Certification

This *2025 Annual Groundwater Monitoring and Corrective Action Report*, Plant McDonough-Atkinson Ash Pond 2 and 3/4 (AP-2, 3/4) has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with WSP USA, Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

Georgia Licensed Professional Engineer No. 026729

Executive Summary

This summary of the *2025 Annual Groundwater Monitoring and Corrective Action Report* provides the status of the groundwater monitoring and corrective action program from July 2024 through June 2025 at Georgia Power Company's (Georgia Power) Plant McDonough-Atkinson Ash Pond 2 and Ash Pond 3/4 (AP-2 and 3/4; Site). This summary was prepared by WSP USA, Inc. (WSP) on behalf of Georgia Power to meet the requirements listed in Part A, Section 6[1] of the United States Environmental Protection Agency (US EPA) coal combustion residual (CCR) rule (40 Code of Federal Regulations [CFR] 257 Subpart D). As required in 40 CFR § 257.90(e), this Annual Report describes the status of the groundwater monitoring program, summarizes key actions completed, and presents projected key activities for the upcoming year for AP-2 and 3/4. The other CCR unit (AP-1) at Plant McDonough-Atkinson (Plant McDonough) is reported separately.

Plant McDonough, formerly a coal-fired power generating facility, was converted to a natural gas combined-cycle power generating facility in 2011. Located approximately 7 miles northwest of Atlanta in southeast Cobb County (5551 South Cobb Drive SE, Smyrna, Georgia 30339), the property occupies approximately 390 acres and is bounded on the southeast by the Chattahoochee River. On March 31, 2025, GA EPD issued draft permit no. 033-099D(CCR) for the closure of AP-2 and 3/4.

Plant McDonough

Groundwater at AP-2 and 3/4 is monitored using a comprehensive well network of upgradient and downgradient wells that meet Federal and State monitoring requirements. Routine semi-annual sampling and reporting for AP-2 and 3/4 began in 2018 after the background groundwater conditions were established between 2016 and 2018.

Based on groundwater quality, an assessment monitoring program and assessment of corrective measures were established on November 13, 2019, and July 9, 2020, respectively. During the 2025 annual reporting period, the Site remained in assessment monitoring as corrective measures are evaluated.

[1] 80 FR 21468, April 17, 2015, as amended at 81 FR 51807, August. 5, 2016; 83 FR 36452, July 30, 2018; 85 FR 53561, August 28, 2020.

Groundwater elevation measurements were recorded from the Site monitoring wells prior to each sampling event to confirm the groundwater flow direction, and to confirm that the groundwater monitoring well network for the CCR units remains sufficient to monitor groundwater downgradient of the units.

2024-2025 Annual Groundwater Monitoring Activities

The following changes were made to the AP-2 and 3/4 certified detection monitoring network during this reporting period: a dry well (DGWC-9) was replaced with a deeper well, three new detection monitoring wells were installed (DGWC-126, DGWC-127, and DGWC-128), two existing piezometers downgradient of AP-2 and 3/4 were converted to detection monitoring wells (B-16 and B-18 converted to DGWC-16 and DGWC-18), and an assessment monitoring well (B-129S), four piezometers (B-130S, B-131S, B-132S, B-133S), and two injection wells (INW-02 and INW-03) were installed.

Groundwater monitoring semi-annual sampling events for AP-2 and 3/4 were conducted in September 2024 and February 2025. Groundwater samples were collected and analyzed for Appendix III[2] and Appendix IV[3] required monitoring parameters.

Analytical data from the September 2024 and February 2025 monitoring events has been statistically analyzed in accordance with the Site's certified statistical analysis method. For the September 2024 monitoring event, statistical analyses indicate statistically significant increases (SSIs) for Appendix III constituents above the statistical limits and statistically significant levels (SSLs) of Appendix IV constituents above the groundwater protection standards (GWPS) as summarized below.

Appendix III Constituent	September 2024 SSIs[1]
Boron	DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-9, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, DGWC-48
Calcium	DGWC-4, DGWC-5, DGWC-9, DGWC-10, DGWC-11, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-48
Chloride	DGWC-5, DGWC-8, DGWC-9, DGWC-10, DGWC-11, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42
Fluoride	DGWC-9, DGWC-10, DGWC-20, DGWC-47, DGWC-48
pH	DGWC-5, DGWC-8, DGWC-9, DGWC-10, DGWC-17, DGWC-19, DGWC-20, DGWC-42, DGWC-47, DGWC-48
Sulfate	DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-9, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, DGWC-48
TDS	DGWC-4, DGWC-5, DGWC-9, DGWC-10, DGWC-11, DGWC-12, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, DGWC-48
Appendix IV Constituent	**September 2024 SSLs[2]**
Arsenic	DGWC-9
Beryllium	DGWC-5, DGWC-9, DGWC-10, DGWC-47, DGWC-48, B-92, B-93
Cobalt	DGWC-8, DGWC-9, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-92, B-93, B-104D
Lithium	DGWC-47, DGWC-48, B-120D
Radium 226 + 228[3]	B-104D, B-122D

[2] Appendix III: boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids
[3] Appendix IV: antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, fluoride, lead, lithium, mercury, molybdenum, combined radium (226 + 228), selenium, and thallium.

Appendix III Constituent	February 2025 SSIs[1][4]
Boron	DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-14, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-48
Calcium	DGWC-4, DGWC-5, DGWC-10, DGWC-11, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-48
Chloride	DGWC-5, DGWC-8, DGWC-10, DGWC-11, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42
Fluoride	DGWC-10, DGWC-20, DGWC-47
pH	DGWC-5, DGWC-8, DGWC-10, DGWC-17, DGWC-19, DGWC-20, DGWC-42, DGWC-47, DGWC-48
Sulfate	DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, DGWC-48
TDS	DGWC-4, DGWC-5, DGWC-10, DGWC-11, DGWC-12, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-48
Appendix IV Constituent	**February 2025 SSLs[2][4]**
Beryllium	DGWC-5, DGWC-10, DGWC-47, DGWC-48, B-92, B-93
Cobalt	DGWC-8, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-92, B-93, B-100, B-104D
Lithium	DGWC-47, DGWC-48, B-120D
Radium 226 + 228[3]	B-104D, B-122D

Notes:
[1] An SSI is determined by an exceedance of the calculated prediction limit.
[2] An SSL is determined by comparing the confidence interval to the GWPS. Per GA EPD Rule 391-3-4-.10(6)(a), the GWPS is: (i) the MCL or Federal and State CCR rules specified levels, or (ii) background levels for constituents where the background level is higher than the MCL or Federal and State CCR rules specified levels.
[3] An ASD for Combined Radium (226+228) at B-104D and B-109D was approved by GA EPD on June 15, 2023. An ASD addendum was submitted on May 28, 2024 to GA EPD in response to the recent SSLs of Combined Radium (226+228) at B-111D and B-122D and is pending approval from GA EPD.
[4] SSLs previously identified at DGWC-9 are not listed as current SSLs (February 2025) because DGWC-9 has been abandoned and replaced with DGWC-9A. Background data for DGWC-9A is currently being collected. Data for DGWC-9A will be evaluated following completion of background data collection.

The Appendix IV SSLs for beryllium, cobalt, and lithium are horizontally and vertically delineated in Site detection and assessment wells and downgradient surface water sampling to below the GWPS and/or flow toward AP-4, with the exception of B-100. A recent SSL of cobalt at B-100 is delineated horizontally by downgradient surface water and vertical delineation efforts are underway. Surface water samples collected in September 2024 and February 2025 did not contain concentrations of arsenic or cobalt above the GWPS (0.024 mg/L).

An Alternate Source Demonstration (ASD) for radium was initially submitted to GA EPD on April 29, 2022 and a revised ASD submitted to GA EPD on July 26, 2022. Based on Site investigation data, additional supporting evidence as to the natural presence of combined radium, a *Supplemental ASD for Combined Radium* was submitted to GA EPD on May 22, 2023 (WSP, 2023a), and was approved by GA EPD on June 15, 2023. An ASD addendum was submitted for GA EPD review on May 28, 2024 in response to the recent SSL at B-111D and B-122D (WSP, 2024a).

A *Draft Remedy Selection Report* was prepared by Georgia Power and was submitted to GA EPD under separate cover on August 31, 2023 (WSP, 2023b) and is pending GA EPD approval. Per GA EPD comment, the *Draft Remedy Selection Report* is being updated to reflect the groundwater modeling updates and the revised report is anticipated to be submitted in the fourth quarter of 2025. On March 14, 2025, GA EPD approved a workplan for a pilot test to confirm in-situ injection amendments are suitable for use as a corrective measure at the Site. The pilot study was initiated on June 6, 2025 and included injections and groundwater monitoring at temporary performance monitoring wells. Data will be submitted as required by the Underground Injection Control (UIC) permit under separate cover. Based on review of the Appendix III and Appendix IV results noted above, the Site will remain in Assessment Monitoring. Georgia Power will continue routine groundwater monitoring and evaluation of corrective action alternatives at the Site. Reports will be posted to the website and provided to the GA EPD semi-annually.

1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (US EPA) coal combustion residual (CCR) rule (40 Code of Federal Regulations [CFR] 257 Subpart D) and the Georgia (GA) Environmental Protection Division (EPD) Rules for Solid Waste Management 391-3-4-.10, this *2025 Annual Groundwater Monitoring and Corrective Action Report* was prepared to document groundwater monitoring activities conducted at Georgia Power Company (Georgia Power)'s Plant McDonough-Atkinson Ash Pond 2 (AP-2), Ash Pond 3 (AP-3), and Ash Pond 4 (AP-4) (aka AP-2 and 3/4) and satisfies the requirements of § 257.90(e). To specify groundwater monitoring requirements, GA EPD rule 391-3-4-.10(6)(a) incorporates by reference the US EPA CCR rule (40 CFR 257 Subpart D). For ease of reference, the US EPA CCR rules are cited within this report.

This annual report documents semi-annual groundwater monitoring events conducted September 2024 through June 2025 at AP-2 and 3/4. Activities completed at Plant McDonough's Ash Pond 1 (AP-1) are reported under separate cover.

1.1 Site Description and Background

Plant McDonough-Atkinson (Plant McDonough, Site), formerly a coal-fired power generating facility, was converted to a natural gas combined-cycle power generating facility in 2011. Located approximately 7 miles northwest of Atlanta in southeast Cobb County (5551 South Cobb Dr SE, Smyrna, GA 30080), the property occupies approximately 390 acres and is bounded on the southeast by the Chattahoochee River. A site location map is included as Figure 1.

Four CCR surface impoundments are located on the Site: Ash Pond 1 (AP-1), Ash Pond 2 (AP-2), Ash Pond 3 (AP-3) and Ash Pond 4 (AP-4). AP-3 and AP-4 have historically operated together and are being closed as a Combined Unit AP-3/4. AP-1 is reported separately from AP-2 and 3/4. A notification of intent to initiate closure of the inactive CCR surface impoundment was certified for AP-2 on December 7, 2015, and for AP-3/4 on December 8, 2015, and posted to Georgia Power's website. A permit application was submitted to GA EPD in November 2018, and a draft permit no. 033-099D(CCR) was issued on March 31, 2025. CCR removal and consolidation at Plant McDonough AP-2, and 3/4 has been completed and final capping and closure is underway. Areas of certified CCR removal are shown on Figure 2.

Groundwater monitoring and reporting for AP-2 and 3/4 are being performed to meet the alternate schedule in § 257 100(e)(5) of the revised US EPA CCR rule (August 5, 2016) as a combined multi-unit AP-2 and 3/4. CCR impoundments AP-2 and 3/4 are located adjacent to each other and there is semi-radial flow away from these CCR units. For these reasons, a combined multi-unit monitoring network has been established for AP-2 and 3/4 as allowed in the CCR Rule § 257.91.

1.2 Regional Geology and Hydrogeologic Setting

The following section and subsections include a general description of regional geologic and hydrogeologic characteristics of formations that occur beneath the Site as presented in the *Hydrogeologic Assessment Report (HAR*; WSP, 2025a).

The Site is located in the Piedmont/Blue Ridge geologic province, which contains some of the oldest rock formations in the southeastern United States. These late Precambrian to late Paleozoic rocks have undergone

repeated cycles of igneous intrusions and extrusions, metamorphism, folding, faulting, shearing, and silicification. Rock outcrops near the site consist of biotite gneiss, porphyritic gneiss, mica schist, and quartzite.

Residual soils, primarily clayey/sandy silt, sandy silt with clay, and silty sand, occur as a variably thick blanket overlying bedrock across most of the Site. These residual saprolitic soils along with saprolitic transitionally or partially weathered rock, collectively referred to as the overburden, range between approximately 9 to 65 feet in thickness across the Site, with an average thickness of approximately 43 feet. Saprolitic rock is considered to be transitionally weathered rock (TWR) or partially weathered rock (PWR). Where TWR is a qualitative description based on visual observations, PWR is defined by Standard Penetration Test (SPT) blow counts that exceed 50 blows/six inches.

A regional, unconfined surficial aquifer system is present at the Site, existing within the overburden and weathered and fractured upper bedrock (e.g., approximately the first 30 feet), depending on topographic location. Recharge primarily occurs through precipitation and subsequent infiltration. Generally, groundwater flow occurs through intergranular pore spaces in the overburden and is controlled by topography and top of rock variations.

A limited and localized bedrock aquifer system also occurs beneath the Site. The upper bedrock is fractured and weathered, connected hydraulically with the overburden groundwater, and is considered part of the uppermost aquifer. The overlying silt/clay-rich overburden may act to retard recharge into the bedrock aquifer system. In addition, deeper bedrock (i.e., greater than approximately 30 feet into the bedrock) is unweathered with few discontinuities (e.g., fractures) available to store or transmit groundwater.

1.3 Groundwater Monitoring Network

Pursuant to § 257.91, a groundwater monitoring system was installed within the uppermost aquifer at AP-2 and 3/4 to monitor groundwater passing the waste boundary. Wells were located to monitor upgradient and downgradient groundwater conditions based on groundwater flow direction. AP-2 and 3/4 monitoring well and piezometer locations are shown on Figure 3.

A comprehensive network of monitoring wells was installed for groundwater monitoring in proximity to AP-2 and 3/4. A separate network for AP-1 as well as a series of piezometers are also installed at the Site. Construction details are presented in Table 1 for each well in the current Site groundwater monitoring network, including detection monitoring wells, assessment monitoring wells, and piezometers for AP-2 and 3/4; and the separate multi-unit monitoring network wells for AP-1.

2.0 GROUNDWATER MONITORING ACTIVITIES

The following section describes monitoring-related activities for sampling performed at the Site from July 2024 through June 2025. Routine groundwater sampling was performed in September 2024 and February 2025 in accordance with 40 CFR § 257.93. Groundwater monitoring field forms from these monitoring events are provided in Appendix A and the analytical data reports are presented in Appendix B.

2.1 Monitoring Well Installation and Maintenance

September 2024 and February 2025 field activities included visual inspection of well conditions prior to sampling, recording conditions around each well, and performing exterior maintenance to provide safe access for sampling. The well condition inspection forms are included in Appendix C.

There were several changes to the detection groundwater monitoring system during this reporting period. Four new detection monitoring wells were installed, two existing piezometers were converted to downgradient detection monitoring wells, a dry detection monitoring well was abandoned and replaced, an assessment monitoring well and four piezometers were installed. Two injection wells were also installed.

Existing monitoring well DGWC-9 had been dry for two previous consecutive monitoring periods (September 2023, and the January-February 2024) prior to the September 2024 event, likely due to the ongoing dewatering at AP-4. In order to have a consistent monitoring well in the DGWC-9 location, replacement well DGWC-9A was drilled and constructed deeper adjacent to DGWC-9. There was sufficient groundwater in DGWC-9 to sample in September 2024 prior to abandonment. Construction of replacement well DGWC-9A was initiated in November 2024 and was completed when its horizontal coordinates and elevation were surveyed in January 2025. Well DGWC-9 was decommissioned and abandoned in November 2024. An installation and abandonment report has been submitted and is included in Appendix H (WSP, 2025b).

The detection monitoring network at AP-3/4 was enhanced with the installation of new detection monitoring wells, DGWC-126 and DGWC-127 and the incorporation (and redesignation) of two existing piezometers (B-16 and B-18) as detection monitoring wells DGWC-16 and DGWC-18. Addition of these four wells were performed in consultation with Georgia EPD to strengthen the detection network with improved coverage. Well DGWC-128 was installed on the northern side of AP-3/4 downgradient of assessment wells B-120 and B-125. The wells were installed November 2024 and January 2025 and surveyed in January 2025. Wells DGWC-126, DGWC-127, and DGWC-128 will be sampled on quarterly basis to establish background data for monitoring statistics. An installation report has been submitted under separate cover and is included in Appendix H (WSP, 2025b).

An assessment well, B-129S and four temporary piezometers (B-130S, B-131S, B-132S, and B-133S), were installed in January 2025 to the east of DGWC-47 to collect additional delineation data for cobalt. The assessment well and temporary piezometers were installed into upper bedrock because rock was encountered at shallow depths. In May 2025, piezometer B-133S was installed in the saprolite to the north of DGWC-47. The locations of the assessment well and piezometers are shown on Figure 3. Surface completions were recently modified and the well and piezometers were re-surveyed in June 2025. A well installation report for the assessment well and temporary piezometers including the new survey data will be submitted under a separate cover.

A new injection well INW-02 was installed in December 2024 near DGWC-48. Another new injection well INW-03 was installed in January 2025 near DGWC-20. The injection wells were installed to collect data for remedy selection for beryllium, cobalt, and lithium at wells DGWC-48 and DGWC-20. A well installation report for the injection wells will be submitted under a separate cover. The groundwater chemical data from the new injection wells will also be submitted under a separate cover.

Monitoring wells are inspected semi-annually to determine if any repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). Monitoring wells were inspected, necessary corrective actions were identified and subsequently completed, as documented in Appendix C. This work was performed under the direction of a professional geologist or engineer registered in the State of Georgia.

2.2 Assessment Monitoring

Pursuant to § 257.94(e)(1), an assessment monitoring program has been established for AP-2 and 3/4 based on identified statistically significant increases (SSIs). A notice of assessment monitoring was placed in the operating record on November 13, 2019. Following the requirements of § 257.96, an assessment of corrective measures is ongoing, and a *Draft Remedy Selection Report* was submitted to GA EPD on August 31, 2023.

Groundwater sampling was conducted for AP-2 and 3/4 in September 2024 and February 2025 in accordance with § 257.93 and GA EPD rule 391-3-4-.10(6)(a). Samples were collected from each well in the certified monitoring network and the established assessment monitoring network for AP-2 and 3/4 (Table 1). The location of each of these monitoring wells is shown on Figure 3. Table 2 presents a summary of groundwater sampling events completed for AP-2 and 3/4 and the status of the monitoring network.

During the September 2024 and February 2025 semi-annual sampling events, groundwater samples were collected and analyzed for Appendix III and Appendix IV constituents. Results of the sampling activities are discussed in Section 5.0, and the data are presented in Appendix B.

Assessment monitoring well, B-129S, to the east of DGWC-47, was sampled in January, February, and May 2025. The groundwater sample from B-129S was analyzed for boron and cobalt in January 2025 and analyzed for Appendix III and Appendix IV constituents in February and May 2025. On June 25, 2025, B-129S was re-sampled for cobalt due to an inconsistent result in May. New monitoring wells DGWC-9A, DGWC-16, DGWC-18, DGWC-126, DGWC-127, DGWC-128 were also sampled in May 2025 and analyzed for Appendix III and Appendix IV constituents to establish background for these wells. The laboratory reports are provided in Appendix B.

2.3 Additional Sampling

At three well locations showing SSL for cobalt, installation of additional wells to horizontally characterize groundwater is infeasible due to the proximity of the Chattahoochee River. Georgia Power therefore collected surface water samples from three locations in the Chattahoochee River on September 10, 2024 and February 4, 2025. The surface water samples were analyzed for Appendix III parameters, select Appendix IV parameters (arsenic, cobalt, and combined radium analyzed in February 2025) and major ions (magnesium, potassium, sodium, and total and bicarbonate alkalinity). The three surface water locations in the Chattahoochee River are used for delineation of cobalt (Dewatering Upstream (DW_US), Dewatering Downstream (DW_DS), and CR-0.1). Surface water sampling locations are shown on Figure 3. Surface water samples are collected in accordance with Region 4 U.S. Environmental Protection Agency Laboratory Services and Applied Science Division, Operating Procedure: *Surface Water Sampling* (US EPA, 2023). The results of surface water sampling are discussed in Section 5.0 and the laboratory reports for the September 2024 and February 2025 events are provided in Appendix B. Georgia Power will continue collecting the surface water samples semi-annually as needed for site delineation.

Additional data collection and evaluation are ongoing to support the proposed corrective measure (i.e., in-situ injections and monitored natural attenuation). Groundwater samples collected from the detection and assessment monitoring well networks in September 2024 and February 2025 were analyzed for major ions (magnesium, potassium, sodium, and total, carbonate and bicarbonate alkalinity) and minor ions (ferrous iron and total iron and manganese).

Well B-98 purged dry during sampling in September 2024 and had elevated turbidity. Upon recharge, the well was sampled and analyzed for total and dissolved metals.

Newly installed injection well INW-02, near DGWC-48, was sampled in December 2024. Groundwater from INW-02 was analyzed for beryllium, cobalt, and lithium to collect data for remedy selection. Newly installed injection well INW-03, near DGWC-20, was sampled in February 2025. Groundwater from INW-03 was analyzed for cobalt to collect data for remedy selection. The laboratory results for these dates are provided in Appendix B and later results will be provided under a separate cover.

2.4 Annual Water Well Survey

A potable well survey of potential groundwater wells within a two-mile radius of AP-2 and 3/4 was conducted in October 2024 and consisted of reviewing Federal, State, and county records, and online resources. A survey conducted by Environmental Data Resources (EDR) is included in Appendix D. Additional Federal, State, and county records, and online sources outside of the EDR survey were also reviewed by WSP. The Cobb County Environmental Health Department responded October 10, 2024 that they did not have records of approved water wells within a 2-mile radius of AP-2 and 3/4, The 2024 EDR report is in Appendix D and no new wells were identified from the EDR report.

3.0 SAMPLE METHODOLOGY AND ANALYSIS

The following sections describe methods used to conduct the September 2024 and February 2025 semi-annual AP-2 and 3/4 groundwater monitoring events. Groundwater analytical data and chain of custody records are presented in Appendix B.

3.1 Groundwater Elevation Measurement

Groundwater elevations were measured during the September 2024 and February 2025 monitoring events prior to sampling. Groundwater elevation data from September 3, 2024 and February 3, 2025, are summarized in Table 3. Calculated water level data were used to develop Figures 4A, 4B, 4C, and 4D. Site potentiometric maps indicate that groundwater generally flows southeast across the Site from the topographic high northwest of AP-3/4 towards AP-2 and the Chattahoochee River, which is consistent with historical observations. Localized flow direction fluctuations due to ongoing dewatering efforts at AP-4 are shown on Figures 4B and 4D, which focus on the northeast portion of AP-3/4. Groundwater flow in this area is towards the center of AP-3/4. Dewatering at AP-4 is creating an inward gradient, restoring the pre-impoundment southward groundwater flow pattern in the northeast portion AP-3/4 that is expected to continue in the future, corresponding to the higher topographic elevations in that area following closure. AP-2 was over-excavated into subgrade soils and filled with on-site backfill from the AP-4 dike, creating a topographic low. Construction in the AP-3/4 area is substantially complete pending construction certification and minor ongoing ash removal.

3.2 Groundwater Gradient and Flow Velocity

Hydraulic gradient is calculated as the difference in groundwater elevation (in feet) divided by the distance between two piezometers or wells (in feet). Groundwater elevation data recorded in September 2024 and February 2025 from two piezometer and/or well pairings; DGWA-53/DGWC-13, and B-26/DGWC-48, located along the inferred groundwater flow paths (i.e., perpendicular to the potentiometric contours) were used to calculate hydraulic gradients for AP-2 and 3/4.

The site hydraulic conductivity data set was enhanced with new field measurements of the hydraulic conductivity data by groundwater zone; namely: residual soils, saprolite, TWR/PWR (collectively the overburden), and upper bedrock. Based on the new dataset, the estimated average hydraulic conductivity in the uppermost aquifer (overburden plus upper bedrock) at the Site is 2.4×10^{-4} centimeters/second (cm/sec), or 0.69 feet/day (WSP, 2025a). The updated hydraulic conductivity value is lower than that previously used to calculate site groundwater flow velocities. This hydraulic conductivity value is within the range of values expected for silty sand and weathered/fractured metamorphic rocks (Freeze and Cherry, 1979).

Average groundwater flow velocities at the Site were calculated using the September 2024 and February 2025 hydraulic gradient data, the updated average upper aquifer hydraulic conductivity (WSP, 2025a), and an estimated effective porosity of the screened portion of the uppermost aquifer. The updated average hydraulic conductivity of the uppermost aquifer (i.e., 0.69 feet/day) (WSP, 2025a) was used in the velocity calculations. An effective porosity of 0.20 (20%) was used based on the default values for effective porosity recommended by US EPA for a silty-sand type soil (US EPA 1996)

The horizontal flow velocities were calculated using the commonly used derivative of Darcy's Law:

$$V = \frac{K * i}{n_e}$$

Where:

V = Groundwater flow velocity $\left(\frac{feet}{day}\right)$

K = Average hydraulic conductivity of the aquifer $\left(\frac{feet}{day}\right)$

i = Horizontal hydraulic gradient $\left(\frac{feet}{feet}\right)$

n_e = Effective porosity

Using this equation, groundwater horizontal flow velocities were calculated for AP-2 and 3/4 using September 2024 and February 2025 groundwater elevation data as shown in Tables 4A and 4B.

Calculated (horizontal) flow velocities range from approximately 33 feet per year (ft/yr) to 35 ft/yr based on the September 2024 and February 2025 groundwater gradients for AP-2 and 3/4 (Tables 4A and 4B). These estimated flow velocities are lower than past results and are also generally consistent with other published velocities for overburden-upper bedrock aquifers of the Piedmont (Heath, 1982 and 1984).

3.3 Groundwater Sampling

Groundwater samples were collected in accordance with § 257.93(a) and 391-3-4-.10(6). Monitoring wells were purged and sampled using low-flow sampling procedures. Dedicated and non-dedicated, low-flow pneumatic bladder pumps and peristaltic pumps were used to purge and sample the wells. Field equipment was decontaminated prior to use and between wells using US EPA Laboratory Services and Applied Science Division, Operating Procedure, *Field Equipment Cleaning and Decontamination* (US EPA, 2020a). AquaTROLL® 400 meters were used to monitor and record field water quality parameters (temperature, specific conductance, dissolved oxygen [DO], pH, and oxidation-reduction potential [ORP]) during purging. Turbidity was monitored using a LaMotte 2020 or Hach turbidimeters. Groundwater samples were collected when the following stabilization criteria were met for a minimum of three consecutive readings:

- pH within ±0.1 standard units (S.U.)
- specific conductance within ±5%
- DO within ±10% or ±0.2 milligrams per liter (mg/L) (whichever is greater) for DO where DO>0.5 mg/L; if DO<0.5 mg/L, the DO stabilization criterion does not apply
- turbidity less than 5 nephelometric turbidity units (NTU)

Upon achieving stabilization, unfiltered samples were collected directly in appropriately preserved laboratory-supplied sample containers, placed in ice-packed coolers, and submitted to the laboratory following standard chain-of-custody protocol. Sample chain-of-custody records are included in Appendix B.

Field data and sampling notes for each monitoring well are recorded on the field information forms generated by the Aqua TROLL® 400. These forms include a description of the sampling equipment, sampling method, test notes, field observations, and purge logs (purge rate, stabilization parameters, and depth to water measurements) at each monitoring location. Deviations from the sample plan and stabilization criteria are noted on the field information forms. Field data sheets and daily field instrument calibration forms are included in Appendix A.

3.4 Laboratory Analysis

September 2024 and February 2025 groundwater samples from wells in the detection and assessment monitoring network were analyzed for Appendix III and Appendix IV monitoring parameters per 40 CFR § 257.93 and §257.95(d)(2). Tables 5A and 5B present a tabulated summary of the September 2024 and February and May 2025 detection and assessment sampling results. Results for the surface water samples collected in September 2024 and February 2025 are presented in Tables 6A and 6B. Analytical methods used for monitoring parameters are listed in the analytical data reports in Appendix B.

Laboratory analyses were performed by Pace Analytical Services, LLC (Pace) in Peachtree Corners, Georgia; Mt Juliet, Tennessee; Asheville, North Carolina; West Columbia, South Carolina; and Greensburg, Pennsylvania. Pace is accredited by the National Environmental Laboratory Accreditation Program (NELAP) and maintains NELAP certification for the parameters analyzed for this project. Analytical data reports including chain-of-custody records for the monitoring events and NELAP certifications are presented in Appendix B.

3.5 Quality Assurance and Quality Control

Quality assurance/quality control (QA/QC) samples were collected at a rate of one per every 10 samples during the September 2024 and February 2025 sampling events. QA/QC samples included equipment blanks (where non-dedicated sampling equipment was used), field blanks, and duplicate samples. QA/QC sample data were evaluated during data validation as described below, and are included in Appendix B.

Groundwater quality data in this report were independently validated in accordance with *Data Validation Standard Operating Procedures* (US EPA, 2016), *National Functional Guidelines for Inorganic Superfund Method Data Review* (US EPA 2020b), *US Department of Energy, Evaluation of Radiochemical Data Usability* (Paar, 1997) and the analytical methods. Data validation generally consisted of reviewing sample integrity, holding times, laboratory method blanks, laboratory control samples, matrix spikes/matrix spike duplicate recoveries, relative percent differences (RPDs), laboratory and field duplicate RPDs, field and equipment blanks, and reporting limits. Where appropriate, validation qualifiers and flags are applied to the data per US EPA procedures and guidance. Data validation summary reports are provided in Appendix B, along with the laboratory reports. The validated data summarized in Tables 5A, 5B, 6A, and 6B meet project objectives.

A value followed by a "J" flag in tables and laboratory reports indicate that the value is an estimated analyte concentration detected between the method detection limit (MDL) and the laboratory reporting limit (RL). The estimated value is positively identified but is below the lowest level that can be reliably achieved within specified limits of precision and accuracy under routine laboratory operating conditions.

Total radium concentration (Radium 226+228) is a combination of isotopes 226 and 228. When radium data are reported below the Minimum Detectable Concentration (MDC), the values are followed by a "U" flag in the tables.

4.0 STATISTICAL ANALYSIS

Statistical analysis of Appendix III and Appendix IV groundwater monitoring data was performed pursuant to §257.93-95 following the established statistical method for AP-2 and 3/4 (Groundwater Stats Consulting, 2019). The statistical analysis report prepared by Groundwater Stats Consulting, LLC is presented in Appendix E.

4.1 Statistical Method

The selected statistical method for AP-2 and 3/4 was developed in accordance with 40 CFR § 257.93(f), using methodology presented in *Statistical Analysis of Groundwater Data at RCRA Facilities, Unified Guidance* (US EPA, 2009). Sanitas groundwater statistical software was used to perform statistical analyses. Sanitas is a decision-support software package that incorporates the statistical tests required of Subtitle C and D facilities by US EPA regulations and guidance as recommended in the US EPA 2009 Unified Guidance document.

4.1.1 Appendix III Detection Monitoring Statistical Methods

Appendix III groundwater monitoring data were statistically evaluated through the use of interwell prediction limits. The Sen's Slope/Mann Kendall trend test was also performed to evaluate concentrations over time and determine whether concentrations are statistically increasing, decreasing, or stabilizing. Upgradient well data were pooled to establish background statistical limits. Data from the September 2024 and February 2025 assessment monitoring events were analyzed using interwell prediction limits applying an optional 1-of-2 verification resample plan and compared to the background statistical limits to evaluate whether concentrations exceed background levels. The Sen's Slope/Mann Kendall trend test was performed to evaluate whether concentrations in individual wells are statistically increasing, decreasing, or stabilizing over time. The results of the background comparisons and trend analyses are presented in Appendix E.

4.1.2 Appendix IV Assessment Monitoring Statistical Methods

Statistical analyses while in assessment monitoring are performed by comparing confidence intervals against groundwater protection standards (GWPS). Parametric tolerance limits were used to calculate Site-specific background limits from pooled upgradient well data for Appendix IV parameters with a target of 95% confidence and 95% coverage. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples. The background limits were then used when determining the GWPS under 40 CFR § 257.95(h) and GA EPD Rule 391-3-4-.10(6)(a). As described in 40 CFR § 257.95(h)(1-3) adopted by reference in the State rule, the GWPS is:

- The maximum contaminant level (MCL) established under 40 CFR §141.62 and §141.66.
- Where an MCL has not been established, Federal and State CCR rules specified levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), or molybdenum (0.100 mg/L).

- The respective background level for a constituent when the background level is higher than the MCL or Rule-identified GWPS.

Following the rule requirements, background concentrations were evaluated to establish site-specific GWPS for statistical comparison of Appendix IV constituents. Table 7 summarizes the background limit established at each monitoring well and the applicable GWPS established under the State and Federal rules.

Confidence intervals were calculated for each of the Appendix IV parameters in each downgradient well for comparison to the GWPS. Only when the entire confidence interval is above a GWPS is the well/constituent pair considered to exceed its respective standard. If there is an exceedance of the established standard, an SSL exceedance is identified.

A summary table of the statistical results accompanies the prediction limits for Appendix III and confidence intervals for Appendix IV in Appendix E. The background period for statistical analyses included historical data through the current event. Tolerance limits for confidence interval calculations are updated to include current data.

Based on a recent evaluation, conducted by Groundwater Stats Consulting, the background data period for cobalt at DGWA-53 has been truncated to eliminate historically elevated concentrations that are no longer representative of current background conditions. The revised background period for statistical analyses of cobalt at DGWA-53 includes data from July 12, 2018, through the most recent event (February 2025). Excluding the historical elevated concentrations of cobalt at DGWA-53 from background analysis has resulted in a lower GWPS for cobalt and additional SSLs, as discussed in Section 5. This truncation method followed the US EPA 2009 Unified Guidance document.

4.2 Statistical Analysis Results

Analytical data from September 2024 and February 2025 at AP-2 and 3/4 have been statistically analyzed in accordance with the Site's certified *Statistical Analysis Plan* (Groundwater Stats Consulting, 2019). Verification resampling to confirm initial statistically significant increases (SSIs) was not performed; therefore, initial SSIs are considered verified. The statistical results are included in Appendix E.

4.2.1 September 2024 Appendix III Statistical Results

Based on the statistical results, SSIs of boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids (TDS) were identified following the September 2024 assessment monitoring event. A detailed list of the noted exceedances is presented in Appendix E.

4.2.2 September 2024 Appendix IV Statistical Results

Analytical data from the September 2024 monitoring event at AP-2 and 3/4 have been statistically analyzed in accordance with the Site's certified statistical analysis method according to both 40 CFR § 257.95(h) and 391-3-4-.10(6)(a) and the following SSLs were identified:

AP-2 and 3/4 Confidence Interval Statistically Significant Level Exceedances, September 2024	
Appendix IV Parameter	**AP-2 and 3/4 Monitoring Wells**
Arsenic	DGWC-9
Beryllium	DGWC-5, DGWC-9, DGWC-10, DGWC-47, DGWC-48, B-92, B-93
Cobalt	DGWC-8, DGWC-9, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-92, B-93, B-104D
Lithium	DGWC-47, DGWC-48, B-120D
Radium 226 + 228[1]	B-104D, B-122D

Note:
[1] An ASD for Combined Radium (226+228) at B-104D and B-109D was approved by GA EPD on June 15, 2023; refer to Section 4.3. An ASD for the occurrence of combined radium at B-111D and B-122D was submitted to GA EPD on May 28, 2024 and is pending GA EPD approval.

4.2.3 February 2025 Appendix III Statistical Results

Based on the statistical results, SSIs of boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids (TDS) were identified following the February 2025 assessment monitoring event. A detailed list of the noted exceedances is presented in Appendix E.

4.2.4 February 2025 Appendix IV Statistical Results

Analytical data from the February 2025 monitoring event at AP-2 and 3/4 have been statistically analyzed in accordance with the Site's certified statistical analysis method according to both 40 CFR § 257.95(h) and 391-3-4-.10(6)(a) and the following SSLs were identified:

AP-2 and 3/4 Confidence Interval Statistically Significant Level Exceedances, February 2025	
Appendix IV Parameter	**AP-2 and 3/4 Monitoring Wells**
Beryllium	DGWC-5, DGWC-10, DGWC-47, DGWC-48, B-92, B-93
Cobalt	DGWC-8, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-92, B-93, B-100, B-104D
Lithium	DGWC-47, DGWC-48, B-120D
Radium 226 + 228[1]	B-104D, B-122D

Note:
[1] An ASD for Combined Radium (226+228) at B-104D and B-109D was approved by GA EPD on June 15, 2023; refer to Section 4.3. An ASD for the occurrence of combined radium at B-111D and B-122D was submitted to GA EPD on May 28, 2024 and is pending GA EPD approval. Combined radium at B-109D and B-111D did not exceed SSLs in September 2024 and February 2025.

Potential trends in SSL constituent concentrations were further evaluated by Groundwater Stats Consulting using the Sen’s Slope/Mann Kendall trend test (Appendix E). The following statistically significant trends were identified for the noted well/constituent pairs, based on available data, following the February 2025 monitoring event:

- Increasing trends: Cobalt at DGWA-71, DGWC-20, and B-56
- Decreasing trends: Beryllium at DGWC-47 and DGWC-48

  Cobalt at DGWA-53, DGWC-8, DGWC-10, DGWC-47, DGWC-48, and B-93

  Lithium at DGWC-47, DGWC-48 and B-120D

  Combined Radium at DGWA-53.

4.3 Alternate Source Demonstration

Following the provisions of 40 CFR § 257.95, *Alternate Source Demonstration for Combined Radium* was submitted to GA EPD on April 29, 2022, to address the SSL of combined radium in Site groundwater. Following GA EPD initial review and comments, a revised ASD was submitted to GA EPD on July 26, 2022 (Golder, 2022b). Based on site investigation data, additional supporting evidence as to the natural presence of combined radium, a *Supplemental ASD for Combined Radium* was submitted to GA EPD on May 22, 2023 (WSP, 2023a). The May 2023 ASD was approved for combined radium due to natural occurrence in groundwater wells B-104D and B-109D. A second ASD, was evaluated, following the options of § 257.95(g)(3)(ii) and § 391 3-4-.14(23)(c), and submitted to GA EPD on May 28, 2024 (WSP, 2024a), as appropriate to address the SSLs of combined radium in B-111D and B-122D following the September 2023 and January-February 2024 semi-annual events, and is pending review and approval by GA EPD. It is noted that the combined radium SSLs were not exceeded during the September 2024 and February 2025 events in two of the wells (B-109D and B-111D) represented in the May 2023 and May 2024 ASDs.

5.0 ASSESSMENT MONITORING AND DELINEATION STATUS

To characterize the nature and extent of arsenic, beryllium, cobalt, lithium, radium, and historical selenium SSLs, multiple detection and assessment wells have been installed and sampled at the Site (WSP, 2023b); refer to the table below for constituent delineation status. Assessment wells were installed to delineate the vertical and horizontal extent of SSLs. The horizontal and vertical extent of the SSLs are currently delineated by data with concentrations less than GWPS, by virtue of flow gradient reversal toward AP-4, or both. Data from a newly installed assessment well B-129S has further delineated the spatial extent of cobalt in the area to the east of DGWC-47 (Figures 7A and 7B). An SSL of selenium was previously noted (prior to the first semi-annual sampling event in 2021) for AP-2 and 3/4 at DGWC-9, but statistical analyses, three consecutive concentrations below the selenium GWPS in this well prior to it going dry, and another measurement below GWPS in September 2024 prior to its abandonment indicate that there is no longer an SSL for selenium at DGWC-9. In addition, surface water has been sampled at multiple locations to demonstrate horizontal delineation in surface water bodies where proximity to surface water prevented installation of additional wells. Specific details regarding the delineation status at AP-2 and 3/4, including isoconcentration contours for each of the constituents with an exceedance of the GWPS, are discussed in the Draft Remedy Selection Report (WSP, 2023b) submitted to GA EPD on August 31, 2023 and are shown on Figures 5A through 9B. Based on the recent SSL of cobalt at B-100, additional delineation efforts are underway.

Detection / Assessment Monitoring Well with SSL	Constituent of Concern	Vertical Delineation Well(s)	Horizontal Delineation Well(s) / Surface Water Monitoring Location	Status of Delineation
DGWC-5	Beryllium	B-111D	B-98, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
DGWC-8	Cobalt	B-106D	B-88, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
DGWC-9[1]	Arsenic	B-101D	DGWC-11, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
	Beryllium	B-101D	DGWC-11, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
	Cobalt	B-101D	DGWC-11, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
DGWC-10	Beryllium	B-102D	DGWC-11, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
	Cobalt	B-102D	DGWC-11, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
DGWC-19	Cobalt	B-107D/B-122D	B-77, DW_US, DW_DS	Delineation complete with data less than GWPS
DGWC-20	Cobalt	B-122D	B-83, DW_DS, DW_US, CR-0.1	Delineation complete with data less than GWPS
DGWC-47	Beryllium	B-122D	B-77	Delineation complete with data less than GWPS
	Cobalt	B-122D	B-77, DW_US, DW_DS	Delineation complete with data less than GWPS
	Lithium	B-122D	B-77	Delineation complete with data less than GWPS
DGWC-48	Beryllium	B-104D/B-122D	B-83	Delineation complete with data less than GWPS
	Cobalt	B-122D	B-83, DW_DS, DW_US, CR-0.1	Delineation complete with data less than GWPS
	Lithium	B-104D/B-122D	B-83	Delineation complete with data less than GWPS
B-56	Cobalt	B-102D	DGWC-11, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
B-63	Cobalt	B-122D	B-77, DW_US	Delineation complete with data less than GWPS
B-92	Beryllium	B-111D	B-97, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
	Cobalt	B-111D	B-97, DGWC-5, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
B-93	Beryllium	B-111D	B-98, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
	Cobalt	B-111D	B-98, DGWC-5, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4

Detection / Assessment Monitoring Well with SSL	Constituent of Concern	Vertical Delineation Well(s)	Horizontal Delineation Well(s) / Surface Water Monitoring Location	Status of Delineation
B-100	Cobalt	pending [3]	CR-0.1, CR+0.2	Horizontal delineation complete with data less than GWPS. Vertical delineation pending
B-104D	Cobalt	B-122D	B-83, DW_DS, DW_US, CR-0.1	Delineation complete with data less than GWPS
B-104D	Combined Radium[4]	NA [4]	NA [4]	ASD[4]
B-120D	Lithium	B-125D	DGWC-4, Flow is toward AP-4[2]	Delineation complete with data less than GWPS and flow toward AP-4
B-122D	Combined Radium[4]	NA[4]	NA[4]	ASD[4]

Notes:

[1] Monitoring well DGWC-9 was dry during the September 2023 and January-February 2024 sampling events. A sample was obtained during the September 2024 event prior to abandonment. A replacement well DGWC-9A was installed per Georgia Rule 391-3-4-.10(6)(g).

[2] Where groundwater flow is inward, toward AP-4, we have indicated delineation is complete.

[3] Based on the recent SSL of cobalt at B-100, vertical delineation efforts are underway.

[4] A Supplemental ASD for Combined Radium at B-104D and B-109D has been documented for Plant McDonough (WSP, 2023a) and approved by GA EPD on June 15, 2023. An ASD has been submitted to GA EPD on May 28, 2024 (WSP, 2024a) in response to the recent SSLs at B-111D and B-122D and is pending approval from GA EPD.

Monitoring well B-120D was installed as a vertical delineation well for B-109D. An SSL of lithium was identified at B-120D. Horizontal and vertical delineation for the lithium SSL at B-120D is complete with well DGWC-4 and well B-125D, respectively. Also note that groundwater flow is inward toward AP-4 at this location.

Statistical exceedances of radium in wells B-104D and B-109D and elevated concentrations of radium in other wells were demonstrated to be due to natural occurrence of radium at the Site. GA EPD approved the radium ASD demonstrating that radium is naturally occurring in bedrock beneath the Site for wells that had SSLs on June 13, 2023, which includes B-104D and B-109D. A second ASD was submitted to GA EPD on May 28, 2024, as appropriate to address the SSLs of combined radium in B-111D and B-122D following the 2023 second semi-annual event and the 2024 first semi-annual event. Combined radium is no longer an SSL in B-109D and B-111D as of the September 2024 and February 2025 sampling events. The May 2024 ASD for B-111D and B-122D is currently under review by GA EPD.

Based on data collected to date, there are no impacts to surface water by constituents with SSLs (arsenic, cobalt, and combined radium) at AP-2 and 3/4. The horizontal and vertical delineation of target SSL constituents is complete, with the exception of vertical delineation of cobalt at B-100. Horizontal and vertical delineation based on review of analytical results, statistical analyses, and the isoconcentration contours is presented in more detail in Figures 5A through 9B.

6.0 ASSESSMENT OF CORRECTIVE MEASURES

Following the requirements of 40 CFR § 257.96, Plant McDonough has initiated an Assessment of Corrective Measures (ACM) for arsenic, beryllium, cobalt, and lithium. Notification of this action was placed in the CCR operating record on July 9, 2020.

Selenium was identified as an SSL at well DGWC-9 (Golder, 2020) and this SSL was originally incorporated into the ACM evaluation. Concentrations of selenium at DGWC-9 have been below GWPS since January 2022—in three consecutive events (January 2022, September 2022, February 2023), prior to this well going dry (September 2023 and February 2024), and was again below GWPS in September 2024 prior to its abandonment in November 2024. Therefore, selenium is no longer identified as an SSL and as such is no longer being evaluated as part of the ACM process.

Since initiation of the ACM, radium was also identified as an SSL. In response, an ASD has been approved for monitoring wells B-104D and B-109D and is pending for wells B-111D and B-122D by GA EPD to address the presence of combined radium in Site groundwater and as such is no longer being evaluated as part of the ACM process.

In accordance with 40 CFR § 257.97(a), remedy selection progress reports have previously been prepared and submitted to document results associated with additional data collection, and present progress toward selection and design of a groundwater remedy. A *Draft Remedy Selection Report* was submitted to GA EPD on August 31, 2023. The *Draft Remedy Selection Report* includes the following:

- The current groundwater conceptual site model applicable to evaluating groundwater corrective measures proposed in the ACM Report (Golder 2020);
- An assessment of corrective action investigations completed;
- An evaluation of each corrective measure retained for further consideration following the completed investigations;
- A comparison of corrective measure options using the comparative criteria such as long- and short-term effectiveness and protectiveness, source control effectiveness and ease of implementation; and
- A summary of the proposed corrective measure, or measures for AP-2 and 3/4.

The *Draft Remedy Selection Report* is pending GA EPD approval. The *Draft Remedy Selection Report* (specifically, Appendix B the Geochemical Model Report) is being updated to reflect groundwater model revisions (additional hydraulic conductivity measurements), and the revised report is anticipated to be submitted in the fourth quarter of 2025. Since submission of the *Draft Remedy Selection Report*, a treatability study has been completed to evaluate injectate materials and dosages, the pre-design investigation (PDI) has been completed, and a pilot study work plan to evaluate the effectiveness of in-situ injections for corrective action has been approved by GA EPD. The pilot study was initiated on June 6, 2025 to inject potassium bicarbonate and perform groundwater monitoring. Data will be submitted as required by the UIC permit under separate cover.

PDI activities were conducted from March 22nd through 27th, 2024. Cascade Technical Services (Cascade) advanced ten (10) direct push technology (DPT) Waterloo Aquifer Profiling System (Waterloo*APS*) borings. Depth-discrete groundwater screening samples were also collected using stainless-steel Waterloo*APS* tooling and a peristaltic pump. Attempts were made to collect groundwater samples from each of the PDI boring locations, but insufficient yield precluded sample collection at some locations. The description of the PDI and the

results are presented in the Plant McDonough Ash Pond Pre-Design Investigation Technical Memorandum in Appendix F.

Terra Systems, Inc. (TSI) was subcontracted to perform a bench-scale treatability study to evaluate potential in-situ remediation approaches for reducing SSL constituents in AP-2 and 3/4 groundwater. Groundwater samples from monitoring well DGWC-48 and soil samples from soil borings drilled adjacent to the well were collected in November 2023 and submitted to TSI for testing. The treatability study evaluated reagents to neutralize or precipitate detected SSL constituents. The treatability study showed reductions in beryllium and lithium concentrations with the application of selected reagents. TSI's June 14, 2024 bench treatability study report is presented in Appendix G. The PDI and bench study data were used to prepare a pilot study workplan submitted on February 6, 2025 and subsequently approved by GA EPD on March 14, 2025.

Injection well INW-03 and temporary performance monitoring wells were installed in December 2024 and January 2025. The pilot study was initiated on June 6, 2025 and included injection of potassium bicarbonate at INW-03 with groundwater monitoring at downgradient temporary performance monitoring wells. An initial injection progress report/data will be submitted as required by the UIC permit under separate cover.

7.0 MONITORING PROGRAM STATUS

Statistical evaluations of the groundwater monitoring data for AP-2 and 3/4 confirm SSIs of Appendix III groundwater monitoring parameters above background and SSLs of Appendix IV groundwater monitoring parameters above the established GWPS. AP-2 and 3/4 will continue to be monitored in accordance with the assessment monitoring program pursuant to 40 CFR § 257.95. An assessment of corrective measures was initiated following the provisions of 40 CFR § 257.96. Pursuant to 40 CFR 257.95(g)(1)(iv), the additional delineation wells may continue to be sampled as part of the ongoing semi-annual assessment monitoring program. All constituents have been delineated spatially and vertically, except for the vertical delineation of newly identified SSL for cobalt in B-100. Spatial distribution of cobalt was refined east of well DGWC-47 and is now limited to the newly installed well B-129S that shows non-detect cobalt. The temporary injection and performance monitoring wells will be sampled and analyzed weekly for the first five weeks, then monthly for a period of 5 months, and finally, quarterly for a period of one year for a maximum total duration of 18 months of performance monitoring. Injection at INW-03 near DGWC-20 was initiated on June 6, 2025, and the initial injection data will be submitted as required by the UIC permit.

8.0 CONCLUSIONS AND FUTURE ACTIONS

This *2025 Annual Groundwater Monitoring and Corrective Action Report, Georgia Power Company Plant McDonough-Atkinson – Ash Pond 2 and 3/4* was prepared to fulfill the requirements of US EPA CCR rule 40 CFR 257 Subpart D and Georgia EPD rule 391-3-4-.10.

The groundwater flow direction and rates interpreted during the September 2024 and February 2025 water level gauging events are consistent with the post closure model predictions. Groundwater flow is south toward the Chattahoochee River, consistent with pre-site development conditions. Although groundwater flow is toward the south, monitoring wells previously established for delineation will remain in the network during assessment monitoring until the ACM is complete and a long-term corrective action groundwater monitoring is established. The monitoring well network continues to effectively monitor the uppermost aquifer beneath AP-2 and 3/4.

Review of analytical results and statistical analyses developed for the Site indicates confirmed SSIs of Appendix III above background and SSLs of Appendix IV above the established GWPS. In accordance with 40 CFR § 257.96, Georgia Power has initiated an assessment of corrective measures study for the identified SSLs. Based on data collected to date, there are no impacts to surface water at Plant McDonough and the horizontal and vertical delineation of constituents exhibiting SSLs is complete, with the exception of cobalt at B-100. A recent SSL of cobalt at B-100 is delineated horizontally by downgradient surface water and vertical delineation efforts are underway. *Alternate Source Demonstration for Combined Radium* was approved by GA EPD in correspondence dated June 15, 2023 for monitoring wells B-104D and B-109D. A supplemental ASD for the occurrence of combined radium at B-111D and B-122D was submitted for GA EPD review on May 28, 2024 and is pending review and approval by GA EPD.

Based on the findings presented herein, Plant McDonough will continue with assessment groundwater monitoring and reporting. A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of corrective measures, was submitted to GA EPD on August 31, 2023. The *Draft Remedy Selection Report* is pending update and GA EPD approval. A high-resolution site characterization and bench-scale testing of potential groundwater treatment amendments have been completed and these data were used to prepare a pilot study workplan submitted to GA EPD on February 6, 2025. This workplan was approved on March 14, 2025, and pilot testing with performance monitoring of in-situ injection to test the selected amendment was initiated in June 2025 in the vicinity of DGWC-20. Georgia Power will continue to work with GA EPD to address isolated low level groundwater impacts at McDonough AP-2 and 3/4 through the remedy selection process. The *Draft Remedy Selection Report* is being updated to reflect the groundwater model updates and the revised report is anticipated to be submitted in the fourth quarter of 2025.

The next AP-2 and 3/4 semi-annual groundwater sampling event is tentatively scheduled for July-August 2025.

Notes:

(1) Coordinate System: NAD 1983 State Plane Georgia West (U.S. feet)

(2) bgs - Below Ground Surface; NAD 83 - North American Datum of 1983; NAVD 88 - North American Vertical Datum of 1988; PWR - Partially Weathered Rock

(3) The 2020 and later Certified Well Surveys have been incorporated into this construction summary.

(4) Ground surface elevations shown are the elevation of the survey nail. Well DGWC-126 ground surface elevation is at the base of the pad.

(5) Well DGWC-9 was decommissioned and abandoned on November 19, 2024.

(6) Detection well DGWC-9A is a replacement well for DGWC-9.

(7) Piezometers B-16 and B-18 were converted to detection monitoring wells (DGWC-16 and DGWC-18) in December 2024.

(8) Piezometer B-41 was converted to detection monitoring well DGWC-41 in June 2025.

(9) Well B-98 screened lithology based on adjacent boring B-97.

(10) The geometric mean of hydraulic conductivity data available for each well is presented in centimeters/second (cm/sec). For individual test data refer to Table GW-3 of the Hydrogeologic Assessment Report (WSP 2025).

(11) -- Indicates test was not conducted in well or data was not available.

(12) The proposed screen elevations of wells DGWC-134 and DGWC-135 are approximate.

(13) B-129S to B-133S were re-surveyed June 16, 2025 after converting the piezometers from stickup protective covers to flush mount protective covers.

(14) TBD - To be determined upon actual installation

Well DGWC-9 was decommissioned and abandoned in November 2024.
New monitoring wells DGWC-9A, DGWC-126, DGWC-127, DGWC-128 were installed in November 2024 and January 2025.
Piezometers B-16 and B-18 were converted to monitoring wells DGWC-16 and DGWC-18 in January 2025.
B-129S was installed as an assessment well in January 2025.
B-129S was re-sampled on June 25, 2025 following the quarterly background event.

Notes:
1. Elevation data recorded in feet referenced to the North American Vertical Datum 1988 (NAVD 88)
2. Survey data for monitoring wells and piezometers provided by Metro Engineering.
3. BTOC indicates below top of casing.
4. Well DGWC-9 was decommissioned and abandoned in November 2024.
5. New monitoring wells DGWC-9A, DGWC-126, DGWC-127, DGWC-128 were installed in November 2024 and January 2025.
6. Piezometers B-16 and B-18 were converted to monitoring wells DGWC-16 and DGWC-18 in January 2025.
7. Assessment well B-129S and piezometers B-130S to B-132S were installed in January 2025.
8. NA - Data not available or well not installed.
9. NM - Not measured.

Table 4A
Groundwater Flow Velocity Calculations - September 2024
Georgia Power Company
Plant McDonough - Ash Pond 2 and 3/4
Cobb County, GA

Gauging Event	Well Pair	Groundwater Elevations in Well Pairs (ft)		Change in Elevation (Δ h) (ft)	Distance Between Well 1 and Well 2 (Δ l) (ft)	Hydraulic Gradient (Δ h / Δ l) (ft/ft)	Estimated Hydraulic Conductivity for Uppermost Aquifer (K) (ft/day)[5]	Estimated Effective Porosity (ne)	Calculated Groundwater Flow Velocity (ft/day)	Calculated Groundwater Flow Velocity (ft/year)
September 2024	B-26 to DGWC-48	824.14	771.64	52.50	1938	0.027	0.69	0.2	0.09	34
September 2024	DGWA-53 to DGWC-13	825.44	760.17	65.27	2488	0.026	0.69	0.2	0.09	33

Notes:

ft = feet, ft/ft = feet/foot, ne = effective porosity

1. Δ h = Change in groundwater elevation
2. Δ l =Distance between wells in direction of flow path
3. i = Δ h / Δ l Hydraulic Gradient
4. Velocity = (i * K)/ne
5. Hydraulic conductivity based on historic aquifer performance tests (updated October 2024)
6. Assumed effective porosities for overburden was based on the default values recommended by US EPA for a silty sand-type soil (1996).
   Assumed effective porosity for bedrock was derived from Daniel and Dahlen (2002) and Dowd and Marshall (1995).

Notes:
1. mg/L - milligrams per liter
2. pCi/L - picocuries per liter
3. SU - Standard Units
4. TDS - Total Dissolved Solids
5. NA - Indicates not analyzed
6. < indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
7. J - The result is an estimated concentration. “J” qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
8. Radium data are a combination of radium isotopes 226 and 228. When results are reported below the MDC (Minimum Detectable Concentration), data is displayed with an accompanying U. The MDC varies depending upon the sample amount and elapsed time of the measurement.
9. B-98 was also analyzed for dissolved metals. See laboratory report for results.

Notes:
1. mg/L - milligrams per liter
2. pCi/L - picocuries per liter
3. SU - Standard Units
4. TDS - Total Dissolved Solids
5. NA - Indicates not analyzed
6. < indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
7. J - The result is an estimated concentration. “J” qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
8. Radium data are a combination of radium isotopes 226 and 228. When results are reported below the MDC (Minimum Detectable Concentration), data is displayed with an accompanying U. The MDC varies depending upon the sample amount and elapsed time of the measurement.
9. B-98 was also analyzed for dissolved metals. See laboratory report for results.

Sodium	mg/L	20.8	12.6	18.2	7.6	19.6	27.9	18.4	11.2	51.6

Notes:

1. mg/L - milligrams per liter
2. pCi/L - picocuries per liter
3. SU - Standard Units
4. TDS - Total Dissolved Solids
5. NA - Indicates not analyzed
6. < indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
7. J - The result is an estimated concentration. “J” qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
8. Radium data are a combination of radium isotopes 226 and 228. When results are reported below the MDC (Minimum Detectable Concentration), data is displayed with an accompanying U. The MDC varies depending upon the sample amount and elapsed time of the measurement.
9. B-129S is an assessment well.
10. Quarterly background sampling was conducted at DGWC-9A, DGWC-16, DGWC-18, DGWC-126, DGWC-127, DGWC-128, and B-129S on May 6 and 7, 2025.

Molybdenum	mg/L	NA	0.1	0.0409[2]	0.1	0.0409[2]	0.1
Radium (226 + 228)	pCi/L	5		4.62	5	4.504	5
Selenium	mg/L	0.05		0.005[2]	0.05	0.005[2]	0.05
Thallium	mg/L	0.002		0.001[2]	0.002	0.001[2]	0.002

Notes:

mg/L = milligrams per liter; pCi/L = picocuries per liter; NA = Not Available

GWPS = Groundwater Protection Standard; US EPA MCL = United States Environmental Protection Agency Maximum Contaminant Level

[1] The background limits are used when determining the groundwater protection standard (GWPS) under 40 CFR § 257.95(h) and 391-3-4-.10(6)(a).

[2] The background tolerance limit (TL) used to evaluate GWPS for this analyte equals the laboratory specified reporting limit (RL). Per the Statistical Analysis Plan, and in accordance with the Unified Guidance, a non-parametric limit approach was used when the data set contains greater than 50% non-detect results for this analyte. Under this approach, the TL equals the highest value reported, for which is the laboratory RL.

- DGWC-9 — ABANDONED MONITORING WELL (NOV. 2024)
- DGWC-X — PROPOSED AP-1 DETECTION MONITORING WELL
- AREA WHERE ASH HAS BEEN CERTIFIED REMOVED AS OF 2/28/2024

NOTES

1. EXISTING TOPOGRAPHIC CONTOUR INTERVAL – 1 FOOT.
2. CLOSURE ACTIVITIES FOR AP-1 WERE INITIATED IN JANUARY 2016 AND FINAL COVER CONSTRUCTION ACTIVITIES WERE COMPLETED IN 2017. COMPLETION OF FINAL POST COVER CONSTRUCTION ACTIVITIES AND IMPROVEMENTS AT AP-1 ARE SUBSTANTIALLY COMPLETE. A PLANNED BARRIER WALL INSTALLATION IS CURRENTLY UNDER REVIEW WITH EPD.
3. CLOSURE ACTIVITIES FOR AP-2 WERE INITIATED IN JANUARY 2016. AP-2 CLOSURE ACTIVITIES CONSISTED OF CLOSURE BY REMOVAL OF CCR, WHERE CCR REMOVED FROM AP-2 WAS PLACED IN THE ADJACENT UNITS AP-1 AND AP-3. CLOSURE CONSTRUCTION ACTIVITIES AT AP-2 WERE COMPLETED IN 2017. BACKFILLING OF THE AP-2 FOOTPRINT WAS COMPLETE IN Q4 2023.
4. CLOSURE ACTIVITIES FOR AP-3 AND AP-4 WERE INITIATED IN JANUARY 2016. AP-3 AND AP-4 ARE CURRENTLY UNDERGOING CLOSURE AS A COMBINED UNIT AP-3/4.

REFERENCES

1. APPROXIMATE PROPERTY BOUNDARY PROVIDED BY SOUTHERN COMPANY SERVICES (2017).
2. THE EXISTING TOPOGRAPHY, AND CONTOUR ELEVATIONS FOR ASH PONDS 1 THROUGH 4 AND ADJACENT AREAS ARE BASED ON LIDAR DATA AND SUPPLEMENTAL GROUND RUN TOPOGRAPHY BY METRO ENGINEERING AND SURVEYING CO, INC. THE DATE OF THE SURVEY PROVIDED AND SHOWN ON THIS SET OF PLANS IS 03/21/2024.
   THE EXISTING TOPOGRAPHY AND CONTOUR ELEVATIONS FOR AREAS OUTSIDE OF THE ABOVE SURVEY LIMITS WERE PROVIDED BY GEORGIA LAND DEPARTMENT AND METRO ENGINEERING AND SURVEYING CO, INC. DATED 03/18/2018. EXISTING TOPOGRAPHIC CONTOUR INTERVAL = 1 FOOT. AERIAL IMAGERY FOR AP-1, AP-2, AND AP-3/4, PROVIDED BY GEORGIA POWER, IMAGE DATED 06/20/2024; ADJACENT AREAS SOURCE BY Earthexplorer.USGS.GOV IMAGE DATED 10/7/2023.
3. SELECT BORING/PIEZOMETER LOCATIONS AND ELEVATIONS RESURVEYED BY METRO ENGINEERING & SURVEYING CO., INC., 2020-2025.
4. COORDINATES SYSTEM: NAD 1983 STATE PLANE GEORGIA WEST (U.S. FEET); ELEVATIONS DISPLAY IN FEET REFERENCED TO NORTH AMERICAN VERTICAL DATUM 1988 (FEET NAVD88).

- PERMIT BOUNDARY

NOTES

1. ALL LOCATIONS AND BOUNDARIES ARE APPROXIMATE.

2. GROUNDWATER CONCENTRATIONS IN MILLIGRAMS PER LITER (MG/L). GWPS = GROUNDWATER PROTECTION STANDARD. RSL = (FEDERAL REGIONAL SCREENING LEVEL)

3. DATA SHOWN REPRESENT THE SEPTEMBER 2024 SEMI-ANNUAL MONITORING EVENT RESULTS AS WELL AS APPLICABLE DELINEATION WELL DATA. DATA FOR B-129 IS FROM JANUARY 27, 2025.

4. GWPS IS EQUAL TO SITE SPECIFIC BACKGROUND CONCENTRATION AS THERE IS NO MCL AND THE RSL IS BELOW SITE SPECIFIC BACKGROUND

5. DEEP WELL ANALYTICAL RESULTS NOT USED FOR ISOCONCENTRATION CONTOURING.

6. POTENTIOMETRIC SURFACE DETERMINED USING SEPTEMBER 2024 WATER LEVELS.

Analyte	Units	GWPS
Cobalt	mg/L	0.024

REFERENCE

1. AERIAL IMAGERY DATE FOR AP-1, AP-2, AND AP-3/4 PROVIDED BY GEORGIA POWER, JUNE 2024; AND SURROUNDING AREAS SOURCED BY PLEXEARTH, DATED SEPTEMBER 28, 2023.

2. COORDINATE SYSTEM: NAD 1983 STATE PLANE GEORGIA WEST (U.S. FEET).

3. MONITORING WELL/PIEZOMETER LOCATIONS AND ELEVATIONS SURVEYED BY METRO ENGINEERING AND SURVEYING COMPANY IN AUGUST 2020 WITH ADDITIONAL SURVEY PROVIDED IN JANUARY 2021, APRIL 2021, MAY 2022 AND 2023, AND JANUARY 2025.

RE: Project: Plant McD AP-234 Detection
Pace Project No.: 92751700

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 05, 2024 and September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-234 Detection
Pace Project No.: 92751700

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
H1	Analysis conducted outside the EPA method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

DC#_Title: ENV-FRM-HUN1-0083 v05_Sample Condition Upon Receipt

Effective Date: 05/24/2024

WO#: 92751700

*Check mark top half of box if pH and/or dechlorination is verified and within the acceptance range for preservation samples.
Exceptions: VOA, Coliform, TOC, Oil and Grease, DRO/8015 (water) DOC, LLHg
**Bottom half of box is to list number of bottles
***Check all unpreserved Nitrates for chlorine

RE: Project: Plant McD AP-234 Detection-RAD
Pace Project No.: 92751698

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 05, 2024 and September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-234 Detection-RAD
Pace Project No.: 92751698

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Sample Condition Upon Receipt

Client Name: G.A. Power

Project #:

Courier: ☐ Commercial ☐ Fed Ex ☐ UPS ☐ USPS ☑ Client ☐ Pace ☐ Other:

Custody Seal Present? ☐ Yes ☑ No **Seals Intact?** ☐ Yes ☐ No ☑ N/A

Date/Initials Person Examining Contents: JG 9/11/24

Packing Material: ☑ Bubble Wrap ☐ Bubble Bags ☐ None ☐ Other

Biological Tissue Frozen? ☐ Yes ☐ No ☑ N/A

Thermometer: ☐ IR Gun ID: 083 **Type of Ice:** ☑ Wet ☐ Blue ☐ None

Cooler Temp: 5.0 **Correction Factor:** Add/Subtract (°C) -0.1

Cooler Temp Corrected (°C): 4.9

Temp should be above freezing to 6°C

☐ Samples out of temp criteria. Samples on ice, cooling process has begun

USDA Regulated Soil (☐ N/A, water sample)

Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.
Sufficient Volume?	☑ Yes	☐ No	☐ N/A	5.
Correct Containers Used?	☑ Yes	☐ No	☐ N/A	6.
-Pace Containers Used?	☐ Yes	☐ No	☐ N/A	
Containers Intact?	☑ Yes	☐ No	☐ N/A	7.
Dissolved analysis: Samples Field Filtered?	☐ Yes	☐ No	☑ N/A	8.
Sample Labels Match COC? -Includes Date/Time/ID/Analysis Matrix: WG	☑ Yes	☐ No	☐ N/A	9.
Headspace in VOA Vials (>5-6mm)?	☐ Yes	☐ No	☑ N/A	10.
Trip Blank Present?	☐ Yes	☐ No	☑ N/A	11.
Trip Blank Custody Seals Present?	☐ Yes	☐ No	☑ N/A	

COMMENTS/SAMPLE DISCREPANCY

Field Data Required? ☐ Yes ☐ No

RE: Project: Plant McD AP-234 Assessment
Pace Project No.: 92751692

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 05, 2024 and September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

Revision 1: Some samples ID's were corrected to match the COC.

Revision 2: Correct units for Dissolved Mercury.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-234 Assessment
Pace Project No.: 92751692

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H1	Analysis conducted outside the EPA method holding time.
H3	Sample was received or analysis requested beyond the recognized method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

RE: Project: Plant McD AP-234 Assess RADs
Pace Project No.: 92751679

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 05, 2024 and September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-234 Assess RADs
Pace Project No.: 92751679

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant McD AP-1234 Assessment
Pace Project No.: 92752200

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 06, 2024 and September 10, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-1234 Assessment
Pace Project No.: 92752200

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

RE: Project: Plant McD AP-1234 Assess- RADs
Pace Project No.: 92752198

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 06, 2024 and September 10, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-1234 Assess- RADs
Pace Project No.: 92752198

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant McD Background
Pace Project No.: 92751673

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 05, 2024 and September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD Background
Pace Project No.: 92751673

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

H1	Analysis conducted outside the EPA method holding time.
H3	Sample was received or analysis requested beyond the recognized method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

RE: Project: Plant McD Background-RADs
Pace Project No.: 92751664

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 05, 2024 and September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

(Greensburg, PA) - Revision #1 - This report replaces the October 3rd, 2024, report. This project was revised on October 21st, 2024, to update the H-3 collection year.

(Greensburg, PA) - Revision #1 - This report replaces the October 21st, 2024, report. This project was revised on October 21st, 2024, to remove H-3 from Radium-226

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALITY CONTROL - RADIOCHEMISTRY

Project: Plant McD Background-RADs
Pace Project No.: 92751664

QC Batch: 695870
QC Batch Method: EPA 9315
Analysis Method: EPA 9315
Analysis Description: 9315 Total Radium
Laboratory: Pace Analytical Services - Greensburg
Associated Lab Samples: 92751664001, 92751664002

METHOD BLANK: 3388999 Matrix: Water
Associated Lab Samples: 92751664001, 92751664002

Parameter	Act ± Unc (MDC) Carr Trac	Units	Analyzed	Qualifiers
Radium-226	-0.0274 ± 0.0932 (0.274) C:73% T:NA	pCi/L	09/30/24 09:02	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

QUALIFIERS

Project: Plant McD Background-RADs
Pace Project No.: 92751664

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Plant McDonough-CCR Ash Pond
Pace Project No.: 92752880

Dear Priya Jacob:

Enclosed are the analytical results for sample(s) received by the laboratory on September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Maiya Parks

Peachtree Corners, GA 30092
(770)734-4200

QUALIFIERS

Project: Plant McDonough-CCR Ash Pond
Pace Project No.: 92752880

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant McDonough-CCR Ash Pond
Pace Project No.: 92752882

Dear Priya Jacob:

Enclosed are the analytical results for sample(s) received by the laboratory on September 11, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Maiya Parks

(770)734-4200

QUALIFIERS

Project: Plant McDonough-CCR Ash Pond
Pace Project No.: 92752882

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: MCD-Temporary Injection Well
Pace Project No.: 92776120

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on January 28, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: MCD-Temporary Injection Well
Pace Project No.: 92776120

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: MCD-INW-02-Temp-29
Pace Project No.: 92768097

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory on December 10, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

RE: Project: Plant McD AP-234 Well Network
Pace Project No.: 92778171

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 06, 2025 and February 13, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

Revision 1: Collected date for MCD-DGWC-11 updated to read 2/6/2025.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Plant McD AP-234 Well Network
Pace Project No.: 92778171

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92778171

[1]

ANALYTE QUALIFIERS

1g	The same analyte was detected in an associated instrument blank at a concentration above 1/2 the reporting limit but below the reporting limit. The concentration in the associated sample was greater than ten times the concentration in the instrument blank.
2g	The same analyte was detected in an associated instrument blank at a concentration above 1/2 the reporting limit but below the reporting limit. The concentration in the sample was non-detect.
B	Analyte was detected in the associated method blank.
BC	The same analyte was detected in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
ED	Due to the extract's physical characteristics, the analysis was performed at dilution.
J	Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

RE: Project: Plant McD AP-234 Well Net- RAD
Pace Project No.: 92778176

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 06, 2025 and February 13, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALITY CONTROL - RADIOCHEMISTRY

Project: Plant McD AP-234 Well Net- RAD
Pace Project No.: 92778176

QC Batch: 727523
QC Batch Method: EPA 9315
Analysis Method: EPA 9315
Analysis Description: 9315 Total Radium
Laboratory: Pace Analytical Services - Greensburg

Associated Lab Samples:

METHOD BLANK: 3541334 Matrix: Water

Associated Lab Samples:

Parameter	Act ± Unc (MDC) Carr Trac	Units	Analyzed	Qualifiers
Radium-226	-0.0135 ± 0.130 (0.350) C:85% T:NA	pCi/L	03/04/25 14:34	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

QUALIFIERS

Project: Plant McD AP-234 Well Net- RAD
Pace Project No.: 92778176

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Cobb County/Assessment Wells
Pace Project No.: 92777632

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 05, 2025 and February 06, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: Cobb County/Assessment Wells
Pace Project No.: 92777632

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Plant McD AP-234 Assessment
Pace Project No.: 92778909

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 07, 2025 and February 13, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALITY CONTROL DATA

Project: Plant McD AP-234 Assessment
Pace Project No.: 92778909

QC Batch: 2465122
QC Batch Method: 3015
Analysis Method: EPA 6020B
Analysis Description: Metals (ICPMS) 6020B
Laboratory: Pace National - Mt. Juliet
Associated Lab Samples: 92778171009, 92778171010, 92778171011, 92778171012, 92778909011, 92778909012, 92778909013, 92778909014, 92778909015, 92778909016, 92778909017, 92778909018, 92778909019, 92778909020, 92778909021, 92778909022, 92778909023, 92778909024

METHOD BLANK: R4184229-1 Matrix: Water
Associated Lab Samples: 92778171009, 92778171010, 92778171011, 92778171012, 92778909011, 92778909012, 92778909013, 92778909014, 92778909015, 92778909016, 92778909017, 92778909018, 92778909019, 92778909020, 92778909021, 92778909022, 92778909023, 92778909024

Parameter	Units	Blank Result	Reporting Limit	MDL	Analyzed	Qualifiers
Lithium	mg/L	ND	0.0300	0.000600	03/09/25 11:42	

LABORATORY CONTROL SAMPLE: R4184229-2

Parameter	Units	Spike Conc.	LCS Result	LCS % Rec	% Rec Limits	Qualifiers
Lithium	mg/L	0.0500	0.0464	92.7	80.0-120	

MATRIX SPIKE & MATRIX SPIKE DUPLICATE: R4184229-4 R4184229-5

Parameter	Units	92778909016 Result	MS Spike Conc.	MSD Spike Conc.	MS Result	MSD Result	MS % Rec	MSD % Rec	% Rec Limits	RPD	Max RPD	Qual
Lithium	mg/L	0.00244	0.0500	0.0500	0.0471	0.0474	89.4	90.0	75.0-125	0.604	20	

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.
