GROUNDWATER STATS CONSULTING

July 31, 2025

Southern Company Services
Attn: Mr. Joju Abraham
241 Ralph McGill Blvd NE, Bin 10160
Atlanta, Georgia 30308-3374

Re: Plant McDonough Ash Pond (AP-2,3,4)
February 2025 Statistical Analysis

Dear Mr. Abraham,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the February 2025 Semi-Annual Groundwater Monitoring and Corrective Action Statistical summary of groundwater data for Georgia Power Company's Plant McDonough AP-2,3,4. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for Appendix III parameters began in 2016, and at least 8 background samples were collected at each of the groundwater monitoring wells. Semi-annual sampling of the majority of Appendix IV constituents has been performed for several years in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** DGWA-53, DGWA-70A, DGWA-71
- **Downgradient wells:** DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-9A, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-14, DGWC-15, DGWC-16, DGWC-17, DGWC-18, DGWC-19, DGWC-20, DGWC-21,

DGWC-22, DGWC-23, DGWC-42, DGWC-47, DGWC-48, DGWC-126, DGWC-127, and DGWC-128

- **Assessment Wells:** B-56, B-62, B-63, B-66, B-77, B-82, B-83, B-88, B-92, B-93, B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, B-111D, B-120D, B-122D, and B-125D

The assessment wells were installed at various times during 2016-2020 as follows:

- **2016** - B-56, B-62, B-63, and B-66
- **2019** - B-77, B-82, B-83, B-88, B-92, and B-93
- **2020** – B-97, B-98, B-100, B-101D, B-102D, B-104D, B-106D, B-107D, B-108D, and B-111D
- **2021** – B-120D
- **2022** – B-122D
- **2023** – B-125D

Note that well B-109D was classified as an assessment well previously but has been redesignated as a piezometer and, therefore, is not included in the analysis. Per request of Georgia Power Company, both Appendix III and Appendix IV constituents among downgradient wells will be evaluated using interwell prediction limits and confidence intervals, respectively, when a minimum of 8 samples is available. Additionally, assessment wells with a minimum of 4 samples are evaluated using confidence intervals for Appendix IV constituents. All downgradient and assessment wells have sufficient samples except for downgradient well DGWC-9A, which was installed in November 2024 and is replacing the recently abandoned downgradient well DGWC-9, and new downgradient wells DGWC-16, DGWC-18, DGWC-126, DGWC-127, and DGWC-128. Data from these wells are plotted on time series and box plots, and will be evaluated for all Appendix III and Appendix IV constituents when the minimum sample requirement has been met.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Andrew Collins, Project Manager for Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology prepared in Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance. In 2024, Georgia Power Company completed a data audit and migration of all CCR related groundwater data to the EarthSoft EQuIS Database Management Program (EQuIS). Data were then exported from EQuIS to Groundwater Stats Consulting (GSC) for use in completing this statistical analysis. Georgia Power Company contracted an independent third-party consultant, Environmental Resources Management (ERM), to support the data audit and migration to EQuIS. Based on the results of the audit and statistical analysis results from GSC, EQuIS will now be used by Georgia Power Company and its third-party geologists and engineers for management of

data imported by independent third-party laboratories and data exported by Georgia Power Company and its Consultants. The data will be used in preparation of report submittals, modeling, strategic planning, and other purposes appropriate and consistent with EQuIS's data management and reporting tools and capabilities.

The Coal Combustion Residuals (CCR) program consists of the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient and assessment well/constituent pairs containing 100% non-detects follows this letter.

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient and assessment well/constituent pairs with 100% non-detects follows this letter. A substitution of the most recent reporting limit is used for non-detect data. For all constituents, a substitution of the most recent reporting limit is used for non-detect data. This generally gives the most conservative limit in each case. Due to elevated reporting limits (at or above the Maximum Containment Level (MCL) or CCR-specified level) during the February 2025 sample event the following historic reporting limits were substituted across all wells in order to maintain conservative (i.e., lower) limit from a regulatory perspective:

- Antimony: 0.003 mg/L
- Arsenic: 0.005 mg/L
- Beryllium: 0.0005 mg/L
- Boron: 0.04 mg/L
- Cadmium: 0.0005 mg/L
- Chromium: 0.005 mg/L
- Cobalt: 0.005 mg/L
- Lead: 0.001 mg/L
- Lithium: 0.03 mg/L
- Molybdenum: 0.01 mg/L
- Selenium: 0.005 mg/L
- Thallium: 0.001 mg/L

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

In earlier analyses, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the previous screening and demonstrated that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests that the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

Summary of Statistical Methods – Appendix III Parameters

Based on the earlier evaluation described above, the following methods were selected:

- Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for

non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.

- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after screening for any new outliers. In some cases, earlier data may require deselection prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Although the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Summary of Background Screening – Conducted in March 2019

Outlier Analysis

Time series plots were used to identify suspected outliers or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits.

Using the Tukey box plot method, several outliers were identified. In cases where the most recent value was identified as an outlier, values were not flagged in the database as they may represent a possible trend. If future values do not remain at similar concentrations, these values may be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

Of the outliers identified by Tukey's method, only a few of these values were flagged in the database as all other values are similar to other measurements. Additionally, when any values are flagged in the database as outliers, they are plotted in a disconnected and

lighter symbol on the time series graph. The accompanying data pages display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends can be identified by visual inspection, a quantification of the trend and its statistical significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each well to identify statistically significant increasing or decreasing trends. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses were included with the previous screening and showed two statistically significant decreasing trends for the Appendix III parameters. The only significant trend identified in the upgradient wells was a statistically significant decreasing trend for sulfate in well DGWA-71. All trends noted were relatively low in magnitude when compared to average concentrations; therefore, no adjustments were made to the data sets at that time.

Appendix III – Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells, which assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are

appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter.

The ANOVA identified no variation among upgradient well data for fluoride, making this constituent eligible for interwell analyses. Variation was noted for boron, calcium, chloride, pH, sulfate, and TDS, which indicated intrawell analyses may be most appropriate for these parameters. While data were further tested for intrawell eligibility during the screening, interwell methods will be used for all Appendix III constituents in accordance with Georgia EPD requirements.

Statistical Analysis of Appendix III Parameters – February 2025

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. As requested by WSP, the February 2025 observation for boron at upgradient well DGWA-71 was flagged as an outlier since it did not meet required criteria for data validation. All previously flagged values were confirmed by visual screening and summary of previously flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February 2025 (Figure D). Background (upgradient) well data were reassessed for potential outliers during this analysis and no new values were flagged. Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The February 2025 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result. Therefore, no exceedance is noted, and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. A

summary table of the interwell prediction limits follows this letter. Prediction limit exceedances were noted for the following well/constituent pairs:

- Boron: DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-14, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, and DGWC-48
- Calcium: DGWC-4, DGWC-5, DGWC-10, DGWC-11, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, and DGWC-48
- Chloride: DGWC-5, DGWC-8, DGWC-10, DGWC-11, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, and DGWC-42
- Fluoride: DGWC-10, DGWC-20, and DGWC-47
- pH (lower limit): DGWC-5, DGWC-8, DGWC-10, DGWC-17, DGWC-19, DGWC-20, DGWC-42, DGWC-47, and DGWC-48
- Sulfate: DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, DGWC-47, and DGWC-48
- TDS: DGWC-4, DGWC-5, DGWC-10, DGWC-11, DGWC-12, DGWC-15, DGWC-17, DGWC-19, DGWC-20, DGWC-21, DGWC-22, DGWC-23, DGWC-42, and DGWC-48

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells. Similar patterns that are present in both upgradient and downgradient wells are an indication of variability in groundwater quality unrelated to practices at the site. Statistically significant trends were noted for the following well/constituent pairs:

Increasing

- Boron: DGWC-11 and DGWC-14
- Calcium: DGWC-5, DGWC-19, DGWC-21, and DGWC-23
- Chloride: DGWA-71 (upgradient), DGWC-5, and DGWC-20
- Fluoride: DGWC-20
- pH: DGWC-19
- Sulfate: DGWC-19

- TDS: DGWC-5, DGWC-11, DGWC-17, DGWC-19, and DGWC-23

Decreasing

- Boron: DGWA-53 (upgradient), DGWC-2, DGWC-5, DGWC-8, DGWC-10, DGWC-12, DGWC-13, DGWC-19, DGWC-20, and DGWC-48
- Calcium: DGWA-53 (upgradient) and DGWC-48
- Chloride: DGWA-53 (upgradient), DGWC-19, DGWC-21, DGWC-22, DGWC-23, and DGWC-42
- Fluoride: DGWC-47
- pH: DGWC-20, DGWC-42, and DGWC-47
- Sulfate: DGWC-2, DGWC-8, DGWC-12, DGWC-13, DGWC-15, DGWC-21, DGWC-42, DGWC-47, and DGWC-48
- TDS: DGWA-53 (upgradient), DGWC-12, DGWC-22, DGWC-42, and DGWC-48

Statistical Analysis of Appendix IV Parameters – February 2025

For Appendix IV parameters, confidence intervals for each downgradient and assessment well/constituent pair with four or more samples were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. As mentioned above, downgradient and assessment well/constituent pairs that contain 100% non-detects do not require analysis. Data from upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis prior to constructing statistical limits. No additional values were flagged during this analysis and a complete list of flagged outliers follows this report (Figure C).

Trend Test Analysis

Earlier concentrations collected from March 2017 through March 2018 during baseline sampling for cobalt at upgradient well DGWA-53 were noted to be elevated compared to current groundwater quality conditions for this well. The Sen's Slope/Mann-Kendall trend test was used to determine whether concentrations have statistically significantly decreased at the 95% confidence level (Figure F). A statistically significant decreasing trend was identified; therefore, the earlier concentrations were truncated from the record in order to reduce the magnitude of the trend (USEPA Unified Guidance, 2009, Chapter 5). The resulting statistical limit is representative of current groundwater quality conditions and is more conservative (i.e., lower) from a regulatory perspective. Trend tests using both the full and truncated records follow this report. A list of the date ranges used for cobalt at upgradient well DGWA-53 follows this report.

Interwell Upper Tolerance Limits

Interwell upper tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through February 2025 for Appendix IV constituents (Figure G). Parametric tolerance limits are calculated, with a target of 95% confidence and 95% coverage, when data follow a normal or transformed-normal distribution, such as for combined radium 226 + 228. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were constructed using the highest background measurement. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure H).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed for each of the Appendix IV constituents in accordance with the state requirements in each downgradient well (Figure I). Note that confidence intervals require a minimum of 4 samples for assessment wells, and in all cases, the assessment wells had sufficient samples at this time.

The Sanitas software was used to calculate the confidence intervals. These intervals were constructed as either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. Nonparametric confidence intervals were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The confidence level associated with nonparametric confidence intervals is dependent upon the number of samples available.

Confidence intervals were compared to the GWPS prepared as described above. Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. A summary of the confidence intervals follows this letter. Exceedances were noted for the following well/constituent pairs:

- Beryllium: DGWC-5, DGWC-10, DGWC-47, DGWC-48, B-92, and B-93
- Cobalt: DGWC-8, DGWC-10, DGWC-19, DGWC-20, DGWC-47, DGWC-48, B-56, B-63, B-92, B-93, B-100, and B-104D
- Combined Radium 226 + 228: B-104D and B-122D
- Lithium: DGWC-47, DGWC-48, and B-120D

Trend Test Evaluation – Appendix IV

Data at wells with confidence interval exceedances are further evaluated using the Sen's Slope/Mann Kendall trend test at the 95% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure J). Although the trend tests for Assessment monitoring pairs were previously evaluated using 99% confidence, the 95% confidence level more rapidly identifies statistically significant trends. Additionally, the 95% confidence level is recommended in cases with limited sample sizes and, particularly, for new assessment wells. All available data for upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability in groundwater quality unrelated to practices at the site. A summary of the Appendix IV trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing

- Cobalt: DGWA-71 (upgradient), DGWC-20, and B-56

Decreasing

- Beryllium: DGWC-47 and DGWC-48
- Cobalt: DGWA-53 (upgradient), DGWC-8, DGWC-10 DGWC-47, DGWC-48, and B-93
- Combined Radium 226 + 228: DGWA-53 (upgradient)
- Lithium: DGWC-47, DGWC-48, and B-120D

Note that while the trend test identified a statistically significant increasing trend for cobalt in upgradient well DGWA-71, the slope is displayed as zero which represents the median slopes of all the possible pairwise slopes. The zero median slope results from the large number of non-detects in the record, and the positive test statistic results from a few recorded trace values in the earlier part of the record.

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for McDonough AP-2,3,4. If you have any questions or comments, please feel free to contact us.

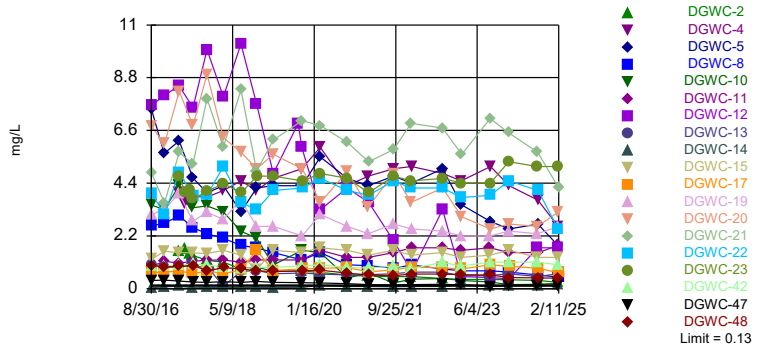
Exceeds Limit: DGWC-2, DGWC-4, DGWC-5, DGWC-8, DGWC-10, DGWC-11, DGWC-12, DGWC-13, DGWC-14, DGWC-15,..

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 63 background values. 23.81% NDs. Annual per-constituent alpha = 0.01763. Individual comparison alpha = 0.0004681 (1 of 2). Comparing 19 points to limit.

Constituent: Boron Analysis Run 7/14/2025 1:14 PM View: Appendix III - Interwell PLs

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
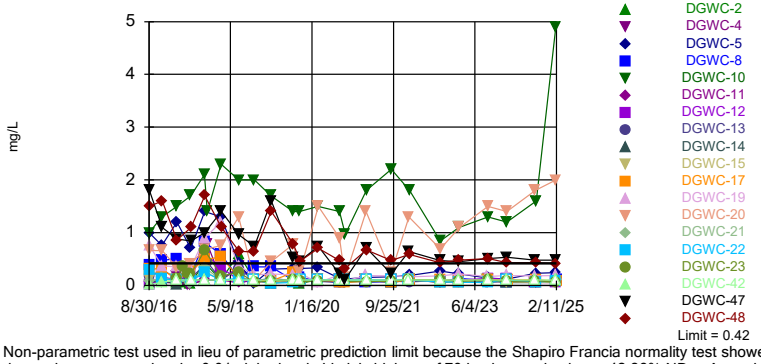
Hollow symbols indicate censored values.

Exceeds Limit: DGWC-10, DGWC-20, DGWC-47

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 70 background values. 42.86% NDs. Annual per-constituent alpha = 0.01429. Individual comparison alpha = 0.0003786 (1 of 2). Comparing 19 points to limit.

Constituent: Fluoride Analysis Run 7/14/2025 1:14 PM View: Appendix III - Interwell PLs

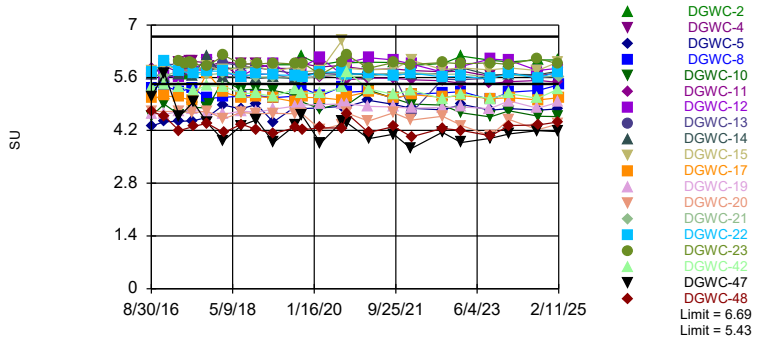
Exceeds Limits: DGWC-5, DGWC-8, DGWC-10, DGWC-17, DGWC-19, DGWC-20, DGWC-42, DGWC-47, DGWC-48

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 71 background values. Annual per-constituent alpha = 0.02793. Individual comparison alpha = 0.0007401 (1 of 2). Comparing 19 points to limit.

Constituent: pH, Field Analysis Run 7/14/2025 1:14 PM View: Appendix III - Interwell PLs

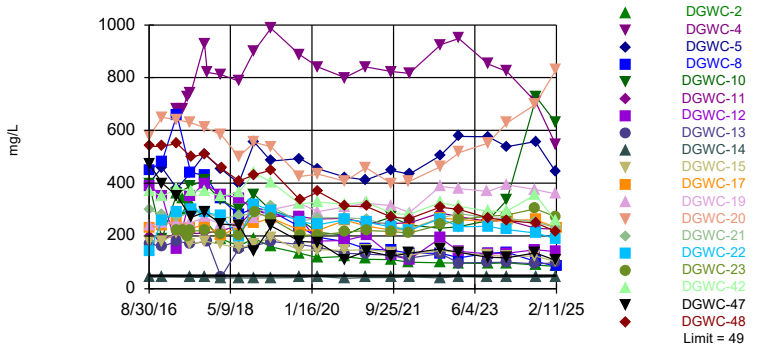
Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 65 background values. 15.38% NDs. Annual per-constituent alpha = 0.01668. Individual comparison alpha = 0.0004425 (1 of 2). Comparing 19 points to limit.

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 67 background values. 94.03% NDs. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03217.

Constituent: Cadmium Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

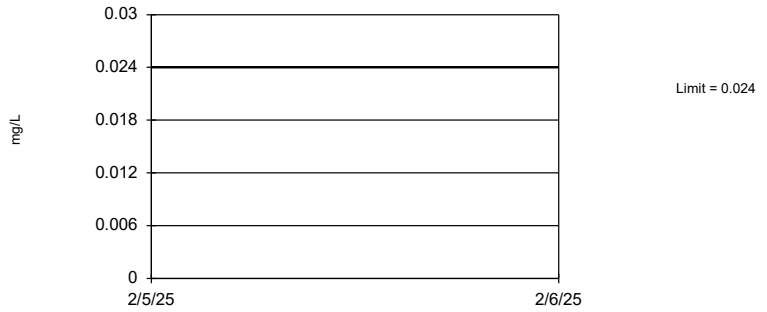
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 65 background values. 73.85% NDs. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03565.

Constituent: Chromium Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 60 background values. 51.67% NDs. 92.77% coverage at alpha=0.01; 95.12% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.04607.

Constituent: Cobalt Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Parametric

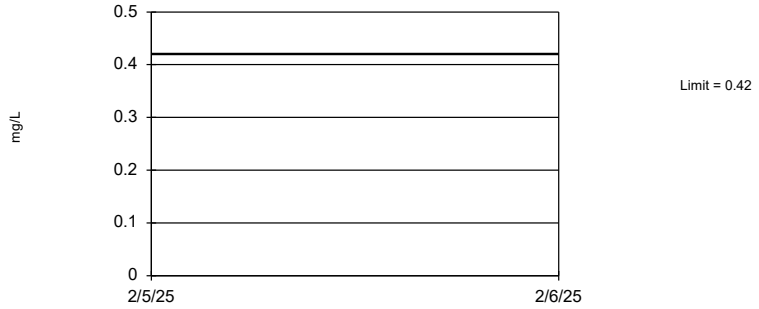
95% coverage. Background Data Summary (based on cube root transformation): Mean=1.009, Std. Dev.=0.3215, n=66. Normality test: Shapiro Francia @alpha = 0.01, calculated = 0.9617, critical = 0.948. Report alpha = 0.05.

Constituent: Combined Radium 226 + 228 Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



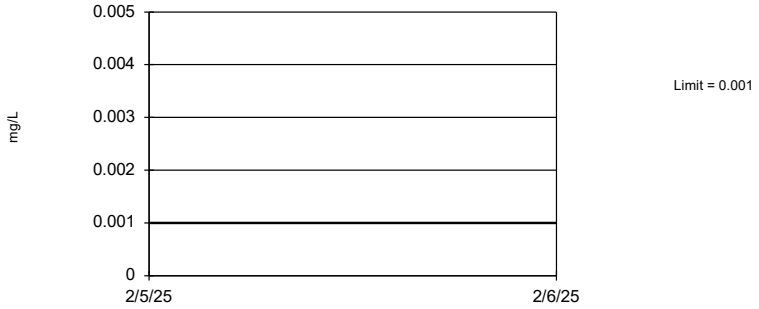
Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 70 background values. 42.86% NDs. 93.55% coverage at alpha=0.01; 95.9% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.02758.

Constituent: Fluoride Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 66 background values. 86.36% NDs. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03387.

Constituent: Lead Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

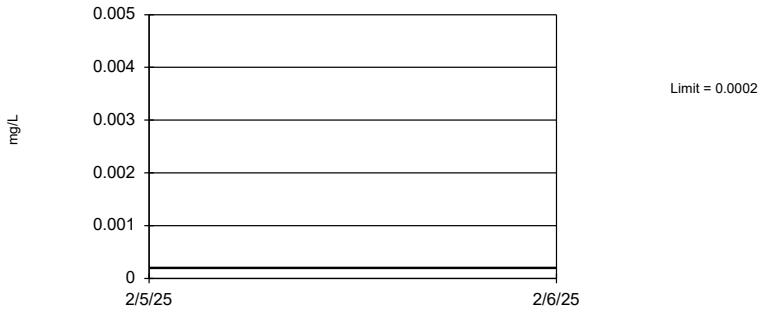
Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 66 background values. 36.36% NDs. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03387.

Constituent: Lithium Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 66 background values. 83.33% NDs. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03387.

Constituent: Mercury Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 66 background values. 65.15% NDs. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03387.

Constituent: Molybdenum Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

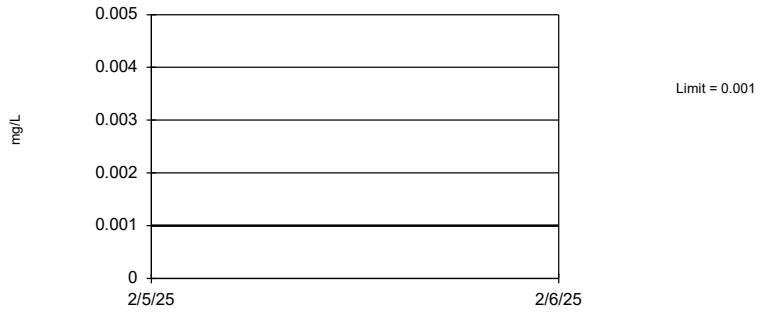
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. All background values were censored; limit is most recent reporting limit. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03387.

Constituent: Selenium Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 66 background values. 95.45% NDs. 93.16% coverage at alpha=0.01; 95.51% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.03387.

Constituent: Thallium Analysis Run 5/16/2025 2:18 PM View: Appendix IV - UTLs
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

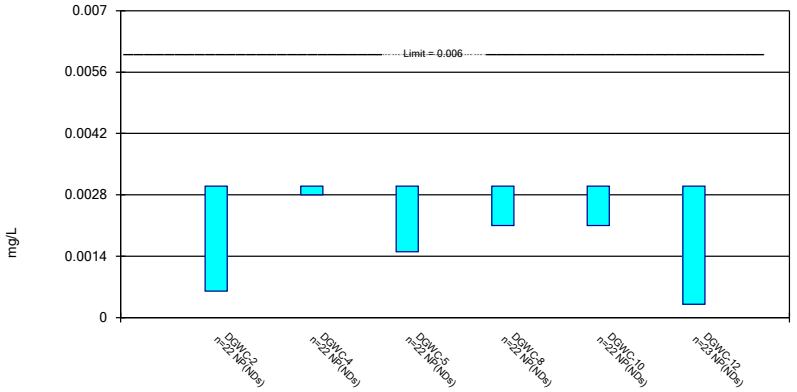
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

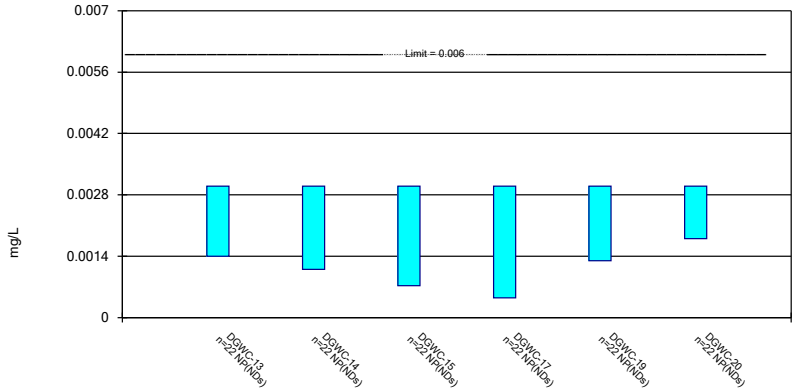


Constituent: Antimony Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

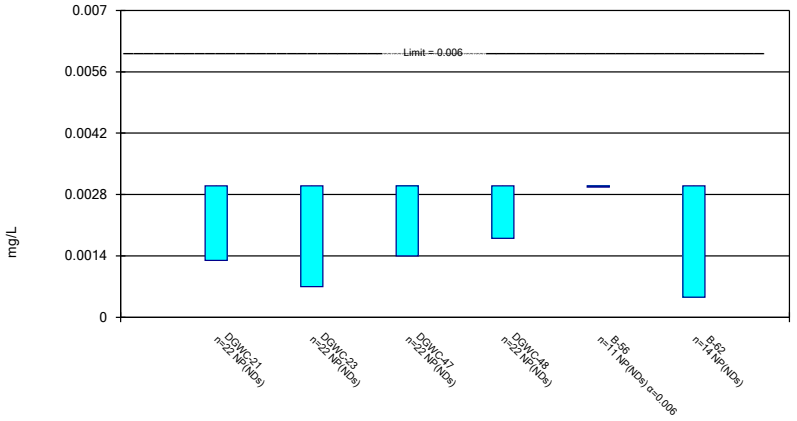


Constituent: Antimony Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.

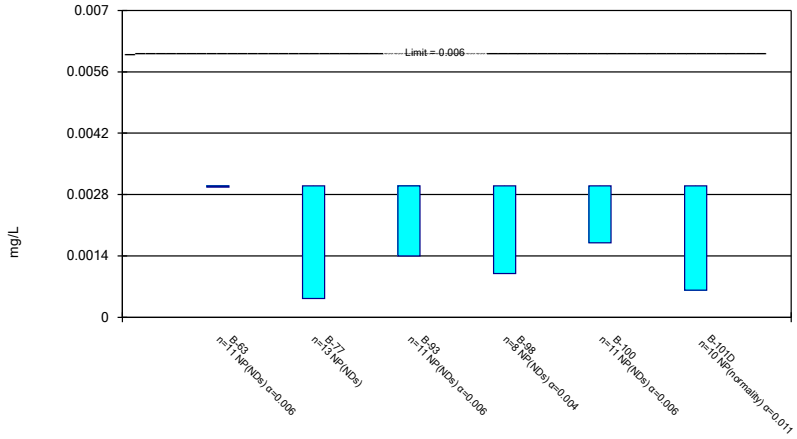


Constituent: Antimony Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.

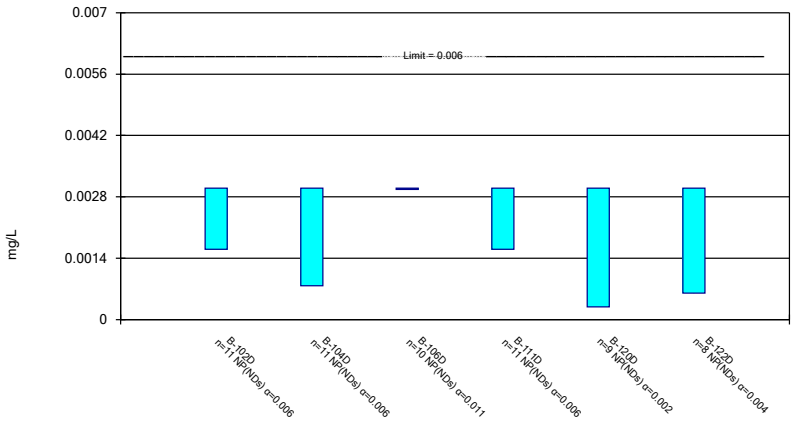


Constituent: Antimony Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

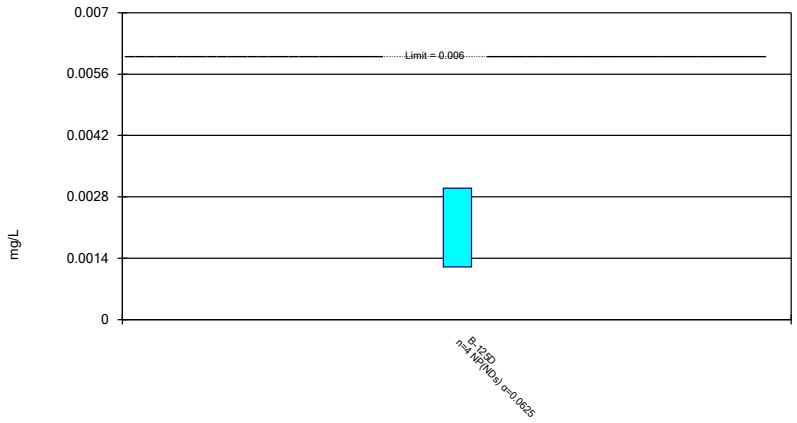


Constituent: Antimony Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

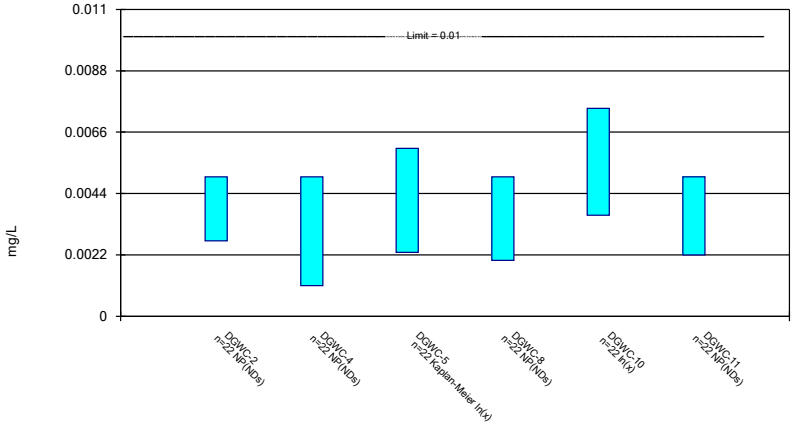


Constituent: Antimony Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

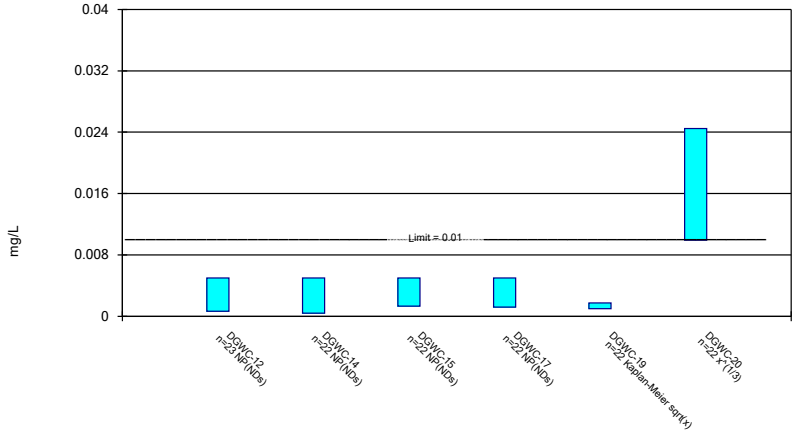


Constituent: Arsenic Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

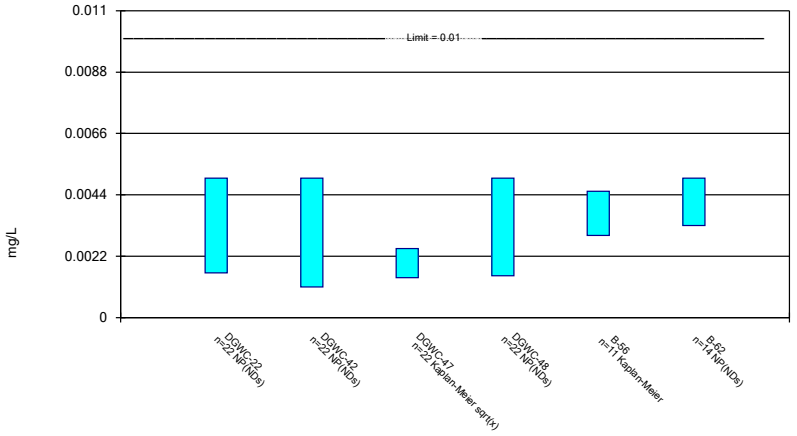


Constituent: Arsenic Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

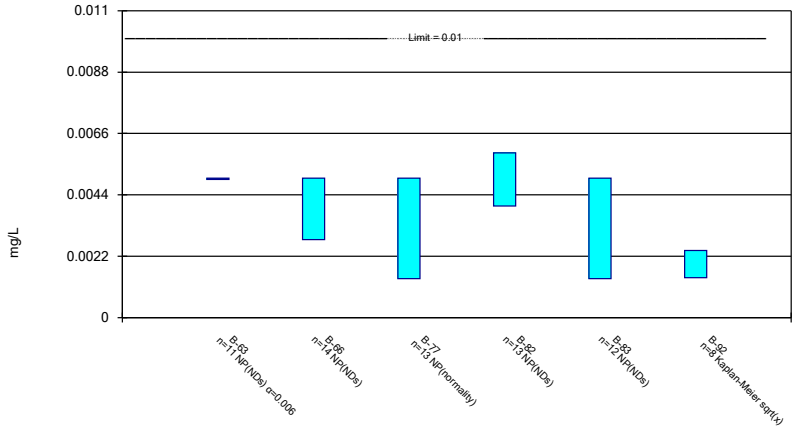


Constituent: Arsenic Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

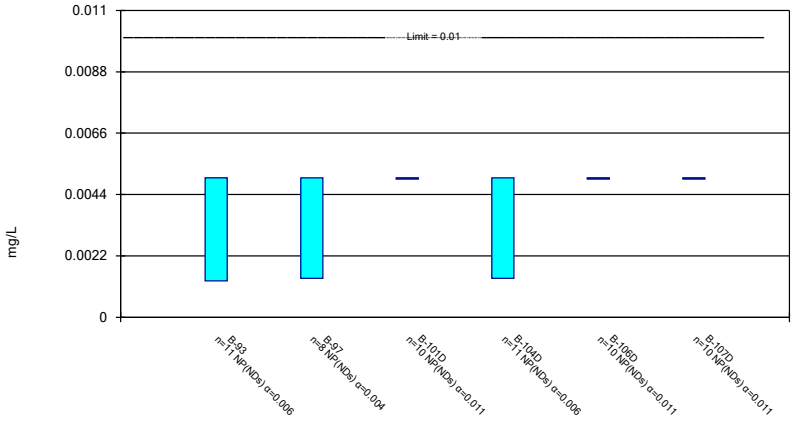


Constituent: Arsenic Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

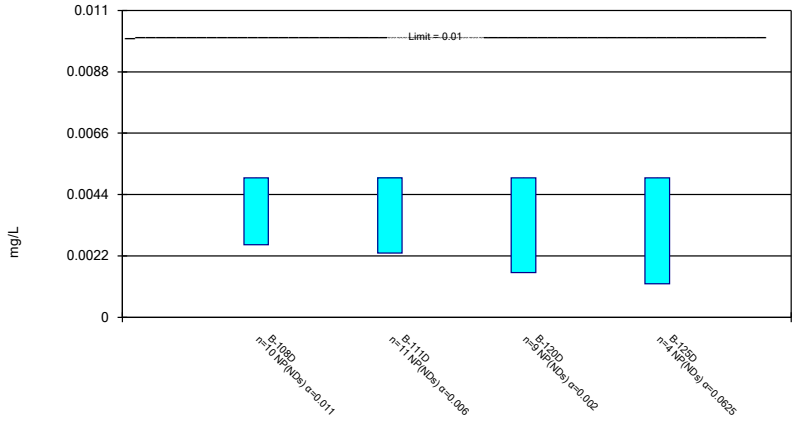


Constituent: Arsenic Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

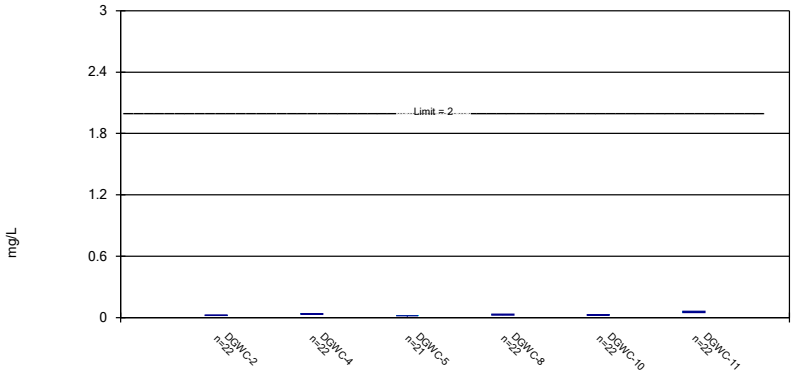


Constituent: Arsenic Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

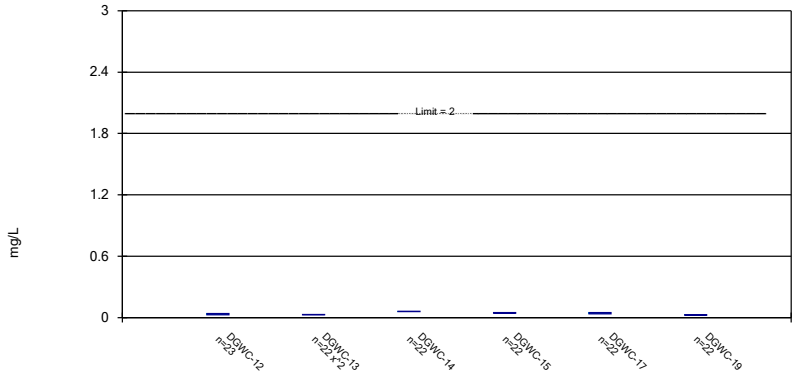


Constituent: Barium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

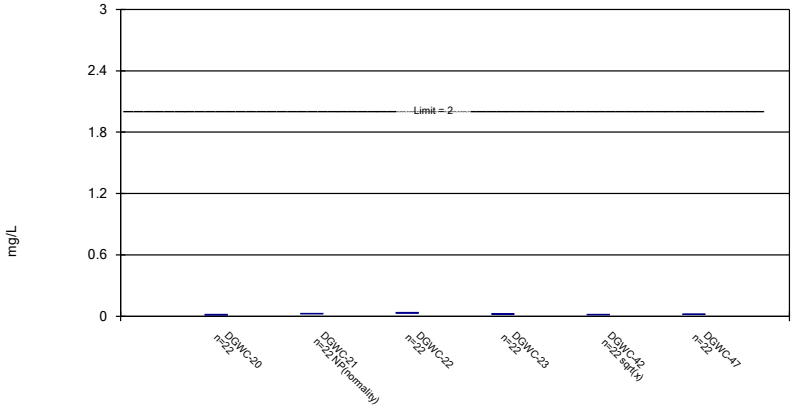


Constituent: Barium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

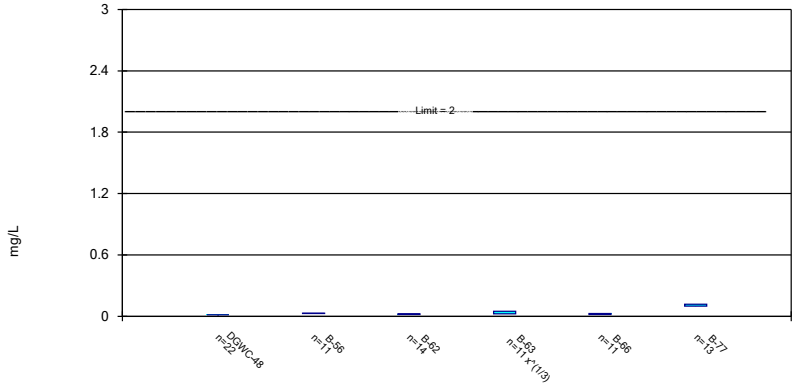


Constituent: Barium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

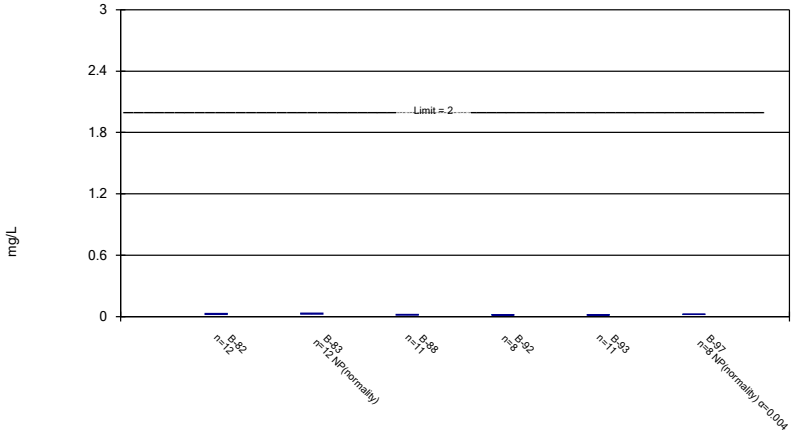


Constituent: Barium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

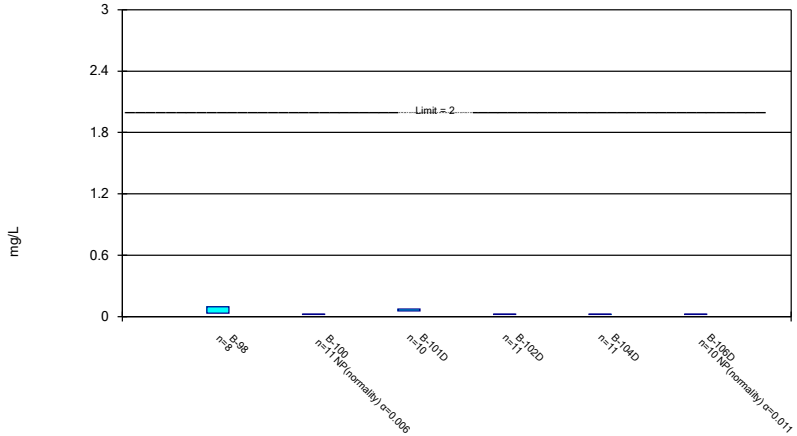


Constituent: Barium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

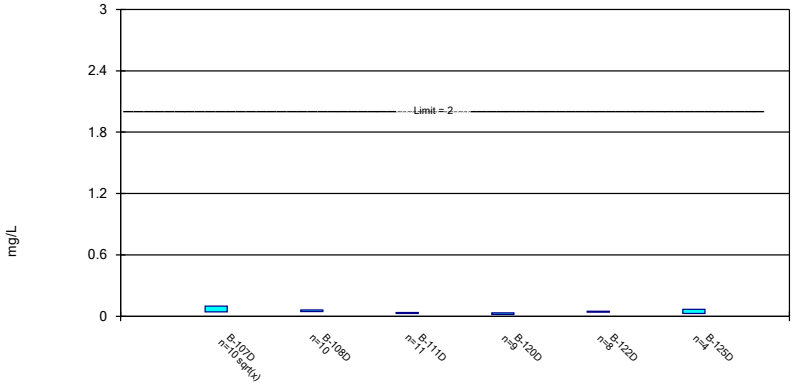


Constituent: Barium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

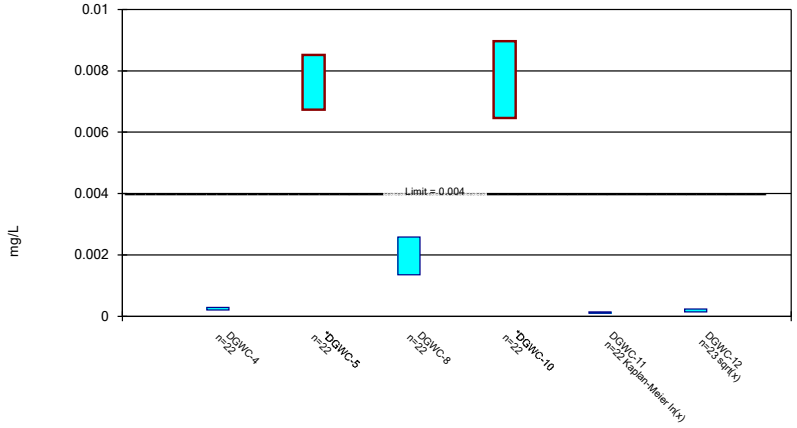


Constituent: Barium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

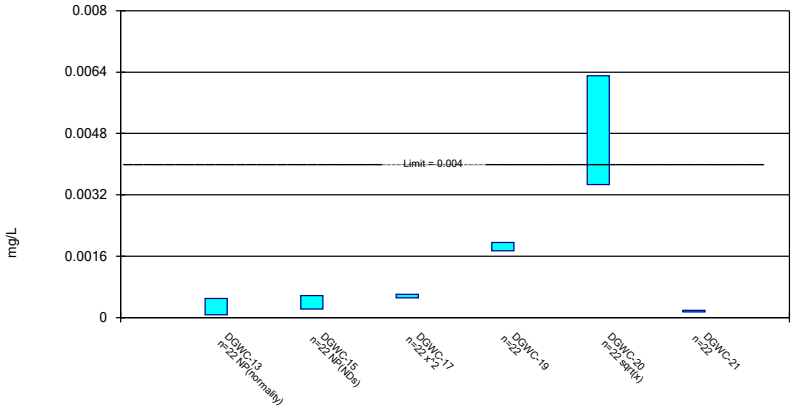


Constituent: Beryllium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

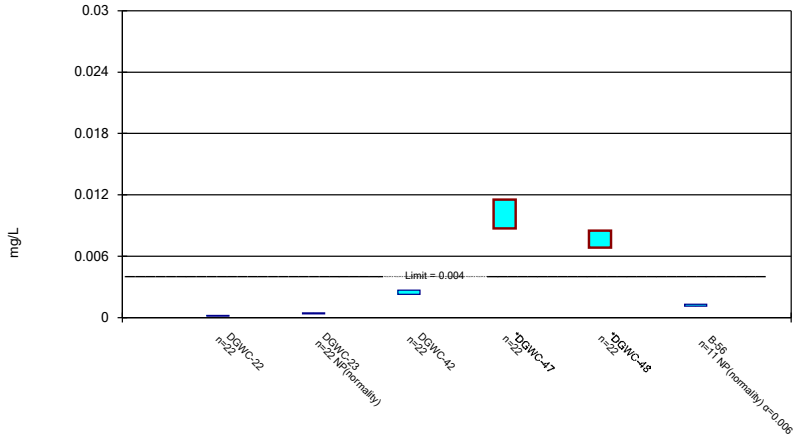


Constituent: Beryllium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

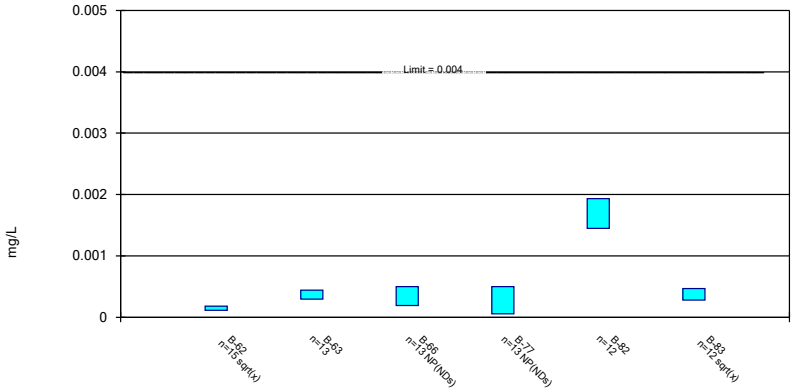


Constituent: Beryllium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

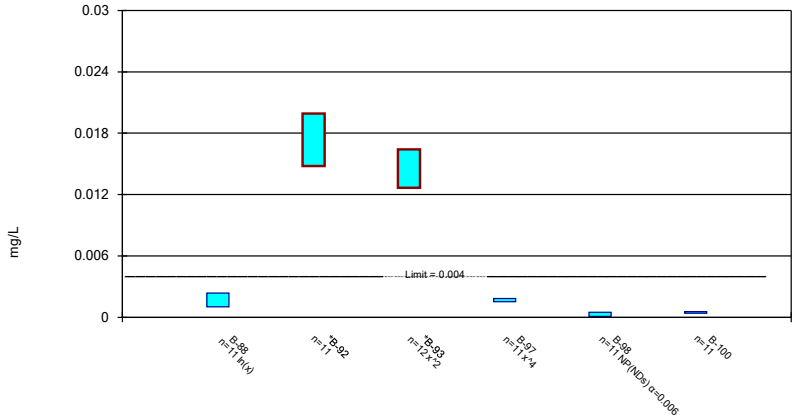


Constituent: Beryllium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

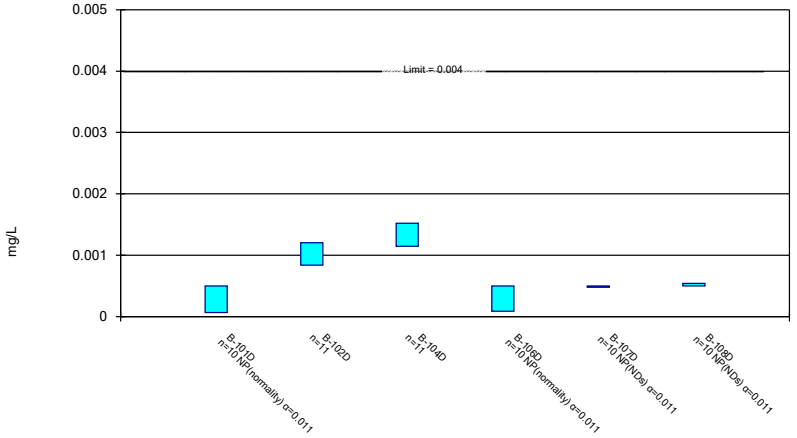
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 5/16/2025 2:20 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

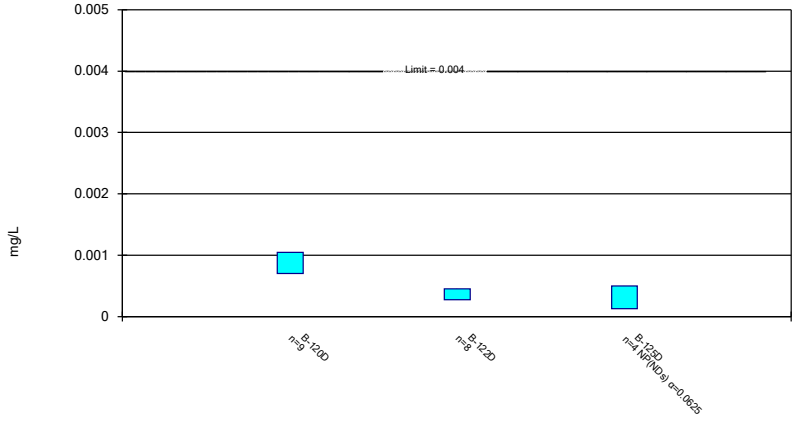
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

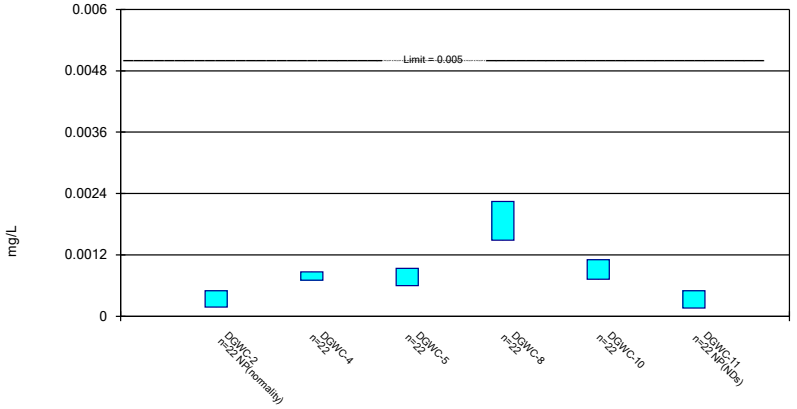


Constituent: Beryllium Analysis Run 5/16/2025 2:21 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 5/16/2025 2:21 PM View: Appendix IV - Confidence Intervals
Plant McDonough Client: Southern Company Data: McDonough AP-2,3,4

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Appendix B Analytical Laboratory Report

1.0 BACKGROUND AND PURPOSE

On behalf of Georgia Power Company (Georgia Power), WSP USA Inc. (WSP) has prepared this Technical Memorandum (Memo) to document pre-design investigation (PDI) field activities and results from Plant McDonough Ash Pond 2 and Ash Pond 3/4 (AP-2 and 3/4; Site). In-situ geochemical injections, coupled with monitored natural attenuation (MNA), have been proposed as corrective measures to address concentrations of arsenic, beryllium, cobalt, and lithium reported at statistically significant levels (SSLs) above Groundwater Protection Standards (GWPS).

Design of in-situ geochemical injection corrective measures includes multiple assessment and design components, including a pre-design investigation (PDI) to characterize and refine proposed treatment areas. This Memo provides a summary of the PDI field activities and the results of the investigation. The information collected during the PDI will inform in-situ injection pilot studies and groundwater remedy design activities.

2.0 INVESTIGATION ACTIVITIES

PDI activities were conducted from March 22nd through 27th, 2024. Cascade Technical Services (Cascade) advanced ten (10) direct push technology (DPT) Waterloo Aquifer Profiling System (Waterloo^{APS}) borings at the locations shown on **Figure 1**. Surveyed PDI boring locations are presented in **Table 1**. The Waterloo^{APS} tooling continuously logged vertical hydrostratigraphic profiles of relative hydraulic conductivity (i.e., Index of Hydraulic Conductivity, or I_k) from ground surface to depths ranging between 3.9 and 57.9 feet below ground surface (bgs), corresponding with DPT refusal. WaterlooAPS boring logs are included in **Appendix A**.

Depth-discrete groundwater screening samples were collected using stainless-steel Waterloo^{APS} tooling and a peristaltic pump. Attempts were made to collect groundwater samples from each of the PDI boring locations, but insufficient yield did not allow for collection at all locations. As the Waterloo^{APS} tooling advanced, attempts were made to collect samples at various depths below the water table. Groundwater recovery was generally less successful at shallower depths. All samples successfully collected ranged in elevation between 761.5 feet and 782.5 feet. Groundwater was purged at a low-flow rate ranging from approximately 20 to 150 milliliters per minute (mL/min) until stabilization criteria were met, or up to a maximum of 60 minutes prior to sample collection. The following stabilization criteria were applied:

- pH ± 0.1 standard units (SU)
- Conductivity ± 5%
- Dissolved oxygen (DO) ± 0.2 milligrams per liter (mg/L) or ± 10% (whichever is greater) for DO > 0.5 mg/L. No criterion applies if DO < 0.5 mg/L, record only.
- Turbidity measured less than 10 nephelometric turbidity units (NTU)

All groundwater samples were field filtered using a 0.45-micron filter. During purging, groundwater quality field parameters (i.e., pH, conductivity, turbidity, dissolved oxygen, temperature, and oxidation reduction potential (ORP)) were monitored using an AquaTroll 400 logger and Hach turbidity meter and were manually recorded on field sample logs. Sulfide and ferrous iron field kits were used during sample collection to assess geochemical conditions in real time. Results from the field tests and stabilized field parameters are provided in **Table 2**.

Samples were collected in appropriately preserved laboratory-supplied sample containers and kept on ice while in the field and then shipped to Pace Analytical Services, LLC (Pace Analytical) in Atlanta, Georgia following chain-of-custody protocols. WSP personnel managed the collection, documentation, and shipment of the groundwater

samples. Samples were analyzed for arsenic, beryllium, cobalt, and lithium, as well as Appendix III constituents, major cations and anions (sodium, magnesium, potassium, chloride, and alkalinity [total/carbonate/bicarbonate]), iron, manganese, sulfide, phosphate, and total organic carbon by Pace Analytical. Analytical results are presented in **Table 3** and the laboratory analytical reports are included in **Appendix B**.

Completed soil borings were abandoned to the ground surface with bentonite, and subsequently surveyed by Metro Engineering and Surveying Co., Inc. The surveyed coordinates for each of the locations is provided in **Table 1**.

3.0 INVESTIGATION RESULTS

The Waterloo^{APS} vertical profiles of I_K (**Appendix A**) for AP-2 and 3/4 PDI locations indicate relatively low I_k at PDI locations AP234-HRSC24-01, AP234-HRSC24-03, AP234-HRSC24-04, and AP234-HRSC24-10. Higher I_K zones were observed at PDI locations AP234-HRSC24-02, AP234-HRSC24-08, AP234-HRSC24-09, and AP234-HRSC24-11. Shallow refusal was encountered at AP234-HRSC24-12 and AP234-HRSC24-13 due to near surface debris.

Analytical results from borings advanced in the AP-2 and 3/4 vicinity are shown on **Figure 2** through **Figure 5**. Arsenic was not detected above GWPS at any of the PDI locations sampled as presented in **Figure 2**. Beryllium concentrations in PDI groundwater samples AP234-HRSC24-08, AP234-HRSC24-09, and AP234-HRSC24-10 exceeded the GWPS of 0.004 mg/L (**Figure 3**). The highest Be concentration detected (0.022 mg/L) was from PDI location AP234-HRSC24-09 at a depth of 28.5 feet bgs (779.8 feet NAVD88). Cobalt concentrations in all collected PDI groundwater samples exceeded the GWPS of 0.024 mg/L as presented on **Figure 4**. The highest Co concentration in PDI groundwater samples (i.e., 0.28 mg/L) was collected at PDI location AP234-HRSC24-08 18.5 feet bgs (782.5 feet NAVD88). Lithium concentrations exceeded GWPS (0.04 mg/L) at PDI locations AP234-HRSC24-08 and AP234-HRSC24-09. The highest Li concentration in PDI groundwater samples (0.36 mg/L) was collected from AP234-HRSC24-09.

Notes:

1. Depth discrete groundwater screening samples collected via Waterloo[APS] and field filtered.
2. ft bgs - feet below ground surface
3. mg/L - milligrams per Liter
4. S.U. - Standard Units
5. < indicates the substance was not detected above the analytical method detection limit (MDL). The value displayed is the method detection limit.
6. J indicates the substance was detected at such low levels that the precision of the laboratory instruments could not produce a reliable value. Therefore, the value displayed is qualified by the laboratory as an estimated number.
7. -- indicates substance not analyzed.

RE: Project: MCD-AP-2, 3/4 Boring Locations
Pace Project No.: 92721964

Dear Lauren Hartley:

Enclosed are the analytical results for sample(s) received by the laboratory on March 28, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: MCD-AP-2, 3/4 Boring Locations
Pace Project No.: 92721964

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
P4	Sample field preservation does not meet EPA or method recommendations for this analysis.

RE: Project: MCD-AP-2, 3/4 Boring Locations
Pace Project No.: 92721029

Dear Lauren Hartley:

Enclosed are the analytical results for sample(s) received by the laboratory on March 25, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Pace Analytical Services, LLC
9800 Kincey Ave. Suite 100
Huntersville, NC 28078
(704)875-9092

QUALIFIERS

Project: MCD-AP-2, 3/4 Boring Locations
Pace Project No.: 92721029

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

H1	Analysis conducted outside the EPA method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: MCD-AP-2, 3/4 Boring Locations
Pace Project No.: 92721018

Dear Lauren Hartley:

Enclosed are the analytical results for sample(s) received by the laboratory on March 23, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang
bonnie.vang@pacelabs.com

QUALIFIERS

Project: MCD-AP-2, 3/4 Boring Locations
Pace Project No.: 92721018

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

H1	Analysis conducted outside the EPA method holding time.
H3	Sample was received or analysis requested beyond the recognized method holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
N2	The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

APPENDIX G

Batch and Column Treatability Studies

June 14, 2024

Todd Rees and Nicholas McMillan
WSP

TERRA SYSTEMS FINAL REPORT FOR WSP FOR COAL ASH RESIDUALS BATCH AND COLUMN TREATABILITY STUDIES FOR GEORGIA POWER PLANT MCDONOUGH, GA VERSION 2

1.0 INTRODUCTION

This bench-scale treatability evaluated neutralization/precipitation with three reagents chosen by WSP to treat arsenic, beryllium, cobalt, and lithium. The Plant McDonough groundwater protection standards (GWPS) are:

- arsenic 0.010 mg/L
- beryllium 0.004 mg/L
- cobalt 0.024 mg/L[1]
- lithium 0.040 mg/L

2.0 BENCH-SCALE STUDY SCOPE FOR ONE GROUNDWATER

The following phases were conducted for the treatability study:

2.1 Bench-scale Groundwater and Soil Collection

Groundwater samples were collected from two wells; Plant McDonough AP-1 DGWC-69 and AP-2, 3/4 DGWC-48. Soil samples were collected from soil borings adjacent to each monitoring well. The volumes of groundwater and soil collected for the initial characterization, titration, and columns are shown in Table 1. For the DGWC-48 treatability studies, there was a total of 54.6 kg of groundwater and 52.4 kg of soil; this includes the containers. For the DGWC-69 treatability studies, there was a total of 10.7 kg of groundwater and 21.5 kg of soil. The samples were delivered to Terra Systems (TS) under chain-of-custodies (Figures 1-3). The soil samples were sieved to remove rocks and debris larger than 0.475 cm and then mixed with an electric drill and auger. After removing rocks and debris, there was 15.8 kg of the DGWC-69 soil with 5.0 kg of rock (24.0%) and 38.3 kg of the DGWC-48 soil with 13.1 kg rock (25.5%). The geochemistry of the site is thought to be aerobic. The soil sieving and all tests were conducted on the bench with exposure to the atmosphere.

Tables 2 and 3 have the estimated volumes of soil and groundwater required for the initial characterization, titration, and columns. The initial characterization required 1.1 L of DGWC-48 groundwater. The titrations tests with the DGWC-48 groundwater and soil plus groundwater and the three reagents required 0.5 L groundwater and 0.3 kg of soil. For the DGWC-48 column

[1] When the treatability study began, the GWPS for cobalt was 0.0322 mg/L. As of February 2024, the GWPS has been updated to 0.024 mg/L due to a truncated background dataset.

studies, assuming 36 inch long by 3-inch diameter columns with soils having a density of 1.67 g/cm^3 and 30% porosity operated at 0.27 ft/day for 42 days, each column required about 7.0 kg of soil and 4.8 L groundwater. As seen in Table 2, with a 25% contingency, the DGWC-48 groundwater requirements are estimated to be 26 L (7 gallons) and the soil requirements are estimated to be 28 kg (62 pounds or equivalent to about 4.4 gallons of soil assuming a density of 1.67 g/cm^3).

The initial characterization required 1.1 L of DGWC-69 groundwater. The titrations tests with the DGWC-69 groundwater and soil plus groundwater and the two reagents required 0.4 L groundwater and 0.2 kg of soil. For the DGWC-69 batch studies, assuming 1,000 mL reactors with 50% groundwater by volume, each batch reactor required about 0.9 kg of soil and 0.5 L groundwater. As seen in Table 3, with a 25% contingency, the DGWC-69 groundwater requirements are estimated to be 7.5 L (2 gallons) and the soil requirements are estimated to be 10.5 kg (23 pounds or equivalent to about 1.5 gallons of soil assuming a density of 1.8 g/cm^3).

2.2 Baseline Characterization

At the beginning of the bench-scale treatability test, baseline characterization was performed to verify contaminant concentrations in the samples. Analyses were conducted by Eurofins Lancaster Laboratories Environmental (ELLE) for:

- Anions (chloride, fluoride, and sulfate) by EPA 300.0 R2.1.Dissolved metals (antimony, arsenic, barium, beryllium, boron, calcium, cadmium, cobalt, chromium, lead, lithium, mercury, molybdenum, selenium, and thallium by SW846 6010D, 6020B, 7471B, and 7470A
- Total dissolved solids (TDS) by SM 2540C, pH by SW846 9040C, and Temperature by SW846 9040C.

TS measured pH in the soil and groundwater, ORP, dissolved oxygen (DO), specific conductivity, total and bicarbonate alkalinity, total hardness, ferrous iron, and sulfide in the aqueous phase using calibrated meters and Hach protocols.

The soil samples were analyzed for antimony, arsenic, barium, beryllium, boron, calcium, cadmium, cobalt, chromium, lead, lithium, mercury, molybdenum, selenium, and thallium by SW846 6010D, SW846 7471B, and SW846 6020B and percent moisture.

Table 4 presents the results of the initial characterization of the DGWC-48 groundwater and soil and the DGWC-69 groundwater and soil. The DGWC-69 groundwater had a pH of 6.9 SU, +252 mV redox potential, 8.9 mg/L dissolved oxygen, specific conductivity of 134 µS/cm, alkalinity of 80 mg/L as $CaCO_3$, hardness of 60 mg/L as $CaCO_3$, 0.35 mg/L ferrous iron, and <0.01 mg/L sulfide; these analyses were conducted by TS using calibrated meters and probes and Hach methods for alkalinity, hardness, ferrous iron, and sulfide. ELLE found 7.37 mg/L sulfate, 5.36 mg/L chloride, 0.0265 mg/L dissolved arsenic (above the Georgia Groundwater Protection Standard or GA GWPS of 0.010 mg/L), a TDS of 93.5 mg/L and pH of 6.65 SU. Other metals were not detected or below the GA GWPS for those constituents. The DGWC-69 soil had >1,000 mg/kg calcium; 100 to 1000 mg/kg barium; 10 to 100 mg/kg cobalt, chromium, and lithium; 1 to 10 mg/kg of arsenic and lead; and <1 mg/kg of beryllium, cadmium, molybdenum, and thallium. The density of the DGWC-69 soil was 1.66 g/cm^3,the saturated soil was 1.77 g/cm^3, and there was 12.2% moisture.

The DGWC-48 groundwater had a pH of 5.6 SU, + 303 mV redox potential, 9.9 mg/L dissolved oxygen, specific conductivity of 623 µS/cm, alkalinity of 20 mg/L as $CaCO_3$, hardness of 40 mg/L as $CaCO_3$, 2.8 mg/L ferrous iron, and 0.1 mg/L sulfide. ELLE found 273 mg/L sulfate, 0.48 mg/L fluoride, 6.21 mg/L chloride, 0.00767 mg/L dissolved beryllium (above the GA GWPS of 0.004 mg/L), 0.329 mg/L dissolved cobalt (above the McDonough GWPS of 0.024 mg/L), and dissolved lithium of 0.091 mg/L (above the GA GWSP of 0.040 mg/L), a TDS of 398 mg/L and pH of 4.45 SU. The DGWC-48 soil had >1,000 mg/kg of calcium; 10 to 100 mg/kg of barium; 1 to 10 mg/kg of arsenic, cobalt, chromium, lithium, molybdenum, and lead; and <1 mg/kg of detectable beryllium and thallium. The density of the DGWC-48 soil was 1.55 g/cm^3, the saturated soil was 1.67 g/cm^3, and there was 11.3% moisture.

Several reagents to be used in the tests were analyzed for dissolved metals, anions, TDS, and pH (Table 5). Solutions were prepared with 10 g/L of the reagents, filtered, and analyzed by ELLE. The first batch of ADA Carbon was prepared incorrectly so ADA sent a new sample (Fluxsorb II). The 10 g/L ADA Carbon Fluxsorb II had no detectable sulfate (<2.5 mg/L), 0.5 mg/L dissolved calcium, trace levels of dissolved arsenic, barium, cobalt, chromium, molybdenum, and lead, a TDS of 176 mg/L and pH of 7.83 SU. The 10 g/L LD Carlson potassium bicarbonate had low levels of sulfate (9.04 mg/L), 22.6 mg/L dissolved calcium, trace levels of dissolved arsenic, barium, cobalt, chromium, molybdenum, and lead, a TDS of 67,700 mg/L and pH of 8.34 SU. Three different ferrous sulfate heptahydrate suppliers were tested including JT Baker (tested twice), Verdesian, and CERES. The 10 g/L ferrous sulfate heptahydrates had elevated levels of sulfate (2,760 mg/L [JT Baker]), iron (2,210 mg/L [CERES]), 1.5 to 40 mg/L dissolved calcium, trace levels of dissolved arsenic, boron, barium, cadmium, molybdenum, lead, selenium, and thallium in some of the samples; a TDS of 6,550 mg/L and pH of 3.28 SU (JT Baker). The ferrous sulfate solutions had cobalt which exceeded the Plant McDonough GWPS of 0.024 mg/L in all four samples (0.0892 to 0.127 mg/L) and the Verdesian and CERES ferrous sulfate heptahydrate products had 0.131 to 0.531 mg/L dissolved chromium which exceeded the GA GWPS of 0.10 mg/L.

2.3 Titration Tests

Titrations were conducted to determine the appropriate dosages of each of the three reagents for the homogenized Plant McDonough DGWC-48 groundwater and for the 60% groundwater and 40% soil slurry, as needed based on the chemistry of the treatment reagents selected for testing. Titrations with potassium bicarbonate, ferrous sulfate heptahydrate, and ADA Carbon were conducted with (1) 100 mL DGWC-48 groundwater and (2) 72 g groundwater and 76.8 g soil

(60:40 volumetric ratio of DGWC-48 groundwater to soil assuming a soil density of 1.8 g/cm^3) to determine the impacts on pH and ORP.

Titrations were conducted to determine the appropriate dosages of the ferrous sulfate for the homogenized Plant McDonough AP-1 DGWC-69 groundwater and for the 60% groundwater and 40% soil slurry, as needed based on the chemistry of the treatment reagents selected for testing. Titrations ferrous sulfate heptahydrate with and without sodium bicarbonate buffer were conducted with (1) 100 mL DGWC-69 groundwater and (2) 72 g DGWC-69 groundwater and 76.8 g soil (60:40 volumetric ratio of DGWC-69 groundwater to soil assuming a soil density of 1.8 g/cm^3) to determine the impacts on pH and ORP.

2.3.1 Titration Results for DGWC-48

Titration results for DGWC-48 are shown in Table 6. With DGWC-48 groundwater and potassium bicarbonate, the initial pH was 5.7 SU, and it took 1 g/L to raise the pH to 6.4 SU, 5.0 g/L to raise the pH to 7.3 SU, and 20 g/L to raise the pH to 7.8 SU. The ORP dropped from +282 mV to +235 mV. After two days, the pH of the 20 g/L $KHCO_3$ solution was 8.4 and the ORP was +211 mV.

With DGWC-48 soil, groundwater, and potassium bicarbonate, the initial groundwater and soil pH was 6.7 and it took 15 g/L to raise the pH to 7.2 and 50 g/L raised the pH to 7.4 with some fluctuations in the ORP. After two days, the pH of the 50 g/L $KHCO_3$ solution containing soil and groundwater was 7.9 and the ORP was +224 mV. It took more potassium bicarbonate to raise the pH of the soil and groundwater than the groundwater alone.

With DGWC-48 groundwater and JT Baker ferrous sulfate heptahydrate, the initial pH was 6.2 and 1 g/L $FeSO_4{\cdot}7H_2O$ dropped the pH to 5.6, 2.0 g/L dropped the pH to 5.2 SU, 5.0 g/L dropped the pH to 4.6 SU and 10 g/L dropped the pH to 4.0 SU. Aliquots of sodium bicarbonate were added to raise the pH of the 10 g/L ferrous sulfate heptahydrate solution. With 5.0 g/L sodium bicarbonate, the pH increased to 6.6 SU and the ORP fell from +209 to -192 mV. With 15 g/L sodium bicarbonate, the pH of the groundwater was 6.8 SU and the ORP fell to -273 mV. After two days, the pH was 7.0 SU and the ORP was +210 mV.

With DGWC-48 soil and groundwater and JT Baker ferrous sulfate heptahydrate, the initial groundwater and soil pH was 6.7 SU, 1.0 g/L $FeSO_4{\cdot}7H_2O$ took pH to 5.7 SU and 10 g/L dropped the pH to 4.5 SU and the ORP decreased from +206 to +38 mV. With the addition of 5.0 g/L sodium bicarbonate to the solution of 10 g/L $FeSO_4{\cdot}7H_2O$, the pH increased to 6.1 SU and the ORP fell to -109 mV. With 10 g/L sodium bicarbonate, the pH was 6.4 SU and the ORP was -150 mV. After two days, the pH of the soil and groundwater was 6.7 and the ORP was +48 mV. Ferrous sulfate heptahydrate alone will drop the pH to as low as 4.0-4.5. Equivalent loadings of $FeSO_4{\cdot}7H_2O$ and $NaHCO_3$ were able to maintain the pH between 6 and 7. The addition of sodium bicarbonate to the ferrous sulfate resulted in large initial drops in the ORP.

2.3.2 Titration Results for DGWC-69

Titrations were conducted with the DGWC-69 groundwater and DGWC-69 soil and groundwater using ferrous sulfate heptahydrate with and without sodium bicarbonate (Table 7).

With the DGWC-69 groundwater and ferrous sulfate heptahydrate, the initial groundwater pH was 7.1 SU and 1 g/L $FeSO_4 \cdot 7H_2O$ dropped the pH to 6.2 SU, 3.0 g/L dropped the pH to 5.7 SU, 5.0 g/L dropped the pH to 5.5 SU, and 10 g/L dropped the pH to 4.6 SU. The ORP remained positive. After one day, the pH was 5.2 SU and the ORP was +104 mV for the 10 g/L $FeSO_4 \cdot 7H_2O$ solution. With the DGWC-69 groundwater and ferrous sulfate heptahydrate and sodium bicarbonate, the initial groundwater pH was 6.7 SU and 1 g/L $FeSO_4 \cdot 7H_2O$ dropped the pH to 6.0 SU and 1 g/L $NaHCO_3$ raised the pH back to 6.4 SU, 3.0 g/L $FeSO_4 \cdot 7H_2O$ dropped the pH to 6.3 SU and 3.0 g/L $NaHCO_3$ brought the pH back to 6.8 SU. The 10.0 g/L $FeSO_4 \cdot 7H_2O$ and 10 g/L $NaHCO_3$ had a pH of 7.0.

With the 100 g DGWC-69 groundwater, 111 g soil, and ferrous sulfate heptahydrate, the initial groundwater pH was 6.2 SU and 1 g/L $FeSO_4 \cdot 7H_2O$ had no impact on the pH SU, 2.5 g/L dropped the pH to 5.4 SU, 5.0 g/L and 7.5 g/L also had a pH 5.4 SU, and 10 g/L dropped the pH to 5.0 SU. The ORP remained positive. After one day, the pH was 5.9 SU and the ORP was -119 mV for the 10 g/L $FeSO_4 \cdot 7H_2O$ solution. With 132 g DGWC-69 groundwater, 146 g soil, and ferrous sulfate heptahydrate and sodium bicarbonate, the initial groundwater pH was 7.0 SU and 1.0 g/L $FeSO_4 \cdot 7H_2O$ dropped the pH to 6.7 SU and 1 g/L $NaHCO_3$ dropped the pH back to 6.4 SU, 2.5 g/L $FeSO_4 \cdot 7H_2O$ dropped the pH to 6.3 SU and 2.5 g/L $NaHCO_3$ brought the pH back to 6.5 SU and the ORP became negative. The 4.9 g/L $FeSO_4 \cdot 7H_2O$ increased the pH to 6.6 and 7.4 g NaHCO3 dropped the pH to 6.2. With 9.8 g/L $FeSO_4 \cdot 7H_2O$ and 9.8 g/L $NaHCO_3$, the pH was 6.2.The next day, the pH was 6.7 with a -179 mV ORP.

2.3.3 FluxSorb II Adsorption Tests

Adsorption studies were conducted to determine the impact of three selected dosages (10, 25, and 40 g/L) of the ADA Carbon FluxSorb II reagent for the homogenized DGWC-48 groundwater on removal of metals in the groundwater. These treatments were incubated for six days. At the end of the test, samples were submitted to ELLE for dissolved metals (As, Ba, Be, Bo, Ca, Cd, Co, Cr, Hg, Li, Mo, Pb, Sb, Se, and Tl). and analyzed for dissolved metals. TS measured the pH, DO, ORP, specific conductivity, and turbidity. The results for the adsorption tests with the DGWC-48 groundwater and FluxSorb II are shown in Table 8. The percent change from the initial DGWC-48 groundwater is shown.

The pH in the treatments with FluxSorb II as measured by ELLE ranged from 6.6 to 6.8 SU, above the 4.4 SU measured in the DGWC-48 groundwater. The TDS in the FluxSorb II treatments varied between 289 and 406 mg/L compared to 398 mg/L in the DGWC-48 groundwater. Sulfate decreased slightly with all three FluxSorb II loadings. Over the six-day incubation, chloride increased slightly in 40 g/L FluxSorb II treatment. Mercury, antimony, and thallium were not detected in the groundwater or the FluxSorb II treatments. A trace of selenium was detected in the 25 g/L FluxSorb II. Boron decreased by 82.2% at the 40 g/L loading but showed little change at the 10 and 25 g/L loadings of FluxSorb II. Lead fell to below detection limits with the 40 g/L FluxSorb II. The FluxSorb II showed increases in arsenic (10 and 25 g/L FluxSorb II), barium (10 and 25 g/L FluxSorb II), chromium (10, 25, and 40 g/L FluxSorb II), and molybdenum but remained below the GA GWPS for each metal. Decreased beryllium to below the GA GWPS of 0.004 mg/L was observed in the 10, 25, and 40 g/L FluxSorb II treatments. Calcium decreased by 5.1 to 85.5% in the 10, 25, and 40 g/L FluxSorb II treatments. Cadmium decreased by 38.4 to 90.9%. Cobalt decreased by 26.7 to 88.0% as the FluxSorb II increased but remained above the Plant McDonough GWPS of 0.024 mg/L. Lithium decreased below the GA GWSP of 0.040 mg/L at the 25 and 40 g/L FluxSorb II loadings. Of the metals exceeding the GA GWPS in the DGWC-48 groundwater, 25 and 40 g/L FluxSorb II effectively treated beryllium and lithium to below the GA GWPS but did not reach the McDonough GWPS for cobalt although cobalt was reduced by 88.0% at the 40 g/L FluxSorb II loading.

2.4 ADA Carbon Transport in Column Bench-Scale Study Scope

Column Objectives

- Evaluate pore volume treatment and evolution under transient flow conditions similar to field flow rate
- Evaluate influence on permeability / flow through column
- Field flow rate: 2.7 feet per day through the 1-foot-long column
- DGWC-48 soil and DGWC-48 groundwater with FluxSorb II
- Analyze field parameters on aqueous samples (pH, ORP, DO, SC, and turbidity)
- Record observations related to flow, leakage, precipitation, photograph periodically

The column study used FluxSorb II at one loading.

A column test was conducted using DGWC-48 groundwater and DGWC-48 soil to evaluate ADA Carbon FluxSorb II reagent at one dosage. ADA recommended a dosage of 0.5% FluxSorb solids by weight of groundwater. The as-received Fluxsorb II has 13.1wt% solids. This would be equivalent to 3.82 g/L FluxSorb II in the suspension. The column was prepared by installing a 3/8" plastic bushing to a small luer outlet onto both endcaps. The weight of the empty column and endcaps were recorded (467 g). The bottom endcap had a geotextile membrane layer at the bottom and was glued onto the column. The soil was weighed and then added to the column while maintaining the groundwater level (to prevent trapping air bubbles). The column was filled with soil and groundwater and periodically tapped and the soil tamped. Once the column was filled, a geotextile covering was placed over the soil and the top endcap was glued onto the column.

The 12" x 2" diameter column (640 mL total empty volume) used 976 g of soil and 110 mL of DGWC-48 with an effective porosity of 17% resulting in a pore volume was 110 mL. First 1.8 pore volumes of DGWC-48 groundwater were pumped through the column over three days at flowrates of 0.41 to 1.18 mL/min. A flowrate of about 0.57 mL/min or 1.8 pore volumes/ day or a groundwater flowrate of 1.8 ft/day was used for the column test. A solution of 38.2 g FluxSorb II in 964 mL DGWC-48 groundwater (0.52% solids) was prepared on January 22, 2024. The FluxSorb II solution was continually mixed on a magnetic stir plate. The pH, ORP, specific conductivity, and turbidity of the effluent from the column were measured periodically. The calibration curve between turbidity and the FluxSorb II is shown in Figure 4. The FluxSorb II solution was pumped through the column over four days (1/22/24 to 1/26/24) between 8:00 and 5:00 with a total of 847 mL collected in the effluent. A groundwater flush was begun on 1/26/24 and continued through 1/31/24 with a total of 625 mL or 5.7 pore volumes. A sample of the effluent was collected 1/29/24 to 1/31/24 over the last 330 mL to be analyzed for dissolved metals.

The date and time, volume, cumulative flow, pore volume, cumulative pore volume, pH, ORP, specific conductivity, mg/L FluxSorb II (calculated from turbidity), mg/L solids (FluxSorb II X 0.131), and cumulative colloidal carbon product (CCP) solids are shown in Table 9. The FluxSorb II solution had a pH of 6.5, ORP of 165 mL, specific conductivity (SC) of 664 µS/ cm, 38,128 mg/L FluxSorb II (calculated), and 4,985 mg CCP solids. After the initial groundwater flush of 1.5 pore volumes, the pH of the effluent was 5.6 SU, ORP was +196 mV, the SC was 654 µS/cm, and there was no turbidity (or FluxSorb II). There was no significant change in the

ORP, SC, or pH over the 16 pore volumes. Light turbidity was observed in the column effluent after 0.2 pore volumes of the FluxSorb II solution (Figure 5). After 5.1 pore volumes of the diluted CCP, there is up to 17,300 mg/L of FluxSorb II in the effluent or roughly 1/2 of the influent concentration. The FluxSorb II ranged between 7,692 mg/L to 17,446 mg/L through pore volume 9.5 when the injection of FluxSorb II was ended. During the flush with DGWC-48 groundwater the FluxSorb II decreased from 6,464 mg/L in the first 1.2 pore volumes to 36 mg/L at pore volume 16. An estimated 11.6 mg of CCP solids was removed during the flush. The mass balance showed an estimated 1,220 mg of CCP solids passed through the column or 24.5% of the CCP applied to the column. Based upon the turbidity measurements and flow, about 75.5% of the CCP was retained on the column.

Figure 6 shows the column over time. The front and back of the column are shown after 1.1 pore volumes during the water flush. The FluxSorb II was introduced to the bottom of the column after 1.8 pore volumes. After 2.6 pore volumes, there is a darker color through much of the column. After the water flush, the column retained much of the dark coloration. The extruded soil had more carbon on the outside of the column near the side walls than in the interior.

At the end of the test, the column was broken down and soil samples collected from the influent end and at three intervals in the exterior and interior of column to be analyzed by heating to 105 C to remove moisture and then for loss on ignition by heating at 550 C in a muffle furnace. Duplicate DGWC-48 background soil samples were tested. Two samples of the FluxSorb II carbon were evaluated for moisture content and loss on ignition.

Table 10 shows the results of the moisture content and loss on ignition tests. The two FluxSorb II samples contained 86.3% moisture (13.7% solids) and 70,400 to 70,600 mg/kg organic matter wet solids or 515,000 to 516,000 mg/kg of organic matter dry solids. The DGWC-48 soils had 9.1 to 9.7% moisture, between 15,000 and 15,800 mg/kg of organic matter in the wet soil and between 16,500 and 17,400 mg/kg of organic matter in the dry soil. The outside samples from the bottom, 1/3, 2/3, and top of the column had between 1,180 to 3,470 mg/kg organic matter more on a dry weight basis or than the background soils. The interior samples from the bottom and top of the column had organic matter contents less than the average for the background soils on a dry weight basis with only 790 mg/kg in the interior sample from 2/3 up the column. A mass balance based upon the average of all eight samples from the column suggested that 1,524 mg organic matter on a dry weight basis was retained on the column over the organic matter in the background soil. With the average of 515,000 mg/kg of organic matter on a dry weight basis in the FluxSorb II and the 0.00498 kg of FluxSorb II dry solids applied to the column, the column received 2,565 mg of organic carbon. The mass balance showed 59.4% of the organic carbon on a dry weight basis was retained on the column.

An effluent sample from the ADA Carbon column was submitted to ELLE (see Table 11). There was little change in boron (below GA GWPS), beryllium was reduced by >98.4% to below the GA GWPS, with only modest (63.2%) improvement in Cobalt (but still remains above McDonough GWPS), and lithium fell by 76.2% to below the GA GWPS.

2.4.1 Conclusions

While the 40 g/L ADA FluxSorb II can take up >98.4% of Beryllium, 82% of Boron, 90.9% Cobalt, and >87.9% of lithium in the batch studies, the column studies showed little improvement in Boron and only modest improvement in Cobalt which remained above the McDonough GWPS in the effluent. Beryllium and lithium were treated to below the GA GWPS

with the ADA Carbon in the preliminary column study. The ADA Carbon was not uniformly distributed throughout the column.

2.5 DGWC-69 Batch Tests

Batch tests were prepared with 900 g of the DGWC-69 soil and 494 to 640 g DGWC-69 groundwater. Treatments included the JT Baker ferrous sulfate heptahydrate and sodium bicarbonate:

- 0.1 g/L ferrous sulfate heptahydrate
- 1.0 g/L ferrous sulfate heptahydrate
- 2.0 g/L ferrous sulfate heptahydrate
- 10 g/L ferrous sulfate heptahydrate
- 0.1 g/L ferrous sulfate heptahydrate and 0.1 g/L sodium bicarbonate
- 1.0 g/L ferrous sulfate heptahydrate and 1.0 g/L sodium bicarbonate
- 2.0 g/L ferrous sulfate heptahydrate and 2.0 g/L sodium bicarbonate
- 10 g/L ferrous sulfate heptahydrate and 10 g/L sodium bicarbonate

The pH and ORP were measured on Day 0. The pH, ORP, dissolved oxygen (DO), specific conductivity, alkalinity, hardness, ferrous iron, and sulfide were measured on Day 7 (Table 12). Metals, anions, TDS, and pH are shown in Table 13.

2.5.1 Ferrous Sulfate Heptahydrate.

The pH of the DGWC-69 groundwater ranged from 7.4 to 7.6 SU with positive ORPs. As the ferrous sulfate heptahydrate concentrations increased, the pH on Day 7 decreased to as low as 4.5 SU. The ORP became reducing on Day 7 in the higher loadings. DO was more variable possibly as oxygen infiltrated the samples during measurement in open centrifuge tubes. Specific conductivity increased with the ferrous sulfate heptahydrate loadings from 217 to 3,720 µS/cm. Alkalinity decreased as the ferrous sulfate concentrations increased and pH decreased. Ferrous iron became elevated (1,350 mg/L) at the highest ferrous sulfate loading. Only trace levels of sulfide were detected.

Sulfate increased from 8.2 mg/L in the groundwater to a maximum of 28,700 mg/L at the highest ferrous sulfate heptahydrate loading. Fluoride and chloride were unchanged. The pH measured by ELLE during the TDS measurements were consistent with the TS measurements. TDS increased to a maximum of 1,720 mg/L. The following metals exceeded the GA GWPS:

- Beryllium only in the10 g/L ferrous sulfate heptahydrate treatment
- Cobalt at the 2.0 and 10 g/L ferrous sulfate heptahydrate loadings (likely due to the cobalt in the ferrous sulfate heptahydrate). The DGWC-69 control and treatments with 0.1 g/L and 1.0 g/L ferrous sulfate heptahydrate and 0.1 g/L and 1.0 g/L ferrous sulfate heptahydrate with 0.1 and 1.0 g/L sodium bicarbonate loadings met the McDonough GWPS for cobalt.
- Molybdenum in the control and 0.1 g/L ferrous sulfate heptahydrate. The ferrous sulfate heptahydrate treated molybdenum to below the GA GPWS at the 1, 2, and 10 g/L ferrous sulfate heptahydrate loadings.

2.5.2 Ferrous Sulfate Heptahydrate and Sodium Bicarbonate.

The sodium bicarbonate additions with ferrous sulfate heptahydrate maintained the pH on Day 7 between 6.2 and 6.7 SU. The ORP was reducing on Day 7 in the 2 and 10 g/L loadings of ferrous

sulfate and sodium bicarbonate. DO ranged from 1.8 and 7.0 mg/L. Specific conductivity increased with the ferrous sulfate heptahydrate and sodium bicarbonate loadings from 532 to 8,130 µS/cm. Alkalinity increased to as high as 2,400 mg/L as $CaCO_3$ as the ferrous sulfate and sodium bicarbonate concentrations increased as pH increased. Ferrous iron became elevated (28 mg/L) at the highest ferrous sulfate loading. Only trace levels of sulfide were detected.

Sulfate increased from 8.2 mg/L in the groundwater to a maximum of 3,300 mg/L at the highest ferrous sulfate heptahydrate loading. Fluoride and chloride were mostly unchanged. The pH measured by ELLE during the TDS measurements were largely consistent with the TS measurements. TDS increased to a maximum of 3,840 mg/L. The following metals exceeded the GA or McDonough GWPS:

- Cobalt at the 1.0, 2.0, and 10 g/L ferrous sulfate heptahydrate loadings (likely due to the cobalt in the JT Baker ferrous sulfate heptahydrate)
- Molybdenum in the control and 0.1 g/L ferrous sulfate heptahydrate with 0.1 g/L sodium bicarbonate. The ferrous sulfate heptahydrate and sodium bicarbonate treated molybdenum to below the GA GPWS at the 1, 2, and 10 g/L ferrous sulfate heptahydrate and sodium bicarbonate loadings.

Lithium was detected at trace concentrations at 1.0 and 2.0 mg/L loadings of ferrous sulfate heptahydrate and sodium bicarbonate but below the GA GWPS, and there was an elevated detection limit of 0.11 mg/L, above the GA GWPS at the 10 g/L ferrous sulfate heptahydrate and sodium bicarbonate loading.

2.5.3 DGWC-69 Batch Tests Conclusions

1. Ferrous sulfate heptahydrate with or without sodium bicarbonate were able to reduce molybdenum below the GA GWPS standard at the 1.0, 2.0, and 10 g/L loadings.
2. The JT Baker ferrous sulfate contained cobalt which at the 1.0, 2.0, and 10 g/L loadings exceeded the McDonough GWPS.
3. The combination of ferrous sulfate and sodium bicarbonate maintained a neutral pH.

4.0 DGWC-48 COLUMN TESTS

4.1 Objectives

- Evaluate pore volume treatment and evolution under transient flow conditions similar to field flow rate
- Evaluate influence on permeability / flow through column
- Field flow rate: 0.27 feet per day with 3 feet long columns
- DGWC-48 soil and groundwater with control and three reagents (4 total columns)
- Analyze complete chemistry on aqueous sample (pH, ORP, SC, alkalinity, anions [SO4 Cl, F], dissolved metals [As, Ba, Be, B, Ca, Cd, Co, Cr, Hg, Li, Mo, Pb, Sb, Se, Tl]], TDS, pH, sulfide, ferrous iron)
- Record observations related to flow, leakage, precipitation, and photograph periodically

The column study used three reagents at one loading per reagent. All reagents used for the bench-scale test were commercially available products selected in consultation with WSP. The reagent usages and their dosages were adjusted according to the results of the activities and observations during the execution of the bench-scale treatability study.

4.2 Column Treatments

Table 14 presents the treatments for the DGWC-48 column studies.

Table 14. Column Treatments

Column	Round 1 Reagent	Round 2 Reagent
1	Control – GW only	Control – GW only
2	GW w/ potassium bicarbonate	GW w/ carbon
3	GW w/ ferrous sulfate	GW w/ carbon
4	GW w/ carbon (low dose)	GW w/ carbon (high dose)

4.3 Column Studies Preparation

The columns were prepared by installing a 3/8" plastic bushing to a small luer outlet onto both endcaps. The weight of the empty column and endcaps was recorded. The bottom endcap had a geotextile membrane layer at the bottom and was glued onto the column. The soil was weighed and then added to the column while maintaining the groundwater level (to prevent trapping air bubbles). The columns were filled with soil and groundwater and periodically tapped and the soil tamped to remove air bubbles. Once each column was filled, a geotextile covering was placed over the soil and the top endcap was glued onto the column.

Four 36-inch long 3-inch diameter clear PVC columns (4.40 to 4.60 L volume) were prepared with 6.44 to 6.73 kg soil and 1.44 to 1.58 kg groundwater (Table 15). The treatment with potassium bicarbonate was prepared with 2 g/L of the LD Carlson $KHCO_3$. The pH of the groundwater was 5.7 SU and increased to 7.8 SU after the addition of the potassium bicarbonate. The CERES ferrous sulfate heptahydrate solution was prepared with 1 g/L $FeSO_4$-$7H_2O$ (pH 4.0) and then 2 g/L of sodium bicarbonate was added to bring the pH to 7.0 SU. For the ADA Carbon column, 57.3 g Fluxsorb II was added to the soil and mixed with an electric drill and auger. The effective porosity ranged from 32.2 to 34.8%.

.

Table 15. Column Setup

Sample	Column Tare	Column Volume	Soil Volume	GW Volume	Packed Column Volume	Porosity	GW pH	+ 2 g/L KHCO3 pH	1 g/L FeSO4-7H2O pH	+ 2 g/L NaHCO3 pH	g FluxSorb II
	kg	L	kg	kg	kg	%					
Control	2.34	4.54	6.72	1.58	8.30	34.8					
2 g/L KHCO3	2.50	4.60	6.52	1.48	8.00	32.2	5.7	7.8			
1 g/L FeSO4-7H2O	2.37	4.40	6.44	1.44	7.42	32.7			4.0	7.0	
FluxSorb II	2.40	4.58	6.73	1.54	7.50	33.6					57.3

A photograph of the columns after setup is presented in Figure 7. Control Column 1 is on the left, followed by Columns 2 KHCO3, 3 FeSO4, and 4 Fluxsorb II. The soil settled after preparation and the top endcap being glued in place and there is standing groundwater on the top of each column.

During Round I, the Control 1 and ADA Carbon 4 columns received the untreated DGWC-48 groundwater. The influent for Column 2 with KHCO3 received 2 g/L potassium bicarbonate for the first 21 days. Column 3 with FeSO4-7H2O received 1 g/L ferrous sulfate heptahydrate adjusted to pH 7.0 with sodium bicarbonate for the first seven days. The columns were run for 21 days with amended groundwater alone. The remaining effluents from each column after sample collection from the first three weeks were saved separately and used as the influents for the last two weeks for Round 2. On Day 22 (after 3 days without flow while waiting for instructions from WSP for dosing with ADA Carbon), Column 1 received untreated DGWC-48 groundwater. Column 2 (KHCO3) received 57.3 g of the Fluxsorb II in the 0.8 L of untreated DGWC-48 groundwater, Column 3 (FeSO4) received 57.3 g of the Fluxsorb II in 0.8 L of the untreated DGWC-48 groundwater and 114.6 g Fluxsorb II (4 ADA Carbon) was introduced suspended in 0.74 L of the untreated DGWC-48 groundwater. The solutions were continually mixed with magnetic stirrers and pumped onto the bottom of the columns. On Day 25, the columns were switched to the collected effluents from Phase I. The activated carbon continued to move through the columns.

Amendments for the columns are summarized in Table 16. For Column 1 Control, additional DGWC-48 groundwater was added to the influent jug on Days 7, 14, 20, 22, 23, and 24. On Day 25, the influent was switched over to the combined Column 1 effluent from Days 1 to 21.

For Column 2 $KHCO_3$, 6 g of potassium bicarbonate was added to 3,000 g of DGWC-48 groundwater. Some of this solution was used to prepare the column. Additional potassium bicarbonate and groundwater was added on Days 2 and 20. The 57.3 g Fluxsorb II was added to 0.8 L of the groundwater on Day 22. On Day 24, an additional 0.447 L of groundwater was added to the bottle with the ADA Fluxsorb II. Little of the carbon solution (0.8 g) remained in the influent bottle on Day 25. On Day 25, the influent was switched over to the combined Column 2 effluent from Days 1 to 21.

For Column 3 with $FeSO_4$, 3 g of CERES ferrous sulfate heptahydrate was added to 3,000 mL of groundwater and the pH adjusted to 7.0 SU with 6 g/L sodium bicarbonate. On Days 7, 14, and 20, unamended groundwater was added to the influent for Column 3. On Day 22, 57.3 g Fluxsorb II was added to 0.8 L of the groundwater. On Day 25, an additional 0.453 L of groundwater was added to the bottle with the ADA Fluxsorb II. On Day 25, 0.346 kg of the ADA Fluxsorb II and groundwater remained in the influent bottle. On Day 25, the influent was switched over to the combined Column 3 effluent from Days 1 to 21.

For the Column 4 with ADA Fluxsorb II, 57.3 g was added to the soil and groundwater during setup. On Days 7, 14, and 20, unamended groundwater was added to the influent for Columns 1 and 4. On Day 22, the 114.6 g Fluxsorb II was added to 0.74 L of the groundwater. On Day 23 and 24, a total of 0.835 L of groundwater was added to the bottle with the ADA Fluxsorb II. On Day 25, the influent was switched over to the combined Column 4 effluent from Days 1 to 21.

4.4 Column Studies Results

4.2.1 Field Parameters

The influent groundwater was pumped from the bottom of the columns with peristaltic pumps at a flow rate of 0 to 1.125 mL/min. The average flowrates were 0.13 (4 ADA Carbon), 0.21 (2 KHCO3), 0.30 (1 Control), to 0.33 mL/min (3 FeSO4) or ranged from 187 to 475 mL/day or a residence time in the column of 6.8 days (2 KHCO3), 7.7 days (1 Control), 8.0 days (3 FeSO4), to 12.6 days (4 ADA Carbon).

Table 17 presents the field results for the untreated groundwater (influent) pumped into columns 1 and 4 through Day 25. From Days 25 to 39, the effluent from control column from Days 1-21 was pumped through the control column and the effluent from ADA Carbon column from Days 1 to 21 was pumped through the ADA Carbon column. The pH ranged from 5.4 to 8.0 SU with moderately oxidizing ORPs of +178 to +253 mV. The DO remained high between 8.4 and 10.8 mg/L as the jug was open to the atmosphere. Specific conductivity ranged from 457 to 625 µS/cm. There was little alkalinity (<40 to 60 mg/L $CaCO_3$), moderate hardness (40 to 600 mg/L $CaCO_3$), ferrous iron decreased from 13.25 mg/L on Day 7 to <0.05 mg/L. There was also little sulfide (<0.02 to 0.08 mg/L).

Table 18 presents the field results for Column 1 Control effluent. The flowrate ranged from 0.004 to 0.86 mL/min with a total of 7.99 L of groundwater going through the column or about 5.1 pore volumes. The pH ranged from 5.4 to 7.4 SU with moderately oxidizing ORPs of +169 to +249 mV. The DO remained high between 5.1 and 7.5 mg/L. Specific conductivity ranged from 424 to 880 µS/cm. Alkalinity ranged from 40 to 960 mg/L $CaCO_3$), hardness ranged from 40 to 480 mg/L $CaCO_3$, ferrous iron decreased from 10.3 mg/L on Day 7 to 0.2 mg/L. There was also little sulfide (<0.02 to 0.08 mg/L). A picture of Column 1 Control on Day 39 is shown in Figure 8.

Table 19 presents the field results for the influent to Column 2 $KHCO_3$. Influent samples were collected on days 7, 14, 21, and 39. The pH ranged from 6.6 to 8.6 SU with moderately oxidizing ORPs of +175 to +263 mV. The DO remained high between 7.1 and 9.8 mg/L as the jug was open to the atmosphere. Specific conductivity was 2,440-2,510 µS/cm from Days 7 to 21 and was lower 676 µS/cm on Day 39. There was moderate alkalinity (200 to 1,200 mg/L $CaCO_3$), moderate hardness ranged from 180 to 320 mg/L $CaCO_3$, ferrous iron decreased from 8.65 mg/L on Day 14 to <0.05 mg/L on day 21. There was also little sulfide (<0.02 to 0.36 mg/L). On Day 24, the influent contained 32,100 mg/L of ADA Carbon as measured by turbidity.

Figure 7. Columns

Table 16. Amendments for Columns

1 Control	Day 7, added 2.0 L to Influent for Columns 1 and 4.
	Day 14, added GW to Influent for Columns 1 and 4.
	Day 20, added GW to Influent for Columns 1 and 4.
	Day 22, added GW to Influent for Column 1.
	Day 23, added GW to Influent for Column 1
	Day 24, added GW to Influent for Column 1.
	Day 25, switch over to Column 1 Effluent. 3.48 kg.
2 KHCO3	During setup, added 6 g KHCO3 to 3000 mL groundwater, used 1480 g in column preparation, and pumped remainder through column.
	Day 2 added 6 g KHCO3 to 3000 mL groundwater.
	Day 20, added 1 g KHCO3 to 1000 mL groundwater
	Day 22, add 57.3 Fluxsorb II to 0.8 L GW.
	Day 24, add 447.1 mL groundwater to influent.
	Day 25, only 0.8 g Fluxsorb II and groundwater in influent bottle.
	Day 25, switch over to Column 2 Effluent. 2.64 kg.
3 FeSO4-7H20	During setup, added 3 g CERES FeSO4-7H2O to 3000 mL groundwater and adjusted pH to 7.0 with 6 g NaHCO3, used 1440 g in column preparation, and pumped remainder through column.
	Day 7, added 1.78 L GW to influent without ferrous sulfate.
	Day 14, added GW to Influent for Column 3.
	Day 20, added1 L GW to Influent for Column 3.
	Day 22, add 57.3 Fluxsorb II to 0.8 L GW.
	Day 23, add 453.1 g groundwater to influent
	Day 25, 345.7 g Fluxsorb II and groundwater remaining in influent bottle.
	Day 25, switch over to Column 3 Effluent. 3.04 kg.
4 Fluxsorb II	During setup, add 57.3 g Fluxsorb II to soil and groundwater and mixed.
	Day 7, added 2.0 L to Influent for Columns 1 and 4.
	Day 14, added GW to Influent for Columns 1 and 4.
	Day 20, added GW to Influent for Columns 1 and 4.
	Day 22, add 114.6 Fluxsorb II to 0.74 L GW.
	Day 23, add 498.8 g groundwater
	Day 24, add 336.4 g groundwater
	Day 25, switch over to Column 4 Effluent.

Figure 8. Column 1 Control Day 39

Figure 9. Column 2 KHCO3 Day 39

Figure 10. Column 3 FeSO4 Day 39

Figure 11. Column 4 FeSO4 Day 39

Table 20 shows the field results for Column 2 $KHCO_3$ effluent. The flowrate ranged from 0.01 to 1.1 mL/min with a total of 8.5 L of groundwater going through the column or about 5.7 pore volumes. The pH ranged from 5.9 to 7.0 SU with moderately oxidizing ORPs of +173 to +247 mV. The DO ranged between 2.4 and 6.8 mg/L which was lower than the column influent. Specific conductivity ranged from 770 to 1,303 µS/cm. Alkalinity ranged from 300 to 600 mg/L $CaCO_3$, hardness ranged from 40 to 240 mg/L $CaCO_3$, ferrous iron decreased from 4.1 mg/L on Day 7 to <0.05 mg/L on Days 10-14 but increased to between 1.15 and 1.88 mg/L during recirculation of the effluent and after the ADA Carbon addition. There was also little sulfide (<0.02 to 0.3 mg/L). On Day 24, the influent contained 2,824 mg/L of ADA Carbon as measured by turbidity. A peak of carbon of 12,600 mg/L was observed on Day 25 and decreased to 1,432 mg/L on Day 39. A picture of Column 2 KHCO3 on Day 39 is shown in Figure 9. There is no discernible carbon banding in this column. There is carbon in the water at the top of the column.

Table 21 presents the field results for the influent to Column 3 $FeSO_4$. Influent samples were collected on days 7, 14, 25, and 39. The pH ranged from 6.7 to 8.4 SU with moderately oxidizing ORPs of +157 to +244 mV. The DO ranged between 5.1 and 8.9 mg/L. Specific conductivity was 2,390 µS/cm on Day 7 when the ferrous sulfate heptahydrate solution was being pumped onto the column and dropped to 547 to 727 µS/cm from Days 14 to 39 when the unamended groundwater (Days 7 to 21), ADA Carbon with unamended groundwater (Days 22 to 25) and combined recirculated effluent (Days 25 to 39). There was moderate alkalinity (180 to 840 mg/L $CaCO_3$), moderate hardness ranged from 60 to 360 mg/L $CaCO_3$, ferrous iron decreased from 8.25 mg/L on Day 14 to 0.7 mg/L on Day 39. There was also little sulfide (<0.02 to 0.04 mg/L).

Table 22 presents the field results for Column 3 $FeSO_4$ effluent. The flowrate ranged from 0 to 0.72 mL/min with a total of 7.0 L of groundwater going through the column or about 4.9 pore volumes. The pH ranged from 6.6 to 7.0 SU with moderately oxidizing ORPs of +165 to +249 mV. The DO ranged between 2.0 and 8.2 mg/L which was lower than the column influent. Specific conductivity ranged from 554 to 1,517 µS/cm. Alkalinity ranged from 120 to 720 mg/L $CaCO_3$, moderate hardness ranged from 60 to 240 mg/L $CaCO_3$, ferrous iron ranged from <0.05 mg/L to 5.62 mg/L on Day 39. There was also little sulfide (<0.02 to 0.16 mg/L). On Day 23, the influent contained 61 mg/L of ADA Carbon as measured by turbidity. A peak of carbon of 1,592 mg/L was observed on Day 34 and decreased to 1,347 mg/L on Day 39. Figure 10 shows Column 3 FeSO4 at Day 39 with bands of activated carbon on the surface. There is also carbon in the water at the top of the column.

Table 23 presents the field results for Column 4 ADA Fluxsorb II effluent. The flowrate ranged from 0 to 0.37 mL/min with a total of 4.8 L of groundwater going through the column or about 2.7 pore volumes. The flowrate through this column was lower than the other columns which suggests that the carbon reduced the permeability. There was no turbidity observed in the effluent from Days 1 to 21 suggesting that emplacement of the ADA Carbon with the soil achieved good distribution and did not leach from the column. The pH ranged from 6.4 to 7.1 SU with moderately oxidizing ORPs of +165 to +248 mV. The DO ranged between 5.7 and 8.3 mg/L which was lower than the column influent. Specific conductivity ranged from 435 to 801 µS/cm. Alkalinity ranged from 40 to 120 mg/L $CaCO_3$, hardness ranged from 40 to 240 mg/L $CaCO_3$, ferrous iron ranged from <0.05 to 11.25 mg/L. There was also little sulfide (<0.02 to 0.6 mg/L).

On Day 23, the influent contained 121 mg/L of ADA Carbon as measured by turbidity. A peak of carbon of 100,900 mg/L was observed on Day 24 and decreased to 3,324 mg/L on Day 39. Figure 11 shows the Column 4 ADA Carbon at Day 39 with scattered bands of activated carbon on the surface. There is also carbon in the water at the top of the column.

4.2.2 Metals and Anions

Table 24 presents the metals, anions, TDS, and pH for the Influent and the Column 1 Control Effluent. Table 25 presents the metals, anions, TDS, and pH for the Column 2 KHCO3 Influent and the Column 2 Effluent. Table 26 presents the metals, anions, TDS, and pH for the Column 3 FeSO4 Influent and the Column 3 Effluent. Table 27 presents the metals, anions, TDS, and pH for the Influent and the Column 4 ADA Carbon Effluent.

Tables 28, 29, 30, and 31 show the concentrations of beryllium, cobalt, boron, and lithium in the influent and effluent over time for each of the four columns and the percent removal from the influent the previous week (about one pore volume).

<0.00020 Average Effluent Concentration from Days 7 to 21
0.0972 Compound exceeds GA or McDonogh GWPS

The influent for Control column 1 had no detectable antimony, chromium, or selenium. Trace levels (0.001 or less) of arsenic, mercury, molybdenum, lead, and thallium were detected at some time points. Low levels (0.001 to 0.010 mg/L) of beryllium and cadmium were detected. Beryllium exceeded the GA GWPS from days 1 to 25 and was not detected on Days 32 and 39. The percent removal of beryllium for days 32 and 39 relative to days 7 through 25 ranged from -42.0% to >83.2%. Moderate levels (0.01 to 0.1 mg/L) of barium were detected. The following metals ranged between 0.1 and 1.0 mg/L: boron, cobalt, iron, and lithium. Boron ranged between 0.491 and 0.692 mg/L but never exceeded the GA GWPS of 4.0 mg/L. The percent removal for boron from the previous Day 7 sampling event of the influent ranged from -14.0 to 15.6%. Cobalt fell from a maximum of 0.399 mg/L on Day 14 to 0.135 mg/L on Day 39 but remained above the McDonough GWPS. The cobalt percent removal from the previous Day 7 sampling event for the influent ranged from -27.1 to 47.6% (between Days 25 and 32). Lithium exceeded the GA GWPS of 0.040 mg/L through Day 25 but was not detected during the recirculation phase from Days 32 to 39. The percent removal for lithium from the previous Day 7 sampling event ranged from -4.9 to >89.0% (between Days 25 and 32) with no lithium detected in the influent from Days 32 to 39. Calcium ranged from 57.4 to 65.0 mg/L. The TDS ranged from 320 to 498 mg/L. The pH measured by ELLE ranged from 3.95 to 6.98 SU. Chloride was generally low between 6.4 to 10.7 mg/L. Fluoride was only detected on Day 7. Sulfate ranged from 251 to 308 mg/L.

The Control column 1 effluent had no detectable antimony, arsenic, or selenium. Trace levels (0.001 or less) of beryllium, cadmium, mercury, lead, and thallium were detected at some time points. Low levels of beryllium, below the GA GWPS, were detected in the effluent of the Control Column 1 with percent removals of 95.3 to 97.2%. Moderate levels (0.001 to 0.1 mg/L) of barium, chromium, and molybdenum were detected periodically. The following metals ranged between 0.1 and 1.0 mg/L: boron and cobalt. Boron ranged between 0.443 and 0.587 mg/L but never exceeded the GA GWPS of 4.0 mg/L. The percent removal for boron from the previous day 7 sampling event in the influent ranged from -10.0 to 31.5%. Cobalt fell from 0.195 mg/L on Day 7 to 0.120 mg/L on Day 39 and remained above the McDonough GWPS. The percent removal for cobalt from the previous day 7 sampling event of the influent ranged from 22.1 to 65.4% (between Days 7 and 14) with an average of 45.5%. Cobalt was removed during passage through the control column. Lithium in the column 1 effluent never exceeded the GA GWPS of 0.040 mg/L with only a low detection of 0.0128 mg/L on Day 25. The percent removal for lithium from the previous sampling event ranged from -86.8 to >89.0% (between Days 14 and 21). Dissolved iron was as high as 2.68 mg/L. Calcium ranged from 53.7 to 67.6 mg/L. The TDS ranged from 388 to 795 mg/L. The pH measured by ELLE ranged from 6.10 to 6.54 SU. Chloride was generally low between 6.8 to 15.9 mg/L. Fluoride was not detected. Sulfate ranged from 265 to 394 mg/L.

The Potassium Bicarbonate Column 2 influent was analyzed on Days 7 and 21. The effluent from Days 0-21 was recirculated from Days 25 to 39 and the average concentrations of dissolved metals from Days 7 and 21 in the effluent are shown (highlighted in green). From Days 22 to 25, 57.3 g of ADA Carbon in 1.25 L groundwater was pumped through the column. The influent had no detectable antimony or chromium. Trace levels (0.001 mg/L or less) of mercury, lead, selenium, and thallium were detected at some time points. Moderate levels (0.001 to 0.1 mg/L) of arsenic, barium, beryllium, cadmium, and molybdenum were detected. Beryllium ranged from 0.00156 to 0.00767 mg/L which exceeded the GA GWPS of 0.004 mg/L only on Day 1. The percent removal for beryllium from the previous day 7 sampling event in the Column 2 influent ranged from 0 to 97.6%.

Boron ranged from 0.462 to 0.725 mg/L but never exceeded the GA GWPS of 4.0 mg/L. The percent removal for boron from the previous day 7 sampling event in the Column 2 influent ranged from -19.4 to 25.2%. Cobalt fell from 0.273 mg/L on Day 7 to 0.262 mg/L on Day 21 and averaged 0.0787 mg/L during the recirculation phase with ADA Carbon. The cobalt decreased in the Column 2 $KHCO_3$ influent from the previous sampling point by 0 to 69.9% during recirculation with the ADA Carbon. Lithium exceeded the GA GWPS of 0.040 mg/L on Day 7 and 21 but was below the standard during the recirculation phase and while ADA Carbon was being injected. The percent removal for lithium from the previous sampling event for the Column 2 $KHCO_3$ influent ranged from -6.5 to 95.9%. Dissolved iron was low, 0.0083 to 0.0484 mg/L. Calcium ranged from 56.3 to 61.2 mg/L from Days 7 to 21 but increased to 103 mg/L during the recirculation phase. The TDS was not measured. The pH measured by ELLE was 8.22 SU, chloride was 6. A concentration of 9 mg/L, fluoride was detected at 0.5 mg/L, and sulfate was 277 mg/L on Day 21.

The $KHCO_3$ column 2 effluent had no detectable antimony. Trace levels (0.0010 or less) of beryllium, cadmium, mercury, lead, selenium, and thallium were detected at some time points. Moderate levels (0.001 to 0.1 mg/L) of arsenic, barium, chromium, and molybdenum were detected. Beryllium was only detected in the effluent of the $KHCO_3$ column on day 21 with percent removals of 92.8 to >98.4%. Boron ranged from 0.438 to 0.467 mg/L but never exceeded the GA GWPS of 4.0 mg/L. The percent removal for boron from the previous sampling event in the Column 2 influent ranged from -1.1 to 37.7%. Cobalt fell from 0.104 mg/L on Day 7 to 0.0435 mg/L on Day 21 and ultimately to 0.0231 mg/L on Day 39 which was below the McDonough GWPS. There was 68.4 to 83.4% removal of cobalt from the $KHCO_3$ column influent concentrations from Days 1 to 21 and 55.0 to 70.7% removal of cobalt from Days 25 to 39 during recirculation and ADA Carbon additions compared to the influent. Lithium never exceeded the GA GWPS of 0.040 mg/L in the effluent from the $KHCO_3$ Column 2 and was only detected at 0.0121 mg/L on Day 14 with percent removals of 87.5 to >87.9%. The dissolved iron was as high as 2.41 mg/L on Day 32. Calcium ranged from 82.3 to 114 mg/L. The TDS ranged from 507 to 853 mg/L. The pH measured by ELLE ranged from 6.80 to 7.53 SU. Chloride was generally low at 7.2 to 12.9 mg/L. Fluoride was not detected. Sulfate ranged from 270 to 374 mg/L.

The Ferrous Sulfate Heptahydrate column 3 influent was analyzed on Day 7 only. From Day 7 to 21, unamended groundwater was used (influent). From Days 22 to 25, 57.3 g of ADA Carbon in 0.91 g groundwater was pumped through the column. The effluent from Days 0-21 was recirculated from Days 25 to 39 with the ADA Carbon additions and the average concentrations of dissolved metals from Days 7 and 21 in the effluent are shown (highlighted in green). There was no detectable antimony, chromium, lead, or thallium. Trace levels (0.001 mg/L or less) of arsenic, beryllium, cadmium, mercury, and selenium were detected at some time points. Beryllium was present at 0.000064 mg/L in the influent from Days 25 to 39. Barium ranged from 0.0024 to 0.0211 mg/L. Boron ranged from 0.512 to 0.590 mg/L but never exceeded the GA GWPS of 4.0 mg/L. The percent removal for boron from the previous day 7 sampling event in the FeSO4 Column 3 influent ranged from -4.3 to 21.3%. Cobalt was 0.00852 mg/L on Day 7 and averaged 0.0744 mg/L during the recirculation and ADA Carbon phase. The cobalt decreased in the influent by 97.4% on Day 7 and between 0 to 74.4% during recirculation and ADA Carbon phase. Lithium exceeded the GA GWPS of 0.040 mg/L on Day 7 but was not present in the combined influent during the recirculation phase with ADA Carbon. The percent removal for lithium from the previous sampling event ranged from -6.8 to >88.7%. Dissolved iron was low between 0.107 to 0.125 mg/L. Calcium

ranged from 21.7 mg/L on Day 7 to 59.2 mg/L during the recirculation phase. The TDS was not measured.

The FeSO4 column 3 effluent had no detectable antimony, lead, or thallium. Trace levels (0.001 or less) of arsenic, beryllium, cadmium, mercury, and selenium were detected at some time points. The maximum chromium concentration was 0.00149 mg/L. Molybdenum ranged from 0.000801 to 0.00622 mg/L. Barium was less than 0.0388 mg/L. Beryllium was only detected in the effluent at 0.000193 mg/L on Day 21 with percent removals of >-62.2 to >98.4. Boron ranged from 0.465 to 0.570 mg/L but never exceeded the GA GWPS of 4.0 mg/L. The percent removal for boron from the previous sampling event in the Column 3 influent ranged from 3.6 to 22.7%. Cobalt fell from 0.107 mg/L on Day 7 to 0.0432 mg/L on Day 21 and ultimately to 0.0291 mg/L on Day 39 but remained above the McDonough GWPS. There was -756.8 to 89.2% removal of cobalt from the influent concentrations from Days 1 to 21 and 57.5 to 87.1% removal of cobalt from Days 25 to 39 during recirculation and ADA Carbon additions compared to the influent. Lithium was not detected in the effluent from the FeSO4 Column 3. The dissolved iron was as high as 0.244 mg/L. Calcium ranged from 39.0 to 75.9 mg/L. The TDS ranged from 370 to 1,070 mg/L. The pH measured by ELLE ranged from 6.58 to 7.26 SU. Chloride was generally low between 6.8 to 14.8 mg/L. Fluoride was only detected once. Sulfate decreased from 656 mg/L on Day 7 to 398 mg/L on Day 21 and ranged from 261 to 356 mg/L during recirculation and ADA Carbon addition phase.

The ADA Carbon column 4 effluent had no detectable antimony, selenium, or thallium. Trace levels (0.001 or less) of beryllium, cadmium, and mercury were detected at some time points. Beryllium was detected at 0.00165 to 0.000178 mg/L on Day 14 and 21 but was not detected from Days 25 to 39. The beryllium percent removal ranged from 97.1 to >98.5%. Molybdenum ranged from <0.00013 to 0.00896 mg/L. An elevated chromium concentration of 0.175 mg/L was found on Day 25, but chromium was low the remainder of the time. Barium ranged from 0.0179 mg/L up to 0.23 mg/L which was much higher from Days 25 to 32 than the influent (0.0206 to 0.0210 mg/L). Boron ranged from 0.347 to 0.505 mg/L but never exceeded the GA GWPS of 4.0 mg/L. The percent removal for boron from the previous sampling event in the Column 4 influent ranged from -7.2 to 46.7%. Cobalt fell from 0.108 mg/L on Day 7 to 0.0957 mg/L on Day 21 and ultimately to 0.0206 mg/L on Day 32 and 0.0239 mg/L on Day 39, below the McDonough GWPS. There was 62.7 to 76.0% removal of cobalt from the influent concentrations from Days 1 to 21 and 77.6 to 89.9% removal of cobalt from Days 25 to 39 during recirculation and ADA Carbon additions compared to the influent. Lithium was not detected above the GA GWPS in the effluent from the ADA Column 4. The dissolved iron was as high as 1.97 mg/L. Calcium ranged from 40.8 to 79.2 mg/L. The TDS ranged from 341 to 1,070 mg/L. The pH measured by ELLE ranged from 6.3 to 7.20 SU. Chloride was generally low between 6.017 to 14.8 mg/L. Fluoride was detected twice. Sulfate decreased from 656 mg/L on Day 7 to 628 mg/L on Day 21 and ranged from 260 to 298 mg/L during recirculation.

5.0 CONCLUSIONS

The following conclusions can be reached from these studies for each metal of concern:

- Arsenic. Exceeded the GA GWPS of 0.010 only in the DGWC-69 groundwater. In the DGWC-69 batch tests, all treatments with ferrous sulfate heptahydrate and the control decreased arsenic to below the GA GWPS. Arsenic was not found above the GA GWPS in the DGWC-48 batch treatments or column studies.

- Beryllium. The GA GWPS is 0.004 mg/L which was exceeded in the DGWC-48 groundwater (0.00767 mg/L). In the batch tests with the ADA Carbon II at loadings of 10 to 40 g/L, beryllium was reduced to below the GA GWPS. Beryllium was treated below the GA GWPS in the preliminary ADA Carbon column and in control, $KHCO_3$, Ferrous Sulfate Heptahydrate, and ADA columns.
- Boron. Neither the DGWC-48 or DGWC-69 groundwaters exceeded GA GWPS of 4 mg/L. The treatments with ferrous sulfate heptahydrate with and without the sodium bicarbonate and the DGWC-48 batch studies and the DGWC-69 batch studies had limited impact on boron concentrations. The highest loading of 40 g/L ADA Carbon II reduced boron by 82.2%. The preliminary column study with the ADA Carbon II showed 46.7% reduction in B. In the DGWC-48 column studies, 36.7% or less of the B was removed with the Control, Potassium Bicarbonate, or Ferrous Sulfate Heptahydrate Column with a maximum of 46.7% with the ADA Carbon Column.
- Cobalt. The ferrous sulfate reagent contained cobalt which resulted in cobalt exceeding the McDonough GWPS of 0.024 mg/L in the DGWC-69 batch tests. The batch studies with the ADA Carbon II reduced cobalt by up 88.0% at the highest 40 g/L loading but still above the GA GWPS although another test with 10 g/L ADA Carbon II showed Cobalt adsorption to a concentration of 0.000164 mg/L. The preliminary column with ADA Carbon reduced cobalt by 63.2% but it remained above the McDonough GWPS. There was 22.1 to 65.4% reduction of cobalt in the control column, 55.0 to 83.4% with potassium bicarbonate, and 57.5 to 89.2% with the ferrous sulfate heptahydrate column (excluding the Day 14 result when there was treatment in the influent), and 67.2 to 89.9% with the 73.g/L loading of ADA carbon. Only the KHCO3 and ADA carbon columns reduced cobalt to below the McDonough GWPS.
- Molybdenum. The DGWC-69 groundwater had 0.107 mg/L molybdenum, above the GA GWPS of 0.10 mg/L. The 1-10 g/L ferrous sulfate heptahydrate and the 1-10 g/L ferrous sulfate heptahydrate with 1-10 g/L sodium bicarbonate all reduced molybdenum to below the GA GWPS. Only low levels of molybdenum were found in the DGWC-48 groundwater and the GA GWPS was never exceeded.
- Lithium. The DGWC-69 groundwater did not contain lithium. The DGWC-48 groundwater had 0.091 mg/L lithium, above the GA GWPS of 0.040 mg/L. The batch treatments with 25 and 40 g/L ADA Carbon II reduced Lithium to below the GA GWPS but the 10 g/L loading did not. In the preliminary column study with ADA Carbon II, lithium was reduced to below the standard. In the full column studies, the control, $KHCO_3$, $FeSO_4$, and ADA Carbon columns all showed complete or nearly complete treatment of lithium.

Please let me know if you have any questions about this final report.

Sincerely,
TERRA SYSTEMS

Michael D Lee, PhD.

Michael D. Lee, Ph.D.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-152142-1

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

Narrative

Job Narrative
410-152142-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/21/2023 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.5°C

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	Not present.
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A

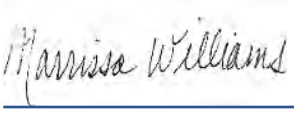
Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization



Generated
12/27/2023 3:53:32 PM

Authorized for release by
Marrissa Williams, Project Manager
Marrissa.Williams@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Terra Systems Inc
Job ID: 410-152936-1
Project/Site: WSP Plant McDonough CCR TS III

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
^3-	Reporting Limit Check Standard is outside acceptance limits, low biased.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
e2	Result falls below calibration range
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-152936-1 Eurofins Lancaster Laboratories Environment

Job Narrative
410-152936-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/30/2023 3:56 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.8°C

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-2-3/4 DGWC-48 Soil IC (410-152936-1). The container labels list sample ID AP-1 DGWC-69 Soil IC, with a collection time of 08:25, while the COC lists AP-1 DGWC-48 Soil IC, with a collection time of 08:10. Entered per COC.

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1 DGWC-69 Soil IC (410-152936-2). The container labels list collection time 08:10, while the COC lists 08:25. Entered per COC.

HPLC/IC
Method 300_ORGFM_28D: The following sample was diluted due to the nature of the sample matrix: Potassium Bicarbonate (410-152936-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010D: The following sample was diluted due to the nature of the sample matrix: Ferrous Sulfate Heptahydrate (410-152936-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	IDs on containers do not match the COC. Logged in per COC.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	False	Limited volume received.
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A

Claymont, Delaware 19703

Generated 1/11/2024 11:03:36 AM

JOB DESCRIPTION

WSP Plant McDonough CCR TS III

JOB NUMBER

410-155716-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

See page two for job notes and contact information.

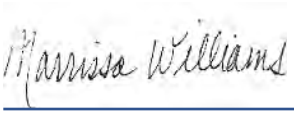
myEOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization



Generated
1/11/2024 11:03:36 AM

Authorized for release by
Marrissa Damiter, Project Manager
Marrissa.Damiter@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Definitions/Glossary

Client: Terra Systems Inc
Job ID: 410-155716-1
Project/Site: WSP Plant McDonough CCR TS III

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
B	Compound was found in the blank and sample.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-155716-1 Eurofins Lancaster Laboratories Environment

Job Narrative
410-155716-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 12/22/2023 2:14 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.2°C

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010D: The following samples were diluted due to the nature of the sample matrix: 25 g/L ADA Carbon Fluxsorb in DGWC-48 GW (410-155716-3) and 40 g/L ADA Carbon Fluxsorb in DGWC-48 GW (410-155716-4). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Terra Systems Inc
Job ID: 410-155716-1
Project/Site: WSP Plant McDonough CCR TS III

Client Sample ID: 10 g/L ADA Carbon Fluxsorb Reagent
Lab Sample ID: 410-155716-1

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A

JOB DESCRIPTION

WSP Plant McDonough CCR TS III

JOB NUMBER

410-162509-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

See page two for job notes and contact information.

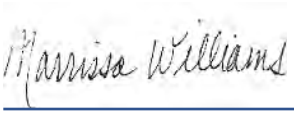
my EOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization



Generated
3/14/2024 3:23:41 AM

Authorized for release by
Marrissa Damiter, Project Manager
Marrissa.Damiter@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-162509-1 Eurofins Lancaster Laboratories Environment

Job Narrative
410-162509-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 3/1/2024 3:55 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1 DGWC-48 Colum 2A (410-162509-2). The container labels list a time of 0830, while the COC lists a time of 0845.

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1 DGWC-48 Colum 2B (410-162509-3). The container labels list a time of 0845, while the COC lists a time of 0900.

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1 DGWC-48 Colum 3A (410-162509-4). The container labels list a time of 0900, while the COC lists a time of 0915.

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1 DGWC-48 Colum 3B (410-162509-5). The container labels list a time of 0915, while the COC lists a time of 0930.

Metals
Method 6010D - Dissolved: The following sample was diluted due to the nature of the sample matrix: 10 g/L CERES FeSO4-7H2O (410-162509-1). Elevated reporting limits (RLs) are provided.

Method 6010D - Dissolved: The following sample was diluted due to the nature of the sample matrix: AP-1 DGWC-48 Colum 2A (410-162509-2) at 10.0. Elevated reporting limits (RLs) are provided.

Method 6010D - Dissolved: The following sample was diluted due to the nature of the sample matrix: AP-1 DGWC-48 Colum 2B (410-162509-3) at 10.0. Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Marrissa Williams

Generated
4/2/2024 2:03:25 PM

Authorized for release by
Marrissa Damiter, Project Manager
Marrissa.Damiter@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
^3+	Reporting Limit Check Standard is outside acceptance limits, high biased
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
410-164568-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 3/19/2024 5:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.6°C.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Container preservation not listed on COC.
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	Not present.
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Marrissa Williams

Generated
4/3/2024 4:33:42 PM

Authorized for release by
Marrissa Damiter, Project Manager
Marrissa.Damiter@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-165417-1 Eurofins Lancaster Laboratories Environment

Job Narrative
410-165417-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 3/26/2024 5:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.8°C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1DGWC-48 2 FeSO4 Day 14 (410-165417-4). The container labels list AP-1 DGWC-48 3 FeSO4 Day 14, while the COC lists AP-1 DGWC-48 2 FeSO4 Day 14. The client COC was followed for entry.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	IDs on containers do not match the COC. Logged in per COC.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	Not present.
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Dr. Michael D Lee
Terra Systems Inc
130 Hickman Road
Suite 1
Claymont, Delaware 19703

Generated 4/22/2024 2:23:27 PM

JOB DESCRIPTION

WSP Plant McDonough CCR TS III

JOB NUMBER

410-166326-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

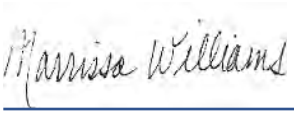
See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization



Generated
4/22/2024 2:23:27 PM

Authorized for release by
Marrissa Damiter, Project Manager
Marrissa.Damiter@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-166326-1 Eurofins Lancaster Laboratories Environment

Job Narrative
410-166326-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/2/2024 4:48 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.3°C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1DGWC-48 2 FeSO4 Day 21 (410-166326-5). The container labels list AP-1 DGWC-48 3 FeSO4 Day 21, while the COC lists AP-1 DGWC-48 2 FeSO4 Day 21.

Insufficient sample volume was provided for the following sample for the TDS analysis: AP-1DGWC-48 2l KHCO3 Day 21 (410-166326-3). The 250 ml container had 3 oz (~80ml) and the 50 ml bottle had 40 ml.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	False	Insufficient volume received for requested analysis.
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	Not present.
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A

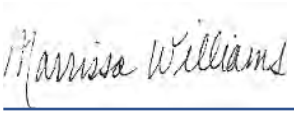
Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization



Generated
4/23/2024 8:08:58 AM

Authorized for release by
Marrissa Damiter, Project Manager
Marrissa.Damiter@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-167150-1 Eurofins Lancaster Laboratories Environment

Job Narrative
410-167150-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/9/2024 7:05 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.6°C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): AP-1DGWC-48 2 FeSO4 Day 28 (410-167150-5). The container labels list AP-1DGWC-48 2 FeSO4 Day 28, while the COC lists AP-1DGWC-48 3 FeSO4 Day 28.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6010D - Total Recoverable: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: AP-1DGWC-48 2 KHCO3 Day 28 (410-167150-4) and AP-1DGWC-48 4 ADA Carbon Day 28 (410-167150-6). The reporting limits (RLs) have been adjusted proportionately.

Method 6020B - Total Recoverable: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: AP-1DGWC-48 2 KHCO3 Day 28 (410-167150-4) and AP-1DGWC-48 4 ADA Carbon Day 28 (410-167150-6). The reporting limits (RLs) have been adjusted proportionately.

Method 7470A: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: AP-1DGWC-48 2 KHCO3 Day 28 (410-167150-4) and AP-1DGWC-48 4 ADA Carbon Day 28 (410-167150-6). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

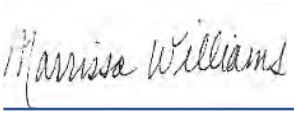
Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization



Generated
4/29/2024 11:28:58 AM

Authorized for release by
Marrissa Damiter, Project Manager
Marrissa.Damiter@et.eurofinsus.com
(717)556-7246

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-167993-1 — Eurofins Lancaster Laboratories Environment

Job Narrative
410-167993-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/16/2024 2:40 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.3°C.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 7470A - Dissolved: Due to the matrix, the initial volume(s) used for the following samples deviated from the standard procedure: AP-1 DGWC-48 2 KHCO3 Day 35 (410-167993-3), AP-1 DGWC-48 2 FeSO4 Day 35 (410-167993-4) and AP-1 DGWC-48 4 ADA Carbon Day 35 (410-167993-5). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable,where thermal pres is required(</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV:Container Temp acceptable,where thermal pres is required (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A	
VOA sample vials do not have headspace >6mm in diameter (none, if from WV)?	N/A	

eurofins | Environment Testing

ANALYTICAL REPORT

PREPARED FOR

Attn: Dr. Michael D Lee
Terra Systems Inc
130 Hickman Road
Suite 1
Claymont, Delaware 19703

Generated 5/7/2024 2:48:23 PM

JOB DESCRIPTION

Golder/WSP column and batch studies

JOB NUMBER

410-168951-1

Eurofins Lancaster Laboratories Environment Testing, LLC
2425 New Holland Pike
Lancaster PA 17601

See page two for job notes and contact information.

myEOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Marrissa Williams

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 410-168951-1 Eurofins Lancaster Laboratories Environment

Job Narrative
410-168951-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/23/2024 2:55 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.4°C.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Monitoring Well Installation (DGWC-9A, DGWC-126, DGWC-127, DGWC-128) and Abandonment (DGWC-9) Report

March 25, 2025 Project No. US-WSP-31406440.McD23

Mr. Joju Abraham, PG
Southern Company Services
241 Ralph McGill Blvd., NE
Atlanta, Georgia 30308

MONITORING WELL INSTALLATION (DGWC-9A, DGWC-126, DGWC-127, DGWC-128) AND ABANDONMENT (DGWC-9) REPORT, GEORGIA POWER COMPANY - PLANT MCDONOUGH, SMYRNA, GEORGIA

Dear Mr. Abraham,

WSP USA Inc. (WSP) is submitting this *Monitoring Well Installation and Abandonment Report* to Southern Company Services, Inc. (SCS) and Georgia Power Company (Georgia Power), which documents the construction of four monitoring wells and the abandonment of one monitoring well at Plant McDonough in Smyrna, Georgia (Site). Monitoring well construction activities were performed in general accordance with the standards described in the United States Environmental Protection Agency, Region 4 Science and Ecosystem Support Division, Operating Procedure for *Design and Installation of Monitoring Wells* (SESDGUID-101-R2 January 16, 2018) and the Georgia Water Wells Standards Act of 1985. The installation and abandonment of the monitoring wells were conducted under the oversight and direction of a Georgia Registered Professional Geologist (PG).

The field activities for this investigation were performed in November 2024 through January 2025. The field work consisted of the installation and development four (4) monitoring wells. Metro Engineering & Surveying (Metro) conducted a survey of the installed monitoring wells in January 2025. A summary of the activities is presented below. Figure 1 presents the location of each of the newly installed monitoring wells.

Monitoring Well Drilling and Construction Activities

Monitoring wells DGWC-9A, DGWC-126, DGWC-127, and DGWC-128 were drilled and installed by Cascade Drilling, L.P. (Cascade), who was contracted through SCS, at the facility in November 2024 through January 2025. Cascade had a current and valid bond with the Water Wells Standards Advisory Council for the state of Georgia at the time of drilling (Attachment A). The driller's name is provided on the boring/construction diagrams presented in Attachment B.

A WSP professional geologist registered to practice in Georgia was present on site to oversee and record the drilling and monitoring well construction. The rotosonic drilling technique was employed for borehole advancement, using a track-mounted TSI 150 rotosonic drill rig equipped with 4-inch sampling rods and a 6-inch casing sleeve. Continuous core samples were logged in the field for lithologic and geotechnical properties, then placed in core boxes and retained by SCS.

Prior to use, and between boreholes, downhole equipment was decontaminated. The boring (lithologic) logs and monitoring well construction records for the newly installed monitoring wells are included in Attachment B. The construction data are summarized on Table 1, and the locations of the monitoring wells are provided on Figure 1.

Monitoring wells were constructed within the borehole using factory-cleaned and sealed Schedule 40 polyvinyl chloride (PVC) products with flush-threaded fittings. Monitoring wells DGWC-9A, DGWC-126, DGWC-127 and DGWC-128 were constructed with a 10-foot section of 3.25-inch outer diameter (OD) and 2-inch inner diameter (ID), flush-threaded, 0.010-inch factory-slotted PVC, U-Pack screen. The well depths for DGWC-9A, DGWC-126, DGWC-127, and DGWC- 128 are shown on Table 1.

The annulus of the U-Pack screen section was filled with No. 1 filter sand, prior to insertion into the borehole. For each borehole, the screen was placed near the bottom of the borehole, with the remainder of the piezometer constructed from 10-foot sections of 2-inch ID, flush-threaded, PVC casing riser. A flush-threaded PVC end cap was placed on the bottom of each monitoring well to provide a 0.3-foot sump/sediment trap, and the top of the monitoring wells DGWC-9A, DGWC-126, and DGWC-128 extend to between approximately 1.7 feet and 3.0-feet above grade and DGWC-127 was 0.7 feet below grade. Construction details for the wells are shown on the boring/construction logs in Attachment B. The PVC products used were American Society for Testing and Materials (ASTM) and National Sanitation Foundation (NSF) rated.

Following placement of the screen and casing, the annular space in each borehole adjacent to the screen was filled with 2 to 2.5 cubic feet of US Standard Sieve size No. 1 filter pack sand as appropriate for the formation. The filter pack sand was placed into the borehole using the tremie-pipe method and extended approximately 2.0 to 3.6 feet above the depth of the top of the screen. Immediately following placement of the filter pack, each monitoring well was pumped using a portable submersible pump until visibly clear water was discharged. A filter pack seal, composed of approximately 3.4 to 5.5 feet of hydrated 3/8” coated bentonite pellets (approximately 5 gallons), was then placed a minimum of 2-feet on top of the filter pack by slowly placed the material by gravity down the borehole and checking its placement with a weighted tape. Potable water was then added to the boring and the bentonite was allowed to cure for a minimum of two hours.

Following hydration of the bentonite, the remaining annular space was grouted with AquaGuard® bentonite grout mixture to approximately 2 feet below ground surface using a tremie method. Based on information provided by the product manufacturer, AquaGuard® is a bentonite grout consisting of bentonite and additives that allow for a mixture of 30% solids by weight to facilitate grouting via tremie pipe, with additives that slow the bentonite curing so that proper placement can be achieved. Monitoring well surface completion for DGWC-9A, DGWC-126, and DGWC-128 consist of a locked, anodized aluminum protective casing and a 4-foot by 4-foot by 4inch concrete pad with an engraved tag showing the monitoring well name. The annular space of the aluminum protective casing was filled with pea gravel to approximately 2 inches from top of PVC. A weep hole was drilled into the lower side of the protective casing. DGWC-127 was completed as a surface flush mount well due to site limitations. The flush mount well consists of a bolted and sealed 8-inch round flush mounted road-box protective casing with a 4-foot by 4-foot by 4-inch concrete pad and a lockable PVC well cap.

Monitoring Well Development Activities

The newly installed monitoring wells were developed between November 2024-January 2025 in general accordance with the *Monitoring Well Development Procedures* prepared by SCS (March 2016), and the US EPA Science and Ecosystem Support Division *Design and Installation of Monitoring Wells* (February 2008). The monitoring wells were surged using a Reclaimer pump system. During development, water quality measurements

of pH, temperature, specific conductance, oxidation reduction potential (ORP), dissolved oxygen (DO), and turbidity were periodically collected using field-calibrated water quality equipment after the piezometer responded to improving conditions. Development activities were conducted utilizing an AquaTroll® multimeter and a Hach turbidimeter and for monitoring water quality measurements. Water level measurements were collected using a decontaminated electronic water level indicator, referenced to a permanent marking at the top of the casing and recorded to within 0.01 foot. Equipment calibration forms and development forms are included in Attachment B with development details summarized in Table 2.

Monitoring Well Survey

The newly installed wells were surveyed on January 24, 2025, by Metro Survey and Engineering. The survey was completed using Leica GS18T (survey-grade) global positioning system receiver and a closed level check loop with a Leica DNA10 digital level with a positional tolerance of 0.5/0.01' H:V. The top of the PVC casing was surveyed to 0.5 foot horizontal and 0.01-foot vertical tolerance, and a marking was made on the PVC to use for reference during future measurements. Surveyed coordinates and elevations are presented on the boring/construction diagrams and on Table 1. The certified surveyor's report dated January 28, 2025 is attached as Attachment C.

Monitoring Well Abandonment

Detection monitoring well DGWC-9 was dry for two consecutive monitoring events. As a result, a replacement monitoring well DGWC-9A was installed adjacent to DGWC-9. DGWC-9 was abandoned in place by Cascade. The abandonment was completed under the oversight of a professional geologist registered to practice in Georgia (Thomas Keller) on November 19, 2024. The abandonment log is provided in Attachment D.

Before abandonment activities, WSP removed the dedicated pump and then measured the depth to water and total depth of the well (Table 2). The well was abandoned by grouting in place and cutting the PVC casing below grade. This abandonment method was used instead of overdrilling, as overdrilling was not possible due to the presence of existing monitoring wells with limited access, and sloping ground which prevented the ability to safely position the drilling rig over DGWC-9. The well was abandoned by first filling the well screen and a portion of the riser (33.45 to 10 feet below ground surface) with one 5-gal bucket of time-released 3/8" TR-30 Pel-Plug bentonite pellets which were allowed to hydrate. The remaining PVC riser was tremie grouted from 10 ft to ground surface with 1.7 gallons of AquaGuard® bentonite grout mixture. The protective casing, bollards, and pad were removed, and the riser was cut approximately 2 feet below grade. Finally, a concrete plug was placed above the former well location.

Closing

We appreciate the opportunity to assist SCS and Georgia Power with this project. Should you have any questions or require additional information, please contact the undersigned at (770) 496-1893.

Cascade Drilling Bond

CONTINUATION CERTIFICATE

Atlantic Specialty Insurance Company , Surety upon

a certain Bond No. 800033976

dated effective September 27, 2017
(MONTH-DAY-YEAR)

on behalf of Ricky Davis / Cascade Drilling, L.P.
(PRINCIPAL)

and in favor of Department of Natural Resources, State of Georgia
(OBLIGEE)

does hereby continue said bond in force for the further period

beginning on June 30, 2023
(MONTH-DAY-YEAR)

and ending on June 30, 2025
(MONTH-DAY-YEAR)

Amount of bond Thirty Thousand and 00/100 Dollars ($30,000.00)

Description of bond Performance Bond for Water Well Contractors

Premium:

PROVIDED: That this continuation certificate does not create a new obligation and is executed upon the express condition and provision that the Surety's liability under said bond and this and all Continuation Certificates issued in connection therewith shall not be cumulative and that the said Surety's aggregate liability under said bond and this and all such Continuation Certificates on account of all defaults committed during the period (regardless of the number of years) said bond had been and shall be in force, shall not in any event exceed the amount of said bond as hereinbefore set forth.

Signed and dated on April 13, 2023
(MONTH-DAY-YEAR)

Atlantic Specialty Insurance Company

By _____
ATTORNEY-IN-FACT Carlos A. Albelo

intact INSURANCE

Power of Attorney

KNOW ALL MEN BY THESE PRESENTS, that ATLANTIC SPECIALTY INSURANCE COMPANY, a New York corporation with its principal office in Plymouth, Minnesota, does hereby constitute and appoint: **Megan Sivley, Melissa Haddick, Sandra Parker, Orlando Aguirre, Stacy Killebrew, Carlos A. Albelo**, each individually if there be more than one named, its true and lawful Attorney-in-Fact, to make, execute, seal and deliver, for and on its behalf as surety, any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof; provided that no bond or undertaking executed under this authority shall exceed in amount the sum of: **unlimited** and the execution of such bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof in pursuance of these presents, shall be as binding upon said Company as if they had been fully signed by an authorized officer of the Company and sealed with the Company seal. This Power of Attorney is made and executed by authority of the following resolutions adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-fifth day of September, 2012:

Resolved: That the President, any Senior Vice President or Vice-President (each an "Authorized Officer") may execute for and in behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and affix the seal of the Company thereto; and that the Authorized Officer may appoint and authorize an Attorney-in-Fact to execute on behalf of the Company any and all such instruments and to affix the Company seal thereto; and that the Authorized Officer may at any time remove any such Attorney-in-Fact and revoke all power and authority given to any such Attorney-in-Fact.

Resolved: That the Attorney-in-Fact may be given full power and authority to execute for and in the name and on behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and any such instrument executed by any such Attorney-in-Fact shall be as binding upon the Company as if signed and sealed by an Authorized Officer and, further, the Attorney-in-Fact is hereby authorized to verify any affidavit required to be attached to bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof.

This power of attorney is signed and sealed by facsimile under the authority of the following Resolution adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-fifth day of September, 2012:

Resolved: That the signature of an Authorized Officer, the signature of the Secretary or the Assistant Secretary, and the Company seal may be affixed by facsimile to any power of attorney or to any certificate relating thereto appointing an Attorney-in-Fact for purposes only of executing and sealing any bond, undertaking, recognizance or other written obligation in the nature thereof, and any such signature and seal where so used, being hereby adopted by the Company as the original signature of such officer and the original seal of the Company, to be valid and binding upon the Company with the same force and effect as though manually affixed.

IN WITNESS WHEREOF, ATLANTIC SPECIALTY INSURANCE COMPANY has caused these presents to be signed by an Authorized Officer and the seal of the Company to be affixed this first day of January, 2023.

ATLANTIC SPECIALTY INSURANCE COMPANY CORPORATE SEAL 1986 NEW YORK

SURVEYOR'S REPORT

SCOPE OF WORK:

Field survey of existing monitoring wells at Georgia Power Company, Plant McDonough in Smyrna, GA.

Horizontal and vertical datum was derived from RTK GPS observations with corrections received via a cellular modem utilizing the Leica "Smartnet" RTK Network and conventional surveying equipment. Horizontal datum is Georgia State Plane, West Zone, NAD83(2011) and vertical datum is NAVD88.

EQUIPMENT USED TO ESTABLISH THE MONITORING WELL LOCATIONS:

Leica GS18T GPS Receiver
Leica TS16 Total Station
Leica DNA10 Digital Level

CERTIFICATION:

I hereby certify that the center of well casing (PVC) has a horizontal accuracy of 0.5+/- feet or better using a Leica GS18T GPS (survey-grade) global positioning system receiver referencing the Georgia State Plane, West Zone, NAD83(2011) coordinate system in US survey feet. The top of well casing (PVC) elevation data was determined in feet above mean sea level based on the NAVD88 vertical datum. Vertical data was confirmed to be accurate within 0.01 foot through establishment of a closed level check loop with a Leica DNA10 digital level having a published accuracy of 0.9mm per dual-traverse kilometer.
