2025 Annual Groundwater Monitoring and Corrective Action Report
Plant Bowen Landfill Cells 1-10

CERTIFICATION STATEMENT

This 2025 Annual Groundwater Monitoring and Corrective Action Report, Georgia Power Company - Plant Bowen Solid Waste Disposal Facility Landfill Cells 1-10 has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule [Title 40 Code of Federal Regulations (40 CFR) 257 Subpart D, specifically § 257.90(e)] and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Stantec Consulting Services Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.10.

Executive Summary

This summary of the *2025 Annual Groundwater Monitoring and Corrective Action Report* provides the status of the groundwater monitoring and corrective action program from January through December 2025 at the Georgia Power Company (Georgia Power) Plant Bowen Landfill Cells 1-10 (the Landfill or the Site). This summary was prepared by Stantec Consulting Services Inc. (Stantec) on behalf of Georgia Power to meet the requirements listed in Part A, Section 6[1] of the United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule Title 40 Code of Federal Regulations (40 CFR) 257 Subpart D (CCR Rule) and the Georgia Environmental Protection Division (GA EPD) Rules of Solid Waste Management 391-3-4-.10.

The Landfill is located in Bartow County off State Highway 113, approximately seven miles west-southwest of Cartersville, Georgia, and 20 miles southeast of Rome, Georgia. The Landfill receives coal combustion by-products, coal ash, and gypsum from coal power generating processes at Plant Bowen. The landfill cells are lined in accordance with Permit No. 008-018D (CCR). Gypsum placement in disposal Cells 1 & 2 began in November 2008, whereas ash placement in disposal Cells 3 & 4 began in February 2015. Waste placement operations were initiated in Cells 9 & 10 in November 2015. Waste placement operations for Cells 5 & 6 were initiated in April 2025, and Cells 7 & 8 are currently under construction. The Site is located in the northeastern portion of the Plant Bowen property.

Plant Bowen Landfill Cells

The groundwater monitoring program for the Landfill is currently managed in accordance with CCR Permit No. 008-018D (CCR) approved on December 8, 2022. Groundwater at the Site is monitored using a groundwater monitoring system of wells installed to meet federal and state monitoring requirements. Groundwater monitoring, in accordance with the previous Georgia Solid Waste Permit No 008-018D (LI), began in 2007 prior to disposal activities and continues to date under the 2024 CCR Permit Groundwater Monitoring Plan (GWMP). Routine sampling and reporting for CCR Rule Appendix III constituents began after the background groundwater conditions were established between February 2016 and August 2017 for Cells 1 & 2, 3 & 4, and 9 & 10. Additional wells were installed in support of the expansion of Cells 5–8 in April–May of 2023 and August–October of 2025. Background groundwater sampling for the wells installed in April–May of 2023 began in June 2023 with a ninth and final background sampling event being conducted in March 2025, exceeding the required eight minimum baseline sampling events in accordance with the GWMP. Background groundwater sampling for the wells installed between August and October 2025 will begin in February 2026 in accordance with § 257.94.

2025 Annual Groundwater Monitoring and Corrective Action Report
Plant Bowen Landfill Cells 1-10

During the 2025 annual reporting period, two groundwater sampling events were conducted; the first in February and March 2025 for Cells 1 & 2, 3 & 4, and 9 & 10, and a second in August and September 2025 for Cells 1-10. Groundwater samples collected during the events were submitted to Pace® Analytical Services, LLC. (Pace), for analysis of Appendix III parameters[2] .Per the CCR Rule, the groundwater analytical results were evaluated in accordance with certified statistical methods. Verified Appendix III constituents with statistically significant increases (SSIs) are provided in the table below and are addressed by the April 19, 2018, Alternate Source Demonstration (ASD).

Appendix III Constituents (SSIs)	**February-March 2025**
Calcium	GWC-16R, GWC-17R
Appendix III Constituents (SSIs)	**August-September 2025**
pH	GWC-44

Based on review of the Appendix III statistical results completed for the groundwater monitoring and corrective action program in 2025, the Landfill will continue in detection monitoring.

1 Introduction

This *2025 Annual Groundwater Monitoring and Corrective Action Report* has been prepared by Stantec Consulting Services Inc. (Stantec) on behalf of Georgia Power Company (Georgia Power) to document groundwater monitoring activities conducted from January through December 2025 at Georgia Power's Plant Bowen solid waste disposal facility Cells 1-10 (Landfill or Site). The groundwater monitoring activities were conducted to comply with the current coal combustion residuals (CCR) Permit No. 008-018D (CCR), approved by the Georgia Environmental Protection Division (GA EPD) on December 8, 2022, and in accordance with the United States Environmental Protection Agency (US EPA) CCR Rule Title 40 Code of Federal Regulations (40 CFR) 257 Subpart D (CCR Rule) and the GA EPD Rules of Solid Waste Management 391-3-4-.10. This report satisfies the reporting requirements of applicable GA EPD Solid Waste Management Rules (391-3-4-.10) and federal CCR Rule 40 CFR 257.90(e).

1.1 Site Description and Background

The Plant Bowen Landfill is a Georgia Power-owned property located in Bartow County off State Highway 113, approximately seven miles west-southwest of Cartersville, Georgia, and 20 miles southeast of Rome, Georgia (**Figure 1**). The Landfill is approximately 300 acres located on a previously undeveloped, contiguous portion of the plant property. The Landfill is located on the northeast portion of the Plant Bowen property. The Landfill receives coal combustion by-products, coal ash, and gypsum from coal power generating processes at Plant Bowen. The landfill cells are lined in accordance with Solid Waste Permit No. 008-018D (CCR). Cells 3 & 4 and 9 & 10 have a leachate collection system. Gypsum placement in disposal Cells 1 & 2 began in November 2008, whereas ash placement in disposal Cells 3 & 4 began in February 2015. Waste placement operations were initiated in Cells 9 & 10 in November 2015. In 2020, GA EPD approved the placement of waste following a retrofit of Cells 9 & 10 with a leachate collection system. Cells 9 & 10 are used to store bottom ash. Landfill expansion activities at Cells 5 & 6 and 7 & 8 began with land clearing, installation of monitoring wells, and construction of Cells 5 & 6, which includes a liner and leachate collection system. Monitoring well installation for landfill Cells 5 & 6 and 7 & 8 occurred in April and May 2023 and has been followed by nine background groundwater sampling events through March 2025, fulfilling requirements per the site permit. In late April 2025, active placement of waste was initiated in Cells 5 & 6. As of December 2025, Cells 7 & 8 are still under construction.

1.2 Regional Geology and Hydrogeologic Setting

The regional geology and hydrogeology of the Plant Bowen Landfill area are summarized below. The Site lies within the Valley and Ridge physiographic province about three to four miles north of the Cartersville Fault (Georgia Power 2022). The Cartersville Fault separates the late Precambrian-aged metamorphic rocks to the east and south from the Cambrian-aged sedimentary rocks to the north-northwest and west (Croft 1963). Two main geologic layers are present at the Site: overburden (residuum clay and partially weathered rock) and carbonate bedrock (dolomite and limestone).

As described in the Composite Site Acceptability Report for CCR Landfill Permit (Georgia Power 2022), the lithologies present in the landfill area of Plant Bowen from the ground surface to depth are terrace deposits, a residuum clay overburden, dolomite, and limestone bedrock. The Knox Group (dolomite and limestone bedrock) produces a characteristic orange to red clayey residuum (overburden soil) that ranges

in thickness from 19 to 127 feet across the Site and often contains weathered chert and dolomite fragments. Silt and clay with some gravel and sand (terrace deposits) overlay the clayey residuum in some areas but are not continuous across the landfill area of Plant Bowen.

The uppermost aquifer for groundwater monitoring purposes is unconfined and, depending on the variability of weathering characteristics, the groundwater surface may occur in the overburden or carbonate bedrock. The water table commonly occurs in the overburden, but at some locations the water table is near the overburden-bedrock interface or in the upper fractured bedrock. Based on these data and field observations, it is assumed that the overburden and upper fractured bedrock are a single, interconnected water bearing zone below the unsaturated overburden. Overburden materials are heterogeneous, ranging in composition from well-graded gravelly sand to fat clay. Bedrock underlying the Site (officially mapped as Knox undifferentiated) is a carbonate bedrock (limestone and dolomite). The local karst geology features massive limestone and dolostone beds with chert, calcite, and fractures and void spaces that were observed during well installation activities. Karst features within the underlying carbonate bedrock are predominately formed along initial discontinuities including joints, fissures (slots), fractures, and bedding planes or other linear features. These karst features may be partially or completely filled with soft unconsolidated solids or may be empty or filled with water. The top of the karst features is usually identified as having a thin zone of weathered carbonate bedrock. The karst features are primarily vertically oriented and generally infilled where present (Georgia Power 2022).

1.3 Groundwater Monitoring System

The existing groundwater monitoring system meets the requirements listed in § 257.91 and 391-3-4.10. A groundwater monitoring system was installed at the Landfill that consists of a sufficient number of wells installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer to represent the groundwater quality both upgradient of the unit (i.e., background conditions) and passing the waste boundary of the unit. The number, spacing, and depths of the groundwater monitoring wells were selected based on the characterization of site-specific hydrogeologic conditions.

A subset of the wells is equipped with data loggers and telemetry systems for water level measurements and data transmission for real-time monitoring of groundwater levels in the subsurface karst geology.

The locations of monitoring wells included in the groundwater monitoring system are presented in **Figure 2**. Well construction details are listed in **Table 1**.

Based on GA EPD comments, three detection wells (GWC-25, GWC-31S and GWC-58) were installed between August and October 2025 and described further in Section 2 (Stantec, 2026).

2 Groundwater Monitoring Activities

The following sections describe monitoring-related activities performed from January through December 2025. Samples were collected in February-March and August-September from each of the wells at Landfill Cells 1-10. Groundwater wells GWC-34 and GWC-34R were not sampled in February-March due to localized flooding. Drainage improvements are currently being evaluated to prevent future flooding of these wells. Drainage improvement activities are expected to begin in February 2026. Wells GWC-34 and GWC-34R were redeveloped during the August-September 2025 semi-annual sampling event, and samples were collected. A verification sampling event was conducted in May 2025 (mercury and selenium at GWC-48). Resampling events were conducted in September 2025 (metals at GWC-46R), and October 2025 (mercury at GWC-48). See Section 3.5 for details on the September and October 2025 resampling events. A final background sampling event for the wells at Cells 5-8 was completed in March 2025. This was the ninth background sample event for these wells, with the exception of wells GWC-34 and GWC-34R which could not be sampled in March due to flooding and, therefore, had eight background sampling events fulfilling the permit requirements. The groundwater monitoring system is shown in **Figure 2**. **Table 2** presents a summary of the 2025 groundwater sampling events completed for the Landfill during this monitoring period. Based on GA EPD comment and request, three additional wells were installed beginning in August 2025. A minimum of eight background groundwater sampling events will be conducted at the new wells in accordance with the Groundwater Monitoring Plan (GWMP).

2.1 Monitoring Well Installation and Maintenance

Monitoring wells are inspected semi-annually to determine if repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). In February and August 2025, monitoring wells were inspected. Standing water was noted for GWC-48 in February 2025. Drainage improvements to the area of GWC-48 were completed in June 2025 to prevent standing water near the well pad. In August 2025, the well pads for GWC-6 and GWC-25R were noted as sounding hollow and having mild animal erosion, respectively. In August 2025, the well pads for GWC-6 and GWC-25R were stabilized utilizing injected concrete to stabilize the well pads and prevent further erosion. In February 2025, localized flooding was noted for GWC-34 and GWC-34R. Drainage improvements in the area of GWC-34 and GWC-34R are expected to be completed in February 2026, prior to the next semiannual sampling event, to prevent future flooding of the well pads. The well inspection forms, drainage improvement memorandum for GWC-48, and well maintenance and repair memorandum for GWC-6 and GWC-25R are included in **Appendix A**.

At the request of GA EPD, in a letter dated June 2, 2025, Georgia Power submitted a proposed well installation workplan for two additional wells (GWC-25 and GWC-31S) to evaluate high hydraulic conductivities at GWC-25R and GWC-31R. Additionally, one well (GWC-58) was proposed for installation to the southeast of Cells 7 & 8 to strengthen the detection monitoring network. The letter was revised and submitted August 8, 2025, with a milestone schedule and professional engineer-stamped proposed well installation map. Groundwater wells GWC-25, GWC-31S, and GWC-58 were installed in August-October 2025. A well installation report documenting the installation of wells GWC-25, GWC-31S, and GWC-58 has been provided to GA EPD under separate cover as described in the GWMP and is included in **Appendix B**.

2.2 Detection Monitoring Program

Groundwater monitoring began in 2007, in accordance with the previous Georgia Solid Waste Permit No. 008-018D (LI), prior to disposal activities and continues to date under the current CCR Permit No. 008-018D (CCR). Groundwater monitoring and reporting activities, conducted in accordance with § 257.90 through § 257.94 of the federal CCR Rule, were initiated in 2016. Pursuant to § 257.94(b), eight baseline sampling events were conducted from February 2016 to August 2017 at Cells 1 & 2, 3 & 4, and 9 & 10, with the initial detection monitoring event occurring in September–October 2017. Pursuant to § 257.94(b), a total of eight to nine baseline sampling events were conducted from June 2023 to March 2025 at Cells 5 & 6 and 7 & 8. Onset of waste placement at Cells 5 & 6 began in April 2025, and the initial detection monitoring event occurred in August 2025. Background sampling of wells installed at Cells 5-8 in August-October 2025 (GWC-25, GWC-31S, and GWC-58,) will begin in February 2026 and will consist of a minimum of eight baseline sampling events in accordance with the GWMP.

Georgia Power currently monitors groundwater associated with Landfill Cells 1-10 under the detection groundwater monitoring program in accordance with § 257.94 and Solid Waste Management Rule 391-3-4-.10(6). During the reporting period, semiannual detection monitoring events occurred in February-March 2025 and August-September 2025. Groundwater samples were collected from monitoring wells in the groundwater monitoring system (Figure 2) and analyzed for

- CCR Rule Appendix III constituents.
- A state-modified Appendix I list of detection constituents according to the approved *Plant Bowen Coal Combustion Residuals (CCR) Landfill Groundwater Monitoring Plan Rev. 1 (GWMP)* (Stantec 2024b). The analyte list includes antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, selenium, silver, thallium, vanadium, and zinc.
- Field parameters recorded during sampling, including pH, temperature, turbidity, dissolved oxygen (DO), specific conductance, and oxidation-reduction potential (ORP).

2.3 Additional Sampling and Analyses

An ephemeral spring at the Site, shown on **Figure 2**, is checked for water during each groundwater sampling event. Insufficient water volume for sampling was present in the spring during the February-March and August-September 2025 sampling events; therefore, no samples were collected.

In addition to routine Appendix I and CCR Rule Appendix III constituents, groundwater samples from the February-March 2025 and August-September 2025 semi-annual events and the March 2025 background event were analyzed for alkalinity, major cations (magnesium, sodium, potassium), iron, and manganese. The chemical composition of groundwater based on major ion chemistry data will be used to evaluate groundwater quality. Results are included in laboratory reports discussed in Section 3.5.

3 Sample Methodology & Analyses

This section presents a summary of the field sampling methodology and the groundwater sampling results during the reporting period from January through December 2025.

3.1 Groundwater Elevation Measurements and Flow Direction

Prior to each sampling event, groundwater levels were recorded at each accessible monitoring well and piezometer at the Landfill. The calculated groundwater elevations for the February and August 2025 gauging events are presented in **Table 3**.

The groundwater elevation data from February and August 2025 were used to develop potentiometric surface elevation contour maps (**Figure 3** and **Figure 4**). Review of Figures 3 and 4 shows that groundwater elevations vary between landfill cells due to topographic variations. Groundwater elevations are similar between the overburden and the upper bedrock at most onsite locations indicating hydraulic communication between the saturated overburden and upper bedrock.

The general direction of groundwater flow in the overburden of Landfill Cells 1 & 2 and 9 & 10 area is to the northeast and to the north-northeast for bedrock. Overburden and bedrock groundwater generally flow toward the Etowah River to the north, east, and south-east of the Site with semi-radial flow from Cells 3 & 4, 5 & 6, and 7 & 8. Observed groundwater elevations are consistent with previous observations.

3.2 Groundwater Gradient and Flow Velocity

The groundwater flow velocity at the Site was calculated using a derivation of Darcy's Law. Specifically,

$$V = \frac{K * i}{n_e}$$

Where

$V =$ Groundwater flow velocity $\left(\frac{feet}{day}\right)$.

$K =$ Average horizontal hydraulic conductivity of the aquifer $\left(\frac{feet}{day}\right)$.

$i =$ Horizontal hydraulic gradient $\left(\frac{feet}{foot}\right)$.

$n_e =$ Effective porosity.

The general groundwater flow velocity that was calculated for the Site is based on hydraulic gradients estimated from February and August 2025 groundwater level measurement data and November 2025 groundwater level measurement data for the new wells installed in August-October 2025. Information used for the calculations is provided in **Table 4**. Average hydraulic conductivity values were based on previous slug test results in addition to data from slug tests of the newly installed wells, conducted in October and November of 2025. An estimated effective porosity of 0.01 (based on default soil type value for silty clays to clays in US EPA 530/SW-89-031 [US EPA 1989]) for the screened horizon was used. The sitewide geometric mean for hydraulic conductivity was used to calculate the horizontal groundwater

flow rates at the Site (6.4×10^{-5} centimeters per second [cm/sec] = 0.18 feet per day [ft/day]) was recently updated in the Summary of Geologic and Hydrologic Conditions Addendum report (Stantec 2026). Results for groundwater flow velocities range from approximately 0.01 to 0.12 ft/day (**Table 4**).

The hydraulic gradients in this report have been calculated between an upgradient and downgradient well pair selected to provide the most accurate alignment possible relative to the interpreted groundwater flow path.

Groundwater flow in the Knox Dolomite Formation, underlying the Site, occurs in joints, fractures, bedding planes, and solution channels (Croft 1963). These pathways can facilitate relatively higher groundwater flows in the upper fractured bedrock. However, the flow rates noted in the wells screened in the upper fractured bedrock (**Table 4**) also suggest an abundance of residual clays in the zone where the top of the carbonate bedrock is weathered.

3.3 Continuous Water Level Monitoring (Hydrogeologic Monitoring)

Georgia Power continuously monitors groundwater level fluctuations in accordance with the GWMP (Stantec 2024b). The hydrogeologic monitoring network provides water level data, which are evaluated for changes in subsurface hydrologic conditions. The hydrogeologic data are evaluated weekly and reported semi-annually.

3.3.1 HYDROGEOLOGIC MONITORING NETWORK

Hydrogeologic monitoring locations for Cells 1-10 were selected following analysis of the interim data and review of historical groundwater elevations and potentiometric surface maps. Across the landfill cells, there are a total of 37 wells as of December 6, 2025, that are currently equipped with transducers for monitoring water levels.

For the hydrogeologic monitoring network, Georgia Power utilized In-Situ VuLink® telemetry systems relaying data to an In Situ® database website (HydroVu®) where the telemetry data are stored and compiled. Each Level Troll 500 transducer was deployed in a monitoring well at a fixed depth. Groundwater levels were recorded multiple times daily from each well transducer, and each transducer was programmed to record fluctuations in water levels of ± 0.5 foot occurring within four-hour recording schedules. The telemetry system relays water level data via cellular network to a central data storage unit that can be accessed in real-time over the internet; whereby, the data can be checked for anomalous groundwater level fluctuations. Groundwater elevations, along with the river stage elevations and rainfall data, recorded between December 7, 2024, and December 6, 2025, are provided in a monitoring report for the landfill cell units in **Appendix C**.

During the annual reporting period, transducers from wells GWC-10R, GWC-11R, GWC-13R, GWC-16R, GWC-18, GWC-27, GWC-27R, GWC-33R, GWC-34, GWC-34R, GWA-36A, GWA-39Z, GWC-45R, GWC-47, GWC-47R, GWC-49R, and GWC-49Z/GWC-48 had minor issues with the telemetry systems and data upload. Southern Company Services (SCS) staff corrected these issues, and data logging and transmission has been reestablished. Details on transducer maintenance and repair are provided in **Appendix C**. On January 14, 2025, the transducer from GWC-49Z was removed and placed into GWC-48 to evaluate drainage in the area.

In addition to collecting transducer data, Etowah River level data for the reporting period were obtained from an on-site transducer at a location near the river intake pumping structure and are presented in **Table 3**, **Figure 3**, and **Figure 4**. Daily total precipitation data were obtained from a U.S. Geological Survey station gauge #02394670 on the Etowah River at Georgia Route 61.

3.3.2 HYDROGEOLOGIC MONITORING RESULTS

During the 2025 annual monitoring period from December 7, 2024, through December 6, 2025, the hydrogeologic monitoring network pressure transducers were operational and collected continuous groundwater elevation data, with the exceptions described in **Appendix C** and in Section 3.3.1. Table 1 in the Hydrogeologic Monitoring Report (**Appendix C**) lists identified data anomalies, their causes, and maintenance efforts during the monitoring period. Observed disruptions in the transducer water levels were found to be directly attributed to (a) drawdown during sampling events, water level gauging, and well development, (b) maintenance of wells, transducers, or telemetry units, or (c) rainfall events (greater than 1.5 inches of rain). Hydrogeologic monitoring data for the 2025 annual monitoring period did not show water level fluctuations or sudden decreases in groundwater elevation data attributed to subsurface changes that might be indicative of land subsidence or sinkhole formation.

3.4 Groundwater Sampling

During the 2025 annual reporting period, groundwater samples were collected during two detection monitoring events conducted in February-March 2025 and August-September 2025. One verification event occurred in May 2025 and resampling events occurred in September and October 2025. The May 2025 verification event included mercury and selenium for GWC-48. See Section 3.5 for details on the September and October 2025 resampling events. One additional background sampling event for the wells installed at Cells 5-8 was conducted in March 2025 (with the exception of GWC-34 and GWC-34R, which could not be sampled due to localized flooding). Sampling procedures were conducted in accordance with US EPA Region 4 Laboratory Services and Applied Science Division operating procedures (US EPA 2023, 2024). Monitoring wells were purged and sampled using low-flow sampling procedures. Dedicated pneumatic bladder pumps, non-dedicated pneumatic bladder pumps, or peristaltic pumps were used to purge and sample the wells. An AquaTroll® (In-Situ® field instrument) was used to monitor and record field water quality parameters (pH, specific conductance, DO, temperature, and ORP) and a LaMotte 2020 (or similar) was used to measure turbidity during well purging to verify stabilization prior to sampling.

Groundwater samples were collected when the following stabilization criteria were met for three consecutive readings.

- pH ± 0.1 Standard Units
- Specific conductance ± 5%
- ± 0.2 mg/L or ± 10% for DO > 0.5 mg/L (whichever is greater); for DO < 0.5 mg/L, record only, no stabilization criterion
- Turbidity measurements less than five Nephelometric Turbidity Units (NTUs) or between five and ten NTUs after three hours of purging

- Temperature - Record only, not used for stabilization criteria
- ORP - Record only, not used for stabilization criteria

Once stabilization was achieved, samples were collected into appropriately preserved laboratory-supplied sample containers. Sample bottles were placed in ice-packed coolers and submitted to Pace® Analytical Services, LLC. (Pace) following standard chain-of-custody protocol. Field parameter logs and equipment calibration forms are included in **Appendix D**.

3.5 Laboratory Analyses

Laboratory analyses were performed by Pace, an accredited laboratory by National Environmental Laboratory Accreditation Program (NELAP) that maintains a NELAP certification for the constituents analyzed. In addition, Pace is certified to perform analysis by the state of Georgia. Groundwater data laboratory reports and chain-of-custody records for the monitoring event are presented in **Appendix D**.

The groundwater analytical results from the 2025 annual reporting period are summarized in **Table 5**. The ephemeral spring had insufficient water during the February-March and August-September 2025 sampling events and no sample was collected. Historical analytical data of the spring is provided in **Appendix E**. The spring lacked sufficient water and was not sampled for events not included in **Appendix E**. The pH field measurements recorded during the detection monitoring, background, verification, and resampling events are also provided in **Table 5**.

During the August-September 2025 semiannual sampling event, sample containers for wells GWC-46R, GWC-48, and GWC-49R were mislabeled by the laboratory (Pace) upon receipt and were thought to have been lost. The GWC-46R metals bottle was initially reported as being mislocated by the laboratory after sample login. Upon notice that the samples had been mislocated and prior to the discovery of the labeling issue and issuance of the revised report, well GWC-46R was resampled for metals in September 2025. Following resampling, the lab determined that the original metals bottle for GWC-46R was mislabeled GWC-49R, thus both the original and resample values are reported in **Table 5**.

Additional resamples were collected at GWC-48 and GWC-49R in October 2025 to account for the mislocated and subsequently mislabeled bottles. After the sampling, but prior to analysis, Pace laboratory located the original sample bottle for GWC-49R (mislabeled as GWC-46R) and no additional analysis was conducted. For GWC-48, only mercury analysis was completed to confirm the revised reporting.

All mislabeled containers were later identified and corrected, and laboratory analytical reports were reissued with the correct sample names. Reported data is consistent with both events and historical concentrations for the well samples mislabeled by the lab (GWC-46R, GWC-48, and GWC-49R). Analytical data associated with the resample events are presented in **Table 5**.

3.6 Quality Assurance & Quality Control

During each sampling event, quality assurance/quality control (QA/QC) samples were collected. Equipment blanks were collected at a rate of one QA/QC sample per ten groundwater samples. Blind field duplicate samples were collected by filling additional containers at the same location during the sampling event at a rate of one QA/QC sample per ten groundwater samples. Field blanks were also collected to

evaluate ambient conditions at the sampling locations at a rate of one QA/QC sample per ten groundwater samples.

QA/QC of the groundwater data were assessed by performing a data quality evaluation of the reported laboratory results. A data quality evaluation was conducted on the data using laboratory precision and accuracy and analytical method requirements (US EPA 2002). In addition to collecting QA/QC samples, the data were validated based on the pertinent methods referenced in the laboratory reports, professional and technical judgment, and applicable federal and site-specific guidance documents (US EPA 2023, 2024). The validated data meet project objectives. The data quality evaluations are included in **Appendix D**.

4 Statistical Analysis

This section presents a summary of the statistical approach applied to assess the 2025 annual groundwater data for potential statistically significant increases (SSI) of permit stipulated constituents reported in downgradient compliance wells relative to the available historical dataset. The statistical analyses used at the Site for Appendix I and Appendix III constituents were conducted pursuant to 40 CFR § 257.93 in accordance with the Statistical Analysis Method Certification (certified by a registered Professional Engineer) and based on methodology presented in the GWMP (Stantec 2024b). Statistical analysis techniques are consistent with the methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities*, Unified Guidance, March 2009, EPA 530/R-09-007 (US EPA 2009), hereinafter referred to as the Unified Guidance.

4.1 Statistical Methods

Statistical analyses of groundwater quality data for the 2025 annual reporting period are provided in the Groundwater Stats Consulting, LLC (GSC) Statistical Analysis Reports presented in **Appendix F**. **Table 6** provides a summary of the statistical methodology used at the Site for the 2025 semiannual groundwater events. Sanitas™ groundwater statistical software was used to perform the statistical analyses. Sanitas™ is a commercially available decision support software package that incorporates the statistical tests required of Subtitle C and D facilities by US EPA regulations and guidance as recommended in the Unified Guidance (US EPA 2009). Detailed statistical methods used for Appendix I and Appendix III constituents are discussed in statistical analysis packages provided in **Appendix F** and summarized in Section 4.1.1. Following the minimum of eight background sampling events, statistical analysis is provided for the detection event conducted in August-September 2025 for Cells 5-8.

4.1.1 APPENDIX I AND APPENDIX III STATISTICAL METHOD

Intrawell and interwell methods were used to analyze the February-March and August-September 2025 detection groundwater monitoring event results, as summarized in **Table 6**. Eligibility for intrawell methods is discussed in detail in the Statistical Analysis Reports (**Appendix F**).

In instances where a potential SSI was identified by intrawell statistical methods, interwell statistical methods were used as a second step to determine if the initial potential SSI was below a sitewide background limit. If the concentrations were above both the intrawell and interwell prediction limits, then an additional verification sampling (i.e., one of two resampling) was collected to verify the potential SSI. When a resample analytical result was below the intrawell prediction limit, then the result was not declared an SSI. If the resample analytical result was above the prediction limit or a resample was not collected, then the SSI would be verified and declared.

In instances where a potential SSI was identified by interwell statistical methods, a resample was collected to verify the initial result. When a resample analytical result was below the prediction limit, then the result was not declared an SSI. If the resample analytical result was above the prediction limit or a resample was not collected, then the SSI was verified and declared.

Background data were evaluated using the Sen's Slope/Mann Kendall or linear regression trend test to confirm suspected increasing or decreasing trends (**Appendix F**). The distribution of the data determined which trend test was used.

4.2 Statistical Analyses Results

Using the statistical analysis approach described in Section 4.1 for the detection monitoring data and associated verification data, potential SSIs from the February-March and August-September 2025 events for Appendix I and Appendix III constituents are presented in **Table 7** through **Table 10** below. Potential SSIs addressed by previously submitted alternate source demonstrations (ASDs) or not verified via resampling are indicated in the footnotes.

5 Alternate Source Demonstration

ASDs were previously submitted to GA EPD under separate report covers to address potential SSIs of Appendix I and Appendix III constituents. Based on GA EPD guidance, ASDs no longer require concurrence if an SSI has not been detected for two consecutive events, which indicates natural variability. SSIs confirmed during this reporting period are addressed by previous ASDs listed below. SSIs addressed in previous ASDs that were confirmed during this reporting period are noted in **Table 11**.

6 Monitoring Program Status

Groundwater monitoring for the Plant Bowen Landfill Cells 1 & 2, 3 & 4, and 9 & 10 is in the detection monitoring phase. Cells 5 & 6 and 7 & 8 have completed background sampling events in accordance with the GWMP and began detection monitoring as of August 2025. Background sampling of wells installed in Cells 5-8 in August-October 2025 (GWC-58, GWC-31S, and GWC-25) will begin in February 2026 and will be followed by the eight minimum baseline sampling events in accordance with the GWMP. Potential SSIs of Appendix I constituent mercury and Appendix III constituents calcium and pH were identified during the semiannual sampling events and were addressed in previously submitted ASDs, as described in Section 5.0. Groundwater monitoring at Plant Bowen Landfill Cells 1-10 will continue in the detection monitoring phase.

7 Conclusions & Future Actions

This 2025 Annual Groundwater Monitoring and Corrective Action Report for Georgia Power's Plant Bowen Landfill Cells 1-10 was prepared to fulfill the requirements of applicable federal and state CCR Rules and GA EPD Solid Waste Management Rules (40 CFR § 257.90(e) and 391-3-4-.10).

During the semiannual monitoring events in February-March 2025 and August-September 2025, potential SSIs of Appendix I and Appendix III constituents were addressed by previously submitted ASDs (mercury calcium and pH). The potential SSIs identified during the semiannual reporting period are not thought to be the result of a release from the Landfill Cells 1 & 2, 3 & 4, and 9 & 10 and are attributed to natural variability of groundwater chemistry underlying the Site combined with poor drainage around GWC-48, which was corrected in June 2025. Groundwater monitoring at Plant Bowen Landfill Cells 1-10 will continue in the detection monitoring phase. The next semiannual groundwater monitoring event is tentatively scheduled for February 2026.

Notes:
Elevations shown are in datum NAVD88, which indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.
Georgia State Plane NAD83 West Zone referenced for horizontal datum.
Ground surface elevation measured at nail or known reference point on surface concrete pad.
Groundwater Zone Screened references USCS ASTM 2488 Visual Manual Group Symbol or well survey.
Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.

Notes:
NAVD88 indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.
NA - Not availabile, water level measurement not collected due to localized flooding
The surface water elevation at the Etowah River gauging location (Northing 1504757.08, Easting 2068108.55, NAD 1983) was recorded as 643.3 feet on February 17, 2025 and 643.41 feet on August 14, 2025.

Notes:

1. The estimated sitewide hydraulic conductivity values of 0.18 ft/day is the geometric mean of slug testing data in the 2026 Summary of Geologic and Hydrologic Conditions Addendum, and additional slug testing completed in 2015, 2016, 2024 and 2025.

2. An estimated effective porosity of 0.01 (based on default soil type value for silty clays to clays in USEPA 530/SW-89-031) of the screened horizon.

3. GWC-31S was installed after the august 2025 sampling event. Gauging data from November 18, 2025 was used in the groundwater flow velocity calculations and is presented in Appendix C.

Notes:

mg/L - milligrams per liter

SU - Standard Units

NA - Indicates not analyzed

< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.

J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.

TDS - Total Dissolved Solids

Notes:

mg/L - milligrams per liter

SU - Standard Units

NA - Indicates not analyzed

< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.

J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.

TDS - Total Dissolved Solids

Notes:

mg/L - milligrams per liter

SU - Standard Units

NA - Indicates not analyzed

< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.

J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.

TDS - Total Dissolved Solids

Notes:
mg/L - milligrams per liter
SU - Standard Units
NA - Indicates not analyzed
< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
TDS - Total Dissolved Solids

Notes:
mg/L - milligrams per liter
SU - Standard Units
NA - Indicates not analyzed
< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
TDS - Total Dissolved Solids

Notes:

mg/L - milligrams per liter

SU - Standard Units

NA - Indicates not analyzed

< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.

J - The result is an estimated concentration. "J" qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.

TDS - Total Dissolved Solids

Table 6
Statistical Method Summary
Georgia Power Company
Plant Bowen – Landfill Cells 1-10
Bartow County, GA

Statistical Methodology	Data Screening on Proposed Background	Evaluate outliers, trends, and seasonality when sufficient data are available
	Statistical Limits	Interwell statistical limits are applied on a parameter basis, depending on the appropriateness of the method as determined by the Analysis of Variance. Intrawell statistical limits are applied on a parameter basis, depending on the appropriateness of the method.
	Prediction Limits	When data contain between 15-50% non-detects the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit. Non-parametric means data sets contain greater than 50% non-detects or data are not normally or transformed-normally distributed.
	Management of Non-Detects	When data contain less than 15% non-detects in background, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the practical quantitation limit (PQL) as reported by the laboratory. When data contain between 15-50% non-detects the Kaplan-Meier non-detect adjustment is applied to the background data. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
	Confidence Intervals	Used in Assessment and Corrective Action monitoring.
	No Statistical Testing	Statistical testing is not required for parameters containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
	Verification Resample Plan	Optional 1-of-2 with minimum of 8 samples per well for interwell and intrawell testing.
	Optional	▪ Interwell statistical methods may be used as a second step to determine if an apparent statistically significant increase (SSI) identified by intrawell statistical methods is below sitewide background. ▪ Initial statistical exceedance warrants independent resampling within 90 days. ▪ If resample passes, well/parameter is not a confirmed SSI. ▪ If resample exceeds, well/parameter has a confirmed SSI. ▪ If no resample is collected, the original result is deemed verified.

Title
Potentiometric Surface - August 2025

APPENDIX A
WELL INSPECTIONS

1080 Holcomb Bridge Road
Building 200, Suite 340
Roswell, GA 30076

MEMORANDUM

Date: August 29, 2025

To: Kevin Stephenson and Kristen Jurinko – Southern Company

CC: Ben Hodges – Georgia Power Company

From: EnSafe Inc

Subject: Plant Bowen Landfill - Well Maintenance and Repair Documentation
Georgia Power Company

EnSafe has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at PLANT BOWEN during the Semiannual reporting period. All repairs and maintenance were completed in accordance with the Georgia Environmental Protection Division (GAEPD) guidance on routine visual inspections of groundwater monitoring wells.

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/ Repair Performed
Plant Bowen Landfill	6/16/2025	GWC-48	Drainage Improvements Completed

All maintenance and repairs are also documented in the 2025 annual/semiannual groundwater monitoring report.

MEMORANDUM

Date: January 30, 2026

To: Kevin Stephenson and Kristen Jurinko – Southern Company

CC: Ben Hodges – Georgia Power Company

From: EnSafe Inc

Subject: Plant Bowen Landfill - Well Maintenance and Repair Documentation
Georgia Power Company

EnSafe has prepared this memorandum to provide documentation of groundwater monitoring well maintenance and/or repair performed at PLANT BOWEN during the annual reporting period. All repairs and maintenance were completed in accordance with the Georgia Environmental Protection Division (GAEPD) guidance on routine visual inspections of groundwater monitoring wells.

Georgia Power Site/Unit	Date Performed	Well ID	Maintenance/ Repair Performed
Plant Bowen Landfill	8/19/2025	GWC-25R	CFS Crew cleaned out voids under pad corner and added concrete to stabilize the pad
Plant Bowen Landfill	8/19/2025	GWC-6	CFS Crew drilled under pad and added grout to stabilize, then added concrete to sides of pad to bring it back in contact with ground surface

All maintenance and repairs are also documented in the 2026 annual/semiannual groundwater monitoring report.

Southern Company CFS
Plant Bowen Aug 2025 Well O&M (Aug 19th)

GWC-25R: CFS Crew cleaned out voids under pad corner and added concrete to stabilize the pad.

Southern Company

Southern Company CFS
Plant Bowen Aug 2025 Well O&M (Aug 19th)

GWC-6: CFS crew drilled 6 holes through the existing pad and pumped 6 gals of Portland grout under the pad to stabilize and added concrete to the sides of the pad to bring the edge of the pad back in contact with the ground surface.

Well Installation Report
Plant Bowen Landfill Cells 3 & 4, 5 & 6, and 7 & 8

CERTIFICATION STATEMENT

I hereby certify that this *Well Installation Report – Plant Bowen Landfill Cells 3 & 4, 5 & 6, and 7 & 8* has been prepared by, or under the direct supervision of, a Qualified Groundwater Scientist with Stantec Consulting Services, Inc. and is in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule [40 Code of Federal Regulations 257 Subpart D], specifically §257.91(e)(1), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10.

According to 391-3-4-.01, a Qualified Groundwater Scientist is "a professional engineer or geologist registered to practice in Georgia who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields that enable that individual to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action."

Katie Ross, P.G.

1.0 Introduction

Stantec Consulting Services Inc. (Stantec) is submitting this Well Installation Report to Southern Company Services, Inc. (SCS) and Georgia Power Company (Georgia Power), which documents the construction of three (3) monitoring wells (GWC-25, GWC-31S, and GWC-58) at Plant Bowen in Euharlee, Georgia (Site). Well installations were completed to meet the requirements promulgated in the United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule 40 Code of Federal Regulations (CFR) Part 257, Subpart D (CCR Rule), specifically 40 CFR §257.91(e)(1) and Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10. Well construction activities were performed in general accordance with the standards described in the Resource Conservation and Recovery Act Technical Enforcement Guidance Document (1986), the Georgia Water Wells Standards Act of 1991, as updated, EPA Design and Installation of Monitoring Wells SESDGUID-101-R2 (2018) and Groundwater Monitoring Plan for Plant Bowen Landfill (GWMP) (WSP, 2022).

The three (3) newly installed monitoring wells were installed to enhance the existing detection monitoring system and monitor the groundwater conditions around Cells 3 through 8 at the Site. The well details are included in **Table 1**: Well Construction Details and the locations are shown on **Figure 1**: Plant Bowen Site Map with Well Network. This report provides details about the drilling and installation of the three wells.

2.0 Well Drilling and Construction Activities

Cascade Drilling, LP, under contract with SCS Civil Field Services, drilled and installed three wells between August 18-August 29, 2025. Cascade had a current and valid bond with the Water Wells Standards Advisory Council for the state of Georgia at the time of drilling (**Appendix A**). The driller's name is provided on the boring/construction diagrams presented in **Appendix B**.

An experienced Stantec geologist was present on site to oversee and record the drilling and well construction under the supervision of a professional geologist registered to practice in Georgia. Drilling methods employed for borehole advancement were rotosonic drilling techniques. The drilling equipment consisted of a TSI 150cc Track-Mounted Compact Crawler Sonic drilling rig equipped with 4-inch sonic rods with a 6-inch outer- casing sleeve. During the drilling, continuous core samples were logged and photographed in the field for lithologic properties. **Appendix B** contains the subsurface boring logs.

Wells were constructed at each boring using factory-cleaned and sealed Schedule 40 polyvinyl chloride (PVC) products with flush-threaded fittings. Three wells were constructed with a 10-foot section of 2.35-inch outer diameter (OD) and 2-inch inner diameter (ID), flush-threaded, 0.010-inch factory-slotted PVC, U-Pack screens. The annulus of the U-Pack screen section was filled with Southern Products and Silica Company's Gravel Pack #1 (16-50) filter sand. The screen was placed near the bottom of the borehole, with a flush-threaded PVC end cap placed on the bottom of the well to provide a 0.4-foot sump/sediment trap. The remainder of the well was constructed from 10-foot sections of 2-inch ID, flush-threaded, PVC casing riser extending to approximately 2.5 feet above grade. Construction details for the wells are shown on the well installation logs (**Appendix B**). The PVC products used were American Society for Testing and Materials (ASTM) and National Sanitation Foundation (NSF) rated.

Following placement of the screen and casing, the annular space in the borehole adjacent to the screen was filled with Southern Products and Silica Company's Gravel Pack #1 (16-50) sand. The filter pack sand was tremie poured into the borehole and extended a minimum of 2 feet above the depth of the top of the screen, then tamped into place. Immediately following placement of the filter pack, wells GWC-58 and GWC-31S were pumped using a portable submersible pump until visibly clear water was discharged; GWC-25 was pumped dry following initial placement of the filter pack. A filter pack seal was placed, using PelPlug 3/8-inch non-coated bentonite pellets, on top of the filter pack; the thickness of each seal was a minimum of 2 feet. HolePlug coarse bentonite chips were also placed on top of the filter pack seal until reaching the top of groundwater. The bentonite was hydrated using both natural formation water and potable water and allowed to cure for a minimum of 8 hours prior to grouting the wells.

Following hydration of the bentonite, the remaining annular space was grouted with an AquaGuard® bentonite grout mixture to approximately 2 feet below ground surface using a tremie method. Based on information provided by the product manufacturer, AquaGuard® is a bentonite grout consisting of bentonite and additives that allow for a mixture of 30% solids by weight to facilitate grouting via tremie pipe, with additives that slow the bentonite curing so that proper placement can be achieved. GWC-31S required additional bentonite chips added in 5-foot increments until the formation was able to hold the AquaGuard® bentonite grout mixture in accordance with the GWMP (WSP, 2022).

Each well surface completion consists of a locked, aluminum protective casing and a 4-foot by 4-foot by 4-inch concrete pad with a name placard showing the well name, along with four concrete filled bollards surrounding the pad. The annular space of the aluminum protective casing was filled with pea gravel to approximately 2 inches from top of PVC. A weep hole was drilled into the lower side of the protective casing.

The original location for GWC-25 was abandoned on October 28, 2025 due to sand and bentonite infiltration into the monitoring well following well installation. A replacement GWC-25 was installed on October 30, 2025 following the abandonment of the original monitoring well. GWC-25 was off-set 10 feet and reinstalled following the same procedures as above.

3.0 Well Development Activities

EnSafe Inc. (EnSafe) conducted development activities on September 26, 2025, and completed development on November 11, 2025. Well Development activities were performed in accordance with the approved GWMP (WSP, 2022). Wells GWC-25, GWC-31S and GWC-58 were initially pumped and surged using a Reclaimer pump system. During development, water quality measurements of pH, temperature, specific conductance, oxidation reduction potential (ORP), dissolved oxygen (DO), and turbidity were periodically collected using field-calibrated water quality equipment.

Water quality measurements were collected utilizing an AquaTroll® multimeter and a Hach turbidimeter. Water level measurements were collected using a decontaminated electronic water level indicator, referenced to a permanent marking at the top of the casing and recorded to within 0.01 foot. EnSafe completed a Well Development Form for each well, documenting well location, development date(s), elapsed time since development started, depth to water, purge rate, cumulative purge volume, and water

quality parameter measurements throughout and at completion of the development process. Equipment Calibration and Well Development Forms are included in **Appendix C**.

4.0 Well Survey

Wells were surveyed November 19, 2025, by Donaldson, Garrett, & Assoc., Inc. The survey was completed using Carlson BRX7 global positioning system receiver and a closed level check loop with a Sokkia SHC6000 digital level with a positional tolerance of 0.5/0.01' H:V. The top of the PVC casing was surveyed to 0.5 foot horizontal and 0.01-foot vertical tolerance, and a marking was made on the PVC to use for reference during future measurements. The horizontal location (i.e., northings and eastings) was recorded in feet relative to the North American Datum of 1983 with the vertical elevation recorded in feet relative to the North American Vertical Datum of 1988. Surveyed coordinates and elevations are presented on the subsurface boring logs, well installation logs, and on **Table 1**. The certified surveyor's report is attached as **Appendix D**.

5.0 Well Abandonment

As stated in Section 2.0, the original monitoring well GWC-25 was abandoned due to sand and bentonite infiltration into the well. Abandonment of the original GWC-25 was completed in general accordance with the Georgia Water Well Standards Act (OCGA § 12-5-120 through 138) and the U.S. Environmental Protection Agency (USEPA) Science and Ecosystem Support Division guidance document Design and Installation of Monitoring Wells (SESDGUID-101-R2) for well abandonment procedures, in addition to the procedures outlined in the approved GWMP (WSP, 2022).

The original GWC-25 monitoring well was abandoned by pumping bentonite grout into the monitoring well via a PVC tremie pipe placed at the bottom of the well. The tremie pipe was raised as the grout rose to the top of the casing. After no grout loss occurred in the monitoring well the top 4.9 feet of casing was removed, and bentonite chips and bentonite grout were used to fill the borehole to ground surface. Soil was placed over the boreholes to complete the abandonment.

Prior to abandonment, the concrete well pad was removed. The specific abandonment methods and original boring log for well GWC-25 are shown in **Appendix E**. The well was abandoned by Cascade Drilling, LP, who was contracted through SCS, on October 28th 2025. Cascade had a current and valid bond with the Water Wells Standards Advisory Council for the state of Georgia at the time of abandonment (**Appendix A**).

Notes:
Elevations shown are in datum NAVD88, which indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.
Georgia State Plane NAD83 West Zone referenced for horizontal datum.
Ground surface elevation measured at nail or known reference point on surface concrete pad.
Groundwater Zone Screened references USCS ASTM 2488 Visual Manual Group Symbol or well survey.
Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.
Water Levels were taken November 18, 2025.

APPENDIX A
CASCADE DRILLING BOND

GA Water Well Contractor License # 651

Bond Number 612424813

Performance Bond For Water Well Contractors

Name of Water Well Contractor Richard Alan Mooney

Know All Men By These Presents

That we Cascade Drilling, L.P. and Richard Alan Mooney and any and all employees, officers and partners (collectively hereinafter, **Principal**), and we United States Fire Insurance Company, duly organized under the laws of the State of Delaware (hereinafter, **Surety**), are held and firmly bound unto the Director of the Environmental Protection Division, Department of Natural Resources, State of Georgia (**Director**) and his or her successor or successors in office, as **Obligee**, in the full sum of **THIRTY THOUSAND DOLLARS ($30,000.00)** for the payment of which will and truly to be made, the Principal and Surety bind ourselves, our heirs, administrators, successors and assigns, jointly and severally, by these presents.

WHEREAS, the Water Well Standards Act of 1985 (O.C.G.A. §§ 12-5-120 *et seq.*) (the Act) requires that a Water Well Contractor, as that term is defined by the Act, have a performance bond with the Director to ensure compliance with the Act; and WHEREAS the above bound Principal is subject to the terms and provisions of said Act.

NOW, THEREFORE, the conditions of this obligation are such that if the above bound Principal shall fully and faithfully perform the duties and in all things comply with the procedures and standards set forth in the Act as now and hereafter amended, and the rules and regulations promulgated pursuant thereto, including but not limited to the correction of any violation of such procedures and standards upon discovery, irrespective of whether such discovery is made before completion of any well subject to this bond, then this obligation shall be void; otherwise it shall remain in full force and effect.

And Surety, for value received, agrees that no amendment to existing laws, rules or regulations, or adoption of new laws, rules or regulations shall in anyway discharge its obligation on this bond, and does hereby waive notice of any such amendment, adoption or modification.

This bond shall be effective from the 30th day of June, 20 25 and shall continue in effect until June 30, 2027, unless sooner terminated by mutual agreement of Principal and Surety, provided that no such termination may be made unless sixty (60) days' prior written notice is made to the Director. In the event of such termination, the rights of the Director as Obligee and beneficiaries under this bond which arose prior to such termination shall continue.

IN WITNESS THEREOF the Principal and Surety have caused these present to be duly signed and sealed, this the 2nd day of May, 20 25.

Principal Cascade Drilling, L.P.

Revised 03.17.2021

POWER OF ATTORNEY
UNITED STATES FIRE INSURANCE COMPANY
PRINCIPAL OFFICE - MORRISTOWN, NEW JERSEY

(PRODUCER CODE)

KNOW ALL MEN BY THESE PRESENTS: That United States Fire Insurance Company, a corporation duly organized and existing under the laws of the state of Delaware, has made, constituted and appointed, and does hereby make, constitute and appoint: **Sandra Parker; Melissa Haddick; Tannis Mattson; Orlando Aguirre; Stacy Killebrew; Madison Diaz and Megan Sivley** each, its true and lawful Attorney(s)-In-Fact, with full power and authority hereby conferred in its name, place and stead, to execute, acknowledge and deliver: Any and all bonds and undertakings of surety and other documents that the ordinary course of surety business may require, and to bind United States Fire Insurance Company thereby as fully and to the same extent as if such bonds or undertakings had been duly executed and acknowledged by the regularly elected officers of United States Fire Insurance Company at its principal office, in amounts or penalties: **One Hundred Twenty Five Million Eight Hundred Thousand Dollars ($125,800,000)**

This Power of Attorney limits the act of those named therein to the bonds and undertakings specifically named therein, and they have no authority to bind United States Fire Insurance Company except in the manner and to the extent therein stated.

This Power of Attorney is granted pursuant to Article IV of the By-Laws of United States Fire Insurance Company as now in full force and effect, and consistent with Article III thereof, which Articles provide, in pertinent part:

Article IV, Execution of Instruments - Except as the Board of Directors may authorize by resolution, the Chairman of the Board, President, any Vice-President, any Assistant Vice President, the Secretary, or any Assistant Secretary shall have power on behalf of the Corporation:

(a) to execute, affix the corporate seal manually or by facsimile to, acknowledge, verify and deliver any contracts, obligations, instruments and documents whatsoever in connection with its business including, without limiting the foregoing, any bonds, guarantees, undertakings, recognizances, powers of attorney or revocations of any powers of attorney, stipulations, policies of insurance, deeds, leases, mortgages, releases, satisfactions and agency agreements;
(b) to appoint, in writing, one or more persons for any or all of the purposes mentioned in the preceding paragraph (a), including affixing the seal of the Corporation.

Article III, Officers, Section 3.11, Facsimile Signatures. The signature of any officer authorized by the Corporation to sign any bonds, guarantees, undertakings, recognizances, stipulations, powers of attorney or revocations of any powers of attorney and policies of insurance issued by the Corporation may be printed, facsimile, lithographed or otherwise produced. In addition, if and as authorized by the Board of Directors, dividend warrants or checks, or other numerous instruments similar to one another in form, may be signed by the facsimile signature or signatures, lithographed or otherwise produced, of such officer or officers of the Corporation as from time to time may be authorized to sign such instruments on behalf of the Corporation. The Corporation may continue to use for the purposes herein stated the facsimile signature of any person or persons who shall have been such officer or officers of the Corporation, notwithstanding the fact that he may have ceased to be such at the time when such instruments shall be issued.

IN WITNESS WHEREOF, United States Fire Insurance Company has caused these presents to be signed and attested by its appropriate officer and its corporate seal hereunto affixed this 17th day of January, 2025.

UNITED STATES FIRE INSURANCE COMPANY

Matthew E. Lubin, President

State of New Jersey}
County of Morris }

On this 17th day of January, 2025, before me, a Notary public of the State of New Jersey, came the above named officer of United States Fire Insurance Company, to me personally known to be the individual and officer described herein, and acknowledged that he executed the foregoing instrument and affixed the seal of United States Fire Insurance Company thereto by the authority of his office.

ETHAN SCHWARTZ
NOTARY PUBLIC
STATE OF NEW JERSEY
MY COMMISSION EXPIRES 6/25/2029
COMMISSION: #50223171

Ethan Schwartz (Notary Public)

I, the undersigned officer of United States Fire Insurance Company, a Delaware corporation, do hereby certify that the original Power of Attorney of which the foregoing is a full, true and correct copy is still in force and effect and has not been revoked.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the corporate seal of United States Fire Insurance Company on the 2nd day of May 20 25

UNITED STATES FIRE INSURANCE COMPANY

Michael C. Fay, Senior Vice President

APPENDIX D
CERTIFIED WELL SURVEY

GEORGIA POWER
PLANT BOWEN
MONITORING WELL SURVEY DATA
November 20, 2025
DGA JOB # 5568-011-D1, H119

WELL ID	NORTHING	EASTING	ELEVATIONS			
			GROUND ELEVATION	NAIL IN CONCRETE	TOP OF CASING	TOP OF WELL PAD
GWC-25	1506432.72	2075063.86	673.69	673.83	676.52	
GWC-31S	1504948.63	2075780.69	680.33	n/a	683.01	680.51
GWC-58	1504081.03	2075608.12	670.36	670.71	673.28	

COORDINATES ARE GA STATE PLANE, WEST ZONE, NAD83.
ELEVATIONS ARE BASED ON MEAN SEA LEVEL, NAVD88.

Survey data shown below has a horizontal positional tolerance of +/-0.5 feet and a vertical positional tolerance of +/- 0.01 feet at the 95% level of confidence.
Equipment used to obtain horizontal and vertical coordinates was a CARLSON BRX7 GPS RECEIVER WITH A SOKKIA SHC6000 DATA COLLECTOR.
Benchmark used to establish vertical position was established from previously surveyed well GWC-25R(top of casing elev=676.42). Coordinates are reported in Ga state plane west zone U.S. survey feet. To convert to International feet, multiply by 1.000002.

MONITORING WELL ABANDONMENT RECORD

WELL NO.: BOW-GWC-25
PROJECT NAME: Plant Bowen Landfill Expansion
PROJECT NO.: 175569450
DATE: 10/28/2025

Name of Property Owner: Georgia Power

Address of Property: 317 Covered Bridge Rd SW, Cartersville, GA 30120

Original Purpose of Well Installation: Monitoring Well

Total Depth of Well
(Measured from Top of Riser) 27.2 ft btoc, total well depth 24.7 ft bgs total boring depth

Well Diameter: 2 inches

Screen Slot Size: 0.010 - inch

Length of Screen: 10 ft (29.4 ft to 39.4 ft bgs)
-

Depth to Water/Date
(Measure from Top of Riser) 16.20 ft BTOC 10/27/2025 16.21 ft BTOC 10/28/2025

Description of Well Abandonment Method: Abandoned in place

Type and Volume of Materials Used to Plug Well/Borehole: 6 Gallons of Bentonite grout (Aqua Guard)

Riser and Screen Removed or Left in Place: Riser removed 4.9 ft BGS, screen left in place

Drilling Contractor: Cascade

Driller's Name: Matthew Herron

Additional Notes: Cascade began removing bollards 10/27/2025.
Cascade removed well pad and protective casing from GWC-25 with a skid steer. PVC casing was twisted off at a joint to 4.9 ft BGS, and GWC-25 was tremie grouted with aqua guard. For surface completion, the hole was backfilled with surrounding soil. The original GWC-25 was abandoned in place prior to any drilling activities for the re-installed GWC-25

Stantec Environmental Services Inc. Field Representative: Devon Abuan, Briggs Evans

Date Well Abandonment Completed: 10/28/2025

APPENDIX C
MEMORANDA ON HYDROGEOLOGIC MONITORING PROGRAM

US EPA CCR Rule and GA EPD Rules of Solid Waste Management 391-3-4-.10

Hydrogeological Monitoring Program
December 7, 2024, through June 6, 2025

August 29, 2025

Prepared for:

Georgia Power Company

Prepared by:
Andrew Stevens, P.G.

Stantec Consulting Services Inc.

The conclusions in the Report titled US EPA CCR Rule and the Georgia Environmental Protection Division (GA EPD) Rules of Solid Waste Management 391-3-4-.10 are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Georgia Power Company (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

Figure 4A – 4B Cells 9 & 10

1 Background

Stantec Consulting Services Inc. (Stantec) was retained by Southern Company Services, Inc. (SCS) to assist with the hydrogeological (water level) monitoring program at Georgia Power Company's Plant Bowen (Site) Landfill Cells 1 -10. The work is being conducted to comply with the United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule Title 40 Code of Federal Regulations (40 CFR) 257 Subpart D (CCR Rule) and the Georgia Environmental Protection Division (GA EPD) Rules of Solid Waste Management 391-3-4-.10 United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule to assist with early detection of subsurface changes that might indicate land subsidence or sinkhole formation. Groundwater level fluctuations are monitored in accordance with the 2022 CCR Permit Groundwater Monitoring Plan. This report presents these groundwater level fluctuations during the period of December 7, 2024, through June 6, 2025.

The Site utilizes In-Situ® Inc telemetry and reporting software and pressure transducers to collect and record groundwater elevations from monitoring wells located around the perimeter of the landfill cells. The program was initiated in 2014 at Cells 1 & 2, expanded in 2015, 2016, and 2023 to Cells 3 & 4, Cells 9 & 10, and Cells 5-8, respectively. During this reporting period transducers were deployed in wells as follows:

Cells 1 & 2:

- Ten wells: GWA-2R, GWA-4R, GWC-6RZ, GWC-7Z, GWC-10R, GWC-11, GWC-11R, GWC-13, GWC-13R, and GWC-15R

Cells 3 & 4:

- Eight wells: GWC-16R, GWC-18, GWC-19R, GWC-22R, GWC-24R, GWC-25R, GWC-36A, and GWC-36RA

Cells 5 & 6 and 7 & 8:

- Nine wells: GWC-27, GWC-27R, GWC-29, GWC-29R, GWC-31R, GWC-33, GWC-33R, GWC-34 and GWC-34R

Cells 9 & 10:

- Ten wells: GWA-39Z, GWA-39RZ, GWA-41R, GWA-43, GWA-43R, GWC-45R, GWC-47, GWC-47R, GWC-49R and GWC-48, which replaced GWC-49Z on January 14, 2025

Water level data are electronically logged hourly by each transducer. During this reporting period, logged data were uploaded after each reading via an In-Situ VuLink® telemetry system to an In-Situ® database website (HydroVu®) where the telemetry data are stored and compiled.

In addition to collecting transducer data, Etowah River levels data for the reporting period were obtained from an on-site transducer logging river data at a location near the river intake pumping structure, Northing: 1504757.08, Easting: 2068108.55 North American Datum (NAD) 1983. Daily total precipitation data were obtained from a U.S. Geological Survey station gauge (02394670) near Cartersville, Georgia.

2 Maintenance Observations

SCS Civil Field Services (SCS-CFS) staff performs routine maintenance on transducers within the hydrogeologic monitoring program including battery replacements, transducer maintenance, or reconnection of modem or transducer cables. The monitoring network has been reviewed and optimized to provide widespread spatial coverage to mitigate localized disruptions in the transducer network and prevent loss of monitoring in case of a potential sinkhole formation. During the reporting period, SCS-CFS conducted maintenance on the following locations: GWA-36A, GWA-39Z, GWC-10R, GWC-11R, GWC-13R, GWC-16R, GWC-18, GWC-27, GWC-27R, GWC-33R, GWC-34, GWC-34R, GWC-47, GWC-47R, GWC-49Z, and GWC-48 (Table 1). Although these transducers were not fully operational at these locations during the monitoring period, transducers located in nearby wells do not indicate subsurface changes. The following summarizes the maintenance performed at these locations:

GWC-10R

- Connection with the transducer was lost on January 28, 2025, and connection with the transducer battery was also lost on March 11, 2025. Connection with the transducer resumed and the battery was replaced on April 8, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-13R

- Connection with the transducer was lost on March 13, 2025. Connection with the transducer resumed on June 3, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-16R

- Data was sporadic from mid-February until the data loss on March 21, 2025. Connection with the transducer was lost on March 21, 2025. Connection with the transducer resumed on June 3, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-18

- Connection with the transducer was lost on April 18, 2025. Connection with the transducer resumed on May 5, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-27

- Battery life has not been displaying from the beginning of the time frame for this report, December 7, 2025. Battery connection was regained on April 13, 2025. On the same day, connection with the transducer was lost, and remains unconnected at the time of this report.

GWC-34

- Connection to the transducer and battery was lost on February 23, 2025. There was a large rain event starting on March 11, 2025, where the well was flooded for a period of time causing the connection to be lost.

GWC-34R

- Connection to the transducer was lost on March 11, 2025. The well was flooded alongside well GWC-34. On the same day, the battery was replaced and has not been functioning properly through the remaining period of this report.

GWC-49Z and GWC-48

- The transducer from GWC-49Z was taken offline on January 14, 2025, and moved to GWC-48, where it currently operates today. Data recording has resumed uninterrupted since that time.

3 Water Level Fluctuations

Continuous groundwater level data and river stage elevations for the Etowah River were recorded between December 7, 2024, and June 6, 2025. Reporting period hydrographs for Cells 1-10 are shown in Figures 1A through 4B.

Table 1 documents maintenance completed during the reporting period that had the potential to result in water level trend anomalies. During the reporting period, manual groundwater elevation gauging and groundwater sample collection took place from February 19 through March 6, 2025, as well as additional verification groundwater sampling that occurred on May 1, 2025.

These field efforts are considered known disruptions to the water table and are marked on the hydrograph plots (Figures 1A through 4B). Large volume groundwater purging induced water level decreases have been removed from hydrograph plots to preserve consistent graph trends and detailed resolution across all figures. Routine transducer maintenance activities and repairs occurred throughout the monitoring period and consisted of resetting reference water elevation depths, controlling insect infestation in wells, and replacing instrument batteries. Periodic sampling and maintenance may induce drifts in pressure readings. When drifts are noted, the reference depth to water is re-set, and the logging cycle is re-started.

The water levels in monitoring wells equipped with transducers exhibited similar overall trends during the reporting period. Groundwater elevations show an overall slight and steady decrease until the end of February before water levels increased sharply across the Site. Two large rain events in February and April coincided with large increases in water levels across monitoring wells. Water levels decreased again into June.

Starting on the evening of February 11, 2025 through February 14, 2025, storms moved across the state of Georgia resulting in precipitation at the Site exceeding 3.85 inches over this period according to the U.S. Geological Survey station gauge (02394670) near Cartersville, Georgia. Consequent groundwater responses at the Site were captured with transducer data and water level increases observed were on the order of 0.47 feet up to 33.2 feet at GWA-41R. Certain wells showed peak groundwater elevations on the days closest to the precipitation event on February 10 through 14 (e.g. GWC-36RA), while many others kept steadily rising and peaked a few days later on February 15 and 16 (e.g. GWA-41R, GWA-33, GWA-39RZ, GWA-39Z, GWA-43R and GWC-15R, among others). During the monitoring period one well, GWA-41R, showed a rapid rising limb in the hydraulic response to substantial rainfall as well as a rapid falling limb. Post rain event, GWA-41R exhibited similar groundwater trends as other nearby wells, such as GWA-43 and GWA-43R indicating no subsurface changes. A second large rain event occurred between April 6, 2025 and April 7, 2025 that resulted in 3.54 inches of precipitation at the Site and produced similar results in the monitoring wells across the Site as the February rain event.

Overall trends are similar between the river and the wells, but the wells have a muted response compared to the river. There is a longer recovery period for the groundwater responses indicating that there is not an open, unimpeded connection between groundwater and surface water. Both the river stage and the groundwater appear to be affected by some precipitation events. The observed variations in groundwater elevations are attributed to rainfall variations or due to sampling or maintenance activities at the monitoring points. A comparison of river stage and precipitation data with recorded groundwater elevations (Figures 1A through 4B) shows that both sets of data follow similar overall patterns.

4 Conclusions and Recommendations

Observed disruptions in the transducer water levels were found to be directly attributed to (a) drawdown during sampling events, concurrent water level gauging ,; (b) maintenance of wells, transducers, or telemetry units; or (c) precipitation events. December 7, 2024, through June 6, 2025, hydrologic monitoring data did not show water level fluctuations attributed to subsurface changes that might be indicative of land subsidence or sinkhole formation. Hydrogeologic monitoring will continue at Plant Bowen Landfill Cells 1 -10.

With every community, we redefine what's possible.

Stantec is a global leader in sustainable engineering, architecture, and environmental consulting. The diverse perspectives of our partners and interested parties drive us to think beyond what's previously been done on critical issues like climate change, digital transformation, and future-proofing our cities and infrastructure. We innovate at the intersection of community, creativity, and client relationships to advance communities everywhere, so that together we can redefine what's possible.

Stantec Consulting Services Inc.

The conclusions in the Report titled US EPA CCR Rule and the Georgia Environmental Protection Division (GA EPD) Rules of Solid Waste Management 391-3-4-.10 are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from Georgia Power Company (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

1 Background

Stantec Consulting Services Inc. (Stantec) was retained by Southern Company Services, Inc. (SCS) to assist with the hydrogeological (water level) monitoring program at Georgia Power Company's Plant Bowen (Site) Landfill Cells 1 -10. The work is being conducted to comply with the United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule Title 40 Code of Federal Regulations (40 CFR) 257 Subpart D (CCR Rule) and the Georgia Environmental Protection Division (GA EPD) Rules of Solid Waste Management 391-3-4-.10 United States Environmental Protection Agency (US EPA) coal combustion residuals (CCR) rule to assist with early detection of subsurface changes that might indicate land subsidence or sinkhole formation. Groundwater level fluctuations are monitored in accordance with the 2022 CCR Permit Groundwater Monitoring Plan.

The Site utilizes In-Situ® Inc telemetry and reporting software and pressure transducers to collect and record groundwater elevations from monitoring wells located around the perimeter of the landfill cells. The program was initiated in 2014 at Cells 1 & 2, expanded in 2015, 2016, and 2023 to Cells 3 & 4, Cells 9 & 10, and Cells 5-8, respectively. During this reporting period from June 7, 2025, through December 6, 2025, transducers were deployed in overburden and bedrock wells as follows:

Cells 1 & 2:

- Three overburden wells (GWC-7Z, GWC-11, and GWC-13)
- Seven bedrock wells (GWA-2R, GWA-4R, GWC-6RZ, GWC-10R, GWC-11R, GWC-13R, and GWC-15R)

Cells 3 & 4:

- Two overburden wells (GWC-18 and GWC-36A)
- Six bedrock wells (GWC-16R, GWC-19R, GWC-22R, GWC-24R, GWC-25R, and GWC-36RA)

Cells 5 & 6 and 7 & 8:

- Four overburden wells (GWC-27, GWC-29, GWC-33, and GWC-34)
- Five bedrock wells (GWC-27R, GWC-29R, GWC-31R, GWC-33R, and GWC-34R)

Cells 9 & 10:

- Four overburden wells (GWA-39Z, GWA-43, GWC-47, and GWC-48)
- Six bedrock wells (GWA-39RZ, GWA-41R, GWA-43R, GWC-45R, GWC-47R, and GWC-49R)

Water level data are electronically logged hourly by each transducer. During this reporting period, logged data were uploaded after each reading via an In-Situ VuLink® telemetry system to an In-Situ® database website (HydroVu®) where the telemetry data are stored and compiled.

In addition to collecting transducer data, Etowah River levels data for the reporting period were obtained from an on-site transducer logging river data at a location near the river intake pumping structure, Northing: 1504757.08, Easting: 2068108.55 North American Datum (NAD) 1983. Etowah River levels ad daily total precipitation data were obtained from a U.S. Geological Survey station gauge (02394670) near Cartersville, Georgia.

2 Maintenance Observations

SCS Civil Field Services (SCS-CFS) staff performs routine maintenance on transducers within the hydrogeologic monitoring program including battery change outs, transducer replacement, or reconnection of modem or transducer cables. The monitoring network has been reviewed and optimized to provide widespread spatial coverage to mitigate localized disruptions in the transducer network and prevent loss of monitoring in case of a potential sinkhole formation. During the reporting period, SCS-CFS conducted maintenance on the following locations: GWC-16R, GWA-33, GWC-33R, GWC-34, GWC-34R, GWC-45R, and GWC-49R (Table 1). Although these transducers were not fully operational at these locations during the monitoring period, transducers located in nearby wells do not indicate subsurface changes. The following summarizes the maintenance performed at these locations.

GWC-16R

- Gaps in readings between August 19 and 28, 2025. Full connection with the transducer resumed on August 28, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWA-33

- Gaps in readings between September 13 and 22, 2025. Full connection with the transducer resumed on September 22, 2025 after the battery was replaced. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-33R

- Connection with the transducer was lost on July 1, 2025. Connection with the transducer resumed on July 14, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-34

- Connection to the transducer and battery was lost on February 23, 2025. There was a large rain event starting on March 11, 2025, where the well was flooded for a period of time causing the connection to be lost. Connection with the transducer resumed on July 1, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-34R

- Connection to the transducer was lost on March 11, 2025. The well was flooded alongside well GWC-34. Connection with the transducer resumed on July 1, 2025. The battery was replaced on the same day and has been functioning properly throughout the remaining period of this report. Data recording has resumed uninterrupted, and the issue has been resolved

GWC-45R

- Connection to the transducer was lost on September 24, 2025. The Level Troll malfunctioned, and a replacement needed to be ordered. The replacement arrived and was replaced on November 26, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

GWC-49R

- Transducer drift was first recorded on August 14, 2025, resulting in an over-reporting of data by 2.0 feet. A second drift event occurred on October 7, 2025, which introduced an additional positive offset of 1.5 feet to the sensor readings.
- Connection to the transducer was lost on October 31, 2025. Connection with the transducer resumed on November 18, 2025. Data recording has resumed uninterrupted, and the issue has been resolved.

3 Water Level Fluctuations

Continuous groundwater level data and river stage elevations for the Etowah River were recorded between June 7, 2025, through December 6, 2025. Reporting period hydrographs for Cells 1-10 are shown in Figures 1A through 4B.

Table 1 documents maintenance completed during the reporting period that had the potential to result in water level trend anomalies. During the reporting period, manual groundwater elevation gauging and groundwater sample collection took place from August 14 through September 4, 2025, as well as two additional verification groundwater sampling events that occurred on September 24, 2025 and October 10, 2025.

The groundwater elevation at GWA-39RZ showed a temporary 10-foot decrease (from 668.65 ft to 658.22 ft) on August 14, 2025, caused by the removal of the transducer during sampling. The readings remained at this lower elevation until August 28, 2025, when the sensor was redeployed and the elevation stabilized at 668.06 feet.

The transducer battery for GWC-10R was replaced on September 22, 2025, which coincided with a 26’ drop in water level from 650.80’ to 623.44’ with the water level stabilizing now at 651’ after the battery replacement was completed.

These field efforts are considered known disruptions to the water table and are marked on the hydrograph plots (Figures 1A through 4B). Large volume groundwater purging induced water level decreases shown on hydrograph plots, marked by sampling events. Routine transducer maintenance activities and repairs occurred throughout the monitoring period and consisted of resetting reference water elevation depths, controlling insect infestation in wells, and replacing instrument batteries. Periodic sampling and maintenance may induce drifts in pressure readings. When drifts are noted, the reference depth to water is re-set, and the logging cycle is re-started.

The water levels in monitoring wells equipped with transducers exhibited similar overall trends during the reporting period. Groundwater elevations show an overall slight and steady decrease until the end of October and early November before water levels increased across the Site. Water levels are steadily increasing still at the time of the review.

There were no rain events that resulted in precipitation at the Site exceeding 1.5 inches over a 24 hour period according to the U.S. Geological Survey station gauge (02394670) near Cartersville, Georgia. Consequent groundwater responses at the Site were captured with transducer data and water level increases observed were up to approximately 2 ft during the rain event in early November. Water levels taper off after a day or two and return to normal levels within 7 days.

Overall trends are similar between the river and the wells, but the wells have a muted response compared to the river. There is a longer recovery period for the groundwater responses indicating that there is not an open, unimpeded connection between groundwater and surface water. Both the river stage and the groundwater appear to be affected by some precipitation events. The observed variations in groundwater elevations are attributed to rainfall variations or due to sampling or maintenance activities at the monitoring points. A comparison of river stage and precipitation data with recorded groundwater elevations (Figures 1A through 4B) shows that both sets of data follow similar overall patterns.

4 Conclusions and Recommendations

Observed disruptions in the transducer water levels were found to be directly attributed to (a) drawdown during sampling events, water level gauging, (b) maintenance of wells, transducers, or telemetry units; or (c) precipitation events. June 7, 2025, through December 6, 2025, hydrologic monitoring data did not show water level fluctuations attributed to subsurface changes that might be indicative of land subsidence or sinkhole formation. Hydrogeologic monitoring will continue at Plant Bowen.

With every community, we redefine what's possible.

Stantec is a global leader in sustainable engineering, architecture, and environmental consulting. The diverse perspectives of our partners and interested parties drive us to think beyond what's previously been done on critical issues like climate change, digital transformation, and future-proofing our cities and infrastructure. We innovate at the intersection of community, creativity, and client relationships to advance communities everywhere, so that together we can redefine what's possible.

RE: Project: Bowen LF Cells 1&2
Pace Project No.: 92782410

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between February 28, 2025 and March 07, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen LF Cells 1&2
Pace Project No.: 92782410

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1g	The continuing calibration verification (CCV) for this analyte is above laboratory acceptance limits. The analyte was not detected above the reporting limit in any of the associated samples.
2g	The same analyte was detected in an associated instrument blank at a concentration above 1/2 the reporting limit but below the reporting limit. The concentration in the sample was non-detect.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

DC#_Title: ENV-FRM-HUN1-0083 v05_Sample Condition Upon Receipt

Effective Date: 05/24/2024

Laboratory receiving samples:
Asheville ☐ Eden ☐ Greenwood ☐ Huntersville ☐ Raleigh ☐ Mechanicsville ☐ Atlanta ☑ Kernersville ☐

WO# : 92782410

92782410

Sample Condition Upon Receipt

Client Name: GA Power

Project #:

Courier: ☐ Commercial ☐ Fed Ex ☑ Pace ☐ UPS ☐ USPS ☐ Other:____ ☐ Client

Custody Seal Present? ☑ Yes ☐ No Seals Intact? ☑ Yes ☐ No ☐ N/A

Date/Initials Person Examining Contents: 2/26/25 mm

Packing Material: ☑ Bubble Wrap ☐ Bubble Bags ☐ None ☐ Other

Biological Tissue Frozen? ☐ Yes ☐ No ☑ N/A

Thermometer: ☐ IR Gun ID: 214

Type of Ice: ☑ Wet ☐ Blue ☐ None

Cooler Temp: 4.0 Correction Factor: Add/Subtract (°C) 0

Temp should be above freezing to 6°C
☐ Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 4.0

USDA Regulated Soil (☐ N/A, water sample)
Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.
Sufficient Volume?	☑ Yes	☐ No	☐ N/A	5.
Correct Containers Used?	☑ Yes	☐ No	☐ N/A	6.
-Pace Containers Used?	☑ Yes	☐ No	☐ N/A	
Containers Intact?	☑ Yes	☐ No	☐ N/A	7.
Dissolved analysis: Samples Field Filtered?	☐ Yes	☑ No	☐ N/A	8.
Sample Labels Match COC?	☑ Yes	☐ No	☐ N/A	9.
-Includes Date/Time/ID/Analysis Matrix: WG				
Headspace in VOA Vials (>5-6mm)?	☐ Yes	☐ No	☑ N/A	10.
Trip Blank Present?	☐ Yes	☐ No	☑ N/A	11.
Trip Blank Custody Seals Present?	☐ Yes	☐ No	☑ N/A	

Field Data Required? ☐ Yes ☐ No

RE: Project: Bowen LF Cells 1&2
Pace Project No.: 92816985

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on September 05, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: Bowen LF Cells 1&2
Pace Project No.: 92816985

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92816985

[1]	STANTEC
[2]	DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

ANALYTE QUALIFIERS

CU	The continuing calibration for this analyte is above laboratory acceptance limits. Analyte was not detected above the reporting limit in any of the associated samples.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

DC#_Title: ENV-FRM-HUN1-0083 v05_Sample Condition Upon Receipt

Effective Date: 05/24/2024

Laboratory receiving samples:
Asheville ☐ Eden ☐ Greenwood ☐ Huntersville ☐ Raleigh ☐ Mechanicsville ☐ Atlanta ☑ Kernersville ☐

Sample Condition Upon Receipt

Client Name: Go Power

Project #:

WO# : 92816985

92816985

Courier: ☐ Commercial ☐ Fed Ex ☐ UPS ☐ USPS ☐ Client ☐ Pace ☐ Other:

Custody Seal Present? ☐ Yes ☑ No Seals Intact? ☐ Yes ☐ No ☑ N/A

Date/Initials Person Examining Contents:

Packing Material: ☑ Bubble Wrap ☐ Bubble Bags ☐ None ☐ Other

Biological Tissue Frozen? ☐ Yes ☐ No ☑ N/A

Thermometer: ☑ IR Gun ID: 730

Type of Ice: ☑ Wet ☐ Blue ☐ None

Cooler Temp: 3.1 Correction Factor: Add/Subtract (°C) 0.0

Temp should be above freezing to 6°C
☐ Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 3.1

USDA Regulated Soil (☐ N/A, water sample)
Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.
Sufficient Volume?	☑ Yes	☐ No	☐ N/A	5.
Correct Containers Used?	☑ Yes	☐ No	☐ N/A	6.
-Pace Containers Used?	☑ Yes	☐ No	☐ N/A	
Containers Intact?	☑ Yes	☐ No	☐ N/A	7.
Dissolved analysis: Samples Field Filtered?	☐ Yes	☐ No	☑ N/A	8.
Sample Labels Match COC?	☑ Yes	☐ No	☐ N/A	9.
-Includes Date/Time/ID/Analysis Matrix:				
Headspace in VOA Vials (>5-6mm)?	☐ Yes	☐ No	☑ N/A	10.
Trip Blank Present?	☐ Yes	☐ No	☑ N/A	11.
Trip Blank Custody Seals Present?	☐ Yes	☐ No	☑ N/A	

Field Data Required? ☐ Yes ☐ No

CLIENT NOTIFICATION/RESOLUTION

Person contacted: Date/Time:

Project Manager SCURF Review: Date:

Project Manager SRF Review: Date:

*Check mark top half of box if pH and/or dechlorination is verified and within the acceptance range for preservation samples.
Exceptions: VOA, Coliform, TOC, Oil and Grease, DRO/8015 (water) DOC, LLHg
**Bottom half of box is to list number of bottles
***Check all unpreserved Nitrates for chlorine

RE: Project: Bowen LF Cells 3&4
Pace Project No.: 92781127

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between February 21, 2025 and February 28, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: Bowen LF Cells 3&4
Pace Project No.: 92781127

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Bowen LF Cells 3&4
Pace Project No.: 92813796

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between August 19, 2025 and August 29, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen LF Cells 3&4
Pace Project No.: 92813796

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92813796

[1]	STANTEC
[2]	DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
P8	Analyte was detected in the method blank. The analyte concentration in this sample is at least ten times greater than the blank or is below the reporting limit.
R1	RPD value was outside control limits.

RE: Project: Bowen LF Cells 5-8
Pace Project No.: 92783822

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on March 07, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Pace Analytical Services, LLC
9800 Kincey Ave. Suite 100
Huntersville, NC 28078
(704)875-9092

QUALIFIERS

Project: Bowen LF Cells 5-8
Pace Project No.: 92783822

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

H3	Sample was received or analysis requested beyond the recognized method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Bowen LF Cells 5-8
Pace Project No.: 92813454

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between August 15, 2025 and September 05, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

Revision 1: Dissolved Aluminun was reported instead of Dissolved Antimony to samples GWC-34 and GWC-34R. Dissolved Antimony is added and the report is revised.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen LF Cells 5-8
Pace Project No.: 92813454

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92813454

[1]	STANTEC
[2]	DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

ANALYTE QUALIFIERS

1g	The same analyte was detected in an associated instrument blank at a concentration above 1/2 the reporting limit but below the reporting limit. The analyte concentration in the sample is at least ten times greater than the blank concentration or is below the reporting limit.
2g	The same analyte was detected in an associated instrument blank at a concentration above 1/2 the reporting limit but below the reporting limit. The concentration in the method blank was below the reporting limit and will be reported.
3g	The same analyte was detected in an associated instrument blank at a concentration above half the reporting limit but less than the reporting limit. The concentration in the LCS was greater than ten times the concentration in the instrument blank, and the percent recovery was within method acceptance limits.
B	Analyte was detected in the associated method blank.
H1	Analysis conducted outside the EPA method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
P8	Analyte was detected in the method blank. The analyte concentration in this sample is at least ten times greater than the blank or is below the reporting limit.

RE: Project: Bowen LF Cells 9&10
Pace Project No.: 92782406

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on February 28, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Bowen LF Cells 9&10
Pace Project No.: 92782406

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1g	The same analyte was detected in an associated instrument blank at a concentration above 1/2 the reporting limit but below the reporting limit. The concentration in the sample was non-detect.
B	Analyte was detected in the associated method blank.
D4	Sample was diluted due to the presence of high levels of target analytes.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Effective Date: 05/24/2024

Laboratory receiving samples:
Asheville ☐ Eden ☐ Greenwood ☐ Huntersville ☐ Raleigh ☐ Mechanicsville ☐ Atlanta ☑ Kernersville ☐

Sample Condition Upon Receipt

WO# : 92782406

92782406

Client Name: GA Power Project #:

Courier: ☐ Commercial ☐ Fed Ex ☐ UPS ☐ USPS ☑ Pace ☐ Other:___ ☐ Client

Custody Seal Present? ☑ Yes ☐ No Seals Intact? ☑ Yes ☐ No ☐ N/A Date/Initials Person Examining Contents: [illegible]

Packing Material: ☑ Bubble Wrap ☐ Bubble Bags ☐ None ☐ Other

Biological Tissue Frozen? ☐ Yes ☐ No ☑ N/A

Thermometer: ☐ IR Gun ID: 214 Type of Ice: ☑ Wet ☐ Blue ☐ None

Cooler Temp: 4.0 Correction Factor: Add/Subtract (°C) 0

Temp should be above freezing to 6°C
☐ Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 4.0

USDA Regulated Soil (☐ N/A, water sample)
Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.
Sufficient Volume?	☑ Yes	☐ No	☐ N/A	5.
Correct Containers Used?	☑ Yes	☐ No	☐ N/A	6.
-Pace Containers Used?	☑ Yes	☐ No	☐ N/A	
Containers Intact?	☑ Yes	☐ No	☐ N/A	7.
Dissolved analysis: Samples Field Filtered?	☐ Yes	☑ No	☐ N/A	8.
Sample Labels Match COC?	☑ Yes	☐ No	☐ N/A	9.
-Includes Date/Time/ID/Analysis Matrix: WG				
Headspace in VOA Vials (>5-6mm)?	☐ Yes	☐ No	☑ N/A	10.
Trip Blank Present?	☐ Yes	☐ No	☑ N/A	11.
Trip Blank Custody Seals Present?	☐ Yes	☐ No	☑ N/A	

Field Data Required? ☐ Yes ☐ No

pH Adjustment Log for Preserved Samples

Sample ID	Type of Preservative	pH upon receipt	Date preservation adjusted	Time preservation adjusted	Amount of Preservative added	Lot #

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DENR Certification Office (i.e. Out of hold, incorrect preservative, out of temp, incorrect containers.

RE: Project: Bowen LF Cells 9&10
Pace Project No.: 92794442

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on May 05, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92794442

Method: **EPA 6020B**
Description: WC 6020B MET ICPMS
Client: Georgia Power- Bowen
Date: June 05, 2025

General Information:
4 samples were analyzed for EPA 6020B by Pace Analytical Services West Columbia. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3005A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92794442

Method: **EPA 7470A**
Description: WCOL 7470 Mercury
Client: Georgia Power- Bowen
Date: June 05, 2025

General Information:
4 samples were analyzed for EPA 7470A by Pace Analytical Services West Columbia. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 7470A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: Bowen LF Cells 9&10
Pace Project No.: 92794442

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Bowen LF Cells 9&10
Pace Project No.: 92815765

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory between August 29, 2025 and September 05, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92815765

Date: October 16, 2025

Upon further investigation, samples collected 8/29/25 (samples 92815765014-92815765020) were mislabelled in the lab.

The lab revised the report and updated each sample with the correct results based on the clients label.

Samples BOW-LF9-10-FB-10 (92815765019) and BOW-LF9-10-EB-10 (92815765020) were re-ran due to the mislabeling.

The revised final report is sent to the client for review.

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92815765

Method: **SM 2320B-2021**
Description: 2320B Alkalinity
Client: Georgia Power- Bowen
Date: October 16, 2025

General Information:
23 samples were analyzed for SM 2320B-2021 by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92815765

Method: **EPA 300.0 Rev 2.1 1993**
Description: 300.0 IC Anions 28 Days
Client: Georgia Power- Bowen
Date: October 16, 2025

General Information:
23 samples were analyzed for EPA 300.0 Rev 2.1 1993 by Pace Analytical Services Asheville. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 957477

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92815483006,92815765011

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 4920896)
  - Fluoride
- MSD (Lab ID: 4920897)
  - Fluoride

Project: Bowen LF Cells 9&10
Pace Project No.: 92815765

Method: **EPA 6020B**
Description: WC 6020B MET ICPMS
Client: Georgia Power- Bowen
Date: October 16, 2025

General Information:
23 samples were analyzed for EPA 6020B by Pace Analytical Services West Columbia. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3005A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 957531

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 92815765001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 4921081)
  - Calcium
- MSD (Lab ID: 4921082)
  - Calcium
  - Magnesium

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92815765

Method: **EPA 7470A**
Description: WCOL 7470 Mercury
Client: Georgia Power- Bowen
Date: October 16, 2025

General Information:
23 samples were analyzed for EPA 7470A by Pace Analytical Services West Columbia. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

H1: Analysis conducted outside the EPA method holding time.
- BOW-LF9-10-EB-10 (Lab ID: 92815765020)
- BOW-LF9-10-FB-10 (Lab ID: 92815765019)

H2: Extraction or preparation conducted outside EPA method holding time.
- BOW-LF9-10-EB-10 (Lab ID: 92815765020)
- BOW-LF9-10-FB-10 (Lab ID: 92815765019)

Sample Preparation:
The samples were prepared in accordance with EPA 7470A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Bowen LF Cells 9&10
Pace Project No.: 92815765

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

1g	The initial calibration verification for this analyte is above laboratory acceptance limits. Analyte was not detected above the reporting limit in any of the associated samples.
H1	Analysis conducted outside the EPA method holding time.
H2	Extraction or preparation conducted outside EPA method holding time.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Bowen LF Cells 9&10
Pace Project No.: 92820550

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on September 26, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Anna Johnson for
Bonnie Vang

QUALIFIERS

Project: Bowen LF Cells 9&10
Pace Project No.: 92820550

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

RE: Project: Bowen LF Cells 9&10
Pace Project No.: 92823078

Dear Kristen Jurinko:

Enclosed are the analytical results for sample(s) received by the laboratory on October 09, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - West Columbia

Revision 1: The case narrative was revised.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92823078

Date: November 12, 2025

Due to a laboratory labeling error, GWC-48, GWC-49R and associated QA/QC samples were re-collected on 10/8/2025. After laboratory labeling issues were resolved with the initial sample sets (WO 92815765), re-sample GWC-48 (92823078001) was re-analyzed for Hg only to confirm the reported concentration.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: Bowen LF Cells 9&10
Pace Project No.: 92823078

Method: **EPA 7470A**
Description: WCOL 7470 Mercury
Client: Georgia Power- Bowen
Date: November 12, 2025

General Information:
1 sample was analyzed for EPA 7470A by Pace Analytical Services West Columbia. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 7470A with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: Bowen LF Cells 9&10
Pace Project No.: 92823078

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Thermometer: ☑ IR Gun ID: 0083

Type of Ice: ☑ Wet ☐ Blue ☐ None

Cooler Temp: 2.1 Correction Factor: Add/Subtract (°C) 0.0

Temp should be above freezing to 6°C
☐ Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 2.1

USDA Regulated Soil (☐ N/A, water sample)
Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.
Sufficient Volume?	☑ Yes	☐ No	☐ N/A	5.
Correct Containers Used?	☑ Yes	☐ No	☐ N/A	6.
-Pace Containers Used?	☑ Yes	☐ No	☐ N/A	
Containers Intact?	☑ Yes	☐ No	☐ N/A	7.
Dissolved analysis: Samples Field Filtered?	☐ Yes	☐ No	☑ N/A	8.
Sample Labels Match COC?	☑ Yes	☐ No	☐ N/A	9.
-Includes Date/Time/ID/Analysis Matrix: W				
Headspace in VOA Vials (>5-6mm)?	☐ Yes	☐ No	☑ N/A	10.
Trip Blank Present?	☐ Yes	☐ No	☑ N/A	11.
Trip Blank Custody Seals Present?	☐ Yes	☐ No	☑ N/A

pH Adjustment Log for Preserved Samples

Sample ID	Type of Preservative	pH upon receipt	Date preservation adjusted	Time preservation adjusted	Amount of Preservative added	Lot #

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DENR Certification Office (i.e. Out of hold, incorrect preservative, out of temp, incorrect containers.

DATA USABILITY SUMMARY

Steven Elliott (Stantec) reviewed one data package from Pace Analytical for the analysis of water samples collected from February 27 through March 4, 2025, at the Georgia Power Bowen Plant site (Cells 1 & 2). Samples were collected according to the 2022 CCR Permit Groundwater Monitoring Plan (CCR Permit No. 008-018D [CCR]).

Intended Use of Data: To delineate concentrations of constituents of concern in site groundwater.

Analyses requested included:

- SW-846-6020B – Metals by inductively coupled plasma - mass spectrometry (ICP/MS)
- SW-846 7470A – Mercury by manual cold-vapor
- EPA 300 Rev 2.1 – Chloride, fluoride, and sulfate by ion chromatography
- SM 2320B – 2011 - Alkalinity
- SM 2540C - 2015 – Total dissolved solids (TDS)

Data were reviewed and validated as described in the field sampling plan and the *National Functional Guidelines for Inorganic Superfund Methods Data Review* (November 2020). The results of the review/validation are discussed in this Data Usability Summary (DUS) and the associated Laboratory Data Review Checklists.

DATA REVIEW/VALIDATION RESULTS

Introduction

Twenty four (24) groundwater samples, three (3) field blanks, three (3) equipment blanks, and three (3) field duplicate samples were analyzed for one or more of the analyses listed above. Table 1 lists the field identifications cross-referenced to laboratory identifications. Table 2 is a summary of qualified data. Tables 3a – 3c summarize field duplicate results.

Analytical Results

The data packages contain a minimum of one quality control batch per analytical method analyzed. The quality control batch identifies the laboratory QC samples that correspond to the designated field samples. Not detected results are reported as less than the value of the method detection limit (MDL).

Preservation and Holding Times

The samples were evaluated for agreement with the chain-of-custody forms. The samples were received in the appropriate containers with the paperwork filled out properly. The laboratory sample condition upon receipt forms indicates all samples were received at a temperature of 3.2°C. All samples were analyzed within the technical holding time. No data were qualified.

Calibrations

Case narratives indicate Initial and continuing calibration verification data were within method acceptance criteria.

Blanks

Laboratory Method Blanks. No contamination was detected in any of the laboratory method blanks.

Field Blanks. Field blanks (BOW-LF1-2-FB-10, BOW-LF1-2-EB-10, BOW-LF1-2-FB-11, BOW-LF1-2-EB-11, BOW-LF1-2-FB-12, and BOW-LF1-2-EB-12) were analyzed for the full suite of sample analyses and all analytes were reported as not detected.

Laboratory Control Samples

Laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) recoveries met the laboratory acceptance criteria for all analyses.

Matrix Spike/Matrix Spike Duplicates

Site-specific MS/MSD precision and accuracy results were within the laboratory acceptance criteria with the following exceptions:

- Chloride in sample BOW-GWC-10 had a high MSD percent recovery and has been qualified as estimated.
- Calcium and magnesium in sample BOW-GWA-2 had MS percent recoveries outside of laboratory acceptance criteria. However, the spiking concentrations were less than 30% of the concentration reported for the parent sample and therefore not appropriate for evaluation.

Laboratory Duplicates

Appropriate analytical duplicates were analyzed and RPDs were within the laboratory acceptance criteria.

Analyte Quantitation and Sensitivity

All results were reported to the MDLs in mg/L.
