ANALYTICAL REPORT

PREPARED FOR

Attn: Robert (Trey) Singleton
Southern Company
3535 Colonnade Parkway
Bin S 530 EC
Birmingham, Alabama 35243

Generated 12/3/2025 10:25:35 AM

JOB DESCRIPTION

Plant Wansley Ash Pond Resample

JOB NUMBER

705-49427-1

Eurofins Atlanta
3080 Presidential Dr
Atlanta GA 30340

See page two for job notes and contact information.

my EOL

Job Notes

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Authorization

List Number: 1

Creator: Jeremiah, Mortley

Question	Answer	Comment
The cooler's custody seal, if present, is intact.	True	
The cooler does not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Sample custody seals, if present, are intact.	True	
Sample collection date/times are provided.	True	
The samples do not appear to have been compromised or tampered with.	True	
Containers are not broken or leaking.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Appropriate sample containers were rec'd and sufficient volume for all analyses.	True	
Samples are received within Holding Time (excluding tests with immediate HTs).	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Is there sufficient air space in bottle for bacteriological analysis.	N/A	

Client: Southern Company
Job ID: 705-49427-1
Project/Site: Plant Wansley Ash Pond Resample

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
705-49427-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The sample was received on 11/14/2025 11:40 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.2°C, 1.3°C, 2.2°C and 2.2°C.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020B - Total Recoverable: The following sample was diluted due to the nature of the sample matrix: WAN-WGWC-28D (705-49427-1). Elevated reporting limits (RLs) are provided.

Method 6020B - Total Recoverable: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 705-95725 and analytical batch 705-96413 recovered outside control limits for the following analytes: Iron. These analytes were biased high in the LCS and were not detected above the reporting limit in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540C: A lesser volume of sample was used for the following samples due to the nature of the sample matrix resulting in elevated reporting limits: WAN-WGWC-28D (705-49427-1).

Method SM4500_S2_F: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 705-95612 and analytical batch 705-95625 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Subject:	**Stage 2A Data Validation - Level II Data Deliverable – Eurofins Laboratory Job ID 680-261849-1 Revision 1 and 680-261849-2**

SITE: Plant Wansley Ash Pond

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of twelve water samples, one field duplicate and one field blank, collected 10-11 February 2025, as part of the Plant Wansley Ash Pond on-site sampling event. The samples were analyzed at Eurofins Savannah, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B
- Mercury by USEPA Method 7470A
- Alkalinity by Standard Method (SM) 2320B
- Sulfide by SM 4500-S2 F-2011
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0
- Total Dissolved Solids (TDS) by SM 2540C
- Radium-226 by US EPA Method 9315
- Radium-228 by US EPA Method 9320
- Total Radium by Calculation

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications. If there are results with two or more different qualifications due to multiple QC failures, the final qualification is reconciled in the electronic data deliverable (EDD) with qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- Idaho National Engineering and Environmental Laboratory, RADIOANALYTICAL DATA VALIDATION, May 11, 2004 (GDE-205).

The following sample was analyzed and reported in the laboratory reports:

Laboratory IDs	Client IDs
680-261849-1	WAN-WGWC-17
680-261849-2	WAN-AP1-FD-01
680-261849-3	WAN-AP1-FB-07
680-261849-4	WAN-WGWA-1
680-261849-5	WAN-WGWA-2
680-261849-6	WAN-WGWA-3
680-261849-7	WAN-WGWA-4

Laboratory IDs	Client IDs
680-261849-8	WAN-WGWA-6
680-261849-9	WAN-WGWA-7
680-261849-10	WAN-WGWA-18
680-261849-11	WAN-WGWC-8
680-261849-12	WAN-WGWC-9
680-261849-13	WAN-WGWC-11
680-261849-14	WAN-WGWC-12

The laboratory reported results for the analytical method(s) requested for each sample on the chain of custody (COC).

The sample was received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

The sample collection time was not listed on the chain of custody (COC) for the field duplicate sample, WAN-AP1-FD-01. The laboratory logged the sample in with the collection time of 00:00.

The second relinquishing signature, date and time are missing from the COC.

1.0 METALS

The sample was analyzed for metals by US EPA methods 3005A/6020B. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Time
⊗ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample

⊗ Field Duplicate
✓ Equipment Blank
✓ Field Blank
✓ Sensitivity
✓ Electronic Data Deliverables Review

1.1 Overall Assessment

The metals data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.2 Holding Time

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding time was met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Metals were not detected in the method blank at or above the method detection limits (MDLs), with the following exception.

Lithium (0.00358 mg/L) was detected in the method blank in batch 875725 at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated concentrations of lithium in samples WAN-AP1-FB-07 and WAN-WGWA-18 were U qualified as not detected above the RL, and the concentrations of lithium in samples WAN-AP1-FD-01, WAN-WGWA-1 and WAN-WGWA-2 were J+ qualified as estimated with a high bias. The lithium concentration for sample WAN-AP1-FD-01 was also J qualified as estimated due to the field duplicate assessment, the final qualification for the lithium concentration for sample WAN-AP1-FD-01 was J qualified as estimated.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
WAN-AP1-FB-07	Lithium	0.0048	JB	0.0050	U	BC1
WAN-AP1-FD-01	Lithium	0.012	B	0.012	J	BC1, FD2
WAN-WGWA-1	Lithium	0.0091	B	0.0091	J+	BC1
WAN-WGWA-18	Lithium	0.0047	JB	0.0050	U	BC1

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
WAN-WGWA-2	Lithium	0.013	B	0.013	J+	BC1

mg/L-milligrams per liter
J-estimated concentration greater than or equal to the MDL and less than the RL
B-Compound was found in the blank and sample
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two sample set specific MS/MSD pairs were reported using samples WAN-WGWC-17 and WAN-WGWA-2. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Duplicate

One field duplicate sample, WAN-AP1-FD-01, was collected with the sample set. Acceptable precision (RPD $\leq$30%) was demonstrated between the field duplicate and the original sample, WAN-WGWC-12, with the following exceptions.

Lithium was detected in the field duplicate sample WAN-AP1-FD-01 at a concentration greater than the reporting limit (RL) and detected at an estimated concentration greater than the MDL and less than the RL in the parent sample WAN-WGWC-12, resulting in a noncalculable RPD result. Since the absolute difference between the parent sample and field duplicate was greater than the RL, the iron concentrations in samples WAN-WGWC-12 and WAN-AP1-FD-01 were J qualified as estimated..

The RPD for iron in the field duplicate pair was greater than 30%. Therefore, the iron concentrations in samples WAN-WGWC-12 and WAN-AP1-FD-01 were J qualified as estimated.

Sample	Analyte	Laboratory Result (mg/L)	Laboratory Flag	RPD	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-01	Iron	1.4	NA	40	1.4	J	FD1

Sample	**Analyte**	**Laboratory Result (mg/L)**	**Laboratory Flag**	**RPD**	**Validation Result (mg/L)**	**Validation Qualifier**	**Reason Code**
WAN-WGWC-12	Iron	2.1	NA		2.1	J	FD1
WAN-AP1-FD-01	Lithium	0.012	B	NC	0.012	J	FD2
WAN-WGWC-12	Lithium	0.0032	J		0.0032	J	FD2

mg/L-milligrams per liter
J-estimated concentration greater than or equal to the MDL and less than the RL
B-compound was found in the blank and sample
NA-not applicable
NC-noncalculable

1.7 Equipment Blank

Equipment blanks were not reported with the sample set.

1.8 Field Blank

One field blank, WAN-AP1-FB-07, was collected with the sample set. Metals were not detected in the field blank at or above the MDLs, with the following exception.

Lithium was detected in the equipment blank at an estimated concentration greater than the MDL and less than the RL. Since lithium result in the equipment blank was qualified due to method blank contamination, no additional qualifications were applied to the data.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 MERCURY

The sample was analyzed for mercury per US EPA method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

The mercury data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data package is 100%.

2.2 Holding Times

The holding time for the mercury analysis of a soil sample is 28 days from sample collection to analysis. The holding time was met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Mercury was not detected in the method blanks at or above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported using sample WAN-AP1-FB-07. The recovery and RPD results were within the laboratory specified acceptance criteria.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

2.6 Field Blank

One field blank, WAN-AP1-FB-07, was collected with the sample set. Mercury was not detected in the field blank at or above the MDL.

2.7 Equipment Blank

Equipment blank were not reported with the sample set.

2.8 Field Duplicate

One field duplicate sample, WAN-AP1-FD-01, was collected with the sample set. Acceptable precision (RPD <30%) was demonstrated between the field duplicate and the original sample, WAN-WGWC-12.

2.9 Sensitivity

The sample was reported to the MDLs. Elevated non-detect results were not reported. The MDLs met the reference limits listed in QAPP Worksheet #15 of the QAPP.

2.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. No discrepancies were identified between the level II report and the EDD.

3.0 WET CHEMISTRY

The sample was analyzed for anions by US EPA method 300.0, sulfide by SM 4500 S2 F-2011, alkalinity by SM 2320B-2011 and TDS by SM 2540C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

3.1 Overall Assessment

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data package is 100%.

3.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions	US EPA Method 300	28 days from collection to analysis
Alkalinity	SM 2320B	14 days from collection to analysis
TDS	SM 2540C	7 days from collection to analysis
Sulfide	SM 4500-S2D	28 days from collection to analysis

The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples).

Two sample set specific MS/MSD pairs were reported for anions using samples WAN-AP1-FB-07 and WAN-WGWC-12. The recovery and RPD results were within the laboratory specified acceptance criteria.

One sample set specific MS/MSD pair was reported for sulfide using sample WAN-AP1-FD-01. The RPD results were within the laboratory specified acceptance criteria. The recovery and RPD results were within the laboratory specified acceptance criteria.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Equipment Blank

Equipment blanks were not reported with the sample set.

3.7 Field Blank

One field blank, WAN-AP1-FB-07, was collected with the sample set. Wet chemistry parameters were not detected in the field blank at or above the MDLs.

3.8 Field Duplicate

One field duplicate sample, WAN-AP1-FD-01, was collected with the sample set. Acceptable precision (RPD <30%) was demonstrated between the field duplicate and the original sample, WAN-WGWC-12.

3.9 Laboratory Duplicate

Two sample set specific laboratory duplicates were reported for alkalinity using samples WAN-WGWA-3 and WAN-AP1-FB-07. The RPD results were within the laboratory specified acceptance criteria.

One sample set specific laboratory duplicate was reported for TDS using sample WAN-WGWC-8. The RPD results were within the laboratory specified acceptance criteria.

One sample set specific laboratory duplicate was reported for sulfide using sample WAN-WGWC-17. The RPD results were within the laboratory specified acceptance criteria.

Batch laboratory duplicates were reported for alkalinity and TDS. Since this was batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

3.10 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

3.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

4.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA method 9315, radium-228 by US EPA method 9320 and total radium by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Sensitivity

4.1 Overall Assessment

4.1.1 Completeness

The radium-226 and radium-228 data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.1.2 Analysis Anomaly

Total radium in sample WAN-WGWA-7 was detected at a concentration greater than the minimum detectable concentration (MDC), for the calculated, combined radium-226 and radium-228. Since radium-226 and radium-228 were not detected above the MDC, and based on professional and technical judgment, the total radium concentration in sample WAN-WGWA-7 was U qualified as not detected.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWA-7	Combined Radium 226 + 228	0.699	NA	0.699	U	RO1

pCi/L-picocuries per liter
U-not detected at or above the MDC
NA-not applicable

4.2 Holding Times

The holding times for the radium-226 and radium-228 analyses of a water sample are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Method blanks were reported for the radium-226 and radium-228 data. Radium-226 and radium-228 were not detected in the method blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-226 (0.2189 pCi/L) was detected in the method blank in batch 703466 at a concentration greater than the RL. Therefore, the radium-226 concentrations with a mean difference greater than 2 and a concentration less than ten times the method blank concentration for radium-226 in the associated samples were J qualified as estimated. In addition, the combined radium 226 + 228 concentrations in sample WAN-WGWA-4 and WAN-WGWC-8 were J qualified as estimated.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWA-4	Radium-226	0.613	NA	0.613	J	BL
WAN-WGWA-4	Combined Radium 226 + 228	2.44	NA	2.44	J	BL
WAN-WGWC-8	Radium-226	0.484	NA	0.484	J	BL

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWC-8	Combined Radium 226 + 228	3.46	NA	3.46	J	BL

pCi/L-picocuries per liter
NA-not applicable

4.4 Matrix Spike/Matrix Spike Duplicate

Batch MS/MSD pairs were reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCSs were reported for radium-226 and radium-228. The recovery results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

Laboratory duplicates were not reported with the sample set.

4.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses, and a tracer was reported for the radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

4.8 Field Blank

One field blank, WAN-AP1-FB-07, was collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (1.00 pCi/L) was detected in WAN-AP1-FB-07 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated sample was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWA-4, WAN-WGWA-6, WAN-WGWC-8 and WAN-WGWC-9 were J qualified as estimated and the combined radium 226 + 228 concentration for sample WAN-AP1-FD-01, WAN-WGWA-1, WAN-WGWA-

3, WAN-WGWC-11 and WAN-WGWC-12 were UJ qualified as not statistically distinguishable from the blank.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-01	Radium-228	1.50	NA	1.50	UJ	BFH
WAN-AP1-FD-01	Combined Radium 226 + 228	1.66	NA	1.66	UJ	BFH
WAN-WGWA-1	Radium-228	1.57	NA	1.57	UJ	BFH
WAN-WGWA-1	Combined Radium 226 + 228	1.59	NA	1.59	UJ	BFH
WAN-WGWA-3	Radium-228	0.989	NA	0.989	UJ	BFH
WAN-WGWA-3	Combined Radium 226 + 228	1.15	NA	1.15	UJ	BFH
WAN-WGWA-4	Radium-228	1.83	NA	1.83	UJ	BFH
WAN-WGWA-4	Combined Radium 226 + 228	2.44	NA	2.44	J	BFH
WAN-WGWA-6	Radium-228	9.84	NA	9.84	J	BFH
WAN-WGWA-6	Combined Radium 226 + 228	13.1	NA	13.1	J	BFH
WAN-WGWC-11	Radium-228	1.20	NA	1.20	UJ	BFH
WAN-WGWC-11	Combined Radium 226 + 228	1.28	NA	1.28	UJ	BFH
WAN-WGWC-12	Radium-228	0.779	NA	0.779	UJ	BFH
WAN-WGWC-12	Combined Radium 226 + 228	0.892	NA	0.892	UJ	BFH
WAN-WGWC-8	Radium-228	2.97	NA	2.97	J	BFH
WAN-WGWC-8	Combined Radium 226 + 228	3.46	NA	3.46	J	BFH
WAN-WGWC-9	Radium-228	2.45	NA	2.45	J	BFH
WAN-WGWC-9	Combined Radium 226 + 228	2.41	NA	2.41	J	BFH

pCi/L-picocuries per liter
NA-not applicable

4.9 Equipment Blank

Equipment blanks were not reported with the sample set.

4.10 Field Duplicate

One field duplicate sample, WAN-AP1-FD-01, was collected with the sample set. Acceptable precision [mean difference (MD) ≤ 3, RPD < 20% or difference < RL] was demonstrated between the field duplicate and the original sample, WAN-WGWC-12.

4.11 Sensitivity

The samples were reported to the MDCs. No elevated non-detect results were reported.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

V Historical undefined qualifier.

Memorandum

Date:	1 July 2025
To:	Robert Singleton
From:	Ashley Wilson
CC:	Kristoffer Henderson
Subject:	**Stage 2A Data Validation - Level II Data Deliverable – Eurofins Laboratory Job IDs 680-261943-1, 680-261943-2 and 680-261943-3**

SITE: Plant Wansley Ash Pond

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of eighteen water samples, two field duplicates, two field blanks and three equipment blanks, collected 12-13 February 2025, as part of the Plant Wansley Ash Pond on-site sampling event. The samples were analyzed at Eurofins Savannah, Georgia, for the following analytical tests:

- Total and Dissolved Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B
- Total and Dissolved Mercury by USEPA Method 7470A
- Alkalinity by Standard Method (SM) 2320B
- Sulfide by SM 4500-S2 F-2011
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0
- Total Dissolved Solids (TDS) by SM 2540C
- Radium-226 by US EPA Method 9315
- Radium-228 by US EPA Method 9320
- Total Radium by Calculation

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications. If there are results with two or more different qualifications due to multiple QC failures, the final qualification is reconciled in the electronic data deliverable (EDD) with qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- Idaho National Engineering and Environmental Laboratory, Radioanalytical Data Validation, May 11, 2004 (GDE-205).

The following sample was analyzed and reported in the laboratory reports:

Laboratory IDs	Client IDs
680-261943-1	WAN-WGWC-13
680-261943-2	WAN-WGWC-14A
680-261943-3	WAN-WGWC-16
680-261943-4	WAN-WGWC-20
680-261943-5	WAN-WGWC-22
680-261943-6	WAN-WGWC-25
680-261943-7	WAN-WGWC-27
680-261943-8	WAN-WGWC-28D
680-261943-9	WAN-WAMW-1
680-261943-10	WAN-WAMW-2
680-261943-11	WAN-AP1-FD-02
680-261943-12	WAN-AP1-FB-08
680-261943-13	WAN-AP1-EB-01

Laboratory IDs	Client IDs
680-261943-14	WAN-WGWC-10
680-261943-15	WAN-WGWC-15
680-261943-16	WAN-WGWC-19
680-261943-17	WAN-WGWC-21
680-261943-18	WAN-WGWC-23
680-261943-19	WAN-WGWC-24
680-261943-20	WAN-PZ-26D
680-261943-21	WAN-PZ-31
680-261943-22	WAN-AP1-FD-03
680-261943-23	WAN-AP1-FB-09
680-261943-24	WAN-AP1-EB-02
680-261943-25	WAN-AP1-EB-03

The laboratory reported results for the analytical method(s) requested for each sample on the chain of custody (COC).

The sample was received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

The sample collection time was not listed on the COC for the field duplicate samples, WAN-AP1-FD-02 and WAN-AP1-FD-03. The laboratory logged the samples in with the collection time of 00:00.

The second relinquishing times are missing from the COCs for laboratory reports 680-261943-1, 680-261943-2 and 680-261943-3.

1.0 METALS

The samples were analyzed for total and dissolved metals by US EPA methods 3005A/6020B. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas

where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

1.1 Overall Assessment

1.1.1 Completeness

The metals data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.1.2 Analysis Anomaly

Additional information from the laboratory indicated that the percent difference (%D) for thallium in the continuing calibration verification (CCV) in batch 876267 was outside the laboratory acceptance limits with a high bias. Since thallium was not detected in the associated samples, no qualifications were applied to the data.

1.2 Holding Time

The holding time for the total metals analysis of a water sample is 180 days from sample collection to analysis. The holding times for the dissolved metals analysis of a water sample are 15 minutes from sample collection to filtration and 180 days from sample collection to analysis. The holding time was met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Metals were not detected in the method blank at or above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Batch MS/MSD pairs were reported. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-02 and WAN-AP1-FD-03, were collected with the sample set. Acceptable precision [relative percent difference (RPD) <30%] was demonstrated between the field duplicates and the original samples, WAN-WGWC-16 and WAN-WGWC-19, respectively, with the following exceptions.

Barium was detected in the sample WAN-WGWC-16 at a concentration greater than the reporting limit (RL) and detected at an estimated concentration greater than the MDL and less than the RL in field duplicate sample WAN-AP1-FD-02, resulting in a noncalculable RPD result. Since the absolute difference between the parent and field duplicate results was greater than the RL, the barium concentrations in the field duplicate pair were J qualified as estimated.

Beryllium was detected in the sample WAN-WGWC-16 at an estimated concentration greater than the MDL and less than the RL and not detected in field duplicate sample WAN-AP1-FD-02. Since the absolute difference between the parent and field duplicate results was less than the RL, no qualifications were applied to the data.

Boron was detected in the sample WAN-WGWC-16 at a concentration greater than the RL and not detected in field duplicate sample WAN-AP1-FD-02, resulting in a noncalculable RPD result. Since the absolute difference between the parent and field duplicate results was greater than the RL, the concentration of boron in sample WAN-WGWC-16 was J qualified as estimated, and the nondetect result in field duplicate sample WAN-AP1-FD-02 was UJ qualified as estimated below the RL.

Iron and lithium were detected in the sample WAN-WGWC-16 at estimated concentrations greater than the MDLs and less than the RLs and detected at concentrations greater than the RLs in field duplicate WAN-AP1-FD-02, resulting in a noncalculable RPD result. Since the absolute differences between the parent and field duplicate results were greater than the RLs, the concentrations of iron and lithium in the field duplicate pair WAN-AP1-FD-02/WAN-AP1-FD-02 were J qualified as estimated.

The RPD for manganese in the field duplicate pair, WAN-AP1-FD-02/ WAN-AP1-FD-02, was greater than 30%. Therefore, the manganese concentrations in WAN-AP1-FD-02/ WAN-AP1-FD-02 were J qualified as estimated.

Boron and cobalt were detected in field duplicate sample WAN-AP1-FD-03 at estimated concentrations greater than the MDL and less than the RL and not detected in parent sample WAN-WGWC-19. Since the absolute differences between the parent and field duplicate results were less than the RLs, no qualifications were applied to the data.

Sample	Analyte	Laboratory Result (mg/l)	Laboratory Flag	RPD	Validation Result (mg/l)	Validation Qualifier*	Reason Code**
WAN-AP1-FD-02	Barium	0.0045	J	NC	0.0045	J	FD2
WAN-WGWC-16	Barium	0.040	NA		0.040	J	FD2
WAN-AP1-FD-02	Boron	0.080	U	NC	0.080	UJ	FD2
WAN-WGWC-16	Boron	0.56	NA		0.56	J	FD2
WAN-AP1-FD-02	Iron	1.9	NA	NC	1.9	J	FD2
WAN-WGWC-16	Iron	0.046	J		0.046	J	FD2
WAN-AP1-FD-02	Lithium	0.024	NA	NC	0.024	J	FD2
WAN-WGWC-16	Lithium	0.0024	J		0.0024	J	FD2
WAN-AP1-FD-02	Manganese	0.031	NA	95	0.031	J	FD1
WAN-WGWC-16	Manganese	0.011	NA		0.011	J	FD1

mg/L-milligrams per liter
J-estimated concentration greater than or equal to the MDL and less than the RL
NA-not applicable
U-not detected at a concentration greater than or equal to the MDL
NC-noncalculable
*Validation qualifiers are defined in Attachment 1 at the end of this report
** Reason codes are defined in Attachment 2 at the end of this report

1.7 Field Blank

Two field blanks, WAN-AP1-FB-08 and WAN-AP1-FB-09, were collected with the sample set. Metals were not detected in the field blanks at or above the MDLs.

1.8 Equipment Blank

Three equipment blanks WAN-AP1-EB-01, WAN-AP1-EB-02 and WAN-AP1-EB-03 were collected with the sample set. Metals were not detected in the equipment blanks at or above the MDLs.

1.9 Assessment of Total vs Dissolved Metal

The samples WAN-WGWC-23 and WAN-WGWC-25 were analyzed for total and dissolved metals. The concentrations of total metals were greater than or equal to the concentrations of dissolved metals in the samples or the dissolved metal concentration was greater than the total metals concentration with an RPD between the total and dissolved metals results less than 30%.

1.10 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 MERCURY

The samples were analyzed for total and dissolved mercury per US EPA method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

The mercury data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data package is 100%.

2.2 Holding Times

The holding time for the total mercury analysis of a soil sample is 28 days from sample collection to analysis. The holding times for the dissolved mercury analysis of a water sample are 15 minutes from sample collection to filtration and 28 days from sample collection to analysis. The holding time was met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Mercury was not detected in the method blanks at or above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three sample set specific MS/MSD pairs were reported using samples WAN-WGWC-16, WAN-WGWC-21 and WAN-AP1-EB-03. The recovery and RPD results were within the laboratory specified acceptance criteria.

Batch MS/MSD pairs were reported for mercury. Since this was batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

2.6 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-02 and WAN-AP1-FD-03, were collected with the sample set. Acceptable precision (RPD <30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-16 and WAN-WGWC-19, respectively.

2.7 Field Blank

Two field blanks, WAN-AP1-FB-08 and WAN-AP1-FB-09, were collected with the sample set. Mercury was not detected in the field blank at or above the MDL.

2.8 Equipment Blank

Three equipment blanks WAN-AP1-EB-01, WAN-AP1-EB-02 and WAN-AP1-EB-03 were collected with the sample set. Mercury was not detected in the equipment blanks at or above the MDL.

2.9 Assessment of Total vs Dissolved Metals

The samples WAN-WGWC-23 and WAN-WGWC-25 were analyzed for total and dissolved mercury. The concentrations of total mercury were greater than or equal to the concentrations of dissolved mercury in the samples or the dissolved mercury concentration was greater than the total mercury concentration with an RPD between the total and dissolved mercury results less than 30%.

2.10 Sensitivity

The sample was reported to the MDLs. Elevated non-detect results were not reported. The MDLs met the reference limits listed in QAPP Worksheet #15 of the QAPP.

2.11 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. No discrepancies were identified between the level II report and the EDD.

3.0 WET CHEMISTRY

The samples were analyzed for anions by US EPA method 300.0, sulfide by SM 4500 S2 F-2011, alkalinity by SM 2320B-2011 and TDS by SM 2540C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment

✓ Electronic Data Deliverables Review

3.1 Overall Assessment

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data package is 100%.

3.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions	US EPA Method 300	28 days from collection to analysis
Alkalinity	SM 2320B	14 days from collection to analysis
TDS	SM 2540C	7 days from collection to analysis
Sulfide	SM 4500-S2D	7 days from collection to analysis

The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples).

Three sample set specific MS/MSD pairs were reported for anions using samples WAN-WAMW-2, WAN-PZ-31 and WAN-AP1-FD-02. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of chloride, fluoride and sulfate in MS/MSD using sample WAN-WAMW-2 were low and outside of laboratory specified acceptance criteria. However, the laboratory noted in the case narrative that the spike compounds were inadvertently omitted during the extraction process for these MS/MSDs. Therefore, the MS/MSD pair using sample WAN-WAMW-2 was not evaluated.

The recoveries chloride, fluoride and sulfate in MS/MSD using sample WAN-AP1-FD-02 were low and outside of laboratory specified acceptance criteria. In addition, the RPD of fluoride in the MS/MSD pair was high and outside of laboratory specified acceptance criteria. Therefore, the concentration of fluoride in sample WAN-AP1-FD-02 was J qualified as estimated and the concentrations of chloride and sulfate were J- qualified as estimated with a low bias. Since the chloride and sulfate concentrations for sample WAN-AP1-FD-02 were also J qualified as estimated due to the field duplicate assessment, the final qualifications for the chloride and sulfate concentrations for sample WAN-AP1-FD-02 were J qualified as estimated.

One sample set specific MS/MSD pair was reported for sulfide using sample WAN-WGWC-19. The recovery and RPD results were within the laboratory specified acceptance criteria.

Batch MS/MSD pairs were reported for alkalinity, sulfide and TDS. Since this was batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-02	Fluoride	0.063	JF1F2	0.063	J	MS1|MS2
WAN-AP1-FD-02	Chloride	2.3	F1	2.3	J	MS1|FD1

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-02	Sulfate	5.4	F1	5.4	J	MS1|FD1

mg/L-milligrams per liter
J-estimated concentration greater than or equal to the MDL and less than the RL
F1-MS and/or MSD recovery exceeds control limits
F2-MS/MSD RPD exceeds control limits

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Laboratory Duplicate

Two sample set specific laboratory duplicates were reported for alkalinity using samples WAN-WAMW-1 and WAN-AP1-FD-03. The RPD results were within the laboratory specified acceptance criteria.

Two sample set specific laboratory duplicates were reported for TDS using samples WAN-WGWC-20 and WAN-WGWC-21. The RPD results were within the laboratory specified acceptance criteria.

One sample set specific laboratory duplicate was reported for sulfide using sample WAN-WGWC-10. The RPD results were within the laboratory specified acceptance criteria.

Batch laboratory duplicates were reported for alkalinity, sulfide and TDS. Since this was batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

3.7 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-02 and WAN-AP1-FD-03, were collected with the sample set. Acceptable precision (RPD <30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-16 and WAN-WGWC-19, respectively, with the following exceptions.

The RPDs of bicarbonate and total alkalinity were high and outside of laboratory specified acceptance criteria in field duplicate pair WAN-AP1-FD-02/WAN-WGWC-16. Therefore, the concentrations of bicarbonate and total alkalinity were J qualified as estimated.

The RPDs of chloride and sulfate were high and outside of laboratory specified acceptance criteria in field duplicate pair WAN-AP1-FD-02/WAN-WGWC-16. Therefore, the concentrations of chloride and sulfate in field duplicate pair WAN-AP1-FD-02/WAN-WGWC-16 were J qualified as estimated.

Fluoride was detected in field duplicate sample WAN-AP1-FD-02 at an estimated concentration greater than the MDL and less than the RL and not detected in parent sample WAN-WGWC-16. Since the absolute difference between the parent and field duplicate results was less than the RL, no qualifications were applied to the data.

Fluoride was detected in field duplicate sample WAN-AP1-FD-03 at a concentration greater than the RL and detected at an estimated concentration greater than the MDL and less than the RL in parent sample WAN-WGWC-19. Since the absolute difference between the parent and field duplicate results was less than the RL, no qualifications were applied to the data.

Sample	Analyte	Laboratory Result (mg/l)	Laboratory Flag	RPD	Validation Result (mg/l)	Validation Qualifier	Reason Code
WAN-AP1-FD-02	Alkalinity Total as CaCO3	77	NA	150	77	J	FD1
WAN-WGWC-16	Alkalinity Total as CaCO3	11	NA		11	J	FD1
WAN-AP1-FD-02	Bicarbonate Alkalinity as CaCO3	77	NA	150	77	J	FD1
WAN-WGWC-16	Bicarbonate Alkalinity as CaCO3	11	NA		11	J	FD1
WAN-AP1-FD-02	Chloride	2.3	F1	170	2.3	J	FD1
WAN-WGWC-16	Chloride	28	NA		28	J	FD1
WAN-AP1-FD-02	Sulfate	5.4	F1	152	5.4	J	FD1
WAN-WGWC-16	Sulfate	40	NA		40	J	FD1

mg/L-milligrams per liter
F1-MS and/or MSD recovery exceeds control limits
NA-not applicable

3.8 Field Blank

Two field blanks, WAN-AP1-FB-08 and WAN-AP1-FB-09, were collected with the sample set. Wet chemistry parameters were not detected in the field blank at or above the MDLs.

3.9 Equipment Blank

Three equipment blanks WAN-AP1-EB-01, WAN-AP1-EB-02 and WAN-AP1-EB-03 were collected with the sample set. Wet chemistry parameters were not detected in the field blank at or above the MDLs, with the following exception.

Sulfide (1.2 mg/L) was detected at a concentration greater than the RL in equipment blank, WAN-AP1-EB-01. Therefore, the detected concentration in sample WAN-WGWC-28D was J+ qualified as estimated with a high bias. Since the other samples were nondetect, no qualifications were applied to those data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-28D	Sulfide	1.5	NA	1.5	J+	BEH

mg/L-milligrams per liter
NA-not applicable

3.10 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

3.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

4.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA method 9315, radium-228 by US EPA method 9320 and total radium by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times
⊗ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate

- ✓ Laboratory Control Sample
- ✓ Laboratory Duplicate
- ✓ Tracers and Carriers
- ✓ Field Duplicate
- ✓ Field Blank
- ✓ Equipment Blank
- ✓ Sensitivity

4.1 Overall Assessment

The radium-226 and radium-228 data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.1.1 Analysis Anomaly

Total radium in samples WAN-PZ-31, WAN-WAMW-1 and WAN-WGWC-13 were detected at a concentration greater than the minimum detectable concentration (MDC), for the calculated, combined radium-226 and radium-228. Since radium-226 and radium-228 were not detected above the MDC, the total radium concentration in samples WAN-PZ-31, WAN-WAMW-1 and WAN-WGWC-13 were U qualified as not detected.

Radium-226 was detected in sample WAN-WGWC-10 at a concentration greater than the MDC and total radium was not detected. Since total radium is calculated from the combined radium 226 and 228 concentrations, and radium-226 was detected, the total radium result should be considered a detection greater than the MDC.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-PZ-31	Combined Radium 226 + 228	0.714	NA	0.714	U	RO1
WAN-WAMW-1	Combined Radium 226 + 228	0.557	NA	0.557	U	RO1
WAN-WGWC-13	Combined Radium 226 + 228	0.589	NA	0.589	U	RO1
WAN-WGWC-10	Combined Radium 226 + 228	0.440	U	0.440	NA	RO1

pCi/L-picocuries per liter
U-not detected at or above the MDC
NA-not applicable

4.2 Holding Times

The holding times for the radium-226 and radium-228 analyses of a water sample are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Method blanks were reported for the radium-226 and radium-228 data. Radium-226 and radium-228 were not detected in the method blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (0.8430 pCi/L) was detected in the method blank in batch 703880 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the method blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium-228 concentrations with a mean difference between 0-2 were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations in samples WAN-AP1-FD-02, WAN-WGWC-14A, WAN-WGWC-21, WAN-WGWC-22, WAN-WGWC-24, WAN-WGWC-25, WAN-WGWC-27 and WAN-WGWC-28D were J qualified as estimated since the radium-226 results in these samples were greater than the MDC, and the combined radium 226 + 228 concentrations in samples WAN-PZ-26D, WAN-WAMW-2, WAN-WGWC-15, WAN-WGWC-16 and WAN-WGWC-20 were UJ qualified as not statistically distinguishable from the blank, since the radium-228 results were UJ qualified as not statistically distinguishable from the blank and radium-226 was detected above the MDC for these samples.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-02	Radium-228	0.678	NA	0.678	UJ	BL

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported with data.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCS/LCS duplicate (LCSD) pairs were reported for radium-226 and radium-228. The recovery and replicate error ratio (RER) [2 sigma (2σ)] results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

Two laboratory duplicates were reported with the sample set using samples WAN-WGWC-13 and WAN-PZ-31. The RER [2 sigma (2σ)] results were within the laboratory specified acceptance criteria.

4.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses, and a tracer was reported for the radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

4.8 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-02 and WAN-AP1-FD-03, were collected with the sample set. Acceptable precision [mean difference (MD) ≤ 3, RPD $< 20\%$ or difference $<$ RL] was demonstrated between the field duplicates and the original samples, WAN-WGWC-16 and WAN-WGWC-19, respectively.

4.9 Field Blank

Two field blanks, WAN-AP1-FB-08 and WAN-AP1-FB-09, were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC.

4.10 Equipment Blank

Three equipment blanks WAN-AP1-EB-01, WAN-AP1-EB-02 and WAN-AP1-EB-03 were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the equipment blanks at or above the measured 2σ uncertainty or the MDC.

4.11 Sensitivity

The samples were reported to the MDCs. The laboratory noted that sample WAN-WGWC-23 was G flagged to indicate that the sample's MDC is greater than the requested reporting limit. No elevated non-detect results were reported.

---

* * * * *

ATTACHMENT 1
DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

V Historical undefined qualifier.

engineers | scientists | innovators

ATTACHMENT 2
DATA VALIDATION REASON CODES

DQM Reason Code	Description
AB1	> Samples in batch
AB2	QC sample missing
AB3	Batch analysis time exceeded
BAH	Contamination detected in the Ambient Blank greater than or equal to the Quantitation Limit.
BAL	Contamination detected in the Ambient Blank less than the Quantitation Limit.
BC	Calibration blank contamination
BC1	assoc. result < RL

Memorandum

Date:	14 July 2025
To:	Robert Singleton
From:	Ashley Wilson
CC:	Kristoffer Henderson
Subject:	**Stage 2A Data Validation - Level II Data Deliverable – Eurofins Laboratory Job ID 680-263379-1, Revision 1**

SITE: Plant Wansley Ash Pond

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of one water sample collected 7 April 2025, as part of the Plant Wansley Ash Pond on-site sampling event. The sample was analyzed at Eurofins Savannah, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B
- Alkalinity by Standard Method (SM) 2320B
- Sulfide by SM 4500-S2 F-2011
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0
- Total Dissolved Solids (TDS) by SM 2540C

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications. If there are results with two or more different qualifications due to multiple QC failures, the final qualification is reconciled in the electronic data deliverable (EDD) with qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011); and
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006).

The following sample was analyzed and reported in the laboratory reports:

Laboratory IDs	Client IDs
680-263379-1	WAN-PZ-32D

The laboratory reported results for the analytical method(s) requested for each sample on the chain of custody (COC).

The sample was received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

The laboratory report was revised on 7/7/2025 to include all metals USEPA Method 3005A/6020B QC data for sample WAN-PZ-32D. The laboratory report was identified as 680-263379-1, Revision 1.

1.0 METALS

The sample was analyzed for metals by US EPA methods 3005A/6020B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Time
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Field Duplicate
- ✓ Equipment Blank
- ✓ Field Blank
- ✓ Sensitivity
- ✓ Electronic Data Deliverables Review

1.1 Overall Assessment

The metals data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data set is 100%.

1.2 Holding Time

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding time was met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). Metals were not detected in the method blank at or above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples).

Batch MS/MSD pairs were reported. Since these were batch QC, the results do not affect the sample in this data set and qualifications were not applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Duplicate

Field duplicate samples were not reported with the sample set.

1.7 Equipment Blank

Equipment blanks were not reported with the sample set.

1.8 Field Blank

Field blanks were not reported with the sample set.

1.9 Sensitivity

The sample was reported to the MDL. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 WET CHEMISTRY

The sample was analyzed for anions by US EPA method 300.0, sulfide by SM 4500 S2 F-2011, alkalinity by SM 2320B-2011 and TDS by SM 2540C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Electronic Data Deliverables Review

2.1 Overall Assessment

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data package is 100%.

2.1.1 Completeness

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as

estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data package is 100%.

2.1.2 Analysis Anomaly

The laboratory indicated that the sulfide method requirement for no headspace was not met for sample WAN-PZ-32D. Since the sample was preserved with sodium hydroxide and zinc acetate, no qualifications were applied to the data.

2.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions	US EPA Method 300	28 days from collection to analysis
Alkalinity	SM 2320B	14 days from collection to analysis
TDS	SM 2540C	7 days from collection to analysis
Sulfide	SM 4500-S2D	7 days from collection to analysis

The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples).

Batch MS/MSD pairs were reported for anions, sulfide. Since these were batch QC, the results do not affect the sample in this data set and qualifications were not applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria.

2.6 Equipment Blank

Equipment blanks were not reported with the sample set.

2.7 Field Blank

Field blanks were not reported with the sample set.

2.8 Field Duplicate

Field duplicate samples were not reported with the sample set.

2.9 Laboratory Duplicate

One sample set specific laboratory duplicate was reported for alkalinity, TDS and sulfide using sample WAN-PZ-32D. The RPD results were within the laboratory specified acceptance criteria, with the following exception.

The RPD of TDS in the laboratory duplicate using sample WAN-PZ-32D was high and outside of laboratory specified acceptance criteria. Therefore, the TDS concentration in sample WAN-PZ-32D was J qualified as estimated.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
WAN-PZ-32D	Total Dissolved Solids	1700	NA	1700	J	LD1

mg/L- milligram per liter
NA-not applicable
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

2.10 Sensitivity

The sample was reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

2.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

V Historical undefined qualifier.

From:	Ashley Wilson
CC:	Kristoffer Henderson
Subject:	**Stage 2A Data Validation - Level II Data Deliverable – Eurofins Laboratory Job ID 680-263382-1**

SITE: Plant Wansley Ash Pond

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of one water sample collected 7 April 2025, as part of the Plant Wansley Ash Pond on-site sampling event. The sample was analyzed at Eurofins Savannah, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B
- Alkalinity by Standard Method (SM) 2320B
- Sulfide by SM 4500-S2 F-2011
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0
- Total Dissolved Solids (TDS) by SM 2540C

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications. If there are results with two or more different qualifications due to multiple QC failures, the final qualification is reconciled in the electronic data deliverable (EDD) with qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011); and
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006).

The following sample was analyzed and reported in the laboratory reports:

Laboratory IDs	Client IDs
680-263382-1	WAN-PZ-33D

The laboratory reported results for the analytical method(s) requested for each sample on the chain of custody (COC).

The sample was received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

1.0 METALS

The sample was analyzed for metals by US EPA methods 3005A/6020B.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment

- ✓ Electronic Data Deliverables Review

1.1 Overall Assessment

The metals data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data set is 100%.

1.2 Holding Time

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding time was met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). Metals were not detected in the method blank at or above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples).

Batch MS/MSD pairs were reported. Since these were batch QC, the results do not affect the sample in this data set and qualifications were not applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Duplicate

Field duplicate samples were not reported with the sample set.

1.7 Equipment Blank

Equipment blanks were not reported with the sample set.

1.8 Field Blank

Field blanks were not reported with the sample set.

1.9 Sensitivity

The sample was reported to the MDL. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 WET CHEMISTRY

The sample was analyzed for anions by US EPA method 300.0, sulfide by SM 4500 S2 F-2011, alkalinity by SM 2320B-2011 and TDS by SM 2540C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the sample submitted for this analysis, for this data package is 100%.

2.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions	US EPA Method 300	28 days from collection to analysis
Alkalinity	SM 2320B	14 days from collection to analysis
TDS	SM 2540C	7 days from collection to analysis
Sulfide	SM 4500-S2D	7 days from collection to analysis

The holding times were met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported for sulfide using sample WAN-PZ-33D. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exception.

The recoveries of sulfide in the MS/MSD pair using sample WAN-PZ-33D were low and outside of laboratory specified acceptance criteria. Therefore, the nondetect result of sulfide in sample WAN-PZ-33D was UJ qualified as estimated below the reporting limit (RL).

Batch MS/MSD pairs were reported for anions. Since these were batch QC, the results do not affect the sample in this data set and qualifications were not applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
WAN-PZ-33D	Sulfide	0.81	UF1	0.81	UJ	MS1

mg/L- milligram per liter
U-not detected at or above the MDL
F1-MS and/or MSD recovery exceeds control limits
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and type of sample analyzed (one per batch of 20 samples). The recovery and RPD results were within the laboratory specified acceptance criteria.

2.6 Equipment Blank

Equipment blanks were not reported with the sample set.

2.7 Field Blank

Field blanks were not reported with the sample set.

2.8 Field Duplicate

Field duplicate samples were not reported with the sample set.

2.9 Laboratory Duplicate

Batch laboratory duplicates were reported for alkalinity, sulfide, and TDS. Since these were batch QC, the results do not affect the sample in this data set and qualifications were not applied to the data.

2.10 Sensitivity

The sample was reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

2.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

**+DATA VALIDATION QUALIFIER DEFINITIONS
AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team**

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

V Historical undefined qualifier.

Memorandum

Date:	7 January 2026
To:	Robert Singleton
From:	Ashley Wilson
CC:	Kristoffer Henderson
Subject:	**Stage 2A Data Validation - Level II Data Deliverable – Eurofins Laboratory Job ID 705-39776-1 Revision 2, 705-39776-2, 705-40813-1, 705-49427-1 and 680-264577-1**

SITE: Plant Wansley Ash Pond - Semiannual

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of thirty-four water samples, four equipment blanks, four field blanks and four field duplicates, collected 4 June, 12-15, 18-20 August and 13 November 2025, as part of the Plant Wansley Ash Pond on-site sampling event.

Some samples were analyzed at Eurofins Atlanta - Atlanta, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B and 3010A/6010D
- Mercury by USEPA Method 7470A
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0
- Alkalinity by SM 2320B-2011
- Total Dissolved Solids (TDS) by Standard Method (SM) 2540C-2015
- Sulfide by SM 4500 S2 F-2011
- Radium-226 by US EPA Method 9315
- Radium-228 by US EPA Method 9320
- Total Radium by Calculation

Some samples were analyzed at Eurofins Savannah - Savannah, Georgia, for the following analytical tests:

- Metals by USEPA Method 3005A/6020B
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0-1993 R2.1
- Sulfide by SM 4500 S2 F-2011
- Total Dissolved Solids (TDS) by SM 2540C-2011

- Alkalinity by SM 2320B-2011

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- Idaho National Engineering and Environmental Laboratory, RADIOANALYTICAL DATA VALIDATION, May 11, 2004 (GDE-205).

The following samples were analyzed and reported in the laboratory reports:

Laboratory IDs	Client IDs
705-39776-1	WAN-WGWA-3
705-39776-2	WAN-WGWA-18
705-39776-3	WAN-WGWA-4
705-39776-4	WAN-WGWA-6
705-39776-5	WAN-WGWA-1
705-39776-6	WAN-WGWA-2
705-40192-1	WAN-WGWA-7
705-40192-2	WAN-WGWC-25
705-40192-3	WAN-WGWC-17
705-40192-4	WAN-WGWC-15
705-40192-5	WAN-PZ-31
705-40192-6	WAN-PZ-26D

705-40516-6	WAN-AP1-FD-03
705-40516-7	WAN-AP1-EB-03
705-40516-8	WAN-WGWC-21
705-40516-9	WAN-AP1-FB-09
705-40516-10	WAN-WGWC-10
705-40516-11	WAN-WGWC-23
705-40516-12	WAN-PZ-32D
705-40516-13	WAN-AP1-FB-14
705-40516-14	WAN-WAMW-2
705-40516-15	WAN-AP1-FD-08
705-40516-16	WAN-WGWC-9
705-40813-1	WAN-PZ-23D
705-40813-2	WAN-AP1-EB-08
705-49427-1	WAN-WGWC-28D
680-264577-1	WAN-PZ-23D

The laboratory reported results for the analytical method(s) requested for each sample on the chain of custody (COC).

The samples were received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

The sample collection time was not listed on the COC for the field duplicate samples, WAN-AP1-FD-01, WAN-AP1-FD-02, WAN-AP1-FD-03 and WAN-AP1-FD-08. The laboratory logged the sample in with the collection time of 00:00.

The laboratory report was revised on 9/25/2025 to correct the initial sample volume amount used in metals prep batch 77076 for Metals 6010D which resulted with incorrect final results calculation. Seventeen samples affected: 705-40516-1 to 705-40516-17. The laboratory report was identified as 705-39776-1, Revision 1. The laboratory report was revised again on 10/22/2025 to add the narrative statement regarding one of the mercury continuing calibration verifications (CCVs). The laboratory report was identified as 705-39776-1, Revision 2.

1.0 METALS

The samples were analyzed for metals by US EPA methods 3005A/6020B and 3010A/6010D. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment
✓ Holding Time
✓ Method Blank
⊗ Matrix Spike/Matrix Spike Duplicate
⊗ Laboratory Control Sample
✓ Field Blank
⊗ Equipment Blank
✓ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverables Review

1.1 Overall Assessment

The metals data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.2 Holding Time

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding time was met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Metals were not detected in the method blank at or above the method detection limits (MDLs).

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Five sample set specific MS/MSD pairs were reported using samples WAN-WGWC-27, WAN-AP1-EB-01, WAN-WGWA-7, WAN-AP1-FD-01 and WAN-WGWC-11. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

705-39776-1

The MS recovery of lithium in the MS/MSD pair using sample WAN-WGWC-27 was high and outside of laboratory specified acceptance criteria. Therefore, the concentration of lithium in sample WAN-WGWC-27 was J+ qualified as estimated with a high bias.

The MS recovery of beryllium in the MS/MSD pair using sample WAN-WGWC-11 was low and outside of laboratory specified acceptance criteria. Therefore, the nondetect result of beryllium in sample WAN-WGWC-11 was UJ qualified as estimated below the MDL

Batch MS/MSD pairs were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
WAN-WGWC-27	Lithium	0.031	F1	0.031	J+	MS1
WAN-WGWC-11	Beryllium	0.00015	UF1	0.00015	UJ	MS1

mg/L-milligrams per liter
U-not detected at or above the MRL
F1- laboratory flag indicating the MS and/or MSD was outside acceptance criteria
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria, with the following exception.

705-49427-1

The LCS recovery of iron was high and outside of laboratory specified acceptance criteria. Therefore, the estimated concentration of iron in sample WAN-WGWC-28D was J+ qualified as estimated with a high bias.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-28D	Iron	9.1	J*+	9.1	J+	LS1

mg/L-milligrams per liter
J-Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
*+-LCS and/or LCSD is outside acceptance limits, high biased

1.6 Field Blank

Four field blanks, WAN-AP1-FB-07, WAN-AP1-FB-08, WAN-AP1-FB-09 and WAN-AP1-FB-14, were collected with the sample set. Metals were not detected in the field blanks at or above the MDLs.

1.7 Equipment Blank

Four equipment blanks, WAN-AP1-EB-01, WAN-AP1-EB-02, WAN-AP1-EB-03 and WAN-AP1-EB-08, were collected with the sample set. Metals were not detected in the field blank at or above the MDLs, with the following exceptions.

705-39776-1

Calcium (0.052 mg/L and 0.039 mg/L) was detected at estimated concentrations greater than the MDL and less than the RL in equipment blanks WAN-AP1-EB-02 and WAN-AP1-EB-03, respectively. Since the associated samples were either nondetect or detected at concentrations greater than five times the blank contamination, no qualifications were applied to the data.

Barium (0.00043 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in equipment blank WAN-AP1-EB-03. Therefore, the estimated concentration of barium in sample WAN-WGWC-9 was U qualified as nondetect. Since remainder of the associated samples were either nondetect or detected at concentrations greater than five times the blank contamination, no qualifications were applied to those data.

Barium (0.00061 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in equipment blank WAN-AP1-EB-08. Since it was not reported in the associated sample, WAN-PZ-23D, no qualifications were applied to those data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-9	Barium	0.00049	J	0.010	U	BEL

mg/L-milligrams per liter
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

1.8 Field Duplicate

Four field duplicate samples, WAN-AP1-FD-01, WAN-AP1-FD-02, WAN-AP1-FD-03 and WAN-AP1-FD-08, were collected with the sample set. Acceptable precision (RPD ≤30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-16, WAN-WAMW-1, WAN-WGWC-24 and WAN-WAMW-2, with the following exceptions.

Lithium was detected in the field duplicate sample WAN-AP1-FD-01 at a concentration greater than the MDL and less than the RL and not detected in the parent sample WAN-WGWC-16, resulting in a noncalculable RPD result. Since the absolute difference between the parent sample and field duplicate was less than the RL, no qualifications were applied to the data.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 MERCURY

The samples were analyzed for mercury per US EPA method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

2.1.1 Completeness

The mercury data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the samples submitted for this analysis, for this data package is 100%.

2.1.2 Analysis Anomaly

The CCV associated with batch 80060 recovered above the upper control limit for Mercury. Since the associated samples were nondetect for mercury, no qualifications were applied to the data.

2.2 Holding Times

The holding time for the mercury analysis of a soil sample is 28 days from sample collection to analysis. The holding time was met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Mercury was not detected in the method blanks at or above the MDL, with the following exception.

Mercury (0.000431 mg/L) was detected in the method blank in batch 76261 at an estimated concentration greater than the MDL and less than the RL. Since the results in associated samples WAN-WGWA-1, WAN-WGWA-18, WAN-WGWA-2 and WAN-WGWA-4 were nondetect, no qualifications were applied to the data.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). One sample set specific MS/MSD pair was reported using sample WAN-WGWC-22. The recovery and RPD results were within the laboratory specified acceptance criteria.

Batch MS/MSD pairs were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set, and qualifications were not applied to the data

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

2.6 Field Blank

Four field blanks, WAN-AP1-FB-07, WAN-AP1-FB-08, WAN-AP1-FB-09 and WAN-AP1-FB-14, were collected with the sample set. Mercury was not detected in the field blanks at or above the MDLs.

2.7 Equipment Blank

Four equipment blanks, WAN-AP1-EB-01, WAN-AP1-EB-02, WAN-AP1-EB-03 and WAN-AP1-EB-08, were collected with the sample set. Mercury was not detected in the field blank at or above the MDLs.

2.8 Field Duplicate

Four field duplicate samples, WAN-AP1-FD-01, WAN-AP1-FD-02, WAN-AP1-FD-03 and WAN-AP1-FD-08, were collected with the sample set. Acceptable precision (RPD ≤30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-16, WAN-WAMW-1, WAN-WGWC-24 and WAN-WAMW-2.

2.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported. The MDLs met the reference limits listed in QAPP Worksheet #15 of the QAPP.

2.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. No discrepancies were identified between the level II report and the EDD.

3.0 WET CHEMISTRY

The samples were analyzed for anions by US EPA method 300.0, TDS by SM 2540C, sulfide by SM 4500 S2 F-2011 and alkalinity by SM 2320B-2011.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Electronic Data Deliverables Review

3.1 Overall Assessment

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the samples submitted for this analysis, for this data package is 100%.

3.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions	US EPA Method 300	28 days from collection to analysis
Alkalinity	SM 2320B	14 days from collection to analysis
TDS	SM 2540C	7 days from collection to analysis
Sulfide	SM 4500-S2D	28 days from collection to analysis

The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples).

Four sample set specific MS/MSD pairs were reported for anions using samples WAN-WGWA-3, WAN-WGWA-18, WAN-WGWC-11 and WAN-PZ-23D.

Two sample set specific MS/MSD pairs were reported for sulfide using samples WAN-WGWC-28D and WAN-PZ-23D.

The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The MSD recovery of fluoride in the MS/MSD pair using sample WAN-WGWA-3 was low and outside of laboratory specified acceptance criteria. Therefore, the nondetect result of fluoride in sample WAN-WGWA-3 was UJ qualified as estimated below the MDL.

The recoveries of chloride and fluoride in the MS/MSD pair using sample WAN-WGWA-18 were low and outside of laboratory specified acceptance criteria. Therefore, the nondetect result of fluoride in sample WAN-WGWA-18 was UJ qualified as estimated below the MDL, and the concentration of chloride was J- qualified as estimated with a low bias.

The recoveries of chloride and sulfate in the MS/MSD pair using sample WAN-PZ-23D were high and outside of laboratory specified acceptance criteria. Since the concentration of sulfate in sample WAN-PZ-23D was greater than four times the spike concentration and the MS/MSD results for chloride and sulfate were flagged E to indicate the results exceeded the calibration range, no qualifications were applied to the data.

The recoveries of sulfide in the MS/MSD pair using sample WAN-WGWC-28D were high and outside of laboratory specified acceptance criteria. Since sulfide was not detected in sample WAN-WGWC-28D, no qualifications were applied to the data.

Batch MS/MSD pairs were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set, and qualifications were not applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWA-18	Fluoride	0.081	UF1	0.081	UJ	MS1
WAN-WGWA-18	Chloride	2.2	F1	2.2	J-	MS1
WAN-WGWA-3	Fluoride	0.081	UF1	0.081	UJ	MS1

mg/L-milligrams per liter
U-not detected at or above the MRL
F1- laboratory flag indicating the MS and/or MSD was outside acceptance criteria

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Field Blank

Four field blanks, WAN-AP1-FB-07, WAN-AP1-FB-08, WAN-AP1-FB-09 and WAN-AP1-FB-14, were collected with the sample set. Wet chemistry parameters were not detected in the field blanks at or above the MDLs, with the following exceptions.

Fluoride (0.16, 0.18 and 0.18 mg/L) was detected at estimated concentrations greater than the MDL and less than the RL in field blanks WAN-AP1-FB-07, WAN-AP1-FB-08 and WAN-AP1-

FB-14, respectively, and detected at a concentration greater than the RL (0.20 mg/L) in field blank WAN-AP1-FB-09. Therefore, the estimated concentrations in the associated samples were U qualified as nondetect, and the detected concentrations greater than the RL and less than ten times the blank contamination were J+ qualified as estimated with a high bias.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code

WAN-WGWC-24	Fluoride	0.28	NA	0.28	J+	BFH
WAN-WGWC-27	Fluoride	0.92	NA	0.92	J+	BFH
WAN-WGWC-28D	Fluoride	1.3	NA	1.3	J+	BFH
WAN-WGWC-8	Fluoride	1.0	NA	1.0	J+	BFH
WAN-WGWC-9	Fluoride	0.90	NA	0.90	J+	BFH

mg/L-milligrams per liter
NA-not applicable
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

3.7 Equipment Blank

Four equipment blanks, WAN-AP1-EB-01, WAN-AP1-EB-02, WAN-AP1-EB-03 and WAN-AP1-EB-08, were collected with the sample set. Wet chemistry parameters were not detected in the equipment blanks at or above the MDLs, with the following exception.

Fluoride (0.14, 0.16, 0.16 and 0.14 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL in WAN-AP1-EB-01, WAN-AP1-EB-02, WAN-AP1-EB-03 and WAN-AP1-EB-08. Since the concentrations of fluoride in the associated samples were either previously qualified due to field blank contamination or greater than ten times the equipment blank concentration, no qualifications were applied to the data.

3.8 Field Duplicate

Four field duplicate samples, WAN-AP1-FD-01, WAN-AP1-FD-02, WAN-AP1-FD-03 and WAN-AP1-FD-08, were collected with the sample set. Acceptable precision (RPD <30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-16, WAN-WAMW-1, WAN-WGWC-24 and WAN-WAMW-2.

3.9 Laboratory Duplicate

Three sample set specific laboratory duplicates were reported for TDS using samples WAN-WGWC-8, WAN-WGWC-28D and WAN-WGWC-28D. The RPD results were within the laboratory specified acceptance criteria.

Two sample set specific laboratory duplicates were reported for alkalinity using samples WAN-WGWC-28D and WAN-PZ-23D. The RPD results were within the laboratory specified acceptance criteria.

Batch laboratory duplicates were reported for TDS. Since this was batch QC, the results do not affect the samples in this data set, and qualifications were not applied to the data.

3.10 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

3.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

4.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA method 9315, radium-228 by US EPA method 9320 and total radium by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

4.1 Overall Assessment

4.1.1 Completeness

The radium-226 and radium-228 data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.1.2 Analysis Anomaly

Total radium in samples WAN-WGWA-18 and WAN-WGWC-16 was detected at a concentration greater than the minimum detectable concentration (MDC), for the calculated, combined radium-226 and radium-228. Since radium-226 and radium-228 were not detected above the MDC, and based on professional and technical judgment, the total radium concentration in samples WAN-WGWA-18 and WAN-WGWC-16 were U qualified as not detected.

Total radium in sample WAN-AP1-EB-01 was not detected for the calculated, combined radium-226 and radium-228. Since radium-228 was detected in sample WAN-AP1-EB-01 at a concentration greater than the MDC, and based on professional and technical judgment, the total

radium concentration in sample WAN-AP1-EB-01 NA qualified as detected. Since the radium-228 concentration was UJ qualified as estimated below the RL due to method blank contamination, the final qualifier for the combined radium-226 and radium-228 concentration was UJ qualified as estimated below the RL.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWA-18	Combined Radium 226 + 228	0.697	NA	0.697	U	RO1
WAN-WGWC-16	Combined Radium 226 + 228	0.940	NA	0.940	U	RO1
WAN-AP1-EB-01	Combined Radium 226 + 228	0.610	U	0.610	NA|UJ	RO1|BL

pCi/L-picocuries per liter
U-not detected at or above the MDC
NA-not applicable

4.2 Holding Times

The holding times for the radium-226 and radium-228 analyses of a water sample are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Method blanks were reported for the radium-226 and radium-228 data. Radium-226 and radium-228 were not detected in the method blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (2.944 pCi/L) was detected in the method blank in batch 732900 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for samples WAN-AP1-EB-01, WAN-WGWA-7, WAN-WGWC-13, WAN-WGWC-15, WAN-WGWC-17 and WAN-WGWC-19 were UJ qualified as not statistically distinguishable from the blank.

Radium-228 (0.8413 pCi/L) was detected in the method blank in batch 732125 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean

difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWA-4 and WAN-WGWA-6 were J qualified as estimated and the combined radium 226 + 228 concentration for samples WAN-WGWA-1 and WAN-WGWA-2 were UJ qualified as not statistically distinguishable from the blank.

Radium-228 (0.9169 pCi/L) was detected in the method blank in batch 737831 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-28D and WAN-WGWC-8 were J qualified as estimated and the combined radium 226 + 228 concentration for samples WAN-AP1-FB-07 and WAN-WGWC-25 were UJ qualified as not statistically distinguishable from the blank.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code

4.4 Matrix Spike/Matrix Spike Duplicate

Batch MS/MSD pairs were reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set, and qualifications were not applied to the data.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCSs were reported for radium-226 and radium-228. The recovery results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

Two sample set specific laboratory duplicates were reported for radium-226 and radium-228 using samples WAN-WGWC-17 and WAN-WGWC-23. The RER results were within the laboratory specified acceptance criteria.

Batch laboratory duplicates were reported for radium-226 and radium-228. Since this was batch QC, the results do not affect the samples in this data set, and qualifications were not applied to the data.

4.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses, and a tracer was reported for the radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

4.8 Field Blank

Four field blanks, WAN-AP1-FB-07, WAN-AP1-FB-08, WAN-AP1-FB-09 and WAN-AP1-FB-14, were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (0.902 pCi/L) was detected in WAN-AP1-FB-07 at a concentration greater than the MDC. Since the radium-228 result in sample WAN-AP1-FB-07 was previously qualified due to method blank contamination, no further qualifications were applied to the data.

Radium-228 (0.727 pCi/L) was detected in WAN-AP1-FB-09 at a concentration greater than the MDC. Therefore, the radium concentrations with a mean difference less than 2 in the associated sample was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for sample WAN-WGWC-21 was UJ qualified as not statistically distinguishable from the blank.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWC-21	Radium-228	0.916	NA	0.916	UJ	BFH
WAN-WGWC-21	Combined Radium 226 + 228	1.14	NA	1.14	UJ	BFH

pCi/L-picocuries per liter
NA-not applicable

4.9 Equipment Blank

Three equipment blanks, WAN-AP1-EB-01, WAN-AP1-EB-02 and WAN-AP1-EB-03, were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (0.610 pCi/L) was detected in WAN-AP1-EB-01 at concentrations greater than the MDC. Since WAN-AP1-EB-01 was previously qualified due to method blank contamination, no additional qualifications were applied to the data.

Radium-228 (0.399 pCi/L) was detected in WAN-AP1-EB-03 at a concentration greater than the measured 2σ uncertainty. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-22, WAN-WGWC-24 and WAN-WGWC-27 were J qualified as estimated and the combined radium 226 + 228 concentration for sample WAN-AP1-FD-03 was UJ qualified as not statistically distinguishable from the blank.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWA-7	Radium-228	0.701	NA	0.701	UJ	BEH

pCi/L-picocuries per liter
NA-not applicable

4.10 Field Duplicate

Four field duplicate samples, WAN-AP1-FD-01, WAN-AP1-FD-02, WAN-AP1-FD-03 and WAN-AP1-FD-08, were collected with the sample set. Acceptable precision [mean difference

(MD) ≤ 3, RPD < 20% or difference < RL] was demonstrated between the field duplicate and the original samples, WAN-WGWC-16, WAN-WAMW-1, WAN-WGWC-24 and WAN-WAMW-2.

4.11 Sensitivity

The samples were reported to the MDCs. No elevated non-detect results were reported. The radium-228 result was sample WAN-PZ-31 was flagged "G" to indicate the MDC exceeded the requested RL.

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

V Historical undefined qualifier.

Memorandum

Date:	12 December 2025
To:	Robert Singleton
From:	Ashley Wilson
CC:	Kristoffer Henderson
Subject:	**Stage 2A Data Validation - Level II Data Deliverable – Eurofins Laboratory Job ID 705-40790-1, 705-40790-2, 705-40816-1, 705-41240-1 and 705-41240-2**

SITE: Plant Wansley Ash Pond - Quarterly

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of twenty water samples, two equipment blanks, two field blanks and two field duplicates, collected 20-21 and 25-27 August 2025, as part of the Plant Wansley Ash Pond on-site sampling event. The samples were analyzed at Eurofins Atlanta - Atlanta, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B and 3010A/6010D
- Mercury by USEPA Method 7470A
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0
- Total Dissolved Solids (TDS) by Standard Method (SM) 2540C - 2015
- Radium-226 by US EPA Method 9315
- Radium-228 by US EPA Method 9320
- Total Radium by Calculation

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);

- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- Idaho National Engineering and Environmental Laboratory, RADIOANALYTICAL DATA VALIDATION, May 11, 2004 (GDE-205).

The following samples were analyzed and reported in the laboratory reports:

Laboratory IDs	Client IDs
705-40790-1	WAN-WGWC-42
705-40790-2	WAN-WGWC-30
705-40790-3	WAN-WGWC-33
705-40790-4	WAN-WGWC-32
705-40790-5	WAN-AP1-FD-09
705-40790-6	WAN-WGWC-40
705-40790-7	WAN-AP1-EB-09
705-40790-8	WAN-WGWC-31S
705-40790-9	WAN-AP1-FB-15
705-40790-10	WAN-WGWC-38D
705-40790-11	WAN-WGWC-41
705-40790-12	WAN-WGWC-31D
705-40790-13	WAN-WGWC-38S

Laboratory IDs	Client IDs
705-40790-14	WAN-WGWC-39
705-40790-15	WAN-AP1-EB-10
705-40790-16	WAN-WGWC-36S
705-40790-17	WAN-WGWC-37S
705-40790-18	WAN-WGWC-34D
705-40816-1	WAN-WGWC-31D
705-41240-1	WAN-WGWC-34S
705-41240-2	WAN-AP1-FB-16
705-41240-3	WAN-WGWC-35D
705-41240-4	WAN-WGWC-35S
705-41240-5	WAN-WGWC-36D
705-41240-6	WAN-WGWC-37D
705-41240-7	WAN-AP1-FD-10

The laboratory reported results for the analytical method(s) requested for each sample on the chain of custody (COC).

The samples were received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the COC, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

The sample collection time was not listed on the COC for the field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10. The laboratory logged the sample in with the collection time of 00:00.

1.0 METALS

The samples were analyzed for metals by US EPA methods 3005A/6020B and 3010A/6010D. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas

where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Time
- ⊗ Method Blank
- ⊗ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Field Blank
- ⊗ Equipment Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverables Review

1.1 Overall Assessment

The metals data reported in this data package are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.2 Holding Time

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding time was met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Metals were not detected in the method blank at or above the method detection limits (MDLs), with the following exception.

705-41240-1: Boron (0.192 mg/L) was detected in the method blank in batch 79432 at a concentration greater than the reporting limit (RL). Therefore, the estimated concentrations of boron in the associated samples were U qualified as not detected above the RL.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
WAN-AP1-FD-10	Boron	0.078	JB	0.080	U	BL

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	Reason Code**
WAN-WGWC-37D	Boron	0.078	JB	0.080	U	BL

mg/L-milligrams per liter
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
B-compound was found in the blank and sample
* Validation qualifiers are defined in Attachment 1 at the end of this report
**Reason codes are defined in Attachment 2 at the end of this report

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Three sample set specific MS/MSD pairs were reported using samples WAN-WGWC-42, WAN-WGWC-30 and WAN-WGWC-34S. The recovery and relative percent difference (RPD) results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of beryllium in the MS/MSD pair using sample WAN-WGWC-30 were low and outside of laboratory specified acceptance criteria. Therefore, the concentration of beryllium in sample WAN-WGWC-30 was J+ qualified as estimated with high bias. Since the beryllium concentration was estimated greater than the MDL and less than the RL, the final qualification was J qualified as estimated.

The RPD on selenium in the MS/MSD pair using sample WAN-WGWC-30 was outside of laboratory specified acceptance criteria. Since selenium was not detected in sample WAN-WGWC-30, no qualifications were applied to the data.

Batch MS/MSD pairs were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-30	Beryllium	0.00039	JF1	0.00039	J	MS1

mg/L-milligrams per liter
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
F1- laboratory flag indicating the MS and/or MSD was outside acceptance criteria

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set. Metals were not detected in the field blanks at or above the MDLs.

1.7 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set. Metals were not detected in the field blank at or above the MDLs, with the following exceptions.

Molybdenum (0.0013 mg/L) was detected at an estimated concentration greater than the MDL and less than the RL, and cobalt (0.023 mg/L) and barium (0.091 mg/L) were detected at concentrations greater than the RL in equipment blank WAN-AP1-EB-10. Therefore, the concentrations of barium and cobalt less than the equipment blank concentration were U qualified as not detected above the RL and the detected concentrations greater than the equipment blank concentration were J+ qualified as estimated with a high bias. No qualifications were applied to data in the associated samples that were either nondetect or detected at concentrations greater than five times the blank contamination.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-31D	Cobalt	0.00044	J	0.023	U	BEH
WAN-WGWC-31D	Barium	0.0050	J	0.091	U	BEH
WAN-WGWC-34D	Barium	0.065	NA	0.091	U	BEH
WAN-WGWC-36S	Barium	0.057	NA	0.091	U	BEH
WAN-WGWC-38S	Cobalt	0.031	NA	0.031	J+	BEH
WAN-WGWC-38S	Barium	0.11	NA	0.11	J+	BEH
WAN-WGWC-39	Cobalt	0.0078	NA	0.023	U	BEH
WAN-WGWC-39	Barium	0.059	NA	0.091	U	BEH
WAN-WGWC-41	Barium	0.0019	J	0.091	U	BEH

mg/L-milligrams per liter
NA-not applicable
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

1.8 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision (RPD $\leq$30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-42 and WAN-WGWC-37D.

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 MERCURY

The samples were analyzed for mercury per US EPA method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

- ✓ Overall Assessment
- ✓ Holding Times
- ✓ Method Blank
- ✓ Matrix Spike/Matrix Spike Duplicate
- ✓ Laboratory Control Sample
- ✓ Field Blank
- ✓ Equipment Blank
- ✓ Field Duplicate
- ✓ Sensitivity
- ✓ Electronic Data Deliverables Review

2.1 Overall Assessment

The mercury data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the samples submitted for this analysis, for this data package is 100%.

2.2 Holding Times

The holding time for the mercury analysis of a soil sample is 28 days from sample collection to analysis. The holding time was met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Mercury was not detected in the method blanks at or above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Two sample set specific MS/MSD pairs were reported using samples WAN-AP1-EB-09 and WAN-WGWC-31D. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exception.

The RPD of mercury in the MS/MSD pair using sample WAN-AP1-EB-09 was outside of laboratory specified acceptance criteria. Since mercury was nondetect in sample WAN-AP1-EB-09, no qualifications were applied to the data.

Batch MS/MSD pairs were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

2.6 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set. Mercury was not detected in the field blanks at or above the MDLs, with the following exception.

Mercury (0.00028 mg/L) was detected in field blank, WAN-AP1-FB-16, at a concentration greater than the RL. Since mercury was not detected in the associated samples, no qualifications were applied to the data.

2.7 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set. Mercury was not detected in the field blank at or above the MDLs.

2.8 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision (RPD ≤30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-42 and WAN-WGWC-37D.

2.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported. The MDLs met the reference limits listed in QAPP Worksheet #15 of the QAPP.

2.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. No discrepancies were identified between the level II report and the EDD.

3.0 WET CHEMISTRY

The samples were analyzed for anions by US EPA method 300.0 and TDS by SM 2540C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Electronic Data Deliverables Review

3.1 Overall Assessment

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as

estimated) to the total number of analytical results requested on the samples submitted for this analysis, for this data package is 100%.

3.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions	US EPA Method 300	28 days from collection to analysis
TDS	SM 2540C	7 days from collection to analysis

The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples).

Four sample set specific MS/MSD pairs were reported for anions using samples WAN-WGWC-42, WAN-AP1-EB-09, WAN-WGWC-41 and WAN-WGWC-34S. The recovery and RPD results were within the laboratory specified acceptance criteria, with the following exceptions.

The recoveries of chloride and fluoride in the MS/MSD pair using sample WAN-AP1-EB-09 were low and outside of laboratory specified acceptance criteria. Therefore, the concentrations of chloride and fluoride for sample WAN-AP1-EB-09 were J- qualified as estimated with a low bias.

One or both recoveries of chloride and fluoride in the MS/MSD pair using sample WAN-WGWC-41 were low and outside of laboratory specified acceptance criteria. Therefore, the concentrations of chloride and fluoride were J- qualified as estimated with a low bias.

Batch MS/MSD pairs were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-AP1-EB-09	Fluoride	0.29	F1	0.29	J-	MS1
WAN-AP1-EB-09	Chloride	1.4	F1	1.4	J-	MS1

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-41	Fluoride	0.70	F1	0.70	J-	MS1
WAN-WGWC-41	Chloride	2.8	F1	2.8	J-	MS1

mg/L-milligrams per liter
F1- laboratory flag indicating the MS and/or MSD was outside acceptance criteria

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery and RPD results were within the laboratory specified acceptance criteria.

3.6 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set. The wet chemistry parameters were not detected in the field blanks at or above the MDLs, with the following exceptions.

Fluoride (0.35 mg/L) and TDS (11.0 mg/L) were detected in field blank, WAN-AP1-FB-15, at concentrations greater than the RL. Therefore, the concentrations of fluoride and TDS less than the equipment blank concentration were U qualified as not detected above the RL and the detected concentrations greater than the equipment blank concentration were J+ qualified as estimated with a high bias. No qualifications were applied to data in the associated samples that were either nondetect or detected at concentrations greater than ten times the blank contamination.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-AP1-EB-09	Fluoride	0.29	F1	0.35	U	BFH
WAN-AP1-FD-09	Fluoride	0.20	NA	0.35	U	BFH
WAN-AP1-FD-09	Total Dissolved Solids	58	NA	58	J+	BFH
WAN-WGWC-30	Fluoride	0.18	J	0.35	U	BFH
WAN-WGWC-30	Total Dissolved Solids	56	NA	56	J+	BFH
WAN-WGWC-31S	Fluoride	0.24	NA	0.35	U	BFH
WAN-WGWC-31S	Total Dissolved Solids	78	NA	78	J+	BFH
WAN-WGWC-32	Fluoride	0.25	NA	0.35	U	BFH
WAN-WGWC-33	Fluoride	0.96	NA	0.35	J+	BFH
WAN-WGWC-38D	Fluoride	0.32	NA	0.35	U	BFH
WAN-WGWC-40	Fluoride	0.16	J	0.35	U	BFH

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-40	Total Dissolved Solids	41	NA	41	J+	BFH
WAN-WGWC-42	Fluoride	0.15	J	0.35	U	BFH
WAN-WGWC-42	Total Dissolved Solids	47	NA	47	J+	BFH

mg/L-milligrams per liter
NA-not applicable
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
U-not detected at or above the MRL
F1- laboratory flag indicating the MS and/or MSD was outside acceptance criteria

3.7 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set. The wet chemistry parameters were not detected in the equipment blanks at or above the MDLs, with the following exceptions.

Fluoride (0.29 mg/L) and chloride (1.4 mg/L) were detected in WAN-AP1-EB-09 at concentrations greater than the RL. Therefore, the concentrations of chloride less than the blank contamination were U qualified as nondetect and the concentrations greater than the blank concentration and less than 10 times the blank concentration were J+ qualified as estimated with a high bias. Since fluoride was previously qualified in WAN-AP1-FB-15, no additional qualifications were applied to the data.

Chloride (1.2 mg/L) and sulfate (1.4 mg/L) were detected in WAN-AP1-EB-10 at concentrations greater than the RL. Therefore, the concentrations of chloride greater than the blank contamination and less than 10 times the blank concentration were J+ qualified as estimated with a high bias. Since the concentrations of sulfate in the associated samples were greater than ten times the blank concentration, no qualifications were applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-09	Chloride	7.7	NA	7.7	J+	BEH
WAN-WGWC-30	Chloride	1.3	NA	1.4	U	BEH
WAN-WGWC-31S	Chloride	3.0	NA	3.0	J+	BEH
WAN-WGWC-32	Chloride	4.3	NA	4.3	J+	BEH
WAN-WGWC-39	Chloride	2.1	NA	2.1	J+	BEH
WAN-WGWC-40	Chloride	12	NA	12	J+	BEH
WAN-WGWC-41	Chloride	2.8	F1	2.8	J+	BEH

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	Reason Code
WAN-WGWC-42	Chloride	7.4	NA	7.4	J+	BEH

mg/L-milligrams per liter
NA-not applicable
F1- laboratory flag indicating the MS and/or MSD was outside acceptance criteria

3.8 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision (RPD <30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-42 and WAN-WGWC-37D, with the following exception.

Fluoride was detected in WAN-AP1-FD-09 at a concentration greater than the RL and detected at an estimated concentration greater than the MDL and less than the RL in parent sample WAN-WGWC-42, resulting in a noncalculable RPD. Since the concentrations were within an RL of each other, no qualifications were applied to the data.

Fluoride was detected in the field duplicate sample WAN-AP1-FD-10 at a concentration greater than the MDL and less than the RL and not detected in the parent sample WAN-WGWC-37D, resulting in a noncalculable RPD result. Since the absolute difference between the parent sample and field duplicate was less than the RL, no qualifications were applied to the data.

The sulfate RPD for field duplicate pair WAN-AP1-FD-10/ WAN-WGWC-37D were greater than 50%. Therefore, the sulfate concentrations in this field duplicate pair were J qualified as estimated.

Sample	Analyte	Laboratory Result (mg/l)	Laboratory Flag	RPD	Validation Result (mg/l)	Validation Qualifier	Reason Code
WAN-AP1-FD-02	Sulfate	11	NA	104	11	J	RPDF1
WAN-WGWC-16	Sulfate	35	NA		35	J	RPDF1

mg/L-milligrams per liter
NA-not applicable

3.9 Laboratory Duplicate

One sample set specific laboratory duplicate was reported using sample, WAN-WGWC-38D. The RPD result was within the laboratory specified acceptance criteria.

A batch laboratory duplicate was also reported for TDS. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

3.10 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

3.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

3.12 Final Validation Qualifier Reconciliation

The fluoride result in the table below had two or more different qualifications due to multiple QC failures. Based on professional and technical judgement, the final validation qualifier for the fluoride concentration in sample WAN-AP1-EB-09 was UJ qualified as estimated below the RL due to low recovery.

The chloride result in the table below had two or more different qualifications due to multiple QC failures. Based on professional and technical judgement, the final validation qualifier for the chloride concentration in sample WAN-WGWC-41 was J qualified as estimated.

Sample	Analyte	Laboratory Result (mg/L)	Validation Result (mg/L)	Validation Qualifiers	Reason Codes	Final Validation Qualifier
WAN-AP1-EB-09	Fluoride	0.20	0.35	U,J-	BFH,MS1	UJ
WAN-WGWC-41	Chloride	2.8	2.8	J,J-	BEH,MS1	J

mg/L-milligrams per liter
F1- laboratory flag indicating the MS and/or MSD was outside acceptance criteria

4.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA method 9315, radium-228 by US EPA method 9320 and total radium by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Equipment Blank
✓ Field Duplicate
✓ Sensitivity

4.1 Overall Assessment

4.1.1 Completeness

The radium-226 and radium-228 data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.1.2 Analysis Anomaly

Total radium in samples WAN-WGWC-31D, WAN-AP1-FB-16 and WAN-WGWC-34S was detected at concentrations greater than the minimum detectable concentration (MDC), for the calculated, combined radium-226 and radium-228. Since radium-226 and radium-228 were not detected above the MDC, and based on professional and technical judgment, the total radium concentrations in samples WAN-WGWC-31D, WAN-AP1-FB-16 and WAN-WGWC-34S were U qualified as not detected.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWC-31D	Combined Radium 226 + 228	1.22	NA	1.22	U	RO1
WAN-AP1-FB-16	Combined Radium 226 + 228	0.508	NA	0.508	U	RO1
WAN-WGWC-34S	Combined Radium 226 + 228	0.545	NA	0.545	U	RO1

pCi/L-picocuries per liter
U-not detected at or above the MDC
NA-not applicable

4.2 Holding Times

The holding times for the radium-226 and radium-228 analyses of a water sample are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Method blanks were reported for the radium-226 and radium-228 data. Radium-226 and radium-228 were not detected in the method blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-226 (0.1321 pCi/L) was detected in the method blank in batch 734888 at a concentration greater than the TPU. Therefore, the radium-226 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-35D, WAN-WGWC-35S, WAN-WGWC-36D were UJ qualified as not statistically distinguishable from the blank, and the combined radium 226 + 228 concentrations for sample WAN-WGWC-37D was J qualified as estimated.

Radium-228 (0.5959 pCi/L) was detected in the method blank in batch 734889 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-35S and WAN-WGWC-36D were UJ qualified as not statistically distinguishable from the blank, and the combined radium 226 + 228 concentrations for samples WAN-AP1-FD-10 and WAN-WGWC-37D were J qualified as estimated.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWC-35D	Radium-226	0.402	NA	0.402	UJ	BL
WAN-WGWC-35D	Combined Radium 226 + 228	0.592	NA	0.592	UJ	BL
WAN-WGWC-35S	Radium-226	0.208	NA	0.208	UJ	BL
WAN-WGWC-36D	Radium-226	0.342	NA	0.342	UJ	BL
WAN-WGWC-37D	Radium-226	0.868	NA	0.868	J	BL
WAN-AP1-FD-10	Radium-228	3.09	NA	3.09	J	BL
WAN-AP1-FD-10	Combined Radium 226 + 228	4.58	NA	4.58	J	BL

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWC-35S	Radium-228	0.912	NA	0.912	UJ	BL
WAN-WGWC-35S	Combined Radium 226 + 228	1.12	NA	1.12	UJ	BL
WAN-WGWC-36D	Radium-228	1.12	NA	1.12	UJ	BL

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported with the sample set.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). LCSs were reported for radium-226 and radium-228. The recovery results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

Laboratory duplicates were reported with the sample set for radium-226 and radium-228 using sample WAN-WGWC-38S. The replicate error ratio (RER) [2 sigma (2σ)] results were within the laboratory specified acceptance criteria.

Batch laboratory duplicates were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data

4.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses, and a tracer was reported for the radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

4.8 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-228 (0.862 pCi/L) was detected in WAN-AP1-FB-15 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-AP1-FD-09, WAN-WGWC-32 and WAN-WGWC-40 were J qualified as estimated and the combined radium 226 + 228 concentrations for samples WAN-WGWC-30, WAN-WGWC-31S and WAN-WGWC-42 were UJ qualified as not statistically distinguishable from the blank.

Radium-228 (0.471 pCi/L) was detected in WAN-AP1-FB-16 at a concentration greater than the measured 2σ uncertainty. Since the radium-228 concentrations in the associated samples were previously qualified due to method blank contamination, no additional qualifications were applied to the data.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-09	Radium-228	1.93	NA	1.93	J	BFH
WAN-AP1-FD-09	Combined Radium 226 + 228	2.13	NA	2.13	J	BFH
WAN-WGWC-30	Radium-228	1.06	NA	1.06	UJ	BFH
WAN-WGWC-30	Combined Radium 226 + 228	1.38	NA	1.38	UJ	BFH
WAN-WGWC-31S	Radium-228	0.731	NA	0.731	UJ	BFH
WAN-WGWC-31S	Combined Radium 226 + 228	1.05	NA	1.05	UJ	BFH
WAN-WGWC-32	Radium-228	2.54	NA	2.54	J	BFH
WAN-WGWC-32	Combined Radium 226 + 228	4.91	NA	4.91	J	BFH
WAN-WGWC-40	Radium-228	1.86	NA	1.86	J	BFH
WAN-WGWC-40	Combined Radium 226 + 228	2.52	NA	2.52	J	BFH
WAN-WGWC-42	Radium-228	0.929	NA	0.929	UJ	BFH

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWC-42	Combined Radium 226 + 228	1.25	NA	1.25	UJ	BFH

pCi/L-picocuries per liter
NA-not applicable

4.9 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

Radium-226 (0.339 pCi/L) was detected in WAN-AP1-EB-09 at concentrations greater than the MDC. Therefore, the radium-226 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-226 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-32, WAN-WGWC-38D and WAN-WGWC-40 were J qualified as estimated.

Radium-226 (0.470 pCi/L) and radium-228 (0.811 pCi/L) were detected in WAN-AP1-EB-10 at a concentration greater than the MDC. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-37S, WAN-WGWC-39 and WAN-WGWC-41 were J qualified as estimated, and the combined radium 226 + 228 concentrations for samples WAN-WGWC-34D, WAN-WGWC-36S and WAN-WGWC-38S were UJ qualified as not statistically distinguishable from the blank.

Sample	Analyte	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validator Qualifiers	Reason Code

pCi/L-picocuries per liter
NA-not applicable

4.10 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision [mean difference (MD) ≤ 3σ, RPD < 20% or difference < RL] was demonstrated between the field duplicate and the original samples, WAN-WGWC-42 and WAN-WGWC-37D, with the following exception.

The MD of radium-226 for field duplicate pair WAN-AP1-FD-10/WAN-WGWC-37D was greater than 3. Therefore, the concentrations of radium-226 in the field duplicate pair were J qualified as estimated.

Sample	Analyte	Laboratory Result (pCi/L)	Laboratory Flag	MD (σ)	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-AP1-FD-10	Radium-226	1.49	NA	3.2	1.49	J	RPDF1
WAN-WGWC-37D	Radium-226	0.868	NA		0.868	J	RPDF1

pCi/L-picocuries per liter

DATA VALIDATION QUALIFIER DEFINITIONS AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

V Historical undefined qualifier.

Memorandum

Date:	21 January 2026
To:	Robert Singleton
From:	Ashley Wilson
CC:	Kristoffer Henderson, Colleen Small
Subject:	**Stage 2A Data Validation - Level II Data Deliverables – Eurofins Laboratory Job ID 705-49212-1, Revision 1, 705-49212-2, 705-49432-1, and 705-49432-2**

SITE: Plant Wansley Ash Pond - Quarterly

INTRODUCTION

This report summarizes the findings of the Stage 2A data validation of eighteen water samples, two equipment blanks, two field blanks, and two field duplicates, collected 10-13 November 2025, as part of the Plant Wansley Ash Pond on-site sampling event. The samples were submitted and analyzed at Eurofins Atlanta - Atlanta, Georgia, for the following analytical tests:

- Metals by United States (US) Environmental Protection Agency (EPA) Methods 3005A/6020B and 3010A/6010D
- Mercury by USEPA Method 7470A
- Anions (Chloride, Fluoride and Sulfate) by USEPA Method 300.0
- Total Dissolved Solids (TDS) by Standard Method (SM) 2540C - 2015

Subsets of the samples were subcontracted to Eurofins St. Louis, in Earth City, Missouri and analyzed for the following tests:

- Radium-226 by US EPA Method 9315
- Radium-228 by US EPA Method 9320
- Total Radium by Calculation

EXECUTIVE SUMMARY

Overall, based on this Stage 2A data validation covering the quality control (QC) parameters listed below and based on the information provided, the data as qualified are usable for supporting project objectives. The qualified data should be used within the limitations of the qualifications.

The data were reviewed based on the pertinent methods referenced in the laboratory report, professional and technical judgment, and the following documents:

- United States (US) EPA Region IV Data Validation Standard Operating Procedures (US EPA Region IV, September 2011);
- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, November 2020 (EPA 542-R-20-006); and
- Idaho National Engineering and Environmental Laboratory, RADIOANALYTICAL DATA VALIDATION, May 11, 2004 (GDE-205).

The following samples were analyzed and reported in the laboratory reports:

Laboratory IDs	Client IDs
705-49212-1	WAN-WGWC-31S
705-49212-2	WAN-WGWC-32
705-49212-3	WAN-WGWC-34D
705-49212-4	WAN-WGWC-34S
705-49212-5	WAN-WGWC-36D
705-49212-6	WAN-WGWC-37D
705-49212-7	WAN-WGWC-38D
705-49212-8	WAN-WGWC-40
705-49212-9	WAN-WGWC-42
705-49212-10	WAN-AP1-FB-15
705-49212-11	WAN-AP1-FD-09
705-49212-12	WAN-AP1-EB-09

Laboratory IDs	Client IDs
705-49432-1	WAN-WGWC-31D
705-49432-2	WAN-WGWC-33
705-49432-3	WAN-WGWC-35S
705-49432-4	WAN-AP1-EB-10
705-49432-5	WAN-WGWC-30
705-49432-6	WAN-WGWC-36S
705-49432-7	WAN-WGWC-37S
705-49432-8	WAN-WGWC-38S
705-49432-9	WAN-WGWC-39
705-49432-10	WAN-AP1-FD-10
705-49432-11	WAN-AP1-FB-16
705-49432-12	WAN-WGWC-35D

The laboratory reported results for the analytical method(s) requested for each sample on the chain of custody (COC).

The samples were received within 0-6 degrees Celsius (°C). No sample preservation issues were noted by the laboratory.

Incorrect error corrections were observed on the COC for project numbers 705-49432-1 and 705-49432-2, instead of the proper procedure of a single strike through, correction, and initials and date of person making the corrections.

The sample collection times were not listed on the COCs for the field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10. The laboratory logged the sample in with the collection time of 00:00.

The laboratory report for project number 705-49212-1 was revised on 1 December 2025 to correct the client sample IDs for samples WAN-AP1-FB-15, WAN-AP1-FD-09, and WAN-AP1-EB-09. The revised report is identified as 705-49212-1, Revision 1.

1.0 METALS

The samples were analyzed for metals by US EPA Methods 3005A/6020B and 3010A/6010D. (Mercury was evaluated separately in Section 2.0, below).

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Time
⊗ Method Blank
✓ Matrix Spike/Matrix Spike Duplicate
✓ Laboratory Control Sample
✓ Field Blank
⊗ Equipment Blank
⊗ Field Duplicate
✓ Sensitivity
✓ Electronic Data Deliverables Review

1.1 Overall Assessment

1.1.1 Completeness

The metals data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

1.1.2 Analysis Anomaly

705-49432-1: The case narrative indicated that continuing calibration verification (CCV) associated with preparatory QC in batch 95804 failed low for silver, chromium, lead, and zinc, which impacts the boron data. Since the CCVs that bracket the associated samples were within the acceptance criteria and the boron results in the preparatory QC were acceptable, no qualifications were applied to the data, based on professional and technical judgement.

705-49432-1: The CCV associated with batch 97111 recovered above the upper control limit for beryllium. Therefore, the estimated concentration of beryllium in sample WAN-WGWC-39 was J+ qualified as estimated with a high bias. However, since the beryllium concentration in sample

WAN-WGWC-39 was J-flagged by the laboratory indicating that the quantitation is estimated, the final validation qualifier was J qualified as estimated. A non-directional qualification is used when both a directional and non-directional qualification are applied to the same result. Since beryllium was not detected in the remaining associated samples, no qualifications were applied to those data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	DQM Reason Code**
WAN-WGWC-39	Beryllium	0.00041	J^+	0.00041	J	CC2

mg/L-milligrams per liter
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
^+-continuing calibration verification (CCV) is outside acceptance limits, biased high
* Validation qualifiers are defined in Attachment 1 at the end of this report
**EQuIS Data Qualification Module (DQM) Reason codes are defined in Attachment 2 at the end of this report

1.2 Holding Time

The holding time for the metals analysis of a water sample is 180 days from sample collection to analysis. The holding time was met for the sample analyses.

1.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Metals were not detected in the method blanks at or above the method detection limits (MDLs), with the following exception.

705-49432-1: Selenium (0.00372 mg/L) was detected in the method blank in batch 96907 at a concentration greater than the MDL and less than the reporting limit (RL). Therefore, the estimated concentrations of selenium in the associated samples were U qualified as not detected above the RL and the detected concentrations greater than the RL and less than five times the blank contamination were J+ qualified as estimated with a high bias.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier*	DQM Reason Code**
WAN-AP1-FD-10	Selenium	0.0032	JB	0.0050	U	BL
WAN-WGWC-36S	Selenium	0.0029	JB	0.0050	U	BL
WAN-WGWC-37S	Selenium	0.019	B	0.019	J+	BL
WAN-WGWC-38S	Selenium	0.0043	JB	0.0050	U	BL
WAN-WGWC-39	Selenium	0.0026	JB	0.0050	U	BL

mg/L-milligrams per liter
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value
B-compound was found in the blank and sample

1.4 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

Sample set specific MS/MSDs were not reported. However, batch MS/MSD pairs were reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

1.5 Laboratory Control Sample (LCS)

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

1.6 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set. Metals were not detected in the field blanks at or above the MDLs.

1.7 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set. Metals were not detected in the equipment blanks at or above the MDLs, with the following exceptions.

705-49432-1: Barium (0.033 mg/L) and cobalt (0.0083 mg/L) were detected at concentrations greater than the RL in equipment blank WAN-AP1-EB-10. Therefore, based on professional and technical judgement, estimated concentrations of barium and cobalt were U qualified as not detected at the RL, the samples concentrations of barium and cobalt that were greater than the RL and less than the equipment blank concentrations were U qualified as not detected above the sample concentrations, and the detected concentrations greater than the equipment blank concentrations and less than ten times the blank contamination were J+ qualified as estimated with a high bias. No qualifications were applied to data in the associated samples that were either non-detect or detected at concentrations greater than ten times the blank contamination.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
WAN-AP1-FD-10	Barium	0.026	NA	0.026	U	BEH
WAN-WGWC-30	Barium	0.026	NA	0.026	U	BEH
WAN-WGWC-31D	Barium	0.00062	J	0.010	U	BEH
WAN-WGWC-33	Cobalt	0.00046	J	0.0050	U	BEH
WAN-WGWC-33	Barium	0.0038	J	0.010	U	BEH
WAN-WGWC-35S	Cobalt	0.0024	J	0.0050	U	BEH

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
WAN-WGWC-35S	Barium	0.013	NA	0.013	U	BEH
WAN-WGWC-36S	Cobalt	0.026	NA	0.026	J+	BEH
WAN-WGWC-36S	Barium	0.086	NA	0.086	J+	BEH
WAN-WGWC-38S	Cobalt	0.031	NA	0.031	J+	BEH
WAN-WGWC-38S	Barium	0.11	NA	0.11	J+	BEH
WAN-WGWC-39	Cobalt	0.0088	NA	0.0088	J+	BEH
WAN-WGWC-39	Barium	0.053	NA	0.053	J+	BEH

mg/L-milligrams per liter
NA-not applicable
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

1.8 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision (RPD $\leq$30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-40 and WAN-WGWC-30, respectively, with the following exceptions.

705-49212-1: Boron was not detected in field duplicate sample WAN-AP1-FD-09 and detected at an estimated concentration greater than the MDL and less than the RL in parent sample WAN-WGWC-40, resulting in a noncalculable RPD result. Since the absolute difference between the results was less than the RL, no qualifications were applied to the data.

705-49212-1: The lead RPD for field duplicate pair WAN-AP1-FD-09/WAN-WGWC-40 was greater than 30%. Therefore, the lead concentrations in this field duplicate pair were J qualified as estimated

705-49432-1: Selenium was detected in the field duplicate sample WAN-AP1-FD-10 at a concentration greater than the MDL and less than the RL and not detected in the parent sample WAN-WGWC-30, resulting in a noncalculable RPD result. Since the absolute difference between the results was less than the RL, no qualifications were applied to the data.

Sample	Analyte	Laboratory Result (mg/l)	Laboratory Flag	RPD	Validation Result (mg/l)	Validation Qualifier	DQM Reason Code
WAN-AP1-FD-09	Lead	0.0022	NA	75	0.0022	J	RPDF1
WAN-WGWC-40	Lead	0.0010	NA		0.001	J	RPDF1

mg/L-milligrams per liter
NA-not applicable

1.9 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were not reported.

1.10 Electronic Data Deliverable (EDD) Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

2.0 MERCURY

The samples were analyzed for mercury per US EPA Method 7470A.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

2.1 Overall Assessment

The mercury data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the samples submitted for this analysis, for this data package is 100%.

2.2 Holding Times

The holding time for the mercury analysis of a soil sample is 28 days from sample collection to analysis. The holding time was met for the sample analyses.

2.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Mercury was not detected in the method blanks at or above the MDL.

2.4 Matrix Spike/Matrix Spike Duplicate

Sample set specific MS/MSDs were not reported. However, batch MS/MSD pairs were reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

2.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

2.6 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set. Mercury was not detected in the field blanks at or above the MDL.

2.7 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set. Mercury was not detected in the equipment blanks at or above the MDL.

2.8 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision (RPD $\leq$30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-40 and WAN-WGWC-30, respectively.

2.9 Sensitivity

The samples were reported to the MDL. Elevated non-detect results were not reported.

2.10 Electronic Data Deliverable Review

Results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20%. No discrepancies were identified between the level II report and the EDD.

3.0 WET CHEMISTRY

The samples were analyzed for anions by US EPA Method 300.0 and TDS by SM 2540C.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable or not applicable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

✓ Overall Assessment

✓ Electronic Data Deliverables Review

3.1 Overall Assessment

The wet chemistry data reported in this data package are considered to be usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on the samples submitted for this analysis, for this data package is 100%.

3.2 Holding Times

The holding times for the wet chemistry parameters are listed below.

Analyte	Method	Holding Time
Anions	US EPA Method 300	28 days from collection to analysis
TDS	SM 2540C	7 days from collection to analysis

The holding times were met for the sample analyses.

3.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The wet chemistry parameters were not detected in the method blanks at or above the MDLs.

3.4 Matrix Spike/Matrix Spike Duplicate

MS/MSDs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples).

Three sample set specific MS/MSD pairs were reported for anions using samples WAN-WGWC-31S, WAN-AP1-EB-09, and WAN-WGWC-39. The recovery and RPD results were within the laboratory specified acceptance criteria.

Batch MS/MSD pairs were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

3.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). The recovery results were within the laboratory specified acceptance criteria.

3.6 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set. The wet chemistry parameters were not detected in the field blanks at or above the MDLs, with the following exceptions.

705-49432-1: Fluoride (0.13 mg/L) was detected in field blank, WAN-AP1-FB-16, at an estimated concentration greater than the MDL and less than the RL. Therefore, the estimated concentrations of fluoride were U qualified as not detected above the RL and the detected concentrations greater than the RL and less than five times the blank contamination were J+ qualified as estimated with a high bias. No qualifications were applied to data in the associated samples that were either non-detect or detected at concentrations greater than five times the blank contamination.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
WAN-AP1-EB-10	Fluoride	0.11	J	0.20	U	BFH
WAN-AP1-FD-10	Fluoride	0.12	J	0.20	U	BFH
WAN-WGWC-30	Fluoride	0.12	J	0.20	U	BFH

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
WAN-WGWC-35D	Fluoride	0.28	NA	0.28	J+	BFH
WAN-WGWC-35S	Fluoride	0.34	NA	0.34	J+	BFH
WAN-WGWC-36S	Fluoride	0.26	NA	0.26	J+	BFH
WAN-WGWC-37S	Fluoride	0.34	NA	0.34	J+	BFH
WAN-WGWC-38S	Fluoride	0.17	J	0.20	U	BFH
WAN-WGWC-39	Fluoride	0.22	NA	0.22	J+	BFH

mg/L-milligrams per liter
NA-not applicable
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

3.7 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set. The wet chemistry parameters were not detected in the equipment blanks at or above the MDLs, with the following exceptions.

705-49432-1: Fluoride (0.11 mg/L) and sulfate (0.79 mg/L) were detected in WAN-AP1-EB-10 at estimated concentrations greater than the MDL and less than the RL. Therefore, the concentrations of sulfate greater than the RL and less than 5 times the blank concentration were J+ qualified as estimated with a high bias and the estimated concentrations were U qualified as not detected above the RL. Since fluoride results were qualified based on associated field blank contamination, no additional qualifications were applied to the data.

Sample ID	Compound	Laboratory Result (mg/L)	Laboratory Flag	Validation Result (mg/L)	Validation Qualifier	DQM Reason Code
WAN-WGWC-30	Sulfate	0.83	J	1.0	U	BEH
WAN-WGWC-35D	Sulfate	1.7	NA	1.7	J+	BEH
WAN-WGWC-35S	Sulfate	3.8	NA	3.8	J+	BEH
WAN-WGWC-37S	Sulfate	3.0	NA	3.0	J+	BEH

mg/L-milligrams per liter
NA-not applicable
J-result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

3.8 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision (RPD <30%) was demonstrated between the field duplicates and the original samples, WAN-WGWC-40 and WAN-WGWC-30, respectively, with the following exceptions.

705-49212-1: The sulfate RPD for field duplicate pair WAN-AP1-FD-09/ WAN-WGWC-40 was greater than 30%. Therefore, the sulfate concentrations in this field duplicate pair were J qualified as estimated.

705-49432-1: Sulfate was detected in the field duplicate sample WAN-AP1-FD-10 at a concentration greater than the MDL and less than the RL and not detected in the parent sample WAN-WGWC-30, resulting in a noncalculable RPD result. Since the absolute difference between the results was less than the RL, no qualifications were applied to the data.

Sample	Analyte	Laboratory Result (mg/l)	Laboratory Flag	RPD	Validation Result (mg/l)	Validation Qualifier	DQM Reason Code
WAN-AP1-FD-09	Sulfate	2.2	NA	44	2.2	J	RPDF1
WAN-WGWC-40	Sulfate	1.4	NA		1.4	J	RPDF1

mg/L-milligrams per liter
NA-not applicable

3.9 Laboratory Duplicate

Batch laboratory duplicates were reported for TDS. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

3.10 Sensitivity

The samples were reported to the MDLs. Elevated non-detect results were reported due to the dilutions analyzed.

3.11 Electronic Data Deliverable Review

The results and sample IDs in the EDD were reviewed against the information provided by the associated level II report at a minimum of 20% as part of the data validation process. No discrepancies were identified between the level II report and the EDD.

4.0 RADIOCHEMISTRY

The samples were analyzed for radium-226 by US EPA Method 9315, radium-228 by US EPA Method 9320, and total radium by calculation.

The areas of data review are listed below. A leading check mark (✓) indicates an area of review in which the data were acceptable. A preceding crossed circle (⊗) signifies areas where issues were raised during the course of the validation review and should be considered to determine any impact on data quality and usability.

⊗ Overall Assessment
✓ Holding Times

4.1 Overall Assessment

4.1.1 Completeness

The radium-226 and radium-228 data reported in this data set are considered usable for supporting project objectives. The results are considered valid; the analytical completeness, defined as the ratio of the number of valid analytical results (valid analytical results include values qualified as estimated) to the total number of analytical results requested on samples submitted for this analysis, for this data set is 100%.

4.1.2 Analysis Anomaly

705-49212-2 and 705-49432-2: Total radium in samples WAN-AP1-FB-15 and WAN-WGWC-36S was detected at concentrations greater than the associated minimum detectable concentration (MDC) for the calculated combined radium-226 and radium-228 results. Since radium-226 and radium-228 were not detected above the associated MDCs, and based on professional and technical judgment, the total radium concentrations in samples WAN-AP1-FB-15 and WAN-WGWC-36S were U qualified as not detected.

705-49432-2: Total radium in sample WAN-AP1-FD-10 was not detected at a concentration greater than the MDC for the calculated combined radium-226 and radium-228. Since radium-226 was detected at a concentration greater than the MDC, and based on professional and technical judgement, the U flag, indicating that the result is less than the sample detection limit, was removed from the total radium concentration in sample WAN-AP1-FD-10.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-AP1-FB-15	Combined Radium 226 + 228	0.770	NA	0.770	U	RO1

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	Reason Code
WAN-WGWC-36S	Combined Radium 226 + 228	0.895	NA	0.895	U	RO1
WAN-AP1-FD-10	Combined Radium 226 + 228	0.663	U	0.663	NA	RO1

pCi/L-picocuries per liter
U-not detected at or above the MDC
NA-not applicable

4.2 Holding Times

The holding times for the radium-226 and radium-228 analyses of a water sample are 180 days from sample collection to analysis. The holding times were met for the sample analyses.

4.3 Method Blank

Method blanks were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). Radium-226 and radium-228 were not detected in the method blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

705-49212-2: Radium-226 (0.3377 pCi/L) was detected in the method blank in batch 746142 at a concentration greater than the total propagated uncertainty (TPU). Since radium-226 was not detected in the associated sample, WAN-AP1-EB-09, no qualifications were applied to the data.

705-49212-2: Radium-228 (0.3717 pCi/L) was detected in the method blank in batch 746141 at a concentration greater than the TPU. Therefore, the radium-228 concentration with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated sample, WAN-AP1-FD-09, was J qualified as estimated. In addition, the combined radium 226 + 228 concentration for sample WAN-AP1-FD-09 was J qualified as estimated.

705-49432-2: Radium-228 (0.4424 pCi/L) was detected in the method blank in batch 746737 at a concentration greater than the TPU. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-226 in the associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in the associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration in sample WAN-WGWC-31D was UJ qualified as not statistically distinguishable from the blank and the combined radium 226 + 228 concentration in sample WAN-WGWC-30 was J qualified as estimated.

705-49432-2: Radium-228 (0.7019 pCi/L) was detected in the method blank in batch 746922 at a concentration greater than the MDC. Therefore, the radium-228 concentration with a mean difference less than 2 in the associated sample, WAN-WGWC-39, was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for sample WAN-WGWC-39 was J qualified as estimated.

705-49432-2: Radium-228 (0.5203 pCi/L) was detected in the method blank in batch 747095 at a concentration greater than the TPU. Therefore, the radium-228 concentrations with a mean difference less than 2 in the associated sample, WAN-AP1-FB-16, was UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentration for sample WAN-AP1-FB-16 was UJ qualified as not statistically distinguishable from the blank.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	DQM Reason Code
WAN-AP1-FD-09	Radium-228	1.96	NA	1.96	J	BL
WAN-AP1-FD-09	Combined Radium 226 + 228	2.82	NA	2.82	J	BL

NA-not applicable
G-Laboratory flag indicating that the sample MDC is greater than the requested RL.

4.4 Matrix Spike/Matrix Spike Duplicate

MS/MSD pairs were not reported with the sample set. However, batch MS/MSD pairs were reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

4.5 Laboratory Control Sample

LCSs were analyzed at the proper frequency for the number and types of samples analyzed (one per batch of 20 samples). In addition, LCS/LCSD pairs were reported when insufficient sample volume was available to perform a sample duplicate or MS/MSD analyses. The recovery and replicate error ratio (RER) [2 sigma (2σ)] results were within the laboratory specified acceptance criteria.

4.6 Laboratory Duplicate

Two sample set specific laboratory duplicates were reported for radium-226 and radium-228, both using sample WAN-AP1-FB-16. The RER [2 sigma (2σ)] results were within the laboratory specified acceptance criteria

Batch laboratory duplicates were also reported with the sample set. Since these were batch QC, the results do not affect the samples in this data set and qualifications were not applied to the data.

4.7 Tracers and Carriers

Carriers were reported for the radium-226 and radium-228 analyses, and a tracer was reported for the radium-228 analyses. The recovery results were within the laboratory specified acceptance criteria.

4.8 Field Blank

Two field blanks, WAN-AP1-FB-15 and WAN-AP1-FB-16, were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the field blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

705-49212-2: Radium-228 (0.691 pCi/L) was detected in WAN-AP1-FB-15 at a concentration greater than the TPU. Therefore, the radium-228 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-228 in the associated samples were J qualified as estimated and the radium-228 concentrations with a mean difference less than 2 in associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-32, WAN-WGWC-37D, WAN-WGWC-40, WAN-WGWC-42, and WAN-AP1-FD-09 were J qualified as estimated.

705-49432-2: Radium-226 (0.189 pCi/L) was detected in WAN-AP1-FB-16 at a concentration greater than the TPU. Therefore, the radium-226 concentrations with a mean difference greater than 2 and a concentration less than ten times the blank concentration for radium-226 in the

associated samples were J qualified as estimated and the radium concentrations with a mean difference less than 2 in associated samples were UJ qualified as not statistically distinguishable from the blank. In addition, the combined radium 226 + 228 concentrations for samples WAN-WGWC-35D, WAN-WGWC-30, and WAN-WGWC-39 were J qualified as estimated, and the combined radium 226 + 228 concentration for sample WAN-AP1-FD-10 was UJ qualified as not statistically distinguishable from the blank.

705-49432-2: Radium-228 (0.912 pCi/L) was detected in WAN-AP1-FB-16 at a concentration greater than the MDC. Since the radium-228 concentration in WAN-AP1-FB-16 previously qualified due to method blank contamination, no additional qualifications were applied to the data.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifier	DQM Reason Code

pCi/L-picocuries per liter
G-sample MDC is greater than the requested RL
U-not detected at or above the MDC
NA-not applicable

4.9 Equipment Blank

Two equipment blanks, WAN-AP1-EB-09 and WAN-AP1-EB-10, were collected with the sample set and analyzed for radium-226 and radium-228. Radium-226 and radium-228 were not detected in the equipment blanks at or above the measured 2σ uncertainty or the MDC, with the following exceptions.

705-49212-2: Radium-228 (0.683 pCi/L) was detected in WAN-AP1-EB-09 at a concentration greater than the TPU. Since the radium-228 concentrations in the associated samples were previously qualified due to field blank contamination, no additional qualifications were applied to the data.

705-49432-2: Radium-228 (0.660 pCi/L) was detected in WAN-AP1-EB-10 at a concentration greater than the TPU. Since radium-228 was also detected in the associate method blank in batch 746737 at a concentration greater than the TPU, and based on professional and technical judgement, no additional qualifications were applied to the data.

4.10 Field Duplicate

Two field duplicate samples, WAN-AP1-FD-09 and WAN-AP1-FD-10, were collected with the sample set. Acceptable precision [mean difference (MD) ≤ 3σ, RPD < 20% or difference < RL] was demonstrated between the field duplicates and the original samples, WAN-WGWC-40 and WAN-WGWC-30, respectively.

4.11 Sensitivity

The samples were reported to the MDCs, with the following exceptions.

The sample MDC was greater than the requested RL for samples WAN-AP1-EB-09, WAN-WGWC-40, and WAN-WGWC-31D. No qualifications were applied to the data.

4.12 Final Validation Qualifier Reconciliation

The combined radium 226 + 228 concentrations in samples WAN-WGWC-30 and WAN-AP1-FD-10 had two or more different qualifications due to multiple QC failures.

The combined radium 226 + 228 concentration in sample WAN-WGWC-30 was J qualified for field blank contamination (radium-226) and for method blank contamination (radium-228). However, since the radium-226 and radium-228 concentrations in sample WAN-WGWC-30 were UJ qualified as not statistically distinguishable from the blank due to field blank or method blank

contamination, the final validation qualifier for the combined radium 226 + 228 concentration in sample WAN-WGWC-30 was also UJ qualified.

The combined radium 226 + 228 activity in sample WAN-AP1-FD-10 was indicated as detected by removing the U flag, indicating that the result is less than the sample detection limit, due concentration of radium-226 greater than the MDC. However, since the radium-226 concentration in sample WAN-AP1-FD-10 was UJ qualified as not statistically distinguishable from the blank due to field blank contamination, the final validation qualifier for the combined radium 226 + 228 concentration in sample WAN-AP1-FD-10 was also UJ qualified.

Sample ID	Compound	Laboratory Result (pCi/L)	Laboratory Flag	Validation Result (pCi/L)	Validation Qualifiers	DQM Reason Codes	Final Validation Qualifier

**DATA VALIDATION QUALIFIER DEFINITIONS
AND INTERPRETATION KEY
Assigned by Geosyntec's Data Validation Team**

DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for but was not detected above the reported sample quantitation limit. Upon application of the U qualifier to a reported result, the definition changes to "not detected at or above the reported result."

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

J+ The analyte was positively identified; however, the associated numerical value is likely to be higher than the concentration of the analyte in the sample due to positive bias of associated QC or calibration data or attributable to matrix interference.

J- The analyte was positively identified; however, the associated numerical value is likely to be lower than the concentration of the analyte in the sample due to negative bias of associated QC or calibration data or attributable to matrix interference.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

V Historical undefined qualifier.

Samples

Sample ID:	Description:

Created using VuSitu from In-Situ, Inc.

Low-Flow Test Report:

Test Date / Time: 2/12/2025 10:59:10 AM
Project: Plant Wansley Ash Pond
Operator Name: Taylor Goble

Location Name: WAMW-2 **Well Diameter: 2 in** **Casing Type: PVC** **Screen Length: 10 ft** **Top of Screen: 76.92 ft** **Total Depth: 86.92 ft** **Initial Depth to Water: 16.44 ft**	**Pump Type: Peristaltic Pump** **Tubing Type: Poly** **Tubing Inner Diameter: 0.17 in** **Pump Intake From TOC: 81 ft** **Estimated Total Volume Pumped: 8.75 liter** **Flow Cell Volume: 90 ml** **Final Flow Rate: 350 ml/min** **Final Draw Down: 0.54 ft**	**Instrument Used: Aqua TROLL 400** **Serial Number: 989619**

Test Notes:
Sampled at 1124. Raining 44 degrees.

Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Flow

Low-Flow Test Report:

Test Date / Time: 8/20/2025 9:03:17 AM
Project: Plant Wansley Ash Pond
Operator Name: J. May

Location Name: WGWC-42 **Well Diameter: 2 in** **Casing Type: PVC** **Screen Length: 10 ft** **Top of Screen: 27.85 ft** **Total Depth: 37.85 ft** **Initial Depth to Water: 17.91 ft**	**Pump Type: Peristaltic Pump** **Tubing Type: Poly** **Tubing Inner Diameter: 0.17 in** **Pump Intake From TOC: 32.85 ft** **Estimated Total Volume Pumped: 7.5 liter** **Flow Cell Volume: 130 ml** **Final Flow Rate: 300 ml/min** **Final Draw Down: 28.68 in**	**Instrument Used: Aqua TROLL 500** **Serial Number: 1235093**

Test Notes:
Sample Time: 0928
Overcast, 70s

Low-Flow Readings:

Date Time	Elapsed Time	pH	Temperature	Specific Conductivity	RDO Concentration	Turbidity	ORP	Depth to Water	Flow
		+/- 0.1	+/- 3	+/- 5 %	+/- 10 %	+/- 10	+/- 25	+/- 0.3	
8/20/2025 9:03 AM	00:00	5.092 pH	20.45 °C	48.68 µS/cm	4.721 mg/L	5.470 NTU	206.3 mV	17.91 ft	300.0 ml/min
8/20/2025 9:08 AM	05:00	5.098 pH	19.83 °C	46.30 µS/cm	4.649 mg/L	2.440 NTU	187.5 mV	19.60 ft	300.0 ml/min

Calibration Point 1

pH of Buffer	4.00 pH
pH mV	158.5 mV
Temperature	5.32 °C

Calibration Point 2

pH of Buffer	7.06 pH
pH mV	-12.3 mV
Temperature	6.62 °C

Calibration Point 3

pH of Buffer	10.14 pH
pH mV	-170.2 mV
Temperature	6.25 °C

Slope and Offset 1

Slope	-55.81 mV/pH
Offset	-8.9 mV

Slope and Offset 2

Slope	-51.28 mV/pH
Offset	-9.2 mV

ORP

ORP Solution	ORP Standard
Offset	-19.9 mV
Temperature	5.96 °C

Calibration Report

Instrument	Aqua TROLL 400
Serial Number	989619
Created	2/11/2025

Sensor	**RDO**
Serial Number	1144824
Last Calibrated	2/11/2025

Calibration Details

Slope	1.0139316
Offset	-0.00 mg/L

Calibration point 100%

Concentration	10.23 mg/L
Temperature	12.79 °C

Statistical Analysis Reports

GROUNDWATER STATS CONSULTING

August 29, 2025

Southern Company Services
Attn: Mr. Trey Singleton
3535 Colonnade Parkway
Birmingham, AL 35243

Re: Plant Wansley Ash Pond
February 2025 Statistical Analysis

Dear Mr. Singleton,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the February 2025 Groundwater Detection and Assessment Monitoring Statistical summary for Georgia Power Company's Plant Wansley Ash Pond. The analysis complies with the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10 as well as with the United States Environmental Protection Agency (USEPA) Unified Guidance (2009). The site is in Assessment Monitoring.

Sampling began for Appendix III and IV parameters in 2016 and at least 8 background samples have been collected at each of the groundwater monitoring wells except for those discussed below. The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** WGWA-1, WGWA-2, WGWA-3, WGWA-4, WGWA-5, WGWA-6, WGWA-7, and WGWA-18
- **Downgradient wells:** WGWC-8, WGWC-9, WGWC-10, WGWC-11, WGWC-12, WGWC-13, WGWC-14A, WGWC-15, WGWC-16, WGWC-17, WGWC-19, WGWC-20, WGWC-21, WGWC-22, WGWC-23, WGWC-24, and WGWC-25
- **Assessment wells:** WGWC-27, WGWC-28D, PZ-26D, WAMW-1, and WAMW-2

Note that downgradient wells WGWC-20, WGWC-21, WGWC-22, WGWC-23, WGWC-24, and WGWC-25 were first sampled in March 2021, and data are evaluated for Appendix III and IV constituents. Additionally, upgradient well WGWA-5 was, reportedly, damaged; therefore, this well has not been sampled for Appendix III and IV parameters since the Fall 2024 event. Historical data from this well, however, characterize groundwater upgradient of the facility and will continue to be used in constructing interwell statistical limits.

Assessment wells are evaluated for Appendix IV constituents using confidence intervals. While the USEPA Unified Guidance recommends a minimum of 8 samples, confidence intervals may be constructed when at least 4 samples are available for assessment wells.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Kristina Rayner, Founder and Senior Statistician of Groundwater Stats Consulting. The analysis is prepared according to the recommended statistical methodology provided in the Fall 2017 by Dr. Kirk Cameron, PhD Statistician with MacStat Consulting, primary author of the USEPA Unified Guidance. In 2024, Georgia Power Company completed a data audit and migration of all CCR related groundwater data to the EarthSoft EQuIS Database Management Program (EQuIS). Data were then exported from EQuIS to Groundwater Stats Consulting (GSC) for use in completing this statistical analysis. Georgia Power Company contracted an independent third-party consultant, Environmental Resources Management (ERM), to support the data audit and migration to EQuIS. Based on the results of the audit and statistical analysis results from GSC, EQuIS will now be used by Georgia Power Company and its third-party geologists and engineers for management of data imported by independent third-party laboratories and data exported by Georgia Power Company and its Consultants. The data will be used in preparation of report submittals, modeling, strategic planning, and other purposes appropriate and consistent with EQuIS's data management and reporting tools and capabilities.

The Coal Combustion Residuals (CCR) program consists of the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, box plots are included

for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV well/constituent pairs containing 100% non-detects follows this letter. Data from these wells are plotted on the time series and box plots, but no formal statistics were required.

For all constituents, a substitution of the most recent reporting limit is used for non-detect data. In the case of fluoride, it was noted that varying reporting limits were provided by the laboratory. Therefore, the historical reporting limit of 0.2 mg/L was substituted for all non-detects for fluoride to be consistent with previous analyses.

During the background screening conducted by MacStat Consulting in 2017, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided to demonstrate that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

Statistical Methods – Appendix III Parameters:

Based on the earlier evaluation described above, Appendix III parameters are evaluated using interwell prediction limits combined with a 1-of-2 resample plan for the following constituents: boron, calcium, chloride, fluoride, pH, sulfate, and TDS.

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality.

After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the most recent reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Note that values shown on data pages reflect raw data and any non-detects that have been substituted with one-half of the reporting limit will be shown as "<" the original reporting limit on the data pages.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. While this was not required for this analysis, in some cases, the earlier portion of data record may require deselecting prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Statistical Evaluation of Appendix III Parameters – February 2025

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. No additional values were flagged and a summary of flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February 2025 (Figure D). Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The February 2025 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When resamples confirm the initial exceedance, a statistically significant increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result; therefore, no exceedance is noted and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. A summary table of the background prediction limits and exceedances follows this letter. Exceedances were identified for the following well/constituent pairs:

- Boron: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-21, WGWC-22, WGWC-24, and WGWC-25
- Calcium: WGWC-8, WGWC-20, and WGWC-21
- Chloride: WGWC-8, WGWC-16, WGWC-20, WGWC-21, WGWC-24, and WGWC-25
- Fluoride: WGWC-9 and WGWC-15
- pH (lower limit): WGWC-24
- Sulfate: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-21, WGWC-22, and WGWC-24
- TDS: WGWC-8, WGWC-20, and WGWC-21

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure E). Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site which is an indication of variability in groundwater unrelated to practices at the site. A summary of the Appendix III trend test results follows this letter. Statistically significant trends were noted for the following well/constituent pairs:

Increasing trends:

- Boron: WGWC-8, WGWC-9, and WGWC-20
- Calcium: WGWA-1 (upgradient) and WGWC-8
- Chloride: WGWA-2 (upgradient) and WGWC-8
- Sulfate: WGWA-4 (upgradient) and WGWC-8
- TDS: WGWA-1 (upgradient) and WGWC-8

Decreasing trends:

- Boron: WGWC-16
- Calcium: WGWA-18 (upgradient)
- Chloride: WGWA-5 (upgradient), WGWC-16, and WGWC-24
- Fluoride: WGWA-18 (upgradient), WGWC-9, and WGWC-15
- pH: WGWA-2 and WGWA-18 (both upgradient)
- Sulfate: WGWA-18 (upgradient) and WGWC-16

Statistical Methods – Appendix IV Parameters

Appendix IV parameters are evaluated by statistically comparing the mean or median of each downgradient well/constituent pair against corresponding Groundwater Protection Standards (GWPS). The GWPS may be either regulatory (Maximum Contaminant Limits or CCR rule-specified limits) or site-specific limits that are based on upgradient background groundwater quality. Site-specific background limits are determined using upper tolerance limits, and the comparison of downgradient means or medians to GWPS is performed using confidence intervals. The methods are described below.

Statistical Evaluation of Appendix IV Parameters – February 2025

For Appendix IV parameters, confidence intervals for each downgradient well/constituent were compared against corresponding GWPS. Downgradient and assessment well/constituent pairs containing 100% non-detects do not require analysis. Data from all upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis prior to constructing statistical limits. All previously flagged measurements were confirmed, and an elevated observation early in the record for cobalt at upgradient well WGWA-5 was flagged as it was deemed uncharacteristic of upgradient groundwater quality among neighboring upgradient wells. A complete list of outliers follows this report (Figure C).

Interwell Upper Tolerance Limits

Interwell tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through February 2025 for Appendix IV constituents (Figure F). Parametric tolerance limits are calculated, with a target of 95% confidence and 95% coverage, when data follow a normal or transformed-normal distribution. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were constructed using the highest background measurement. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed using data through February 2025 for each of the Appendix IV constituents in each downgradient well with a minimum of 8 samples and in each assessment well with a minimum of 4 samples (Figure H). These intervals were constructed as either parametric or nonparametric confidence intervals depending on the data distribution and percentage

of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the appropriate order statistics, depending on the sample size, as interval limits, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The achievable confidence level associated with nonparametric confidence intervals is dependent upon the number samples available.

Note that due to a statistically significant increasing trend for lithium at downgradient well WGWC-21 with more recent concentrations reported at or above the GWPS, only the most recent 8 observations were used to construct a confidence interval on more relatively stable data (USEPA Unified Guidance, 2009, Chapter 7). Trend tests using both the full and truncated records follow this report (Figure I).

The confidence intervals were compared to the GWPS established using the rules mentioned above. Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. Summaries and graphical results of the confidence intervals analyses follow this letter. Exceedances were noted for the following well/constituent pairs:

- Beryllium: WGWC-20 and WGWC-24
- Cobalt: WGWC-24
- Lithium: WGWC-19, WGWC-20, WGWC-21, and WGWC-28D

Trend Test Evaluation – Appendix IV

Data at wells with confidence interval exceedances are further evaluated using the Sen's Slope/Mann Kendall trend test at the 95% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure J). Although the trend tests for Assessment monitoring pairs were previously evaluated using 99% confidence, the 95% confidence level more rapidly identifies statistically significant trends. Additionally, the 95% confidence level is recommended in cases with limited sample sizes and, particularly, for new assessment wells. Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability in groundwater quality unrelated to practices at the site. A summary of the Appendix IV

trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing trend:

- Lithium: WGWC-19 and WGWC-21

Decreasing trends:

- Beryllium: WGWC-24
- Cobalt: WGWA-1, WGWA-2, WGWA-5, WGWA-18 (all upgradient), and WGWC-24

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Wansley Ash Pond. If you have any questions or comments, please feel free to contact us.

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
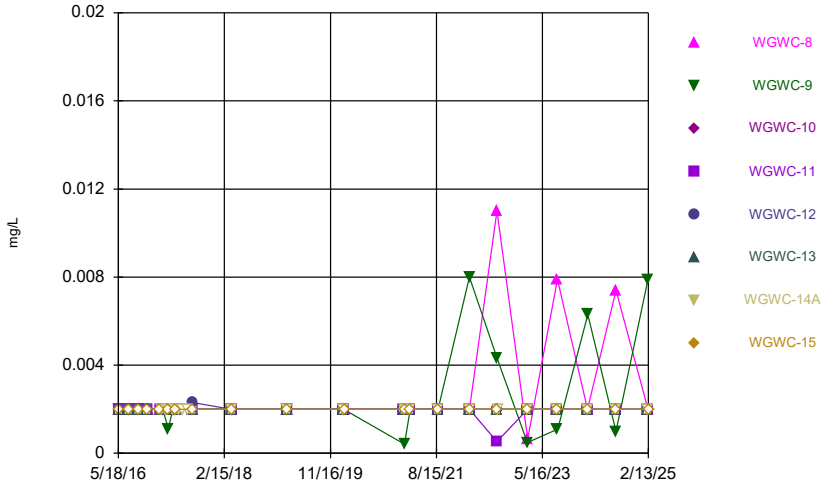
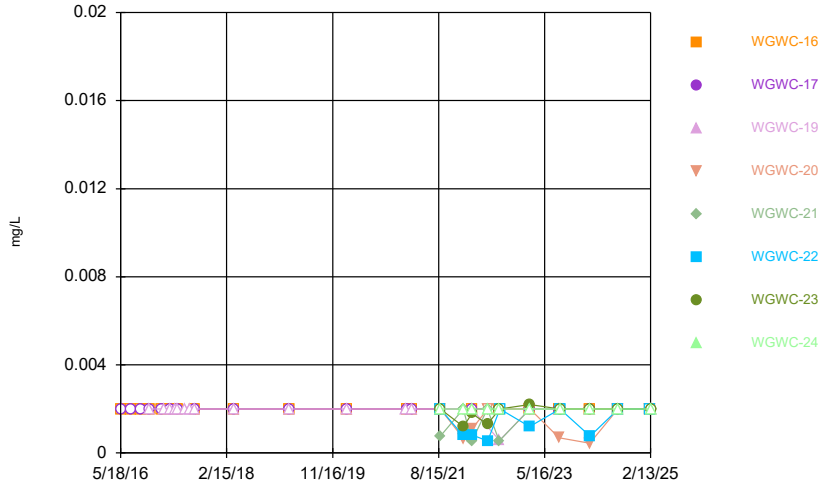
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

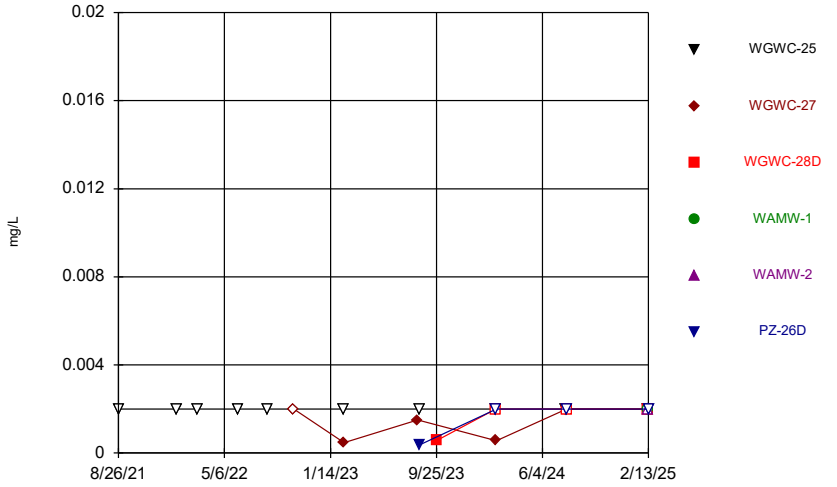
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

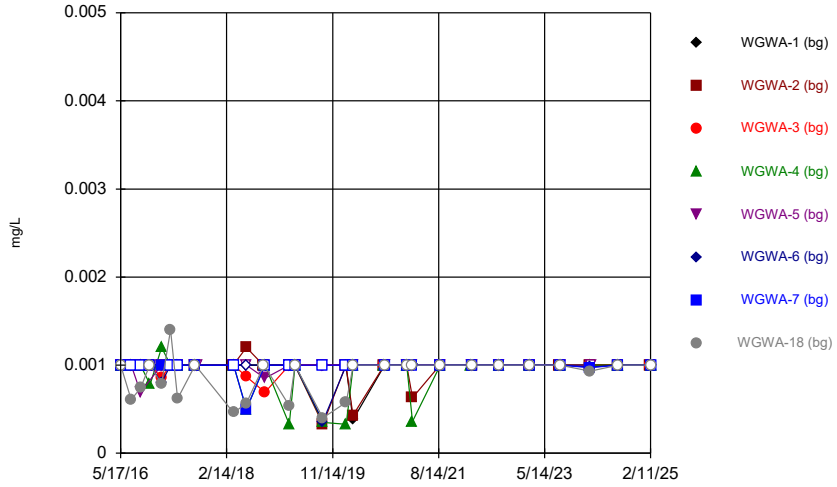
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

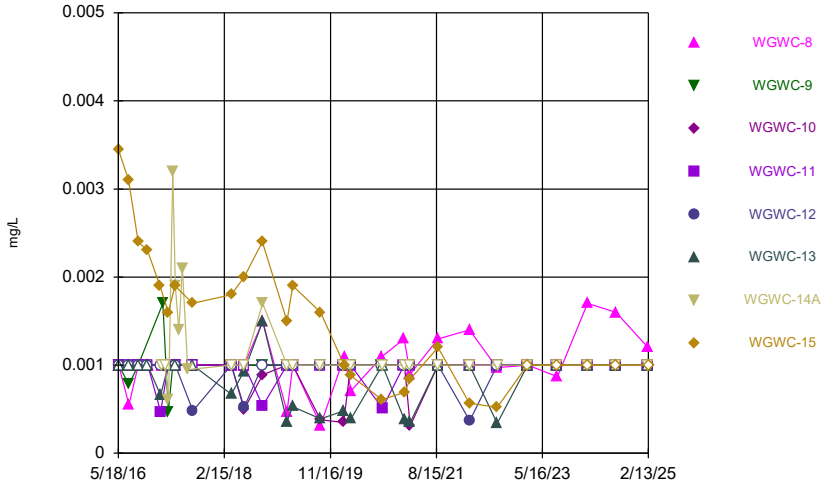
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

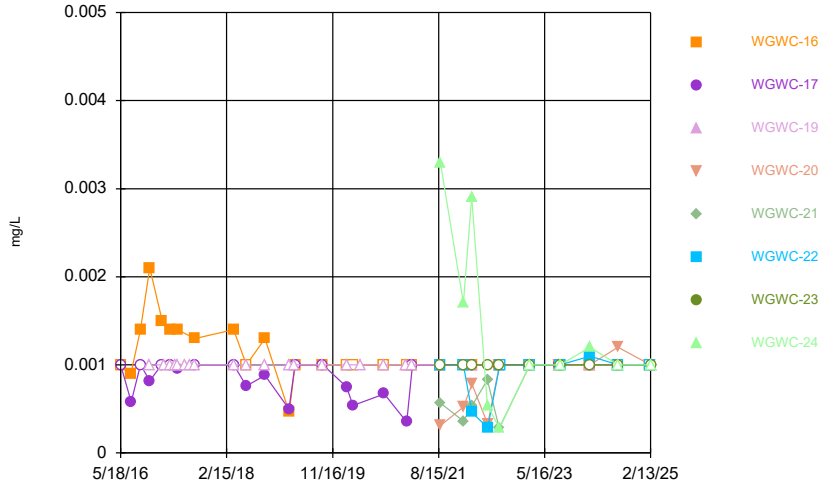
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

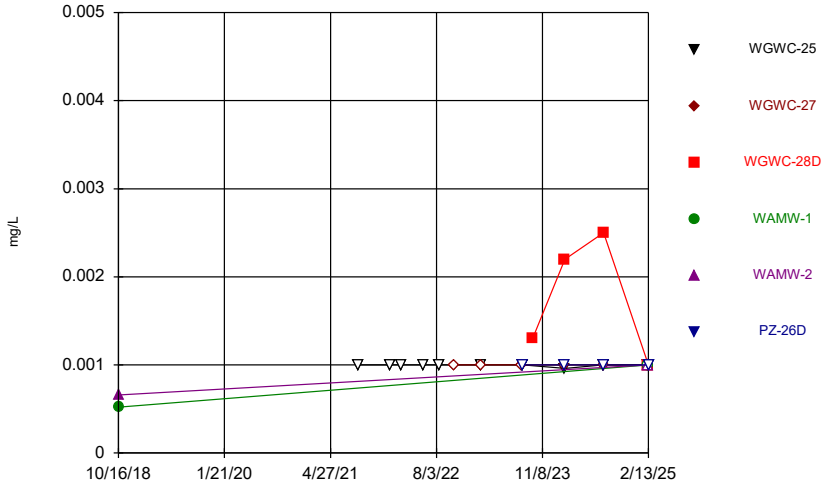
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

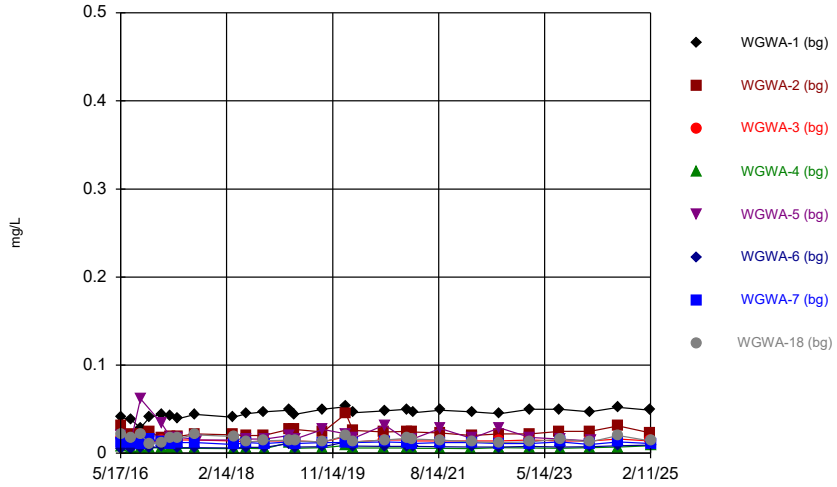
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

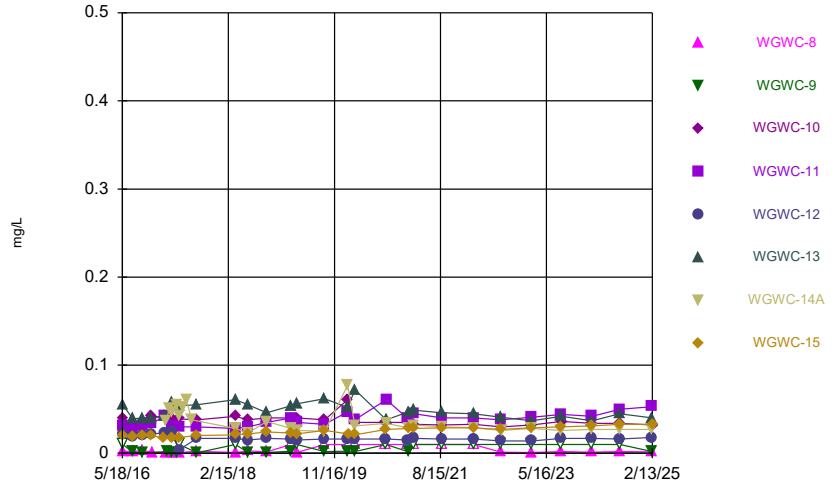


Time Series

Constituent: Arsenic Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series



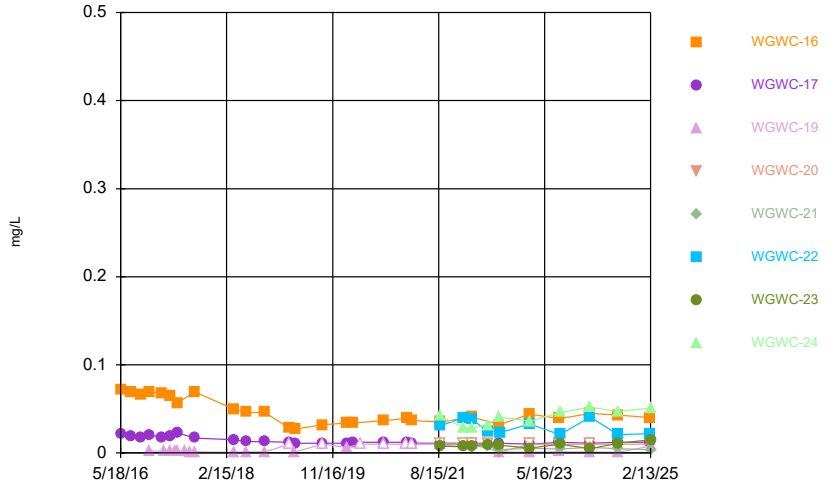
Constituent: Barium Analysis Run 4/11/2025 1:39 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Time Series



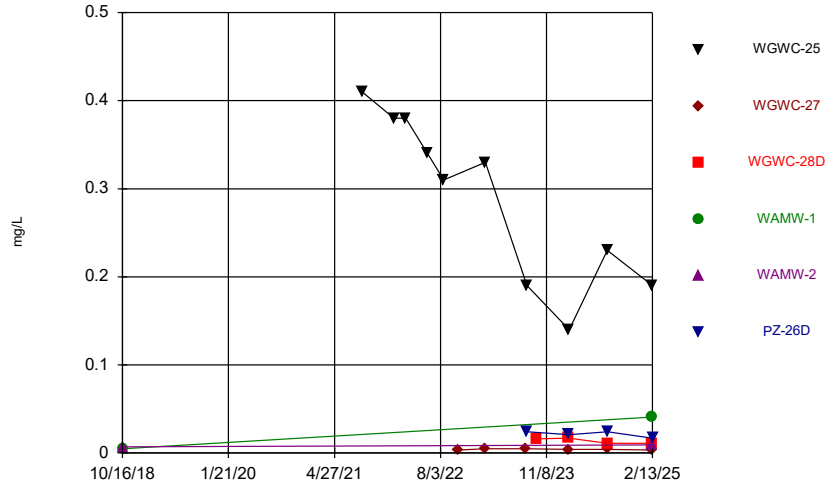
Constituent: Barium Analysis Run 4/11/2025 1:39 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Time Series

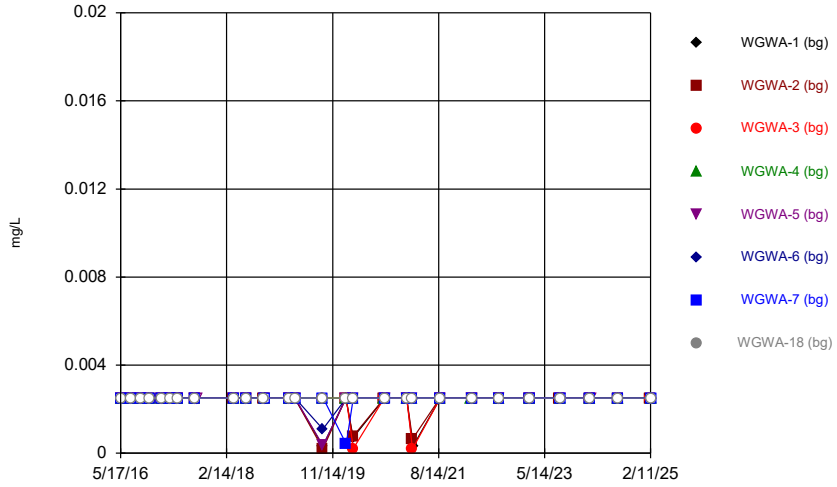


Constituent: Barium Analysis Run 4/11/2025 1:39 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

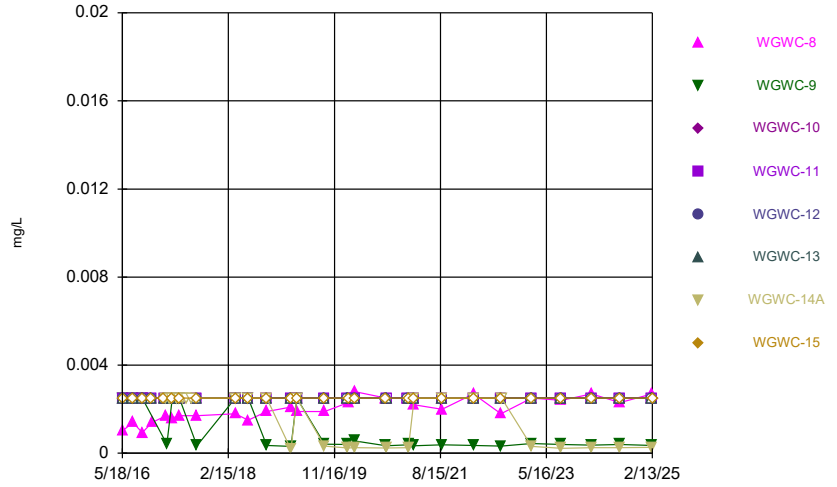
Time Series



Constituent: Barium Analysis Run 4/11/2025 1:39 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

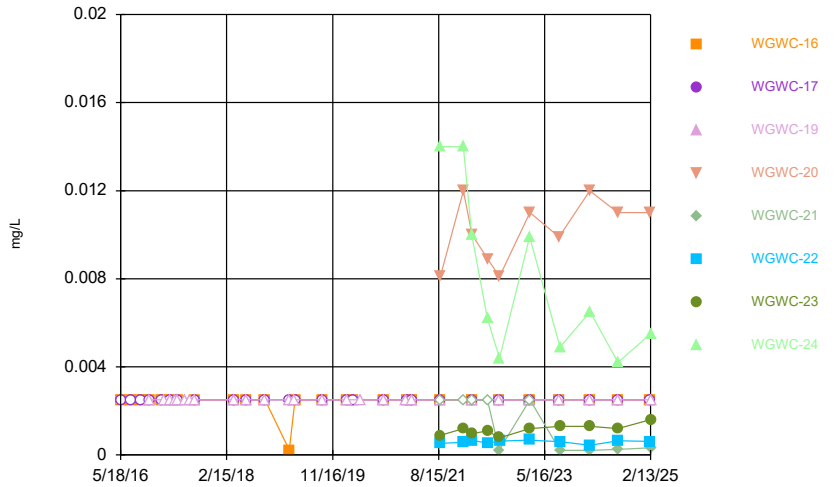
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

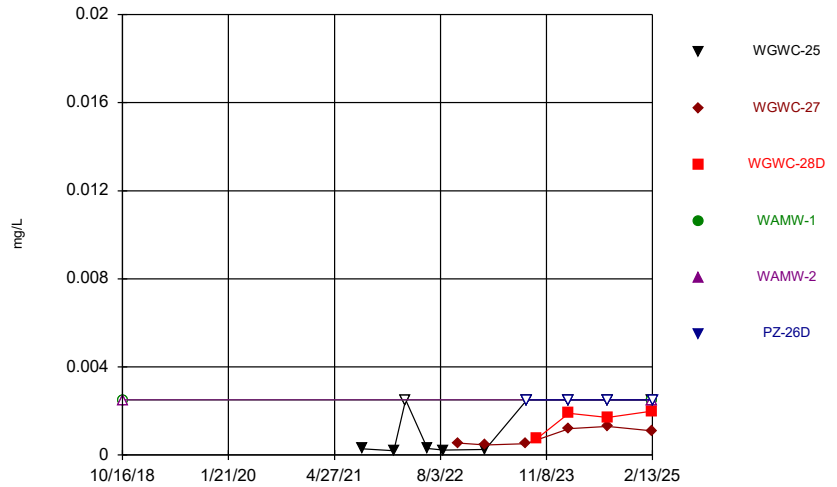
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

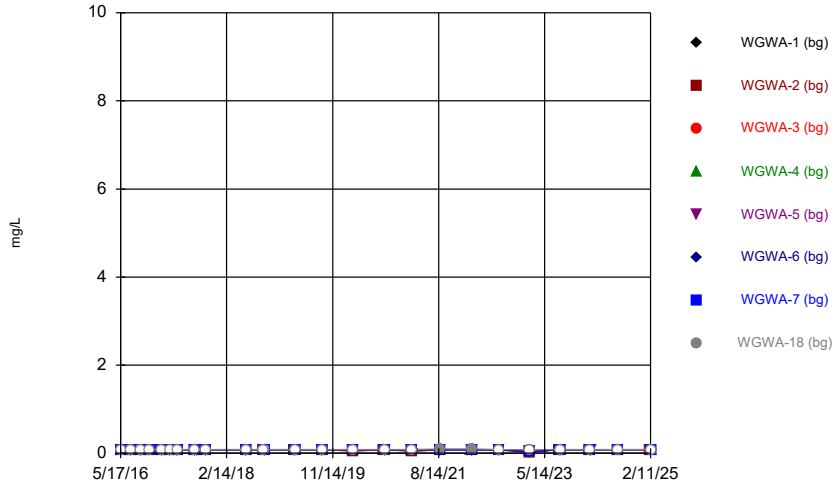
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

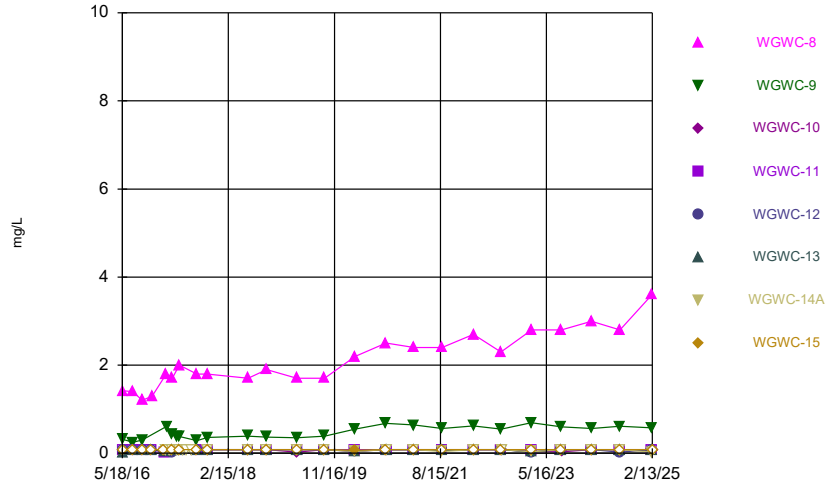
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 4/11/2025 1:39 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

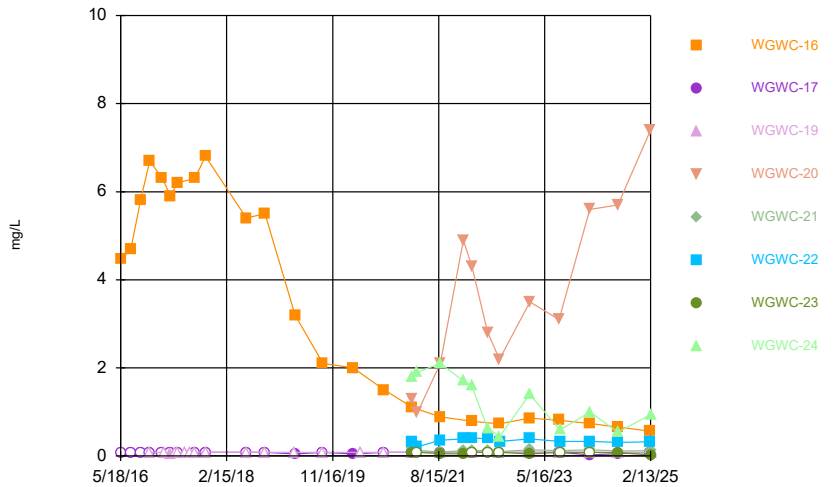
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

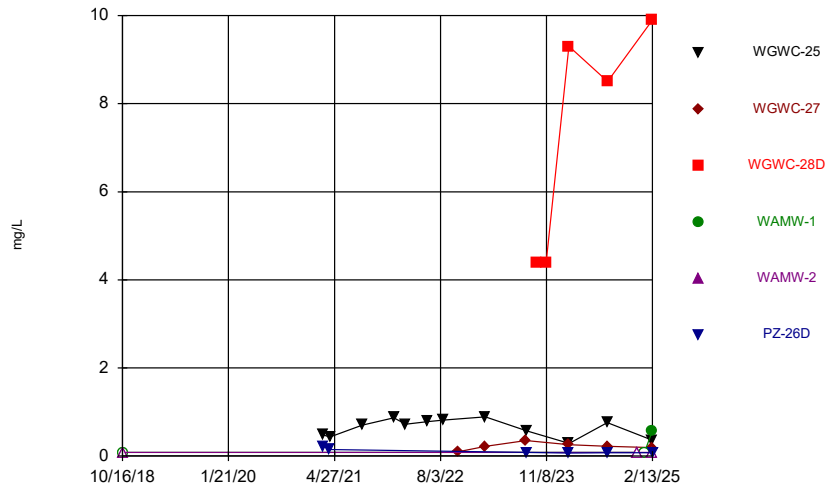
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

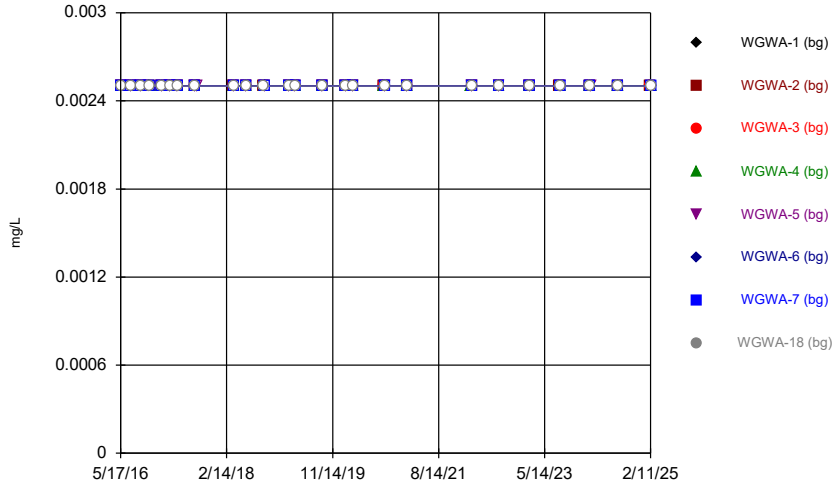
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

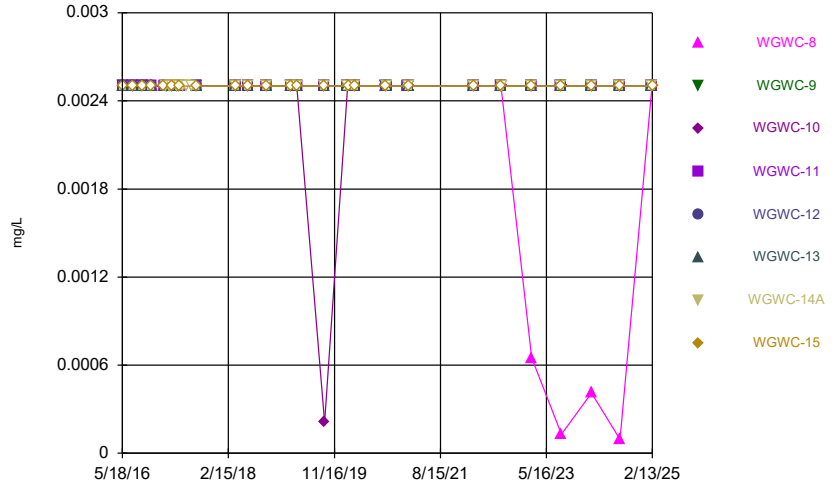
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

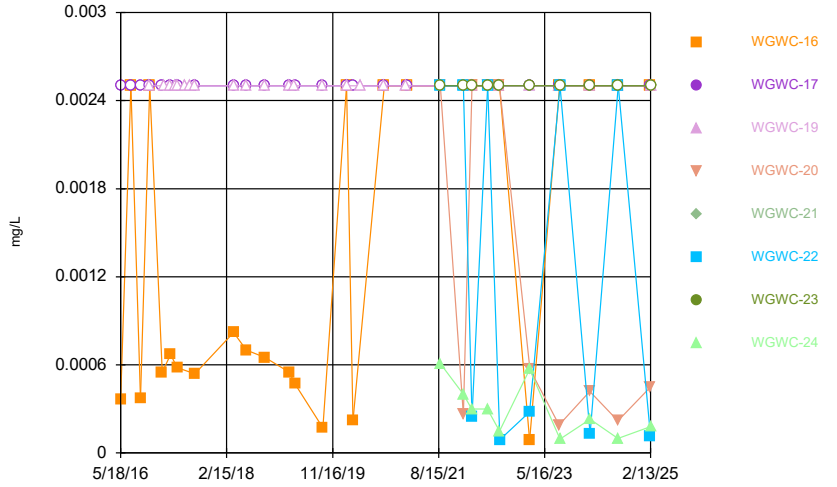
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
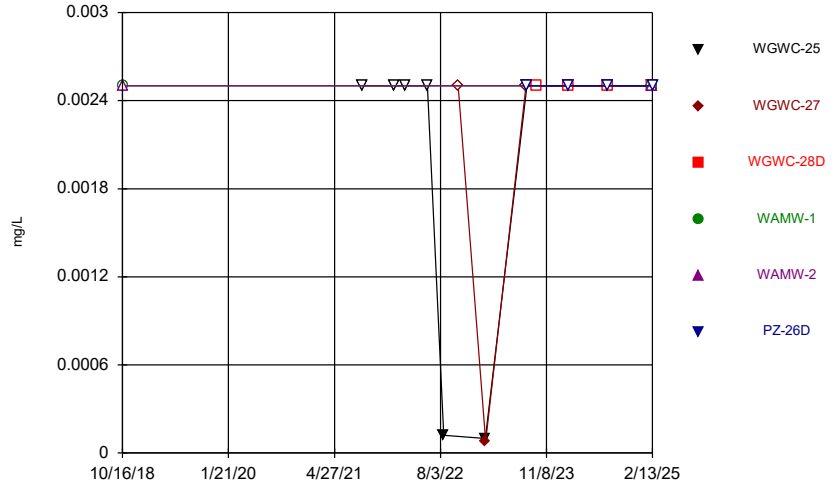
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
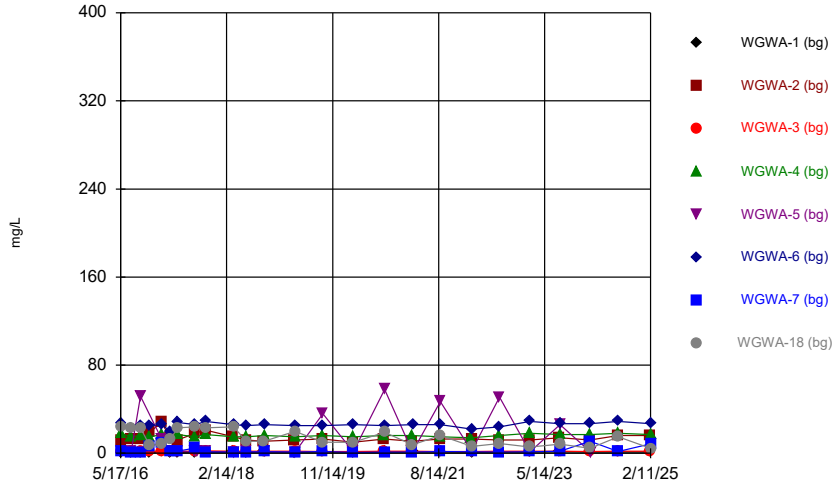
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 4/11/2025 1:40 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 4/11/2025 1:40 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 4/11/2025 1:40 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 4/11/2025 1:40 PM

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Cobalt Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Fluoride Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 4/11/2025 1:40 PM
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Lead Analysis Run 4/11/2025 1:40 PM

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

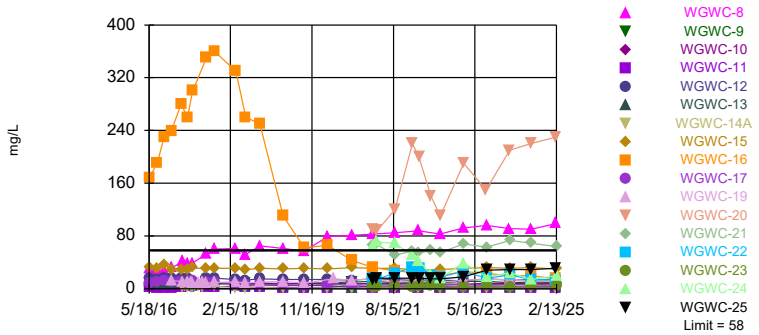
Exceeds Limit: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-21, WGWC-22, WGWC-24, WGWC-25

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 190 background values. 95.26% NDs. Annual per-constituent alpha = 0.00186. Individual comparison alpha = 0.00005474 (1 of 2). Comparing 17 points to limit.



Constituent: Boron Analysis Run 4/11/2025 2:02 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

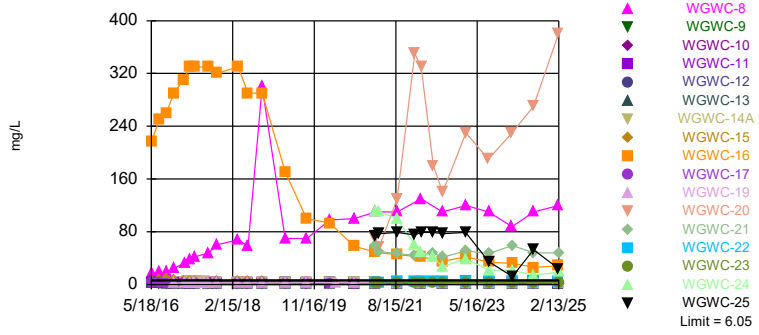
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Exceeds Limit: WGWC-8, WGWC-20, WGWC-21

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 198 background values. Annual per-constituent alpha = 0.001706. Individual comparison alpha = 0.00005021 (1 of 2). Comparing 17 points to limit.



Constituent: Calcium Analysis Run 4/11/2025 2:02 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

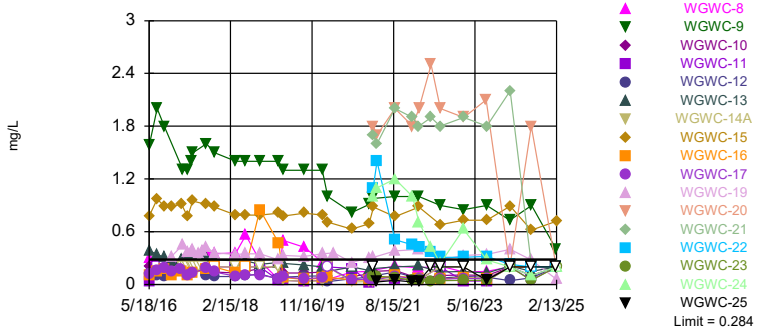
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Exceeds Limit: WGWC-8, WGWC-16, WGWC-20, WGWC-21, WGWC-24, WGWC-25

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 198 background values. Annual per-constituent alpha = 0.001706. Individual comparison alpha = 0.00005021 (1 of 2). Comparing 17 points to limit.



Constituent: Chloride Analysis Run 4/11/2025 2:02 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

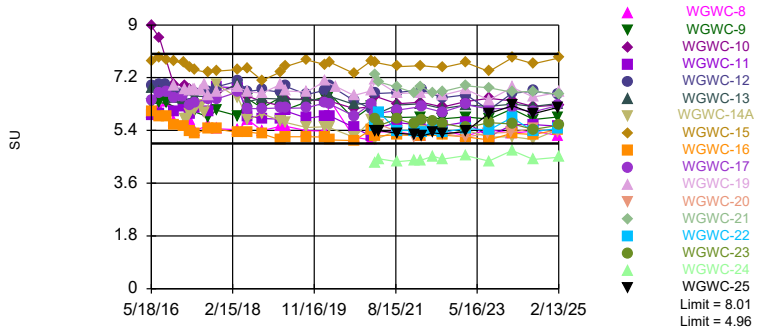
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Exceeds Limit: WGWC-9, WGWC-15

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 222 background values. 47.75% NDs. Annual per-constituent alpha = 0.001667. Individual comparison alpha = 0.00004908 (1 of 2). Comparing 17 points to limit.



Constituent: Fluoride Analysis Run 4/11/2025 2:02 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Exceeds Limits: WGWC-24

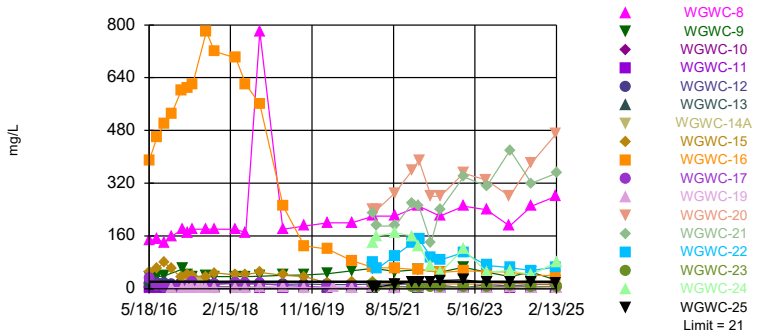
Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 221 background values. Annual per-constituent alpha = 0.003334. Individual comparison alpha = 0.00009815 (1 of 2). Comparing 17 points to limit.

Constituent: pH, Field Analysis Run 4/11/2025 2:02 PM View: Appendix III Interwell

Plant Wansley Client: Southern Company Data: Wansley AP 1



Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Exceeds Limit: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-21, WGWC-22, WGWC-24

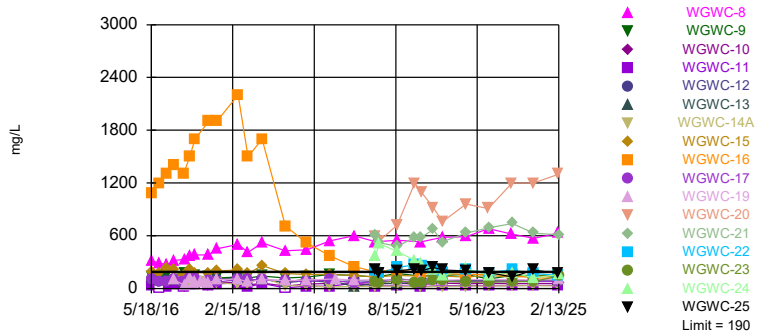
Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 198 background values. 23.74% NDs. Annual per-constituent alpha = 0.001706. Individual comparison alpha = 0.00005021 (1 of 2). Comparing 17 points to limit.

Constituent: Sulfate Analysis Run 4/11/2025 2:02 PM View: Appendix III Interwell

Plant Wansley Client: Southern Company Data: Wansley AP 1



Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

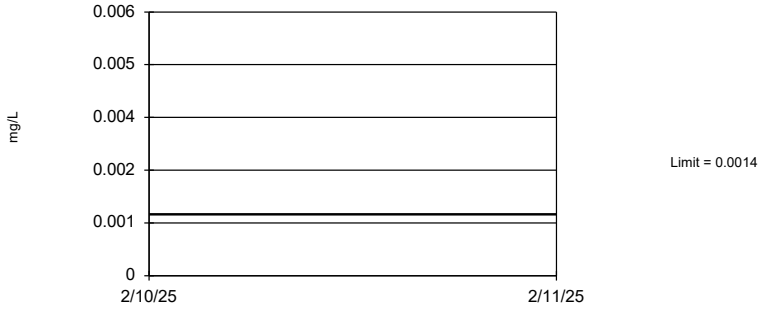
Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 166 background values. 98.19% NDs. 97.07% coverage at alpha=0.01; 98.24% coverage at alpha=0.05; 99.41% coverage at alpha=0.5. Report alpha = 0.0002005.

Constituent: Antimony Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

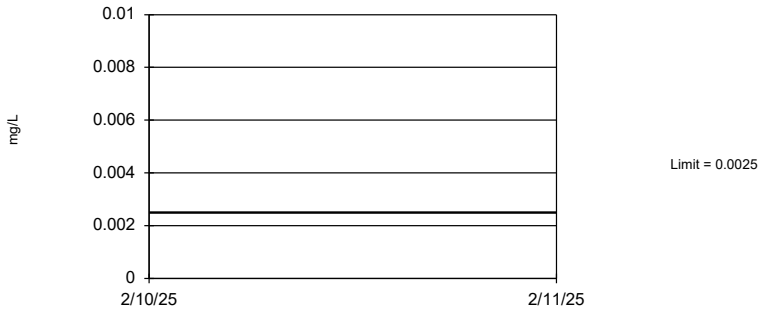
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 214 background values. 83.18% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Arsenic Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



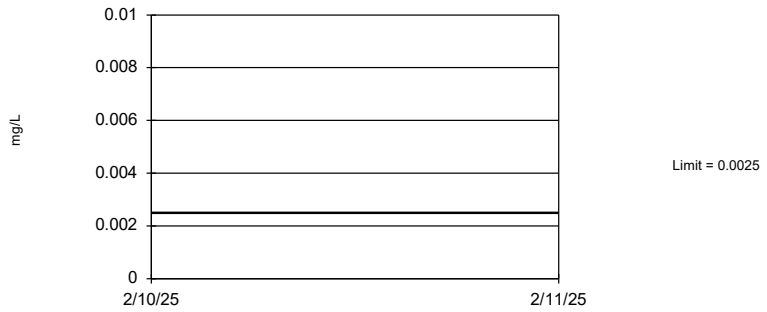
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 214 background values. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Barium Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



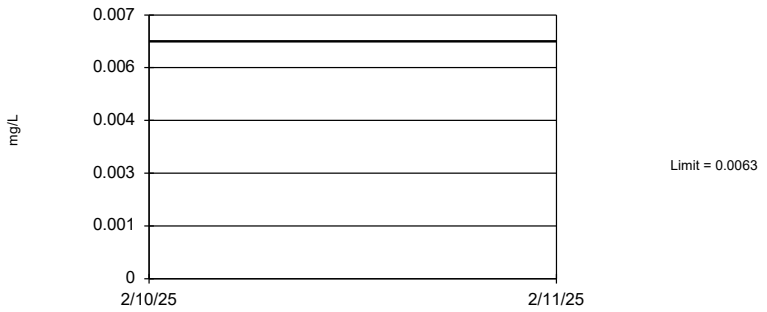
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 214 background values. 94.86% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Beryllium Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



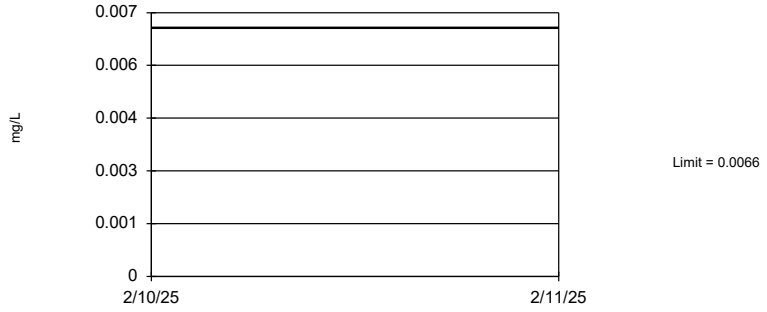
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. All background values were censored; limit is most recent reporting limit. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cadmium Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



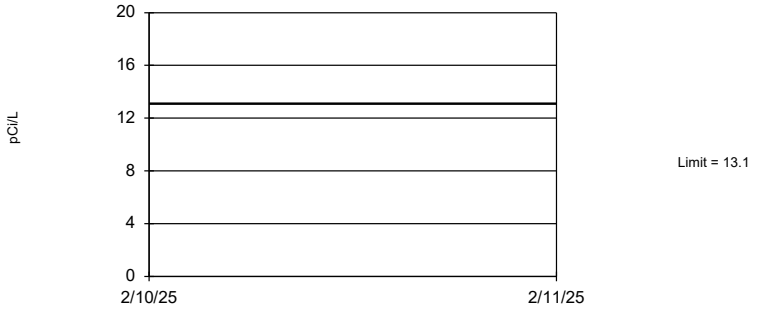
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 213 background values. 94.37% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Chromium Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



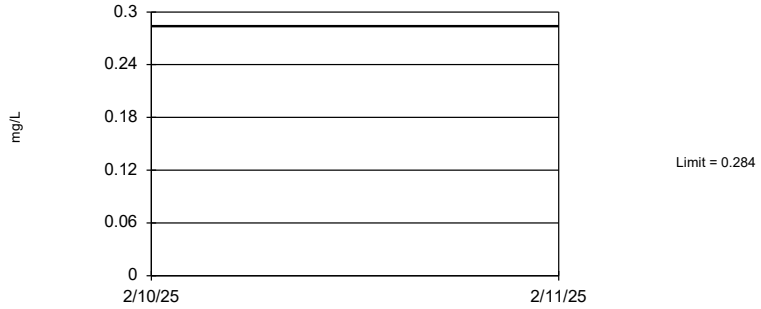
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 212 background values. 46.7% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cobalt Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



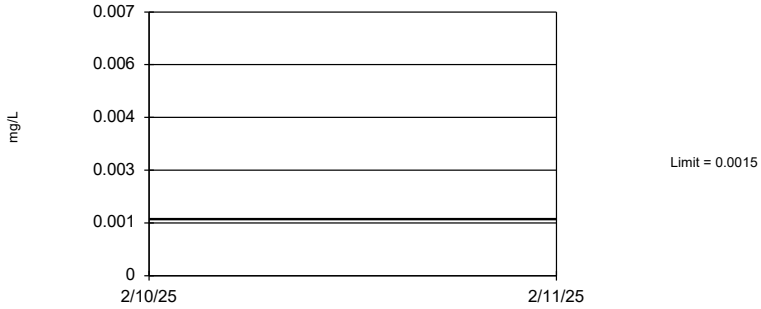
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 212 background values. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



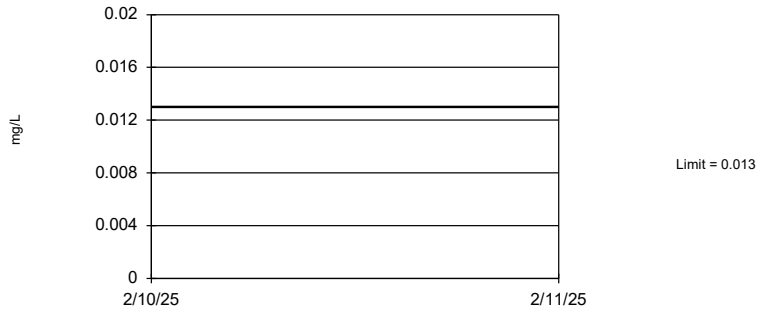
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 222 background values. 47.75% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Fluoride Analysis Run 4/11/2025 2:21 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 198 background values. 89.9% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

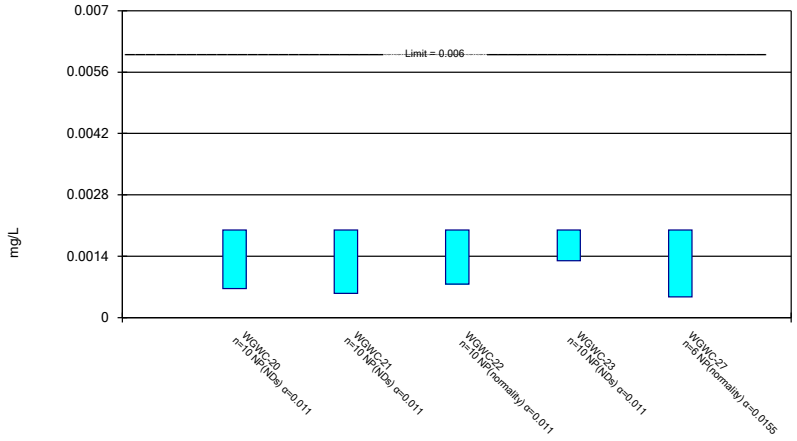
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Antimony Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

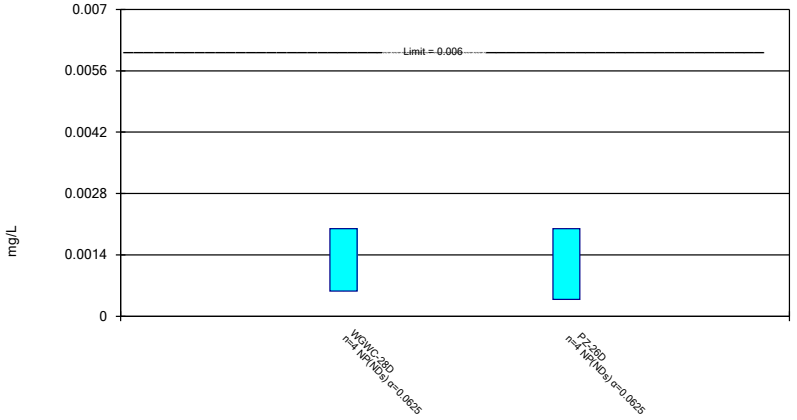
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



Constituent: Antimony Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

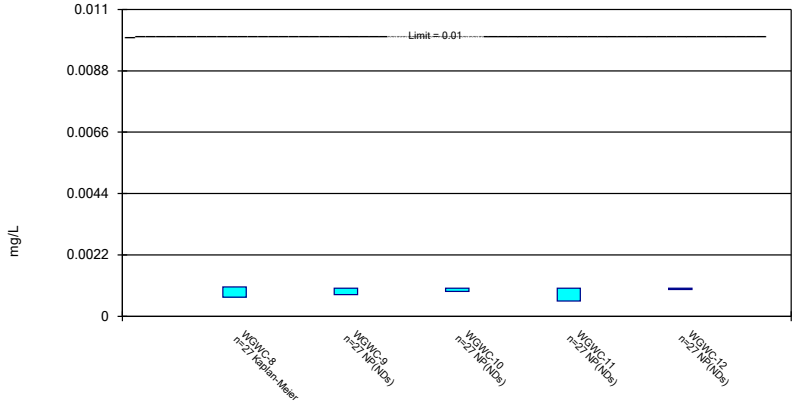
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



Constituent: Antimony Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

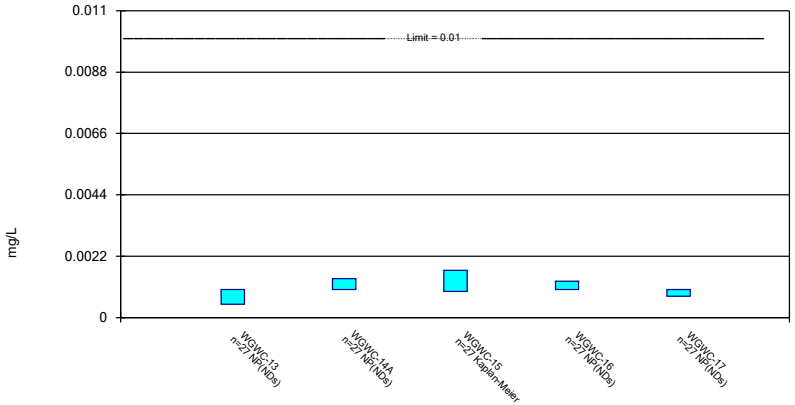
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Arsenic Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

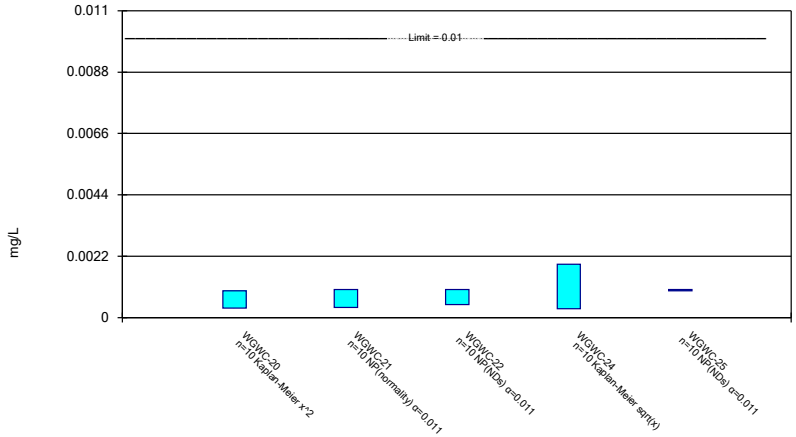
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Arsenic Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

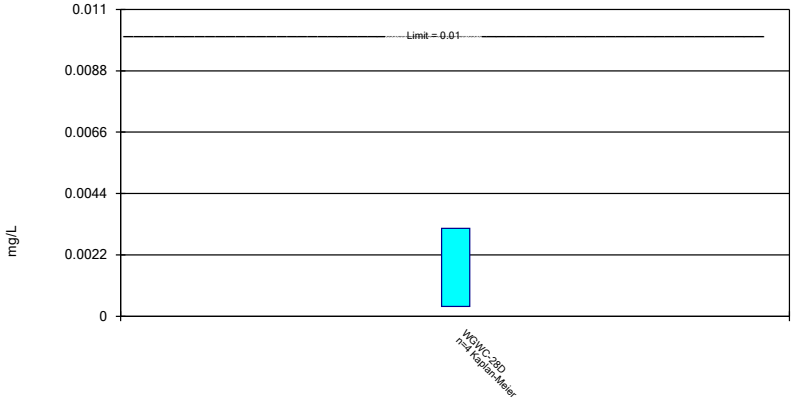
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Arsenic Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

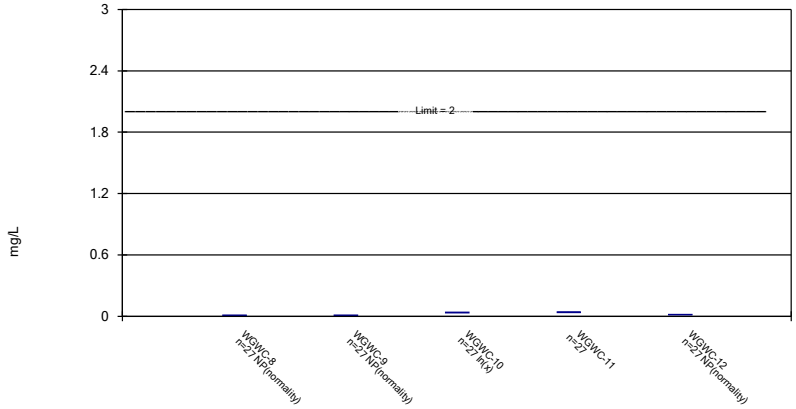
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Arsenic Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

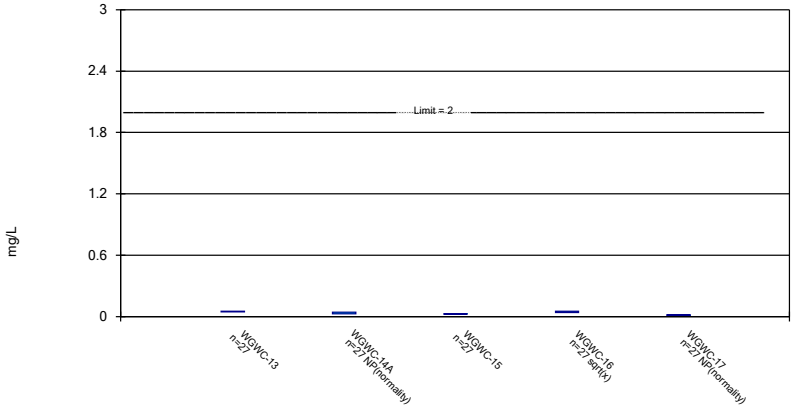
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

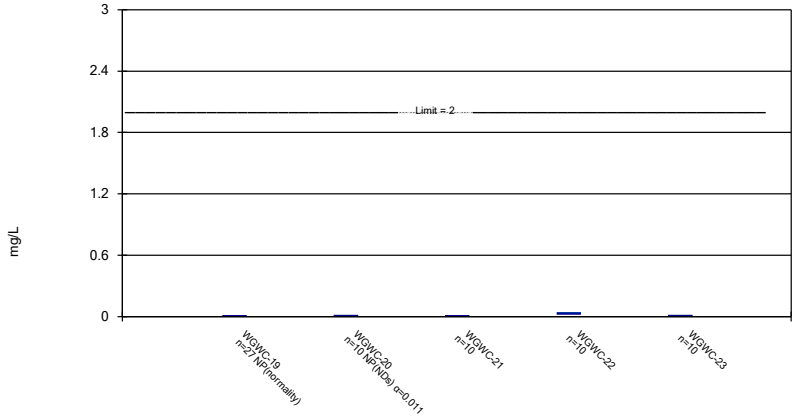
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

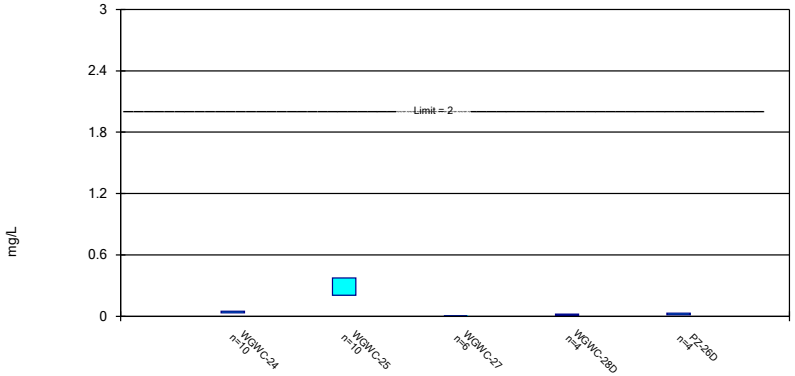
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

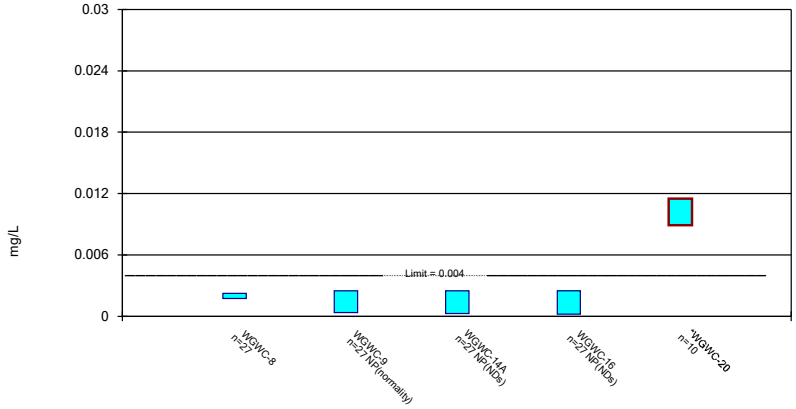
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Barium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

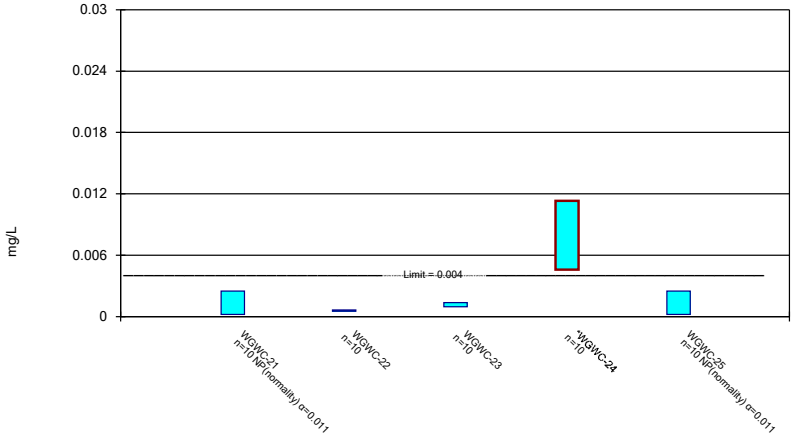
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

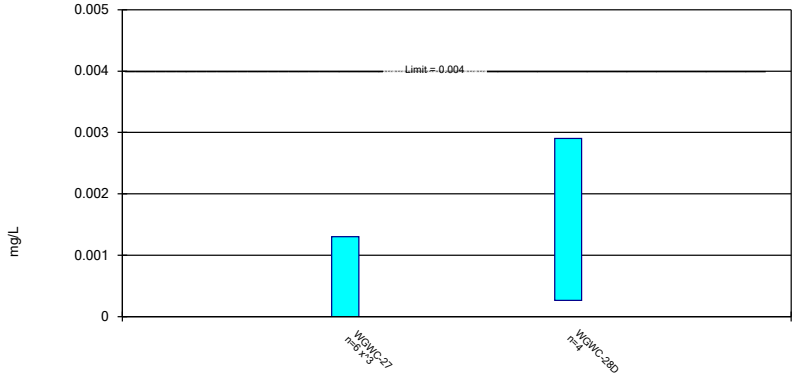
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

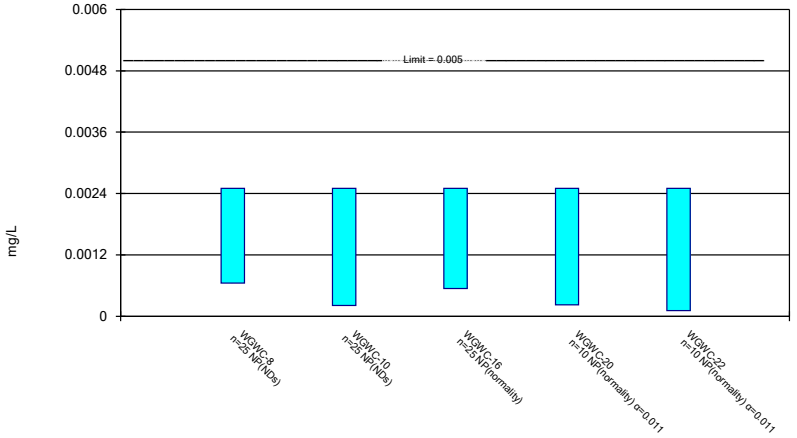
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Beryllium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

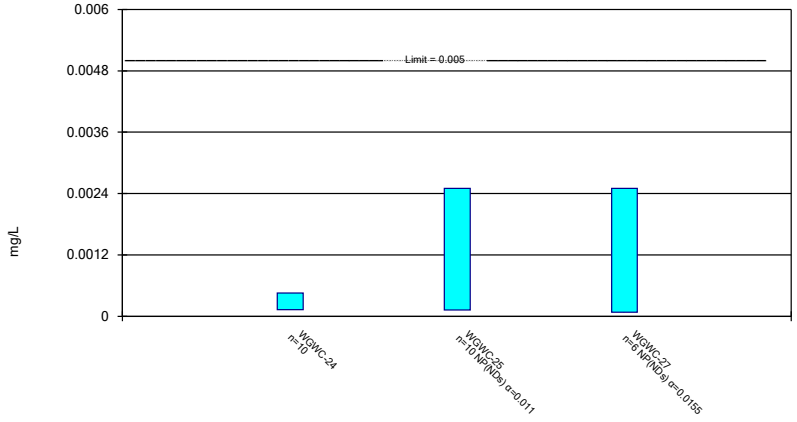
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Cadmium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

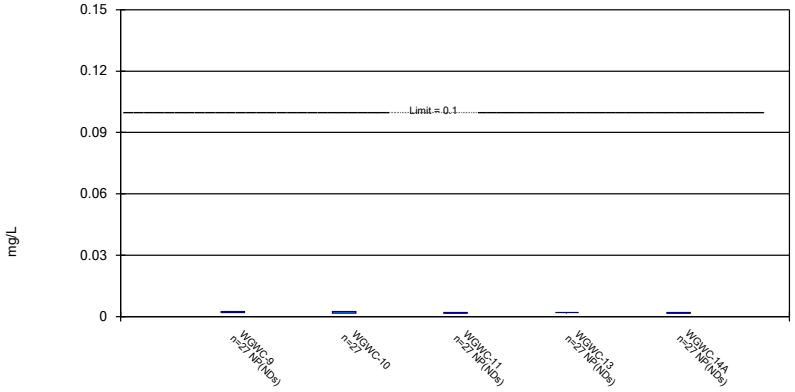
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cadmium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

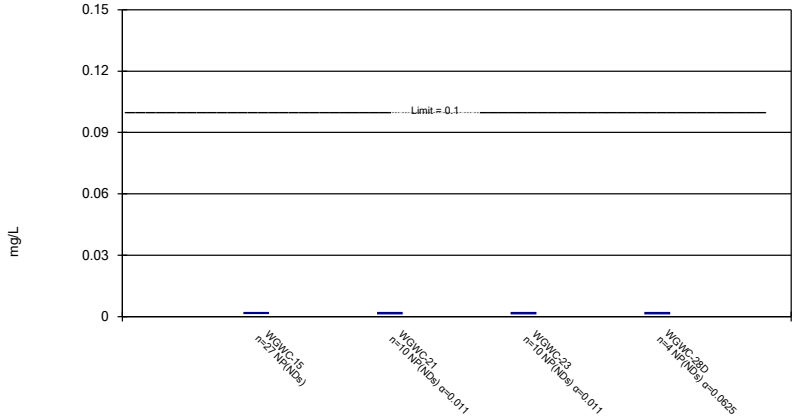
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Chromium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

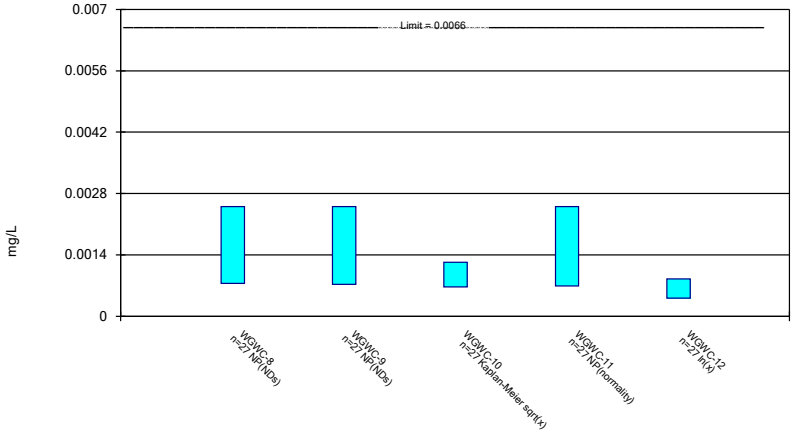
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Chromium Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

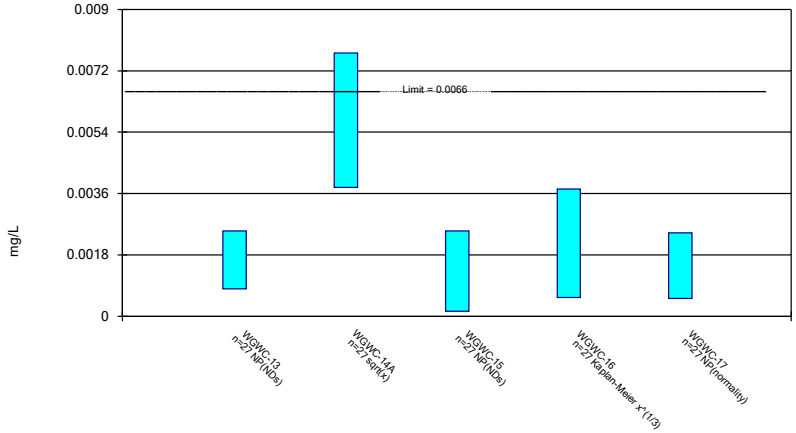
Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

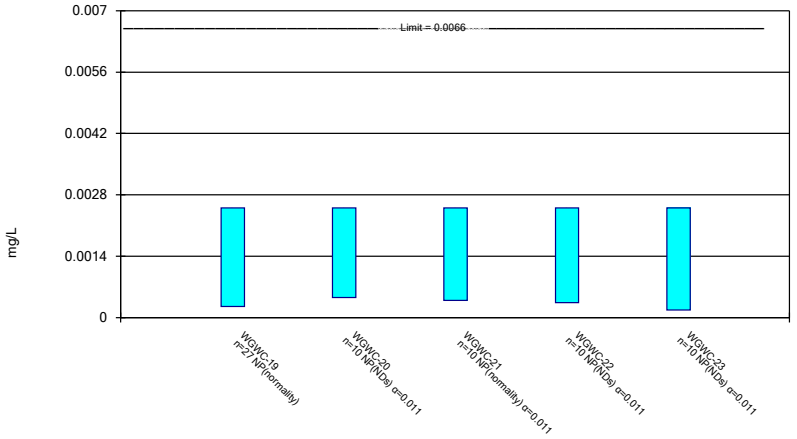
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

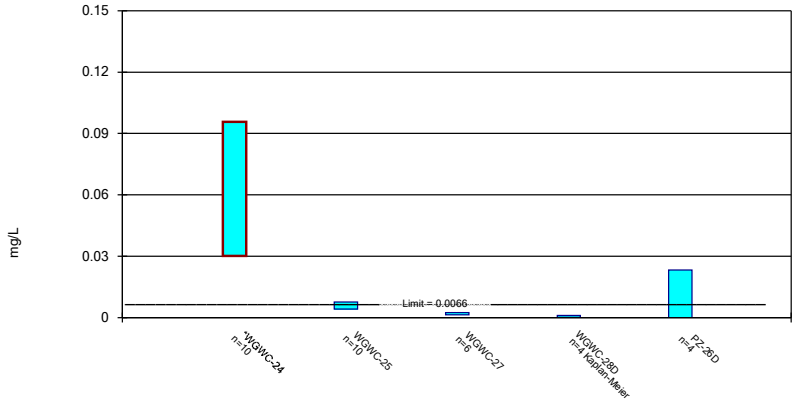
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Cobalt Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

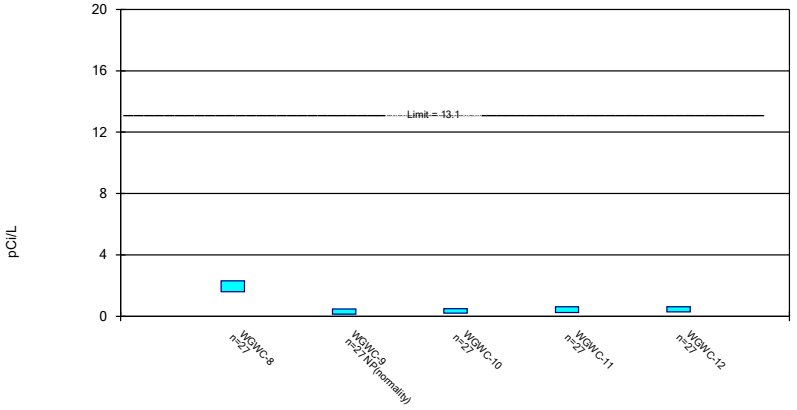
Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

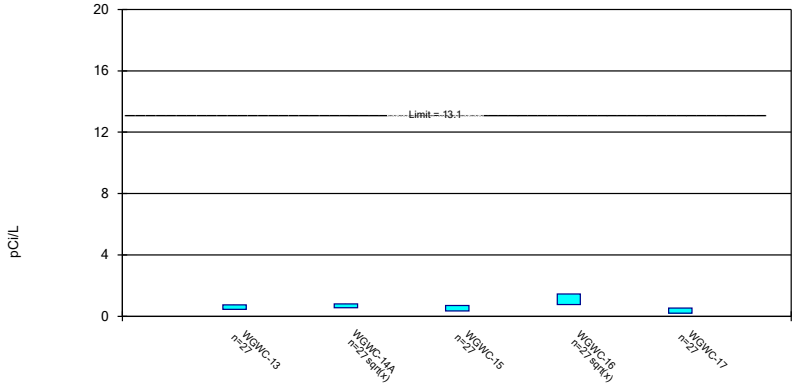
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

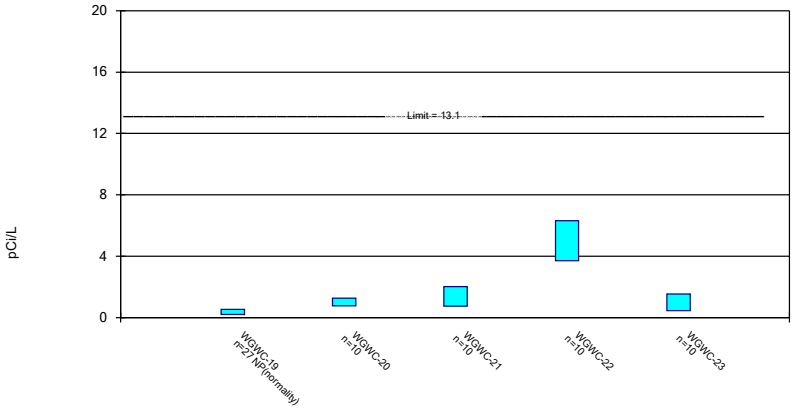
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 2:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

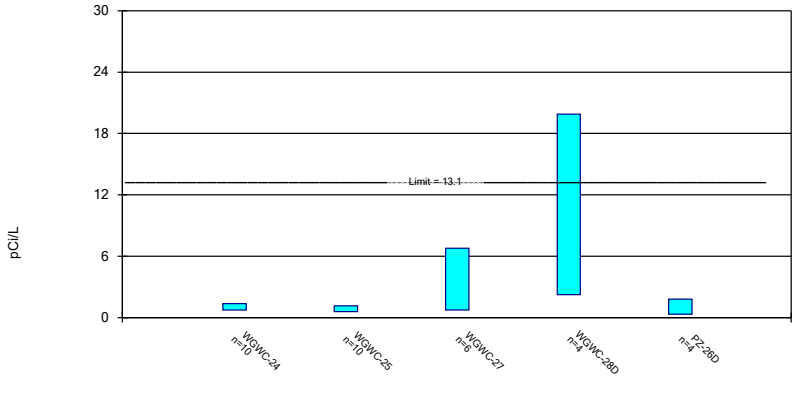
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

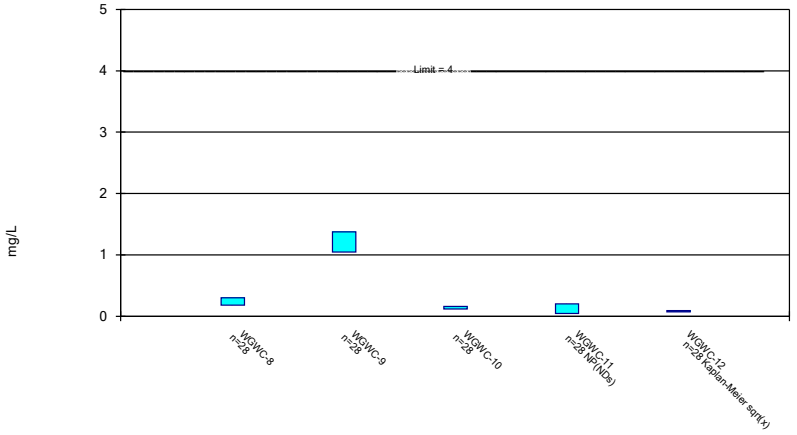
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

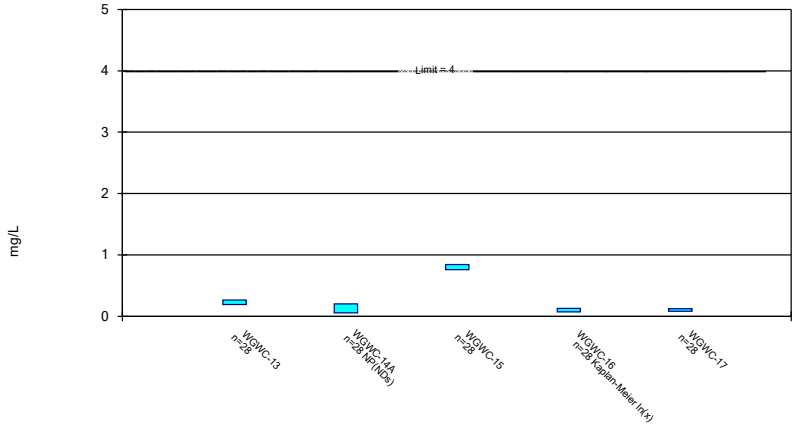
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

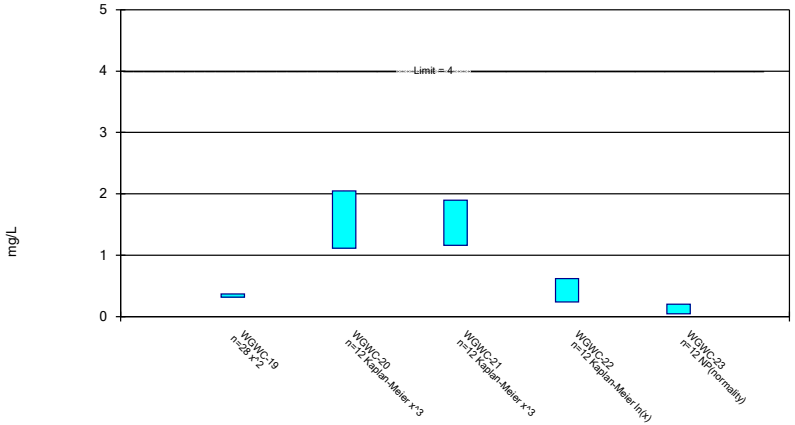
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

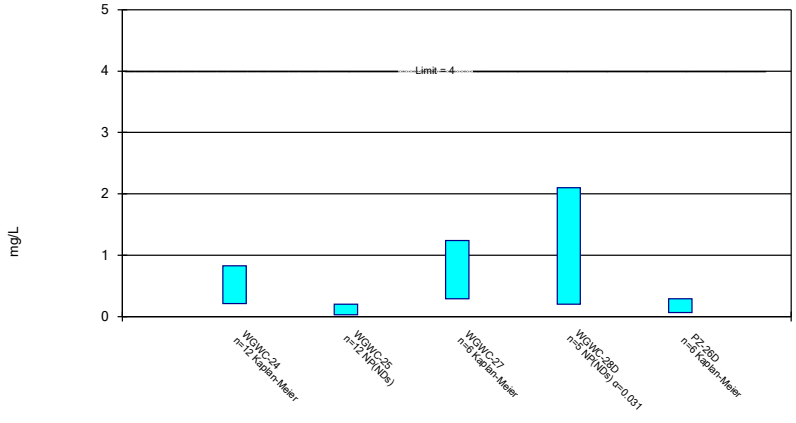
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

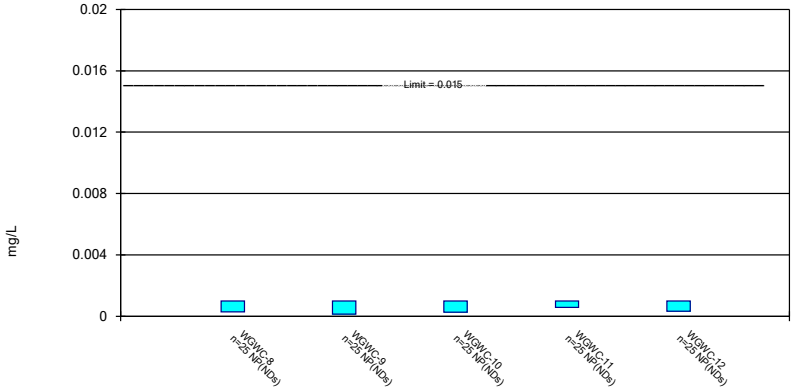
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

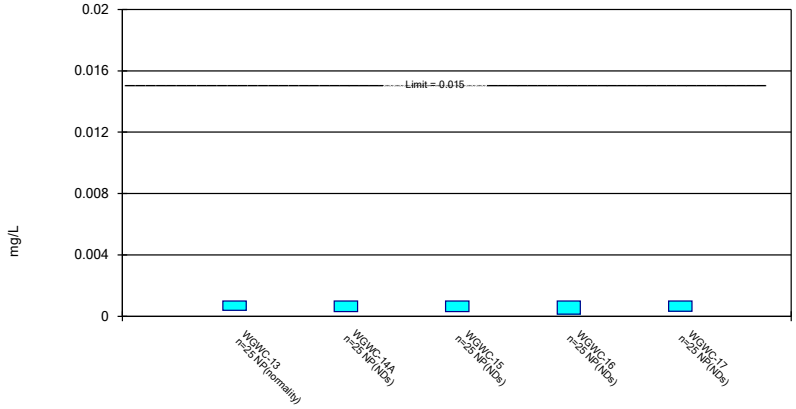
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Lead Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.0.24 Software licensed to Groundwater Stats Consulting. UG

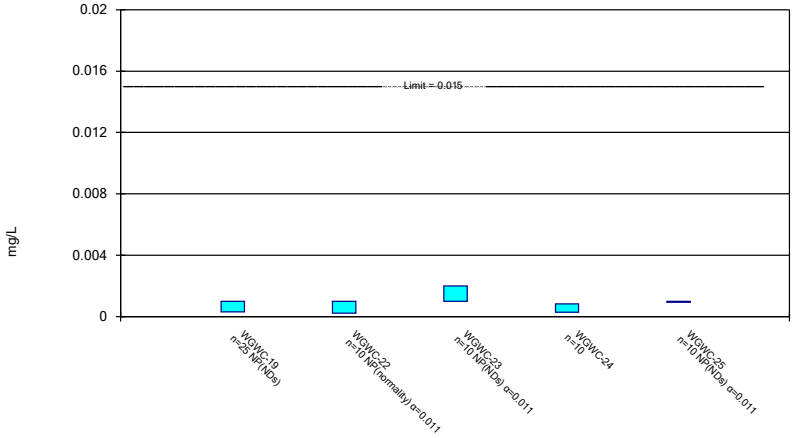
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Lead Analysis Run 4/11/2025 2:44 PM View: Confidence Intervals

GROUNDWATER STATS CONSULTING

January 30, 2026

Southern Company Services
Attn: Mr. Trey Singleton
3535 Colonnade Parkway
Birmingham, AL 35243

Re: Plant Wansley Ash Pond
August 2025 Statistical Analysis

Dear Mr. Singleton,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the August 2025 Groundwater Detection and Assessment Monitoring Statistical summary for Georgia Power Company's Plant Wansley Ash Pond. The analysis complies with the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10 as well as with the United States Environmental Protection Agency (USEPA) Unified Guidance (2009). The site is in Assessment Monitoring.

Sampling began for Appendix III and IV parameters in 2016 and at least 8 background samples have been collected at each of the groundwater monitoring wells except for those discussed below. The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:** WGWA-1, WGWA-2, WGWA-3, WGWA-4, WGWA-5, WGWA-6, WGWA-7, and WGWA-18
- **Downgradient wells:** WGWC-8, WGWC-9, WGWC-10, WGWC-11, WGWC-12, WGWC-13, WGWC-14A, WGWC-15, WGWC-16, WGWC-17, WGWC-19, WGWC-20, WGWC-21, WGWC-22, WGWC-23, WGWC-24, and WGWC-25
  - **New Downgradient wells:** WGWC-30, WGWC-31D, WGWC-31S, WGWC-32, WGWC-33, WGWC-34D, WGWC-34S, WGWC-35D, WGWC-35S, WGWC-36D, WGWC-36S, WGWC-37D, WGWC-37S,

WGWC-38D, WGWC-38S, WGWC-39, WGWC-40, WGWC-41, and WGWC-42

- **Assessment wells:** WGWC-27, WGWC-28D, PZ-26D, WAMW-1, and WAMW-2

Note that new downgradient wells WGWC-30, WGWC-31D, WGWC-31S, WGWC-32, WGWC-33, WGWC-34D, WGWC-34S, WGWC-35D, WGWC-35S, WGWC-36D, WGWC-36S, WGWC-37D, WGWC-37S, WGWC-38D, WGWC-38S, WGWC-39, WGWC-40, WGWC-41, and WGWC-42 were first sampled in October 2025, and data will be evaluated with interwell prediction limits and confidence intervals for Appendix III and IV constituents, respectively, at these wells once a minimum of 8 samples has been collected. Additionally, upgradient well WGWA-5 was, reportedly, damaged; therefore, this well has not been sampled for Appendix III and IV parameters since the Fall 2024 event. Historical data from this well, however, characterize groundwater upgradient of the facility and will continue to be used in constructing interwell statistical limits.

Assessment wells are evaluated for Appendix IV constituents using confidence intervals. While the USEPA Unified Guidance recommends a minimum of 8 samples, confidence intervals may be constructed when at least 4 samples are available for assessment wells.

Data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Kristina Rayner, Founder and Senior Statistician of Groundwater Stats Consulting.

The Coal Combustion Residuals (CCR) program consists of the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, box plots are included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a

disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV well/constituent pairs containing 100% non-detects follows this letter. Data from these wells are plotted on the time series and box plots, but no formal statistics were required.

For all constituents, a substitution of the most recent reporting limit is used for non-detect data. In the case of fluoride, it was noted that varying reporting limits were provided by the laboratory during this analysis. Therefore, the most recent reporting limit of 0.2 mg/L was substituted for all non-detects for fluoride to be consistent with previous analyses.

During the background screening conducted by MacStat Consulting in 2017, data at all wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method for Appendix III parameters based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. Power curves were provided with the sceening to demonstrate that the selected statistical methods for Appendix III parameters comply with the USEPA Unified Guidance. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

Statistical Methods – Appendix III Parameters:

Based on the earlier evaluation described above, Appendix III parameters are evaluated using interwell prediction limits combined with a 1-of-2 resample plan for the following constituents: boron, calcium, chloride, fluoride, pH, sulfate, and TDS.

Parametric prediction limits are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. After testing for normality and performing any adjustments as discussed below (US EPA, 2009), data are analyzed using either parametric or non-parametric prediction limits. Non-detects are handled as follows:

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the most recent reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Note that values shown on data pages reflect raw data and any non-detects that have been substituted with one-half of the reporting limit will be shown as "<" the original reporting limit on the data pages.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. While this was not required for this analysis, in some cases, the earlier portion of data record may require deselecting prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Statistical Evaluation of Appendix III Parameters – August 2025

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. Values in background which have been flagged as outliers and may be seen in a lighter font and as a disconnected symbol on the graphs. Although assessment wells are not evaluated with interwell prediction limits, resamples were collected in November 2025 for all Appendix III parameters at assessment well WGWC-28D. Data at assessment well WGWC-28D was screened with Tukey's outlier test to determine if the August 2025 event was anomalous compared to the remaining observations within the record. Tukey's outlier test identified a high value for TDS at WGWC-28D, and this observation was flagged in

the database. No other values were flagged for Appendix III parameters and a summary of flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through August 2025 (Figure D). Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The August 2025 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When resamples confirm the initial exceedance, a statistically significant increase (SSI) is identified, and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result; therefore, no exceedance is noted and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. A summary table of the background prediction limits and exceedances follows this letter. Exceedances were identified for the following well/constituent pairs:

- Boron: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-22, WGWC-24, and WGWC-25
- Calcium: WGWC-8, WGWC-20, and WGWC-21
- Chloride: WGWC-8, WGWC-16, WGWC-20, WGWC-21, WGWC-24, and WGWC-25
- Fluoride: WGWC-8, WGWC-9, WGWC-10, WGWC-15, WGWC-19, WGWC-20, WGWC-21, and WGWC-22
- Sulfate: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-21, WGWC-22, and WGWC-24
- TDS: WGWC-8, WGWC-20, WGWC-21, and WGWC-25

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test at the 99% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure E). Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site which is an indication of variability in groundwater

unrelated to practices at the site. A summary of the Appendix III trend test results follows this letter. Statistically significant trends were noted for the following well/constituent pairs:

Increasing trends:

- Boron: WGWC-8, WGWC-9, and WGWC-20
- Calcium: WGWA-1 (upgradient) and WGWC-8
- Chloride: WGWA-2 (upgradient) and WGWC-8
- Sulfate: WGWA-4 (upgradient) and WGWC-8
- TDS: WGWA-1, WGWA-3 (both upgradient), and WGWC-8

Decreasing trends:

- Boron: WGWC-16 and WGWC-24
- Calcium: WGWA-18 (upgradient)
- Chloride: WGWA-5 (upgradient), WGWC-16, and WGWC-24
- Fluoride: WGWA-4, WGWA-18 (both upgradient), WGWC-9, WGWC-10, WGWC-15, and WGWC-22
- Sulfate: WGWA-18 (upgradient), WGWC-16, and WGWC-24

Statistical Methods – Appendix IV Parameters

Appendix IV parameters are evaluated by statistically comparing the mean or median of each downgradient well/constituent pair against corresponding Groundwater Protection Standards (GWPS). The GWPS may be either regulatory (Maximum Contaminant Limits or CCR rule-specified limits) or site-specific limits that are based on upgradient background groundwater quality. Site-specific background limits are determined using upper tolerance limits, and the comparison of downgradient means or medians to GWPS is performed using confidence intervals. The methods are described below.

Statistical Evaluation of Appendix IV Parameters – August 2025

For Appendix IV parameters, confidence intervals for each downgradient well/constituent were compared against corresponding GWPS. Downgradient and assessment well/constituent pairs containing 100% non-detects do not require analysis. Data from all upgradient wells for Appendix IV parameters are reassessed for outliers during each analysis prior to constructing statistical limits. All previously flagged measurements were confirmed. A resample was collected in November 2025 for lithium at assessment well WGWC-28D. Tukey's outlier test was used to determine whether the August 2025 sample was anomalous compared to the remaining observations within the record for lithium at this well. No outliers were identified; therefore, the August 2025 observation for lithium

at well WGWC-28D was not flagged. A complete list of outliers follows this report (Figure C).

Interwell Upper Tolerance Limits

Interwell tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through August 2025 for Appendix IV constituents (Figure F). Parametric tolerance limits are calculated, with a target of 95% confidence and 95% coverage, when data follow a normal or transformed-normal distribution. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were constructed using the highest background measurement. The confidence and coverage levels for nonparametric tolerance limits are dependent upon the number of background samples.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed using data through August 2025 for each of the Appendix IV constituents in each downgradient well with a minimum of 8 samples and in each assessment well with a

minimum of 4 samples. These intervals were constructed as either parametric or nonparametric confidence intervals depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the appropriate order statistics depending on the sample size, as interval limits, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The achievable confidence level associated with nonparametric confidence intervals is dependent upon the number of samples available.

Note that due to a statistically significant increasing trend for lithium at downgradient well WGWC-21 with more recent concentrations reported at or above the GWPS, a minimum of the most recent 8 observations were used to construct a confidence interval on more relatively stable data (USEPA Unified Guidance, 2009, Chapter 7). Trend tests using both the full and truncated records follow this report (Figure H).

The confidence intervals were compared to the GWPS established using the rules mentioned above. Only when the entire confidence interval is above a GWPS is the downgradient well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. Summaries and graphical results of the confidence intervals analyses follow this letter (Figure I). Exceedances were noted for the following well/constituent pairs:

- Beryllium: WGWC-20 and WGWC-24
- Cobalt: WGWC-24
- Lithium: WGWC-19, WGWC-20, WGWC-21, and WGWC-28D

Trend Test Evaluation – Appendix IV

Data at wells with confidence interval exceedances are further evaluated using the Sen's Slope/Mann Kendall trend test at the 95% confidence level to determine whether concentrations are statistically increasing, decreasing, or stable (Figure J). Although the trend tests for Assessment monitoring pairs were previously evaluated using 99% confidence, the 95% confidence level more rapidly identifies statistically significant trends. Additionally, the 95% confidence level is recommended in cases with limited sample sizes and, particularly, for new assessment wells. Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability

in groundwater quality unrelated to practices at the site. A summary of the Appendix IV trend test results follows this letter. Statistically significant trends were identified for the following well/constituent pairs:

Increasing trends:

- Lithium: WGWC-19, WGWC-20, and WGWC-21

Decreasing trends:

- Beryllium: WGWC-24
- Cobalt: WGWA-1, WGWA-2, WGWA-5, WGWA-18 (all upgradient), and WGWC-24

Resample Reports – November 2025

As mentioned above, a resample was collected in November 2025 for lithium at assessment well WGWC-28D. A confidence interval for lithium at WGWC-28D was compared to its respective GWPS (Figure K), and an exceedance was identified.

Summary

Observations from the August 2025 sample event and November 2025 resample event at Wansley AP were compared to established interwell prediction limits for all Appendix III constituents. Exceedances were identified for the following well/constituent pairs:

- Boron: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-22, WGWC-24, and WGWC-25
- Calcium: WGWC-8, WGWC-20, and WGWC-21
- Chloride: WGWC-8, WGWC-16, WGWC-20, WGWC-21, WGWC-24, and WGWC-25
- Fluoride: WGWC-8, WGWC-9, WGWC-10, WGWC-15, WGWC-19, WGWC-20, WGWC-21, and WGWC-22
- Sulfate: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-21, WGWC-22, and WGWC-24
- TDS: WGWC-8, WGWC-20, WGWC-21, and WGWC-25

When confidence intervals were constructed on downgradient and assessment wells for Appendix IV constituents and compared to respective GWPS, exceedances were noted for the following well/constituent pairs:

- Beryllium: WGWC-20 and WGWC-24
- Cobalt: WGWC-24
- Lithium: WGWC-19, WGWC-20, WGWC-21, and WGWC-28D

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Wansley Ash Pond. If you have any questions or comments, please feel free to contact us.

Lead, Total (mg/L)	n/a	0.015	0.0015	0.015
Lithium, Total (mg/L)	n/a	0.04	0.02	0.04
Mercury, Total (mg/L)	0.002		0.0002	0.002
Molybdenum, Total (mg/L)	n/a	0.1	0.0072	0.1
Selenium, Total (mg/L)	0.05		0.005	0.05
Thallium, Total (mg/L)	0.002		0.001	0.002

GWPS = Groundwater Protection Standard

MCL = Maximum Contaminant Level

CCR = Coal Combustion Residual

Highlighted cells indicate background is higher than established limit.

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

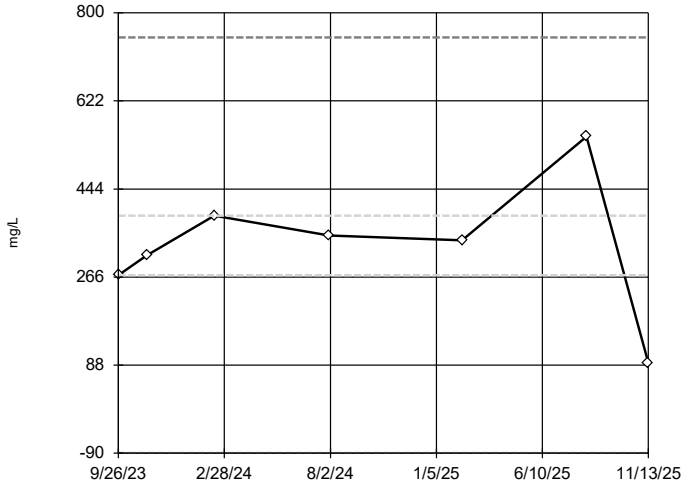
Tukey's Outlier Screening

WGWC-28D

n = 7

No outliers found. Tukey's method selected by user.

High cutoff = 26.4, low cutoff = -12.1, based on IQR multiplier of 3.



Constituent: Boron Analysis Run 12/17/2025 12:23 PM View: Outlier Check

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

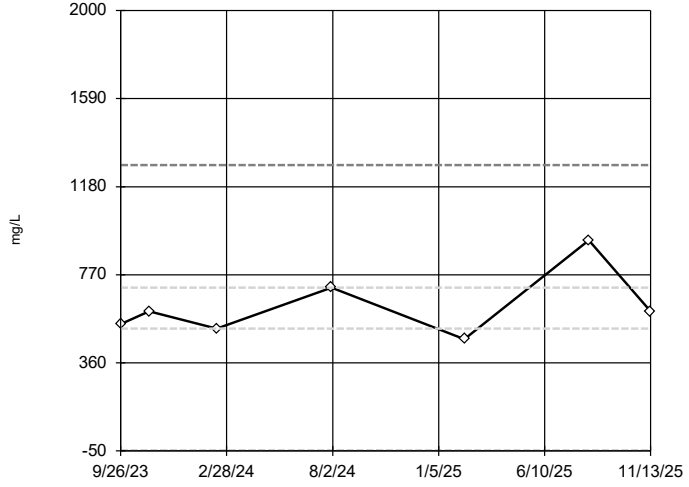
Tukey's Outlier Screening

WGWC-28D

n = 7

No outliers found. Tukey's method selected by user.

High cutoff = 750, low cutoff = -90, based on IQR multiplier of 3.



Constituent: Calcium Analysis Run 12/17/2025 12:23 PM View: Outlier Check

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

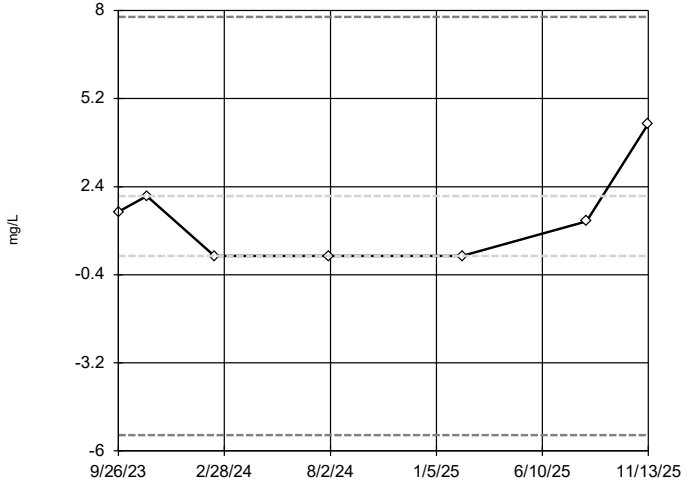
Tukey's Outlier Screening

WGWC-28D

n = 7

No outliers found. Tukey's method selected by user.

High cutoff = 1280, low cutoff = -50, based on IQR multiplier of 3.



Constituent: Chloride Analysis Run 12/17/2025 12:23 PM View: Outlier Check

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

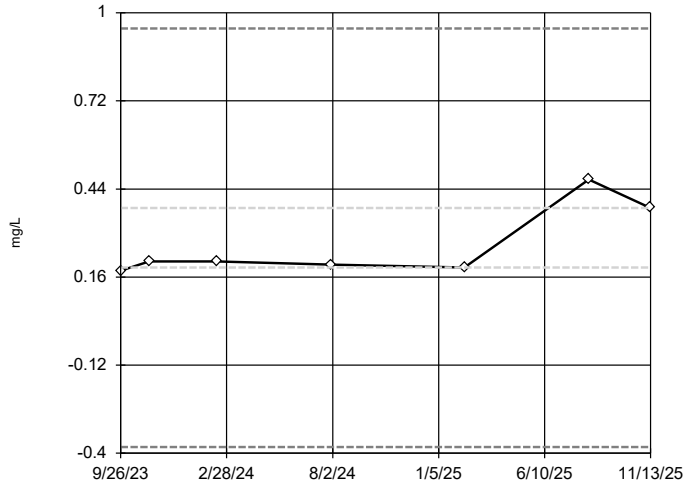
Tukey's Outlier Screening

WGWC-28D

n = 7

No outliers found. Tukey's method selected by user.

High cutoff = 7.8, low cutoff = -5.5, based on IQR multiplier of 3.



Constituent: Fluoride Analysis Run 12/17/2025 12:23 PM View: Outlier Check

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

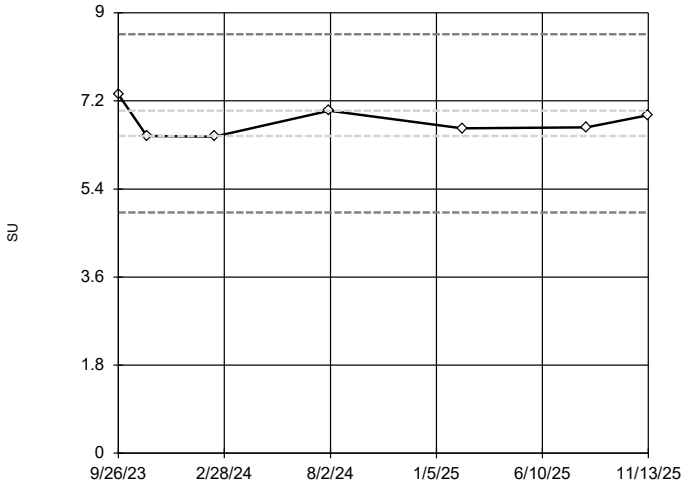
Tukey's Outlier Screening

WGWC-28D

n = 7

No outliers found. Tukey's method selected by user.

High cutoff = 0.95, low cutoff = -0.38, based on IQR multiplier of 3.



Constituent: Lithium Analysis Run 12/17/2025 12:23 PM View: Outlier Check

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

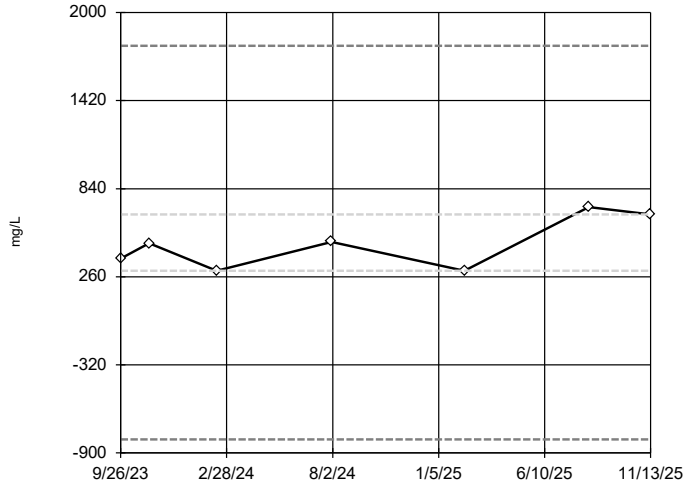
Tukey's Outlier Screening

WGWC-28D

n = 7

No outliers found. Tukey's method selected by user.

High cutoff = 8.56, low cutoff = 4.92, based on IQR multiplier of 3.



Constituent: pH, Field Analysis Run 12/17/2025 12:23 PM View: Outlier Check

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

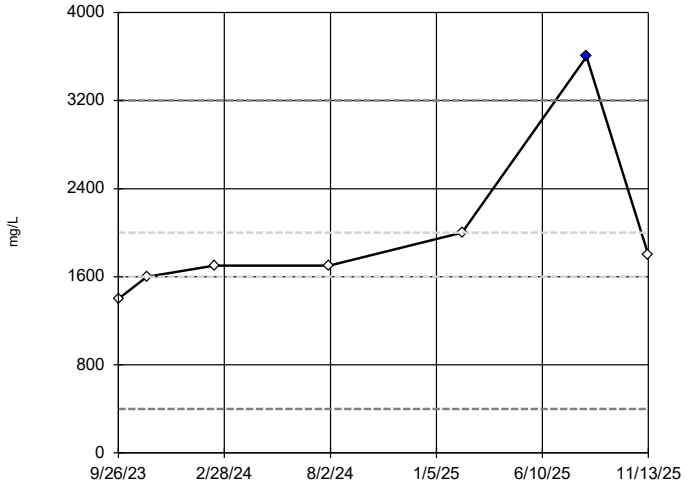
Tukey's Outlier Screening

WGWC-28D

n = 7

No outliers found. Tukey's method selected by user.

High cutoff = 1780, low cutoff = -810, based on IQR multiplier of 3.



Constituent: Sulfate Analysis Run 12/17/2025 12:23 PM View: Outlier Check

Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tukey's Outlier Screening

WGWC-28D

n = 7

Outlier is drawn as solid. Tukey's method selected by user.

High cutoff = 3200, low cutoff = 400, based on IQR multiplier of 3.

Constituent: TDS Analysis Run 12/17/2025 12:23 PM View: Outlier Check

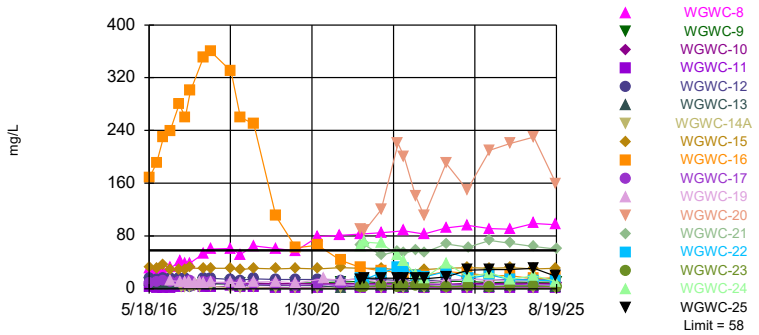
Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Exceeds Limit: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-22, WGWC-24, WGWC-25

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 197 background values. 95.43% NDs. Annual per-constituent alpha = 0.001725. Individual comparison alpha = 0.00005078 (1 of 2). Comparing 17 points to limit.



Constituent: Boron Analysis Run 10/22/2025 3:03 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

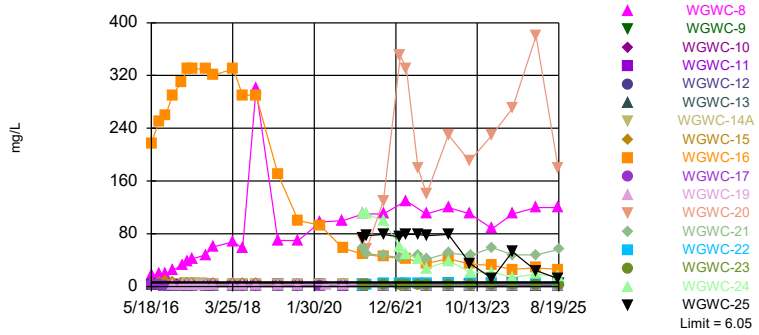
Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Exceeds Limit: WGWC-8, WGWC-20, WGWC-21

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 205 background values. Annual per-constituent alpha = 0.001667. Individual comparison alpha = 0.00004908 (1 of 2). Comparing 17 points to limit.



Constituent: Calcium Analysis Run 10/22/2025 3:04 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

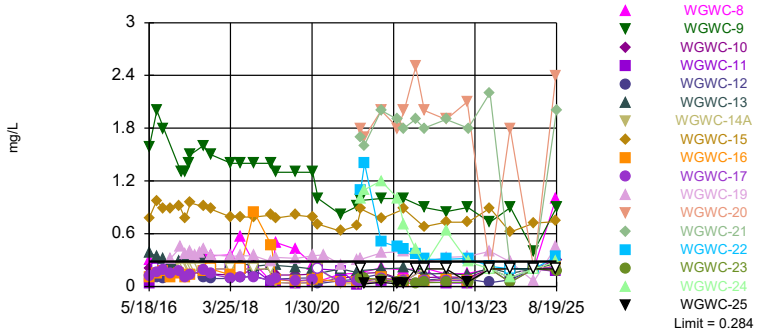
Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Exceeds Limit: WGWC-8, WGWC-16, WGWC-20, WGWC-21, WGWC-24, WGWC-25

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 205 background values. 0.4878% NDs. Annual per-constituent alpha = 0.001667. Individual comparison alpha = 0.00004908 (1 of 2). Comparing 17 points to limit.



Constituent: Chloride Analysis Run 10/22/2025 3:04 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

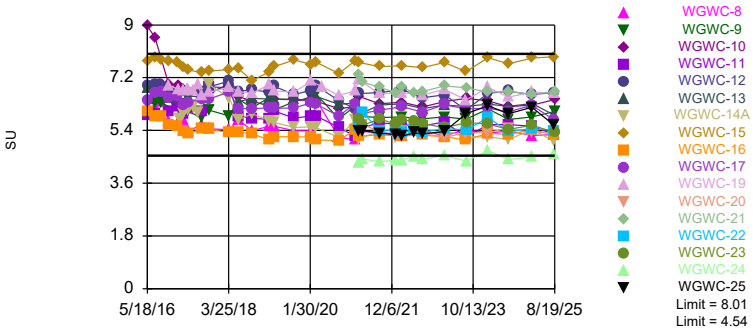
Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Exceeds Limit: WGWC-8, WGWC-9, WGWC-10, WGWC-15, WGWC-19, WGWC-20, WGWC-21, WGWC-22

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 229 background values. 49.34% NDs. Annual per-constituent alpha = 0.001667. Individual comparison alpha = 0.00004908 (1 of 2). Comparing 17 points to limit.



Constituent: Fluoride Analysis Run 10/22/2025 3:04 PM View: Appendix III Interwell
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Within Limits

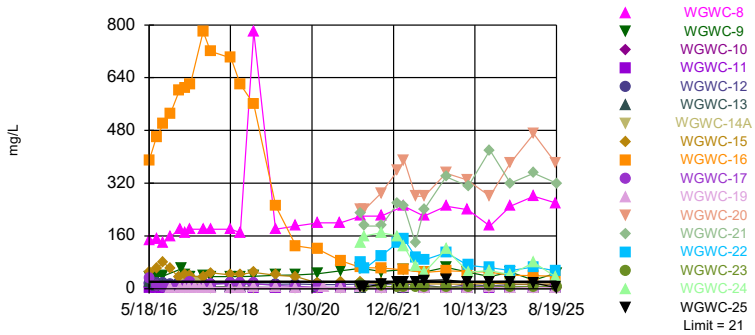
Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 228 background values. Annual per-constituent alpha = 0.003334. Individual comparison alpha = 0.00009815 (1 of 2). Comparing 17 points to limit.

Constituent: pH, Field Analysis Run 10/22/2025 3:04 PM View: Appendix III Interwell

Plant Wansley Client: Southern Company Data: Wansley AP 1



Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Hollow symbols indicate censored values.

Exceeds Limit: WGWC-8, WGWC-9, WGWC-16, WGWC-20, WGWC-21, WGWC-22, WGWC-24

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 205 background values. 24.39% NDs. Annual per-constituent alpha = 0.001667. Individual comparison alpha = 0.00004908 (1 of 2). Comparing 17 points to limit.

Constituent: Sulfate Analysis Run 10/22/2025 3:04 PM View: Appendix III Interwell

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

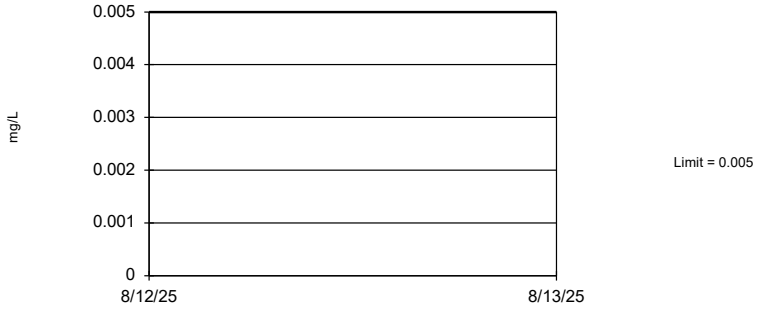
Tolerance Limit

Interwell Non-parametric



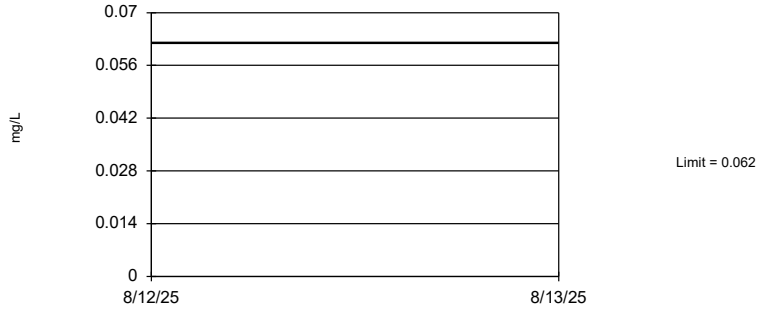
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 173 background values. 98.27% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Antimony Analysis Run 10/22/2025 3:11 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



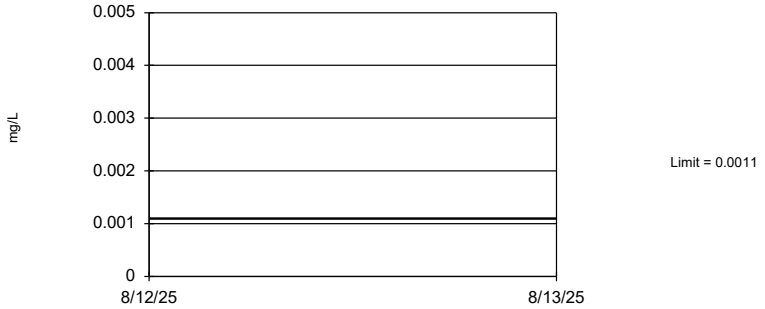
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 221 background values. 83.71% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Arsenic Analysis Run 10/22/2025 3:11 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



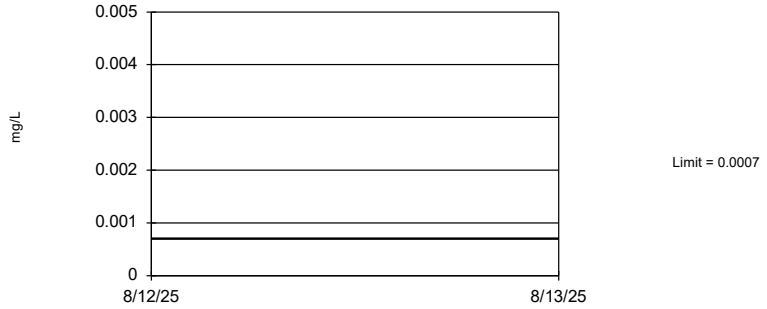
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 221 background values. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Barium Analysis Run 10/22/2025 3:11 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



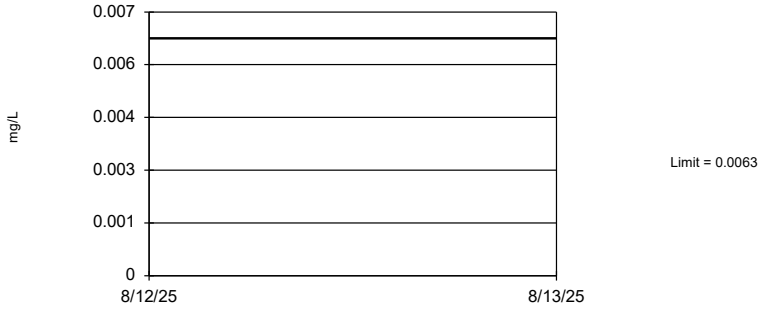
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 221 background values. 95.02% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Beryllium Analysis Run 10/22/2025 3:11 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



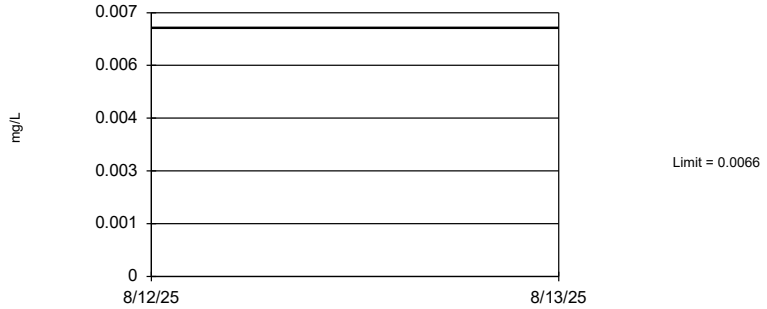
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. All background values were censored; limit is most recent reporting limit. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cadmium Analysis Run 10/22/2025 3:11 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



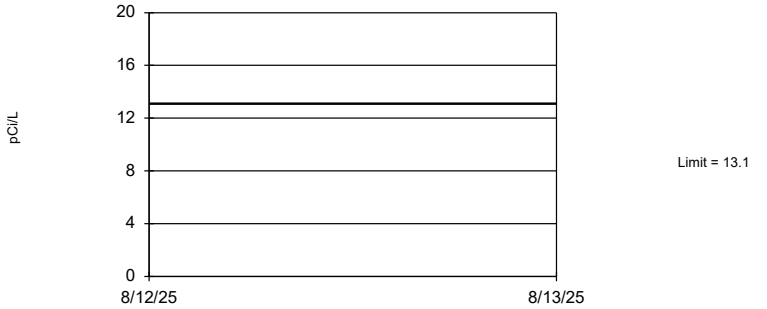
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 220 background values. 94.55% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Chromium Analysis Run 10/22/2025 3:11 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 219 background values. 47.95% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cobalt Analysis Run 10/22/2025 3:11 PM View: Upper Tolerance Limits
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

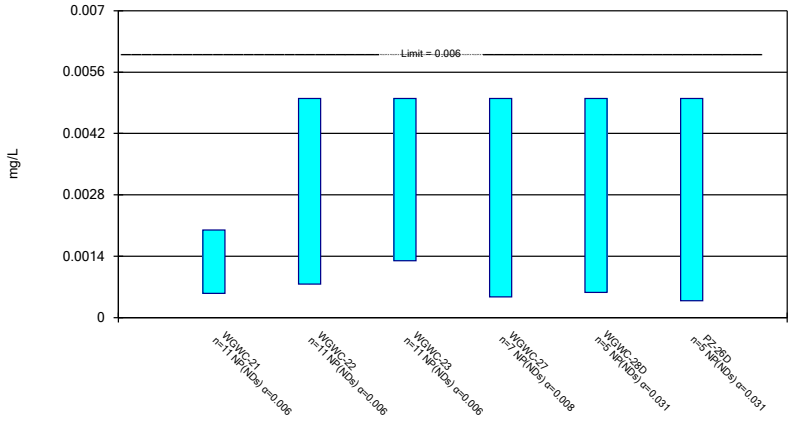
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.

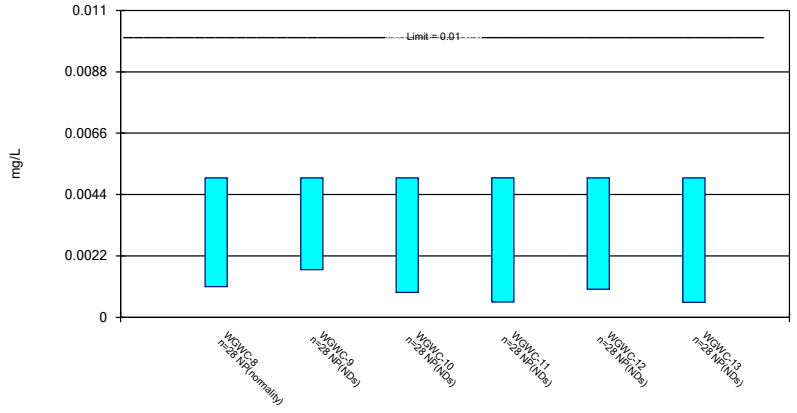


Constituent: Antimony Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

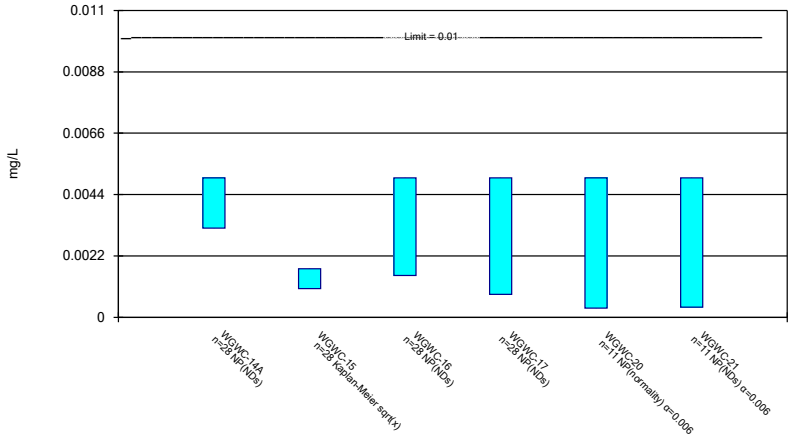


Constituent: Antimony Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

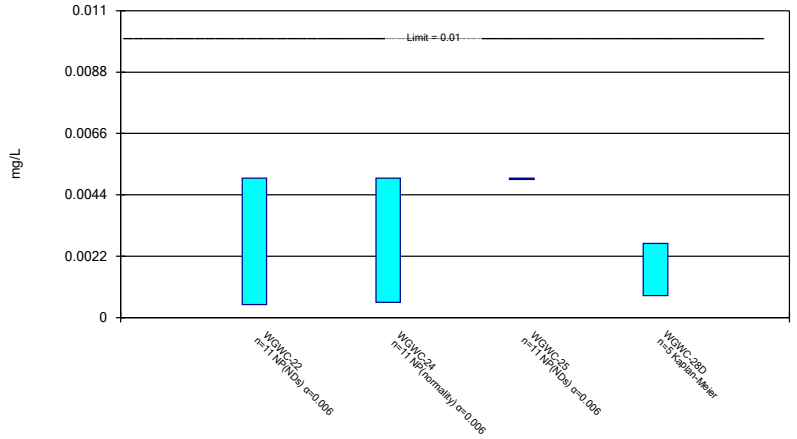


Constituent: Arsenic Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

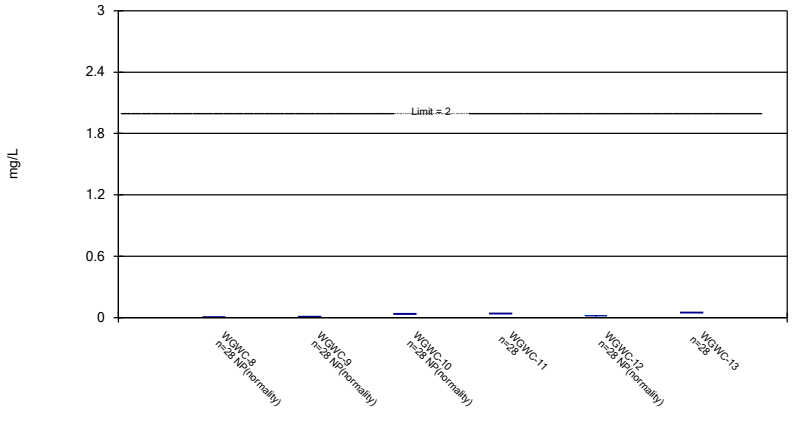


Constituent: Arsenic Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

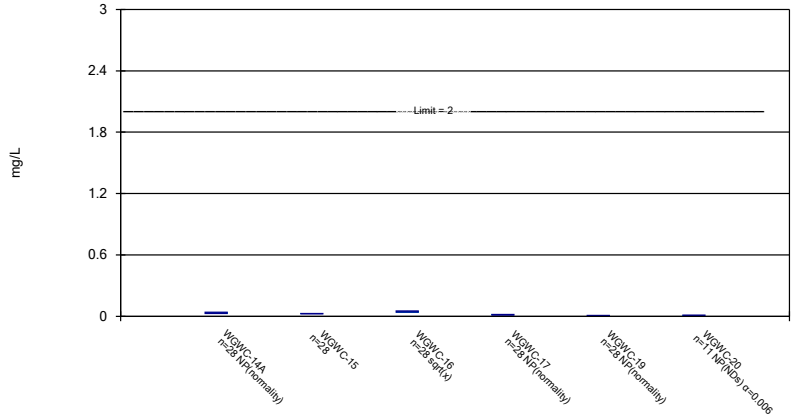


Constituent: Arsenic Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

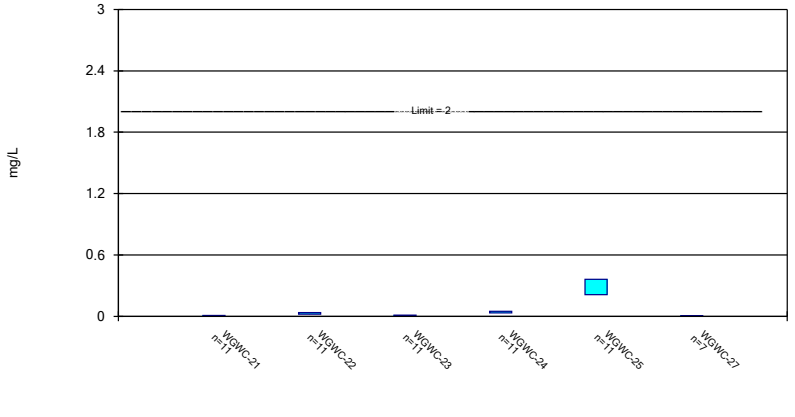


Constituent: Barium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

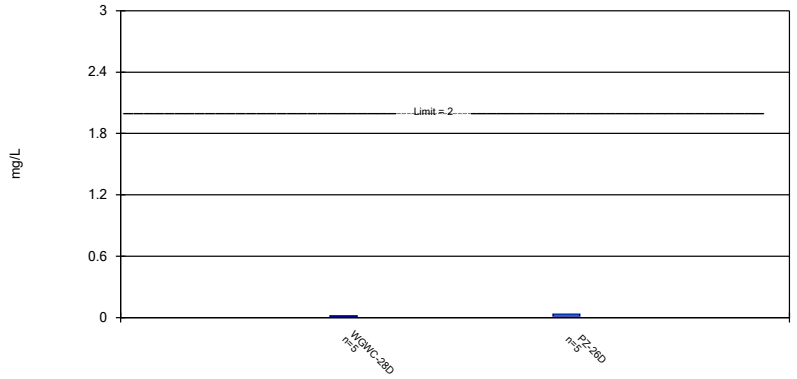


Constituent: Barium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

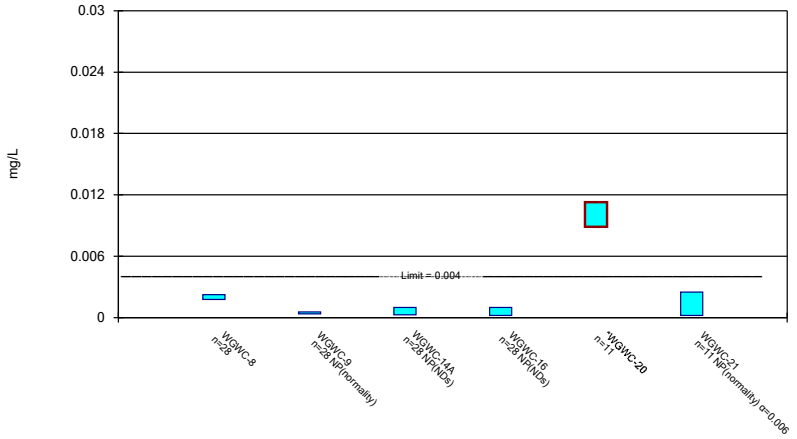


Constituent: Barium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

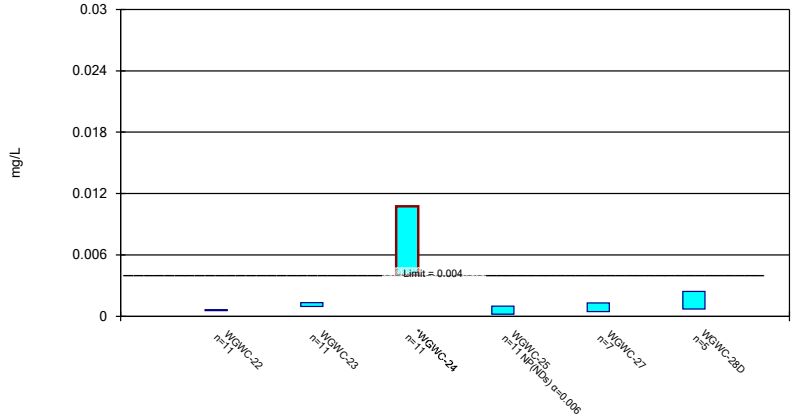


Constituent: Barium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

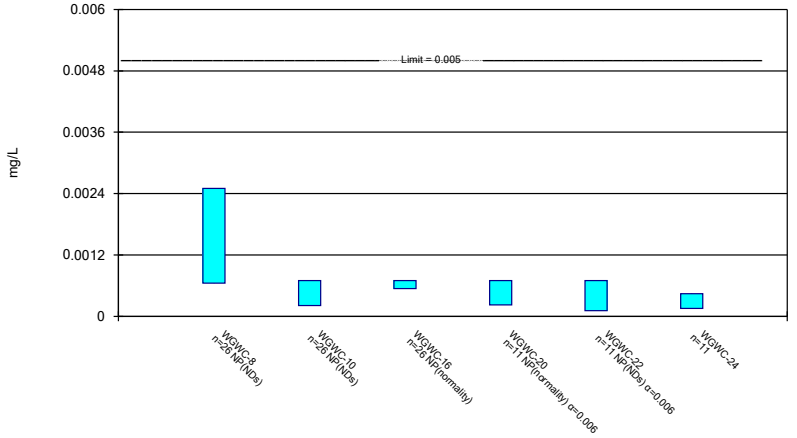


Constituent: Beryllium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

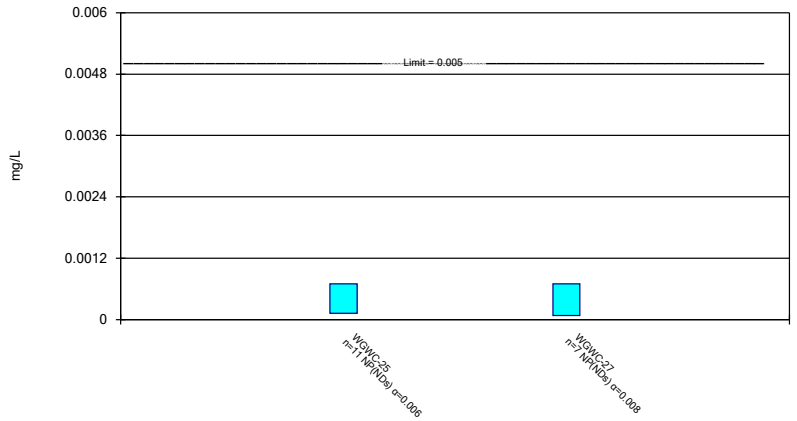


Constituent: Beryllium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

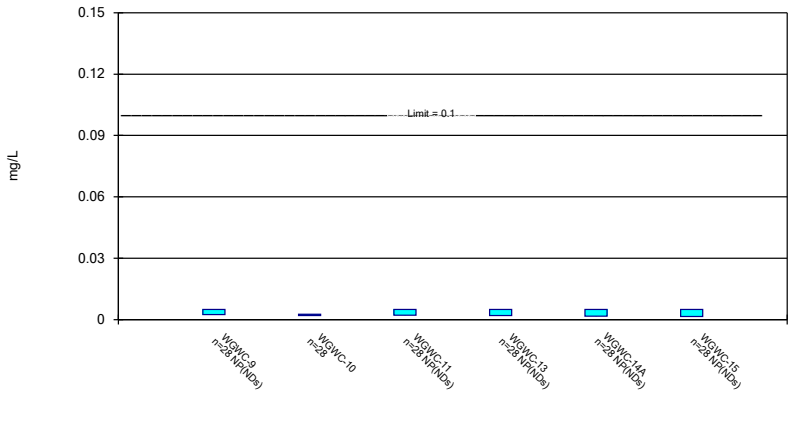


Constituent: Cadmium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded.

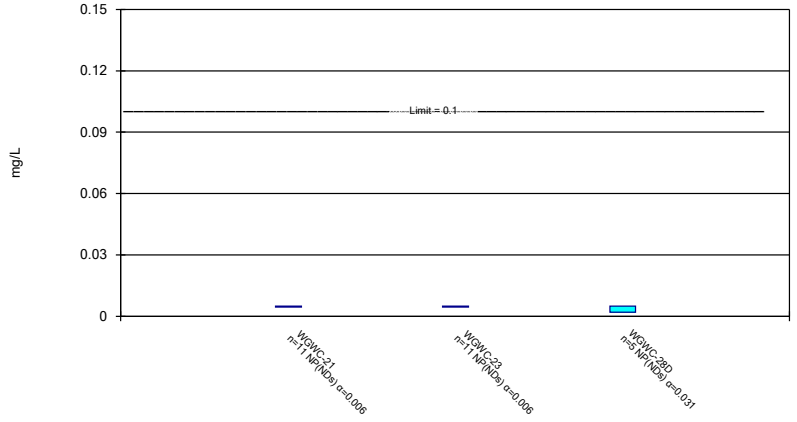


Constituent: Cadmium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Chromium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

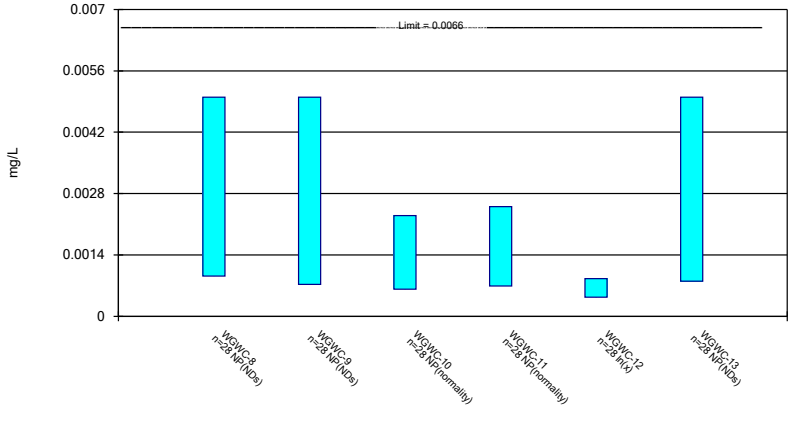
Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



Constituent: Chromium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

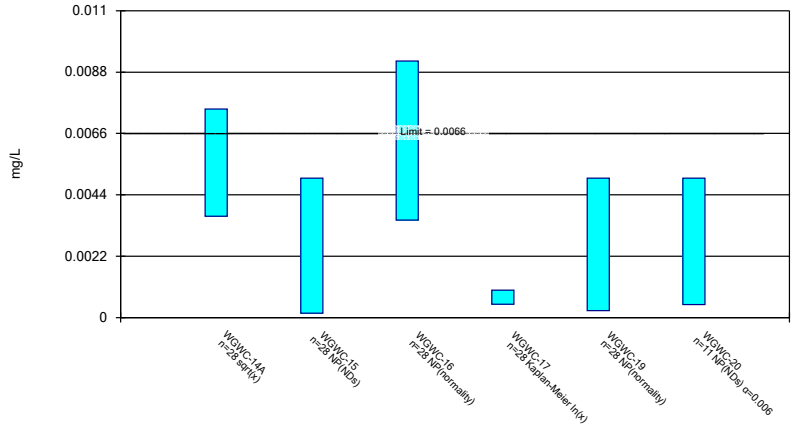
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

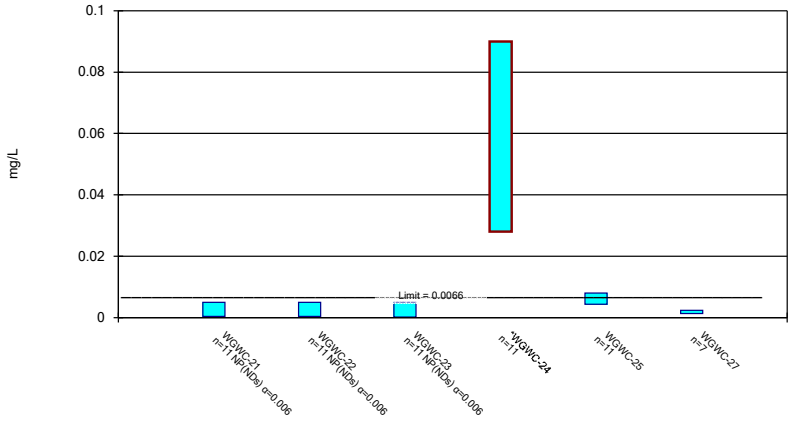
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

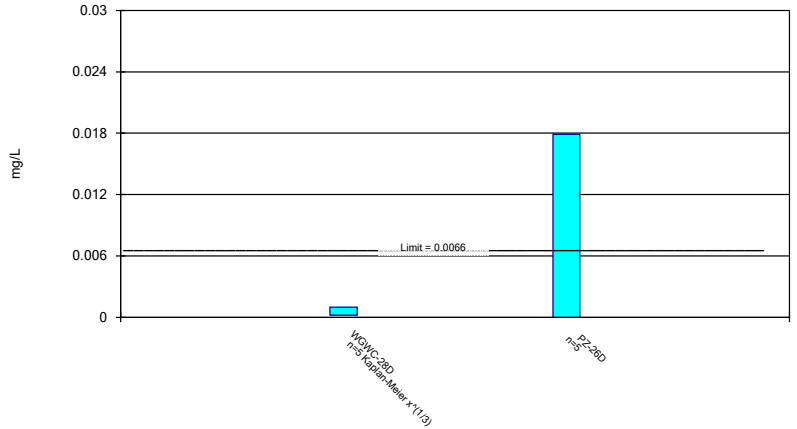
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

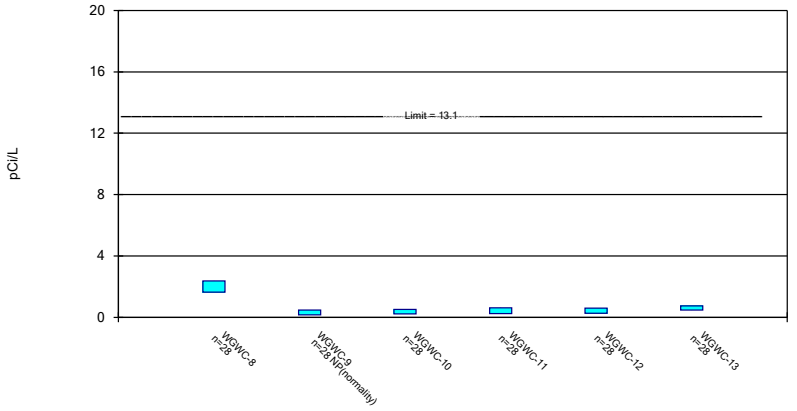
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

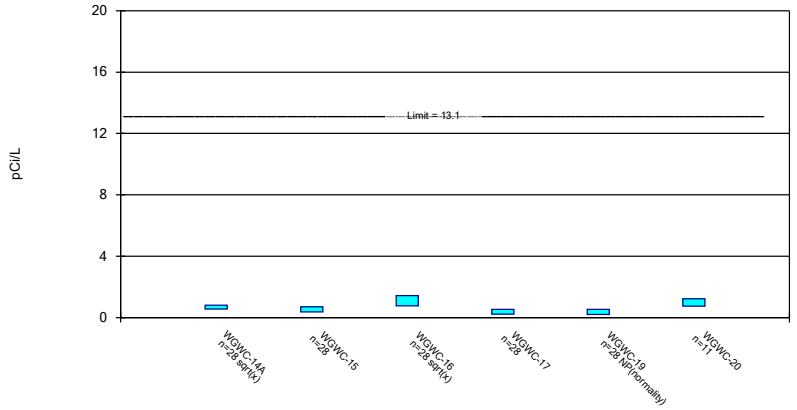
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

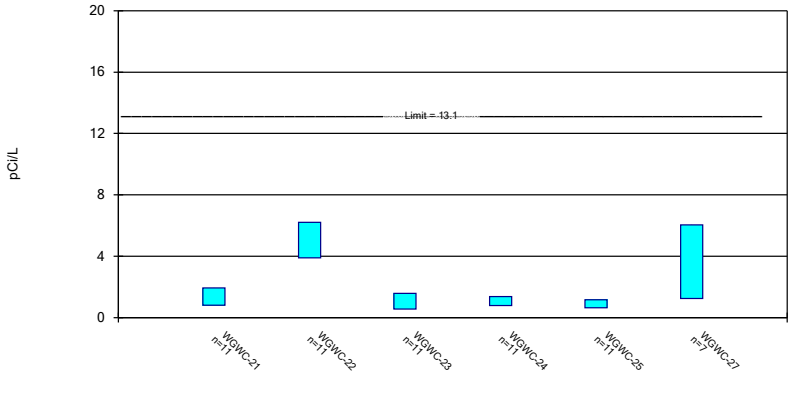
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

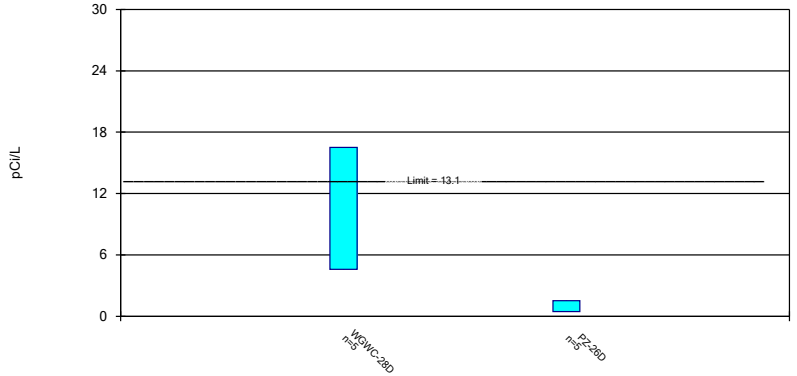
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

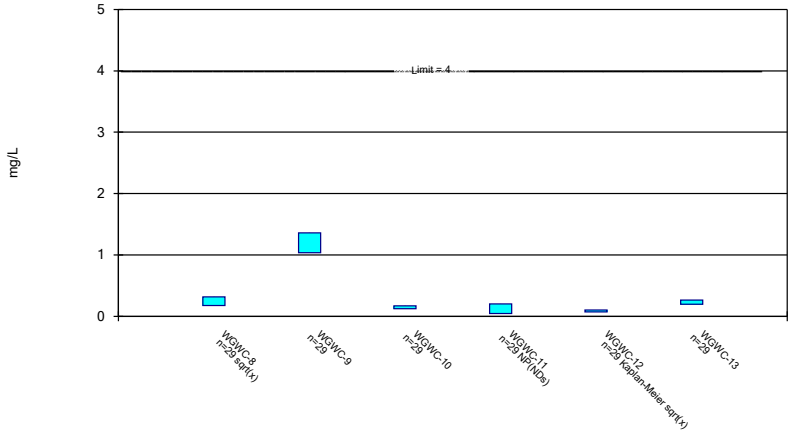
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

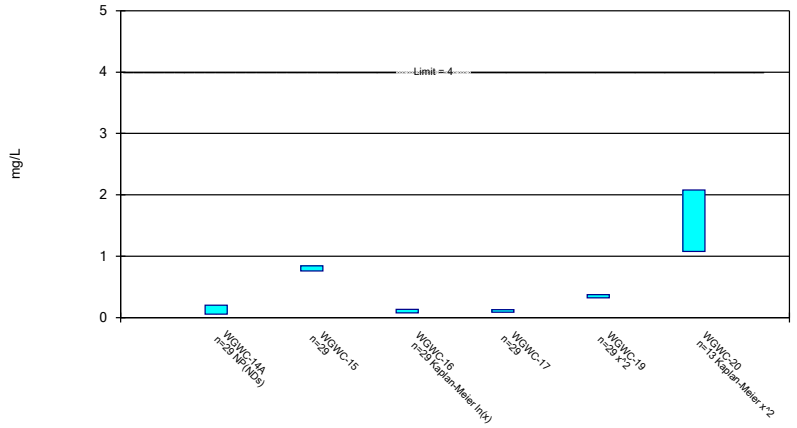
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

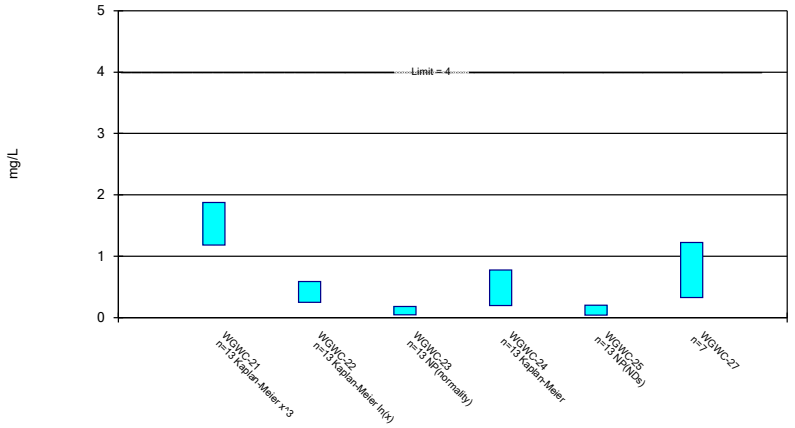
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

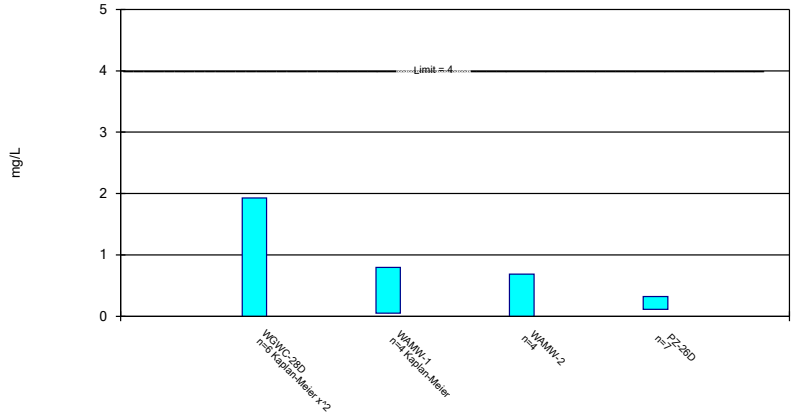
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

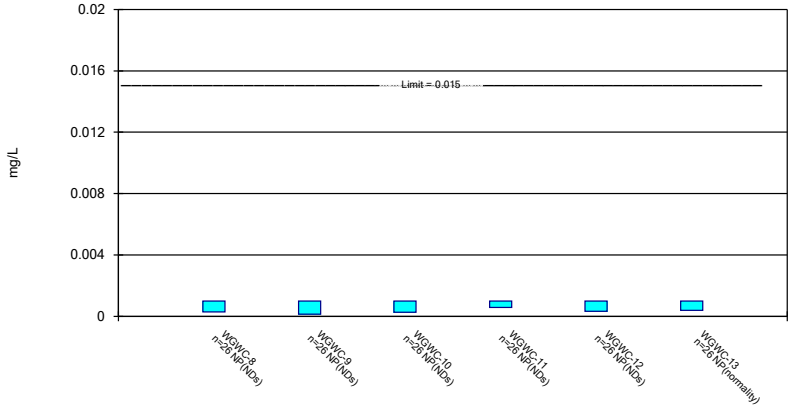
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

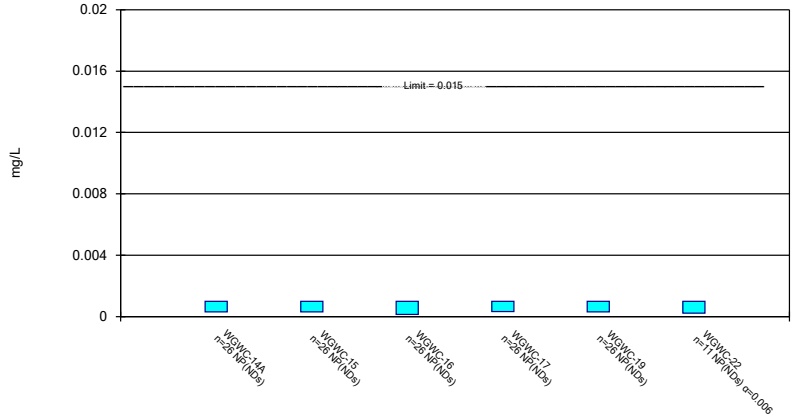
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Lead Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

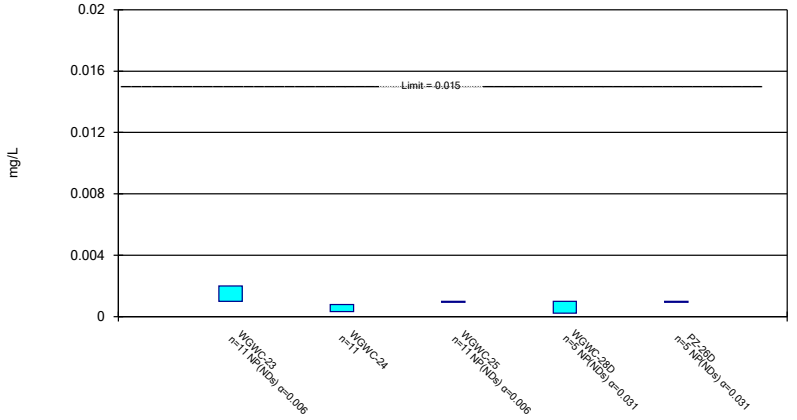
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Lead Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

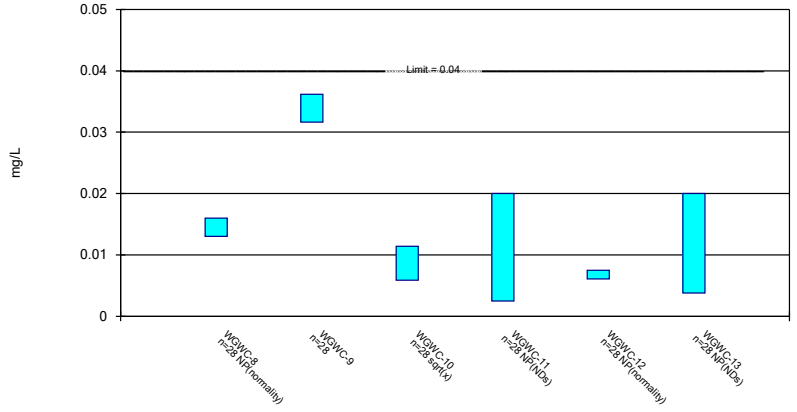
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Lead Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

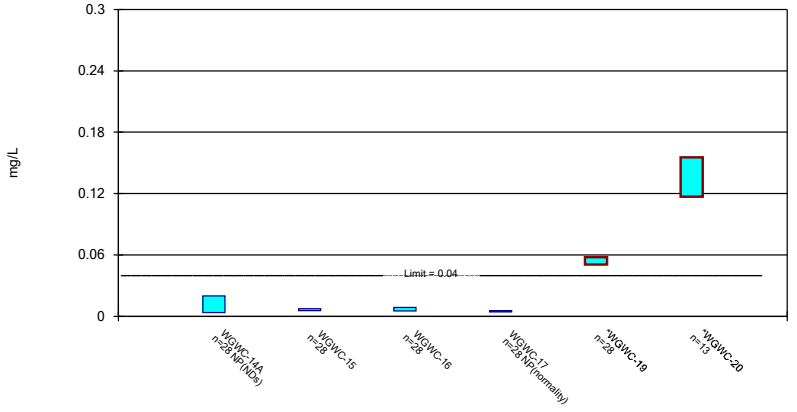
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Lithium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

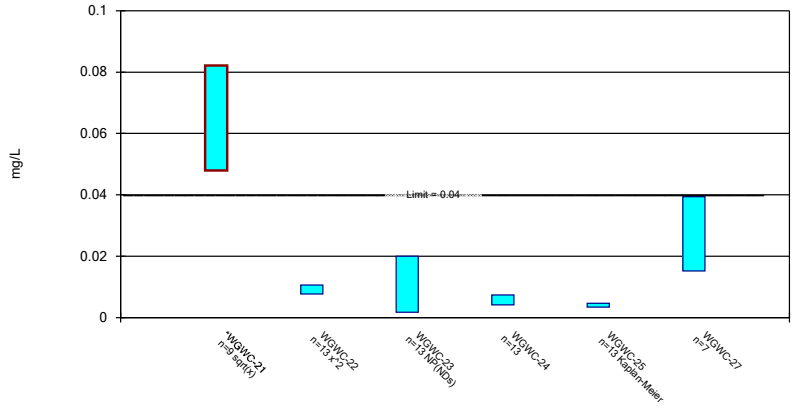
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Lithium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

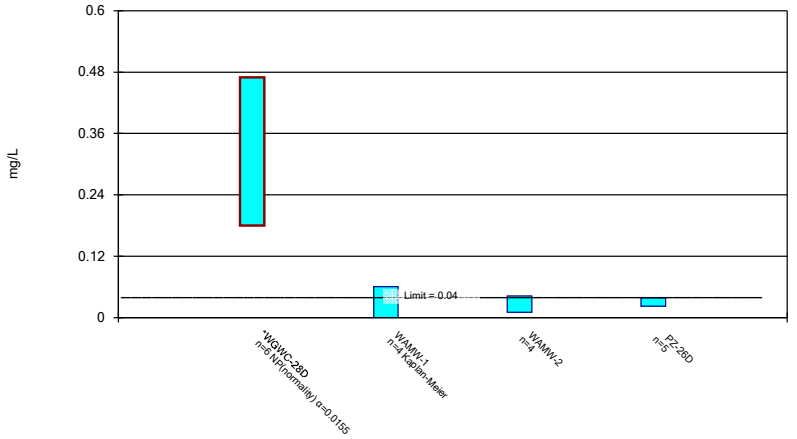
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Lithium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

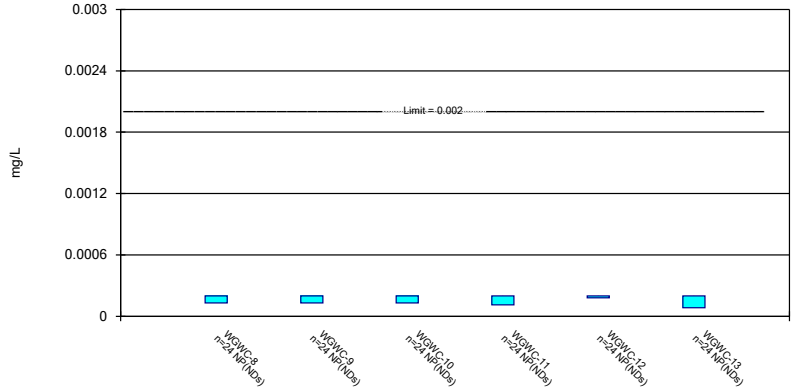
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Lithium Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

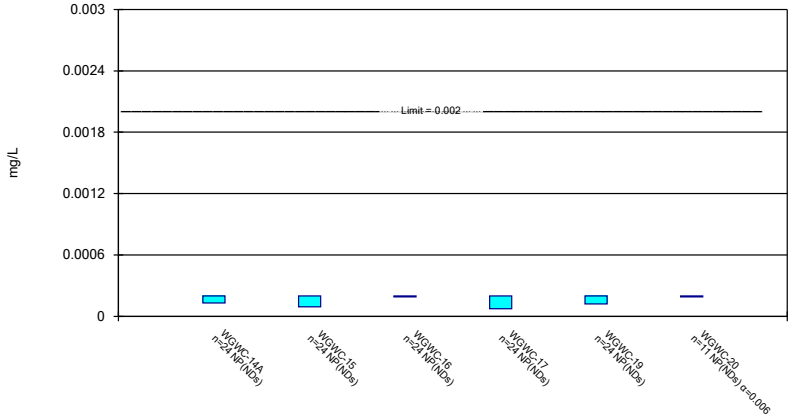
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Mercury Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

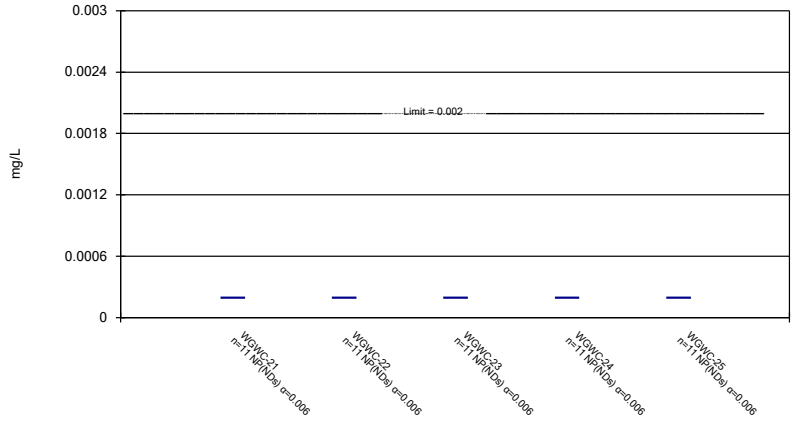
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Mercury Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

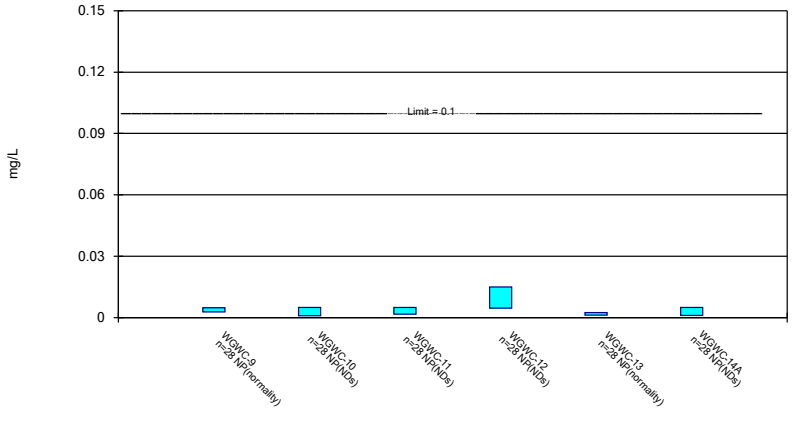
Non-Parametric Confidence Interval

Compliance Limit is not exceeded.



Constituent: Mercury Analysis Run 10/22/2025 3:43 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

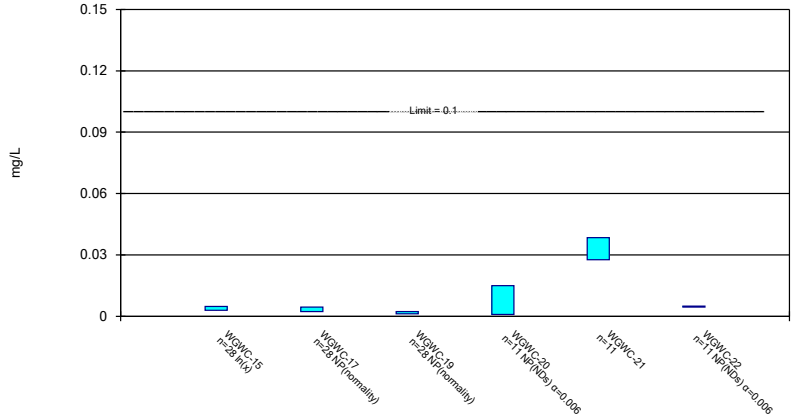
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Molybdenum Analysis Run 10/22/2025 3:44 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

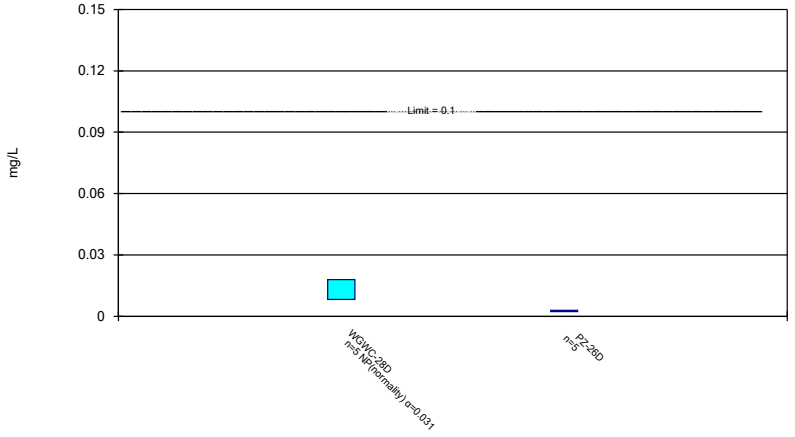
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Molybdenum Analysis Run 10/22/2025 3:44 PM View: Confidence Intervals
Plant Wansley Client: Southern Company Data: Wansley AP 1

Sanitas™ v.10.1.01 Software licensed to Groundwater Stats Consulting. UG

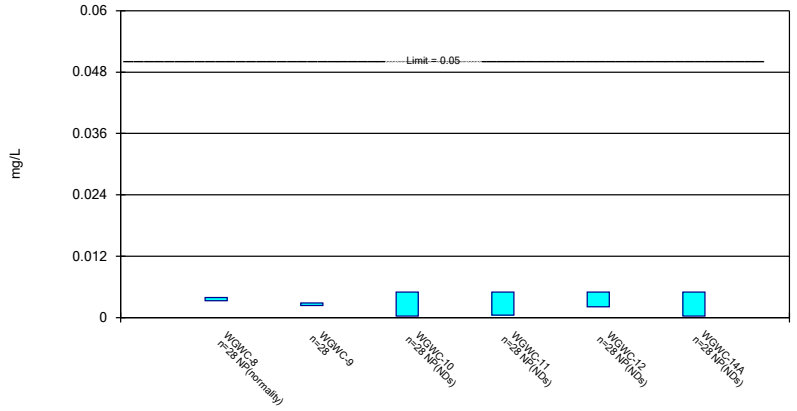
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Molybdenum Analysis Run 10/22/2025 3:44 PM View: Confidence Intervals

CERTIFICATION STATEMENT

This *Semiannual Remedy Selection and Design Progress Report, Plant Wansley Ash Pond 1 (AP-1)* has been prepared in compliance with the United States Environmental Protection Agency Coal Combustion Residual Rule (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically § 257.97(a), the Georgia Environmental Protection Division Rules for Solid Waste Management 391-3-4-.10(6)(a) by a qualified groundwater scientist or engineer with Geosyntec Consultants, Inc. I hereby certify that I am a qualified groundwater scientist, in accordance with the Georgia Rules of Solid Waste Management 391-3-4-.01.

1.0 INTRODUCTION

1.1 Purpose

This *Semiannual Remedy Selection and Design Progress Report* (the semiannual progress report) was prepared by Geosyntec Consultants, Inc. (Geosyntec) for Georgia Power Company (Georgia Power) Plant Wansley Ash Pond 1 (AP-1 or Site) in accordance with the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (CCR Rule) (40 Code of Federal Regulations [CFR] 257 Subpart D), specifically 40 CFR § 257.97(a), and the Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10(6)(a) (State CCR Rule). This semiannual progress report describes the progress made since the issuance of the prior semiannual progress report in August 2025 in selecting and designing a remedy. Potentially applicable groundwater corrective measures were previously described in the *Assessment of Corrective Measures Report – Plant Wansley Ash Pond 1 (AP-1)* (Geosyntec, 2023a) (ACM Report).

The purpose of the ACM Report (and subsequent semiannual progress reports) is to document the process of evaluating and selecting corrective measure(s) to improve groundwater quality at the Site. This process is typically iterative and may be composed of multiple steps to analyze the effectiveness of corrective measures. Once potential corrective measures are identified, they are further evaluated using the criteria outlined in § 257.96(c) and Rule 391-3-4-.10(6)(a). The selected corrective measure must meet the additional protection criteria outlined in § 257.97 and corresponding Rule 391-3-4-.10(6)(a). Pursuant to § 257.97(a) and Rule 391-3-4-.10(6)(a), semiannual progress reports have been regularly submitted to document the efforts of evaluating and progressing toward selecting a groundwater corrective measure (Geosyntec, 2024a, 2024b, 2025a, and 2025b).

1.2 Site Background and Overview of AP-1 Pond Closure

Plant Wansley (**Figure 1**) is a former electric generating facility owned and operated by Georgia Power. Constructed in the early 1970s, the Plant operated one 343-acre CCR pond identified as AP-1 for water treatment and disposal of CCR from electrical generation operations. AP-1 began receiving process water containing fly ash and bottom ash in 1976. In 2008, two temporary gypsum storage cells were constructed on top of the CCR delta in AP-1, adjacent to the Separator Dike (**Figure 2**).

As of April 2019, all process-related flows from the Plant to AP-1 have ceased. Georgia Power has elected to close Plant Wansley AP-1 by removal of the CCR material in accordance with § 257.102 and corresponding State Rule 391-3-4-.10(7)(b). Removed CCR will be consolidated in the onsite existing landfill. The closure of AP-1 in this manner provides a source control measure that reduces the potential for migration of CCR constituents to groundwater. The GA EPD approved closure permit no. 074-006D(CCR) for AP-1 on March 6, 2025, and the Site closure is underway.

1.3 Regulatory Program Status and Nature and Extent

Pursuant to the CCR Rule, CCR compliance groundwater monitoring-related activities have been performed for AP-1 since 2016. Georgia Power initiated an assessment monitoring program for groundwater at AP-1 in January 2018, after identifying statistically significant increases (SSI) of Appendix III constituents. Statistical analyses of the 2018 assessment monitoring data identified a statistically significant level (SSL) of lithium in detection monitoring wells WGWC-8, WGWC-9, WGWC-10, and WGWC-19 in excess of the associated federal and/or state groundwater protection standard (GWPS)[1]. Statistical analyses of groundwater data obtained since March 2021 have identified an SSL of lithium in WGWC-19 and SSLs of beryllium and lithium in WGWC-20, and statistical analyses of groundwater data since February 2023 have identified SSLs of beryllium and cobalt in WGWC-24. Statistical analyses of groundwater data identified new SSLs of lithium in WGWC-21 and WGWC-28D following the February 2025 sampling event.

In accordance with § 257.95(g)(3), Georgia Power prepared an alternate source demonstration (ASD) for lithium (ACC, 2019b), which was included in the *2018 Annual Groundwater Monitoring and Corrective Action Report* (ACC, 2019a). The ASD presented evidence that the source of lithium in groundwater at wells WGWC-8, WGWC-9, WGWC-10, and WGWC-19 was naturally-derived from the subsurface rock formations and did not originate from the unit. An ASD Addendum was submitted to GA EPD in November 2020 (Geosyntec, 2020), with a revised ASD Addendum subsequently submitted to GA EPD in February 2021 (Geosyntec, 2021). The ASD Addendum presents supplemental data collected since submittal of the 2019 ASD, which provide additional lines of evidence to demonstrate that the SSLs of lithium identified at AP-1 are associated with naturally occurring lithium within rock formations at the Site. On September 26,

[1] On February 22, 2022, GA EPD adopted the federal GWPS for cobalt, lithium, lead, and molybdenum. The GWPS for cadmium is derived from the federally promulgated maximum contaminant level of 0.005 milligrams per liter (mg/L).

2024, GA EPD issued a letter of nonconcurrence stating that they do not currently agree with the ASD, based on the information provided. Additional data collection and evaluation of lithium SSLs are ongoing to supplement the ASD or support ACM efforts, as appropriate.

Pursuant to § 257.96, an ACM program was initiated for AP-1 in October 2022. The ACM Report for AP-1 was submitted to GA EPD on March 24, 2023 (Geosyntec, 2023a). In accordance with § 257.96(b), groundwater continues to be monitored at AP-1 under the assessment monitoring program while the ACM phase is implemented.

Since the ACM was initiated, assessment monitoring wells have been installed and incorporated into the detection monitoring well network to delineate, both horizontally and vertically, the extent of the beryllium, cobalt, and lithium SSLs at AP-1. To enhance the groundwater monitoring network at the Site at the request of GA EPD, Georgia Power installed 13 monitoring wells between December 2024 and March 2025, including eight paired wells on the Separator Dike and five wells on the southern side of AP-1. Additionally, six existing piezometers were reclassified to detection monitoring wells and added to the monitoring network. Following GA EPD's approval of the Minor Modification to revise the AP-1 permit boundary on July 23, 2025, WGWC-8 was replaced by a new detection monitoring well WGWC-8A and reclassified as a piezometer. Additionally, detection monitoring well WGWC-42 was reclassified to a horizontal assessment monitoring well. The current monitoring well network is shown on **Figure 2**; **Table 1** provides well construction details.

Statistical analysis of the August 2025 semiannual assessment monitoring groundwater data identified SSLs of the following Appendix IV constituents at concentrations exceeding the applicable GWPS at AP-1:

- Beryllium: WGWC-20 and WGWC-24
- Cobalt: WGWC-24
- Lithium: WGWC-19, WGWC-20, WGWC-21, and WGWC-28D

Details are provided in the *2025 Annual Groundwater Monitoring and Corrective Action Report* (2025 Annual Groundwater Report) to which this semiannual progress report is appended.

The groundwater data collected in August 2025 was used to generate the beryllium, cobalt, and lithium iso-concentration maps presented on **Figures 3** through **5**, respectively. Based on the groundwater data reported in the 2025 Annual Groundwater Report, the current horizontal and vertical delineation status of identified beryllium, cobalt, and lithium SSLs is as follows:

- WGWC-20 – beryllium and lithium are horizontally delineated downgradient by WGWC-27. Beryllium is vertically delineated by WGWC-28D, and vertical delineation of lithium is ongoing.

- WGWC-24 – beryllium and cobalt are horizontally delineated by the inward groundwater flow direction and by PZ-31 groundwater concentration data. Beryllium is vertically delineated by PZ-26D although cobalt is not delineated based on the most current groundwater concentration reported in August 2025. However, the lower limit of the calculated confidence interval for cobalt remains below the GWPS following the most current sampling event. Georgia Power will monitor the cobalt concentration trend in PZ-26D and apply adaptive site management strategy as necessary to maintain vertical delineation of the cobalt SSL in WGWC-24. Of note, there are significant decreasing trends of beryllium and cobalt in WGWC-24 based on statistical analysis of the latest groundwater data.

- WGWC-19 – lithium is horizontally delineated by WAMW-2. WAMW-1 does not vertically delineate the lithium SSL based on the most current groundwater concentration reported in August 2025; however, the lower limit of the calculated confidence interval for lithium in WAMW-1 remains below the GWPS following the most current sampling event. Georgia Power will monitor the lithium concentration trend in WAMW-1 and apply adaptive site management strategy as necessary to maintain vertical delineation of the lithium SSL in WGWC-19.

- WGWC-21 – lithium is horizontally delineated based on the inward groundwater flow direction in this area toward AP-1. Vertical delineation of lithium is currently under evaluation.

- WGWC-28D – horizontal and vertical delineation of lithium are ongoing.

In accordance with GA EPD guidance, data for monitoring wells with SSLs were further evaluated by Groundwater Stats Consulting using the Sen's Slope/Mann Kendall trend

test (**Figures 6a** through **6e**). The full statistical evaluation is included as an appendix to the 2025 Annual Groundwater Report.

- No statistically significant trends (at 95% confidence) were identified for beryllium in WGWC-20 or lithium in WGWC-28D during the current reporting period.

- Statistically significant decreasing trends (at 95% confidence) were identified for beryllium and cobalt in WGWC-24 during the current reporting period.

- Statistically significant increasing trends (at 95% confidence) were identified for lithium in WGWC-19, WGWC-20, and WGWC-21 during the current reporting period.

In addition to the assessment monitoring program at the Site, Georgia Power conducted a human health and ecological risk evaluation to evaluate beryllium and lithium that are present at SSLs at the Site. The evaluation provides one of many lines of evidence that will be evaluated and factored into the remedy selection process, which will be completed in accordance with § 257.97. Based on this risk evaluation, concentrations of beryllium and lithium detected in groundwater and surface water at AP-1 between November 2016 and October 2022 are not expected to pose a risk to human health or the environment (Geosyntec, 2023b). Data collected since October 2022 are generally consistent with data used in the risk evaluation; therefore, the conclusions provided in the *2023 Risk Evaluation Report* (Geosyntec, 2023b) are supported by current conditions. The risk evaluation will be updated by Georgia Power to evaluate the identified SSL constituents current at the time of preparing the Remedy Selection Report.

Georgia Power will continue to adaptively manage the Site and use ongoing data collection to evaluate the need for additional wells at AP-1. Pursuant to § 257.96, groundwater in the vicinity of AP-1 continues to be monitored during the ACM phase in accordance with the established assessment monitoring program.

1.4 Corrective Measures Evaluated

As discussed in the ACM Report, the following corrective measures were initially considered to be potentially feasible for use at AP-1.

1. Geochemical Approaches (In-Situ Injection)
2. Hydraulic Containment (Pump and Treat)

3. In-Situ Solidification/Stabilization (ISS)
4. Monitored Natural Attenuation (MNA)
5. Permeable Reactive Barrier (PRB)
6. Phytoremediation
7. Subsurface Vertical Barrier Walls

A comparative screening of the corrective measures is provided in **Table 2,** with the exception of ISS. ISS, also known as deep soil mixing, is a method for solidifying soil, immobilizing constituents of interest in the solid matrix. ISS technology was not retained as it is less effective or not applicable to dilute concentrations of lithium and beryllium in groundwater beyond the unit boundary as compared to the other options being evaluated. As such, no detailed evaluation on ISS is provided in **Table 2**.

PRB, phytoremediation, and subsurface vertical barrier wall corrective measures have since been removed from consideration based on retainage evaluations applicable to WGWC-20 and WGWC-24 presented in the August 2024 semiannual progress report (Geosyntec, 2024b) and the discussion provided in **Table 2**.

Georgia Power proactively initiated adaptive site management as outlined in the ACM Report (Geosyntec, 2023a) to support the groundwater remedy selection process and address potential changes in site conditions (e.g., successful reduction of constituent concentrations or changing trends) as appropriate during ash pond closure. The adaptive site management approach will take existing site conditions, including natural attenuation mechanisms, into account.

Characterization activities to evaluate attenuation mechanisms at the Site include collection of data necessary to progressively evaluate the existing and long-term effectiveness of these processes in the aquifer and reduce uncertainty for decision making at each screening step as listed in the USEPA guidelines for MNA of inorganic constituents (USEPA, 1999, 2007, and 2015). The 1999 MNA guidance originally introduced a “tiered approach” with three tiers of site-specific information, or lines of evidence, to evaluate the appropriate use of MNA at certain sites (USEPA, 1999). In 2007, the USEPA issued MNA technical guidance specific to inorganic contaminants (USEPA, 2007) that contained four “tiers.” The 2015 MNA guidance retains these four “tiers,” but describes them as “phases” as described below (USEPA, 2015). This 2015 MNA document for inorganic contaminants expands on and is designed to be a companion to the 1999 and 2007 MNA guidance. The phases are briefly outlined below:

- Phase I: Demonstration that the groundwater plume is *not expanding*.
- Phase II: Determination that the *mechanism and rate* of the attenuation process are sufficient.
- Phase III: Determination that the *capacity* of the aquifer is sufficient to attenuate the mass of contaminant within the plume and the *stability* of the immobilized contaminant is sufficient to resist re-mobilization.
- Phase IV: Design of a *performance monitoring program* based on an understanding of the mechanism of the attenuation process, and establishment of contingency remedies tailored to site-specific characteristics.

Georgia Power will address Phase IV, as appropriate, during the development of the future corrective action monitoring plan, after the final remedy selection report.

The data collection approach and the data interpretation presented within this semiannual progress report are informed by this tiered MNA guidance. It is noted, however, that the characterization data collected under this approach are also used to refine the conceptual site model (CSM) and evaluate other retained potential corrective measures, namely, in-situ injection and hydraulic containment.

1.5 Annual Potable Water Survey

An updated potable well survey of potential groundwater wells within a two-mile radius of AP-1 was conducted in October 2025 and consisted of reviewing federal, state, county records, and online sources. Surveys conducted by Environmental Data Resources (EDR) are included in **Appendix A**. Federal, state, county records and online sources outside of the EDR survey were also reviewed. No additional wells relative to the findings of the previous 2024 survey were identified during this review. The 2024 survey identified the following off-site wells:

- Properties at the following locations have been identified as having a public water source:
    - Property located approximately 0.3 miles southwest of AP-1, with geographic coordinates 33.40284, -85.06687 and address of 3428 Hollingsworth Ferry Road, Franklin, Georgia.

  - Property located approximately 0.8 miles south of AP-1, with geographic coordinates 33.39681, -85.05126 and address of 4430 Hollingsworth Ferry Road, Franklin, Georgia.

  - Property located approximately 1.0 mile south of AP-1, with geographic coordinates 33.39403, -85.04482 and address of 4870 Hollingsworth Ferry Road, Franklin, Georgia.

- The following additional locations have been found to have had a well at some point, but have been identified as currently having a public water source:

  - Property located approximately 0.2 miles southwest of AP-1, with geographic coordinates 33.40538, -85.06618 and address of 3343 Hollingsworth Ferry Road, Franklin, Georgia.

  - Property located approximately 0.5 miles southwest of AP-1, with geographic coordinates 33.40263, -85.06640 and address of 3430 Hollingsworth Ferry Road, Franklin, Georgia.

Properties with wells identified during the well surveys in addition to those identified in the EDR survey are either on public water or are located upgradient of AP-1. Furthermore, the risk evaluation results conducted for other wells in the vicinity are applicable to these newly identified wells.

Taking into account all identified wells, public water is available throughout most of the investigated area, supplied by Carroll County Water Authority and Heard County Water Authority. These well locations identified to the south/southwest of AP-1 are separated from AP-1 by the on-site landfill (currently in detection monitoring for groundwater) and/or topographic ridges that likely represent groundwater divides. Therefore, it is reasonable to expect the wells to be hydrologically separated from the site, and none are considered to be hydraulically downgradient. In topographically high areas, for example south of AP-1, hydraulic gradients also indicate localized flow inward towards the pond as shown in the potentiometric surface contour maps provided in the 2025 Annual Groundwater Report.

2.0 SUMMARY OF WORK COMPLETED

The following section summarizes the field investigations and data evaluations completed in support of the ACM program since the issuance of the prior semiannual progress report in August 2025 (Geosyntec, 2025b). The routine monitoring events associated with the assessment monitoring program are discussed in the 2025 Annual Groundwater Report, to which this semiannual progress report is appended.

2.1 Field Activities

Since the issuance of the prior semiannual progress report, field investigation activities included well abandonment, well installation, and groundwater sampling. No new well or piezometer installations were performed specifically for the ACM program for AP-1 during this semiannual reporting period. However, as noted in Section 1.3, the detection and assessment monitoring well networks were expanded with 19 new or reclassified wells during this reporting period. In addition, detection monitoring well WGWC-8 was reclassified as a piezometer and replaced with detection monitoring well WGWC-8A, while WGWC-42 was reclassified as a horizontal assessment monitoring well. The well installation report for WGWC-8A is provided in Appendix A of the 2025 Annual Groundwater Report.

Supplemental groundwater samples were collected in August 2025 from piezometers PZ-23D, PZ-31, PZ-32D, and PZ-33D. PZ-23D was sampled to provide additional information in support of SSL delineation. Data collected from these wells are presented and evaluated in the 2025 Annual Groundwater Report.

Additional supplemental samples were collected from interstitial wells PZA-2S and PZA-2M in August 2025, and in November 2025 from six additional wells: WGWC-19, WGWC-20, WGWC-21, WGWC-28D, GWA-28 and GWA-29. Interstitial wells PZA-2S and PZA-2M were sampled for lithium, strontium, and isotope analysis to support the evaluation of lithium SSLs northeast of AP-1. These two interstitial wells along with four additional piezometers (PZA1-S, PZA1-M, PZA1-D, and PZA2-D) were subsequently abandoned on August 28, 2025, in support of the ongoing construction activities within AP-1. The well abandonment report is provided in Appendix A of the 2025 Annual Groundwater Report. Four additional wells (WGWC-19, WGWC-20, WGWC-21, and WGWC-28D) and two landfill wells (GWA-28 and GWA-29), to serve as surrogate background wells, were also sampled for lithium, strontium, and isotope analysis to support the evaluation of lithium SSLs northeast of AP-1.

2.2 Data Analysis Activities

Analytical results from the August 2025 assessment monitoring event, along with supplemental data collected from PZ-23D, PZ-31, PZ-32D, and PZ-33D, are evaluated in the 2025 Annual Groundwater Report to characterize the nature and extent of beryllium, cobalt, and lithium impacts downgradient of AP-1. The results for these samples are presented in Table 5 of that report, and the corresponding laboratory data are provided in Appendix C. Results for the isotope analysis will be provided in the next semiannual progress report.

3.0 SUMMARY OF RESULTS

Aside from the supplemental data collected from PZ-23D, PZ-31, PZ-32D, and PZ-33D, which are discussed in the 2025 Annual Groundwater Report, there are no new field or analytical laboratory results related to the ACM program to discuss during this progress reporting period.

4.0 UPDATED CONCEPTUAL SITE MODEL

As noted previously, the closure strategy for AP-1 will be closure by removal, thereby providing a source control measure that reduces potential for migration of CCR-related constituents to groundwater. Data collected since the previous semiannual progress report are consistent with and generally agree with the CSM described in the previous semiannual remedy selection and design progress report (Geosyntec, 2025b).

- Previous characterization of aquifer solids downgradient of AP-1 indicate the presence of iron oxides and clays could potentially provide surface sites and ion exchange capacities to attenuate inorganics.

- Previous sorption and desorption studies confirm that cobalt and beryllium strongly sorb onto aquifer solids. Beryllium and cobalt showed strong sorption with minimal desorption under representative site conditions, indicating a low potential for remobilization. Overall, results indicate aquifer solids have a substantial capacity to attenuate both metals of interest, supporting the use of the calculated distribution coefficient (K_d) values in fate and transport modeling.

- During previous studies, lithium was detected in the minerals of aquifer solids collected from a location in the vicinity of wells with SSLs of lithium. Solid phase lithium was observed to be associated with environmentally available fractions.

- The laboratory studies presented to date are consistent with groundwater monitoring results that indicate variable attenuation of site-specific constituents is occurring downgradient of AP-1.

5.0 UPDATED EVALUATION OF CORRECTIVE MEASURES

Based on the data collected to date, the following potential corrective measures will be retained for further evaluation.

- Geochemical Injections:
    - Geochemical injections include the use of an injection well network, or other means of introducing reagents or air into the subsurface, to promote conditions suitable for the attenuation of beryllium and cobalt and possibly lithium. A variety of pH and/or oxidation-reduction (redox)-altering technologies are available which can incorporate biological processes, chemical oxidants and reductants, and/or mechanical processes such as air sparging. These processes can be used to decrease the mobility of beryllium and cobalt. For example, beryllium and cobalt can be sorbed to iron and manganese oxides or co-precipitated with sulfide minerals. In-situ treatment techniques to sequester lithium into the formation of hydroxide minerals have been successful at the laboratory scale for lithium remediation, however treatment of lithium via geochemical injection has yet to be demonstrated in the field. This approach would mainly be evaluated for use at WGWC-20 to potentially address beryllium and lithium and WGWC-19, WGWC-21, and WGWC-28D to address lithium. Currently the groundwater flow direction observed at WGWC-24, where SSLs of beryllium and cobalt have been identified, is inward toward AP-1. Given this condition and the observed decreasing concentration trends, the applicability of this corrective measure should be considered for this location.

- Hydraulic Containment (Pump and Treat):
    - Hydraulic containment refers to the use of groundwater extraction to induce a hydraulic gradient for hydraulic capture or control the migration of impacted groundwater. This approach uses extraction wells or trenches to capture groundwater, which may subsequently require above-ground treatment and permitted discharge to a receiving water feature, reinjection into the groundwater, or reuse. Groundwater extraction and above-ground treatment is potentially a viable option within the alluvium and fractured bedrock zone as a supplemental or adaptive measure to treat groundwater

near compliance wells if warranted by site conditions. However, it may not be suited or effective for extraction to treat groundwater near deeper wells with slow aquifer recharge. A screening-level analysis indicates that hydraulic containment remains a viable corrective measure.

- Monitored Natural Attenuation:

    - MNA relies on natural attenuation processes to achieve site-specific remediation objectives within a reasonable time frame relative to more active methods. Under certain conditions (e.g., through sorption, mineral precipitation or redox reactions), MNA effectively reduces the dissolved concentrations of inorganic constituents in groundwater. The characterization of aquifer solids presented in previous progress reports suggest that the aquifer matrix has the potential for attenuation of the various constituents of interest at the Site. Therefore, MNA remains a viable corrective measure especially for use at WGWC-24 to address beryllium and cobalt. MNA may either be a stand-alone corrective measure or be part of a combination of corrective measures to address groundwater impacts.

Continued groundwater monitoring and updates to the statistical analyses will further refine the CSM and allow for the continued evaluation of an appropriate groundwater corrective measure at the Site.

6.0 PLANNED ACTIVITIES AND ANTICIPATED SCHEDULE

The proposed closure by removal approach provides a source control measure that reduces the potential for migration of CCR constituents to groundwater. During the closure construction of AP-1, temporary changes in site conditions may occur that must be considered as part of remedy selection. Georgia Power proactively initiated adaptive site management as outlined in the ACM Report (Geosyntec, 2023a) to support the remedial strategy and address potential changes in site conditions as appropriate. The adaptive site management approach may be adjusted over the Site's life cycle as new site information and technologies become available. To this end, Georgia Power will continue its data collection efforts as necessary in support of efforts to refine the CSM and to continue assessment of the feasibility of the corrective measures retained for further evaluation. Once sufficient data are available to make technically sound decisions regarding the ability to implement one or more specific corrective measures, necessary steps will be taken to design and implement a remedy for AP-1 in accordance with § 257.98.

Supplementary data collection and evaluation activities proposed to be completed during the next semiannual reporting period include:

- Continue evaluation of beryllium, cobalt, and lithium in assessment monitoring wells.
- Continue the ongoing characterization of the nature and extent of lithium downgradient of WGWC-19, WGWC-20, WGWC-21, and WGWC-28D, including additional groundwater sampling and lithium and strontium isotopic analyses.
- Develop a geochemical conceptual site model (GCSM) to evaluate the horizontal and vertical nature and extent of SSLs and identify the mechanisms of mobilization and potential attenuation.
- Assess the application of geochemical modeling to support remedy selection.

Georgia Power will continue to prepare semiannual progress reports to document AP-1 groundwater conditions, results associated with additional data collection, and the progress in selecting and designing a groundwater remedy in accordance with § 257.97(a). Georgia Power will include future semiannual progress reports in routine groundwater monitoring and corrective action reports. Record keeping, notifications, and

publicly accessible internet site requirements for the semiannual progress reports will be provided in accordance with § 257.105(h)(12), § 257.106(h)(9), and § 257.107(h)(9), respectively.

Notes:
Elevations shown are in datum NAVD88, which indicates feet (ft) in elevation referenced to the North American Vertical Datum 1988.
Coordinates in North American Datum (NAD) 1983, State Plane, Georgia-West, feet. Survey of WGWA-1 through WGWA-18, WGWC-8 through WGWC-19, WAMW-1 and WAMW-2, and PZ-01 through PZ-20 was completed by GEL Solutions and certified June 16, 2020. Survey of WGWC-20 through WGWC-25, and PZ-23D through PZ-29D was completed by GEL Solutions and certified on November 17, 2020. Survey of WGWC-26D and WGWC-27 was completed by GEL Solutions and certified on October 13, 2022. Survey of WGWC-28D was completed by GEL Solutions and certified September 5, 2023. Survey of PZ-30 and PZ-31 was completed by GEL Solutions and certified July 1, 2024. Survey of PZ-32D and PZ-33D was completed by GEL Solutions and certified November 7, 2024. Survey of WGWC-30 through WGWC-38S was completed by Thompson Engineering and certified on April 9, 2025. Survey of WGWC-8A was completed by Thompson Engineering and certified on October 31, 2025.
Ground surface elevation defined at the survey nail installed within the well pad.
Well screen elevations are calculated by subtracting the depths to top and bottom of the well screen from the ground surface elevation.
Total well depth accounts for sump if data provided on construction logs.
PZ-29D, PZ-29S, PZ-15, PZ-12, PZ-10, and PZ-20 were reclassified to detection wells WGWC-37D, WGWC-37S, and WGWC-39 though WGWC-42, respectively.
WAMW-2 and WGWC-42 were reclassified to assessment wells.
WGWC-8 was reclassified as a piezometer following the August 2025 semiannual sampling event. WGWC-8A was installed as a replacement of WGWC-8.

Regulatory Citation for Criteria:		40 CFR 257.96(C)(1)		40 CFR 257.96(C)(1)	40 CFR 257.96(C)(1)
Corrective Measure	**Description**	**Performance**	**Reliability**	**Ease of Implementation**	**Potential Impacts**
Geochemical Approaches (In-Situ Injection)	Use of an injection well network, or other means of introducing reagents or air into the subsurface, to promote either anaerobic or aerobic attenuation of beryllium (Be), Cobalt (Co), and potentially lithium (Li), although further evaluation and testing would be needed to understand applicability to Li attenuation. The main attenuation mechanism for Be and Co is sorption, which is more dependent on pH than oxidation-reduction (redox) conditions. Under anaerobic conditions, Be and Co would be attenuated within sparingly soluble sulfide minerals. Under aerobic conditions, soluble iron or manganese and oxygen (either via air sparging or through a chemical oxidant) would be injected to promote the formation of iron or manganese (oxy-) hydroxides for subsequent sorption of Be and Co onto these mineral phases. If sufficient iron is present in groundwater, the use of air sparging alone may be considered to precipitate iron (oxy-) hydroxides for sorption. In-situ chemical oxidation (ISCO) or in-situ chemical reduction (ISCR) can be used to chemically alter the redox environment in the subsurface to affect the mobility of certain inorganic compounds, including Be and Co.	The effective immobilization of Be and Co at neutral to alkaline pH can be effective at achieving groundwater protection standards (GWPS) within a reasonable time frame. This immobilization has been shown at other sites under aerobic and anaerobic conditions; however, the anaerobic approach (involving the injection of an electron donor together with iron or manganese and sulfur) requires careful study and testing. While aerobic approaches are somewhat less complex, additional aquifer characterization is needed to further evaluate these options. Li is generally characterized as nonreactive, and the application of in-situ injection treatment for immobilization would need to be further investigated to evaluate efficacy.	Reliability dependent on permeability of the subsurface and the amount and distribution of secondary iron or manganese (oxy-) hydroxides (for aerobic approach), or electron donors and soluble iron or manganese and sulfur that can be consistently distributed (for anaerobic approach). Reliable technology if injected materials can be distributed throughout the impacted aquifer. Bench- and/or pilot-scale treatability testing programs are needed to understand the biogeochemical processes that would effectively reduce migration of Be, Co, and Li in groundwater.	Moderate. Installation of injection well network or other injection infrastructure would be required. Alternative installation approaches may be considered, such as along the downgradient edge of impacted groundwater, which would function similar to a PRB application. The potential for clogging of aquifer matrix and/or injection well infrastructure is an implementation consideration. Injectate distribution during injections (i.e., radius of influence) needs to be evaluated, especially given the shallow bedrock environment in the vicinity of WGWC-20. Current groundwater flow conditions are towards AP-1 in the vicinity of WGWC-24, therefore the relevant applicability of this corrective measure needs to be considered for this location. Consideration of the technical practicability must be given when evaluating the application of this technology within the bedrock and at depths consistent with WGWC-28D and a potential deeper vertical delineation well. Distribution and implementation constraints may not allow for injection and/or sufficient injectant distribution under those conditions.	Minimal impacts are expected if remedy works as designed, based on a thorough pre-design investigation, geochemical modeling, and bench/pilot study results. Redox-altering processes have the potential to mobilize naturally-occurring constituents as an unintended consequence if not properly studied and implemented.
Hydraulic Containment ("Pump and Treat")	Hydraulic containment refers to the use of groundwater extraction to induce a hydraulic gradient for hydraulic capture or control the migration of impacted groundwater. This approach uses extraction wells or trenches to capture groundwater, which may subsequently require above-ground treatment and permitted discharge to a receiving water feature, reinjection into the aquifer, or reuse (e.g., land application, CCR conditioning, etc.). It is applicable to a variable mix of inorganic constituents, including dissolved Be, Co, and Li.	Pump and treat (P&T) is effective at providing hydraulic control, but it is unclear whether full groundwater remediation can be achieved without further understanding attenuation mechanisms at the Site. At WGWC-20 and WGWC-24, implementation of the corrective measure is contingent on completing additional assessment activities (i.e., high-resolution site characterization, pump tests, flow modeling, and capture zone analysis). This is needed to refine the constituent distribution in the subsurface to target specific flow zones for pumping for improved mass recovery efficiency/effectiveness and to further evaluate the potential remedy performance. Current groundwater flow conditions are towards AP-1 in the vicinity of WGWC-24, therefore the relevant applicability of this corrective measure needs to be considered for this location.	Generally reliable for hydraulic containment, but uncertainty exists whether groundwater remediation goals can be achieved within a reasonable time frame without further understanding attenuation mechanisms.	Moderate. Proven approach for hydraulic control, and supplemental installation of extraction wells/trenches is fairly straightforward. The extracted groundwater may potentially require an above-ground treatment system, although one may be available as a result of closure activities. A variety of sorption and precipitation approaches exist for ex-situ treatment of Be and Co, while this would need to be further evaluated for Li. Operation and maintenance (O&M) requirements are expected to include upkeep of infrastructure components (pumps, pipes, tanks, instrumentation and controls, above-ground treatment system) and handling of treatment residuals. Current groundwater flow conditions are towards AP-1 in the vicinity of WGWC-24, therefore the relevant applicability of this corrective measure needs to be considered for this location.	Moderate. The main potential impacts are related to the presence and operation of an on site above-ground water treatment facility and related infrastructure to convey and treat extracted groundwater. Pumping activity may unintentionally alter the geochemistry within the hydraulic capture zone.
Monitored Natural Attenuation (MNA)	MNA relies on natural attenuation processes to achieve site-specific remediation objectives within a reasonable time frame relative to more active methods. Under certain conditions (e.g., through sorption, mineral precipitation or oxidation-reduction reactions), MNA effectively reduces the dissolved concentrations of inorganic constituents in groundwater. Attenuation mechanisms for inorganic constituents at CCR sites, including Be and Li at WGWC-20 and Be and Co at WGWC-24, are either physical (e.g., dilution, dispersion, flushing, and related processes) or chemical (sorption or oxidation reduction reactions). Chemical attenuation processes include precipitation and sorption reactions such as adsorption on the surfaces of soil minerals, absorption into the matrix of soil minerals, or partitioning into organic matter. Further, redox reactions, via abiotic or biotic processes, can transform the valence states of some inorganic constituents to less soluble and thus less mobile forms. For Be and Co, the main attenuation processes include sorption to iron and manganese oxides and for Li, physical attenuation. Further evaluation of chemical attenuation mechanisms for Li would need to be completed.	Physical and chemical MNA mechanisms for Be, Co, and Li, including dilution, dispersion, sorption, and oxidation reduction reactions, can be effective at achieving GWPS within a reasonable time frame. Attenuation processes for Be, Co, and Li are already occurring at the site as evidenced by data from the assessment wells associated with WGWC-20 and WGWC-24. Source control will improve the mass balance such that the buffer capacity of the aquifer is unlikely to be exhausted. The attenuation processes already at work for Be and Li at WGWC-20 and Be and Co at WGWC-24 will further enhance the effectiveness of MNA.	Reliable as long as the aquifer conditions that result in Be, Co, and Li attenuation remain favorable (and/or are being enhanced) and sufficient attenuation capacity is present. MNA is reliable and can either be used as a stand-alone corrective measure for groundwater impacted by dissolved Be and Co, or in combination with a second technology for Be, Co, or Li.	Reasonably implementable with respect to infrastructure, but moderate to complex with respect to documentation. Proven approach, but additional data are needed to show that the existing attenuation capacity is sufficient to meet site objectives within a reasonable timeframe. A monitoring well network already exists to implement future groundwater monitoring efforts.	None. MNA relies on the natural processes active in the aquifer matrix to reduce constituent concentrations without disturbing the surface or the subsurface.
Permeable Reactive Barrier	Permeable reactive barrier (PRB) technology typically involves the installation of a permeable subsurface wall constructed with reactive media for the removal of constituents as groundwater passes through. The effectiveness of a PRB on the removal of Be and Li is relatively unknown. Further research and testing are required to see if Be and Li could be attenuated by a PRB. Either ZVI- Carbon matrix or solid carbon (bio-barrier) are most likely viable for the removal of Co. The carbon could be composed of peat moss, mulch or another carbon source. Exact placement of the PRB is contingent on finalization of the nature and extent characterization and subsurface geologic considerations. PRBs can also be constructed as "funnel and gate" systems, where a barrier wall directs groundwater to a smaller "treatment gate" filled with reactive media.	The PRB approach would be expected to achieve GWPS for Be, Co, and Li as impacted groundwater passes through the reactive barrier, if an appropriate reactive barrier can be identified in further evaluations. Additional testing is required to select the appropriate sorptive media mix that will not result in generation of unwanted byproducts and be applicable for Be and Li, ideally in concurrence with Co.	Reliable groundwater corrective measure, but loss of reactivity over time may require re-installation depending on the duration of the remedy. Additional data collection, including conducting a bench and/or pilot study, is needed to better characterize current attenuation mechanisms and/or select the appropriate reactive media mix for a PRB wall.	Difficult. Trenching at depth through bedrock (up to 40 feet) would be required to install a mix of reactive materials in the subsurface. Placement of reactive material in bedrock fracture zones to capture groundwater would be a complex construction method. Once installed, treatment will be passive and O&M requirements are minimal if replacement of the PRB is not necessary.	Minimal impacts are expected following the construction of the remedy. However, certain PRB methods have the potential to create anaerobic conditions downgradient of the PRB wall that may mobilize redox-sensitive naturally-occurring constituents. These conditions need to be carefully monitored. Short-term impacts during the construction of the remedy can be mitigated through appropriate planning and health and safety measures.
Phytoremediation / *TreeWells*	Phytoremediation uses trees and other plants to degrade or immobilize constituents or achieve hydraulic control without the need for an above-ground water treatment system and infrastructure. Within the context of AP-1, this corrective measure would likely use an engineered (proprietary) TreeWell phytoremediation system along the point of compliance or downgradient edge of the impacted groundwater for hydraulic control. The system promotes root development to the targeted groundwater zone (depth), allowing for hydraulic control of impacted groundwater. In addition, immobilization of Be, Co, and Li within the root zone as well as incidental uptake of dissolved Be, Co, and Li with groundwater is expected to occur concurrent with hydraulic control.	Once established (typically at the end of the third growing season), a TreeWell system is effective for providing hydraulic containment of groundwater, and potential reduction of Be, Co, and Li concentrations through immobilization and/or uptake and sequestration in the tree biomass; however, the main purpose is to provide hydraulic control. Additional aquifer testing and/or groundwater flow modeling would be needed to confirm the suitability of this technology in the shallow bedrock and variable lithologic subsurface at WGWC-20 and WGWC-24.	Engineered phytoremediation is a proven technology where hydrogeologic factors are taken into account (e.g., hydraulic conductivity, flow velocity, depth to impacted groundwater zone, etc.). This is considered an active remedial approach through the use of trees as the "pumps" driving the system. Careful design will be needed to select the proper species, which will include consideration of groundwater chemistry, plant uptake of constituents, the nature of the subsurface, and groundwater flow modeling to evaluate the required number and placement of TreeWell units.	Reasonably implementable to moderate. Engineered approach has been proven effective, and specific depth zones can be targeted. Trees are installed as "tree wells" in a large diameter boring to get the roots deep enough to intercept impacted groundwater flow paths. Area must be clear of above and below-ground structures (i.e., power lines). The system, once established (approximately three growing seasons), is a self-maintaining, sustainable remedial system that has no external energy requirements and little maintenance (i.e., efforts normally associated with landscaping).	Minimal impacts are expected. In fact, there are several positive impacts expected, including enhanced aesthetics, wildlife habitat, and limited energy consumption.
Subsurface Vertical Barrier Walls	This approach involves placing a barrier to groundwater flow in the subsurface, frequently around a source area, to prevent future migration of dissolved constituents in groundwater from beneath the source to downgradient areas. In general, barrier walls are designed to provide containment; localized treatment achieved through the sorption or chemical precipitation reactions from construction of the walls are incidental to the design objective. A variety of barrier materials can be used, including cement and/or bentonite slurries, geomembrane composite materials, or driven materials such as steel or vinyl sheet pile. Groundwater extraction from upgradient of the barrier may be required to avoid groundwater mounding behind the barrier. A barrier wall might be used in conjunction with a "funnel and gate" system for a PRB rather than a stand-alone technology. Barrier walls can also be used in downgradient applications.	Barrier walls are a proven technology for seepage control and/or groundwater cutoff at impoundments. Slurry walls can be installed up to approximately 90 ft below ground surface (bgs), and groundwater impacts at the site are observed at depths less than 40 ft bgs. Within the context of WGWC-20, groundwater could either be directed to "treatment gates" for passive treatment (in a PRB) or migration of impacted groundwater could be minimized via barrier wall installation. The inward groundwater flow condition at WGWC-24 may not necessitate corrective action at this time. Additional subsurface investigations, aquifer testing, and compatibility testing with site-specific groundwater will be needed to assess applicability in the shallow bedrock subsurface environment.	Generally reliable as a barrier to groundwater flow; however, treatment of downgradient groundwater is typically not the primary objective.	Moderate to difficult. Trenching will be required to fill in the various slurry mixes; alternatively, sheet pile installations can be accomplished without excavation of trenches. The application of barrier walls is limited by the depth of installation and subsurface geology, which will be a consideration at AP-1. Installation methods and materials are readily available. Once installed, above-ground infrastructure to pump and treat groundwater may be required. O&M requirements are expected to include upkeep of infrastructure components (pumps, pipes, tanks, instrumentation and controls, above-ground treatment system) and handling of treatment residuals.	Minimal impacts are expected following the construction of the remedy. Short-term impacts during the construction of the remedy can be mitigated through appropriate planning and health and safety measures. Changes to groundwater flow patterns due to installation of the barrier wall are expected, which can affect other aspects of groundwater corrective action. Pumping activity may unintentionally alter the geochemistry within the hydraulic capture zone that may result in the mobilization of other constituents that may require treatment.

Regulatory Citation for Criteria:	40 CFR 257.96(C)(2)	40 CFR 257.96(C)(3)			
Corrective Measure	**Time Requirement to Begin/Complete**	**Institutional Requirements**	**Other Env or Public Health Requirements**	**Relative Costs**	**Evaluation of Retainage**
Geochemical Approaches (In-Situ Injection)	Installation of the injection network can be accomplished relatively quickly (1 to 2 months). However, a thorough pre-design investigation, geochemical modeling, and/or bench- and/or pilot-testing will be required to obtain design parameters prior to design and construction of the corrective measure, which may take up to 24 months. Once installed, the time required to achieve GWPS within the treatment area may be relatively quick but depends on the attenuation process kinetics of each targeted constituent. The time for complete distribution of the injected materials throughout the treatment area is also variable.	No institutional requirements are expected at this time.	Based on the results of the Risk Evaluation Report (Appendix A of the ACM Report), SSL-related constituents (Li and Be) evaluated from AP-1 are not expected to pose a risk to human health and the environment; Co will be added to a revised version of the Risk Evaluation as part of the Remedy Selection Report. Georgia Power will continue to proactively evaluate the data and update this evaluation, if necessary. Based on downgradient sampling results, there currently are no complete exposure pathways for potential receptors downgradient of WGWC-20; a risk evaluation in vicinity of WGWC-24 is pending. Potential for mobilization of redox-sensitive constituents exists during implementation of an anerobic attenuation approach.	Medium to high (depending on expanse of injection network required, injection dispersion requirements in bedrock, and injectate volume required per derived design parameters).	Remedial approach retained as a targeted injection layout may result in decreased concentrations of Be and Co in groundwater below the GWPS; may be used as a stand-alone corrective measure or in conjunction with other potential groundwater corrective measures. Further evaluation would be required to understand applicability and efficacy to treat Li.
Hydraulic Containment ("Pump and Treat")	Installation of extraction wells and/or trenches can be accomplished relatively quickly (1 to 2 months). However, additional aquifer testing, system design and installation, and permit approval may be required, which may take up to 24 months. The initiation of the approach would be contingent on the start-up of the wastewater treatment infrastructure (if being utilized). Hydraulic containment can be achieved relatively quickly after startup of the extraction system, but uncertainty exists with respect to the time to achieve GWPS without additional data collection to better understand attenuation mechanisms for Be, Co, and Li.	Depending on the effluent management strategy, modifications to the existing NPDES permit may be required, or obtaining a UIC permit will be needed if groundwater reinjection is chosen.	Based on the results of the Risk Evaluation Report (Appendix A of the ACM Report), SSL-related constituents (Li and Be) evaluated from AP-1 are not expected to pose a risk to human health and the environment; Co will be added to a revised version of the Risk Evaluation as part of the Remedy Selection Report. Georgia Power will continue to proactively evaluate the data and update this evaluation, if necessary. Based on downgradient sampling results, there currently are no complete exposure pathways for potential receptors downgradient of WGWC-20; a risk evaluation in vicinity of WGWC-24 is pending. Above-ground treatment components may need to be present for an extended period of time, generating residuals requiring management and disposal.	Medium to high (depending on remedy duration, complexity of above-ground treatment system, and volume of water processed).	P&T is a potentially viable corrective measure for Be, Co, and Li in groundwater and will be retained for further evaluation.
Monitored Natural Attenuation (MNA)	The infrastructure to initiate MNA is already in place. Demonstrating attenuation mechanisms and capacity can be time-consuming and can take up to 24 months. MNA is expected to be successful within a reasonable time frame following pond closure. Engineering measures will be implemented to minimize potential impacts to the subsurface during closure activities and routine groundwater monitoring will be used to verify that groundwater impacts remain stable or decrease over time.	No institutional requirements are expected at this time.	Based on the results of the Risk Evaluation Report (Appendix A of the ACM Report), SSL-related constituents (Li and Be) evaluated from AP-1 are not expected to pose a risk to human health and the environment; Co will be added to a revised version of the Risk Evaluation as part of the Remedy Selection Report. Georgia Power will continue to proactively evaluate the data and update this evaluation, if necessary. Based on downgradient sampling results, there currently are no complete exposure pathways for potential receptors downgradient of WGWC-20; a risk evaluation in vicinity of WGWC-24 is pending. Little to no physical disruption to remediation areas and no adverse construction related impacts are expected on the surrounding community.	Low. Minimal cost requirements.	Under current conditions, attenuation processes for Be, Co, and Li are already occurring as evidenced by groundwater data from assessment wells associated with WGWC-20 and WGWC-24. Therefore, MNA is a potentially viable corrective measure and will be retained for further evaluation, either as a stand-alone corrective measure or in conjunction with other potential groundwater corrective measures.
Permeable Reactive Barrier	Installation of a PRB can be accomplished relatively quickly (6 to 12 months), depending on the final location and configuration. WGWC-20 and WGWC-24 would require installation of two systems for use in both locations due to distance, however current groundwater flow for WGWC-24 is inward toward AP-1 and may not necessitate corrective action at this time. Bench- and/or pilot-testing would be required to obtain design parameters prior to design and construction of the remedy, which may take up to 24 months. Once installed, the time to achieve GWPS downgradient of the PRB is anticipated to be relatively quick.	No institutional requirements are expected at this time.	Based on the results of the Risk Evaluation Report (Appendix A of the ACM Report), SSL-related constituents (Li and Be) evaluated from AP-1 are not expected to pose a risk to human health and the environment; Co will be added to a revised version of the Risk Evaluation as part of the Remedy Selection Report. Georgia Power will continue to proactively evaluate the data and update this evaluation, if necessary. Based on downgradient sampling results, there currently are no complete exposure pathways for potential receptors downgradient of WGWC-20; a risk evaluation in vicinity of WGWC-24 is pending. Following installation, the remedy is passive (but may require replacement). However, certain treatment media (such as ZVI) have the potential to mobilize naturally-occurring constituents downgradient of the PRB.	High (for installation) - minimal O&M requirements if replacement is not necessary.	Due to limited space and significant infrastructure downgradient of WGWC-20 and the direction of groundwater flow at WGWC-24 inward to AP-1, PRB has not been retained for further consideration.
Phytoremediation / *TreeWells*	The design phase will require groundwater modeling for optimal placement of the TreeWell units, which may take up to 6 months. Additional aquifer testing and design will likely be required, which may take up to 24 months. Depending on the number of required units, the installation effort is expected to last several weeks. Hydraulic capture/control is expected approximately three years after planting and system performance is expected to further improve over time.	No institutional requirements are expected at this time.	Based on the results of the Risk Evaluation Report (Appendix A of the ACM Report), SSL-related constituents (Li and Be) evaluated from AP-1 are not expected to pose a risk to human health and the environment; Co will be added to a revised version of the Risk Evaluation as part of the Remedy Selection Report. Georgia Power will continue to proactively evaluate the data and update this evaluation, if necessary. Based on downgradient sampling results, there currently are no complete exposure pathways for potential receptors downgradient of WGWC-20; a risk evaluation in vicinity of WGWC-24 is pending. Following installation, the remedy is passive and does not require external energy.	Medium to high (for installation) - minimal O&M requirements.	Given groundwater depth and SSL exceedance depth at the Site, phytoremediation is likely not a viable groundwater corrective measure. In addition, the fractured shallow bedrock, variable subsurface lithology, and significant infrastructure in the vicinity will make plant selection and planting layout difficult.
Subsurface Vertical Barrier Walls	Installation of a barrier wall can be accomplished relatively quickly (6 to 12 months), depending on the final location and configuration. However, design and additional aquifer and compatibility testing will be required, which may take up to 24 months. Once installed, preventing migration of constituents dissolved in groundwater is anticipated to be relatively quick. Since this approach does not treat the downgradient area of impacted groundwater but prevents migration from a source area, it will likely have to be maintained long-term and coupled with other approaches.	No institutional requirements are expected at this time.	Based on the results of the Risk Evaluation Report (Appendix A of the ACM Report), SSL-related constituents (Li and Be) evaluated from AP-1 are not expected to pose a risk to human health and the environment; Co will be added to a revised version of the Risk Evaluation as part of the Remedy Selection Report. Georgia Power will continue to proactively evaluate the data and update this evaluation, if necessary. Based on downgradient sampling results, there currently are no complete exposure pathways for potential receptors downgradient of WGWC-20; a risk evaluation in vicinity of WGWC-24 is pending. Due to the need for groundwater extraction associated with barrier walls, above-ground treatment components may need to be present for an extended period of time, generating residuals requiring management and disposal.	High (depending on length and depth of wall, subsurface geologic considerations, remedy duration and complexity of above-ground treatment system).	Due to limited space and significant infrastructure downgradient of WGWC-20 and the direction of groundwater flow at WGWC-24 inward to AP-1, subsurface vertical barrier walls have not been retained for further consideration.

- 0.040 Lithium GWPS Iso-Concentration Contour (mg/L) (dashed where inferred)
- Approximate AP-1 Boundary

Notes:
1. Concentration data from groundwater samples was collected in August 2025.
2. Concentrations are reported in milligrams per liter (mg/L).
3. Water level elevation recorded on August 11, 2025. Elevation provided in feet (ft) referenced to the North American Vertical Datum (NAVD) 88.
4. The Groundwater Protection Standard (GWPS) for Lithium is 0.040 mg/L.
5. J - Estimated value and detected between the analytical method detection limit and the reporting limit.
6. Data in parentheses were not used to develop iso-concentration contours. These wells are screened in a different zone or lithologic material in the aquifer.
7. Detection Monitoring Well WGWC-8A was installed October 2025, following the semiannual monitoring event.
8. WGWC-42 was reclassified as a Horizontal Assessment Monitoring Well and WGWC-8 was reclassified as a Piezometer following the semiannual monitoring event.
9. Service Layer Credit Sources:
- Immediate vicinity of AP-1: SAM LLC, June 24, 2025.
- Surrounding area: SAM LLC, January 30, 2024, and Source: Esri, Maxar, Earthstar Geographics, and the GIS User Community.

Elevation:	771 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	33085-D1 LOWELL, GA
Version Date:	1982

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

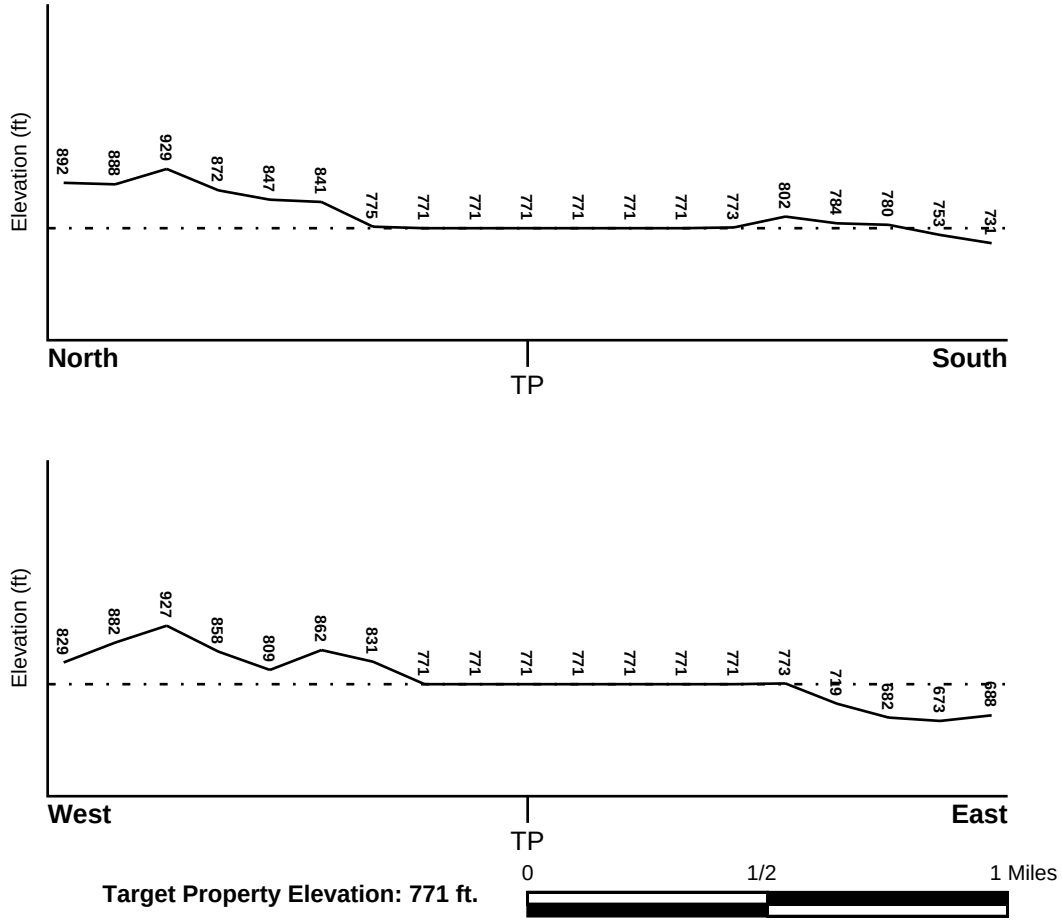
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
13077C0095D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOWELL	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Dam

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Louisa

Soil Surface Texture: weathered bedrock

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	16 inches	83 inches	weathered bedrock	Not reported	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6 Min: 4.5
2	0 inches	5 inches	gravelly fine sandy loam	Not reported	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6 Min: 4.5
3	5 inches	16 inches	gravelly loam	Not reported	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6 Min: 4.5

Soil Map ID: 4

Soil Component Name: Madison

Soil Surface Texture: gravelly fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6 Min: 4.5
2	5 inches	35 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6 Min: 4.5
3	35 inches	51 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

DNR Managed Lands
Source: Department of Natural Resources
Telephone: 706-557-3032
This dataset provides 1:24,000-scale data depicting boundaries of land parcels making up the public lands managed by the Georgia Department of Natural Resources (GDNR). It includes polygon representations of State Parks, State Historic Parks, State Conservation Parks, State Historic Sites, Wildlife Management Areas, Public Fishing Areas, Fish Hatcheries, Natural Areas and other specially-designated areas. The data were collected and located by the Georgia Department of Natural Resources. Boundaries were digitized from survey plats or other information.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
