CERTIFICATION STATEMENT

This 2026 *Annual Groundwater Monitoring and Corrective Action Report, Georgia Power Company - Plant McManus– Former Ash Pond 1 (AP-1)* has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with EnSafe Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

SUMMARY

This summary of the 2026 Annual Groundwater Monitoring and Corrective Action Report provides the status of groundwater monitoring and corrective action program from July 2025 through June 2026 (the Annual reporting period) at Georgia Power Company's (Georgia Power's) Former Ash Pond (AP) AP-1 at Plant McManus (the Site). This summary was prepared by EnSafe Inc. on behalf of Georgia Power to meet the requirements listed in Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste 391-3-4-.10, and by reference, Part A, Section 6[1] of the U.S. Environmental Protection Agency (USEPA) coal combustion residual (CCR) rule (40 Code of Federal Regulations [CFR] 257 Subpart D).

Plant McManus is located at 1 Crispen Island Drive in Glynn County, Georgia, approximately 5.37 miles northwest of the city of Brunswick. The plant property is bordered by the Turtle River to the west and by Burnett Creek to the north. The former AP-1 is located on the northeastern portion of the plant property. The former AP-1 was an approximately 80-acre ash pond that was built in the late 1950's. Ash sluicing operations at AP-1 commenced in 1959 and ceased in 1972. Closure of AP-1 commenced in 2016. As part of closure, AP-1 was dewatered sufficiently to remove the free liquids, and ash was removed and disposed of in an offsite permitted landfill. A certification of removal report demonstrating completion of removal activities was submitted to the Georgia Environmental Protection Division (GA EPD) on November 27, 2019. Based on review of the report and an inspection of AP-1 on December 13, 2019, GA EPD acknowledged the completion of CCR removal on January 10, 2020. The final CCR Permit for the Plant McManus Ash Pond was issued by GA EPD Friday June 18, 2021 (063-030D (CCR)).

Former Ash Pond (AP-1) and the Site.

Groundwater at the Site is monitored using a comprehensive monitoring network that meets federal and state monitoring requirements. Routine sampling and reporting began after the background groundwater conditions were established between August 2016 and May 2018. Based on groundwater conditions at the Site, an assessment monitoring program and assessment of corrective measures were established in August 2019 and July 2020, respectively. An *Assessment of Corrective Measures Report* was subsequently prepared for the former AP-1 (Arcadis, 2020b) and submitted to GA EPD in December 2020. During the semiannual reporting period, the Site remained in assessment monitoring as corrective measures were evaluated. A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD in February 2023 with revisions provided on January 18, 2024. Following the approval of GA EPD Watershed and Land Branch approval of the *MCM-06 Pilot Study Workplan* (Arcadis 2024b) on June 26 and August 2, 2024, respectively, a pilot study was initiated at former AP-1 in support of the ongoing remedy selection

[1] 80 CFR 21468, Apr. 17, 2015, as amended at 81 CFR 51807, Aug. 5, 2016; 83 CFR 36452, July 30, 2018; 85 FR 53561, Aug. 28, 2020

process. Post-injection performance monitoring was completed in accordance with the *MCM-06 Pilot Study Workplan*. A *Pilot Study Summary Report* was submitted to EPD, dated August 29, 2025, under separate cover. On December 17, 2025, GA EPD issued a letter, concurring with the summary report conclusions. In February 2026, Georgia Power submitted a letter to GA EPD proposing to hold a public meeting, in accordance with 40 CFR §257.96(e), during the second quarter of 2026 to present strategy and accept comments from the public pertaining to the proposed remedy strategy. The public meeting was conducted on May 28th, 2026 at the Brunswick public library in Brunswick, Georgia. Comments collected at the May 2026 Public Meeting will be considered in the remedy screening process to be submitted with the final Remedy Selection Report.

During the 2026 Annual reporting period, EnSafe conducted the semiannual groundwater and surface water sampling events in September 2025 and March 2026. Samples were submitted to GEL Laboratories (GEL) for analysis. Per the CCR rule, groundwater results were evaluated in accordance with the certified statistical methods. That evaluation showed statistically significant values of Appendix III[2] and Appendix IV[3] constituents in wells provided in the table below.

Appendix III Constituents	**September 2025**	**March 2026**
Boron	MCM-12 and MCM-17	MCM-12 and MCM-17
Calcium	MCM-05 and MCM-06	MCM-05, MCM-06 and MCM-14
pH	MCM-05, MCM-06, MCM-07, MCM-12, MCM-14 and MCM-17	MCM-05, MCM-06, MCM-07, MCM-12, MCM-14 and MCM-17
Appendix IV Parameter[4]	**September 2025**	**March 2026**
Arsenic	MCM-06	MCM-06
Lithium	DPZ-02	DPZ-02

Based on review of the Appendix III and Appendix IV statistical results, the Site will continue in assessment monitoring. An alternate source demonstration (ASD) was approved for lithium at wells MCM-06 and DPZ-02 on May 1, 2023 by GA EPD (Arcadis 2023). Georgia Power will continue routine groundwater monitoring, reporting, and groundwater remedy evaluation at the Site. Reports will be posted to the Georgia Power CCR website and provided to GA EPD semiannually.

[2] Boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids (TDS)

[3] Antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, fluoride, lead, lithium, mercury, molybdenum, selenium, thallium, and radium 226 + 228

[4] An SSL-related constituent is determined by comparing the confidence intervals developed to either the constituent's MCL, if available, the CCR rule specified level (RSL), if no MCL is available, or the calculated background interwell tolerance limit.

1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (USEPA) coal combustion residual (CCR) rule (40 Code of Federal Regulations [CFR] 257 Subpart D; published in 80 FR 21302-21501, April 17, 2015) and the Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10, this *2026 Annual Groundwater Monitoring and Corrective Action Report* has been prepared to document groundwater monitoring activities conducted at Georgia Power Company's (Georgia Power's) Plant McManus Former Ash Pond AP-1 (the Site) and satisfy the requirements of § 257.90(e). To specify groundwater monitoring requirements, Georgia EPD rule 391-3-4-.10(6)(a) incorporates by reference the USEPA CCR rule (40 Code of Federal Regulations [CFR] 257 Subpart D; published in 80 FR 21302-21501, April 17, 2015). For ease of reference, the USEPA CCR rules are cited within this report.

Groundwater monitoring and reporting for the former AP-1 is performed in accordance with the monitoring requirements of 40 CFR 257.90 through 257.95 of the USEPA CCR rule, and Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6).

This report documents annual monitoring activities completed from July 2025 through June 2026 (the reporting period) and includes the required report components in accordance with 40 CFR 257.90(e).

1.1 SITE LOCATION AND DESCRIPTION

The Site is located at 1 Crispen Island Drive in Glynn County, Georgia, approximately 5.37 miles northwest of the city of Brunswick. The plant property is bordered by the Turtle River to the west and by Burnett Creek to the north. The former AP-1 is located on the northeastern portion of the plant property (Figure 1).

The former AP-1 was an approximately 80-acre ash pond that was built in the late 1950's. Ash sluicing operations at AP-1 commenced in 1959 and ceased in 1972. Closure of AP-1 commenced in 2016. As part of closure, AP-1 was dewatered sufficiently to remove the free liquids, and ash was removed and disposed of in an off-site, permitted landfill. A certification of removal report demonstrating completion of removal activities was submitted to GA EPD on November 27, 2019. Based on review of the report and an inspection of AP-1 on December 13, 2019, GA EPD acknowledged the completion of CCR removal on January 10, 2020. The final CCR Permit (No. 063-030D(CCR)) for the Plant McManus Ash Pond was issued by GA EPD on June 18, 2021. A 5-year Permit Review document package was submitted to GA EPD on December 12th, 2025, and subsequently approved on April 17th, 2026. The former AP-1 is monitored by an on-site network of piezometers and wells to define groundwater elevation, flow direction, and monitor groundwater condition. The locations of the wells and piezometers are shown on Figure 2; well and piezometer construction details are listed in Tables 1 and 2, respectively.

1.1.1 Regional Geology

The aquifer systems in Brunswick, Glynn County, GA are: (1) the surficial aquifer, (2) the Brunswick aquifer (Upper and Lower) and (3) the Floridan aquifer system (Upper and Lower). The Floridian aquifer system can extend to depths beyond 2,000 feet or more (Clark et al. 1990, Maslia and Prowell,1990; Jones et.al 2002). The uppermost regional aquifer is the surficial aquifer. In the Brunswick area, this aquifer extends to a depth of approximately 180 feet. Although the surficial aquifer is defined on a regional scale as extending to approximately 180 feet below ground surface, Clarke et al. (1990) acknowledge that localized lower permeability units can create confined or semi-confined conditions within limited areas of the surficial aquifer (ATC Associates Inc., 1997).

Regionally, the surficial aquifer is composed of geologic formations overlying the Hawthorn Formation. These formations include the Satilla, Charlton, and Raysor Formations, as well as undifferentiated Holocene, Pleistocene, Pliocene and late-Miocene deposits. In the Brunswick area, the Satilla is described as extending to approximately 28 feet below ground surface and the Cypresshead to approximately 50 feet below ground surface. Underlying the Satilla and Cypresshead Formations are sands, gravels, and clays which have been described by Weems and Edwards (2001) as two pairs of alternating confining units and water-bearing zones of the Ebenezer Formation. These alternating units of the Ebenezer Formation are described as an uppermost confining unit extending from approximately 50 to 75 feet below ground surface, followed by a water-bearing zone from approximately 75 to 110 feet below ground surface, another confining unit from approximately 110 to 150 feet below ground surface, and then another water-bearing zone from approximately 150 to 185 feet below ground surface. Depositionally, these sediments represent marginal to shallow marine beds, that are overlain by marine terrace deposits. Fluvial or residual deposits overlay the terrace deposits (Miller, 1986; Clarke et al, 1990).

The regional surficial aquifer is underlain by approximately 90 feet of lower-permeability portions (Miocene Unit A) of the Hawthorn Formation. This stratum forms the upper confining bed for the Brunswick aquifer system. The Brunswick aquifer system is composed of two confined aquifers (the Upper Brunswick aquifer and the Lower Brunswick aquifer) which are separated and confined above and below by less permeable units of the Hawthorn Formation. The Upper Brunswick aquifer extends from approximately 270 feet to 350 feet below ground surface, and the Lower Brunswick aquifer extends from approximately 400 feet to 470 feet below ground surface (Clarke *et al*, 1990).

1.1.2 Site Geology and Hydrogeology

Based on information collected during subsurface investigations, Plant McManus is underlain by very fine sands and clays from land surface (or beneath a shallow fill layer) to depths ranging from 33 to 43 feet below land surface. Very fine sands are predominant, but discontinuous clay layers of varying thickness were encountered during drilling activities. The clay layers varied from less than one inch to approximately ten feet in thickness. These very fine sands and discontinuous clay layers are interpreted to be the Upper Satilla Formation (ATC Associates, Inc., 1997).

Underlying the Upper Satilla Formation are fine to medium sands with greater silt content, and apparently lower permeability, than the sands of the Upper Satilla. These siltier sands, which were interpreted to be the Lower Satilla Formation, were encountered at depths greater than 35 feet below ground surface during the Site investigation performed in the 1990s (ATC Associates Inc., 1997). These sands may also correspond to the Cypresshead Formation of Huddleston (1988). Sands and clays below the Cypresshead and above the confining unit of the Brunswick aquifer system have been described by Weems and Edwards (2001) as two pairs of alternating confining units and water-bearing zones of the Ebenezer Formation, extending from approximately 50 to 185 feet below ground surface in the Brunswick area.

The regional surficial aquifer that contains the Upper and Lower Satilla Formations is underlain by approximately 90 feet of lower-permeability portions (Miocene Unit A) of the Hawthorn Formation. This stratum forms the upper confining bed for the Brunswick aquifer system.

The surficial aquifer underlying the mainland, marsh, and island is composed of the very fine to fine grain sand with discontinuous clay layers of the Upper and Lower Satilla Formation. In the marsh, the groundwater elevation at low tide is below the top of the marsh surface. The upper portion of the aquifer in the marsh has been cut by tidal creeks, which meander through the marsh. In addition to current and historically recent (pre-ash pond construction) tidal channels, the marsh is also likely to have paleo (pre-historic) tidal channels present throughout the upper portion of the aquifer in the marsh area, which may provide zones of higher hydraulic conductivity or isolated pockets of groundwater. Vertically, the Satilla formation fines downward to a silty fine sand of the Lower Satilla Formation. The aquifer is generally unconfined, with localized clay layers. Groundwater flowing within the surficial aquifer is separated from deeper aquifers by approximately 90 feet of lower-permeability portions of the Hawthorn Formation (Miocene Unit A) that form the upper confining bed for the Brunswick aquifer system (Clarke et al, 1990).

Groundwater flows from two directions toward the former AP-1. One groundwater flow component originates on the mainland, northeast of the facility, and flows southwest, while the other flow component originates on Crispen Island and flows north and northeast (Figures 3-10). Groundwater elevations in the monitoring wells on the mainland (MCM-02, -15, and -16) and on the island (MCM-08, and -11) have consistently exhibited higher groundwater elevations than the monitoring wells and piezometers installed along the dikes (Table 3), with MCM-01 and -04 exhibiting intermediate elevations between the mainland and dike wells. The potentiometric surface of the surficial aquifer and the resultant groundwater flow direction in the vicinity of the former AP-1 is a reflection of the topography of the mainland, Crispen Island, and the tidal marsh surrounding the area.

1.2 GROUNDWATER MONITORING SYSTEM

Pursuant to § 257.91, Georgia Power installed a groundwater monitoring system within the uppermost aquifer around former AP-1. The monitoring system is designed to monitor groundwater passing the waste boundary of the former AP-1 within the uppermost aquifer. As

part of the assessment monitoring program, DPZ-02, an assessment monitoring well, was added to the program during the 2020 semiannual monitoring period to vertically characterize the nature and extent of groundwater downgradient of former AP-1.

An on-site network of piezometers is used to gauge water levels to define groundwater flow direction and gradients. The piezometers may be sampled as needed to support the Assessment of Corrective Measures (ACM) program.

The construction and location of the detection monitoring wells, assessment wells, and piezometers are shown on Tables 1 and 2 and Figure 2.

2.0 GROUNDWATER AND SURFACE WATER MONITORING ACTIVITIES

As required by § 257.90(e), the following describes monitoring-related activities performed during the reporting period and discusses any change in status of the monitoring program.

2.1 WELL INSTALLATION, MAINTENANCE, AND ABANDONMENTS

Monitoring wells are inspected semiannually to determine if any repairs or corrective actions are necessary to meet the requirements of the Georgia Water Well Standards Act (O.C.G.A. § 12-5-134(5)(d)(vii)). In September 2025 and March 2026, monitoring wells were inspected, necessary corrective actions were identified and subsequently completed, as documented in Appendix A. In summary, maintenance activities for this reporting period included:

- Visual inspection of well conditions prior to sampling, recording Site conditions, and performing exterior maintenance to perform sampling under safe and clean conditions.
- Replacement AquaTroll 200 transducer installed in MCM-06 in September 2025 after faulty unit was removed.
- Replacement AquaTroll 200 transducers installed in PT-01 and PT-04D in March 2026 after faulty units were removed.

On October 10, 2025, GA EPD approved a *Request for Minor Modification to Update Groundwater Monitoring Network* submitted by Georgia Power to abandon 18 piezometers and to remove an additional 10 piezometers from the groundwater monitoring network that were previously used for routine water level gauging. Abandonment procedures began on October 13, 2025 and concluded on October 17, 2025. *Well Abandonment Report, Plant McManus Former Ash Pond 1,* was submitted on December 3, 2025 and is included in Appendix A. A 5-Year Permit Review document package was submitted to Georgia EPD on December 12th, 2025, and subsequently approved on April 17th, 2026 with the updated groundwater monitoring network.

The well maintenance and repair documentation from July 2025 through June 2026 is presented in Appendix A.

2.2 ASSESSMENT MONITORING

Based on results of the August 2019 *Annual Groundwater Monitoring and Corrective Action Report*, assessment monitoring was initiated at the Site. Currently identified SSLs of Appendix IV constituents exceeding their respective Groundwater Protection Standard (GWPS) at former AP-1 include arsenic in MCM-06 and lithium in DPZ-02. An alternate source demonstration (ASD) was approved by GA EPD for lithium at wells MCM-06 and DPZ-02 on May 1, 2023 (Arcadis, 2023).

Plant McManus entered Assessment Monitoring and Assessment of Corrective Measures in 2019 and 2020, respectively. Following the evaluation of several potential remedies, geochemical injections were proposed in the 2023/2024 *Draft Remedy Selection Report* (Arcadis, 2023).

Following EPD concurrence, pilot testing was completed on site and results submitted to EPD in 2025.

With EPD's consent and as required by the CCR Rules, Georgia Power held a Public Meeting requesting community input on the proposed remedy on May 28th, 2026. Comments collected during the public comment process will be considered in the upcoming final Remedy Selection Report and submitted to GA EPD for review. In accordance with § 257.96(b), groundwater continues to be monitored at the former AP-1 under the assessment monitoring program while the ACM phase is implemented.

Pursuant to § 257.95(b), the monitoring wells of the certified compliance monitoring network were sampled for the complete list of Appendix III and Appendix IV parameters during the monitoring event conducted in September 2025 and March 2026 (Table 4). A summary of the analyses collected is provided in Table 5. Details of these events and analytical results are discussed in Section 3, with the field sampling and calibration reports and laboratory analytical reports presented in Appendix C. The statistical results are discussed in Section 4.

2.3 ADDITIONAL EVALUATIONS

Groundwater samples were collected from MCM-05 and MCM-06 during the September 2025 monitoring event and were analyzed for iron and sulfide. During the March 2026 monitoring event, groundwater samples were collected from all monitoring wells and analyzed for iron, magnesium, potassium, and sodium; additional samples from MCM-05 and MCM-06 were also collected and analyzed for sulfide. A supplemental groundwater sample was collected from MCM-06 and analyzed for arsenic in June 2026 and will be included in the next semi-annual report. These samples were collected in support of evaluating, as necessary, the geochemical composition of the groundwater at the Site. The laboratory reports associated with the September and March data are provided in Appendix C.

2.4 ASSESSMENT OF CORRECTIVE MEASURES

Corrective action piezometers (INW-01, DR-02, DR-03, PT-01, PT-02, PT-03) were sampled during the 2025 annual reporting period to collect data supporting future corrective action. Groundwater samples were analyzed for arsenic, iron, and sulfide. A summary of the analytical results from corrective action piezometers is presented in Table 5A. Refer to Section 6.2 for details of the Assessment of Corrective Measures.

2.5 SURFACE WATER SAMPLING

To assess horizontal delineation of arsenic, Georgia Power has proactively completed additional sampling to assess concentrations of arsenic in surface water in the tidal salt marsh since February 2020. Surface water samples are collected in accordance with USEPA Region 4 Science and Ecosystem Support Division (SESD), Operating Procedure, Surface Water Sampling SESDPROC-201-R6 (April 22, 2023).

September 2025 and March 2026 Sampling

In September 2025 and March (May) 2026, surface water samples were collected during high tide (HT, HTS) from each point along Transect 2 (T2) (Figure 11). Low tide surface water samples (LT) were collected from T2 at the fourth location (i.e., T2-4LT). Background samples were collected at high tide background location BG-2HT, located in the Turtle River, north of its confluence with Gibson Creek, and low tide background location BG-1LT, in Cowpen Creek, north of its confluence with Burnett Creek.

For the March 2026 event, the reporting limit and method detection limit values reported by the laboratory for arsenic exceeded historical reporting standard requirements due to dilution factors associated with matrix interference upon analysis at GEL. A resample event was completed on May 14th, 2026 for all surface water sample locations and the samples were submitted to Eurofins for analysis. All results from the May 2026 sampling event met reporting standard requirements.

Surface water collected during the events was analyzed for arsenic, Appendix III parameters, and additional geochemical parameters (magnesium, potassium, sodium, alkalinity). The laboratory reports associated with the surface water sampling events are provided in Appendix D and a summary of the results are presented in Table 6. Surface water data from this reporting period are consistent with historical results. Surface water sampling will continue on a semiannual basis to support ongoing assessment monitoring.

3.0 SAMPLE METHODOLOGY & ANALYSES

The following sections describe the methods used to conduct groundwater and surface water monitoring, as well as the sampling results that were obtained from sampling events at the former AP-1 during the reporting period.

3.1 GROUNDWATER ELEVATION MEASUREMENT

Prior to each sampling event, groundwater levels were recorded from piezometers and monitoring wells in the network at the former AP-1. Groundwater measurements were taken from transducers installed in 16 wells (MCM-01, -02, -04 through -07, -11, -12, -14 through -20, and DPZ-02) and 9 piezometers (MCM-08, MCM-10, PZ-09, PZ-11, DPZ-01, DPZ-03, PT-01, PT-02 and PT-04D). When other wells and piezometers in the network are utilized for potentiometric surface maps, they are gauged by hand using a Heron water level indicator. Groundwater elevations calculated during the September 2025 and March 2026 monitoring events are summarized in Table 3. Groundwater elevation data was used to develop a high tide and low tide potentiometric surface elevation contour map for each event (Figures 3-10). Groundwater flow at the Site is discussed in Section 1.1.

During the September 2025 sampling event, the transducer for former AP-1 was inoperable, and no elevation measurements could be collected. Therefore, the surface water elevation of former AP-1 during the September 2025 event is not depicted on the potentiometric surface maps (Figures 3, 4, 7, 8, and 12). The surface water monitor was replaced in November 2025 and an accompanying stage gauge to prevent this occurrence in the future.

3.2 GROUNDWATER GRADIENT AND HORIZONTAL FLOW VELOCITY

The horizontal groundwater flow velocity at the former AP-1 was calculated using a derivation of Darcy's Law. Specifically,

$$V = \frac{K * i}{\eta_e}$$

Where:

$V =$ Groundwater flow velocity $\left(\frac{feet}{day}\right)$

$K =$ Average Hydraulic Conductivity $\left(\frac{feet}{day}\right)$

$i =$ Horizontal hydraulic gradient $\left(\frac{feet}{feet}\right)$

$\eta_e =$ Effective porosity

Horizontal groundwater flow velocities were calculated for two well pairs at high and low tide using groundwater elevations collected on September 8, 2025, September 11, 2025, March 10, 2026 and March 11, 2026. Groundwater flow velocities representing groundwater historically flowing

from the mainland to former AP-1 (between MCM-16 and MCM-02) and from the island to former AP-1 (between MCM-11 and MCM-12) are presented in Table 7.

Groundwater flow between MCM-16 and MCM-02 was 0.013 feet per day (ft/day) at low tide and 0.011 ft/ day at high tide in September 2025, while groundwater flow between MCM-11 and MCM-12 was 0.029 ft/ day at both low tide and high tide. During the September 2025 event, the gradient was positive (approximately 0.03 ft/day), indicating a flow from MCM-16 toward MCM-02. As described in Section 3.1, the former AP-1 pond level transducer malfunctioned during the September 2025 sampling event and no surface water elevation could be obtained. Based on tidal elevation being greater than groundwater elevations on the dikes, it appears the groundwater flow is inward towards the pond. Additionally, the pond effluent is now equipped with a floating weir to manage pond level and allows for surface water/pond water exchange. The overall groundwater conditions at the pond still appear to yield a net outward flow given the periodicity and extent of the tidal conditions compared to adjacent monitoring well groundwater elevations. Additional water level gauging during the March 2026 event displayed a similar gradient from the mainland to the pond, with a groundwater flow velocity of 0.006 ft/day at high tide and 0.011 ft/day at low tide between MCM-16 and MCM-02. Groundwater flow between MCM-11 and MCM-12 during the March 2026 event was recorded at 0.028 ft/day at low tide and 0.026 ft/day at high tide. Groundwater flow between MCM-11 and MCM-18 during the March 2026 event was calculated to be 0.023 ft/day at both low and high tides. A groundwater flow outward from the pond was observed during the March 2026 event at both high and low tide.

Groundwater elevation fluctuations along the western dike have been previously observed due to the tidal influence interaction between the marsh-side surface water and groundwater well elevations. Previous groundwater observations have displayed an approximate 40-minute delay from when surface water reaches its greatest elevation until groundwater elevations are influenced. The groundwater gradient from MCM-11 to MCM-12 indicates a groundwater flow direction from the island to the marsh at both high and low tides. For September 2025, groundwater flow velocities were 4.19 (MCM-16 to -02) and 10.51 (MCM-11 to -12) feet per year (ft/yr) at high tide and 4.66 (MCM-16 to -02) and 10.67 (MCM-11 to -12) ft/yr at low tide. For March 2026, groundwater flow velocities were 2.33 (MCM-16 to -02) and 9.58 (MCM-11 to -12) feet per year (ft/yr) at high tide and 4.19 (MCM-16 to -02) and 10.28 (MCM-11 to -12) ft/yr at low tide. Similarly, the groundwater gradient from MCM-11 to MCM-18 indicates a groundwater flow direction from the island towards the marsh at both high and low tides. For March 2026, groundwater flow velocities were 8.43 (MCM-11 to -18) feet per year (ft/yr) at high tide and 8.39 (MCM-11 to -18) ft/yr at low tide

3.3 GROUNDWATER SAMPLING

Groundwater samples were collected from the compliance well network and select piezometers using low-flow sampling procedures in accordance with § 257.93(a). Purging and sampling were performed using a peristaltic pump with the intake tubing lowered to the midpoint of the well screen (or as appropriate determined by the water level). QED dedicated pumps are utilized in monitoring wells MCM-01, MCM-05, MCM-06, MCM-07, MCM-12, MCM-14, MCM-15, MCM-16,

and MCM-17. Non-disposable equipment was decontaminated before use and between well locations.

An AquaTroll 400 (In-Situ field instrument) was used to monitor and record field water quality parameters (pH, conductivity, dissolved oxygen (DO), temperature, and oxidation reduction potential [ORP]) during well purging to verify stabilization prior to sampling. Turbidity was monitored using a LaMotte 2020we (or similar) 1970-USEPA and ISO Compliant Model turbidity meter.

Groundwater samples were collected when the following stabilization criteria were met:

- ± 0.1 standard units for pH
- ± 5% for specific conductance
- ± 0.2 milligrams per liter (mg/L) or ± 10%, whichever is greater for DO > 0.5 mg/L. No criterion applies if DO < 0.5 mg/L, record only.
- Turbidity measurements less than 5 nephelometric turbidity units (NTU) or measurements between 5 to 10 NTUs following three hours of purging.

Once stabilization was achieved, samples were collected in appropriately preserved laboratory-supplied containers and placed in ice-packed coolers. No filtered samples were collected during this reporting period for Appendix III and IV analyses.

Upon completion of the sampling events in September 2025 and March 2026, samples were submitted to GEL for Appendix III and IV analysis and Eurofins for sulfide analysis. Sample submittals followed chain-of-custody protocol. The field sampling forms generated during this reporting period are included in Appendix C.

3.4 LABORATORY ANALYSES

Laboratory analysis was performed by GEL and Eurofins, which are accredited by National Environmental Laboratory Accreditation Program (NELAP) and maintain a NELAP certification for all Appendix III and Appendix IV constituents and geochemical parameters analyzed for this project.

The groundwater analytical results from this reporting period are summarized in Table 5 and 5A, and the laboratory analytical reports are provided in Appendix C. The surface water results for the reporting period are summarized in Table 6, and the laboratory analytical reports are provided in Appendix D. The pH field measurements recorded during the groundwater and surface water sampling events are also provided in Tables 5, 5A, and 6, respectively.

3.5 QUALITY ASSURANCE AND QUALITY CONTROL

During each sampling event, quality assurance/quality control samples (QA/QC) are collected at a rate of at least one set of field blanks (FB), field equipment rinsate blanks (EB), and duplicate

(FD) samples per every 10 samples collected. QA/QC sample data were evaluated during groundwater data validation (as described below) and are included in Appendix C.

Groundwater quality data for the assessment events were independently validated by Environmental Standards in accordance with USEPA guidance (USEPA, 2011) and the analytical methods. Data validation generally consisted of reviewing sample integrity, holding times, laboratory method blanks, laboratory control samples, matrix spikes/matrix spike duplicate recoveries and relative percent differences (RPDs), post digestion spikes, laboratory and field duplicate RPDs, field and equipment blanks, and reporting limits. Where appropriate, validation qualifiers and flags are applied to the data using USEPA procedures as guidance (USEPA, 2017). Based on the data validation, the data collected during the reporting period are acceptable for meeting project objectives. The associated data validation results are provided in Appendix C with the laboratory reports.

4.0 STATISTICAL ANALYSIS

Statistical analysis of the reporting period groundwater monitoring data was performed by Groundwater Stats Consulting, LLC (GSC), following the *Groundwater Monitoring Plan, 5-Year Permit Review* (EnSafe, 2025). The reports generated from the statistical analyses are provided in Appendix E (GSC, 2025, 2026). A summary of methods and results is provided in the following sections.

4.1 METHODS

The statistical method used at the Site was developed by GSC using methodology presented in Statistical Analysis of Groundwater Data at RCRA Facilities, Unified Guidance, March 2009, US EPA 530/ R-09-007 (US EPA, 2009). To develop the statistical methods, analytical data collected during the background period were evaluated and used to develop statistical limits for each Appendix III and IV parameter. Sanitas groundwater statistical software was used to screen the data and perform the statistical analyses. Sanitas is a decision support software package that incorporates the statistical tests required of Subtitle C and D facilities by US EPA regulations.

Appendix III statistical analysis was performed to determine if Appendix III constituents have returned to background levels. Appendix IV constituents were evaluated to determine if concentrations statistically exceeded the established GWPS. Detailed statistical methods used for Appendix III and Appendix IV constituents are discussed in the statistical analysis reports provided in Appendix E and summarized in Sections 4.1.1 and 4.1.2.

4.1.1 Appendix III Constituents

The statistical test used to evaluate the groundwater monitoring data was the interwell prediction limit (PL) method for Appendix III constituents (boron, calcium, chloride, fluoride, pH, sulfate, and total dissolved solids [TDS]) combined with the option of a 1-of-2 verification resampling strategy. Interwell prediction limits, constructed from all available pooled upgradient well data were used to evaluate the most recent compliance sample from each downgradient well reported during the September 2025 and March 2026 sampling events.

If data from a sampling event initially exceeds the PL, the resampling strategy may be used to verify the result. In 1-of-2 resampling, one independent resample may be collected and evaluated within 90 days to determine whether the initial exceedance is verified. If the resample exceeds the PL, the initial exceedance is verified, and an SSI is determined. When the resample result does not verify the initial result, there is no SSI. If resampling is not performed, the initial exceedance is a confirmed exceedance.

4.1.2 Appendix IV Constituents

To statistically compare groundwater data to GWPS, confidence intervals are constructed for each of the detected Appendix IV constituents in each downgradient detection and assessment

monitoring well with a minimum of four samples. In accordance with Section 21.1.1 of the Unified Guidance (USEPA, 2009), four independent data are the minimum population size recommended to construct confidence intervals required to assess SSLs for Appendix IV constituents. Due to supplemental (or ACM investigation) sampling, some Appendix IV constituents at a well location have differing number of analytical data points.

The confidence intervals are compared to the GWPS. Only when the entire confidence interval is above a GWPS is the well/constituent pair considered to exceed its GWPS. If a confidence interval exceeds a GWPS, an SSL exceedance is identified. GWPS were established for statistical comparison of Appendix IV constituents and are presented in Tables 8 and 9.

4.2 STATISTICAL ANALYSES RESULTS

Based on review of the full Appendix III statistical analysis discussion presented in Appendix E, groundwater conditions have not returned to background and assessment monitoring should continue. Review of the Sanitas results indicates that using the GWPS established according to both 40 CFR §257.95(h) and 391-3-4-.10(6)(a), the following Appendix IV SSLs were identified during the current reporting period:

<u>September 2025 Assessment Monitoring Event</u>
AP-1 (Federal and GA EPD CCR Rule):

- Arsenic: MCM-06
- Lithium: DPZ-02

<u>March 2026 Assessment Monitoring Event</u>
AP-1 (Federal and GA EPD CCR Rule):

- Arsenic: MCM-06
- Lithium: DPZ-02

An ASD was approved for lithium at MCM-06 and DPZ-02 by GA EPD on May 1, 2023 (Arcadis 2023).

Based on EPD guidance, groundwater trends at wells with SSLs were further evaluated by GSC using the Sen's Slope/Mann Kendall trend tests. Statistically-significant decreasing trends were identified for arsenic at MCM-06 and lithium at DPZ-02 following the September 2025 and March 2026 groundwater sampling events. Trends will continue to be evaluated as data is collected in future monitoring events. The full report generated from the analyses is provided in Appendix E.

5.0 NATURE AND EXTENT

The SSL previously identified for arsenic at MCM-06 is vertically delineated below the GWPS by assessment well DPZ-02.

As described in Section 2.3.2, to assess horizontal delineation of arsenic, Georgia Power proactively collected surface water samples from along Transect T2 in the tidal marsh adjacent to well MCM-06 of former AP-1. Arsenic was not detected above the Georgia instream water quality standard for dissolved arsenic for marine estuary environments (0.036 mg/L) using a laboratory reporting limit of 0.005 mg/L in surface water samples collected to date (Table 6); therefore, no impacts to surface water have been detected and horizontal delineation is complete.

The groundwater data from the September 2025 and March 2026 assessment monitoring events was used to generate the arsenic iso-concentration maps presented on Figures 12 and 13, respectively. Additional data from performance monitoring events that were utilized to create these maps can be found in Appendix C.

6.0 MONITORING PROGRAM STATUS

6.1 ASSESSMENT MONITORING STATUS

Pursuant to 40 CFR 257.96(b), Georgia Power will continue to monitor the groundwater at the former AP-1 in accordance with the assessment monitoring program regulations of 40 CFR 257.95 as corrective measures to address arsenic in MCM-06 are evaluated. Pursuant to § 257. 95(g)(1)(iv), the assessment wells will continue to be sampled as part of the ongoing semiannual assessment groundwater monitoring program.

6.2 ASSESSMENT OF CORRECTIVE MEASURES

A *Draft Remedy Selection Report* was submitted to GA EPD on February 28, 2023 (Arcadis 2023). A revision to the *Draft Remedy Selection Report* was submitted on January 18, 2024 (Arcadis 2024) to correct a typographical error. The *Draft Remedy Selection Report* was submitted under a separate cover. The report summarizes:

(i) the current conceptual site model applicable to evaluating groundwater corrective measures proposed in the ACM Report (Arcadis, 2020b);
(ii) an evaluation of each corrective measure retained for further consideration following the completed investigations; and,
(iii) an evaluation of corrective measure options using the comparative criteria such as long-term and short-term effectiveness and protectiveness, source control effectiveness, and ease of implementation. The *Draft Remedy Selection Report* presents geochemical approaches (in-situ injections) as the proposed groundwater remedy for former AP-1.

In the interim of GA EPD's review of the *Draft Remedy Selection Report*, the state agency issued a letter on February 16, 2024, stating their support for Georgia Power to initiate a pilot study at the former AP-1 to facilitate further remedy design. As discussed in Section 2.3.1, Georgia Power collected baseline data from wells prior to implementation of a remedial action pilot study. Georgia Power submitted a pilot study workplan and in situ injection request to GA EPD on April 30, 2024 that summarizes the baseline data collected to date, treatability study results, and additional data to support corrective action design. The GA EPD Watershed Protection Branch approved the UIC request in a letter dated June 26, 2024. The GA EPD Land Protection Branch approved the implementation of the pilot study in a letter dated August 2, 2024. Post-injection monitoring was completed in April 2025, and Georgia Power submitted a Pilot Study Summary Report as a stand-alone document, dated August 29, 2025. The report provided a summary of the pilot study activities and performance results, which can be found in Appendix B. GA EPD issued a letter on December 17, 2025, concurring with the summary report conclusions.

In February 2026, Georgia Power submitted a letter to GA EPD proposing to hold a public meeting, in accordance with 40 CFR §257.96(e), in the second quarter of 2026 to present the proposed remedial strategy at AP-1. The public meeting was held May 28, 2026 at the Brunswick

public library. Comments collected at the May 2026 Public Meeting will be considered in the remedy screening process to be submitted with the final Remedy Selection Report. Monitoring of corrective action piezometers continued during the 2025 annual reporting period to collect data supporting future corrective action. The groundwater analytical results from September 2025 and March 2026 corrective action piezometers are summarized in Table 5A; the laboratory reports and field logs associated with these results are provided in Appendix C.

6.3 ANNUAL POTABLE WELL SURVEY

As requested by EPD, a survey of water wells has been conducted within a two-mile radius from the site. The survey incorporated records from federal, state, and county sources cited in previously completed well surveys and additional data identified during the annual update. A current Environmental Data Resources (EDR) GeoCheck® Report is included in Appendix F. The wells identified were consistent with previous well surveys with the following updates. In 2025, existing data were compared to water meter locations provided on the recently published Brunswick-Glynn Joint Water & Sewer Commission (BGJWSC) Service Line Inventory Map. Approximately 250 developed parcels were identified as not having a BGJWSC water meter. A BGJWSC representative confirmed that the Service Line Inventory Map is up to date as of the 2024 reporting period and water meter data are representative of properties currently serviced by the commission. BGJSCW further confirmed that properties that do not have a water meter are serviced by a private or community well. The figure in Appendix F has been updated to correspond with the BGJWSC service line inventory.

7.0 CONCLUSIONS & FUTURE ACTIONS

This *2026 Annual Groundwater Monitoring and Corrective Action Report for Georgia Power's Plant McManus Former Ash Pond 1 (AP-1)* was prepared to fulfill the requirements of USEPA's CCR Rule and GA EPD rule 391-3-4-.10(6)(c). Statistical evaluations of the groundwater monitoring data from the September 2025 and March 2026 events at the former AP-1 identified the continued presence of SSLs for arsenic in detection well MCM-06 and lithium in assessment well DPZ-02. The lithium SSL in DPZ-02 has been addressed by an ASD with final approval from EPD on May 1, 2023. The arsenic SSL in MCM-06 is vertically delineated below the GWPS by DPZ-02. Surface water data along Transect 2 (T2) will continue to be collected as needed and analyzed for arsenic semiannually and reported in semiannual and annual groundwater monitoring reports. Arsenic was not detected above the Georgia instream water quality standard for dissolved arsenic for marine estuary environments in surface water samples collected to date; therefore, no impacts to surface water have been detected and horizontal delineation is complete.

Georgia Power will continue to monitor groundwater in the vicinity of former AP-1 under the current assessment monitoring program and adaptively manage the Site as new data become available. A *Draft Remedy Selection Report*, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to GA EPD on February 28, 2023. In the interim of GA EPD's review of the *Draft Remedy Selection Report*, the state agency issued a letter on February 16, 2024, stating their support for Georgia Power to initiate a pilot study at the former AP-1 to facilitate further remedy design. Georgia Power submitted a *Pilot Study Work Plan* and Pilot Test Notification Form for EPD review prior to initiating pilot testing. Pilot study injections activities were performed from August 13 to August 20, 2024 and post-injection performance monitoring has been implemented and completed. Georgia Power submitted a comprehensive *Pilot Study Summary Report*, dated August 29, 2025, as a stand-alone document which provided findings and recommendations for the design and implementation of the full-scale remedy. GA EPD issued a letter on December 17, 2025, concurring with the summary report conclusions. In February 2026, Georgia Power submitted a letter to GA EPD proposing to hold a public meeting in the second quarter of 2026 to present the proposed remedial strategy at AP-1. The public meeting was performed on May 28, 2026 outlining the proposed remedial strategy and allowed for the submittal of public comments . Comments collected at the May 2026 Public Meeting will be considered in the remedy screening process to be submitted with the final Remedy Selection Report.

The next routine semiannual assessment monitoring event for former AP-1 is scheduled for September 2026.

Georgia State Plane NAD83 East Zone referenced for horizontal datum.

Survey points measured from nail or known reference point.

Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.

Groundwater screened zone uses USCS designations for soil type.

Notes:

Elevations shown are in datum NAVD88, which indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.

Georgia State Plane NAD83 East Zone referenced for horizontal datum.

Survey points measured from nail or known reference point.

Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.

Groundwater screened zone references USCS designations for soil type.

Piezometers INW-01, PT-01 through PT-04D, and DR-01 through DR-03 were installed in support of a pre-design investigation and are not included in the monitoring well network.

* - wells were abandoned in October 2025, separate Abandonment Report submitted

Ash Pond Monitor	NA	LT	NA	**	NA	3.39
		HT	NA	**	NA	3.25

Notes:

NAVD88 indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.

LT - Low Tide Measurement

HT - High Tide Measurement

Surface water transducer monitors used for surface water elevations

NA - indicates not applicaple

** - value unavailable at time of water level sweep

Piezometers INW-01, PT-01 through PT-04D, and DR-01 through DR-03 were installed in support of a pre-design investigation and are not included in the monitoring well network

A/R - well was abandoned or removed from network prior to water level sweep

SU - Standard Units
NA - Indicates not analyzed
< indicates the substance was not detected above the method detection limit (MDL). The value displayed is the MDL.
J - The result is an estimated concentration. “J” qualifiers are applied by the laboratory when the concentration reported is above the method detection limit, but below the laboratory reporting limit.
Radium data are a combination of radium isotopes 226 and 228. When results are reported below the MDC (Minimum Detectable Concentration), data is displayed with an accompanying U. The MDC varies depending upon the sample amount and elapsed time of the measurement.

		HT	3.99	2.27	1.72	723.07	0.0024	3.40	0.35	0.023	8.43

Notes:
ft – feet
HT - High Tide Measurement
LT- Low Tide Measurement
In-situ hydraulic conductivity (slug) tests in the Upper Satilla Formation at the Site ranged from 0.27 to 52.72 feet/day with an average of 3.40 feet/day
Effective porosity of 35% was selected for the alluvial coastal deposits of very fine to fine sands ranging from the surface to 33-34ft below ground surface identified during the subsurface investigations at the site
See figures for illustrated flow path
Groundwater flow velocity equation: V= (K* i)ne
where:
V = groundwater flow velocity
K = average hydraulic conductivity
i = horizontal hydraulic gradient
ne = estimated effective porosity

Selenium	mg/L	0.05		0.073	0.073
Thallium	mg/L	0.002		0.002	0.002

Notes:
GWPS- Groundwater Protection Standard
MCL - Maximum Contaminant Level
mg/L - milligrams per liter
pCi/L - picocuries per liter
The background limits are used when determining the groundwater protection standard (GWPS) under 40 CFR § 257.95(h) and 391-3-4-.10(6)(a).
Under existing EPD rules, the GWPS is: (i) the MCL or RSL, (ii) where the MCL or RSL is not established, the background concentration, or
(iii) background levels for constituents where the background level is higher than the MCL or RSL

Table 9
Summary of Background Levels and GWPS - March 2026

Note:
Piezometers proposed for abandonment are not associated with the Coal Combustion Residuals (CCR) well network and will be abandoned upon approval of the Environmental Protection Division - Hazardous Site Response Branch, Response and Remediation Program.

Non-CCR Related Piezometers are not associated with the CCR well network. DPZ-01 and DPZ-03 are piezometers used in a hydrological assessment completed in 2020. MWA-18 is reported under the Hazardous Site Response Act (HSRA).

Piezometers INW-01, PT-01 through PT-04D and DR-01 through DR-03 were installed in support of a pre-design investigation and are not included in the monitoring well network.

I. CERTIFICATION

I hereby certify that this *Well Abandonment Report, Plant McManus Former Ash Pond 1* was prepared by, or under the direct supervision of, a "Qualified Groundwater Scientist," in accordance with the Rules of Solid Waste Management. According to 391-3-4-.01(57), a Qualified Groundwater Scientist is "a professional engineer or geologist registered to practice in Georgia who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields that enable individuals to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action." The design of the groundwater monitoring system was developed in compliance with the Georgia Environmental Protection Division (EPD) Rules of Solid Waste Management, Chapter 391-3-4.10(6)

Signature: _____

Date: December 4, 2025

1. INTRODUCTION

This report has been prepared to summarize abandonment of the following wells: MCM-03, MCM-13, DPZ-04, DPZ-05, DPZ-06, RW-1, RW-2, RW-3, RW-4, RW-5, RW-6, RW-7, RW-8, RW-9, RW-10, PZ-10, PZ-12, and PZ-14A (**Figure 1**). Abandonment procedures began on October 13th 2025 and concluded on October 17th 2025. This report contains the Well Abandonment Logs (**Appendix A**) for each well.

Additionally, this report certifies that temporary piezometers TPZ-1 through TPZ-5 were previously abandoned. In March 2019, temporary piezometers (TPZ-1 through -5) were placed inside the former AP-1 and in the marsh, north of the northern dike and south of the Crispen Island Drive dike in order to further evaluate both groundwater flow directions/velocities and the tidal influence in the groundwater system. These piezometers consisted of one 5-foot section of 1-inch well screen that was manually (by hand) advanced approximately 1.5 feet into the soft sediment of the respective location. Temporary piezometers TPZ-3, TPZ-4, and TPZ-5 were decommissioned prior to January 23, 2020 by manually removing the 5-foot well screen and transducer from the sediment at which time the soft sediments would immediately collapse upon itself. The *Hydrological Assessment Report (HAR) Rev4*, dated June 2020, notes piezometers TPZ-3 through TPZ-5 as abandoned in Table 3, *Groundwater Elevation Data*. TPZ-1 and TPZ-2 were located in the marsh outside of the permit boundary of former AP-1. They were maintained until June of 2020 and were decommissioned using a procedure consistent with the that described for TPZ-3 through TPZ-5 above. The TPZ locations were visually inspected during the 2025 abandonment activities to verify removal. No evidence of the TPZ piezometers was observed.

2. WELL ABANDONMENTS

Georgia Power submitted a *Request for Minor Modification to Update Groundwater Monitoring Network*, dated September 12, 2025, to Georgia Environmental Protection Division (GA EPD) as notification of intent to abandon 18 piezometers and to remove an additional 10 piezometers from routine water level gauging as part of the groundwater monitoring network. GA EPD approved the *Request for Minor Modification to Solid Waste Handling Permit* (Minor Modification) in a letter dated October 10, 2025. In accordance with the approval letter, Georgia Power abandoned these wells under "Option 2" which states "The use of fine sand for backfill in the screened interval of the wells then tremie grout to surface with a high total dissolved solids (TDS) clay/cement mix. This option also includes removal of the upper three feet of well casing at ground surface."

The well abandonments were conducted in accordance with the *Groundwater Monitoring Plan, Plant McManus – Inactive Ash Pond AP-1, Glynn County, Georgia*, dated February 2021, and the United States Environmental Protection Agency, Region 4 Science and Ecosystem Support Division, Operating Procedure for *Design and Installation of Monitoring Wells* (SESDGUID-101-R2 January 16, 2018). Well abandonments were conducted by UES and overseen by a Georgia-licensed professional geologist (PG)).

Piezometer abandonments were completed using the following procedures:

- The well screened interval was filled with fine sand and measured to assure the sand was above the well screen. The remainder of the casing was backfilled with the appropriate grout material (80% Portland cement and 20% high TDS clay). The backfill material was placed into the well casing from the top of the sand backfill, bottom to the top, utilizing pressure grouting with the positive displacement method (Tremie method).

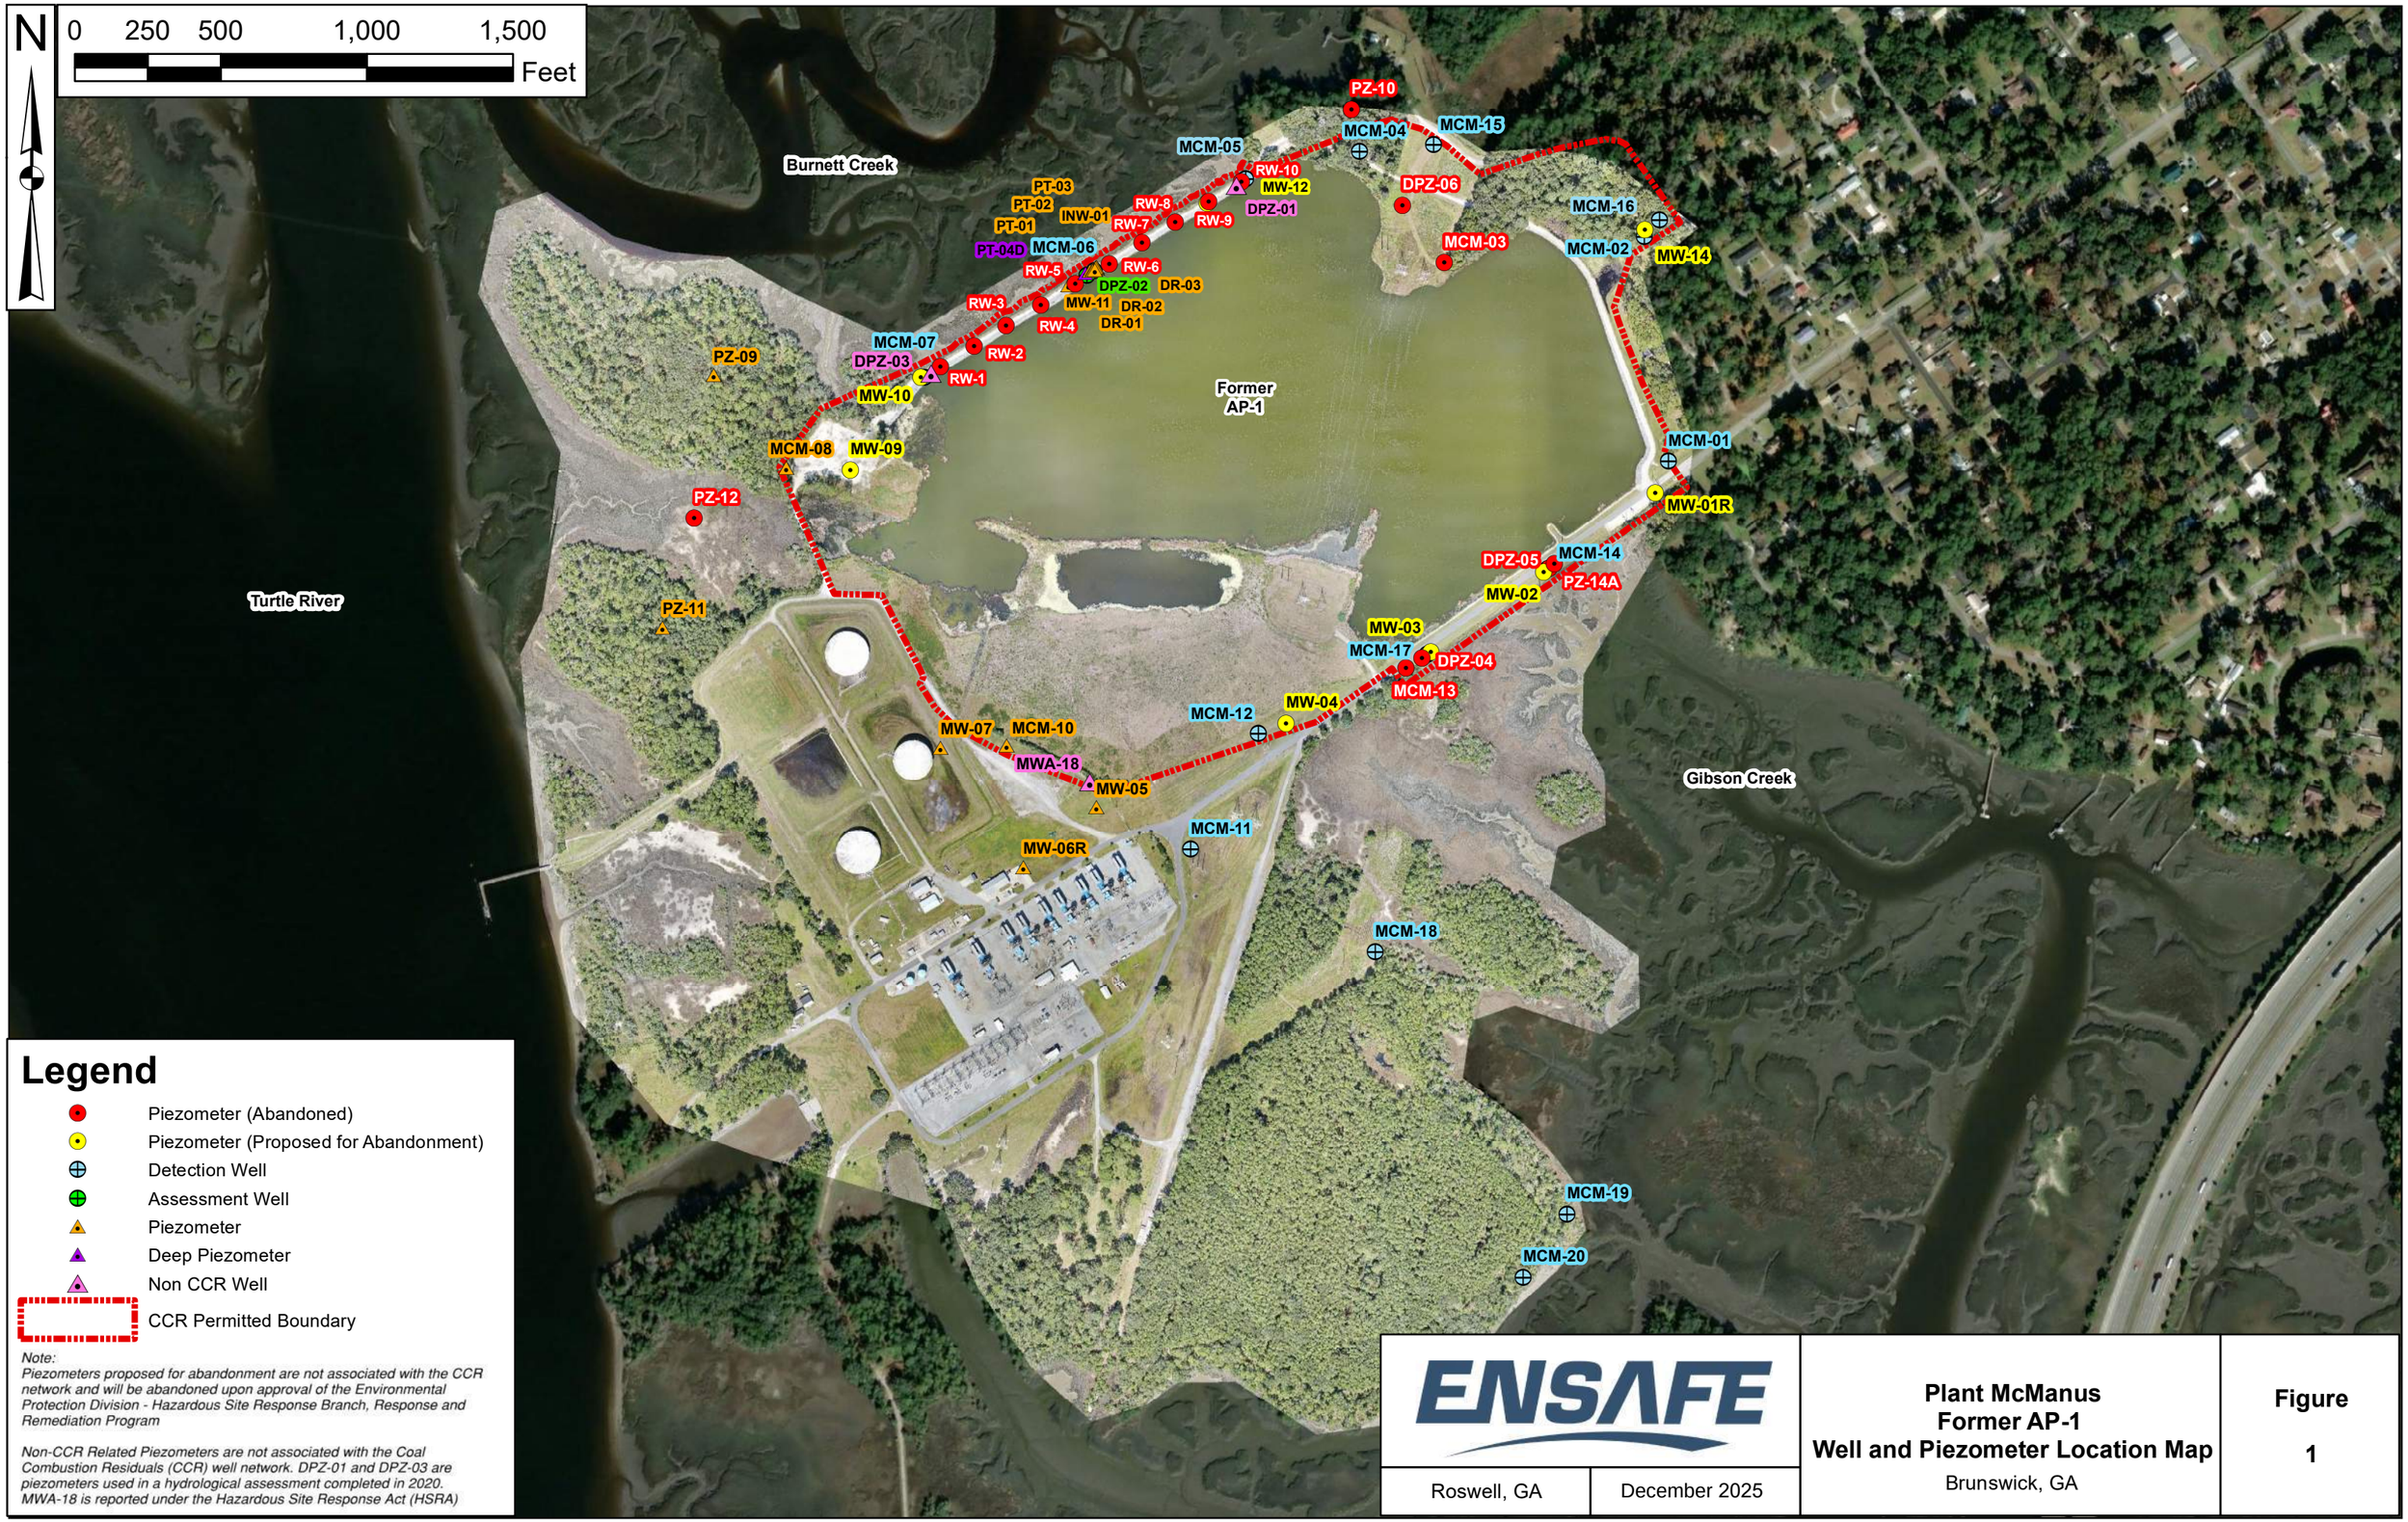
- The grout mixture was allowed a 24-hour setting period, after which the surface completions (e.g., concrete well pads, steel casings, bollards) were removed and segregated for proper disposal.

- Well casing was removed from top of casing to a depth of approximately one foot below ground surface (bgs) for wells located on the dikes to maintain dike stability, and to a depth of approximately three feet bgs for wells located off the dikes, using an excavator. Additional grout was added to the top of the remaining well casing, if needed, to inhibit infiltration.

- Former piezometer surface completion depressions that remained after the abandonment were restored to match surrounding surface conditions.

Well abandonment logs (**Appendix A**) were completed for each location to document the date of well abandonment, abandonment method, length of casing extracted and/or left in the ground, volume of sand and grout emplaced, and any other pertinent information regarding issues encountered during the well decommissioning process.

Figure 1 – Well and Piezometer Location Map



Legend

- Piezometer (Abandoned)
- Piezometer (Proposed for Abandonment)
- Detection Well
- Assessment Well
- Piezometer
- Deep Piezometer
- Non CCR Well
- CCR Permitted Boundary

Note:
Piezometers proposed for abandonment are not associated with the CCR network and will be abandoned upon approval of the Environmental Protection Division - Hazardous Site Response Branch, Response and Remediation Program

Non-CCR Related Piezometers are not associated with the Coal Combustion Residuals (CCR) well network. DPZ-01 and DPZ-03 are piezometers used in a hydrological assessment completed in 2020. MWA-18 is reported under the Hazardous Site Response Act (HSRA)

Non-CCR Well Network Piezometer							
PZ-14A*	11.10	NA	NA	NA	15.10	-4.00	6.10

Notes:

* PZ-14A is a piezometer not associated with the CCR well network that is located within the CCR Permit Boundary of former AP-1.

Elevations shown are in datum NAVD88, which indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.

ft BTOC - feet below top of casing

LT - Low Tide Measurement

HT - High Tide Measurement

NA - indicates not applicable

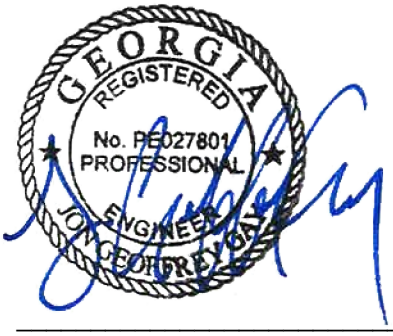
Certification Statement

This Pilot Study Summary Report, Georgia Power Company – Plant McManus Former Ash Pond 1 (AP-1) has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Arcadis U.S., Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.



Geoff Gay, P.E. (PE 27801)
Technical Expert (Eng.), Vice President
August 29, 2025

1 Background and Purpose

Arcadis U.S., Inc. (Arcadis) developed this Pilot Study Summary Report (Report) as part of the implementation of Assessment of Corrective Measures (ACM) process at Georgia Power Company's (Georgia Power) Plant McManus Former Ash Pond 1 (AP-1; **Figure 1**). The Draft Remedy Selection Report (Arcadis 2024a) proposed in-situ geochemical injections as the corrective measure to address concentrations of arsenic reported at statistically significant levels (SSLs) above the Groundwater Protection Standard (GWPS) of 0.032 milligram per liter (mg/L) in detection monitoring well MCM-06 (**Figure 2**). The nature and extent of arsenic is documented in the 2024 Semiannual Groundwater Monitoring and Corrective Action Report (EnSafe 2025). As documented in the Draft Remedy Selection Report, in-situ geochemical injections meet the required remedy criteria set forth in the United States Environmental Protection Agency's (USEPA's) Coal Combustion Residuals (CCR) Rule, 40 Code of Federal Regulations (CFR) Part 257 effective October 19, 2015 (CCR Rule) including subsequent revisions and Georgia Environmental Protection Division's (GA EPD's) Rule for Solid Waste Management Rule 391-3-4-.10 for CCR.

In a letter dated February 16, 2024, the GA EPD Solid Waste Management Program reviewed the Draft Remedy Selection Report and provided written concurrence to move forward with pilot testing to inform corrective action design. Arcadis prepared the MCM-06 Pilot Study Work Plan (Work Plan; Arcadis 2024b) detailing the planned injections and subsequent performance monitoring. Both the GA EPD Underground Injection Control (UIC) program and Solid Waste Management Program approved the Work Plan in a letter dated June 26, 2024, authorizing limited pilot test injections with a 90-day duration to inform corrective action design. This Report summarizes the results of the pilot injection study.

Design of an in-situ geochemical injection corrective measure includes multiple assessment and design components such as pilot studies to evaluate injection delivery and the performance of injectates before implementing a full-scale remedy to address arsenic SSLs on site in the vicinity of MCM-06. Specifically, the objectives of this pilot study were:

- Determine the site-specific hydrogeologic and injection parameters necessary to design and implement in-situ treatment (i.e., injection flowrates, injection pressures, radius of influence [ROI], required injection volumes, concentrations, and injection frequency).
- Determine the efficacy of in-situ injections with ferrous chloride tetrahydrate ($FeCl_2 \cdot 4H_2O$) for addressing arsenic concentrations in groundwater.
- Verify that there are no sustained increases in Appendix IV parameters above GWPS due to injections.

This Report provides a summary of pre-injection activities and the in-situ injection pilot study completed at the Site between June 1 and August 20, 2024 and post-injection data monitoring conducted between August 27, 2024 and April 16, 2025.

The following previous reports have been submitted to document pilot study progress:

- 2024 Semiannual Pilot Study Progress Report (Appendix of Ensafe 2025); and
- Pilot Study Post-Injection Event Report (45-Day Report; Arcadis 2024c).

Both are provided within **Appendix A** of this Report.

Georgia Power anticipates receiving written authorization from GA EPD to hold the public meeting with the selected remedy of in-situ injection. After the public meeting, Georgia Power will revise the Draft Remedy Selection Report, incorporating results of the pilot study and public meeting comments.

2 Pre-Injection Activities

Pre-injection activities, completed between June 1 and August 13, 2024, before the initiation of the in-situ pilot study, included well installation, baseline groundwater sampling, and reagent selection.

2.1 Well Installation

A temporary performance monitoring network was installed proximal to detection well MCM-06 in an area where detections of arsenic above the GWPS were expected based on high-resolution site characterization activities. The purpose of this performance monitoring network was to evaluate reagent distribution and pilot study performance for an interim period to inform full-scale corrective action design. This monitoring network consists of temporary dose-response and performance monitoring piezometers and existing detection well MCM-06 shown on **Figure 2.**

Temporary corrective action dose-response piezometers (dose-response piezometers) were installed within the design ROI for the pilot study to be sampled during and after the injection event to track arrival of injection solution. Temporary corrective action performance monitoring piezometers (performance monitoring piezometers) were installed outside of the design ROI and sampled following injection to evaluate the groundwater quality and groundwater flow direction following the completion of injection activities.

The temporary piezometers and temporary injection well INW-01, installed between May 2022 and June 2024, are screened at depths and lithology generally similar to those of detection well MCM-06 and constructed in general accordance with the Permit No. 063-030D(CCR) groundwater monitoring plan (GWMP; Resolute 2021). Cascade Environmental installed the piezometers under contract with Southern Company Services (SCS) Civil Field Services. Well construction details are provided in **Table 1** and completion reports are provided in **Appendix B**.

2.2 Baseline Sampling

Groundwater samples were collected from temporary injection well (INW-01), dose-response piezometers (DR-02, PT-03, and DR-03), performance monitoring piezometers (PT-01, PT-02, and DR-01), and detection monitoring well MCM-06 on June 18 and 19 and July 23, 2024 to establish pre-injection baseline conditions. The results for the baseline sampling events are presented in **Table 2**. The baseline analytical laboratory results and field sampling and equipment calibration forms are provided in the 45-Day Report (Arcadis 2024c; **Appendix A**). These pre-injection baseline groundwater data were evaluated along with historical groundwater sample results provided in Appendix B of the Work Plan (Arcadis 2024b).

Baseline sampling data from June and July 2024 were consistent with historical results and indicated highly reducing conditions based on iron, sulfate, and sulfide data as well as arsenic concentrations greater than the GWPS (**Table 2**). This understanding is supported by:

- Highly negative oxidation reduction potential (ORP) values (range: -58.2 to -353.3 millivolts [mV], average: -250.9 mV), and low levels of dissolved oxygen (DO; less than 1 mg/L) in samples collected from wells located along the dike.
- Bicarbonate alkalinity reflective of the production of bicarbonate as part of microbial reduction processes.
- Elevated sulfide (>20 mg/L) concentrations at sample locations with elevated arsenic content. For example, the two wells with the highest sulfide concentrations (DR-02 and MCM-06) also exhibited the highest total arsenic concentrations. At DR-02, sulfide concentrations in June and July 2024 were 26 and 33 mg/L, and corresponding total arsenic concentrations were 0.0482 to 0.0726 mg/L, respectively. At MCM-06, sulfide concentrations in June and July 2024 were 31 and 42 mg/L, and corresponding total arsenic concentrations were 0.0776 and 0.0762 mg/L, respectively.
- Detections of reduced-phase arsenic species (predominantly thioarsenic species) compared to oxidized forms (arsenate), particularly in DR-02, PT-03, and MCM-06. The reduced-phase arsenic species concentrations were 66.2 µg/L, estimated; 81.0 µg/L, estimated; and 121 µg/L, estimated, respectively, up to two orders of magnitude greater than arsenate concentrations, which were less than the laboratory method detection limit (2.0 µg/L, estimated) at all three locations.

2.3 Reagent Selection and Removal Mechanism

As discussed in the Geochemical Conceptual Site Model Report (Appendix A to the Draft Remedy Selection Report [Arcadis 2024a]), arsenic is present as thioarsenic species in groundwater at detection monitoring well MCM-06. Thioarsenic species formation is linked to iron and sulfur cycling, and elevated concentrations of sulfur compounds (e.g., sulfide and sulfate) present in the groundwater near MCM-06 that are likely promoting thioarsenic species formation through biologically mediated sulfate reduction and other pathways (Herath et al. 2018). As such, an approach to treatment of thioarsenic species in groundwater is to reduce the concentration of dissolved sulfide available in groundwater and thereby disrupt the arsenic-sulfide complex and reduce the solubility of arsenic in groundwater.

The selected reagent, ferrous chloride, readily precipitates with sulfide to form insoluble ferrous sulfide minerals such as mackinawite (FeS) and pyrite (FeS_2). Arsenic liberated from the thioarsenic complex can co-precipitate with or sorb onto the ferrous sulfide minerals or more readily sorb onto existing aquifer minerals. Removal of arsenic from groundwater when ferrous iron is added was demonstrated in bench-scale testing (Appendix C to the Work Plan [Arcadis 2024b]), which showed a reduction in arsenic concentrations in groundwater and a conversion of remaining arsenic into less soluble arsenate and arsenite species. An iron dose of 0.2 percent by weight iron was selected based on the results of bench-scale testing.

3 Injection Activities

Cascade Drilling conducted pilot study injection activities between August 13 and 20, 2024, with technical supervision by Arcadis (45-Day Report [Arcadis 2024c; **Appendix A]**). Injections occurred over a 7-day period between August 13 and 19 with a day of demobilization on August 20, 2024. The work was completed in accordance with the GA EPD-approved Pilot Test Notification Form and the Work Plan (Arcadis 2024b).

The injection solution consisted of a mixture of ferrous chloride, tracer (deuterated water), and potable water from an on-site source designated in the Work Plan (Arcadis 2024b). ProChem, Inc. provided the selected solid ferrous

chloride reagent as ferrous chloride tetrahydrate, an iron chloride with four water molecules included in its crystal structure. Injectate batches consisted of approximately 0.2 percent by weight iron (Fe) and 0.037 percent deuterium tracer administered at the MCM-06 pilot study area.

A total of 4,329 gallons of injection solution was introduced at INW-01 over a 7-day period. An initial leak test was conducted with 50 gallons of potable water on August 13, 2024. Additionally, at the end of each day from August 13 to 19, a 50-gallon batch of potable water was added to the injection well to flush the reagent from the well. The location of temporary injection well INW-01 is shown on **Figure 2**. Injection pressures, flowrates, water levels, and groundwater quality parameters[1] were measured throughout injection and are provided in **Appendix A**. At INW-01, the wellhead pressure remained below 1 pound per square inch (psi) for the duration of the injection, which was well below the limit of 5 psi presented in the Pilot Test Notification Form. Additionally, the daily maximum injection volume remained below the value included in the Pilot Test Notification Form (3,000 gallons per day). Daily maximum wellhead pressure and injected solution volumes are provided in **Table 3** and summarized in **Exhibit 1;** cumulative injected solution volumes are also shown on **Figure 3**. The maximum daily injection volume (748 gallons) occurred on August 16, 2024, and the average daily injection volume was 618 gallons (**Exhibit 1**). A summary of injection activities is included in **Exhibit 1** below.

Exhibit 1. Summary of Injection Activities

Injection	INW-01
Maximum Well Head Pressure (psi)	0.8
Average Flow Rate (gpm)	2.22
Average Daily Injection Volume (gallons)	618
Total Injection Volume (gallons)	4,329
Total Injection Volume Potable Water (gallons)[1]	400

1. Total injection volume of potable water includes 50 gallons from the initial leak test on August 13, 2024 plus a total of 350 gallons used to wash the injection well after daily injection activities (50 gallons per day from August 13 to 19, 2024).

The injection flowrate over the 7-day period decreased from an initial maximum flowrate of 5.5 gallons per minute (gpm) to a final flowrate of 1.1 gpm (**Figure 3**). Batch preparation was adjusted during the first day of injections by reducing each batch size and limiting oxygen contact in order to reduce the potential for injection solution oxidation and formation of precipitates, which can clog the well screen and filter pack. Despite the observed decrease in flowrate, a sufficient volume was injected to observe arrival at dose-response piezometers and for the determination of additional design parameters, as discussed in Section 5.

In addition to flow monitoring, sampling for ferrous iron, total iron, deuterium and field parameter monitoring was conducted in accordance with the Work Plan at dose-response piezometers DR-02, DR-03, and PT-03 to confirm distribution of injected reagent solution and develop breakthrough curves of injection solution to evaluate mobile porosity for full-scale design. These results, as well as initial and final arsenic concentrations, are summarized in **Table 4.** Associated analytical reports are included in **Appendix C**. Performance monitoring piezometer samples were collected at a reduced frequency. These results are also provided in **Table 4** and **Appendix C**. GEL Laboratories analyzed groundwater samples for all analyses except for deuterium, arsenic speciation, and sulfide,

[1] Injection pressures and flowrates were only measured at INW-01 during the active injection period, but water levels and groundwater quality parameters were measured in all monitoring wells shown on **Figure 2**.

which were evaluated by Isotope Tracer Technologies, Brook Applied Laboratories and Eurofins, respectively. GEL Laboratories and Eurofins are accredited by the National Environmental Laboratory Accreditation Program (NELAP) and maintain NELAP certifications for the constituents and geochemical parameters analyzed for this project. Ferrous iron was analyzed in the field with a Hach® test kit.

A detailed summary of the injection activities is provided in the 45-Day Report (Arcadis 2024c; **Appendix A**).

4 Post-Injection Performance Monitoring Activities

The purpose of post-injection performance monitoring is to evaluate the efficacy of the injections to treat arsenic in groundwater to less than the GWPS and assess the longevity of the injection performance and potential downgradient effects over an extended period.

Arsenic concentrations at performance monitoring piezometers were monitored to evaluate arsenic treatment outside of the influence of injections. Concentrations of Appendix IV parameters at dose-response and performance monitoring piezometers were also tracked.

Post-injection performance monitoring was initiated on August 27, 2024, with groundwater samples collected from INW-01 and all dose-response and performance monitoring piezometers in accordance with the Work Plan. The post-injection performance monitoring frequency was weekly for the first month after injections, bimonthly for the second and third months after injections, and finally, quarterly for the duration of the pilot study. The wells sampled in the post-injection performance monitoring program included the temporary injection well (INW-01), dose-response piezometers (DR-02, PT-03, DR-03), performance monitoring piezometers (PT-01, PT-02, DR-01), and detection monitoring well MCM-06. Groundwater samples collected from these locations were generally evaluated for the complete suite of Appendix III and Appendix IV constituents (except radium), arsenic speciation, geochemical parameters (including deuterium[2]), and field parameters. The sampling schedule and full analytical list are provided in **Table 5**.[3]

Groundwater analytical results from the post-injection monitoring events through the end of the post-injection monitoring period (Week 34; April 15 and 16, 2025) are summarized in **Table 6**. The field and laboratory reports associated with Week 23 and Week 34 sampling events are provided in **Appendices D and E**, respectively. Field and laboratory reports from earlier sampling events are provided in previously submitted reports (**Appendix A**). Laboratory reports associated with the pilot study investigation are included in **Appendix E** and were generated by the same laboratories used during the injection event as specified in Section 3.

5 Pilot Study Results

As stated in Section 1, the first objective of the pilot study was to determine site-specific hydrogeologic and injection parameters necessary to design and implement in-situ treatment including injection flowrates, injection pressures, ROI, required injection volumes, concentrations, and injection frequency. Section 5.1 discusses injection parameters such as injection flowrates, pressures, and volumes, and Section 5.2 discusses the ROI observed during the pilot study.

[2] Deuterium results were analyzed by Isotope Tracer Technologies, Inc. (Waterloo, Ontario) rather than the UC Davis Isotope Laboratory, as indicated in the Work Plan (Arcadis 2024b).
[3] Changes to the sampling program compared to the sample schedule provided in the Work Plan (Arcadis 2024b) are summarized in the 2024 Semiannual Pilot Study Progress Report (Arcadis 2025).

The second objective of the pilot study was to determine the efficacy of in-situ injections with ferrous chloride for addressing arsenic concentrations in groundwater, and the third objective was to verify that there were no sustained increases in Appendix IV parameters above their respective GWPS due to injections. Section 5.3 discusses the concentrations observed during the pilot event and in the post-injection monitoring phase.

5.1 Sustainable Injection Pressure and Flowrate

The maximum flowrate and peak groundwater mounding observed at the MCM-06 pilot study area were 5.5 gpm and between 0.5 and 1 ft, respectively (**Appendix A**). Injection flowrates decreased over time, from a maximum of 5.5 gpm to 1.1 gpm by the end of the study, under gravity-feed conditions (**Figure 3**). The decrease in flowrate is likely due to the formation of iron oxide precipitates observed during reagent mixing, which can clog the well screen and filter pack. It is expected that a flowrate greater than 1.1 gpm may be achievable during the future in-situ injection with reagent preparation modifications and the application of light pressure (less than 5 psi) and mixing methods to minimize oxidation.

Increases in groundwater elevation due to the injection (groundwater mounding) were minimal, generally less than 1 foot during injection, and within the variation of groundwater elevations due to tidal influences at the site (**Appendix A**).

5.2 Radius of Influence

As discussed above, sampling and monitoring were conducted during injections at dose-response piezometers DR-02, DR-03, and PT-03 to achieve the following objectives:

- Confirm distribution of injected reagent solution.
- Develop breakthrough curves of injection solution to calculate parameters for future full-scale design.

The arrival of the ferrous chloride injection solution was evaluated with field data (ferrous iron), analytical data (deuterium tracer and total iron), and visual observations collected and recorded during dose-response monitoring (**Table 4**). **Figure 4** shows the arrival of total iron, deuterium, and ferrous iron at the dose-response piezometer DR-03 based on their respective percent relative concentrations to the injection solution. Results indicated successful ROI between 4 and 6 feet, as detailed below.

The arrival of an injection solution can be evaluated by comparing the concentration of a tracer or component of an injection solution against their respective concentrations in the bulk injection solution. This relationship is expressed as percent relative concentration and is calculated using the following generic formula:

$$A = \frac{[C]_{sample} - [C]_{baseline}}{[C]_{injected} - [C]_{baseline}}$$

Where $[C]_{sample}$ is the concentration at a given sampling point, $[C]_{baseline}$ is the baseline concentration, and $[C]_{injected}$ is the concentration of the injection solution. This calculation normalizes observed values to the range between the baseline and the injected tracer, allowing relative enrichment to be compared across samples. The higher the percent relative concentration, the greater the water collected at the wells reflects the injection solution. Arrival at a dose-response piezometer is indicated by an increase in relative concentration followed by a levelling off at a maximum relative concentration.

Dose-response piezometer DR-03, which is located 4 feet from the temporary injection well, saw injection solution arrival within the first 500 gallons injected, with a relative deuterium concentration of 12.42 percent (386 ± 0.19 per mil [‰]), and relative total iron concentration of 4 percent (76.1 mg/L) of the injection solution (**Figure 4**). By the completion of the injection program, the maximum relative deuterium concentration was 55.15 percent (1,686 ± 3 ‰), and the maximum relative total iron concentration was 31.95 percent (561 mg/L) at this location. These relative concentrations are less than 100 percent, which would indicate that the water at the dose-response piezometer is a mixture of injection solution and formation water.

Injection solution arrival at PT-03, located 6 feet from the temporary injection well, occurred later during the injection program (at approximately 2,000 gallons injected), and at lower final maximum relative concentrations (18.08 and 4.38 percent for deuterium and iron, respectively; **Table 4**).This would be anticipated due to the greater distance from the temporary injection well and higher level of dilution of the injection solution.

Based on the data collected during dose-response monitoring, DR-02, located 10 feet from the temporary injection well, was outside the injection ROI. There was little to no change in the relative concentrations of deuterium or iron throughout dose-response monitoring (**Table 4**).

The timing for the arrival of injection solution was further confirmed by visual observations of a black precipitate, which was identified in samples collected during the injection program in DR-03 and PT-03. Precipitate formation was observed one day after the start of injections in DR-03 and approximately three days after the start of injections in PT-03. A photo of the precipitate in conjunction with the arrival of other dose response constituents is provided in **Figure 4**. This black precipitate was later determined to be iron sulfide minerals based on electron microscopy and microanalysis techniques (scanning electron microscopy [SEM], energy dispersive X-ray spectroscopy [EDS], and backscattered electron imaging [BSE]) conducted by MicroVision Laboratories, Inc. [**Appendix F**]).

5.3 Post-Injection Monitoring: Injectate Efficacy and Dosing

The purpose of post-injection performance monitoring is to evaluate the efficacy of the injections to treat arsenic in groundwater to less than the GWPS and assess the longevity of the performance of the injection and potential downgradient effects over an extended period. As discussed in Section 2.3, ferrous chloride provides treatment by reducing the concentration of dissolved sulfide available in groundwater and through the generation of iron sulfide minerals, which disrupts the arsenic-sulfide complexes and provides sorption points for arsenic. As such, the primary indicators of effectiveness and longevity in this pilot study are:

- Decreasing arsenic concentrations to below the GWPS at dose-response piezometers;
- Reduction in sulfide concentrations at dose-response piezometers; and
- Measurable concentrations of iron in solution at dose-response piezometers over time (to verify field measurements).

Injection of a 0.2 percent by weight iron solution successfully treated arsenic concentrations in groundwater to below the GWPS at wells within the injection ROI (DR-03, and PT-03; **Figures 5 and 6**). DR-03, located 4 feet from the temporary injection well, exhibited the greatest arrival of injection solution based on deuterium and iron results. Iron concentrations increased from 0.252 mg/L on July 23, 2024 to a maximum of 1,210 mg/L on August 27, 2024, an increase in concentration of almost four orders of magnitude a week following the injection. With the

arrival of the injection solution, the total arsenic concentration at DR-03 decreased from a maximum of 0.0376 mg/L on July 23, 2024 to less than the laboratory method detection limit (0.01 mg/L) on August 27, 2024, resulting in at least a 73 percent decrease immediately after injection[4] (**Figure 5; Tables 2 and 6**). Similarly, following the injections, sulfide concentrations decreased from 31 mg/L on July 23, 2024 to 11 mg/L on August 27, 2024, a 65 percent decrease, demonstrating the intended removal mechanism was occurring.

PT-03 received a lower dose of the injection solution but still treated arsenic to less than the GWPS. The total iron concentration in groundwater at PT-03 was 128 mg/L on August 27, 2024 a week following the injection. The total arsenic concentration at PT-03 decreased from a maximum baseline concentration of 0.060 mg/L on June 18, 2024 to 0.023 mg/L, estimated on August 27, 2024, a 62 percent decrease immediately after injection (**Figure 6; Tables 2 and 6**). In that same period, sulfide concentrations halved from a baseline result of 18 mg/L to 9.9 mg/L.

DR-02 was outside of the injection ROI, and performance monitoring at this location suggests that the injection solution did not reach this location, as demonstrated by low deuterium relative concentration, lack of iron arrival, and no observed arsenic treatment (**Tables 4** and **6**).

5.3.1 Long-term Treatment Performance

Long-term monitoring has shown that the iron added by the injection of a 0.2 percent by weight iron solution has been able to maintain arsenic treatment for up to 9 months following the pilot study injection at locations within the core of the injection ROI (represented by DR-03). However, increases in arsenic concentrations at the outer perimeter of the injection ROI (represented by PT-03) during the final post-injection sampling event (34-week) suggest that maintenance injections or smaller design ROI may be required during full-scale implementation. These results are discussed further below.

During the post-injection monitoring period, migration of the injected solution was tracked by measuring deuterium tracer concentrations. As shown on **Figures 5** and **6**, deuterium concentrations decreased during the post-injection monitoring period from maximum relative deuterium values of 87 percent at DR-03 and 18 percent at PT-03 to near baseline concentrations. The return to baseline concentrations occurred within approximately 1 month at PT-03 and within 3 months at DR-03.

Despite the migration of the injection solution outside of the pilot study area, the arsenic concentration in DR-03 has remained less than the GWPS through the 34-week (9 month) sampling event (0.00523 mg/L, estimated) (**Figure 5**). Similarly, total iron concentrations remain elevated at DR-03 in the most recent sampling event (11.5 mg/L) compared to baseline (0.252 mg/L). Sulfide concentrations at DR-03 remain below the average background level (23 mg/L), with the most recent measurement on April 15, 2025, recorded at 5.8 mg/L.

While continued treatment was observed in groundwater sampled from DR-03, arsenic concentrations increased in groundwater at PT-03 to above the GWPS during the week 34 (9-month) sampling event (0.045 mg/L). Iron and sulfide concentrations during that sampling event had also returned close to baseline (0.0561 mg/L, estimated and 21 mg/L, respectively).

Continued suppression of arsenic and sulfide concentrations in groundwater at DR-03 suggests that the iron added as part of the pilot study has promoted iron sulfide precipitation and shifted the iron-sulfur-arsenic cycling to favor the attenuation of arsenic in groundwater, as discussed in Section 2.3. The selected reagent (ferrous chloride) readily precipitated with sulfide during the injection to form insoluble ferrous sulfide minerals, shown on **Figure 4** and confirmed with microscopy as discussed in Section 5.2. Arsenic released from the thioarsenic

[4] The reporting limit of 0.01 mg/L was used in the calculation.

complex can co-precipitate with or sorb onto these ferrous sulfide minerals or more readily sorb onto existing aquifer minerals. This trend is consistent with the sustained reduction in arsenic concentrations discussed above, further supporting that effective in-situ geochemical transformation has occurred, leading to the long-term immobilization of arsenic.

The return of arsenic in groundwater at PT-03 to concentrations greater than the GWPS indicates that the iron distribution at the outer edge of the ROI was not sufficient to sustain the shift in iron-sulfur-arsenic cycling to favor the attenuation of arsenic. Based on these results, additional maintenance injections or smaller design ROI may be required to provide treatment.

5.3.2 Temporary Corrective Action Performance Monitoring Piezometers

Additional locations (piezometers PT-01, PT-02, DR-01, and detection well MCM-06) located outside of the target ROI were monitored to evaluate how the movement of treated water outside of the ROI affects arsenic concentrations. These locations showed little to no response during and after the injection event (**Tables 4** and **6**, respectively), supporting the interpretation that they are located cross-gradient to groundwater flow, and that they were located outside of the pilot study ROI.

5.3.3 Appendix IV Parameter Results

In addition to the parameters discussed above, Appendix IV parameters were monitored during the post-injection monitoring period. In the post-injection monitoring period, there were no sustained increases in Appendix IV parameters above their respective GWPS in the temporary injection well, dose-response piezometers, or performance monitoring piezometers (**Table 6**).

6 Conclusion

This pilot study demonstrated that the in-situ geochemical injection of ferrous chloride successfully treated arsenic in groundwater to below the GWPS at the MCM-06 pilot study area. This conclusion is supported by:

- Measured injection pressures and flowrates that would be sustainable at full-scale;
- Effective reagent distribution ROI between 4 and 6 feet;
- Sustained treatment of arsenic to concentrations lower than the GWPS, which have persisted 9 months following the injection at DR-03;
- Continued reductions of sulfide concentrations at locations closer to the injection well , demonstrating the target removal mechanism; and,
- No mobilization of other Appendix IV parameters.

Though post-injection monitoring results show sustained decreases in arsenic and sulfide concentrations at locations closer to the injection well, a return to near-baseline concentrations in arsenic concentrations at the outer perimeter of the injection ROI during the final post-injection sampling event (34-week) suggests that maintenance injections or smaller design ROI may be required during full-scale implementation.

The results of this pilot study support the proposed remedy described in the Draft Remedy Selection Report. Based on these results, the proposed remedy is capable of meeting requirements listed in § 257.97. Data

collected from this pilot study will be used in the design of full-scale in-situ geochemical injection corrective measure and included in the Corrective Action Management Plan. Full-scale in-situ geochemical injection corrective measures are expected to treat the arsenic SSL above the GWPS in detection monitoring well MCM-06.

Georgia Power anticipates receiving written authorization from GA EPD to hold the public meeting with the selected remedy of geochemical approaches (in-situ injection). After the public meeting, Georgia Power will revise the Draft Remedy Selection Report (Arcadis 2024a), incorporating results of the pilot study and public meeting comments.

Table 2
Summary of Baseline Groundwater Analytical Data
Georgia Power Company
Plant McManus Former Ash Pond 1
Brunswick, Georgia

Notes:

1. Analytical methods are provided in Table 5.
2. The evaluation of 40 CFR Part 257 Appendix IV constituents excludes radium.
3. "Unknown arsenic species" is the total estimated concentration of any unidentified arsenic-containing species. Previous analytical data evaluating the "unknown arsenic species" results have demonstrated that these species are thioarsenic species (Arcadis 2024).
4. Arsenic speciation samples arrived at laboratory at a temperature of 7.5 °C, slightly greater than the recommended temperature (6 °C). Results are estimated.
5. “J” qualifiers are applied by the laboratory when the reported concentration is above the method detection limit, but below the laboratory reporting limit.

Acronyms and Abbreviations:

$CaCO_3$ = calcium carbonate
J = estimated value (see Note 5)
mg/L = milligram per liter
mV = millivolt
NA = not analyzed
NTU = nephelometric turbidity unit
ORP = oxidation-reduction potential
ppt = part per trillion
S.U. = standard unit
USEPA = United States Environmental Protection Agency
< = not detected at or above method detection limit
°C = degree Celsius
µg/L = microgram per liter
µS/cm = microSiemen per centimeter
‰ = per mil
$\delta^2H\ H_2O$ = delta notation measurement of stable hydrogen isotope concentrations. Results are compared to a known standard (δ^2H_s/δ^1H_s) by the following equation: $\delta^2H\ H_2O = ([(\delta^2H/\delta^1H)\div(\delta^2H_s/\delta^1H_s)]-1)x1000$. Negative results indicate depletion of the rare isotope compared to standard. Positive results indicate enrichment of the rare isotope compared to standard.

Table 3
Summary of Daily Injection Activities
Georgia Power Company
Plant McManus Former Ash Pond 1
Brunswick, Georgia

Date	INW-01		
	Maximum Well Head Pressure (psi)	Daily Injection Solution Volume (gallons)	Potable Water/Clean Wash (gallons)
8/13/2024	--	--	Initial Leak Test - 50
8/13/2024	0.2	472	50
8/14/2024	0.1	709	50
8/15/2024	0.3	746	50
8/16/2024	0.7	748	50
8/17/2024	0.7	711	50
8/18/2024	0.8	475	50
8/19/2024	0.7	468	50
Maximum	**0.8**	**748**	**50**
Average	**--**	**618**	**50**
Total	**--**	**4,329**	**400**

Notes:

1. At the close of each day, 50 gallons of potable water were used to rinse the injection well to limit precipitate formation.

2. Wellhead pressure remained below 1 pound per square inch (psi) for the duration of the injection, which was well below the limit of 5 psi presented in the Pilot Test Notification Form.

3. The daily maximum injection volume remained below the value included in the Pilot Test Notification Form (3,000 gallons per day).

Abbreviations:

-- = not applicable
psi = pound per square inch

Notes:

1. Lab sample ID is associated with analytical analysis (see Section 3 for more information). Ferrous iron was analyzed with a Hach® test kit in the field.

2. "J" qualifiers are applied by the laboratory when the reported concentration is above the method detection limit, but below the laboratory reporting limit.

3. Relative concentrations calculated based on the following equation: $A=([C]_{sample}-[C]_{baseline})/([C]_{injected}-[C]_{baseline})$. Where $[C]_{sample}$ is the concentration at a given sampling point, $[C]_{baseline}$ is the baseline concentration, and $[C]_{injected}$ is the concentration of the injection solution.

4. The initial concentration for deuterium, total iron, and ferrous iron from August 13, 2024 at the start of injection (i.e., zero gallons injected) was used in all instances to calculate relative iron except for the total iron at DR-02 due to anomalously high iron value (19.3 mg/L) relative to the pre-injection period (0.97 mg/L on June 18, 2024; Table 2).

Acronyms and Abbreviations:
ID = identification
J = estimated value (see Note 2)
mg/L = milligrams per liter
% = percent
‰ = per mil
NA = not analyzed/applicable
< = not detected at or above method detection limit

Georgia Power Company
Plant McManus Former Ash Pond 1
Brunswick, Georgia

Note:
1. Appendix IV constituents are 40 CFR Part 257 Appendix IV constituents for assessment monitoring, excluding radium. Total and dissolved metals were evaluated during each sampling event.

Acronyms and Abbreviations:
CFR = Code of Federal Regulations
GWPS = Groundwater Protection Standard
IC-ICP-MS = ion chromatography inductively coupled plasma mass spectroscopy
IRMS = isotope ratio mass spectroscopy
mg/L = milligram per liter
USEPA = United States Environmental Protection Agency
X = sample was successfully collected
-- = no GWPS assigned to constituent
δ2H H2O = Delta notation measurement of stable hydrogen isotope concentrations.

Table 6
Summary of Pilot Injection Performance Groundwater Analytical Data
Georgia Power Company
Plant McManus Former Ash Pond 1
Brunswick, Georgia

Notes:

1. Analytical methods are provided in Table 5. Ferrous iron was analyzed with a Hach® test kit in the field.
2. Negative dissolved oxygen values are assumed to be zero.
3. "Unknown arsenic species" is the total estimated concentration of any unidentified arsenic-containing species. Previous analytical data evaluating the "Unknown arsenic species" results have demonstrated that these species are thioarsenic species (Arcadis 2024).
4. The evaluation of 40 CFR Part 257 Appendix IV constituents excludes radium.
5. “J” qualifiers are applied by the laboratory when the reported concentration is above the method detection limit, but below the laboratory reporting limit.
6. Relative concentrations calculated based on the following equation: $A=([C]_{sample}-[C]_{baseline})/([C]_{injected}-[C]_{baseline})$. Where $[C]_{sample}$ is the concentration at a given sampling point, $[C]_{baseline}$ is the baseline concentration, and $[C]_{injected}$ is the concentration of the injection solution.
7. The initial concentration for deuterium, total iron, and ferrous iron from August 13, 2024 at the start of injection (i.e., zero gallons injected) was used in all instances to calculate relative iron except for the total iron at DR-02 due to anomalously high iron value (19.3 mg/L) relative to the pre-injection period (0.97 mg/L on June 18, 2024; Table 2).

Acronyms and Abbreviations:

$CaCO_3$ = calcium carbonate
CFR = Code of Federal Regulations
GWPS = Groundwater Protection Standard
F1 = matrix spike and/or matrix spike duplicate recovery exceeds control limits
H = sample exceeded the specified holding time
J = estimated value (see Note 5)
mg/L = milligram per liter
mV = millivolt
NA = not analyzed
NTU = nephelometric turbidity unit
S.U. = standard unit
% = percent
µg/L = microgram per liter
< = not detected at or above the laboratory method detection limit.
°C = degree Celsius
µS/cm = microSiemen per centimeter
-- = no Groundwater Protection Standard (GWPS) assigned to constituent
‰ = per mil
$\delta^2H\ H_2O$ = Delta notation measurement of stable hydrogen isotope concentrations. Results are compared to a known standard (δ^2H_s/δ^1H_s) by the following equation: $\delta^2H\ H_2O = ([(\delta^2H/\delta^1H)\div(\delta^2H_s/\delta^1H_s)]-1)x1000$. Negative results indicate

CERTIFICATION STATEMENT

This 2024 Semiannual Pilot Study Progress Summary*, Georgia Power Company – Plant McManus Former Ash Pond 1 (AP-1)* has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.90(e), and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10 by a qualified groundwater scientist or engineer with Arcadis U.S., Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

J. Geoffrey Gay, P.E. (PE 27801)
Technical Expert (Eng.), Vice President

2024 Semiannual Pilot Study Progress Summary

Plant McManus Former Ash Pond 1 (AP-1)
Georgia Power Company

February 28, 2025

Introduction

This Pilot Study Progress Summary (Summary) was developed by Arcadis U.S. Inc. (Arcadis) as part of implementing the Assessment of Corrective Measures (ACM) process at Georgia Power Company (Georgia Power) Plant McManus former Ash Pond 1 (AP-1). Arsenic is present in groundwater at statistically significant levels (SSLs) above the Groundwater Protection Standard (GWPS) of 0.032 milligrams per liter (mg/L) in detection monitoring well MCM-06. The nature and extent of arsenic can be found in Figure 9 of the adjoining 2024 Semiannual Groundwater Monitoring and Corrective Action Report (EnSafe 2025). A Draft Remedy Selection Report, which summarizes the evaluation and proposed selection of a corrective measure, or measures, was submitted to Georgia Environmental Protection Division (GA EPD) on February 28, 2023 (revised on January 18, 2024) (Arcadis 2024a). Following GA EPD's approval of the MCM-06 Pilot Study Workplan (Arcadis 2024b) on June 26, 2024, a pilot study was initiated at former AP-1 in support of the ongoing remedy selection process. The purpose of this Summary is to describe the in situ injection pilot study work completed at the site between July and December 2024 and includes baseline sampling, injection activities, and post-injection monitoring. In addition, the Pilot Study Post-Injection Report submitted to GA EPD 45 days after initiation of injection is included as Appendix A of this Summary and provides a detailed summary of pilot study work completed between June 1 and August 20, 2024.

Pilot Study Summary

Pilot study injection well INW-01 and performance monitoring well DR-03 were installed on June 1, 2024. The well completion report is included within the Pilot Study Post-Injection Report (Arcadis 2024c) included as Appendix A to this Summary.

Prior to injection, baseline groundwater sampling was conducted at the pilot study network, on June 18 to 19 and July 23, 2024 in accordance with the sampling schedule provided in Table 1 and the MCM-06 Pilot Study Work Plan (Arcadis 2024b). A summary of baseline groundwater analytical data is provided in Table 2 of the Pilot Study Post-Injection Report (Appendix A; Arcadis 2024c).

Injection activities were performed between August 13 to 20, 2024 by Cascade Drilling, Inc. with technical supervision conducted by Arcadis. Approximately 4,329 gallons (gal) of a 0.2% by weight solution of iron (Fe) and 0.037% deuterium tracer was administered at the MCM-06 pilot study area. The iron for the injection solution was supplied from a ferrous chloride salt. All pilot study injection

activities were completed in accordance with the GA EPD approved Pilot Test Notification Form and the MCM-06 Pilot Study Workplan (Arcadis 2024b).

Additional details pertaining to the remedial implementation (pilot study well installation, injection activities, and dose response monitoring) can be found in the Pilot Study Post-Injection Event Report (Arcadis 2024c) submitted to GA EPD 45 days after initiation of injection activities and included as Appendix A to this Report.

Post-Injection Sampling Summary

Post-injection performance monitoring sample collection was initiated on August 27, 2024 per the sampling schedule provided in Table 1[1]. The wells sampled in post-injection performance monitoring program included the injection well (INW-01), dose response wells (DR-02, PT-03, DR-03), performance monitoring wells (PT-01, PT-02, DR-01), and detection monitoring well (MCM-06). Groundwater samples collected from these wells were generally evaluated for the complete suite of Appendix III and Appendix IV constituents (except radium), arsenic speciation, geochemical parameters (including deuterium[2]), and field parameters. The groundwater analytical results from the post-injection performance monitoring events between August 27, 2024, and November 13, 2024 are summarized in Table 2. Time series plots for arsenic at the injection well, dose response wells, and performance monitoring wells associated with the pilot study are included in Figures 1 and 2. The field and laboratory reports associated with these results are provided in Appendix B and C, respectively.

Summary

Post-injection monitoring is ongoing, and Georgia Power anticipates submitting a comprehensive pilot study technical report as a stand-alone document by August 29, 2025. The report will provide findings and recommendations for the design and implementation of the full-scale remedy. Following submittal of the report, Georgia Power anticipates receiving written authorization from GA EPD to hold the public meeting with the selected remedy of geochemical approaches (in-situ injection) and MNA. After the public meeting, Georgia Power will revise the Draft Remedy Selection Report (Arcadis 2024a), incorporating results of the pilot study and public meeting comments.

[1] Changes to the sampling program compared to the sample schedule provided in the Pilot Study Work Plan (Arcadis 2024b) include the addition of boron, magnesium, potassium, and sodium to the analyte list (assessed during each sampling event) and an expansion of analytes evaluated from groundwater collected at INW-01 to match the analyte list for the dose response and performance monitoring wells.
[2]Deuterium results were analyzed by Isotope Tracer Technologies Inc. (Waterloo, Ontario) rather than the UC Davis Isotope Laboratory, as indicated in the Pilot Study Work Plan (Arcadis 2024b).

Table 2
Post-injection Performance Monitoring Results
Georgia Power Company
Plant McManus Former Ash Pond 1
Brunswick, Georgia

Notes:
1. Analytical methods are provided in Table 1.
2. Negative dissolved oxygen values are assumed to be zero.
3. "Unknown arsenic species" is the total estimated concentration of any unidentified arsenic-containing species. Previous analytical data evaluating the "Unknown arsenic species" results have demonstrated that these species are thioarsenic species (Arcadis 2024a).
4. The evaluation of 40 CFR Part 257 Appendix IV constituents excludes radium.
5. “J” qualifiers are applied by the laboratory when the reported concentration is above the method detection limit, but below the laboratory reporting limit.

Abbreviations:
< = not detected at or above the laboratory method detection limit.
As(III) = arsenite
As(V) = arsenate
°C = degrees Celsius
$CaCO_3$ = calcium carbonate
H = sample exceeded the specified holding time
J = estimated value (see Note 5)
µg/L = microgram per liter
mg/L = milligram per liter
mV = millivolt
NTU = nephelometric turbidity unit
NA = not analyzed
S.U. = standard units
µS/cm = microSiemen per centimeter
-- = no Groundwater Protection Standard (GWPS) assigned to constituent
‰ = per mil
$\delta^2H\ H_2O$ = delta notation measurement of stable hydrogen isotope concentrations. Results are compared to a known standard (δ^2H_s/δ^1H_s) by the following equation: $\delta^2H\ H_2O = ([(\delta^2H/\delta^1H)\div(\delta^2H_s/\delta^1H_s)]-1)x1000$.
Negative results indicate depletion of the rare isotope compared to standard. Positive results indicate enrichment of the rare isotope compared to standard.

Certification

I, Geoffrey Gay, am a professional engineer and licensed in the State of Georgia. I hereby certify that this report was prepared by, or under the direct supervision of, a Qualified Groundwater Scientist in accordance with the Georgia Environmental Protection Division Rules of Solid Waste Management. According to 391-3-4-.01, a Qualified Groundwater Scientist is, “a professional engineer or geologist registered to practice in Georgia who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields that enable individuals to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.” By affixing my professional seal and signature, I hereby acknowledge that this report has been prepared in conformance with the United States Environmental Protection Agency coal combustion residual rule (40 Code of Federal Regulations 257 Subpart D) and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10.

1 Introduction

Arsenic is present in groundwater at statistically significant levels (SSLs) above the Groundwater Protection Standard (GWPS) of 0.032 milligrams per liter (mg/L) in detection monitoring well MCM-06 at the Georgia Power Plant McManus former Ash Pond 1 (AP-1; the site). In situ injections (ISI) were proposed as the corrective measure for the arsenic SSL in the Draft Remedy Selection Report (Arcadis 2024a) for the site submitted on February 28, 2023. On February 16, 2024, the Georgia Environmental Protection Division (GA EPD) concurred with the initiation of pilot studies for ISI to facilitate further remedial design and a copy of the concurrence letter is provided in **Appendix A**. Georgia Power submitted the MCM-06 Pilot Study Work Plan with an application to conduct an ISI pilot study under the Underground Injection Control (UIC) Program on April 30, 2024 to GA EPD (Injection Work Plan; Arcadis 2024b; GEOS ID 836675). The Watershed Protection Branch deemed the injections acceptable under the UIC program in a letter dated June 26, 2024, included in **Appendix A**. The Land Protection Branch approved the initiation of pilot studies based on review of the work plan in a letter dated August 2, 2024, included in **Appendix A**.

This report provides a summary of ISI pilot study work completed at the site between June 1 and August 20, 2024, including pilot study well installation, baseline sampling activities, and injection activities. Pilot study injections and associated activities detailed herein were conducted under the direction of a qualified groundwater scientist. The work was completed in accordance with the MCM-06 Pilot Study Work Plan (Arcadis 2024b).

2 Background

2.1 Site Description

Plant McManus is an electrical power generation plant located on Crispen Island in Glynn County, near Brunswick, Georgia (**Figure 1**). The physical address of the plant is 1 Crispen Island Drive, Brunswick, Georgia 31523. The plant is separated from the mainland to the northeast by tidal marsh and bound on the west and southwest by the Turtle River.

The plant was originally constructed in 1952 and consisted of two boilers and nine diesel-fired combustion turbines. During operation of the coal-fired units from 1959 until 1972, coal combustion residual (CCR) was disposed in an approximately 80-acre surface impoundment (i.e., AP-1) on the Plant McManus property northeast of the plant.

AP-1 was formed by the construction of a dike from the northeast corner of Crispen Island to the mainland. Closure-related construction activities at AP-1 consisted of closure by removal and included the removal of all visible CCR within the surface impoundment, as well as removal of an additional 6 inches or more of soil below the limits of ash. Closure-related construction activities ended in 2019, and the final CCR removal certification report was submitted in November 2019 (Arcadis 2019). GA EPD acknowledged the report and removal activities within the identified boundaries of AP-1 in a letter dated January 10, 2020 (GA EPD 2020). Closure Permit No. 063-030D(CCR) was issued by GA EPD on June 18, 2021 (GA EPD 2021). Post-removal monitoring is detailed in the GA EPD-approved Groundwater Monitoring Plan (Resolute 2021).

2.2 Pilot Study Area and Historical Groundwater Monitoring

Groundwater monitoring of the surficial aquifer has been performed at AP-1 since 2016 in accordance with the United States Environmental Protection Agency (USEPA) CCR Rule (40 Code of Federal Regulations 257 Subpart D). The groundwater monitoring network consists of detection wells and an assessment well used to monitor groundwater passing the waste boundary of AP-1 within the uppermost aquifer (**Figure 2**). An onsite network of piezometers is used to gauge water levels to define groundwater flow direction and gradients.

An arsenic SSL was identified at detection monitoring well MCM-06 along the northern dike boundary of AP-1 as part of the assessment monitoring program. This SSL has been horizontally and vertically delineated to levels below the GWPS.

3 Fieldwork Summary

Fieldwork activities were conducted between June 1 and August 20, 2024, as summarized in the following sections. Well information is provided in **Table 1**, **Figure 2**, and **Appendix B**. Baseline analytical results are provided in **Table 2** and **Appendix C**. Field information and injection volumes are provided in **Table 3** and **Appendix D**.

A summary of the pilot study objectives, existing geochemical conditions, and reagent selection and removal mechanisms was provided in the Pilot Study Work Plan (Arcadis 2024b).

3.1 Well Installation

One injection well (INW-01) and one dose response well (DR-03) were installed in 2024 for this pilot study and screened at similar depth and lithology to detection monitoring well MCM-06 and in general accordance with the Groundwater Monitoring Plan (Resolute 2021). Exceptions to the design presented in the Groundwater Monitoring Plan are associated with the purpose of the wells (injection and dose response monitoring) in support of the approved Injection Work Plan (Arcadis 2024b). The well locations are shown on **Figure 2** and construction details are provided in **Table 1**.

Well drilling, installation, and surface completion activities were performed by Cascade Drilling, Inc. The boreholes were advanced using rotosonic drilling techniques with continuous core collection and a Terra Sonic compact crawler size track mounted rig. A copy of the Well Installation Report detailing the design, installation, and development of these wells is included in **Appendix B**.

3.2 Baseline Characterization

Prior to injection, baseline groundwater sampling was completed and evaluated along with historical groundwater sample results from the wells previously installed within the MCM-06 area. Groundwater samples and water quality field parameters (i.e., pH, conductivity, dissolved oxygen, temperature, and ORP) were collected using low-flow sampling procedures in accordance with the Groundwater Monitoring Plan (Resolute 2021) and Injection Work Plan (Arcadis 2024b). Samples were submitted for analysis of the following:

- Total and dissolved metals (Appendix IV, boron, iron, manganese, calcium, magnesium, sodium, potassium) (Method 6020B);
- Mercury (Method 7470);
- Sulfide (Method SM 4500);
- Sulfate (Method USEPA 300.0);
- Alkalinity (Method SM 2320B);
- Chloride (Method SM 4500);
- Total dissolved solids (TDS; Method SM 2540);
- Deuterium (Isotope Ratio Mass Spectrometry); and
- Arsenic Speciation.

Groundwater samples were placed in ice-packed coolers and submitted to GEL Laboratories LLC for analysis, except for deuterium, arsenic speciation, and sulfide, which were evaluated by Isotope Tracer Technologies, Brook Applied Laboratories, and Eurofins, respectively. GEL Laboratories LLC and Eurofins are accredited by the National Environmental Laboratory Accreditation Program (NELAP) and maintain NELAP certifications for the constituents and geochemical parameters analyzed for this project.

The results for the June and July baseline sampling events are presented in **Table 2**. The analytical laboratory results and field sampling and equipment calibration forms are provided in **Appendix C**.

3.3 Injection

Injection activities were performed between August 13 and 20, 2024 by Cascade Drilling, Inc. with technical supervision conducted by Arcadis.

3.3.1 Tank and Wellhead Assembly and Testing

Injection solution was batch mixed in and injected from a 550-gallon tank, located within secondary containment on top of an injection trailer to elevate the tank and improve injection under gravity feeding conditions. The bottom of the tank was approximately 3 feet above ground surface. Piping from the outlet of the tank was constructed with valves to allow for the tank to gravity feed or for the injection line to be pressurized with a pump, if needed. The piping was connected to the wellhead assembly via a 1-inch diameter rubber hose with camlock connections.

The wellhead assembly was constructed with a meter run and a standpipe. The meter run was equipped with a flow control valve, a 1/2-inch digital flow meter capable of sub-gallon per minute accuracy, straight piping before and after the flow meter to minimize turbulence, and a 0 to 10 pound per square inch (psi) pressure gauge. The wellhead was fitted with a separate standpipe taller than the highest point of the mixing tank, approximately 5 feet tall to allow for release of air in the piping and casing as injections are started and was valved at the top to be closed after the air is released.

Prior to injecting the solution, approximately 50 gallons of potable water were injected to test the system for leaks. Once the system was confirmed to be free from leaks, injection of the ferrous chloride solution commenced.

3.3.2 Reagent Mixing

The injection solution consisted of a mixture of ferrous chloride, tracer (deuterated water), and potable water from an onsite source designated in the Injection Work Plan (Arcadis 2024b). Ferrous chloride was shipped to the site as a solid from ProChem Inc. A solution of 0.2% weight for weight iron (Fe) and 0.037% tracer was prepared and introduced into the injection well. Solution volume and reagent amounts by batch and measured solution field parameters are provided in the Injection Solution Log in **Appendix D**. Sodium bicarbonate was available onsite to adjust the pH prior to injection but was not needed given that the as-mixed solution pH was between 5.10 and 6.00. Mixing was achieved by circulating water with a pump equipped with a stinger to limit oxygen exposure to the injection solution, which can result in solution oxidation and precipitate formation.

3.3.3 Injection

To begin injection, the valves from the tank through the wellhead were opened, allowing the injection solution from the tank to gravity feed into injection well INW-01. Following the first day of injection activities, the injection batch size was reduced from 500 gallons to 250 gallons to minimize ferrous chloride oxidation and precipitate formation that was observed in the first 500 gallon batch. The reduction to a 250-gallon batch worked well to reduce the amount of precipitation. At the end of each day, a 50-gallon batch of potable water was added to the injection well to clear the injection well of reagent.

Injection solution flow rate, cumulative injected volume, and observed wellhead pressure were monitored and recorded once every hour for the duration of the injection. Field forms are included in the Injection Field Test Log in **Appendix D**. A summary of daily injected volumes is included in **Table 3**. The daily maximum injection volume was below the value included in the Pilot Test Notification Form (3,000 gallons per day). Water levels in nearby performance monitoring wells were measured throughout injection activities and are provided in the Dose Response Monitoring Logs in **Appendix D**.

A total of 4,329 gallons of injection solution were introduced at INW-01 over seven days of injection. Injection flow rate over this time decreased from an initial maximum flow rate of 5.5 gallons per minute (gpm) to a final flow rate of 1.1 gpm (**Exhibit 1**). Wellhead pressure remained below 1 psi for the duration of the injection, which was well below the limit of 5 psi presented in the Pilot Test Notification Form. The decrease in flowrate over time was likely caused by precipitates clogging the well screen and filter pack. The flowrates and pressures achieved the objective of determining these design parameters and demonstrated injections are readily implementable at the site. Despite the decrease in flowrate, a sufficient volume was injected to observe arrival at dose response wells and for the determination of additional design parameters, as discussed in Section 4.3.4 and 5.2.

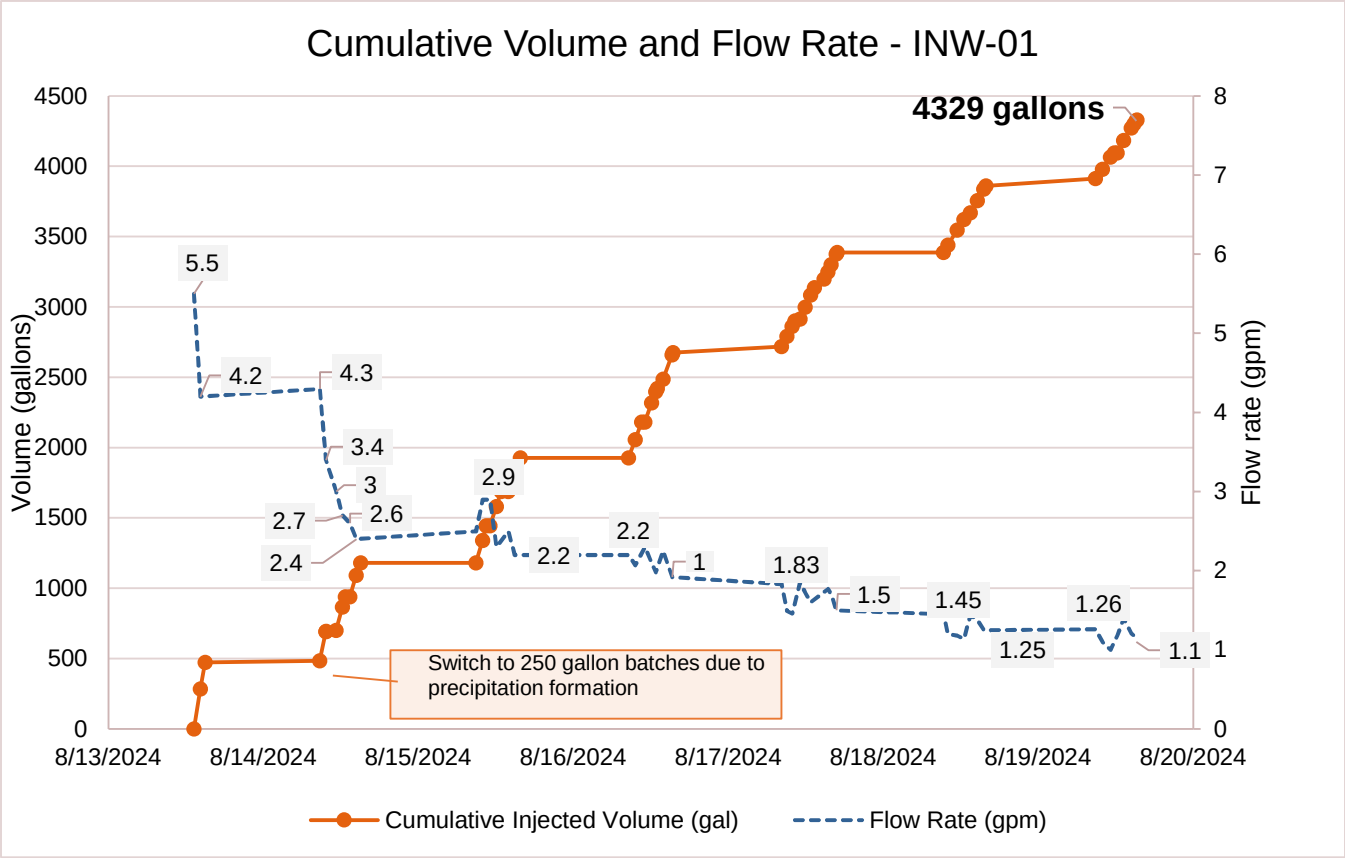

Exhibit 1. Cumulative Volume and Injection Flow Rate

3.3.4 Dose Response Monitoring

Real-time sampling and monitoring was conducted during injections at dose-response wells DR-02, DR-03, and PT-03 to achieve the following objectives:

- Confirm distribution of injected reagent solution and reagent.
- Develop breakthrough curves of injection solution to evaluate mobile porosity for full-scale design.

Field parameters (i.e., pH, dissolved oxygen, turbidity, ORP, specific conductivity, and temperature) were recorded every 5 feet across the screen interval of each dose response monitoring well (at 2.5 feet, 7.5 feet, and 12.5 feet for 15-foot screens). In addition, multi-parameter sondes were placed in the dose-response wells in the middle of the well screen (7.5 feet below the top of the well screen). Plots of the data collected from the sondes is included in **Appendix E**. These data, in conjunction with the deuterium analytical data and iron data, will be used to evaluate injection solution breakthrough and the injection volume-distribution radius relationship at the site, and to determine the design parameter mobile porosity. The data will also be evaluated to understand tidal influences on the injection distribution and effectiveness. The data analysis will be provided in the comprehensive pilot study technical memorandum at completion of the study.

Samples were collected from each dose-response location at least every 10-percent of target volume and from other performance monitoring wells at least once a day during injections. Sampling consisted of:

- Recording depth to water before purging.
- Performing a line purge, accounting for current depth to water and volume in sample tubing.
- Collecting a laboratory sample for iron and deuterium analysis. Arsenic was also evaluated for the first and final samples collected during the injection dose response monitoring program. Field parameters and a ferrous iron Hach kit analysis were also completed at time of laboratory sample collection and logged in the Dose Response Monitoring Logs provided in **Appendix D**. A subset of these were submitted for analysis based on field parameter readings.
- Visual observations were also recorded during sample collection.

4 Results

Results of the injection study are summarized in the following sections.

4.1 Baseline Sampling

Results from baseline sampling events are summarized in Table 2 and were generally consistent with previous results.

4.2 Dose Response Monitoring

As presented in Section 3.3.4, dose response monitoring was performed to confirm distribution of injected reagent solution and reagent and develop breakthrough curves of injection solution to evaluate mobile porosity for full-scale design. This section primarily discusses the visual observations recorded during sampling and the field measurements of ferrous iron, both of which indicate arrival of injected water and reagent at dose response wells during the injections. Field parameter data (i.e., specific conductivity, pH, ORP, and water depth) included in **Appendix E** and will be discussed in further detail in the next report in conjunction with upcoming analytical data results.

4.2.1 Visual Observations

Visual observations were recorded during sampling. A fine black precipitate was observed, first at the closest dose response monitoring well DR-03, then the next closest dose response monitoring well PT-03, and finally to a lesser extent at the furthest dose response monitoring well DR-02. **Figure 3** shows the sample bottles collected over time and with increasing injection volume at each of these locations. The appearance of the black precipitate can be seen in the arrays of sample bottles. The precipitate was initially black and, in some cases, turned rust colored following exposure to oxygen. The precipitate was collected and has been submitted for analysis of energy dispersive spectrometry and scanning electron microscopy for confirmation.

4.2.2 Field Measurements of Ferrous Iron

Ferrous iron samples were collected and analyzed with a Hach kit in the field at the same time as laboratory sample collection and the concentration measured with Hach kits were recorded in the Dose Response Monitoring Logs provided in **Appendix D**. Samples were collected from all three dose response wells (DR-02,

DR-03, and PT-03). Ferrous iron in DR-03 and PT-03 steadily increased over the course of the injection event. DR-03 showed the strongest response with concentrations increasing to 7.5 mg/L at the end of the injection of 4,329 gallons. Ferrous iron in PT-03 increased to 2.5 mg/L after the injection of the same volume, though there were two spikes in the middle of the injection event measuring 6 and 7 mg/L (at 2,675 and 3,386 gallons, respectively). Ferrous iron concentrations increased to 0.5 mg/L in groundwater at DR-02 after the injection of 4,329 gallons. Ferrous iron concentrations will be considered in conjunction with field parameters and laboratory analytical data to provide a comprehensive arrival analysis in the pilot study technical memorandum prepared at the completion of the study.

5 Post Injection Monitoring and Reporting

The purpose of post-injection performance monitoring is to evaluate the efficacy of the injection for arsenic removal from groundwater and the longevity of the performance of the injections and potential downgradient effects over an extended period. With iron injections, the primary indicators of effectiveness and longevity are:

- Decreasing arsenic concentrations to below the GWPS at dose-response wells;
- Measurable concentrations of iron in solution at dose-response wells over time (to verify field measurements); and
- Reduction in sulfide concentrations in wells.

In addition, dose response and performance monitoring wells will be monitored to evaluate:

- Arsenic treatment outside of the influence of injections at performance monitoring wells; and
- Any substantial increases in Appendix IV parameters greater than the GWPS due to injections at dose response and performance monitoring wells.

Post-injection performance monitoring was initiated on August 26, 2024, and will continue weekly for the first month, biweekly for the next two months, and at 6 months and 9 months at dose-response wells DR-02, DR-03, PT-03, and performance monitoring wells PT-01, PT-02, DR-01, and detection monitoring well MCM-06.

Updates concerning the pilot study results will be reported to the GA EPD Solid Waste Management Program as brief summaries included as part of semiannual groundwater monitoring and corrective action reporting. Links to these reports will be emailed to the GA EPD Wastewater Regulatory Program. A comprehensive technical memorandum will be prepared at the conclusion of the pilot study as a standalone report.

Table 2
Summary of Baseline Groundwater Analytical Data
Georgia Power Company
Plant McManus Former Ash Pond 1
Brunswick, Georgia

Notes:

1. Lowflow sampling protocols were completed for baseline sampling. The last reading recorded prior to sampling at each well is reflected in this table.
2. Analytical methods include: total and dissolved metals (EPA 6020B, EPA 7470A for mercury), arsenic speciation (IC-ICP-CRC-MS), alkalinity (SM 2320B), sulfide (SM 4500-S2D), anions (EPA 300.0), total dissolved solids (SM2540C).
3. "Unknown arsenic species" is the total estimated concentration of any unidentified arsenic-containing species. Previous analytical data evaluating the "Unknown arsenic species" results have demonstrated that these species are thioarsenic species (Arcadis 2024a).
4. Arsenic speciation samples arrived at laboratory at a temperature of 7.5 °C, slightly greater than the recommended temperature (6 °C). Results are estimated.

Abbreviations:

< = not detected at or above method detection limit
As(III) = arsenite
As(V) = arsenate
°C = degrees Celsius
$CaCO_3$ = calcium carbonate
ft = feet
J = estimated value
mg/L = milligram per liter
mV = millivolt
NTU = nephelometric turbidity unit
NA = not analyzed
ORP = oxidation-reduction potential
S.U. = standard units
µS/cm = microSiemen per centimeter
‰ = per mil

$\delta^{18}O\ H_2O$ = delta notation measurement of stable oxygen isotope concentrations. Results are compared to a known standard ($\delta^{18}O_s/\delta^{16}O_s$) by the following equation: $\delta^{18}O\ H_2O = ([(\delta^{18}O/\delta^{16}O)\div(\delta^{18}O_s/\delta^{16}O_s)]-1)x1000$. Negative results indicate depletion of the rare isotope compared to standard. Positive results indicate enrichment of the rare isotope compared to standard.

$\delta^{2}H\ H_2O$ = delta notation measurement of stable hydrogen isotope concentrations. Results are compared to a known standard ($\delta^{2}H_s/\delta^{1}H_s$) by the following equation: $\delta^{2}H\ H_2O = ([(\delta^{2}H/\delta^{1}H)\div(\delta^{2}H_s/\delta^{1}H_s)]-1)x1000$. Negative results indicate depletion of the rare isotope compared to standard. Positive results indicate enrichment of the rare isotope compared to standard.

SUBJECT: Georgia Power Company–Plant McManus AP-1
Permit No: 063-030D (CCR)
Assessment of Corrective Measures: Draft Remedy Selection Report: Pilot Study Initiation: Concurrence
GEOS Submittal: 739298

Dear Mr. McNelly:

The Georgia Environmental Protection Division (EPD) has reviewed the **draft** remedy selection report for Georgia Power Company's Plant McManus AP-1 submitted February 28, 2023. The draft remedy selection report provides an overview of conceptual site models to support the remediation of statistically significant levels of arsenic at MCM-06.

Based on EPD's review of the subject submittal as well as their most recent groundwater monitoring report, EPD concurs with the initiation of pilot studies for in-situ injection (ISI) at the subject facility to facilitate further remedy design. EPD's concurrence to conduct pilot studies is not an approval of a final remedy.

However, as discussed in the subject submittal, Georgia Power will provide pilot study workplans for EPD review prior to implementation. An Underground Injection Permit will also be required before implementation of the pilot study.

Please submit an updated milestone schedule with the pilot study work plan and include a progress report to assess groundwater quality performance. If deviations from the milestone schedule occur, an updated milestone schedule will be required.

If you have any questions regarding this letter, please contact Mark Wescott at mark.wescott@dnr.ga.gov or (470) 763-6344.

Sincerely,

Mark Wescott, P.G.

RE: Pilot Test Notification
Plant McManus AP-1
Pilot Test No. UPT000071
Glynn County, Satilla River Basin

Dear Mr. Hendricks:

The Environmental Protection Division (EPD) has received your Pilot Test Notification for Plant McManus AP-1 in Glynn County. The proposed injection activities as described in your Pilot Test Notification are acceptable to the Underground Injection Control (UIC) Program as a limited Pilot Test with a 90-day duration.

Please forward any reports resulting from the injections, such as those provided to other EPD Programs, to the UIC Program. Any reports may be provided electronically via email to UIC Coordinator Jeff Hopper at *jeff.hopper@dnr.ga.gov* or via mail to:

Environmental Protection Division
Underground Injection Control

SUBJECT: Georgia Power Company–Plant McManus AP-1
Permit No: 063-030D (CCR)
MCM-06 Pilot Study Work Plan - Approved
Pilot Test No. UPT000071
GEOS Submittal: 836675

Dear Ms. McNelly:

The Georgia Environmental Protection Division (EPD) has reviewed the MCM-06 Pilot Study Workplan for Georgia Power Company's Plant McManus AP-1 submitted on April 30, 2024. This workplan describes planned injections necessary to inform corrective action design near monitoring well MCM-06, which has statistically significant levels (SSLs) of arsenic.

In a letter dated June 26, 2024, the EPD's Underground Injection Control Program approved your Pilot Test Notification under separate cover (Pilot Test No. UPT000071).

Based on EPD's review of the subject submittal as well as the most recent groundwater monitoring report, EPD concurs with the initiation of pilot studies for in-situ injection (ISI) at the subject facility to facilitate further remedy design. EPD's concurrence to conduct pilot studies is not an approval of a final remedy.

As discussed in the subject submittal, Georgia Power will provide remediation progress updates to EPD.

If deviations from the milestone schedule occur, an updated milestone schedule will be required.

If you have any questions regarding this letter, please contact Mark Wescott at mark.wescott@dnr.ga.gov or (470) 763-6344.

Certification

I, Geoffrey Gay, am a professional engineer and licensed in the State of Georgia. I hereby certify that this report was prepared by, or under the direct supervision of, a Qualified Groundwater Scientist, in accordance with the Georgia Environmental Protection Division Rules of Solid Waste Management. According to 391-3-4-.01, a Qualified Groundwater Scientist is “a professional engineer or geologist registered to practice in Georgia who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields that enable individuals to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.” By affixing my professional seal and signature, I hereby acknowledge that this report has been prepared in conformance with the United States Environmental Protection Agency coal combustion residual rule [40 Code of Federal Regulations (CFR) 257 Subpart D] and the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10.

Date

1 Introduction

This report documents the installation of two piezometers at Georgia Power Company (Georgia Power) Plant McManus Former Ash Pond 1 (AP-1). One injection well (INW-01) and one dose response well (DR-03), screened at similar depth and lithology to detection well MCM-06 and in general accordance with the Permit No. 063-030D(CCR) groundwater monitoring plan [GWMP] (Resolute 2021) were installed. Exceptions to the design presented in the GWMP are associated with the purpose of the wells (injection and dose response monitoring) in support of an approved Injection Pilot Study Workplan (Arcadis 2024, GEOS ID 836675).

2 Drilling and Well Installation

The piezometer locations are shown in **Figure 1**. The installation date, location, elevation, screen interval, and designations for the installed wells are provided in the following sections. Boring logs with well construction details are provided in **Appendix A**. A summary of well construction details is provided in **Table 1**.

2.1 Drilling Method

The wells were installed by Cascade Environmental under contract with Southern Company Services (SCS) Field Services. Cascade had a current and valid bond with the Water Wells Standards Advisory Council for the state of Georgia at the time of drilling and well installation, provided in **Appendix B**. The well installations were performed under the oversight and direction of a Georgia Registered Professional Engineer with Arcadis. Borehole advancement drilling was completed using rotosonic drilling techniques. A Terra Sonic 150CC Compact Crawler sonic rig was used to drill the boreholes where the wells were installed. During the drilling, continuous core samples were logged in the field for lithologic properties.

2.2 Screened Interval

Injection well INW-01 is constructed with 15 feet of 4-inch diameter well screen placed at an interval of 15.95 feet to 30.95 feet below ground surface (bgs) with a flush-threaded polyvinyl chloride (PVC) end cap placed on the bottom 0.1-foot sump/sediment trap.

Dose response well DR-03 is constructed with 15 feet of 2-inch diameter well screen placed at an interval of 15.90 feet to 30.90 feet bgs with a flush-threaded PVC end cap placed on the bottom 0.6-foot sump/sediment trap.

The screen intervals are provided along with the construction details in **Table 1**.

2.3 Well Construction Materials

The wells were designed and constructed to: (1) allow sufficient groundwater flow to the well for sampling and injection in the case of INW-01; (2) minimize the passage of formation materials (turbidity) into the wells; and (3) ensure sufficient structural integrity to prevent collapse of the well. The dose response well was constructed of 2-inch diameter Schedule 40 PVC casing affixed to a slotted PVC screen. The injection well was constructed of 4-inch diameter Schedule 40 PVC casing affixed to a slotted PVC screen. Factory machine slotted 0.010-inch

screens were used. The construction materials are ink-free, National Science Foundation (NSF) approved, and do not contain glues or solvents. The casing and screen sections are flush-threaded (ASTM-F-480).

2.3.1 Filter Pack

Following placement of the well screen and casing at INW-01, the annular space around the screen and casing was filled with Standard Sand and Silica 20/30 filter pack sand from the base of the borehole to a minimum of 2 feet above the top of the screen. Approximately 4.5 cubic feet of filter sand were used for INW-01.

Following placement of the well screen and casing at DR-03, the annular space around the screen and casing was filled with Standard Sand and Silica 20/30 filter pack sand from the base of the borehole to approximately 3 feet above the top of the screen. Approximately 2.5 cubic feet of bags of filter sand were used for DR-03.

After placing the filter pack and prior to installing the annular seal, each well was pumped for at least 30 minutes to ensure proper settlement of the filter pack. Prior to installing the annular seal, the depth to the filter pack was remeasured to ensure a minimum of two feet was present above the screen. Well construction and boring logs are provided in **Appendix A**.

2.3.2 Annular Seal and Well Completion

For INW-01, an annular seal composed of approximately 12 feet of neat cement grout (approximately 9 cubic feet) was placed on top of 2 feet of Standard Sand & Silica Co. fine sand (30/65 filter sand) and tremie-grouted to surface. Approximately 0.5 cubic feet of 30/65 filter sand was used as an annular seal for INW-01. The monitoring well surface completion consists of a 12-inch bolt down manhole and a four-foot by four-foot by six-inch concrete pad.

For DR-03, an annular seal composed of 3/8-inch Baroid Holeplug® non-coated, bentonite chips was placed on top of the filter pack by slowly pouring the material down the borehole and tamping it into place with a tremie pipe. Bentonite chips were placed from the top of the 20/30 sand to a thickness of approximately 2 feet in order to prevent grout contamination into the water-bearing zone. Approximately 0.5 cubic feet of bentonite chips were used. Following hydration of the bentonite, the remaining annular space was filled to approximately 4.9 feet bgs with Sand & Silica Co. fine sand (30/65 filter sand) to top of the water table (approximately 1 cubic foot) and tremie-grouted to surface with approximately 0.5 cubic feet of cement bentonite grout. The monitoring well surface completion consists of a 6-inch diameter bolt down manhole and a two-foot by two-foot by six-inch concrete pad.

3 Well Development

Injection well INW-01 was developed on June 4, 2024, using a 12-volt Proactive submersible pump. The well was surged continuously across the entire well screen in 2-foot strokes with the Proactive submersible pump from top to bottom and over-pumped to remove fines resulting from the well installation activities. Turbidity, pH, temperature, and conductivity measurements ensured that the well was fully developed. The final turbidity measurement following development was 1.43 nephelometric turbidity units (NTU).

Dose response well DR-03 was developed on June 3, 2024, using a Geotech Reclaimer submersible pump. The well was surged continuously across the entire well screen in 2-foot strokes with the submersible pump from top to bottom and over-pumped to remove fines resulting from the well installation activities. Turbidity, pH,

temperature, and conductivity measurements ensured that the well was fully developed. The final turbidity measurement following development was 9.19 nephelometric turbidity units (NTU).

The well development forms are included in **Appendix C**.

4 Survey

The monitoring well locations and top of casing (TOC) elevations were surveyed by Shupe Surveying Company, P.C. on June 27, 2024 using a Carlson BRX-7 Global Positioning System (GPS) and Geomax Model Zone 20-HV Laser Level. A re-survey was performed on August 28, 2024 to achieve the requisite vertical accuracy. Horizontal survey locations are relative to the Georgia State Plane Coordinate System, East Zone, North American Datum of 1983 (NAD83), US Survey Feet. All horizontal locations meet or exceed an accuracy of 0.5-foot. Vertical elevations are referenced to North American Vertical Datum of 1988 (NAVD1988), US Survey Feet and meet an accuracy standard of 0.01 foot. A detailed survey report is included in **Appendix D**.

Well Driller Performance Bond

CONTINUATION
CERTIFICATE

Atlantic Specialty Insurance Company , Surety upon

a certain Bond No. 800033976

dated effective September 27, 2017
(MONTH-DAY-YEAR)

on behalf of Ricky Davis / Cascade Drilling, L.P.
(PRINCIPAL)

and in favor of Department of Natural Resources, State of Georgia
(OBLIGEE)

does hereby continue said bond in force for the further period

beginning on June 30, 2023
(MONTH-DAY-YEAR)

and ending on June 30, 2025
(MONTH-DAY-YEAR)

Amount of bond Thirty Thousand and 00/100 Dollars ($30,000.00)

Description of bond Performance Bond for Water Well Contractors

Premium:

PROVIDED: That this continuation certificate does not create a new obligation and is executed upon the express condition and provision that the Surety's liability under said bond and this and all Continuation Certificates issued in connection therewith shall not be cumulative and that the said Surety's aggregate liability under said bond and this and all such Continuation Certificates on account of all defaults committed during the period (regardless of the number of years) said bond had been and shall be in force, shall not in any event exceed the amount of said bond as hereinbefore set forth.

Signed and dated on April 13, 2023
(MONTH-DAY-YEAR)

Atlantic Specialty Insurance Company

By _____
ATTORNEY-IN-FACT Carlos A. Albelo

intact INSURANCE

Power of Attorney

KNOW ALL MEN BY THESE PRESENTS, that ATLANTIC SPECIALTY INSURANCE COMPANY, a New York corporation with its principal office in Plymouth, Minnesota, does hereby constitute and appoint: **Megan Sivley, Melissa Haddick, Sandra Parker, Orlando Aguirre, Stacy Killebrew, Carlos A. Albelo**, each individually if there be more than one named, its true and lawful Attorney-in-Fact, to make, execute, seal and deliver, for and on its behalf as surety, any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof; provided that no bond or undertaking executed under this authority shall exceed in amount the sum of: **unlimited** and the execution of such bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof in pursuance of these presents, shall be as binding upon said Company as if they had been fully signed by an authorized officer of the Company and sealed with the Company seal. This Power of Attorney is made and executed by authority of the following resolutions adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-fifth day of September, 2012:

Resolved: That the President, any Senior Vice President or Vice-President (each an "Authorized Officer") may execute for and in behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and affix the seal of the Company thereto; and that the Authorized Officer may appoint and authorize an Attorney-in-Fact to execute on behalf of the Company any and all such instruments and to affix the Company seal thereto; and that the Authorized Officer may at any time remove any such Attorney-in-Fact and revoke all power and authority given to any such Attorney-in-Fact.

Resolved: That the Attorney-in-Fact may be given full power and authority to execute for and in the name and on behalf of the Company any and all bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof, and any such instrument executed by any such Attorney-in-Fact shall be as binding upon the Company as if signed and sealed by an Authorized Officer and, further, the Attorney-in-Fact is hereby authorized to verify any affidavit required to be attached to bonds, recognizances, contracts of indemnity, and all other writings obligatory in the nature thereof.

This power of attorney is signed and sealed by facsimile under the authority of the following Resolution adopted by the Board of Directors of ATLANTIC SPECIALTY INSURANCE COMPANY on the twenty-fifth day of September, 2012:

Resolved: That the signature of an Authorized Officer, the signature of the Secretary or the Assistant Secretary, and the Company seal may be affixed by facsimile to any power of attorney or to any certificate relating thereto appointing an Attorney-in-Fact for purposes only of executing and sealing any bond, undertaking, recognizance or other written obligation in the nature thereof, and any such signature and seal where so used, being hereby adopted by the Company as the original signature of such officer and the original seal of the Company, to be valid and binding upon the Company with the same force and effect as though manually affixed.

IN WITNESS WHEREOF, ATLANTIC SPECIALTY INSURANCE COMPANY has caused these presents to be signed by an Authorized Officer and the seal of the Company to be affixed this first day of January, 2023.

ATLANTIC SPECIALTY INSURANCE COMPANY CORPORATE SEAL 1986 NEW YORK

By _____
Sarah A. Kolar, General Counsel

STATE OF MINNESOTA
HENNEPIN COUNTY

On this first day of January, 2023, before me personally came Sarah A. Kolar, General Counsel of ATLANTIC SPECIALTY INSURANCE COMPANY, to me personally known to be the individual and officer described in and who executed the preceding instrument, and she acknowledged the execution of the same, and being by me duly sworn, that she is the said officer of the Company aforesaid, and that the seal affixed to the preceding instrument is the seal of said Company and that the said seal and the signature as such officer was duly affixed and subscribed to the said instrument by the authority and at the direction of the Company.

ALISON DWAN NASH-TROUT
NOTARY PUBLIC - MINNESOTA
My Commission Expires
January 31, 2026

_____
Notary Public

I, the undersigned, Secretary of ATLANTIC SPECIALTY INSURANCE COMPANY, a New York Corporation, do hereby certify that the foregoing power of attorney is in full force and has not been revoked, and the resolutions set forth above are now in force.

Signed and sealed. Dated 13th day of April, 2023.

ATLANTIC SPECIALTY INSURANCE COMPANY CORPORATE SEAL 1986 NEW YORK

This Power of Attorney expires
January 31, 2025

Samples

Sample ID:	Description:

Created using VuSitu from In-Situ, Inc.

Low-Flow Test Report:

Test Date / Time: 6/3/2024 4:25:45 PM
Project: Plant McManus Dike Development June 2024
Operator Name: Jay Siewert

Location Name: DR-03 **Well Diameter: 2 in** **Casing Type: PVC** **Screen Length: 15 ft** **Top of Screen: 16.22 ft** **Total Depth: 31.22 ft** **Initial Depth to Water: 6.67 ft**	**Pump Type: GeoTech Reclaimer** **Tubing Type: LDPE** **Pump Intake From TOC: 23.72 ft** **Estimated Total Volume Pumped: 170000 ml** **Flow Cell Volume: 90 ml** **Final Flow Rate: 1400 ml/min** **Final Draw Down: -1.86 ft**	**Instrument Used: Aqua TROLL 400** **Serial Number: 789310**

Test Notes: Pre-purged for 6+ hours and 2,365L prior to trolling. Gray purge water on initial pumping. 0.83ft of drawdown observed at 3GPM. Water cleared fast. Hydraulic surging performed across full length of the screen 2x with pumping being performed at each foot of screen length.

Re: Plant McManus CCR Groundwater Compliance
Work Order: 672636

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on June 21, 2024. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. The data package is being revised to include total and dissolved Manganese. This replaces the original data package issued on July 3, 2024.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
672636001	MCM-INW-01	Ground Water	06/19/24 14:10	06/21/24 09:22

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 672636 GEL Work Order: 672636

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N Metals--The Matrix spike sample recovery is not within specified control limits

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Erin Trent.

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

QC Summary

Workorder: **672636**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.

B The target analyte was detected in the associated blank.

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

1205770464	672636001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)
1205776174	672636001(MCM-INW-01PS) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1205770463 (MCM-INW-01MS)	Selenium	60.7* (75%-125%)
1205770464 (MCM-INW-01MSD)	Selenium	58.4* (75%-125%)

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 672636001 (MCM-INW-01), 672636002 (MCM-MCM-06), 672636003 (MCM-PT-01), 672636004 (MCM-PT-02), 672636005 (MCM-PT-03), 672636006 (MCM-DR-01), 672636007 (MCM-DR-02), 672636008 (MCM-DR-03), 672636009 (MCM-AP1-FD-01), 672636012 (MCM-INW-01), 672636013 (MCM-MCM-06), 672636014 (MCM-PT-01), 672636015 (MCM-PT-02), 672636016 (MCM-PT-03), 672636017 (MCM-DR-01), 672636018 (MCM-DR-02), 672636019 (MCM-DR-03) and 672636020 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

1205769498	672636001(MCM-INW-01) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement
The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less

than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Chloride	1205769498 (MCM-INW-01PS)	114* (90%-110%)

Technical Information

Sample Dilutions
The following samples 672636008 (MCM-DR-03) and 672636009 (MCM-AP1-FD-01) were diluted because target analyte concentrations exceeded the calibration range. Samples 1205769497 (MCM-INW-01DUP), 1205769498 (MCM-INW-01PS), 672636001 (MCM-INW-01) and 672636009 (MCM-AP1-FD-01) were diluted to minimize matrix effects on instrument performance. Samples 672636001 (MCM-INW-01), 672636002 (MCM-MCM-06), 672636003 (MCM-PT-01), 672636004 (MCM-PT-02), 672636005 (MCM-PT-03), 672636006 (MCM-DR-01), 672636007 (MCM-DR-02) and 672636009 (MCM-AP1-FD-01) were diluted based on historical data. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Analyte	672636								
	001	002	003	004	005	006	007	008	009
Chloride	500X	500X	500X	500X	500X	500X	500X	500X	500X
Fluoride	5X	5X	5X	5X	5X	5X	5X	1X	10X
Sulfate	500X	500X	500X	500X	500X	500X	500X	500X	100X

Miscellaneous Information

Manual Integrations
Samples 1205769497 (MCM-INW-01DUP), 1205769498 (MCM-INW-01PS), 672636001 (MCM-INW-01) and 672636008 (MCM-DR-03) were manually integrated to correctly position the baseline as set in the calibration standards.

Product: **Solids, Total Dissolved**
Analytical Method: SM 2540C
Analytical Procedure: GL-GC-E-001 REV# 21
Analytical Batch: 2631495

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
672636004	MCM-PT-02
672636005	MCM-PT-03
672636006	MCM-DR-01
672636007	MCM-DR-02
672636009	MCM-AP1-FD-01
672636010	MCM-AP1-FB-01
672636011	MCM-AP1-EB-01
1205771672	Method Blank (MB)
1205771673	Laboratory Control Sample (LCS)
1205771674	672638006(NonSDG) Sample Duplicate (DUP)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Miscellaneous Information

Additional Comments
A reduced aliquot was used due to matrix interference. 672636004 (MCM-PT-02), 672636005 (MCM-PT-03), 672636006 (MCM-DR-01), 672636007 (MCM-DR-02) and 672636009 (MCM-AP1-FD-01). A TDS meter was used to check the samples for interference prior to analysis. 672636004 (MCM-PT-02), 672636005 (MCM-PT-03), 672636006 (MCM-DR-01), 672636007 (MCM-DR-02) and 672636009 (MCM-AP1-FD-01).

Job Narrative
680-252405-1

Receipt
The samples were received on 6/21/2024 11:21 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.1º C.

Subcontract Work
Method Metals Speciation: This method was subcontracted to Brooks Applied Labs LLC. The subcontract laboratory certification is different from that of the facility issuing the final report. The subcontract report is appended in its entirety.

RE: Project EUR-SV2201 Client Project: Job#680-252405-1

Dear David Fuller,

On June 25, 2024, Brooks Applied Labs (BAL) received nine (9) water samples at a temperature of 7.5°C. The samples were logged-in for the analyses of arsenic speciation [As(III), As(V), DMA, MMA, and unknown As species] according to the chain-of-custody form. All samples were received and stored according to BAL SOPs and EPA methodology.

All samples were field filtered.

BAL strongly recommends that all samples submitted for arsenic speciation remain at a temperature of ≤ 6°C to maintain sample integrity prior to analysis. Consequently, the As speciation results were qualified (**Z**), indicating that the samples were received above the recommended temperature.

Arsenic Speciation Quantitation by IC-ICP-CRC-MS
Arsenic speciation was performed by ion chromatography inductively coupled plasma collision reaction cell mass spectrometry (IC-ICP-CRC-MS). Arsenic species are first chromatographically separated on an ion exchange column and then quantified using inductively coupled plasma collision reaction cell mass spectrometry (ICP-CRC-MS). For more information on this determinative technique, please visit the Interference Reduction Technology section on our website.

It should be noted that all Brooks Applied Labs, LLC methods, standard operating procedures, inventions, ideas, processes, improvements, designs, and techniques included or referred to therein, must be considered and treated as Proprietary Information, protected by the Washington State Trade Secret Act, RCW 19.108 et seq., and other laws. All Proprietary Information, written or implied, will not be distributed, copied, or altered in any fashion without prior written consent from Brooks Applied Labs, LLC. All Proprietary Information (including originals, copies, summaries, or other reproductions thereof) shall remain the property of Brooks Applied Labs, LLC at all times and must be returned upon demand. Furthermore, products presented in this document may be protected by Federal Patent laws and infringement will be subject to prosecution in accordance with Title 35 US Code 271.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

The results were not method blank corrected, as described in the calculations section of the relevant BAL SOP(s), and were evaluated using reporting limits adjusted to account for sample aliquot size. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

All data was reported without further qualification and all other associated quality control sample results met the acceptance criteria.

BAL verifies that the reported results of all analyses for which the laboratory is accredited meet the requirements of the accrediting body, unless otherwise noted in the report narrative. For more information regarding accreditations please see the *Report Information* and *Batch Summary* pages. This report must be used in its entirety for interpretation of results.

Please feel free to contact us if you have any questions regarding this report.

Sincerely,

Amy Goodall
Project Manager
Brooks Applied Labs

Report Information

General Disclaimers

Test results are based solely upon the sample submitted to Brooks Applied Labs in the condition it was received . This report shall not be reproduced or copied, except in full, without written approval of the laboratory. Brooks Applied Labs is not responsible for the consequences arising from the use of a partial report.

Laboratory Accreditation

BAL maintains accreditation with various state and national agencies for select test methods. For a current list of BAL accreditations, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. The reported analyte/matrix/method combination shall be considered outside BAL's scopes of accreditation unless otherwise identified as ISO, TNI, or ISO,TNI in the tables. It is the responsibility of the client to verify whether a specific accreditation is required for the intended data use.

ISO: ISO/IEC 17025:2017 accredited test method. Issued by ANSI National Accreditation Board (ANAB), #ADE-1447.02

TNI: NELAP accredited test method. Issued by the State of Florida Department of Health, #E87982.

ISO,TNI: Test method is accredited under both the ISO/IEC 17025:2017 and NELAP accreditations referenced above.

Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

Common Abbreviations

AR	as received	**MS**	matrix spike
BAL	Brooks Applied Labs	**MSD**	matrix spike duplicate
BLK	method blank	**ND**	non-detect
BS	blank spike	**NR**	non-reportable
CAL	calibration standard	**N/C**	not calculated
CCB	continuing calibration blank	**PS**	post preparation spike
CCV	continuing calibration verification	**REC**	percent recovery
COC	chain of custody record	**RPD**	relative percent difference
D	dissolved fraction	**SCV**	secondary calibration verification
DUP	duplicate	**SOP**	standard operating procedure
IBL	instrument blank	**SRM**	reference material
ICV	initial calibration verification	**T**	total fraction
MDL	method detection limit	**TR**	total recoverable fraction
MRL	method reporting limit		

Definition of Data Qualifiers

E	An estimated value due to the presence of interferences. A full explanation is presented in the narrative.
H	Holding time and/or preservation requirements not met. Please see narrative for explanation.
J	Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.
J-1	Estimated value. A full explanation is presented in the narrative.
M	Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.
N	Spike recovery was not within acceptance criteria. Please see narrative for explanation.
R	Rejected, unusable value. A full explanation is presented in the narrative.
U	Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.
X	Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated.
Z	Holding time and/or preservation requirements not established for this method; however, BAL recommendations for holding time were not followed. Please see narrative for explanation.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southeast, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Definitions/Glossary

Client: Southern Company
Job ID: 680-252370-1
Project/Site: Plant McManus Dike Baseline Sampling 2024-06

Qualifiers

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 680-252370-1 Eurofins Savannah

Job Narrative
680-252370-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 6/21/2024 11:21 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.6°C.

General Chemistry
Method SM4500_S2_F: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 680-844120 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

List Source: Eurofins Savannah

List Number: 1

Creator: Johnson, Corey M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Re: Plant McManus CCR Groundwater Compliance Reanalysis:
Work Order: 677099

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on June 21, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
677099001	MCM-INW-01	Ground Water	06/19/24 14:10	06/21/24 09:22
677099002	MCM-MCM-06	Ground Water	06/19/24 10:15	06/21/24 09:22

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 677099 GEL Work Order: 677099

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit

QC Summary

Workorder: **677099**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals
Technical Case Narrative
Georgia Power Company
SDG #: 677099

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2644961

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2644960

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
677099001	MCM-INW-01

1205798218	677099002(MCM-MCM-06SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

SAMPLE RECEIPT & REVIEW FORM

Client: GPCC	SDG/AR/COC/Work Order:
Received By: STACY BOONE	Date Received: JUNE 21, 2024
	Circle Applicable: FedEx Express FedEx Ground UPS Field Services Courier Other
Carrier and Tracking Number	—

Suspected Hazard Information	Yes	No	*If Net Counts > 100cpm on samples not marked "radioactive", contact the Radiation Safety Group for further investigation.
A)Shipped as a DOT Hazardous?		✓	Hazard Class Shipped: UN#: If UN2910, Is the Radioactive Shipment Survey Compliant? Yes___ No___
B) Did the client designate the samples are to be received as radioactive?		✓	COC notation or radioactive stickers on containers equal client designation.
C) Did the RSO classify the samples as radioactive?		✓	Maximum Net Counts Observed* (Observed Counts - Area Background Counts): 0 CPM / mR/Hr Classified as: Rad 1 Rad 2 Rad 3
D) Did the client designate samples are hazardous?		✓	COC notation or hazard labels on containers equal client designation.
E) Did the RSO identify possible hazards?		✓	If D or E is yes, select Hazards below. PCB's Flammable Foreign Soil RCRA Asbestos Beryllium Other:

	Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1	Shipping containers received intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2	Chain of custody documents included with shipment?	✓			Circle Applicable: Client contacted and provided COC COC created upon receipt
3	Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	✓			Preservation Method: Wet Ice Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: 1.6
4	Daily check performed and passed on IR temperature gun?	✓			Temperature Device Serial #: IR3-23 Secondary Temperature Device Serial # (If Applicable):
5	Sample containers intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6	Samples requiring chemical preservation at proper pH?	✓			Sample ID's and Containers Affected: If Preservation added, Lot#:
7	Do any samples require Volatile Analysis?			✓	If Yes, are Encores or Soil Kits present for solids? Yes___ No___ NA___(If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes___ No___ NA___(If unknown, select No) Are liquid VOA vials free of headspace? Yes___ No___ NA___ Sample ID's and containers affected:
8	Samples received within holding time?	✓			ID's and tests affected:
9	Sample ID's on COC match ID's on bottles?	✓			ID's and containers affected:
10	Date & time on COC match date & time on bottles?	✓			Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11	Number of containers received match number indicated on COC?	✓			Circle Applicable: No container count on COC Other (describe)
12	Are sample containers identifiable as GEL provided by use of GEL labels?	✓			
13	COC form is properly signed in relinquished/received sections?	✓			Circle Applicable: Not relinquished Other (describe)

Re: Plant McManus CCR Groundwater Compliance
Work Order: 677344

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on July 24, 2024. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the previous revision noted as SDG number 677344 Rev01 in the left-hand footer of the data report. Revision two updates the reporting metals to include magnesium, potassium, sodium, and calcium, replacing the August 7, 2024 revised report.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
677344001	MCM-INW-01	Ground Water	07/23/24 13:08	07/24/24 09:35
677344002	MCM-MCM-06	Ground Water	07/23/24 14:20	07/24/24 09:35
677344003	MCM-PT-01	Ground Water	07/23/24 09:25	07/24/24 09:35
677344004	MCM-PT-02	Ground Water	07/23/24 13:10	07/24/24 09:35
677344005	MCM-PT-03	Ground Water	07/23/24 10:38	07/24/24 09:35
677344006	MCM-DR-01	Ground Water	07/23/24 10:47	07/24/24 09:35
677344007	MCM-DR-02	Ground Water	07/23/24 09:10	07/24/24 09:35
677344008	MCM-DR-03	Ground Water	07/23/24 14:16	07/24/24 09:35
677344009	MCM-AP1-FD-01	Ground Water	07/23/24 12:00	07/24/24 09:35

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 677344 GEL Work Order: 677344

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported

QC Summary

Workorder: **677344**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
J	See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals
Technical Case Narrative
Georgia Power Company
SDG #: 677344

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2645896

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2645895

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
677344001	MCM-INW-01
677344002	MCM-MCM-06
677344003	MCM-PT-01

1205799935	Laboratory Control Sample (LCS)
1205799938	677344001(MCM-INW-01L) Serial Dilution (SD)
1205799936	677344001(MCM-INW-01S) Matrix Spike (MS)
1205799937	677344001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Product: **Determination of Metals by ICP-MS**

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

Analyte	677344								
	001	002	003	004	005	006	007	008	009

SAMPLE RECEIPT & REVIEW FORM

Client: GPCC	**SDG/AR/COC/Work Order:**
Received By: WJ	**Date Received:** 7/24/24
Carrier and Tracking Number	Circle Applicable: ~~FedEx Express~~ FedEx Ground UPS Field Services Courier Other 2774 2358 9706

Suspected Hazard Information	Yes	No	*If Net Counts > 100cpm on samples not marked "radioactive", contact the Radiation Safety Group for further investigation.
A)Shipped as a DOT Hazardous?		✓	Hazard Class Shipped: UN#: If UN2910, Is the Radioactive Shipment Survey Compliant? Yes___ No___
B) Did the client designate the samples are to be received as radioactive?		✓	COC notation or radioactive stickers on containers equal client designation.
C) Did the RSO classify the samples as radioactive?		✓	Maximum Net Counts Observed* (Observed Counts - Area Background Counts): _____CPM / mR/Hr **Classified as: Rad 1 Rad 2 Rad 3**
D) Did the client designate samples are hazardous?		✓	COC notation or hazard labels on containers equal client designation.
E) Did the RSO identify possible hazards?		✓	If D or E is yes, select Hazards below. PCB's Flammable Foreign Soil RCRA Asbestos Beryllium Other:

	Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1	Shipping containers received intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2	Chain of custody documents included with shipment?	✓			Circle Applicable: Client contacted and provided COC COC created upon receipt
3	Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	✓			Preservation Method: ~~Wet Ice~~ Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: 3°
4	Daily check performed and passed on IR temperature gun?	✓			**Temperature Device Serial #:** IR8-23 Secondary Temperature Device Serial # (If Applicable):
5	Sample containers intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6	Samples requiring chemical preservation at proper pH?	✓			Sample ID's and Containers Affected: If Preservation added, Lot#:
7	Do any samples require Volatile Analysis?			✓	If Yes, are Encores or Soil Kits present for solids? Yes___ No___ NA___(If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes___ No___ NA___(If unknown, select No) Are liquid VOA vials free of headspace? Yes___ No___ NA___ Sample ID's and containers affected:
8	Samples received within holding time?	✓			ID's and tests affected:
9	Sample ID's on COC match ID's on bottles?	✓			ID's and containers affected:
10	Date & time on COC match date & time on bottles?	✓			Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11	Number of containers received match number indicated on COC?				Circle Applicable: No container count on COC Other (describe)
12	Are sample containers identifiable as GEL provided by use of GEL labels?				
13	COC form is properly signed in relinquished/received sections?				Circle Applicable: Not relinquished Other (describe)

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Definitions/Glossary

Client: Southern Company
Job ID: 680-253694-1
Project/Site: Plant McManus Dike Baseline Sampling 2024-07

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 680-253694-1 Eurofins Savannah

Job Narrative
680-253694-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Receipt
The samples were received on 7/24/2024 9:45 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.4°C.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Re: Plant McManus CCR Groundwater Compliance
Work Order: 677339

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on July 24, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
677339001	MCM-INW-01	Ground Water	07/23/24 13:08	07/24/24 09:35
677339002	MCM-MCM-06	Ground Water	07/23/24 14:20	07/24/24 09:35
677339003	MCM-PT-01	Ground Water	07/23/24 09:25	07/24/24 09:35
677339004	MCM-PT-02	Ground Water	07/23/24 13:10	07/24/24 09:35
677339005	MCM-PT-03	Ground Water	07/23/24 10:38	07/24/24 09:35
677339006	MCM-DR-01	Ground Water	07/23/24 10:47	07/24/24 09:35
677339007	MCM-DR-02	Ground Water	07/23/24 09:10	07/24/24 09:35
677339008	MCM-DR-03	Ground Water	07/23/24 14:16	07/24/24 09:35
677339009	MCM-AP1-FD-01	Ground Water	07/23/24 12:00	07/24/24 09:35
677339010	MCM-AP1-FB-01	Water	07/23/24 15:08	07/24/24 09:35
677339011	MCM-AP1-EB-01	Water	07/23/24 15:11	07/24/24 09:35

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 677339 GEL Work Order: 677339

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N Metals--The Matrix spike sample recovery is not within specified control limits

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

QC1205802001 677339008 MS										
Alkalinity, Total as CaCO3	50.0	334		385	mg/L		N/A	(80%-120%)		07/26/24 12:41

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.

QC Summary

Workorder: **677339**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

N/A RPD or %Recovery limits do not apply.

ND Analyte concentration is not detected above the detection limit

E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.

B The target analyte was detected in the associated blank.

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2645894

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2645892

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
677339001	MCM-INW-01
677339002	MCM-MCM-06
677339003	MCM-PT-01
677339004	MCM-PT-02
677339005	MCM-PT-03
677339006	MCM-DR-01

1205799930	Laboratory Control Sample (LCS)
1205799933	677339001(MCM-INW-01L) Serial Dilution (SD)
1205799931	677339001(MCM-INW-01S) Matrix Spike (MS)
1205799932	677339001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)
1205802960	677339001(MCM-INW-01PS) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is

less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike also did not meet the required control limits; thus, confirming matrix interferences and/or sample non-homogeneity.

Sample	Analyte	Value
1205799932 (MCM-INW-01MSD)	Manganese	72.1* (75%-125%)

Post Spike (PS) Recovery Statement
The percent recoveries (%R) obtained from the PS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The PS did not meet the recommended quality control acceptance criteria for percent recoveries for all applicable analytes and verifies the presence of matrix interferences.

Sample	Analyte	Value
1205802960 (MCM-INW-01PS)	Manganese	34.2* (75%-125%)

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 677339001 (MCM-INW-01), 677339002 (MCM-MCM-06), 677339003 (MCM-PT-01), 677339004 (MCM-PT-02), 677339005 (MCM-PT-03), 677339006 (MCM-DR-01), 677339007 (MCM-DR-02), 677339008 (MCM-DR-03) and 677339009 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

1205802351	677536006(NonSDG) Sample Duplicate (DUP)
1205802352	677536006(NonSDG) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Sample Dilutions
The following sample 677339001 (MCM-INW-01) was diluted because target analyte concentrations exceeded the calibration range. Samples 677339001 (MCM-INW-01), 677339002 (MCM-MCM-06), 677339003 (MCM-PT-01), 677339004 (MCM-PT-02), 677339005 (MCM-PT-03), 677339006 (MCM-DR-01), 677339007 (MCM-DR-02), 677339008 (MCM-DR-03) and 677339009 (MCM-AP1-FD-01) were diluted based on historical data. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

C) Did the RSO classify the samples as radioactive?		✓	Maximum Net Counts Observed* (Observed Counts - Area Background Counts): _____CPM / mR/Hr **Classified as: Rad 1 Rad 2 Rad 3**
D) Did the client designate samples are hazardous?		✓	COC notation or hazard labels on containers equal client designation.
E) Did the RSO identify possible hazards?		✓	If D or E is yes, select Hazards below. PCB's Flammable Foreign Soil RCRA Asbestos Beryllium Other:

	Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1	Shipping containers received intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2	Chain of custody documents included with shipment?	✓			Circle Applicable: Client contacted and provided COC COC created upon receipt
3	Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	✓			Preservation Method: (Wet Ice) Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: 3°
4	Daily check performed and passed on IR temperature gun?	✓			**Temperature Device Serial #:** IR8-23 Secondary Temperature Device Serial # (If Applicable):
5	Sample containers intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6	Samples requiring chemical preservation at proper pH?	✓			Sample ID's and Containers Affected: If Preservation added, Lot#:
7	Do any samples require Volatile Analysis?			✓	If Yes, are Encores or Soil Kits present for solids? Yes___ No___ NA___(If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes___ No___ NA___(If unknown, select No) Are liquid VOA vials free of headspace? Yes___ No___ NA___ Sample ID's and containers affected:
8	Samples received within holding time?	✓			ID's and tests affected:
9	Sample ID's on COC match ID's on bottles?	✓			ID's and containers affected:
10	Date & time on COC match date & time on bottles?	✓			Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11	Number of containers received match number indicated on COC?				Circle Applicable: No container count on COC Other (describe)
12	Are sample containers identifiable as GEL provided by use of GEL labels?				
13	COC form is properly signed in relinquished/received sections?				Circle Applicable: Not relinquished Other (describe)

Comments (Use Continuation Form if needed):

PM (or PMA) review: Initials AT Date 7/25/24 Page 1 of 1

Sample ID:	Description:
DR-03	Metals, Diss. Metals, Inorganics, Sulfide, Deuterium

Created using VuSitu from In-Situ, Inc.

Low-Flow Test Report:

Test Date / Time: 9/12/2024 11:40:13 AM
Project: Plant McManus Week 3 Performance
Operator Name: Jay Siewert

Location Name: INW-01 **Well Diameter: 4 in** **Casing Type: PVC** **Screen Length: 15 ft** **Top of Screen: 15.78 ft** **Total Depth: 30.78 ft** **Initial Depth to Water: 5.59 ft**	**Pump Type: GeoTech Peristaltic** **Tubing Type: LDPE** **Pump Intake From TOC: 23.28 ft** **Estimated Total Volume Pumped: 3700 ml** **Flow Cell Volume: 90 ml** **Final Flow Rate: 185 ml/min** **Final Draw Down: 0.42 ft**	**Instrument Used: Aqua TROLL 400** **Serial Number: 850762**

Test Notes:
Pre-purged 2 L. Orange purge water.

Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Salinity	Flow
		+/- 0.1	+/- 1000	+/- 5 %	+/- 10 %	+/- 5	+/- 1000	+/- 0.3	+/- 10	
9/12/2024 11:40 AM	00:00	6.31 pH	25.37 °C	17,442 µS/cm	0.21 mg/L	79.10 NTU	-81.9 mV	5.91 ft	10.43 PSU	185.00 ml/min

Re: Plant McManus CCR Groundwater Compliance Week 1
Work Order: 683401

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 29, 2024. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 683401 in the left-hand footer of the data report. Revision 01 includes the addition of Iron and Sodium results to the final package.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
683401001	MCM-INW-01	Ground Water	08/27/24 12:12	08/29/24 14:20
683401002	MCM-MCM-06	Ground Water	08/28/24 15:34	08/29/24 14:20
683401003	MCM-PT-01	Ground Water	08/28/24 14:10	08/29/24 14:20
683401004	MCM-PT-02	Ground Water	08/28/24 10:12	08/29/24 14:20
683401005	MCM-PT-03	Ground Water	08/27/24 15:10	08/29/24 14:20
683401006	MCM-DR-01	Ground Water	08/28/24 11:46	08/29/24 14:20
683401007	MCM-DR-02	Ground Water	08/27/24 16:30	08/29/24 14:20
683401008	MCM-DR-03	Ground Water	08/27/24 10:22	08/29/24 14:20
683401009	MCM-AP1-FD-01	Ground Water	08/27/24 12:00	08/29/24 14:20
683401010	MCM-AP1-FB-01	Water	08/27/24 17:30	08/29/24 14:20
683401011	MCM-AP1-EB-01	Water	08/27/24 17:36	08/29/24 14:20

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 683401 GEL Work Order: 683401

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
R	Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.

QC Summary

Workorder: **683401**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

B The target analyte was detected in the associated blank.

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2665212

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2665211

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
683401001	MCM-INW-01
683401002	MCM-MCM-06
683401003	MCM-PT-01
683401004	MCM-PT-02
683401005	MCM-PT-03

683401007	MCM-DR-02
683401008	MCM-DR-03
683401009	MCM-AP1-FD-01
683401010	MCM-AP1-FB-01
683401011	MCM-AP1-EB-01
1205840135	Method Blank (MB)**ICP-MS**
1205840136	Laboratory Control Sample (LCS)
1205840139	683401001(MCM-INW-01L) Serial Dilution (SD)
1205840137	683401001(MCM-INW-01S) Matrix Spike (MS)
1205840138	683401001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 683401001 (MCM-INW-01), 683401002

(MCM-MCM-06), 683401003 (MCM-PT-01), 683401004 (MCM-PT-02), 683401005 (MCM-PT-03), 683401006 (MCM-DR-01), 683401007 (MCM-DR-02), 683401008 (MCM-DR-03) and 683401009 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the SOP, samples 683401001 (MCM-INW-01), 683401002 (MCM-MCM-06), 683401003 (MCM-PT-01), 683401004 (MCM-PT-02), 683401005 (MCM-PT-03), 683401006 (MCM-DR-01), 683401007 (MCM-DR-02), 683401008 (MCM-DR-03) and 683401009 (MCM-AP1-FD-01) were diluted due to internal standard recoveries outside the acceptable control limits.

1205840177	683390005(NonSDG) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Sample Dilutions
The following samples 683401001 (MCM-INW-01), 683401008 (MCM-DR-03) and 683401009 (MCM-AP1-FD-01) were diluted because target analyte concentrations exceeded the calibration range. Samples 683401001 (MCM-INW-01), 683401002 (MCM-MCM-06), 683401003 (MCM-PT-01), 683401004 (MCM-PT-02), 683401005 (MCM-PT-03), 683401006 (MCM-DR-01), 683401007 (MCM-DR-02), 683401008 (MCM-DR-03) and 683401009 (MCM-AP1-FD-01) were diluted based on historical data. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Re: Plant McManus CCR Groundwater Compliance Week 1
Work Order: 683403

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 29, 2024. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 683403 in the left-hand footer of the data report. Revision 01 includes the addition of Iron and Sodium results to the final package.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
683403001	MCM-INW-01	Ground Water	08/27/24 12:12	08/29/24 14:20
683403002	MCM-MCM-06	Ground Water	08/28/24 15:34	08/29/24 14:20
683403003	MCM-PT-01	Ground Water	08/28/24 14:10	08/29/24 14:20
683403004	MCM-PT-02	Ground Water	08/28/24 10:12	08/29/24 14:20
683403005	MCM-PT-03	Ground Water	08/27/24 15:10	08/29/24 14:20
683403006	MCM-DR-01	Ground Water	08/28/24 11:46	08/29/24 14:20
683403007	MCM-DR-02	Ground Water	08/27/24 16:30	08/29/24 14:20
683403008	MCM-DR-03	Ground Water	08/27/24 10:22	08/29/24 14:20
683403009	MCM-AP1-FD-01	Ground Water	08/27/24 12:00	08/29/24 14:20

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 683403 GEL Work Order: 683403

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

QC Summary

Workorder: **683403**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals
Technical Case Narrative
Georgia Power Company
SDG #: 683403

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2665214

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2665213

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
683403001	MCM-INW-01
683403002	MCM-MCM-06
683403003	MCM-PT-01
683403004	MCM-PT-02
683403005	MCM-PT-03
683403006	MCM-DR-01
683403007	MCM-DR-02
683403008	MCM-DR-03
683403009	MCM-AP1-FD-01
1205840140	Method Blank (MB)**ICP-MS**
1205840141	Laboratory Control Sample (LCS)
1205840144	683403001(MCM-INW-01L) Serial Dilution (SD)
1205840142	683403001(MCM-INW-01S) Matrix Spike (MS)
1205840143	683403001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 683403001 (MCM-INW-01), 683403002 (MCM-MCM-06), 683403003 (MCM-PT-01), 683403004 (MCM-PT-02), 683403005 (MCM-PT-03), 683403006 (MCM-DR-01), 683403007 (MCM-DR-02), 683403008 (MCM-DR-03) and 683403009 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the

SOP, samples 683403001 (MCM-INW-01), 683403002 (MCM-MCM-06), 683403003 (MCM-PT-01), 683403004 (MCM-PT-02), 683403006 (MCM-DR-01) and 683403007 (MCM-DR-02) were diluted due to internal standard recoveries outside the acceptable control limits.

SAMPLE RECEIPT & REVIEW FORM

Client: PCC	**SDG/AR/COC/Work Order:**
Received By: CLM	**Date Received:** 8/29/24
Carrier and Tracking Number	Circle Applicable: FedEx Express FedEx Ground UPS Field Services (Courier) Other Cooler 1 - 0° 2 - 0°

Suspected Hazard Information	Yes	No	*If Net Counts > 100cpm on samples not marked "radioactive", contact the Radiation Safety Group for further investigation.
A)Shipped as a DOT Hazardous?		✓	Hazard Class Shipped: UN#: If UN2910, Is the Radioactive Shipment Survey Compliant? Yes___ No___
B) Did the client designate the samples are to be received as radioactive?		✓	COC notation or radioactive stickers on containers equal client designation.
C) Did the RSO classify the samples as radioactive?		✓	Maximum Net Counts Observed* (Observed Counts - Area Background Counts): 0 CPM / mR/Hr **Classified as: Rad 1 Rad 2 Rad 3**
D) Did the client designate samples are hazardous?		✓	COC notation or hazard labels on containers equal client designation.
E) Did the RSO identify possible hazards?		✓	If D or E is yes, select Hazards below. PCB's Flammable Foreign Soil RCRA Asbestos Beryllium Other:

	Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1	Shipping containers received intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2	Chain of custody documents included with shipment?	✓			Circle Applicable: Client contacted and provided COC COC created upon receipt
3	Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	✓			Preservation Method: (Wet Ice) Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: See above with coolers
4	Daily check performed and passed on IR temperature gun?	✓			**Temperature Device Serial #:** IR5-23 Secondary Temperature Device Serial # (If Applicable):
5	Sample containers intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6	Samples requiring chemical preservation at proper pH?	✓			Sample ID's and Containers Affected: If Preservation added, Lot#:
7	Do any samples require Volatile Analysis?			✓	If Yes, are Encores or Soil Kits present for solids? Yes___ No___ NA___(If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes___ No___ NA___(If unknown, select No) Are liquid VOA vials free of headspace? Yes___ No___ NA___ Sample ID's and containers affected:
8	Samples received within holding time?	✓			ID's and tests affected:
9	Sample ID's on COC match ID's on bottles?	✓			ID's and containers affected:
10	Date & time on COC match date & time on bottles?	✓			Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11	Number of containers received match number indicated on COC?			✓	Circle Applicable: No container count on COC Other (describe)
12	Are sample containers identifiable as GEL provided by use of GEL labels?	✓			
13	COC form is properly signed in relinquished/received sections?	✓			Circle Applicable: Not relinquished Other (describe)

Re: Plant McManus CCR Groundwater Compliance
Work Order: 684573

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on September 06, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
684573001	MCM-INW-01	Ground Water	09/05/24 11:46	09/06/24 12:52
684573002	MCM-MCM-06	Ground Water	09/05/24 15:38	09/06/24 12:52
684573003	MCM-PT-01	Ground Water	09/05/24 09:25	09/06/24 12:52
684573004	MCM-PT-02	Ground Water	09/05/24 14:17	09/06/24 12:52
684573005	MCM-PT-03	Ground Water	09/05/24 14:22	09/06/24 12:52
684573006	MCM-DR-01	Ground Water	09/05/24 11:39	09/06/24 12:52
684573007	MCM-DR-02	Ground Water	09/05/24 15:54	09/06/24 12:52
684573008	MCM-DR-03	Ground Water	09/05/24 09:22	09/06/24 12:52
684573009	MCM-AP1-FD-01	Ground Water	09/05/24 12:00	09/06/24 12:52

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 684573 GEL Work Order: 684573

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
J	See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals
Technical Case Narrative
Georgia Power Company
SDG #: 684573

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2668630

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2668629

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
684573001	MCM-INW-01
684573002	MCM-MCM-06
684573003	MCM-PT-01
684573004	MCM-PT-02
684573005	MCM-PT-03
684573006	MCM-DR-01
684573007	MCM-DR-02
684573008	MCM-DR-03
684573009	MCM-AP1-FD-01
1205847273	Method Blank (MB)**ICP-MS**

1205847277	684573001(MCM-INW-01L) Serial Dilution (SD)
1205847275	684573001(MCM-INW-01S) Matrix Spike (MS)
1205847276	684573001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Sample 684573008 (MCM-DR-03) was diluted to ensure that the analyte concentration was within the linear calibration range of the instrument. Per the SOP, samples were diluted due to internal standard recoveries outside the acceptable control limits.

Re: Plant McManus CCR Groundwater Compliance
Work Order: 684564

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on September 06, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
684564001	MCM-INW-01	Ground Water	09/05/24 11:46	09/06/24 12:52

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4443.

Sincerely,

Hannah Bowden for
Alaina Pinnick
Project Manager

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 684564 GEL Work Order: 684564

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

QC Summary

Workorder: **684564**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
R	Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
B	The target analyte was detected in the associated blank.
e	5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes
J	See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2668628

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2668627

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
684564001	MCM-INW-01
684564002	MCM-MCM-06
684564003	MCM-PT-01
684564004	MCM-PT-02
684564005	MCM-PT-03
684564006	MCM-DR-01
684564007	MCM-DR-02
684564008	MCM-DR-03
684564009	MCM-AP1-FD-01
684564010	MCM-AP1-FB-01
684564011	MCM-AP1-EB-01
1205847268	Method Blank (MB)**ICP-MS**
1205847269	Laboratory Control Sample (LCS)
1205847272	684564001(MCM-INW-01L) Serial Dilution (SD)
1205847270	684564001(MCM-INW-01S) Matrix Spike (MS)
1205847271	684564001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 684564001 (MCM-INW-01), 684564002

(MCM-MCM-06), 684564003 (MCM-PT-01), 684564004 (MCM-PT-02), 684564005 (MCM-PT-03), 684564006 (MCM-DR-01), 684564007 (MCM-DR-02), 684564008 (MCM-DR-03) and 684564009 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

Analyte	684564

684564010	MCM-AP1-FB-01
684564011	MCM-AP1-EB-01
1205847900	Method Blank (MB)**CVAA**
1205847901	Laboratory Control Sample (LCS)
1205847904	684298010(NonSDGL) Serial Dilution (SD)
1205847902	684298010(NonSDGD) Sample Duplicate (DUP)
1205847903	684298010(NonSDGS) Matrix Spike (MS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

General Chemistry

Product: **Ion Chromatography**
Analytical Method: EPA 300.0

Analytical Procedure: GL-GC-E-086 REV# 35
Analytical Batch: 2669330

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
684564001	MCM-INW-01
684564002	MCM-MCM-06
684564003	MCM-PT-01

1205849111	684564008(MCM-DR-03) Sample Duplicate (DUP)
1205849112	684564008(MCM-DR-03) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement
The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Chloride	1205849110 (MCM-INW-01PS)	111* (90%-110%)
Fluoride	1205849112 (MCM-DR-03PS)	111* (90%-110%)

Technical Information

Sample Dilutions
The following samples 1205849109 (MCM-INW-01DUP), 1205849110 (MCM-INW-01PS) and 684564001 (MCM-INW-01) were diluted because target analyte concentrations exceeded the calibration range. Samples 1205849109 (MCM-INW-01DUP), 1205849110 (MCM-INW-01PS), 1205849111 (MCM-DR-03DUP), 1205849112 (MCM-DR-03PS), 684564001 (MCM-INW-01), 684564002 (MCM-MCM-06), 684564003 (MCM-PT-01), 684564004 (MCM-PT-02), 684564005 (MCM-PT-03), 684564006 (MCM-DR-01), 684564007 (MCM-DR-02), 684564008 (MCM-DR-03) and 684564009 (MCM-AP1-FD-01) were diluted to minimize matrix effects on instrument performance. Samples 1205849109 (MCM-INW-01DUP), 1205849110 (MCM-INW-01PS), 1205849111 (MCM-DR-03DUP), 1205849112 (MCM-DR-03PS), 684564001 (MCM-INW-01), 684564002 (MCM-MCM-06), 684564003 (MCM-PT-01), 684564004 (MCM-PT-02), 684564005 (MCM-PT-03), 684564006 (MCM-DR-01),

684564007 (MCM-DR-02), 684564008 (MCM-DR-03) and 684564009 (MCM-AP1-FD-01) were diluted based on historical data. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Re: Plant McManus CCR Groundwater Compliance
Work Order: 685645

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on September 13, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Client requested sample MCM-MCM-06 be reported seperately. It is reported as GEL workorder 685519. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
685645001	MCM-INW-01	Ground Water	09/12/24 12:10	09/13/24 09:40
685645002	MCM-MCM-06	Ground Water	09/12/24 10:12	09/13/24 09:40

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 685645 GEL Work Order: 685645

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
R	Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
B	The target analyte was detected in the associated blank.
e	5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes
J	See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
Georgia Power Company
SDG #: 685645

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2672440

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2672439

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
685645001	MCM-INW-01
685645003	MCM-PT-01
685645004	MCM-PT-02

1205855320	685645001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities

indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 685645001 (MCM-INW-01), 685645003 (MCM-PT-01), 685645004 (MCM-PT-02), 685645005 (MCM-PT-03), 685645006 (MCM-DR-01), 685645007 (MCM-DR-02), 685645008 (MCM-DR-03), 685645009 (MCM-AP1-FD-01), 685645012 (MCM-INW-01), 685645013 (MCM-MCM-06), 685645014 (MCM-PT-01), 685645015 (MCM-PT-02), 685645016 (MCM-PT-03), 685645017 (MCM-DR-01), 685645018 (MCM-DR-02), 685645019 (MCM-DR-03) and 685645020 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the SOP, samples 685645001 (MCM-INW-01), 685645003 (MCM-PT-01), 685645004 (MCM-PT-02), 685645005 (MCM-PT-03), 685645006 (MCM-DR-01), 685645009 (MCM-AP1-FD-01), 685645012 (MCM-INW-01), 685645014 (MCM-PT-01), 685645015 (MCM-PT-02), 685645017 (MCM-DR-01) and 685645020 (MCM-AP1-FD-01) were diluted due to internal standard recoveries outside the acceptable control limits.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Sample Dilutions
The following samples 1205854701 (MCM-MCM-04DUP) and 1205854702 (MCM-MCM-04PS) were diluted because target analyte concentrations exceeded the calibration range. Samples 1205854703 (MCM-DR-02DUP), 1205854704 (MCM-DR-02PS), 685645001 (MCM-INW-01), 685645002 (MCM-MCM-06), 685645003 (MCM-PT-01), 685645004 (MCM-PT-02), 685645005 (MCM-PT-03), 685645006 (MCM-DR-01), 685645007 (MCM-DR-02), 685645008 (MCM-DR-03) and 685645009 (MCM-AP1-FD-01) were diluted to minimize matrix effects on instrument performance. Samples 1205854703 (MCM-DR-02DUP), 1205854704 (MCM-DR-02PS), 685645001 (MCM-INW-01), 685645002 (MCM-MCM-06), 685645003 (MCM-PT-01), 685645004 (MCM-PT-02), 685645005 (MCM-PT-03), 685645006 (MCM-DR-01), 685645007 (MCM-DR-02), 685645008 (MCM-DR-03) and 685645009 (MCM-AP1-FD-01) were diluted based on historical data. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Re: Plant McManus CCR GW Compliance Sept 2024
Work Order: 685517

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on September 12, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. The sample ID "MCM-MCM-06" was removed from the original report to be included on separate reports 685517 and 685519. The client provided a revised chain of custody via email. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
685517001	MCM-MCM-06	Ground Water	09/12/24 10:12	09/12/24 14:30
685517002	MCM-MCM-06	Ground Water	09/12/24 10:12	09/12/24 14:30

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 685517 GEL Work Order: 685517

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N Metals--The Matrix spike sample recovery is not within specified control limits

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit

QC Summary

Workorder: **685517**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.

B The target analyte was detected in the associated blank.

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
Georgia Power Company
SDG #: 685517

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2671581

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2671579

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
685517001	MCM-MCM-06
1205853453	Method Blank (MB)**ICP-MS**
1205853454	Laboratory Control Sample (LCS)
1205853457	685517001(MCM-MCM-06L) Serial Dilution (SD)
1205853455	685517001(MCM-MCM-06S) Matrix Spike (MS)
1205853456	685517001(MCM-MCM-06SD) Matrix Spike Duplicate (MSD)
1205865427	685517001(MCM-MCM-06PS) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1205853455 (MCM-MCM-06MS)	Selenium	37.7* (75%-125%)
1205853456 (MCM-MCM-06MSD)	Selenium	39* (75%-125%)

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Sample 685517001 (MCM-MCM-06) was diluted to ensure that the analyte concentration was within the linear calibration range of the instrument.

GEL Sample ID#	Client Sample Identification
685517001	MCM-MCM-06
1205854607	Method Blank (MB)
1205854608	Laboratory Control Sample (LCS)
1205854609	685518002(MCM-MCM-02) Sample Duplicate (DUP)
1205854610	685518002(MCM-MCM-02) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement
The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Chloride	1205854610 (MCM-MCM-02PS)	113* (90%-110%)

Technical Information

Sample Dilutions
The following samples 1205854609 (MCM-MCM-02DUP), 1205854610 (MCM-MCM-02PS) and 685517001 (MCM-MCM-06) were diluted because target analyte concentrations exceeded the calibration range. Sample 685517001 (MCM-MCM-06) was diluted to minimize matrix effects on instrument performance. Sample 685517001 (MCM-MCM-06) was diluted based on historical data. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Analyte	**685517001**
Chloride	500X
Fluoride	4X
Sulfate	200X

Product: **Solids, Total Dissolved**
Analytical Method: SM 2540C
Analytical Procedure: GL-GC-E-001 REV# 21
Analytical Batch: 2674517

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
685517001	MCM-MCM-06
1205859364	Method Blank (MB)
1205859365	Laboratory Control Sample (LCS)
1205859366	685705001(NonSDG) Sample Duplicate (DUP)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Miscellaneous Information

Additional Comments
A reduced aliquot was used due to historical information. 685517001 (MCM-MCM-06).

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Re: Plant McManus 4-Week Sampling September 2024
Work Order: 686583

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on September 19, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. One of the shipping containers was not sealed. Dissolved metals including mercury is reported in this data package. All other analyses requested on the chain of custody were reported under GEL 686578. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
686583001	MCM-INW-01	Ground Water	09/18/24 12:22	09/19/24 09:40
686583002	MCM-MCM-06	Ground Water	09/18/24 11:56	09/19/24 09:40
686583003	MCM-PT-01	Ground Water	09/18/24 10:02	09/19/24 09:40
686583004	MCM-PT-02	Ground Water	09/18/24 15:37	09/19/24 09:40
686583005	MCM-PT-03	Ground Water	09/18/24 15:50	09/19/24 09:40
686583006	MCM-DR-01	Ground Water	09/18/24 11:07	09/19/24 09:40
686583007	MCM-DR-02	Ground Water	09/18/24 09:58	09/19/24 09:40
686583008	MCM-DR-03	Ground Water	09/18/24 10:35	09/19/24 09:40
686583009	MCM-AP1-FD-01	Ground Water	09/18/24 12:00	09/19/24 09:40

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 686583 GEL Work Order: 686583

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Mercury	U	ND	U	ND	ug/L	N/A		(0%-10%)		09/24/24 13:40

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.

QC Summary

Workorder: **686583**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

ND Analyte concentration is not detected above the detection limit

E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals
Technical Case Narrative
Georgia Power Company
SDG #: 686583

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2675662

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2675661

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
686583001	MCM-INW-01
686583002	MCM-MCM-06
686583003	MCM-PT-01
686583004	MCM-PT-02
686583005	MCM-PT-03
686583006	MCM-DR-01
686583007	MCM-DR-02
686583008	MCM-DR-03
686583009	MCM-AP1-FD-01
1205861592	Method Blank (MB)**ICP-MS**
1205861593	Laboratory Control Sample (LCS)
1205861596	686583001(MCM-INW-01L) Serial Dilution (SD)
1205861594	686583001(MCM-INW-01S) Matrix Spike (MS)
1205861595	686583001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 686583001 (MCM-INW-01), 686583002 (MCM-MCM-06), 686583003 (MCM-PT-01), 686583004 (MCM-PT-02), 686583005 (MCM-PT-03), 686583006 (MCM-DR-01), 686583007 (MCM-DR-02), 686583008 (MCM-DR-03) and 686583009 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the

SOP, samples 686583001 (MCM-INW-01), 686583002 (MCM-MCM-06), 686583003 (MCM-PT-01), 686583004 (MCM-PT-02), 686583005 (MCM-PT-03), 686583006 (MCM-DR-01), 686583007 (MCM-DR-02), 686583008 (MCM-DR-03) and 686583009 (MCM-AP1-FD-01) were diluted due to internal standard recoveries outside the acceptable control limits.

Good morning,

Notifying you that one of the shipping coolers for samples received, 9/19/24 and 9/20/24, was not sealed and did not contain a chain of custody. The chain of custody was received in the first cooler that was delivered on 9/19/24. There is no response needed! Please see the attached COC for reference..

Re: Plant McManus 4-Week Sampling September 2024
Work Order: 686578

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on September 19, 2024. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 686578 in the left-hand footer of the data report. Revision 01 corrects the collection dates for GEL sample IDs 686578006 and 686578007 from 9/17/24 to 9/18/24.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. One of the shipping containers was not sealed. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
686578001	MCM-INW-01	Ground Water	09/17/24 12:22	09/19/24 09:40
686578002	MCM-MCM-06	Ground Water	09/17/24 11:56	09/19/24 09:40
686578003	MCM-PT-01	Ground Water	09/17/24 10:02	09/19/24 09:40
686578004	MCM-PT-02	Ground Water	09/17/24 15:37	09/19/24 09:40
686578005	MCM-PT-03	Ground Water	09/17/24 15:50	09/19/24 09:40
686578006	MCM-DR-01	Ground Water	09/18/24 11:07	09/19/24 09:40
686578007	MCM-DR-02	Ground Water	09/18/24 09:58	09/19/24 09:40
686578008	MCM-DR-03	Ground Water	09/17/24 10:35	09/19/24 09:40
686578009	MCM-AP1-FD-01	Ground Water	09/17/24 12:00	09/19/24 09:40
686578010	MCM-AP1-FB-01	Ground Water	09/18/24 12:58	09/19/24 09:40
686578011	MCM-AP1-EB-01	Ground Water	09/18/24 13:08	09/19/24 09:40

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 686578 GEL Work Order: 686578

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

QC Summary

Workorder: **686578**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.

B The target analyte was detected in the associated blank.

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2675467

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2675466

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
686578001	MCM-INW-01
686578002	MCM-MCM-06
686578003	MCM-PT-01
686578004	MCM-PT-02
686578005	MCM-PT-03
686578006	MCM-DR-01
686578007	MCM-DR-02
686578008	MCM-DR-03
686578009	MCM-AP1-FD-01
686578010	MCM-AP1-FB-01
686578011	MCM-AP1-EB-01
1205861291	Method Blank (MB)**ICP-MS**
1205861292	Laboratory Control Sample (LCS)
1205861295	686578001(MCM-INW-01L) Serial Dilution (SD)
1205861293	686578001(MCM-INW-01S) Matrix Spike (MS)
1205861294	686578001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 686578001 (MCM-INW-01), 686578002

(MCM-MCM-06), 686578003 (MCM-PT-01), 686578004 (MCM-PT-02), 686578005 (MCM-PT-03), 686578006 (MCM-DR-01), 686578007 (MCM-DR-02), 686578008 (MCM-DR-03) and 686578009 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

Good morning,

Notifying you that one of the shipping coolers for samples received, 9/19/24 and 9/20/24, was not sealed and did not contain a chain of custody. The chain of custody was received in the first cooler that was delivered on 9/19/24. There is no response needed! Please see the attached COC for reference..

Re: Plant McManus 6-Week Sampling September 2024 Week 6
Work Order: 688692

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on October 03, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
688692001	MCM-INW-01	Ground Water	10/02/24 10:16	10/03/24 09:10
688692002	MCM-MCM-06	Ground Water	10/01/24 11:10	10/03/24 09:10
688692003	MCM-PT-01	Ground Water	10/01/24 12:58	10/03/24 09:10
688692004	MCM-PT-02	Ground Water	10/02/24 10:12	10/03/24 09:10
688692005	MCM-PT-03	Ground Water	10/01/24 13:36	10/03/24 09:10
688692006	MCM-DR-01	Ground Water	10/01/24 16:43	10/03/24 09:10
688692007	MCM-DR-02	Ground Water	10/01/24 16:37	10/03/24 09:10
688692008	MCM-DR-03	Ground Water	10/01/24 11:47	10/03/24 09:10
688692009	MCM-AP1-FD-01	Ground Water	10/01/24 12:00	10/03/24 09:10

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 688692 GEL Work Order: 688692

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.

QC Summary

Workorder: **688692**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

N/A RPD or %Recovery limits do not apply.

ND Analyte concentration is not detected above the detection limit

E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals
Technical Case Narrative
Georgia Power Company
SDG #: 688692

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2682269

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2682267

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
688692001	MCM-INW-01
688692002	MCM-MCM-06
688692003	MCM-PT-01
688692004	MCM-PT-02
688692005	MCM-PT-03
688692006	MCM-DR-01
688692007	MCM-DR-02
688692008	MCM-DR-03

1205874967	688692001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the SOP, sample 688692001 (MCM-INW-01) was diluted due to internal standard recoveries outside the acceptable control limits.

Re: Plant McManus 6-Week Sampling September 2024 Week 6
Work Order: 688684

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on October 03, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
688684001	MCM-INW-01	Ground Water	10/02/24 10:16	10/03/24 09:10
688684002	MCM-MCM-06	Ground Water	10/01/24 11:10	10/03/24 09:10
688684003	MCM-PT-01	Ground Water	10/01/24 12:58	10/03/24 09:10
688684004	MCM-PT-02	Ground Water	10/02/24 10:12	10/03/24 09:10
688684005	MCM-PT-03	Ground Water	10/01/24 13:36	10/03/24 09:10
688684006	MCM-DR-01	Ground Water	10/01/24 16:43	10/03/24 09:10
688684007	MCM-DR-02	Ground Water	10/01/24 16:37	10/03/24 09:10
688684008	MCM-DR-03	Ground Water	10/01/24 11:47	10/03/24 09:10
688684009	MCM-AP1-FD-01	Ground Water	10/01/24 12:00	10/03/24 09:10
688684010	MCM-AP1-FB-01	Water	10/02/24 07:55	10/03/24 09:10
688684011	MCM-AP1-EB-01	Water	10/02/24 08:02	10/03/24 09:10

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 688684 GEL Work Order: 688684

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

QC Summary

Workorder: **688684**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range

Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.

FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies

N1 See case narrative

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.

B The target analyte was detected in the associated blank.

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2682265

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2682264

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
688684001	MCM-INW-01
688684002	MCM-MCM-06
688684003	MCM-PT-01
688684004	MCM-PT-02
688684005	MCM-PT-03
688684006	MCM-DR-01
688684007	MCM-DR-02
688684008	MCM-DR-03
688684009	MCM-AP1-FD-01
688684010	MCM-AP1-FB-01
688684011	MCM-AP1-EB-01
1205874959	Method Blank (MB)**ICP-MS**
1205874960	Laboratory Control Sample (LCS)
1205874963	688684001(MCM-INW-01L) Serial Dilution (SD)
1205874961	688684001(MCM-INW-01S) Matrix Spike (MS)
1205874962	688684001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 688684001 (MCM-INW-01), 688684002

(MCM-MCM-06), 688684003 (MCM-PT-01), 688684004 (MCM-PT-02), 688684005 (MCM-PT-03), 688684006 (MCM-DR-01), 688684007 (MCM-DR-02), 688684008 (MCM-DR-03) and 688684009 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the SOP, samples 688684001 (MCM-INW-01), 688684003 (MCM-PT-01) and 688684006 (MCM-DR-01) were diluted due to internal standard recoveries outside the acceptable control limits.

Re: Plant McManus 8-Week Sampling October 2024
Work Order: 690725

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on October 17, 2024. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. This report replaces the original version which is noted as SDG number 690725 in the left-hand footer of the data report. Revision 02 corrects the collection date for 007,010, 011 and 018.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
690725001	MCM-INW-01	Ground Water	10/15/24 14:11	10/17/24 09:15
690725002	MCM-MCM-06	Ground Water	10/15/24 11:41	10/17/24 09:15
690725003	MCM-PT-01	Ground Water	10/15/24 09:55	10/17/24 09:15
690725004	MCM-PT-02	Ground Water	10/15/24 16:01	10/17/24 09:15
690725005	MCM-PT-03	Ground Water	10/15/24 16:46	10/17/24 09:15

690725020	MCM-AP1-FD-01	Ground Water	10/15/24 12:00	10/17/24 09:15

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 690725 GEL Work Order: 690725

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

QC Summary

Workorder: **690725**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
R	Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
B	The target analyte was detected in the associated blank.
e	5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes
J	See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

1205890609	690725001(MCM-INW-01S) Matrix Spike (MS)
1205890610	690725001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 690725001 (MCM-INW-01), 690725002 (MCM-MCM-06), 690725003 (MCM-PT-01), 690725004 (MCM-PT-02), 690725005 (MCM-PT-03), 690725006 (MCM-DR-01), 690725007 (MCM-DR-02), 690725008 (MCM-DR-03), 690725009 (MCM-AP1-FD-01), 690725012 (MCM-INW-01), 690725013 (MCM-MCM-06), 690725014 (MCM-PT-01), 690725015 (MCM-PT-02), 690725016 (MCM-PT-03), 690725017 (MCM-DR-01), 690725018 (MCM-DR-02), 690725019 (MCM-DR-03) and 690725020 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the SOP, samples 690725001 (MCM-INW-01), 690725005 (MCM-PT-03), 690725006 (MCM-DR-01), 690725007 (MCM-DR-02), 690725012 (MCM-INW-01), 690725013 (MCM-MCM-06), 690725014 (MCM-PT-01), 690725015 (MCM-PT-02), 690725016 (MCM-PT-03) and 690725017 (MCM-DR-01) were diluted due to internal standard recoveries outside the acceptable control limits.

SAMPLE RECEIPT & REVIEW FORM

Client: GPCC	**SDG/AR/COC/Work Order:**
Received By: QG	**Date Received:** 10/17/24
Carrier and Tracking Number	Circle Applicable: FedEx Express FedEx Ground UPS Field Services Courier Other 2807 1147 9200

Suspected Hazard Information	Yes	No	*If Net Counts > 100cpm on samples not marked "radioactive", contact the Radiation Safety Group for further investigation.
A)Shipped as a DOT Hazardous?		✓	Hazard Class Shipped: UN#: If UN2910, Is the Radioactive Shipment Survey Compliant? Yes___ No___
B) Did the client designate the samples are to be received as radioactive?		✓	COC notation or radioactive stickers on containers equal client designation.
C) Did the RSO classify the samples as radioactive?		✓	Maximum Net Counts Observed* (Observed Counts - Area Background Counts): 0 CPM / mR/Hr **Classified as: Rad 1 Rad 2 Rad 3**
D) Did the client designate samples are hazardous?		✓	COC notation or hazard labels on containers equal client designation.
E) Did the RSO identify possible hazards?		✓	If D or E is yes, select Hazards below. PCB's Flammable Foreign Soil RCRA Asbestos Beryllium Other:

	Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1	Shipping containers received intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2	Chain of custody documents included with shipment?	✓			Circle Applicable: Client contacted and provided COC COC created upon receipt
3	Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	✓			Preservation Method: Wet Ice Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: 4°C
4	Daily check performed and passed on IR temperature gun?	✓			Temperature Device Serial #: IR1-23 Secondary Temperature Device Serial # (If Applicable):
5	Sample containers intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6	Samples requiring chemical preservation at proper pH?	✓			Sample ID's and Containers Affected: If Preservation added, Lot#:
7	Do any samples require Volatile Analysis?			✓	If Yes, are Encores or Soil Kits present for solids? Yes___ No___ NA___(If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes___ No___ NA___(If unknown, select No) Are liquid VOA vials free of headspace? Yes___ No___ NA___ Sample ID's and containers affected:
8	Samples received within holding time?	✓			ID's and tests affected:
9	Sample ID's on COC match ID's on bottles?	✓			ID's and containers affected:
10	Date & time on COC match date & time on bottles?	✓			Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11	Number of containers received match number indicated on COC?	✓			Circle Applicable: No container count on COC Other (describe)
12	Are sample containers identifiable as GEL provided by use of GEL labels?	✓			
13	COC form is properly signed in relinquished/received sections?	✓			Circle Applicable: Not relinquished Other (describe)

Re:
Work Order:

Dear :

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on October 31, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
693032001	MCM-INW-01	Ground Water	10/29/24 11:52	10/31/24 09:40
693032002	MCM-MCM-06	Ground Water	10/29/24 09:46	10/31/24 09:40

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 693032 GEL Work Order: 693032

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N Metals--The Matrix spike sample recovery is not within specified control limits

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

U	Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
J	Value is estimated
X	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
N	Metals--The Matrix spike sample recovery is not within specified control limits
H	Analytical holding time was exceeded
<	Result is less than value reported
>	Result is greater than value reported
h	Preparation or preservation holding time was exceeded
R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
R	Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
B	The target analyte was detected in the associated blank.
e	5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes
J	See case narrative for an explanation

QC Summary

Workorder: **693032**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
Georgia Power Company
SDG #: 693032

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2698397

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2698396

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
693032001	MCM-INW-01
693032002	MCM-MCM-06
693032003	MCM-PT-01
693032004	MCM-PT-02
693032005	MCM-PT-03
693032006	MCM-DR-01
693032007	MCM-DR-02
693032008	MCM-DR-03
693032009	MCM-AP1-FD-01
693032010	MCM-AP1-FB-01
693032011	MCM-AP1-EB-01
693032012	MCM-INW-01
693032013	MCM-MCM-06
693032014	MCM-PT-01
693032015	MCM-PT-02
693032016	MCM-PT-03
693032017	MCM-DR-01
693032018	MCM-DR-02
693032019	MCM-DR-03
693032020	MCM-AP1-FD-01
1205905875	Method Blank (MB)**ICP-MS**
1205905876	Laboratory Control Sample (LCS)
1205905879	693032001(MCM-INW-01L) Serial Dilution (SD)
1205905877	693032001(MCM-INW-01S) Matrix Spike (MS)
1205905878	693032001(MCM-INW-01SD) Matrix Spike Duplicate (MSD)
1205914556	693032001(MCM-INW-01PS) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike recovery was within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recovery may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1205905878 (MCM-INW-01MSD)	Lead	73.5* (75%-125%)

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Per the SOP, samples 693032001 (MCM-INW-01), 693032002 (MCM-MCM-06), 693032003 (MCM-PT-01), 693032004 (MCM-PT-02), 693032005 (MCM-PT-03), 693032006 (MCM-DR-01), 693032007 (MCM-DR-02), 693032008 (MCM-DR-03), 693032009 (MCM-AP1-FD-01), 693032012 (MCM-INW-01), 693032013 (MCM-MCM-06), 693032014 (MCM-PT-01), 693032015 (MCM-PT-02), 693032016 (MCM-PT-03), 693032017 (MCM-DR-01), 693032018 (MCM-DR-02), 693032019 (MCM-DR-03) and 693032020 (MCM-AP1-FD-01) were diluted due to internal standard recoveries outside the acceptable control limits.

Re: Plant McManus 12-Week Sampling November 2024
Work Order: 695708

Dear Kristen Jurinko:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on November 14, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

Laboratory ID	Client ID	Matrix	Date Collected	Date Received
695708001	MCM-INW-01	Ground Water	11/12/24 15:15	11/14/24 09:15

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report
for

GPCC001 Georgia Power Company

Client SDG: 695708 GEL Work Order: 695708

The Qualifiers in this report are defined as follows:

* A quality control analyte recovery is outside of specified acceptance criteria

** Analyte is a Tracer compound

** Analyte is a surrogate compound

B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL

J Value is estimated

N Metals--The Matrix spike sample recovery is not within specified control limits

N/A RPD or %Recovery limits do not apply.

U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Alaina Pinnick.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded

QC Summary

Workorder: **695708**

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

R	Sample results are rejected
Z	Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
d	5-day BOD--The 2:1 depletion requirement was not met for this sample
^	RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
N/A	RPD or %Recovery limits do not apply.
ND	Analyte concentration is not detected above the detection limit
E	%difference of sample and SD is >10%. Sample concentration must meet flagging criteria
NJ	Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
E	General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
Q	One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
FB	Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
N1	See case narrative
Y	Other specific qualifiers were required to properly define the results. Consult case narrative.
R	Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
B	The target analyte was detected in the associated blank.
e	5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes
J	See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Technical Case Narrative
Georgia Power Company
SDG #: 695708

Metals

Product: **Determination of Metals by ICP-MS**
Analytical Method: SW846 3005A/6020B
Analytical Procedure: GL-MA-E-014 REV# 36
Analytical Batch: 2706223

Preparation Method: SW846 3005A
Preparation Procedure: GL-MA-E-006 REV# 15
Preparation Batch: 2706220

The following samples were analyzed using the above methods and analytical procedure(s).

GEL Sample ID#	Client Sample Identification
695708001	MCM-INW-01
695708002	MCM-MCM-06
695708003	MCM-PT-01
695708004	MCM-PT-02
695708005	MCM-PT-03
695708006	MCM-DR-01
695708007	MCM-DR-02
695708008	MCM-DR-03
695708009	MCM-AP1-FD-01
695708010	MCM-AP1-FB-01
695708011	MCM-AP1-EB-01
695708012	MCM-INW-01

695708017	MCM-DR-01
695708018	MCM-DR-02
695708019	MCM-DR-03
695708020	MCM-AP1-FD-01
1205920658	Method Blank (MB)**ICP-MS**
1205920659	Laboratory Control Sample (LCS)
1205920662	695708002(MCM-MCM-06L) Serial Dilution (SD)
1205920660	695708002(MCM-MCM-06S) Matrix Spike (MS)
1205920661	695708002(MCM-MCM-06SD) Matrix Spike Duplicate (MSD)
1205935507	695708002(MCM-MCM-06PS) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement
For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement
The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1205920660 (MCM-MCM-06MS)	Selenium	36.7* (75%-125%)
1205920661 (MCM-MCM-06MSD)	Selenium	36.9* (75%-125%)

Technical Information

Sample Dilutions
Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 695708001 (MCM-INW-01), 695708002 (MCM-MCM-06), 695708003 (MCM-PT-01), 695708004 (MCM-PT-02), 695708005 (MCM-PT-03), 695708006 (MCM-DR-01), 695708007 (MCM-DR-02), 695708008 (MCM-DR-03), 695708009 (MCM-AP1-FD-01), 695708012 (MCM-INW-01), 695708013 (MCM-MCM-06), 695708014 (MCM-PT-01), 695708015 (MCM-PT-02), 695708016 (MCM-PT-03), 695708017 (MCM-DR-01), 695708018 (MCM-DR-02), 695708019 (MCM-DR-03) and 695708020 (MCM-AP1-FD-01) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the SOP, samples 695708001 (MCM-INW-01), 695708002 (MCM-MCM-06), 695708003 (MCM-PT-01), 695708004 (MCM-PT-02), 695708005 (MCM-PT-03), 695708006 (MCM-DR-01), 695708007 (MCM-DR-02), 695708008 (MCM-DR-03), 695708009 (MCM-AP1-FD-01), 695708012 (MCM-INW-01), 695708013 (MCM-MCM-06), 695708014 (MCM-PT-01), 695708015 (MCM-PT-02), 695708016 (MCM-PT-03), 695708017 (MCM-DR-01), 695708018 (MCM-DR-02), 695708019 (MCM-DR-03) and 695708020 (MCM-AP1-FD-01) were diluted due to internal standard recoveries outside the acceptable control limits.

Sample Collection Time Zone : [X] Eastern [ ] Pacific [ ] Central [ ] Mountain [ ] Other:

1.) Chain of Custody Number = Client Determined

2.) QC Codes: **N** = Normal Sample, **TB** = Trip Blank, **FD** = Field Duplicate, **EB** = Equipment Blank, **MS** = Matrix Spike Sample, **MSD** = Matrix Spike Duplicate Sample, **G** = Grab, **C** = Composite

3.) Field Filtered: For liquid matrices, indicate with a - **Y** - for yes the sample was field filtered or - **N** - for sample was not field filtered.

4.) Matrix Codes: **DW**=Drinking Water, **GW**=Groundwater, **SW**=Surface Water, **WW**=Waste Water, **W**=Water, **ML**=Misc Liquid, **SO**=Soil, **SD**=Sediment, **SL**=Sludge, **SS**=Solid Waste, **O**=Oil, **F**=Filter, **P**=Wipe, **U**=Urine, **F**=Fecal, **N**=Nasal

5.) Sample Analysis Requested: Analytical method requested (i.e. **8260B**, **6010B/7470A**) and number of containers provided for each (i.e. *8260B* - **3**, *6010B/7470A* - **1**).

6.) Preservative Type: **HA** = Hydrochloric Acid, **NI** = Nitric Acid, **SH** = Sodium Hydroxide, **SA** = Sulfuric Acid, **AA** = Ascorbic Acid, **HX** = Hexane, **ST** = Sodium Thiosulfate, If no preservative is added = leave field blank

7.) **KNOWN OR POSSIBLE HAZARDS**

RCRA Metals
As = Arsenic **Hg**= Mercury
Ba = Barium **Se**= Selenium
Cd = Cadmium **Ag**= Silver
Cr = Chromium **MR**= Misc. RCRA metals
Pb = Lead

Characteristic Hazards
FL = Flammable/Ignitable
CO = Corrosive
RE = Reactive

TSCA Regulated
PCB = Polychlorinated biphenyls

Listed Waste
LW= Listed Waste
(F,K,P and U-listed wastes.)
Waste code(s):

Other
OT= Other / Unknown
(i.e.: High/low pH, asbestos, beryllium, irritants, other misc. health hazards, etc.)
Description:

Please provide any additional details below regarding handling and/or disposal concerns. *(i.e.: Origin of sample(s), type of site collected from, odd matrices, etc.)*

Dissolved metals are the only Field Filterd Samples

SAMPLE RECEIPT & REVIEW FORM

695708

Client: GPCC	SDG/AR/COC/Work Order:
Received By: QG	Date Received: 11/14/24
Carrier and Tracking Number	Circle Applicable: FedEx Express FedEx Ground UPS Field Services Courier Other 2817 6154 4985

Suspected Hazard Information	Yes	No	*If Net Counts > 100cpm on samples not marked "radioactive", contact the Radiation Safety Group for further investigation.
A)Shipped as a DOT Hazardous?		✓	Hazard Class Shipped: UN#: If UN2910, Is the Radioactive Shipment Survey Compliant? Yes___ No___
B) Did the client designate the samples are to be received as radioactive?		✓	COC notation or radioactive stickers on containers equal client designation.
C) Did the RSO classify the samples as radioactive?		✓	Maximum Net Counts Observed* (Observed Counts - Area Background Counts): 0 CPM / mR/Hr **Classified as: Rad 1 Rad 2 Rad 3**
D) Did the client designate samples are hazardous?		✓	COC notation or hazard labels on containers equal client designation.
E) Did the RSO identify possible hazards?		✓	If D or E is yes, select Hazards below. PCB's Flammable Foreign Soil RCRA Asbestos Beryllium Other:

	Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1	Shipping containers received intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2	Chain of custody documents included with shipment?	✓			Circle Applicable: Client contacted and provided COC COC created upon receipt
3	Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	✓			Preservation Method: Wet Ice Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: 1°c
4	Daily check performed and passed on IR temperature gun?	✓			**Temperature Device Serial #:** IR1-23 Secondary Temperature Device Serial # (If Applicable):
5	Sample containers intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6	Samples requiring chemical preservation at proper pH?		✓		Sample ID's and Containers Affected: If Preservation added, Lot#:
7	Do any samples require Volatile Analysis?		✓		If Yes, are Encores or Soil Kits present for solids? Yes___ No___ NA___(If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes___ No___ NA___(If unknown, select No) Are liquid VOA vials free of headspace? Yes___ No___ NA___ Sample ID's and containers affected:
8	Samples received within holding time?	✓			ID's and tests affected:
9	Sample ID's on COC match ID's on bottles?	✓			ID's and containers affected:
10	Date & time on COC match date & time on bottles?		✓		Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11	Number of containers received match number indicated on COC?	✓			Circle Applicable: No container count on COC Other (describe)
12	Are sample containers identifiable as GEL provided by use of GEL labels?	✓			
13	COC form is properly signed in relinquished/received sections?	✓			Circle Applicable: Not relinquished Other (describe)

SPECIAL INSTRUCTIONS/COMMENTS

THE QUESTIONS BELOW MUST BE ANSWERED FORWATER SAMPLES (CHECK Yes OR No)

Are any samples taken from a regulated DW System? Yes ___ No ___

If yes, an authorized drinking water COC MUST be used for this submission.

Is the water sampled intended to be potable for human consumption? Yes ___ No

SAMPLE CONDITION

___ FROZEN
___ COLD
___ COOLING INITIATED
___ AMBIENT

SAMPLED BY: Kevin Stephenson	DATE & TIME	RECEIVED BY:	DATE & TIME
RELINQUISHED BY:	DATE & TIME	RECEIVED AT LAB BY: Nour	DATE & TIME 2024-09-09

Observations

1. TAT may vary dependent on complexity of analysis and lab workload at time of submission. Please contact the lab to confirm TATs.

2. Any known or suspected hazards relating to a sample must be noted on the chain of custody in comments section.

THE QUESTIONS BELOW MUST BE ANSWERED FORWATER SAMPLES (CHECK Yes OR No)

Are any samples taken from a regulated DW System? Yes ___ No ___

If yes, an authorized drinking water COC MUST be used for this submission.
Is the water sampled intended to be potable for human consumption? Yes ___ No

SAMPLE CONDITION

__ FROZEN
__ COLD
__ COOLING INITIATED
__ AMBIENT

SAMPLED BY: Jay Siewert, Natalie Piparo, William Laaker, Kevin Step	DATE & TIME	RECEIVED BY:	DATE & TIME
RELINQUISHED BY:	DATE & TIME 10/16/24 1200	RECEIVED AT LAB BY:	DATE & TIME 10/22/24 9:39am

Observations

1. TAT may vary dependent on complexity of analysis and lab workload at time of submission. Please contact the lab to confirm TATs.

2. Any known or suspected hazards relating to a sample must be noted on the chain of custody in comments section.

680-255318-7	DR-01	Water	08/28/24 11:46	08/29/24 11:59
680-255318-8	PT-01	Water	08/28/24 14:10	08/29/24 11:59
680-255318-9	MCM-06	Water	08/28/24 15:34	08/29/24 11:59

Job Narrative
680-255318-1

Receipt
The samples were received on 8/29/2024 11:59 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.4°C.

Subcontract Work
Method Metals Speciation: This method was subcontracted to Brooks Applied Labs LLC. The subcontract laboratory certification is different from that of the facility issuing the final report. The subcontract report is appended in its entirety.

RE: Project EUR-SV2201 Client Project: Job#680-255318-1

Dear David Fuller,

On August 30, 2024, Brooks Applied Labs (BAL) received nine (9) water samples at a temperature of 1.4°C. The samples were logged-in for the analyses of arsenic speciation [As(III), As(V), DMA, MMA, and unknown As species] according to the chain-of-custody form. All samples were received and stored according to BAL SOPs and EPA methodology.

All samples were field filtered.

Arsenic Speciation Quantitation by IC-ICP-CRC-MS
Arsenic speciation was performed by ion chromatography inductively coupled plasma collision reaction cell mass spectrometry (IC-ICP-CRC-MS). Arsenic species are first chromatographically separated on an ion exchange column and then quantified using inductively coupled plasma collision reaction cell mass spectrometry (ICP-CRC-MS). For more information on this determinative technique, please visit the Interference Reduction Technology section on our website.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

It should be noted that all Brooks Applied Labs, LLC methods, standard operating procedures, inventions, ideas, processes, improvements, designs, and techniques included or referred to therein, must be considered and treated as Proprietary Information, protected by the Washington State Trade Secret Act, RCW 19.108 et seq., and other laws. All Proprietary Information, written or implied, will not be distributed, copied, or altered in any fashion without prior written consent from Brooks Applied Labs, LLC. All Proprietary Information (including originals, copies, summaries, or other reproductions thereof) shall remain the property of Brooks Applied Labs, LLC at all times and must be returned upon demand. Furthermore, products presented in this document may be protected by Federal Patent laws and infringement will be subject to prosecution in accordance with Title 35 US Code 271.

The results were not method blank corrected, as described in the calculations section of the relevant BAL SOP(s), and were evaluated using reporting limits adjusted to account for sample aliquot size. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

All data was reported without further qualification and all other associated quality control sample results met the acceptance criteria.

BAL verifies that the reported results of all analyses for which the laboratory is accredited meet the requirements of the accrediting body, unless otherwise noted in the report narrative. For more information regarding accreditations please see the *Report Information* and *Batch Summary* pages. This report must be used in its entirety for interpretation of results.

Please feel free to contact us if you have any questions regarding this report.

Sincerely,

Amy Goodall
Project Manager
Brooks Applied Labs
amy@brooksapplied.com

Report Information

General Disclaimers

Test results are based solely upon the sample submitted to Brooks Applied Labs in the condition it was received . This report shall not be reproduced or copied, except in full, without written approval of the laboratory. Brooks Applied Labs is not responsible for the consequences arising from the use of a partial report.

Laboratory Accreditation

BAL maintains accreditation with various state and national agencies for select test methods. For a current list of BAL accreditations, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. The reported analyte/matrix/method combination shall be considered outside BAL's scopes of accreditation unless otherwise identified as ISO, TNI, or ISO,TNI in the tables. It is the responsibility of the client to verify whether a specific accreditation is required for the intended data use.

ISO: ISO/IEC 17025:2017 accredited test method. Issued by ANSI National Accreditation Board (ANAB), #ADE-1447.02

TNI: NELAP accredited test method. Issued by the State of Florida Department of Health, #E87982.

ISO,TNI: Test method is accredited under both the ISO/IEC 17025:2017 and NELAP accreditations referenced above.

Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

Common Abbreviations

AR	as received	**MS**	matrix spike

MRL	method reporting limit		

Definition of Data Qualifiers

E	An estimated value due to the presence of interferences. A full explanation is presented in the narrative.
H	Holding time and/or preservation requirements not met. Please see narrative for explanation.
J	Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.
J-1	Estimated value. A full explanation is presented in the narrative.
M	Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.
N	Spike recovery was not within acceptance criteria. Please see narrative for explanation.
R	Rejected, unusable value. A full explanation is presented in the narrative.
U	Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.
X	Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated.
Z	Holding time and/or preservation requirements not established for this method; however, BAL recommendations for holding time were not followed. Please see narrative for explanation.
