additionally, higher measurements earlier in the record remain flagged as outliers for barium at well GWA-3A and are not included in construction of statistical limits. A list of well/constituent pairs using a truncated portion of their record follows this report.

For Appendix I and III constituents evaluated with interwell prediction limits, since these limits are constructed using pooled upgradient well data, trend tests were used to evaluate the full record through February 2025 for upgradient well GWA-3A to determine if statistically significant increasing or decreasing trends in groundwater quality are present (Figure E). No statistically significant trends were identified; therefore, no further action was required. While more recent concentrations for boron at this well are higher than historical concentrations reported from abandoned well GWA-3, all measurements were similar to those reported in neighboring upgradient wells; therefore, truncation would have no impact on the resulting interwell prediction limits.

Intrawell Prediction Limits

Intrawell limits constructed from screened background data from within each well serve to provide statistical limits that are representative of the background data population, and that will rapidly identify a change in more recent compliance data from within a given well. The most recent sample from the same well is compared to its respective background. This statistical method removes the element of variation from across wells and eliminates the chance of mistaking spatial variation for a release from the facility.

In cases where downgradient average concentrations are higher than observed upgradient concentrations for a given constituent where intrawell analyses are recommended, the current assumption is that this is due to spatial variation rather than a result of practices at the landfill. Further validation of this assumption requires a separate analysis or investigation that is beyond the scope of this data screening study. However, for this site, the pre-waste data support the assumption of variation rather than impacts of the landfill.

Intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed using all available historical data through August 2023, except for the cases mentioned above and listed in the Date Range summary following this letter, within each well with detections (Figure F). As mentioned above, intrawell prediction limits are not constructed on upgradient wells GWA-51RZ, GWA-52, GWA-53, GWA-53R, GWA-54, GWA-55, GWA-55R, and GWA-56 as these wells were abandoned in 2022.

As discussed earlier, the most recent reporting limit is substituted on a well-by-well basis for computing intrawell prediction limits. Therefore, individual wells can have different substitutions for a given parameter depending on what the laboratory has reported for each well. Note that due to the reporting limit for cobalt at downgradient well GWC-22R decreasing from 0.01 mg/L to 0.005 mg/L, the prediction limit also decreased. Also note that prediction limits for mercury and selenium changed during this report from previous analyses due to the substitution of historic reporting limits of 0.0005 mg/L and 0.01 mg/L across all wells for these constituents, as discussed with Stantec. No significant changes occurred as a result of the prediction limit changes. The February 2025 data from each well were compared to these intrawell background limits. No statistical analyses were included for well/constituent pairs with 100% non-detects and a list of these well/constituent pairs follows this report.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When the resample confirms the initial exceedance, a statistically significant increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If any resample falls within the statistical limit, the initial exceedance is considered to be a false positive result, and no further action is necessary. A summary of the Georgia EPD Appendix I prediction limits follows this report. Exceedances were identified for the following well/constituent pairs:

- Antimony: GWA-41R (upgradient)
- Barium: GWA-42 (upgradient)

Two-Step Analysis

When apparent intrawell prediction limit exceedances are identified among downgradient wells, interwell prediction limits are constructed using pooled upgradient well data following the two-step analysis as described above. Since no exceedances were identified among downgradient wells, no further action was required.

Trend Tests

When prediction limit exceedances occur in any of the downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level. Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site which is an indication of variability in groundwater unrelated to practices at the site. Since no exceedances were identified among downgradient wells, no further action was required.

Evaluation of Appendix III Parameters – February 2025

Intrawell Prediction Limits

For chloride, pH, sulfate, and TDS, intrawell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical data through August 2023 (Figure G). The February 2025 sample from each well was compared to its respective background limit to determine whether exceedances over background are present. Note that due to the reporting limit for TDS at well GWC-38 decreasing from 36 mg/L mg/L to 25 mg/L, the prediction limit increased. No significant changes occurred as a result of the prediction limit increase. Apparent intrawell prediction limit exceedances were identified for the following well/constituent pairs:

- Chloride: GWA-2R and GWA-3A (both upgradient)
- pH (upper limit): GWC-21R
- Sulfate: GWA-2R (upgradient)
- TDS: GWA-2R (upgradient)

Two-Step Analysis

Following the two-step analysis as described above, an interwell prediction limit was then constructed using pooled upgradient well data through February 2025 to evaluate the apparent intrawell prediction limit exceedance for pH among downgradient wells (Figure H). No exceedance was identified.

Interwell Prediction Limits

For boron, calcium, and fluoride, interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all pooled upgradient well data through February 2025 (Figure I). Interwell prediction limits pool upgradient well data to establish a

background limit for an individual constituent. As mentioned above, abandoned wells GWA-51RZ, GWA-52, GWA-53, GWA-53R, GWA-54, GWA-55, GWA-55R, and GWA-56 were not sampled, but historic data were used along with all data from neighboring upgradient well data to construct statistical limits.

Upgradient well data were reassessed for potential outliers during this analysis. When values in background are flagged as outliers, the measurements may be seen in a lighter font and as a disconnected symbol on the graphs. No additional values were flagged as outliers at any of the upgradient wells for Appendix III constituents evaluated with interwell prediction limits.

The February 2025 sample from each downgradient well was compared to the background limits to determine whether exceedances over background are present. The following interwell prediction limits exceedances were noted:

- Calcium: GWC-16R and GWC-17R

Trend Tests

Data from downgradient well/constituent pairs found to exceed their respective prediction limit for both intrawell and interwell methods were further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level along with upgradient wells for the same constituents (Figure J). Complete graphical results of the trend tests follow this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing
- Calcium: GWA-2R, GWA-4RZ, GWA-42, GWA-43R, GWA-51RZ, GWA-55, GWA-55R (all upgradient), and GWC-16R
- Sulfate: GWA-51RZ (upgradient) and GWC-25R
- TDS: GWA-3A, GWA-55, and GWA-55R (all upgradient)

Decreasing
- Calcium: GWA-43, GWA-50, and GWA-50R (all three upgradient)
- pH: GWA-1, GWA-2R, GWA-4RZ, GWA-39RZ, GWA-40, GWA-41R, GWA-43 GWA-50, GWA-50R, and GWA-54 (all upgradient)

Summary

Based on the results of the Appendix I and III constituents requiring intrawell and interwell prediction limits, as well as interwell prediction limits for apparent intrawell prediction

limit exceedances at downgradient wells according to the Two-Step Approach, the following prediction limit exceedances were identified in downgradient wells:

Appendix I

- None

Appendix III

- Calcium: GWC-16R and GWC-17R

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Bowen Landfill at Cells 3 & 4. If you have any questions or comments, please feel free to contact us.

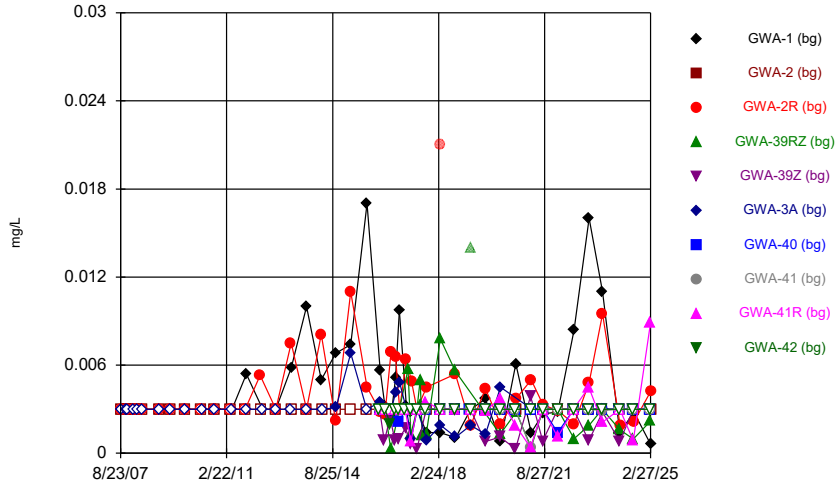
FIGURE A.

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

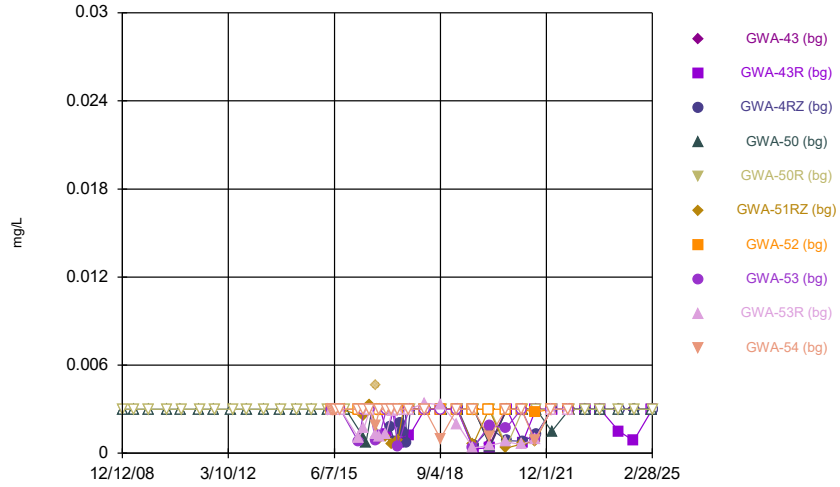
Time Series



Constituent: Antimony Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

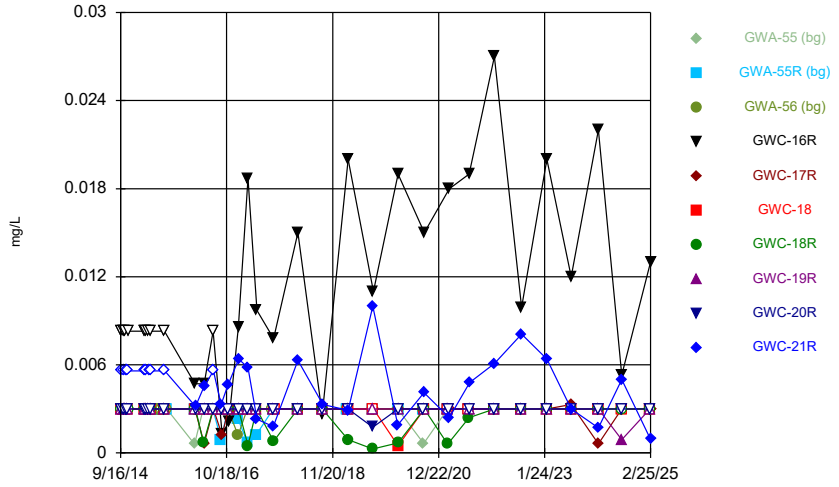
Time Series



Constituent: Antimony Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

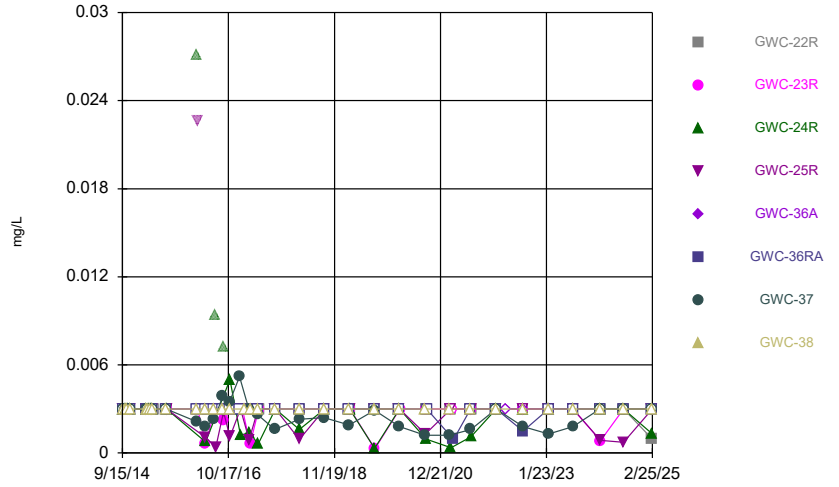
Time Series



Constituent: Antimony Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

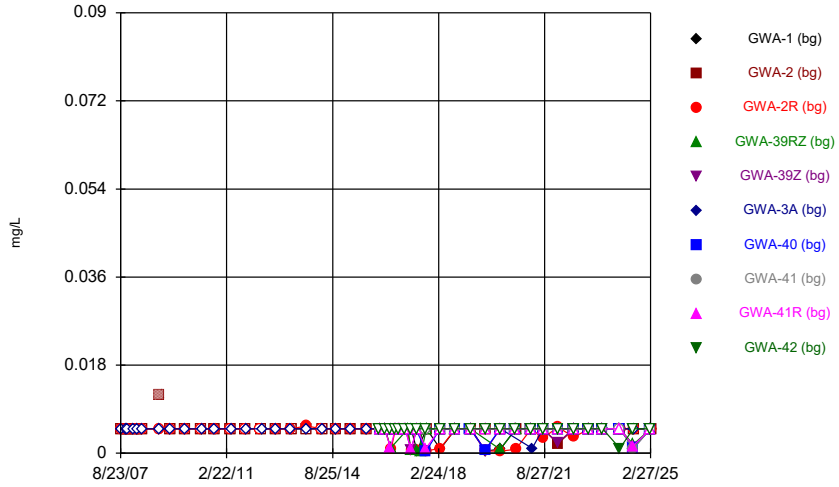
Time Series



Constituent: Antimony Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

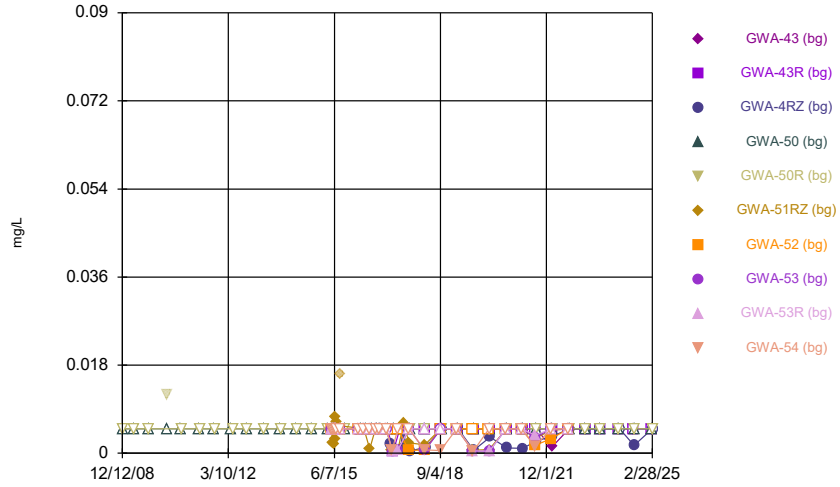
Time Series



Constituent: Arsenic Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

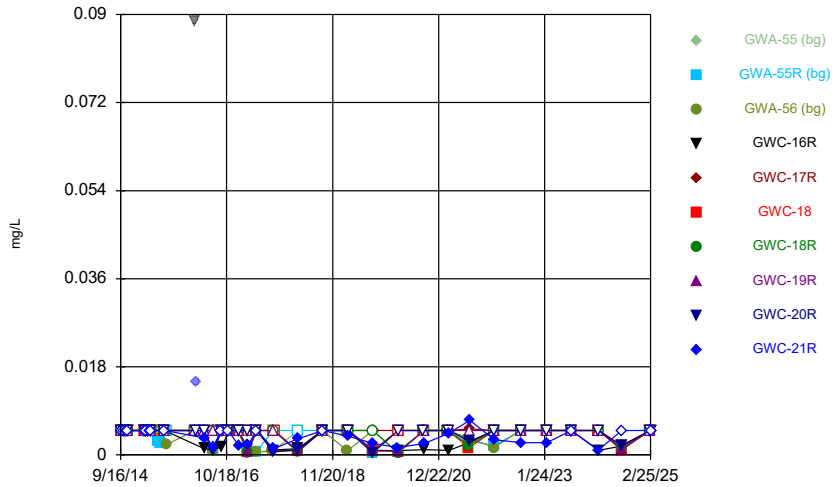
Time Series



Constituent: Arsenic Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

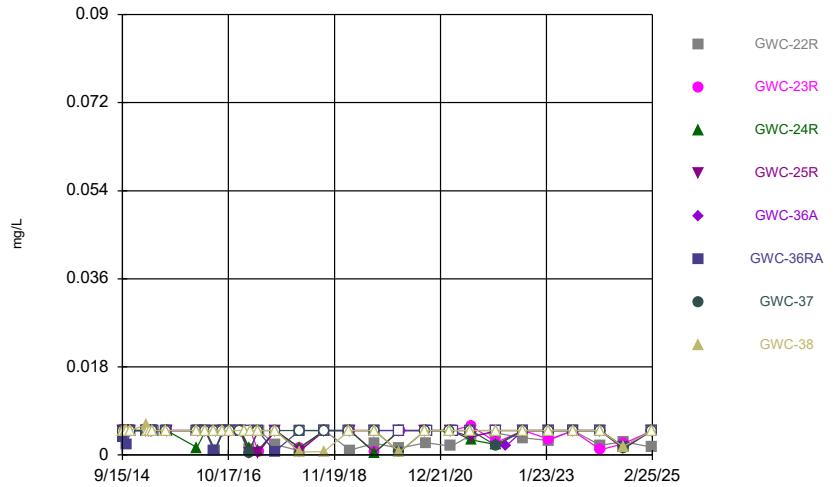
Time Series



Constituent: Arsenic Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

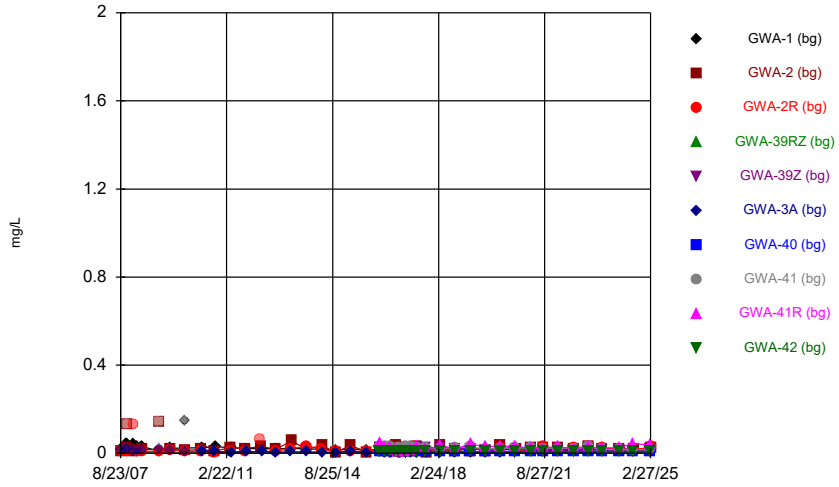
Time Series



Constituent: Arsenic Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

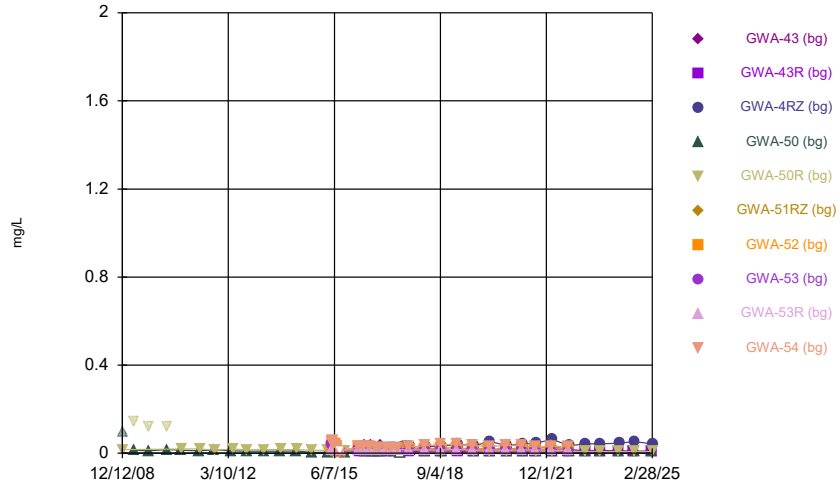
Time Series



Constituent: Barium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

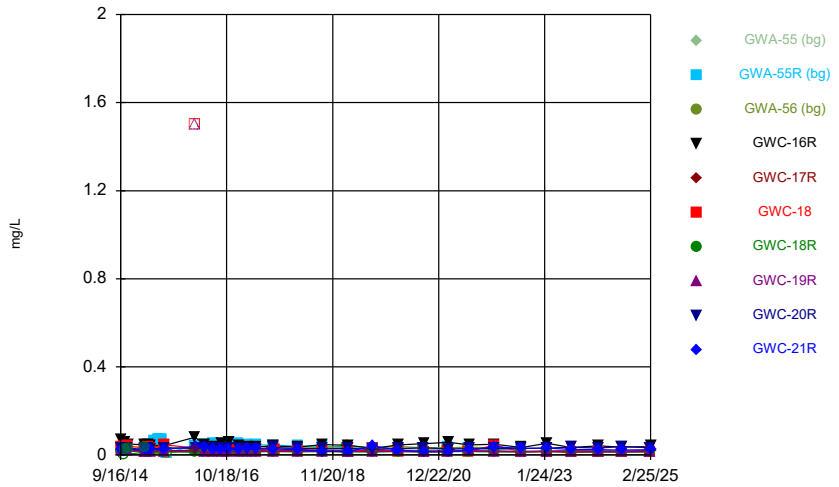
Time Series



Constituent: Barium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

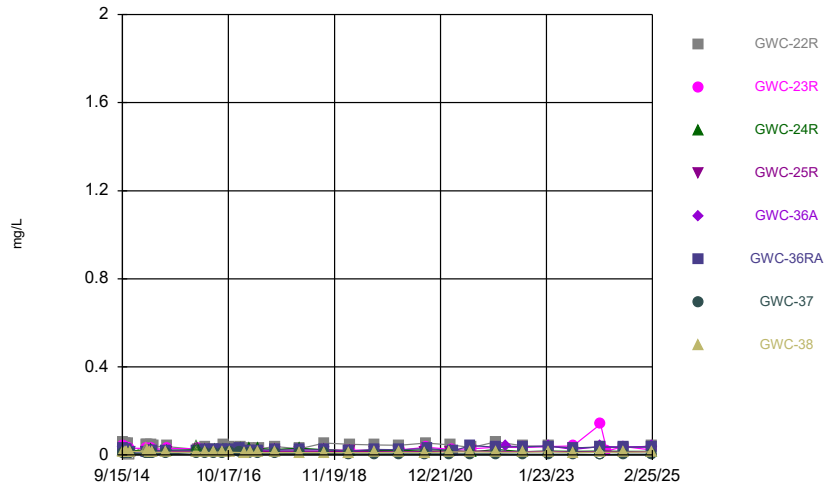
Time Series



Constituent: Barium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

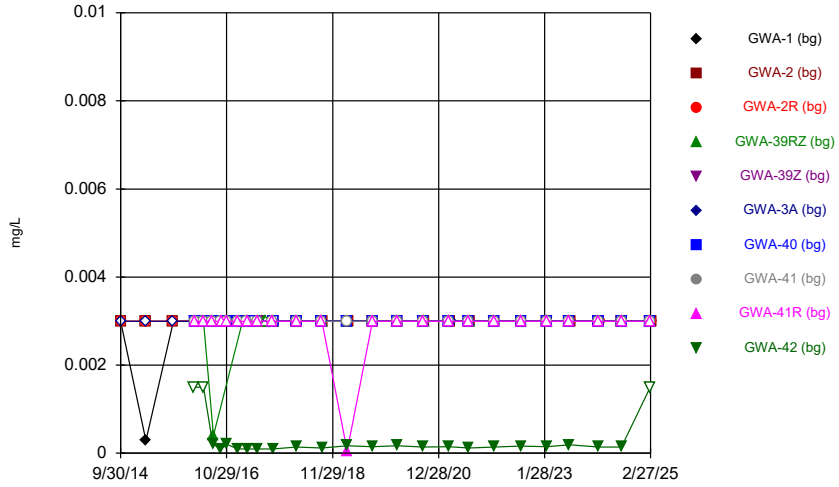
Time Series



Constituent: Barium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

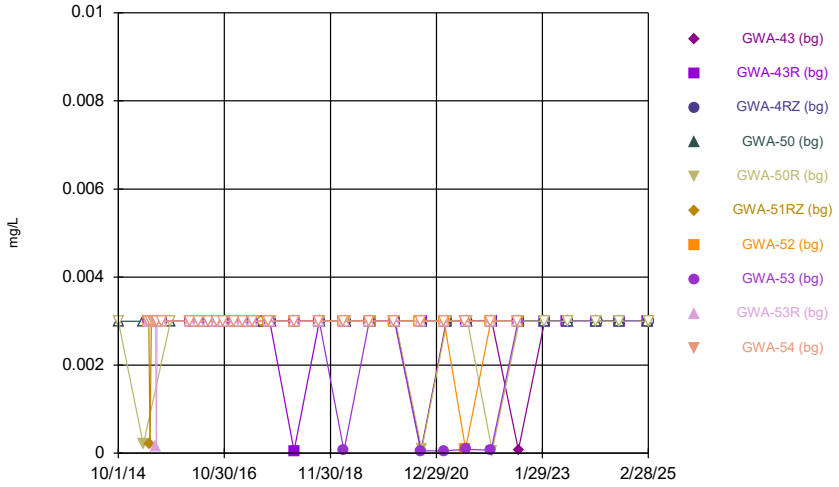
Time Series



Constituent: Beryllium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

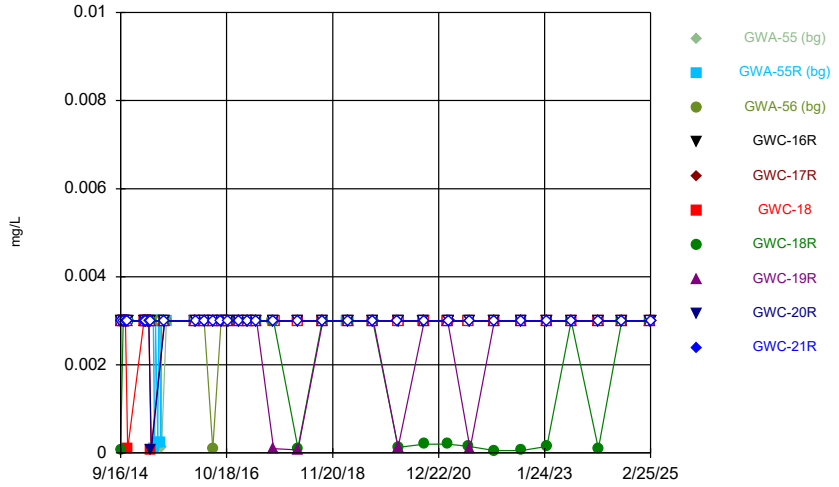
Time Series



Constituent: Beryllium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

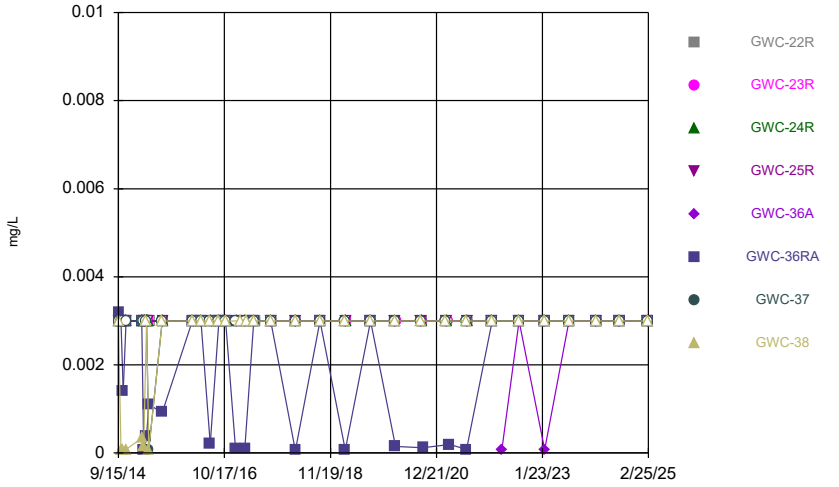
Time Series



Constituent: Beryllium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

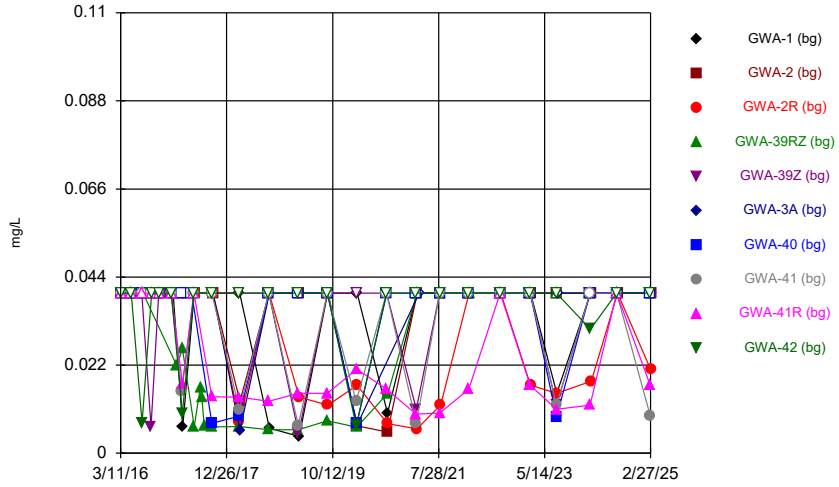
Time Series



Constituent: Beryllium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

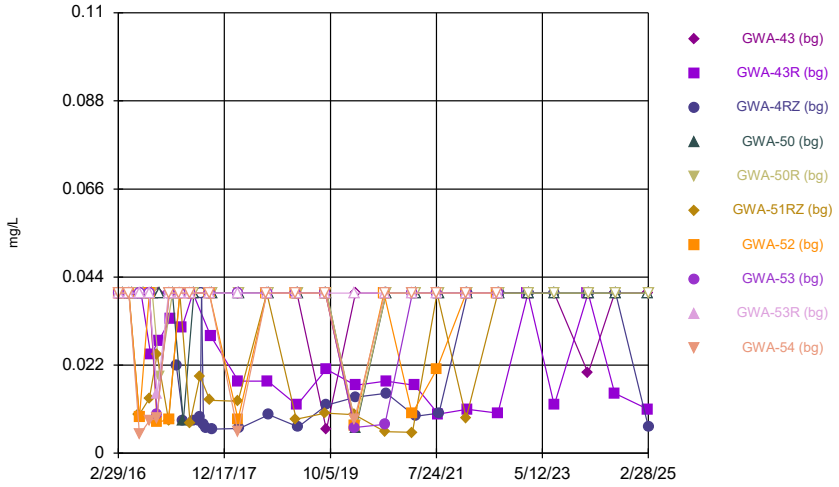
Time Series



Constituent: Boron Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

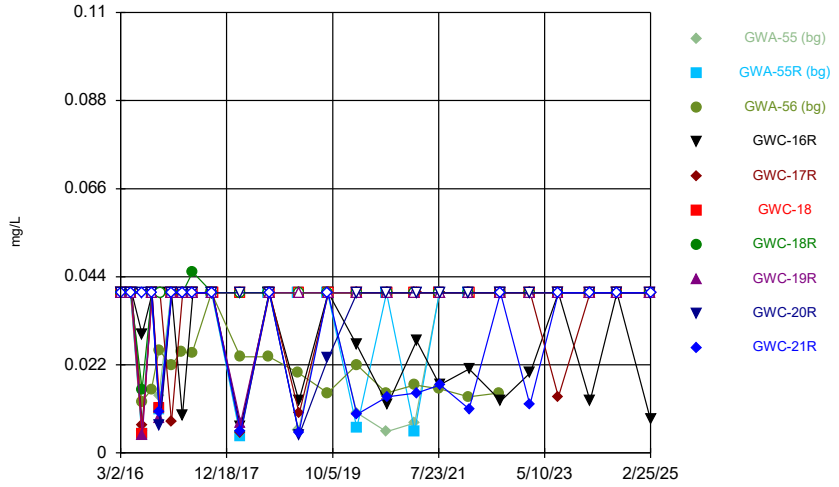
Time Series



Constituent: Boron Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

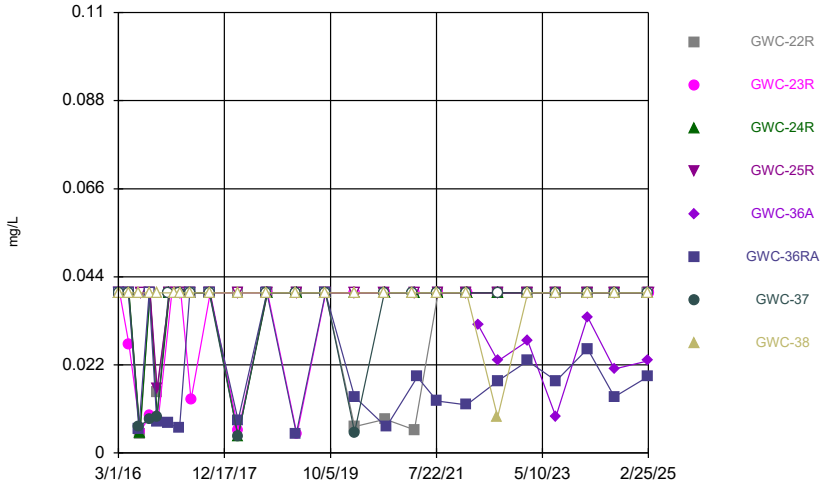
Time Series



Constituent: Boron Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

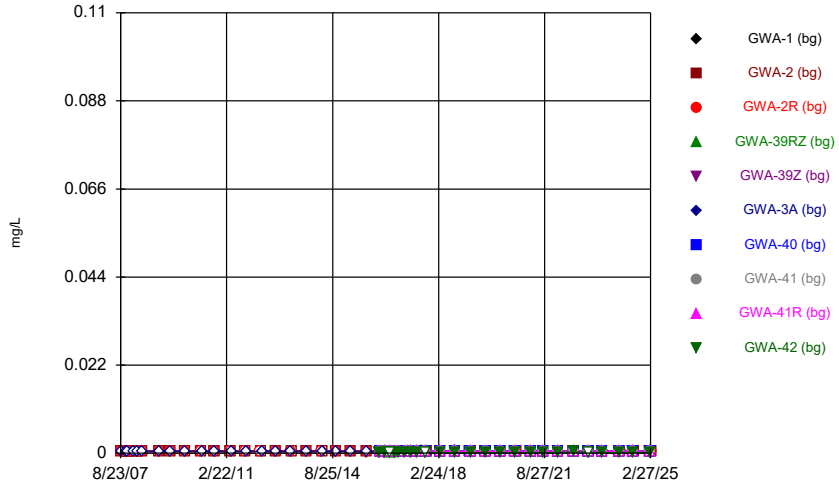
Time Series



Constituent: Boron Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

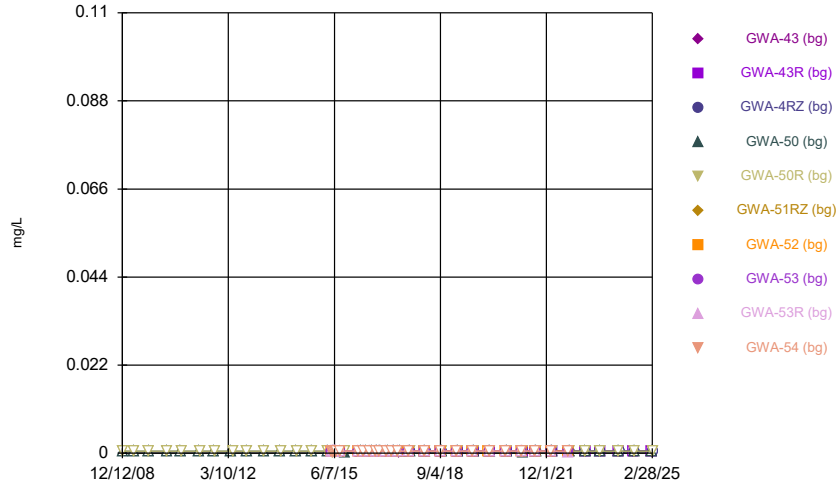
Time Series



Constituent: Cadmium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

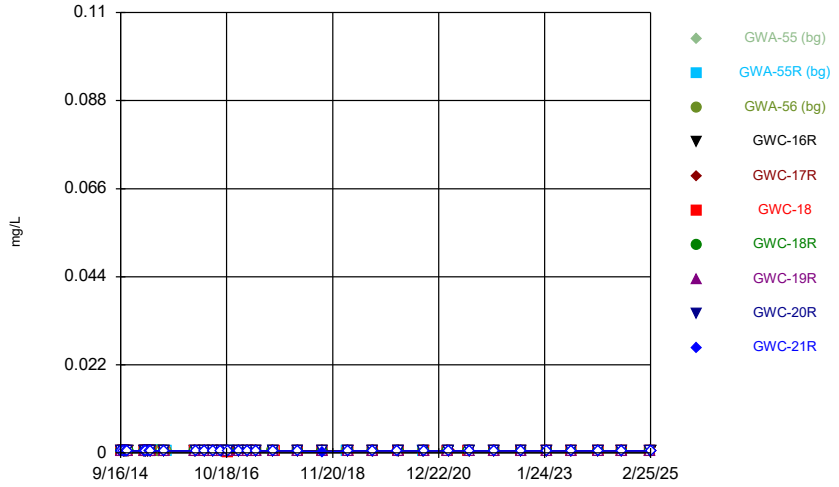
Time Series



Constituent: Cadmium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

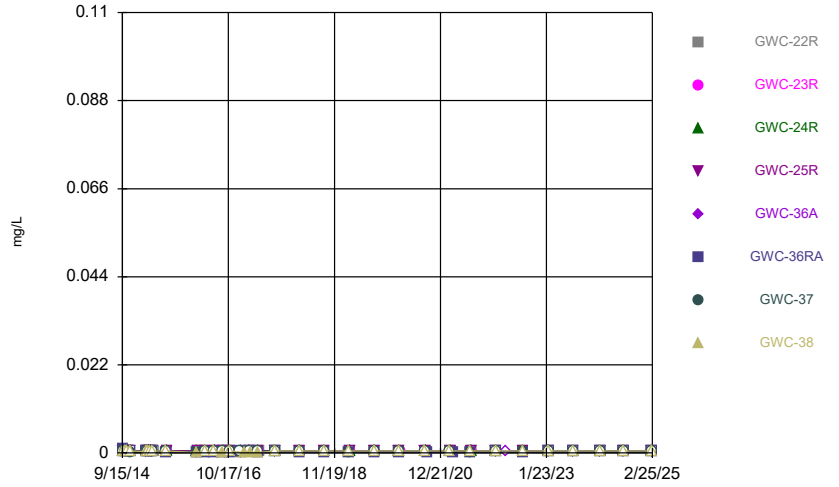
Time Series



Constituent: Cadmium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series



Constituent: Cadmium Analysis Run 6/26/2025 10:59 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 6/26/2025 10:59 AM

Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 6/26/2025 10:59 AM

Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 6/26/2025 11:00 AM

Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 6/26/2025 11:00 AM

Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chloride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chloride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chloride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Copper Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Copper Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Copper Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Copper Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/26/2025 11:00 AM
Plant Bowen Client: Southern Company Data: Bowen 3-4 CCR

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 6/26/2025 11:00 AM

Hollow symbols indicate censored values.

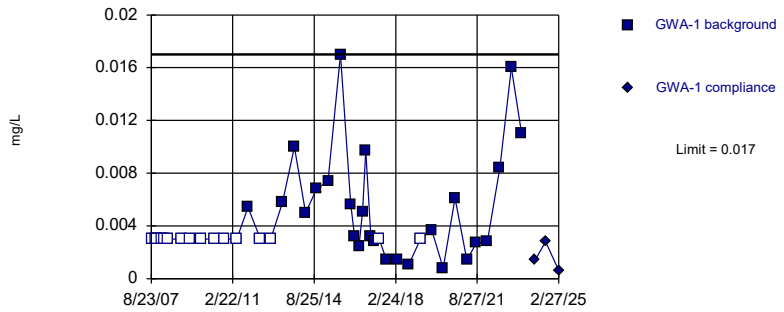
Within Limit

Prediction Limit

Intrawell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 42 background values. 38.1% NDs. Well-constituent pair annual alpha = 0.002154. Individual comparison alpha = 0.001077 (1 of 2).

Constituent: Antimony Analysis Run 6/26/2025 11:12 AM View: Appendix I Intrawell

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Intrawell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 25 background values. 48% NDs. Well-constituent pair annual alpha = 0.005656. Individual comparison alpha = 0.002832 (1 of 2).
