Ms. Kelli-Ann Schrage, Manager Wastewater Regulatory Program Georgia Environmental Protection Division 2 Martin Luther King, Jr. Drive S.W., Suite 1152 Atlanta, GA 30334

Re: NPDES Permit No. GA0035564 – Plant Scherer 2025 ELG Annual Progress Report

Dear Ms. Schrage:

Georgia Power is providing this Annual Progress Report for Plant Scherer, consistent with 40 C.F.R. § 423.19 (f)(3) and the Steam Electric Effluent Limitations Guidelines. The attached Annual Progress Report provides the status for each generating unit and the associated high-level milestones.

If you need additional information or have questions regarding this matter, please contact Stephanie Whitacre at 470-367-0303.

Sincerely,

Dominic Weatherill Water Programs Manager

Cc: Sarita Banjade - EPD

# <u>Plant Scherer – NPDES Permit No. GA0035564</u> ELG Progress Report – October 10, 2025

### **Summary**

Georgia Power Company ("the Company") Plant Scherer remains on track to meet the Flue Gas Desulfurization Wastewater ("FGDW") compliance deadlines in the 2020 Effluent Limitations Guidelines ("ELG") Rule.

The Company's ELG compliance strategy for Plant Scherer continues to incorporate the Integrated Resource Planning ("IRP") process with the Georgia Public Service Commission ("PSC"), necessary coordination with Plant Scherer co-owners, while also acknowledging the U.S Environmental Protection Agency's ("EPA's") finalization of the ELG Supplemental Rule in May 2024.

This report summarizes progress at Plant Scherer in meeting the Effluent Limitations Guidelines and Standards for the Steam Electric Power Generating Point Source Category for FGDW. The report describes steps completed to meet the Voluntary Incentive Program ("VIP") effluent limits for FGDW provided in 40 C.F.R. § 423.13(g)(3)(i); and information regarding the subcategory for Permanent Cessation of Coal Combustion as provided in 40 C.F.R. § 423.13(g)(2)(i). The details provided herein conform with the annual reporting requirements in 40 C.F.R. § 423.19(h) and 40 C.F.R. § 423.19(f).

#### Units 3 and 4

On October 13, 2021, pursuant to 40 C.F.R. § 423.19(f) the Company submitted to the Environmental Protection Division ("EPD") a Notice of Planned Participation ("NOPP") for Unit 3 and a separate NOPP for Unit 4 at Plant Scherer. The NOPP's informed EPD of the plan to permanently cease coal combustion for Units 3 and 4 by no later than December 31, 2028, and January 31, 2022, respectively, and notified EPD that these units are eligible for the alternative limits at 40 C.F.R. § 423.13(g)(2)(i).

In the 2022 IRP Final Order, the PSC approved the retirement and decertification of Plant Scherer Unit 3 by December 31, 2028. In Georgia Power's subsequent 2023 Integrated Resource Plan Update, the Company noted new information regarding continuing increases to the projected load forecast and capacity needs following 2028. In Georgia Power's 2025 IRP, the Company requested to extend the operation of Unit 3 through at least December 31, 2035, and subsequently on July 15, 2025, the PSC approved the 2025 IRP request to extend operation of Unit 3. As a result, the Company plans to submit a transfer NOPP no later than December 31, 2025. The NOPP will state the Company's plans to pursue

# <u>Plant Scherer – NPDES Permit No. GA0035564</u> <u>ELG Progress Report – October 10, 2025</u>

compliance with the 2020 ELG Rule for Plant Scherer Unit 3 through the VIP by no later than December 31, 2028.

Plant Scherer Unit 4 is owned by Florida Power & Light and Jacksonville Electric Authority. The owners ceased operation of Unit 4 on December 31, 2021.

As previously noted, the electric generating status of Units 3 and 4 does not impact the overall FGDW compliance strategy at Plant Scherer as the FGDW system is a common environmental control for all four generating units.

#### Units 1 and 2

On October 13, 2021, pursuant to 40 C.F.R. § 423.19(h) the Company submitted a NOPP for Units 1 and 2 informing EPD of the Company's plan to participate in the VIP and notified EPD that these units are eligible for the alternative limits at 40 C.F.R. § 423.19(g)(3)(i). As required, the NOPP also included an engineering dependency chart ("schedule") that was subsequently updated and provided to EPD as part of the ELG Progress Reports.

The Company continues to work with WesTech as the supporting engineering firm and has since further refined and updated the schedule as provided below. This schedule is subject to further revisions that will be disclosed in future annual progress reports. The schedule supports a March 2026 through September 2027 commissioning period, which is well in advance of the statutory applicability date of December 31, 2028.

The Company continues its pursuit of a leading-edge and full-scale membrane based FGDW treatment system, afforded by the unique FGDW conditions present at Plant Scherer.

## Plant Scherer - FGDW VIP Schedule
