RE: Project: YAT AP-3, A, B/B', R6-RAD
Pace Project No.: 92812846

Dear Trey Singleton:

Enclosed are the analytical results for sample(s) received by the laboratory between August 13, 2025 and August 15, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: YAT AP-3, A, B/B', R6-RAD
Pace Project No.: 92812846

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92812846

[1] ARCADIS

[2] DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

	Effective Date: 05/24/2024

Laboratory receiving samples:
Asheville ☐ Eden ☐ Greenwood ☐ Huntersville ☐ Raleigh ☐ Mechanicsville ☐ Atlanta ☑ Kernersville ☐

Sample Condition Upon Receipt

Client Name: CA Power

Project #: WO# : 92812846

92812846

Courier: ☐ Commercial ☐ Fed Ex ☐ Pace ☐ UPS ☐ USPS ☐ Other:____ ☑ Client

Custody Seal Present? ☑ Yes ☐ No **Seals Intact?** ☑ Yes ☐ No ☐ N/A

Date/Initials Person Examining Contents: 5/22/25 aw

Packing Material: ☑ Bubble Wrap ☐ Bubble Bags ☐ None ☐ Other

Biological Tissue Frozen? ☐ Yes ☐ No ☑ N/A

Thermometer:
☐ IR Gun ID: 214 **Type of Ice:** ☑ Wet ☐ Blue ☐ None

Cooler Temp: 4.5 **Correction Factor:** Add/Subtract (°C) 0

Temp should be above freezing to 6°C
☐ Samples out of temp criteria. Samples on ice, cooling process has begun

Cooler Temp Corrected (°C): 4.5

USDA Regulated Soil (☐ N/A, water sample)
Did samples originate in a quarantine zone within the United States: CA, NY, or SC (check maps)? ☐ Yes ☐ No

Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? ☐ Yes ☐ No

				Comments/Discrepancy:
Chain of Custody Present?	☑ Yes	☐ No	☐ N/A	1.
Samples Arrived within Hold Time?	☑ Yes	☐ No	☐ N/A	2.
Short Hold Time Analysis (<72 hr.)?	☐ Yes	☑ No	☐ N/A	3.
Rush Turn Around Time Requested?	☐ Yes	☑ No	☐ N/A	4.
Sufficient Volume?	☑ Yes	☐ No	☐ N/A	5.
Correct Containers Used?	☑ Yes	☐ No	☐ N/A	6.
-Pace Containers Used?	☑ Yes	☐ No	☐ N/A	
Containers Intact?	☑ Yes	☐ No	☐ N/A	7.
Dissolved analysis: Samples Field Filtered?	☐ Yes	☑ No	☐ N/A	8.
Sample Labels Match COC? -Includes Date/Time/ID/Analysis Matrix: WG WQ	☑ Yes	☐ No	☐ N/A	9.
Headspace in VOA Vials (>5-6mm)?	☐ Yes	☐ No	☑ N/A	10.
Trip Blank Present?	☐ Yes	☐ No	☑ N/A	11.
Trip Blank Custody Seals Present?	☐ Yes	☐ No	☐ N/A	

COMMENTS/SAMPLE DISCREPANCY

Field Data Required? ☐ Yes ☐ No

Lot ID of split containers:

pH Adjustment Log for Preserved Samples

Sample ID	Type of Preservative	pH upon receipt	Date preservation adjusted	Time preservation adjusted	Amount of Preservative added	Lot #

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DENR Certification Office (i.e. Out of hold, incorrect preservative, out of temp, incorrect containers.

RE: Project: Yates AP-3, A, B/B', R6
Pace Project No.: 92822967

Dear Trey Singleton:

Enclosed are the analytical results for sample(s) received by the laboratory on October 09, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Asheville
- Pace Analytical Services - West Columbia

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Anna Johnson for

QUALIFIERS

Project: Yates AP-3, A, B/B', R6
Pace Project No.: 92822967

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

WO: 92822967

[1] ARCADIS

[2] DO NOT DILUTE. MUST MEET REPORTING LIMITS. LET PM KNOW FIRST IF THERE ARE ISSUES.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Yates AP-3, A, B/B', R6-RADs
Pace Project No.: 92822969

Dear Trey Singleton:

Enclosed are the analytical results for sample(s) received by the laboratory on October 09, 2025. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

Revision 1: QC sheets added to report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bonnie Vang

QUALIFIERS

Project: Yates AP-3, A, B/B', R6-RADs
Pace Project No.: 92822969

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval). Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

WORKORDER QUALIFIERS

YATES
704 DYER ROAD
NEWNAN, GA 30263

TARGET PROPERTY COORDINATES

Latitude (North):	33.458172 - 33° 27' 29.42''
Longitude (West):	84.897356 - 84° 53' 50.48''
Universal Tranverse Mercator:	Zone 16
UTM X (Meters):	695420.4
UTM Y (Meters):	3703866.5
Elevation:	739 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	33084-D8 WHITESBURG, GA
Version Date:	1982

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

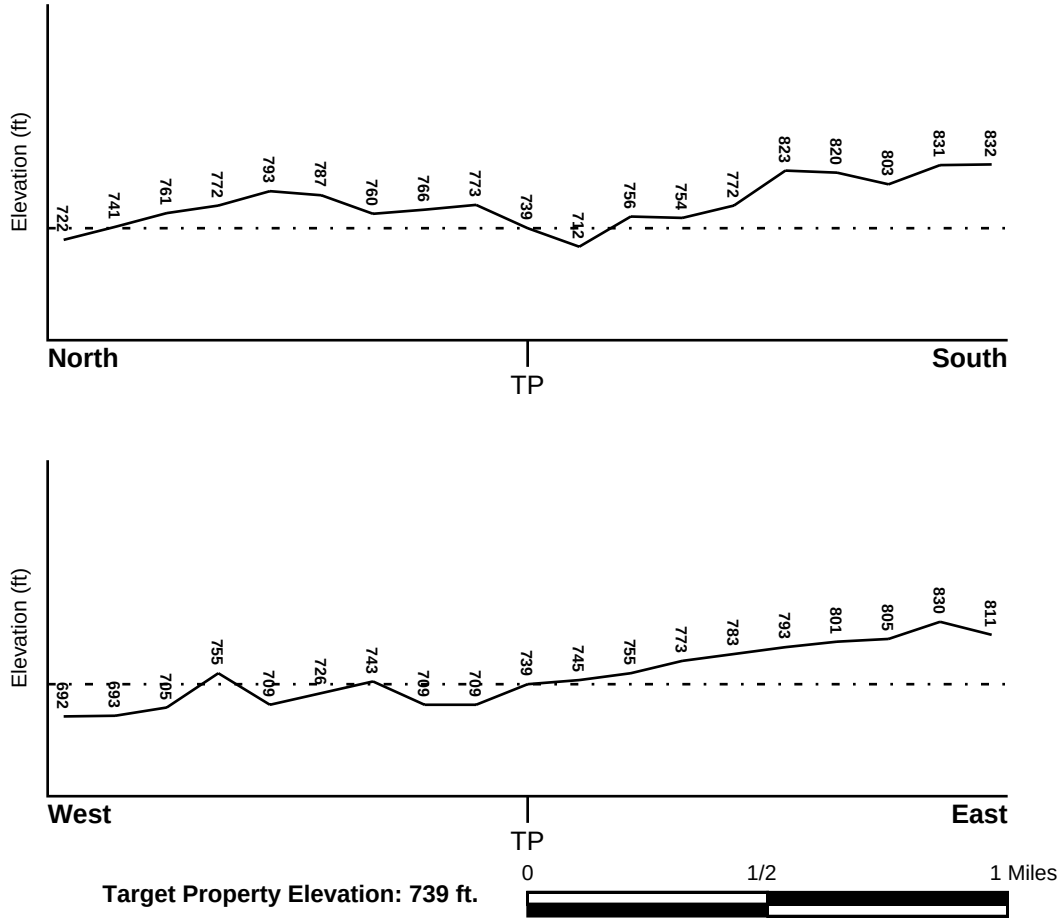
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 739 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
13077C0110D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITESBURG	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

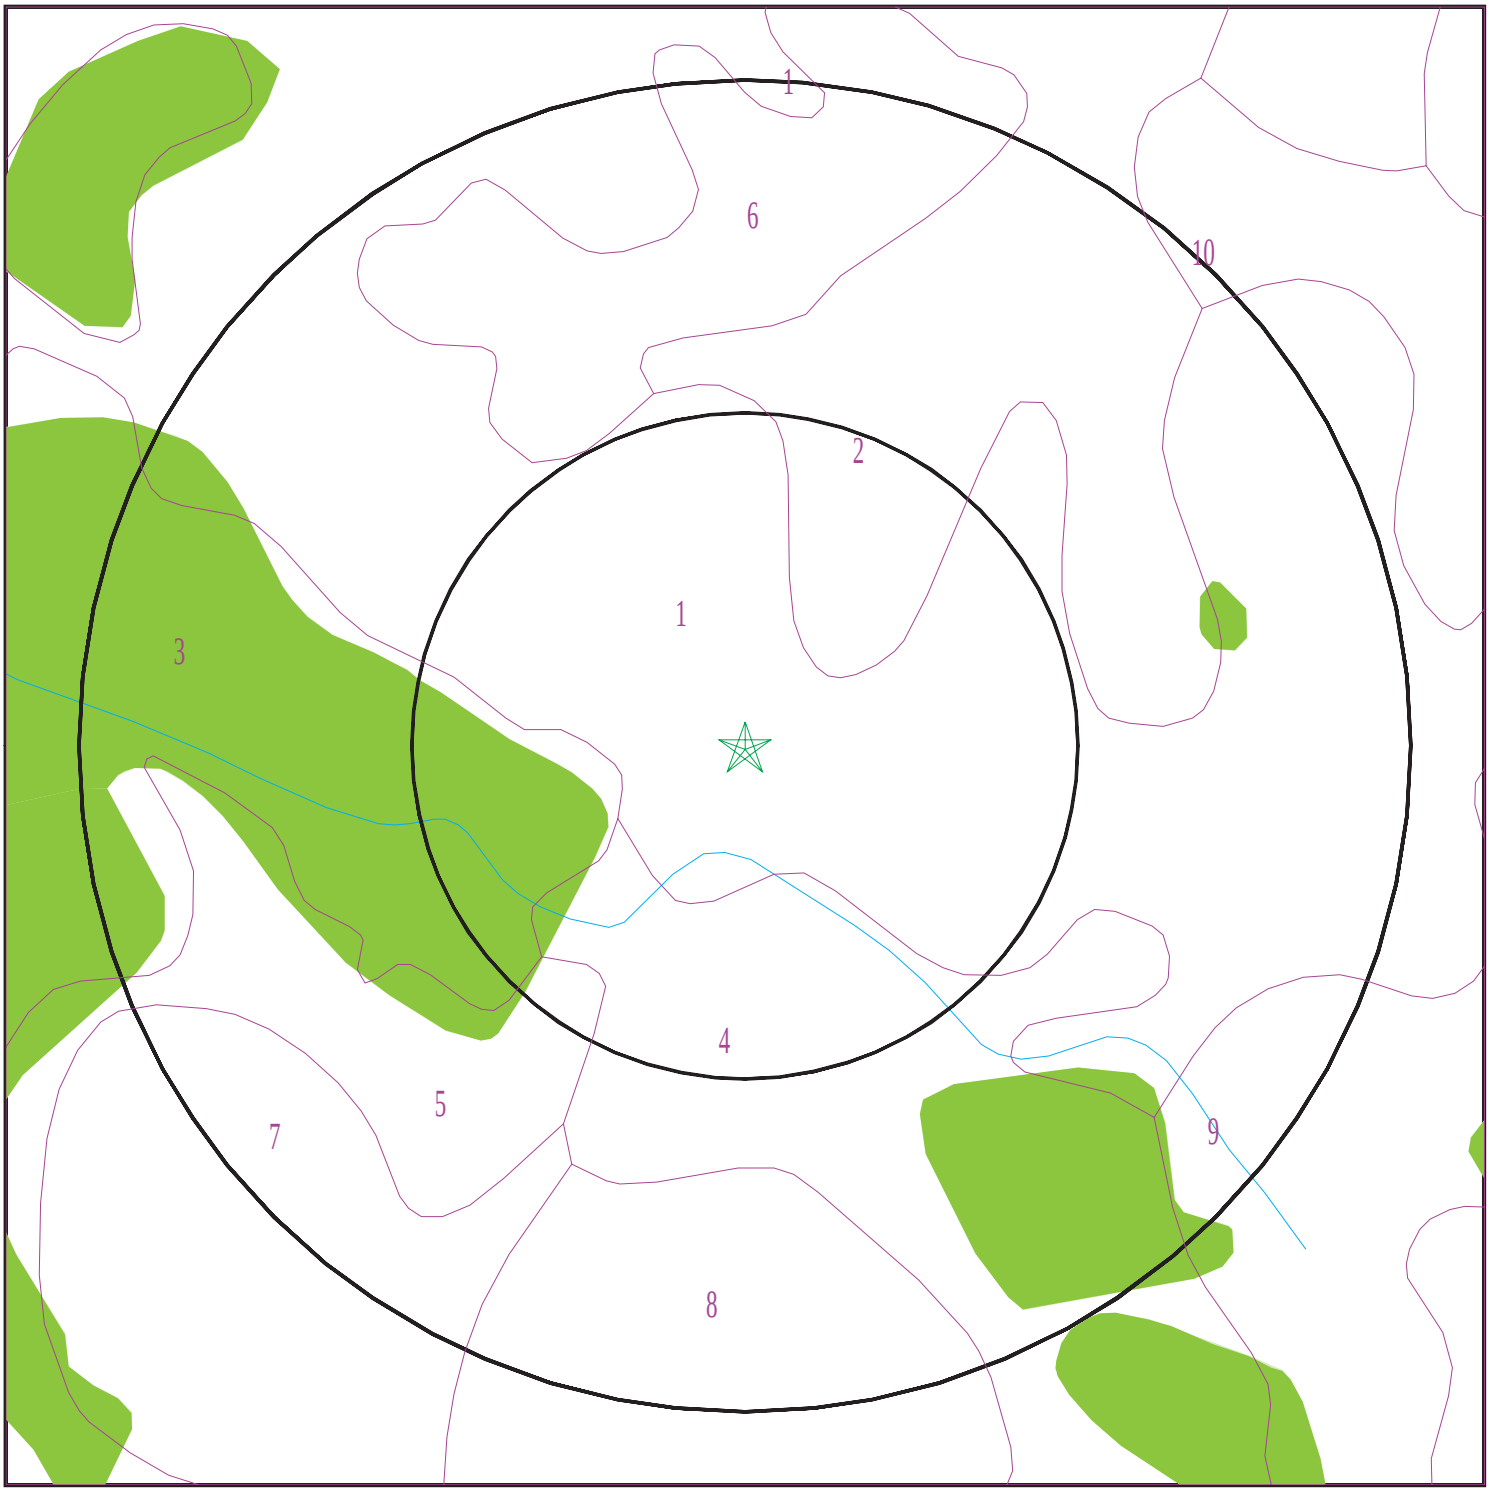
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Paleozoic
System:	Ordovian
Series:	Lower Paleozoic granitic rocks
Code:	Pzg1 *(decoded above as Era, System & Series)*

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name:	Urban land
Soil Surface Texture:	
Hydrologic Group:	Not reported
Soil Drainage Class:	
Hydric Status: Unknown	
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name:	Cecil
Soil Surface Texture:	sandy clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Well drained
Hydric Status: Not hydric	
Corrosion Potential - Uncoated Steel:	High
Depth to Bedrock Min:	> 0 inches
Depth to Watertable Min:	> 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	53 inches	72 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 14 Min: 4	Max: 5.5 Min: 4.5
2	0 inches	5 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 14 Min: 4	Max: 5.5 Min: 4.5
3	5 inches	53 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Elastic silt.	Max: 14 Min: 4	Max: 5.5 Min: 4.5

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: sandy clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 4

Soil Component Name: Riverview

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Birmingham, AL 35243

Re: Plant Yates Ash Management Area (AMA) and R6 CCR Landfill
February/March/May 2025 Statistical Analysis

Dear Mr. Singleton,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the February/March/May 2025 semi-annual Groundwater Detection and Assessment Monitoring statistical analysis for Georgia Power Company's Plant Yates Ash Management Area (AMA) and R6 CCR Landfill. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for the Appendix III parameters began in 2016 at most wells. Semi-annual sampling of the majority of constituents has been performed for several years in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:**
  - **AP-1:** YGWA-47

        - **AP-2:** YGWA-1D, YGWA-1I, YGWA-2I, YGWA-3D, YGWA-3I, YGWA-14S, and YGWA-30I
        - **Gypsum Landfill:** GWA-2
        - **AMA-R6:** YGWA-17S, YGWA-18I, YGWA-18S, YGWA-20S, YGWA-21I, YGWA-39, YGWA-40, YGWA-4I, YGWA-5D, and YGWA-5I
    - **Downgradient wells:** YGWC-23S, YGWC-24SB, YGWC-36A, YGWC-38, YGWC-41, YGWC-42, YGWC-43, YGWC-49, and YGWC-50
    - **Assessment wells:** YAMW-1, YAMW-2, YAMW-3, YAMW-4, YAMW-5, PZ-35, PZ-37, PZ-37D, PZ-51, PZ-52D, and PZ-54D

Data from downgradient wells are evaluated for Appendix III and IV constituents, as described below, when a minimum of 8 samples is available. Note that downgradient well YGWC-50 was first sampled during the August 2023 event and now has a maximum of 8 samples; therefore, this well was evaluated with interwell prediction limits for Appendix III parameters and confidence intervals for Appendix IV parameters during this analysis. Assessment wells are evaluated for Appendix IV constituents when a minimum of 4 samples is available. Assessment well PZ-54D was first sampled in June 2024 and has a maximum of 3 samples. Data from this well was plotted on time series and box plots for all constituents.

Downgradient well YGWC-24SA was installed in June 2020 as a replacement well for well YGWC-24S; however, it was abandoned and replacement well YGWC-24SB was installed in late 2022 and first sampled in February 2023. Historical data from wells YGWC-24 and YGWC-24SA were combined with data from well YGWC-24SB. Downgradient well YGWC-36A was installed in September 2020 as a replacement well for YGWC-36 to supplement existing data for each constituent. Historical data from well YGWC-36 were combined with data from well YGWC-36A. Replacement wells YGWC-24SB and YGWC-36A are evaluated in this report for Appendix III and IV constituents.

When a minimum of 8 samples has been collected from new well YGWC-24SB, the Mann-Whitney test will be used to compare newer observations from this well to historical observations from abandoned well YGWC-24SA for Appendix IV constituents and evaluate whether the populations of data are statistically different. In cases where statistically significant differences are identified at the 99% confidence level, the historical record is truncated so that only data from the new wells, which may be more representative of current groundwater quality, are evaluated for the Appendix IV constituents in the confidence interval comparisons to respective Groundwater Protection Standards. This evaluation was previously performed for well YGWC-36A and is discussed below.

All data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Kristina Rayner, Senior Statistician and Founder of Groundwater Stats Consulting. In 2024, Georgia Power Company completed a data audit and migration of all CCR related groundwater data to the EarthSoft EQuIS Database Management Program (EQuIS). Data were then exported from EQuIS to Groundwater Stats Consulting (GSC) for use in completing this statistical analysis. Georgia Power Company contracted an independent third-party consultant, Environmental Resources Management (ERM), to support the data audit and migration to EQuIS. Based on the results of the audit and statistical analysis results from GSC, EQuIS will now be used by Georgia Power Company and its third-party geologists and engineers for management of data imported by independent third-party laboratories and data exported by Georgia Power Company and its Consultants. The data will be used in preparation of report submittals, modeling, strategic planning, and other purposes appropriate and consistent with EQuIS's data management and reporting tools and capabilities.

The CCR program consists of the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient and assessment well/constituent pairs containing 100% non-detects follows this letter. For all constituents, a substitution of the most recent reporting limit is used for non-detect data, and this generally gives the most conservative limit in each case. For interwell prediction and tolerance limits, a single reporting limit substitution is used across upgradient wells for a given parameter. Due to elevated reporting limits (at or above the MCL or CCR-specified level) during the May 2025 sample event, the following historic reporting limits were substituted across all wells in order to maintain conservative (i.e., lower) limits from a regulatory perspective:

- Antimony: 0.003 mg/L
- Arsenic: 0.005 mg/L
- Chromium: 0.005 mg/L
- Cobalt: 0.005 mg/L
- Lead: 0.001 mg/L

- Molybdenum: 0.01 mg/L
- Selenium: 0.005 mg/L
- Thallium: 0.001 mg/L

Combined upgradient well data from all units at Plant Yates are utilized to construct statistical limits for Appendix III and IV parameters. Although upgradient well GWA-2 is no longer sampled, data from this well represent groundwater quality upgradient of the facility and are, therefore, plotted on time series and box plots and included in the construction of interwell prediction limits and upper tolerance limits.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

During previous screenings, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. A power curve was previously provided and demonstrated that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

Summary of Statistical Methods – Appendix III and IV Parameters

Based on the April 2019 evaluation and state and federal regulatory requirements described below, the following methods were selected for Appendix III and IV constituents:

- Appendix III: Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- Appendix IV: Confidence intervals for antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. Parametric prediction limits (or tolerance limits or confidence intervals as applicable) are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The following approaches are used for handling non-detects (USEPA, 2009):

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In some cases, the earlier portion of data are deselected prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Summary of Background Screening Conducted in April 2019

Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population.

Suspected outliers at all wells for Appendix III and Appendix IV parameters were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits.

Using the Tukey box plot method, several outliers were identified. When the most recent value is identified as an outlier, values are not flagged in the database at this time as they may represent a possible trend. If future values do not remain at similar concentrations, these values will be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

During the time of the screening, none of the outliers identified by Tukey's method were flagged in the database as all values were either similar to remaining measurements within the same well and neighboring wells, or the values were reported non-detects. Subsequently, when all upgradient wells were pooled to construct statistical limits, one detected value of 6.3 s.u. for pH at well YGWA-47 (an upgradient well from AP-1) was flagged as an outlier because it was unusually high during a single event compared to all other values at neighboring wells. When any values are flagged in the database as outliers, they are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages will display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data. When the reporting limit was higher than the CCR-rule specified levels discussed below, non-detects were substituted with one half the reporting limit.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each well to identify statistically significant increasing or decreasing trends, and the results of those findings were submitted with the screening. In the absence of

suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses showed several statistically significant decreasing and increasing trends for the Appendix III parameters. Most of the trends noted were relatively low in magnitude when compared to average concentrations, and the background time period was short with only two years of record, making it difficult to separate trends from normal year-to-year variation; therefore, no adjustments were made to the data sets at that time. If the observed decreasing or increasing trends persist over a longer time frame, some records may need to be truncated.

Appendix III – Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells, which assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter.

The ANOVA identified variation among upgradient well data for all Appendix III parameters. These constituents were further evaluated during the screening for the appropriateness of intrawell or interwell methods for each constituent. However, interwell methods will be used for all Appendix III constituents in accordance with Georgia EPD requirements.

Summary of Background Update Conducted in 2024

Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers at all wells for Appendix III and Appendix IV parameters were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits. When the most recent value is identified as an outlier, values are not flagged in the database at this time as the measurements may represent a possible trend. If future values do not remain at similar concentrations, these values will be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

Using the Tukey box plot method, several outliers were identified and both Tukey's test and visual screening confirmed values flagged from previous analyses. An exception is for one detected value of 6.3 s.u. for pH at well YGWA-47 that was previously flagged as an outlier because it was high during a single event compared to all other values at neighboring wells. However, when compared among pooled upgradient well data, this value is no longer spurious and was unflagged. Although not identified by Tukey's test due to the high percentage of non-detects, elevated concentrations for cobalt at upgradient well GWA-2 remain flagged to reduce variation in the record and maintain statistical limits that are conservative (i.e., lower) from a regulatory perspective.

When any values are flagged in the database as outliers, the measurements are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages will display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data. When the reporting limit was higher than the CCR-rule specified levels discussed below, non-detects were substituted with one half the reporting limit.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits

will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each upgradient well to identify statistically significant increasing or decreasing trends. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses showed several statistically significant decreasing and increasing trends for the Appendix III and IV parameters. However, the trends noted were relatively low in magnitude compared to average pooled upgradient concentrations. Therefore, no adjustments were made to the data sets at this time. If the observed decreasing or increasing trends persist over a longer time frame and influence resulting statistical limits, some records may need to be truncated.

Statistical Analysis of Appendix III Parameters – February/March/May 2025

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. During a previous analysis, the data were not normally distributed for TDS which resulted in a nonparametric prediction limit. Therefore, the highest value observed during the February 2024 event at upgradient well YGWA-5D was flagged as an outlier TDS in order to maintain statistical limits that are conservative from a regulatory perspective. A previously flagged value for pH at upgradient well YGWA-47 was unflagged. A summary of flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through February/March 2025 (Figure D). Interwell

prediction limits pool upgradient well data to establish a background limit for an individual constituent. The February/March 2025 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present. Note that the May 2025 sample event was compared to established limits for downgradient well YGWC-50.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result and, therefore, no exceedance is noted and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. A summary table of the interwell prediction limits follows this letter. Prediction limit exceedances were noted for the following Appendix III well/constituent pairs:

- Boron: YGWC-23S, YGWC-38, YGWC-41, YGWC-42, YGWC-43, and YGWC-50
- Calcium: YGWC-36A, YGWC-38, YGWC-42, and YGWC-50
- Sulfate: YGWC-36A, YGWC-42, YGWC-43, and YGWC-50
- TDS: YGWC-36A, YGWC-38, YGWC-42, YGWC-43, and YGWC-50

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site. Upgradient trends are an indication of spatial variability in groundwater quality that is unrelated to practices at the site. Both a summary and complete graphical results of the trend tests follow this report. Statistically significant trends were identified for the following well/constituent pairs:

Increasing trends

- Boron: YGWA-18S and YGWA-39 (both upgradient), and YGWC-43
- Calcium: GWA-2, YGWA-1D, YGWA-5I, YGWA-17S, YGWA-30I, and YGWA-39 (all upgradient)

- Sulfate: GWA-2, YGWA-1D, YGWA-2I, YGWA-3D, YGWA-3I, and YGWA-5I (all upgradient)
- TDS: YGWA-21I, YGWA-39 (both upgradient), and YGWC-43

Decreasing trends

- Boron: YGWA-40 (upgradient), YGWC-38, YGWC-41, and YGWC-42
- Calcium: YGWA-1I, YGWA-5D, YGWA-18S, YGWA-47 (all upgradient), YGWC-38, and YGWC-42
- Sulfate: YGWA-5D, YGWA-18I, YGWA-18S, YGWA-30I, YGWA-39, YGWA-40, YGWA-47 (all upgradient), and YGWC-42
- TDS: YGWA-47 (upgradient), YGWC-38, and YGWC-42

Statistical Analysis of Appendix IV Parameters – February/March/May 2025

For analysis of Appendix IV parameters, confidence intervals for each downgradient and assessment well/constituent were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. Data from all wells for Appendix IV parameters are reassessed for outliers during each analysis.

The reported measurements of cobalt from August 2020 through August 2022 in upgradient well GWA-2 were previously flagged as outliers as these measurements were two orders of magnitude higher than remaining measurements at this well. This step results in statistical limits that are conservative (i.e., lower) from a regulatory perspective. If further studies indicate these measurements represent spatial variation in groundwater quality, the values will be re-evaluated for construction of interwell tolerance limits. A November 2021 observation for lithium at YAMW-3 was previously added to the database, but was flagged as an outlier with an "ox" flag in the database since this sample was collected prior to the well's redevelopment. Note that more recent concentrations for cobalt at upgradient well YGWA-21I have been increasing and the most recent measurement was flagged as an outlier in order to maintain statistical limits that are capable of readily detecting changes in groundwater quality. All upgradient concentrations will be re-evaluated in future analyses and if future observations are similar to this measurement, then this observation may be unflagged as an outlier. A summary of flagged outliers follows this report (Figure C).

Mann-Whitney Test

During a previous analysis, the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the median of observations sampled before October 2020 at abandoned well YGWC-36 to the median of the 8 most recent observations sampled at well YGWC-36A

for each Appendix IV parameters. When no variation was present between historical data and compliance samples, the Mann-Whitney test was not performed, which was the case for mercury and thallium. When the populations of the two groups are statistically significantly different at the 99% confidence level (such as cadmium and lithium), the historical data sampled from abandoned well YGWC-36 are truncated to only use data from well YGWC-36A. The earlier data are shown on the time series as disconnected point and in a lighter font on the data pages. A list of constituents using truncated records follows this report.

Interwell Upper Tolerance Limits

Interwell tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through February/March 2025 for Appendix IV constituents (Figure F). Parametric tolerance limits are used when data follow a normal or transformed-normal distribution. When data contained greater than 50% non-detects or did not follow a normal or transformed-normal distribution, non-parametric tolerance limits were used. When the alpha level (or false positive rate) for a nonparametric limit is shown as NaN in the results table, it indicates that the background sample size is large enough such that the resulting alpha level (or false positive rate) is too small to display in the results table.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed on downgradient and assessment wells for each of the Appendix IV constituents in accordance with the state requirements. Assessment wells are included when a minimum of 4 samples is available.

The Sanitas software was used to calculate the confidence intervals, either parametric or nonparametric, depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the appropriate order statistics, depending on the sample size, as interval limits, were constructed when data did not follow a normal or transformed-normal distribution or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The achievable confidence level associated with nonparametric confidence intervals is dependent upon the number samples available.

Although trend analysis for Appendix IV parameters in downgradient wells is not routinely included in data screening, records with visually apparent trends may be formally tested using the Sen's Slope/Mann-Kendall trend test at the 95% confidence level. When statistically significant trends are identified, the record may require truncation prior to construction of confidence intervals if earlier concentrations no longer represent current average conditions (USEPA Unified Guidance, 2009, Chapter 7). Note that due to a statistically significant decreasing trend for selenium at downgradient well YGWC-38 and a statistically significant increasing trend for lithium at YGWC-42 (Figure H), only concentrations since March 2021 and, subsequently, relatively stable observations were used to construct confidence intervals for these well/constituent pairs to represent the current average and current groundwater quality conditions. As mentioned above, the records for cadmium and lithium at downgradient well YGWC-36A were also evaluated with confidence intervals using only the most recent measurements. Trend tests using both the full and truncated records follow this report and a list of well/constituent pairs that use a truncated portion of their record follows this letter.

Only when the entire confidence interval is above a GWPS is the well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a

statistically significant level (SSL) exceedance is identified. A summary of the confidence intervals follows this letter (Figure I). Exceedances were noted for the following well/constituent pairs:

- Cadmium: YGWC-50
- Lithium: YGWC-42 and YAMW-3
- Selenium: PZ-37

Trend Test Evaluation – Appendix IV

Assessment monitoring well/constituent pairs identified with confidence interval exceedances are further evaluated using the Sen's Slope/Mann-Kendall trend test using 95% confidence (Figure J). Although the trend tests for Assessment monitoring pairs were previously evaluated using 99% confidence, the 95% confidence level more rapidly identifies statistically significant trends. Additionally, the 95% confidence level is recommended in cases with limited sample sizes and, particularly, for new assessment wells. Upgradient wells are included in the trend analyses to identify whether similar patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability in groundwater quality unrelated to practices at the site. Significant trends were identified for the following well/constituent pairs:

Increasing trends

- Lithium: YGWA-3D, YGWA-3I, YGWA-39 (all upgradient), and YGWC-42
- Selenium: YGWA-17S (upgradient)

Decreasing trends

- Lithium: YGWA-1D, YGWA-18I, YGWA-18S, and YGWA-47 (all upgradient)
- Selenium: PZ-37

Note that for selenium at upgradient well YGWA-17S, a statistically significant increasing trend was identified. The slope, however, is zero at this well which represents the median slope of all the possible pairwise slopes of the data evaluated.

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Yates Ash Management Area (AMA) and R6 CCR Landfill. If you have any questions or comments, please feel free to contact us.

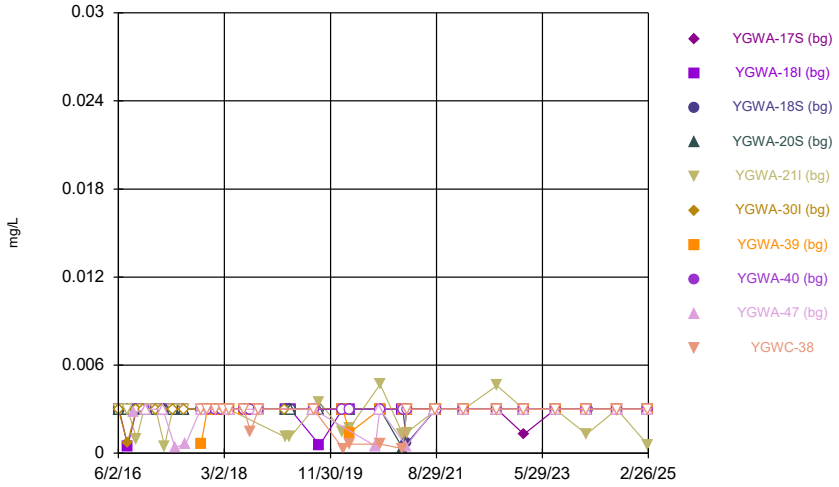
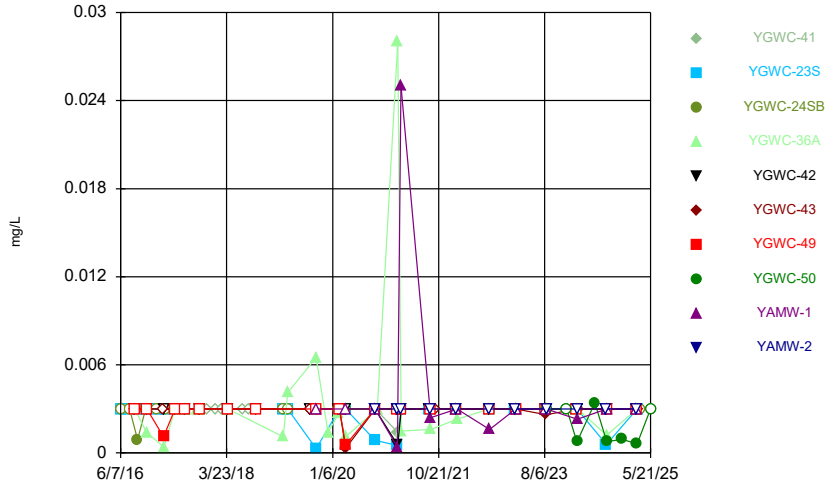
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

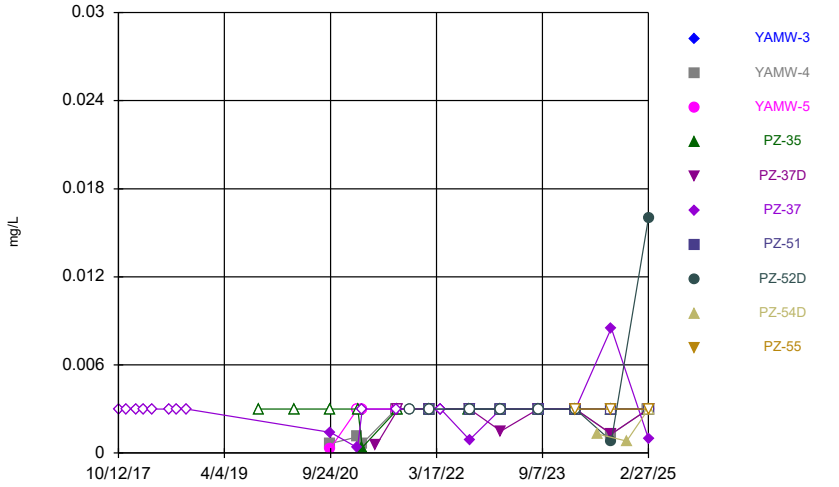
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

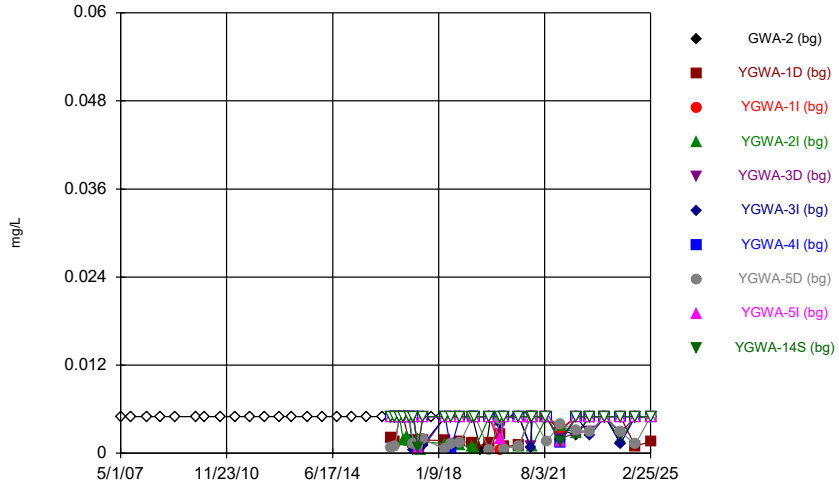
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

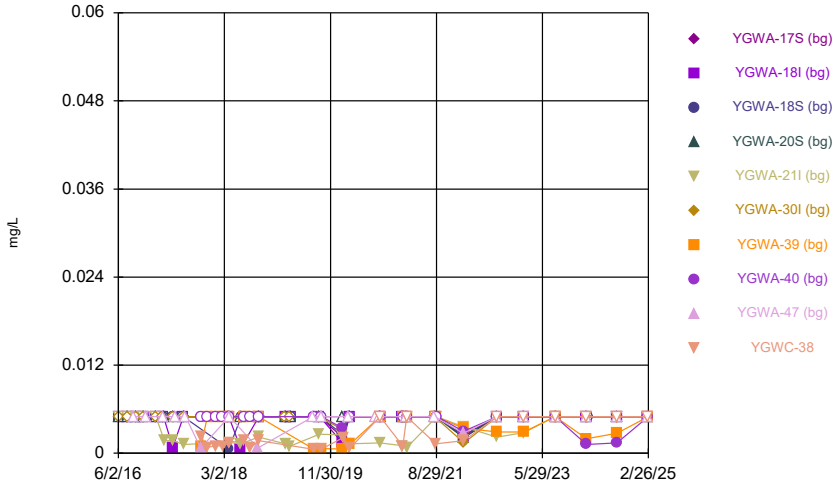
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

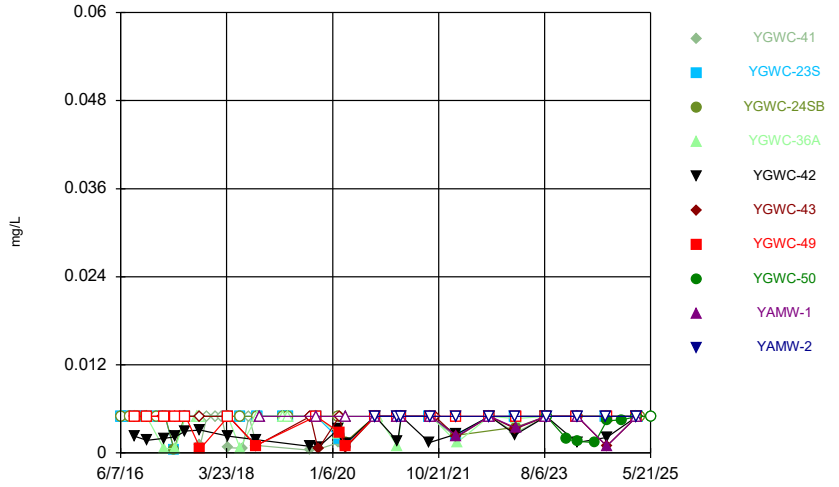
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

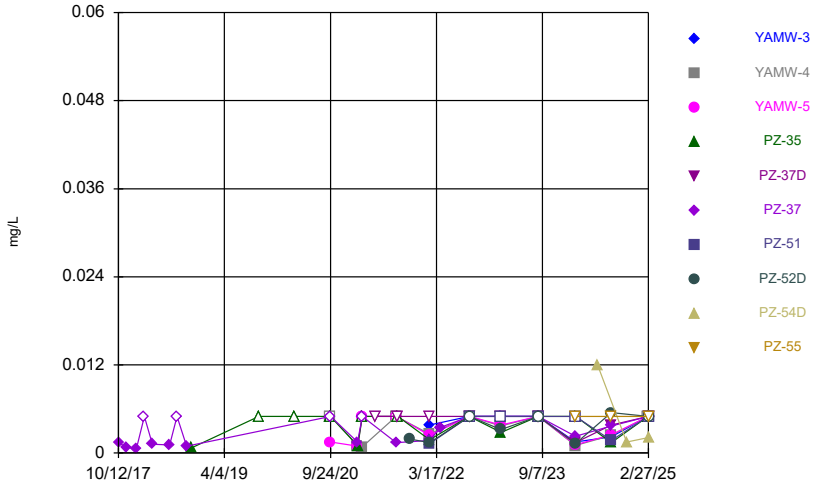
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

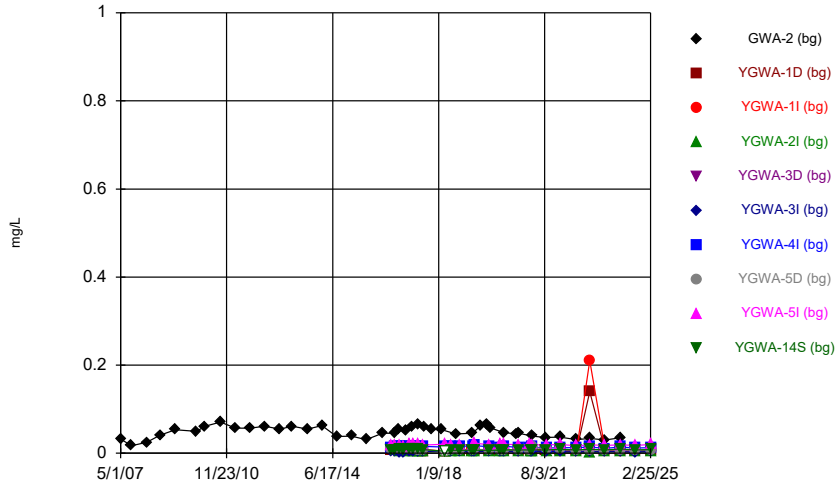
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

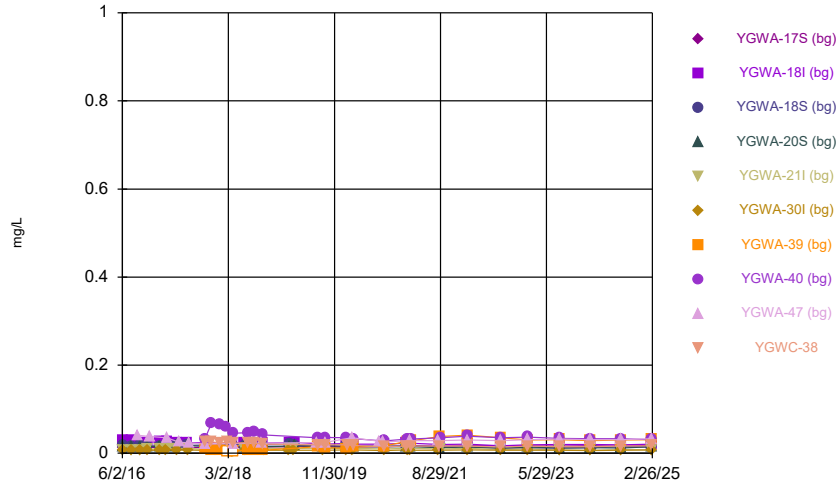
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

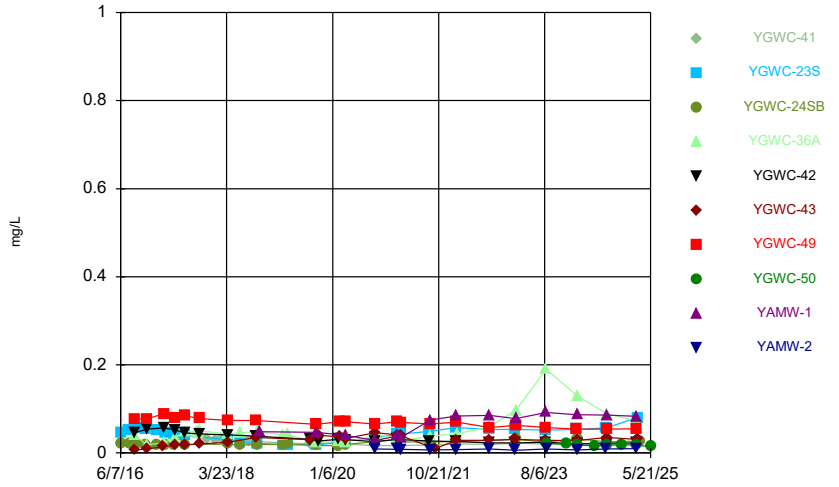
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Barium Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

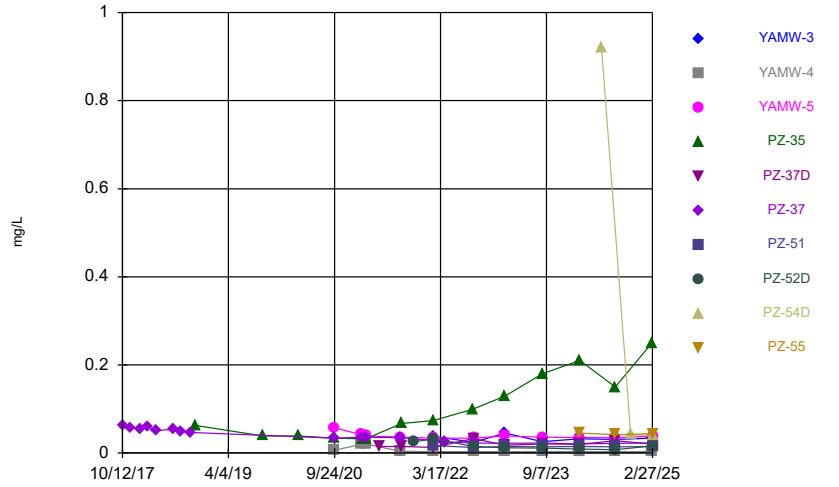
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Barium Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

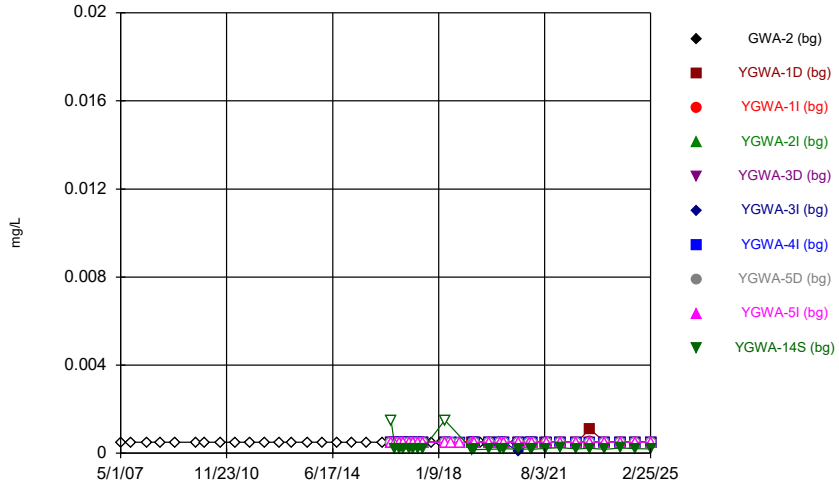
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG



Time Series

Constituent: Barium Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

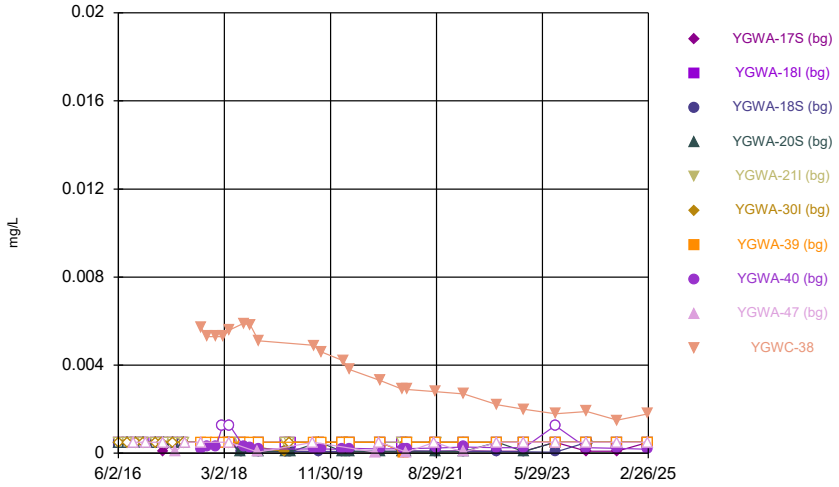
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG



Time Series

Constituent: Barium Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

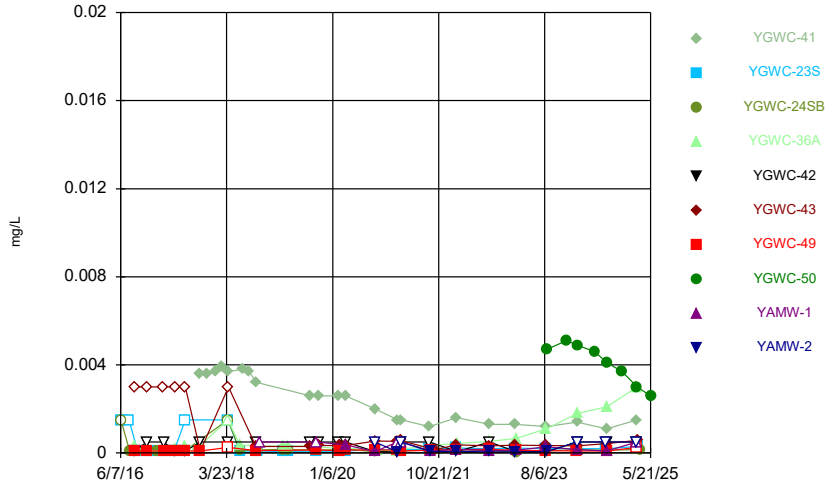
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

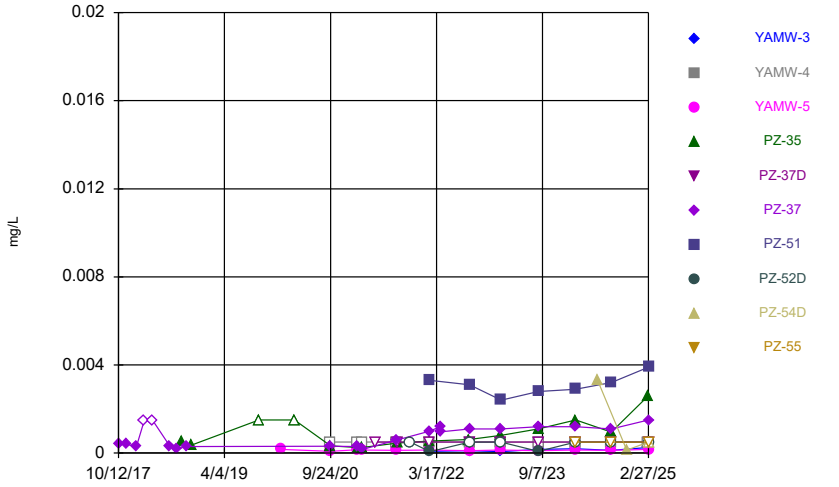
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 7/7/2025 12:14 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

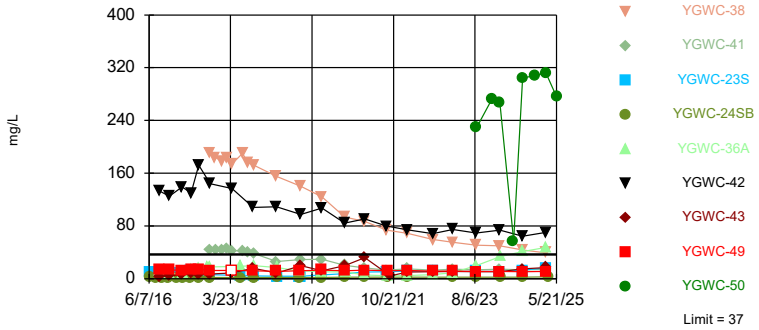
Exceeds Limit: YGWC-38, YGWC-41, YGWC-23S, YGWC-42, YGWC-43, YGWC-50

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 443 background values. 51.92% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Boron Analysis Run 7/7/2025 2:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

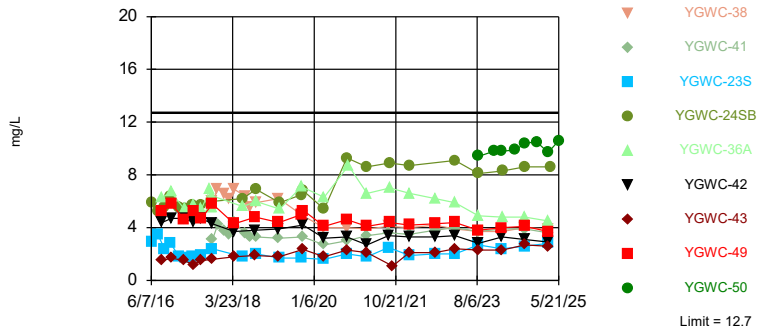
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Exceeds Limit: YGWC-38, YGWC-36A, YGWC-42, YGWC-50

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 449 background values. 0.6682% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Calcium Analysis Run 7/7/2025 2:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

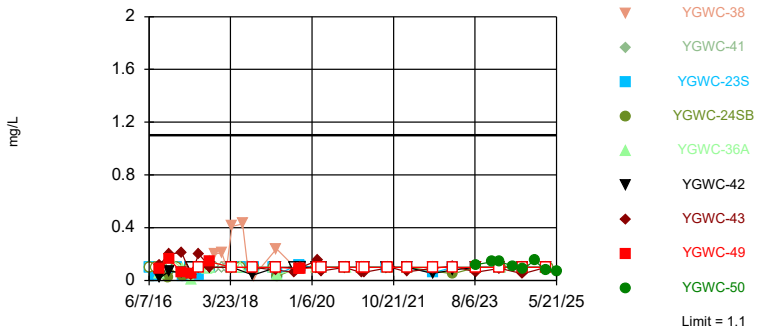
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Within Limit

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 448 background values. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Chloride Analysis Run 7/7/2025 2:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 518 background values. 54.25% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Within Limits

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 527 background values. Annual per-constituent alpha = 0.001769. Individual comparison alpha = 0.00009831 (1 of 2). Comparing 9 points to limit.

Constituent: pH, Field Analysis Run 7/7/2025 2:45 PM View: Appendix III Interwell

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

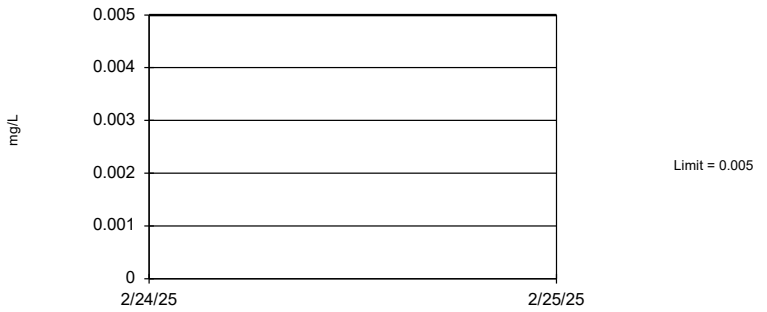
Tolerance Limit

Interwell Non-parametric



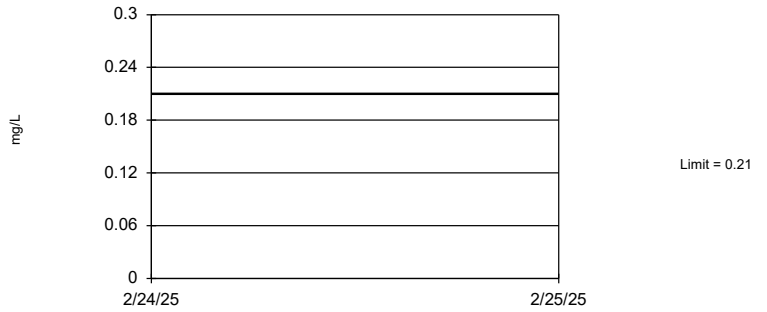
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 467 background values. 87.58% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Antimony Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



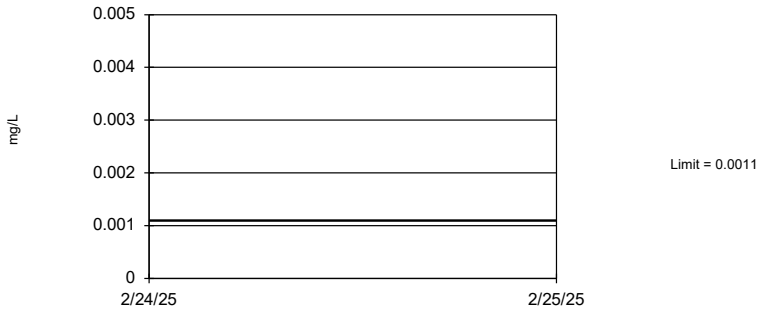
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 515 background values. 74.56% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Arsenic Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



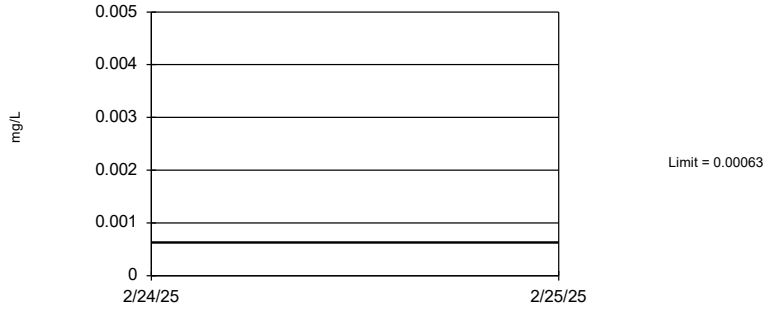
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 515 background values. 2.136% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Barium Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



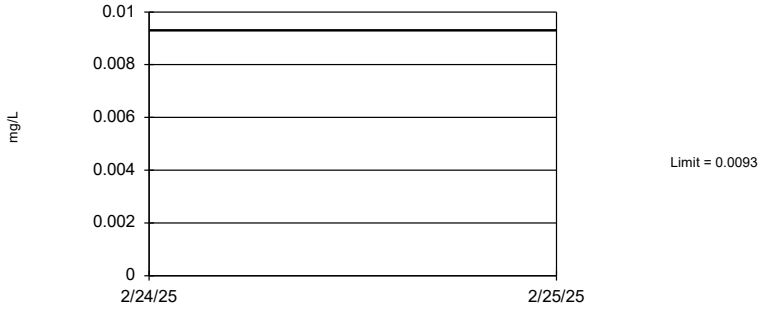
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 499 background values. 80.36% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Beryllium Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 499 background values. 94.79% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cadmium Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 467 background values. 80.51% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Chromium Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

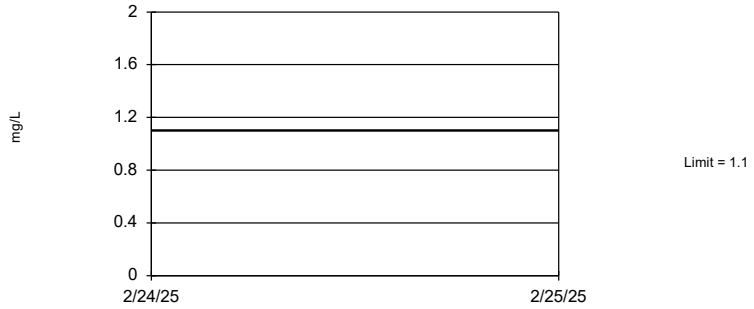
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 508 background values. 69.49% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cobalt Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



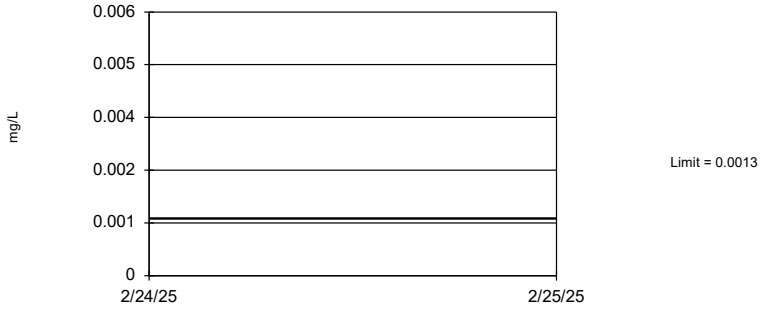
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 493 background values. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Combined Radium 226 + 228 Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 518 background values. 54.25% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Fluoride Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

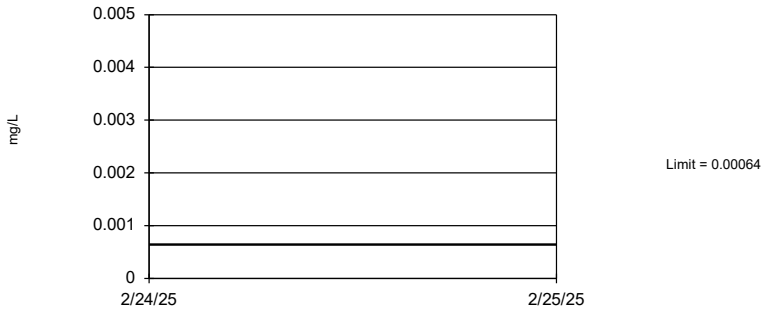
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 469 background values. 87.85% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Lead Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 493 background values. 27.18% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Lithium Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 423 background values. 87.23% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Mercury Analysis Run 5/20/2025 9:47 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 457 background values. 61.49% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Molybdenum Analysis Run 5/20/2025 9:48 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 497 background values. 92.96% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Selenium Analysis Run 5/20/2025 9:48 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.25 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 431 background values. 97.22% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

Constituent: Cobalt Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

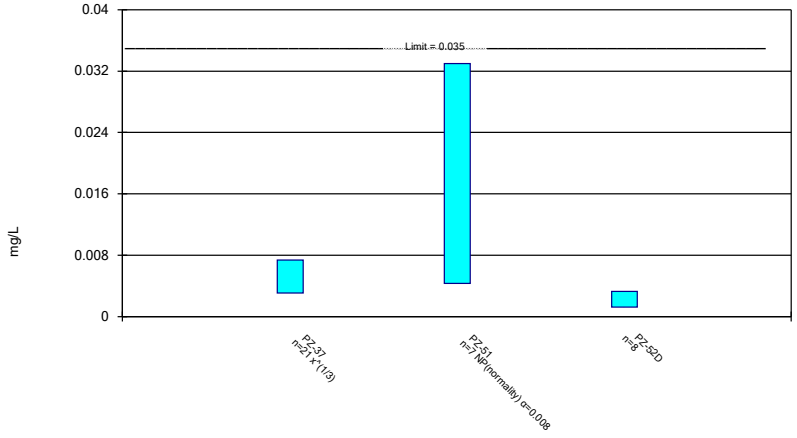
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

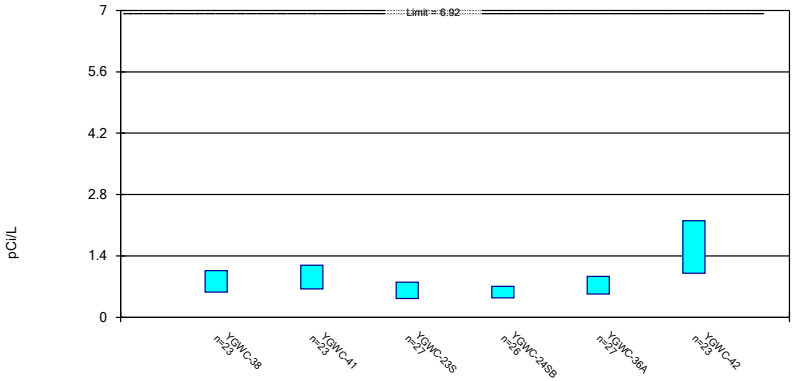
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

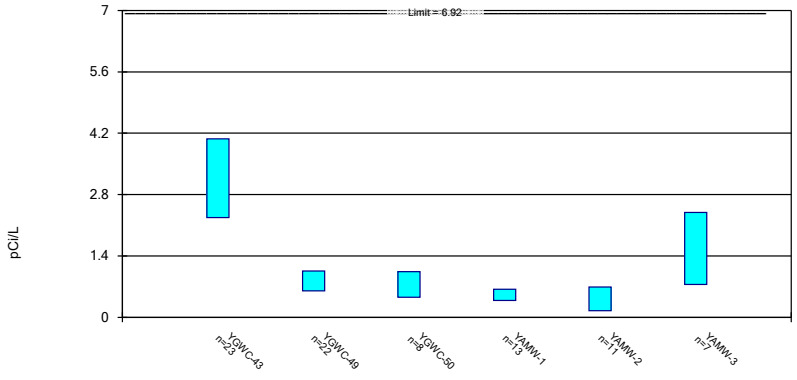
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

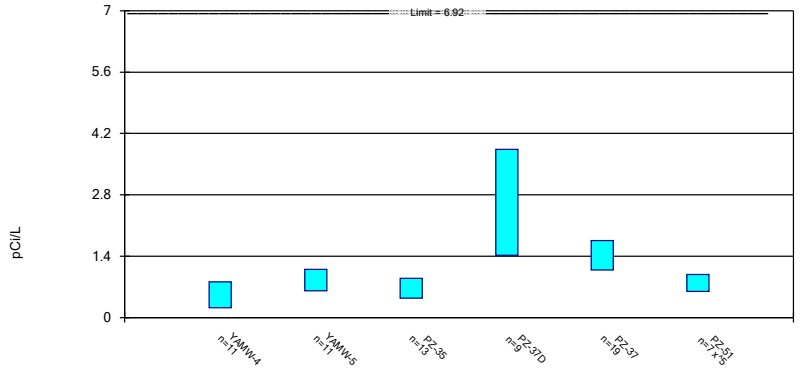
Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

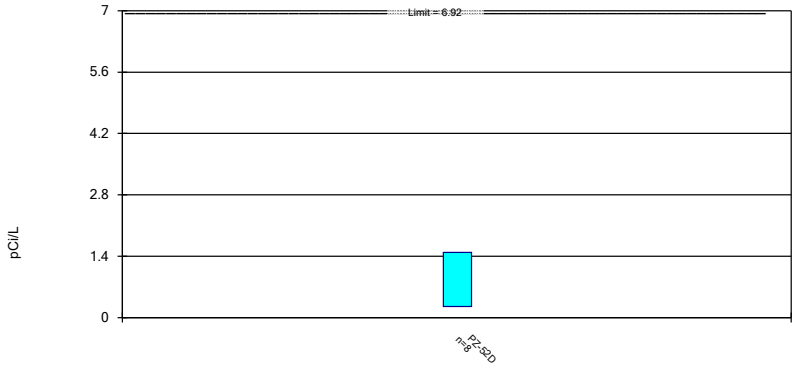
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

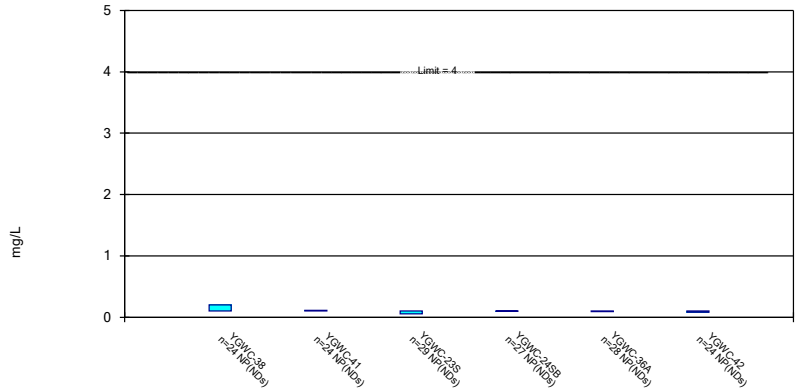
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

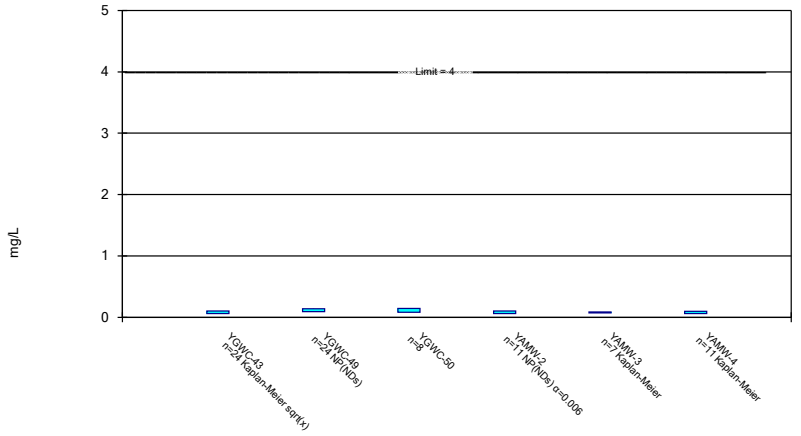
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Fluoride Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

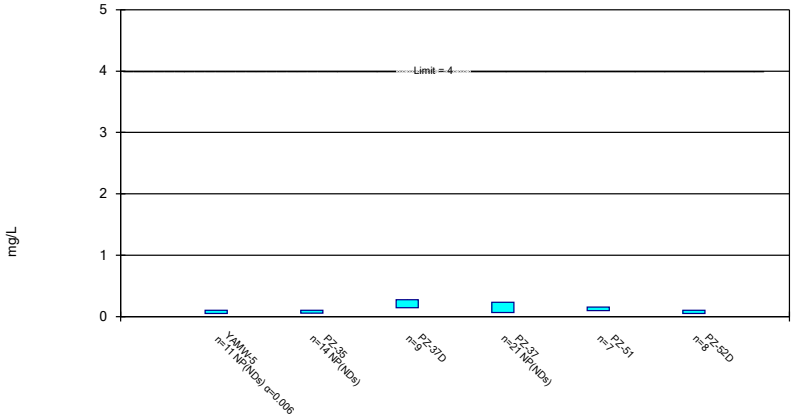
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

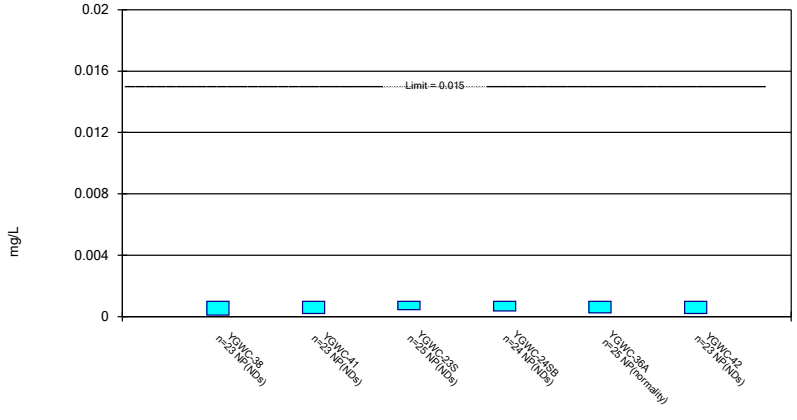
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

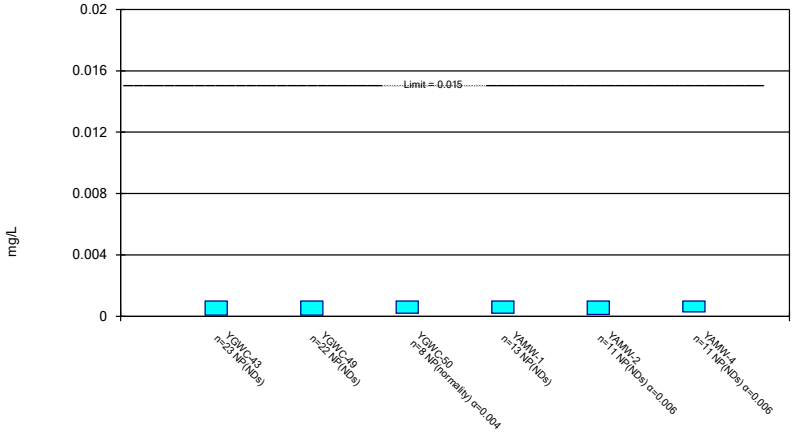
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Lead Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

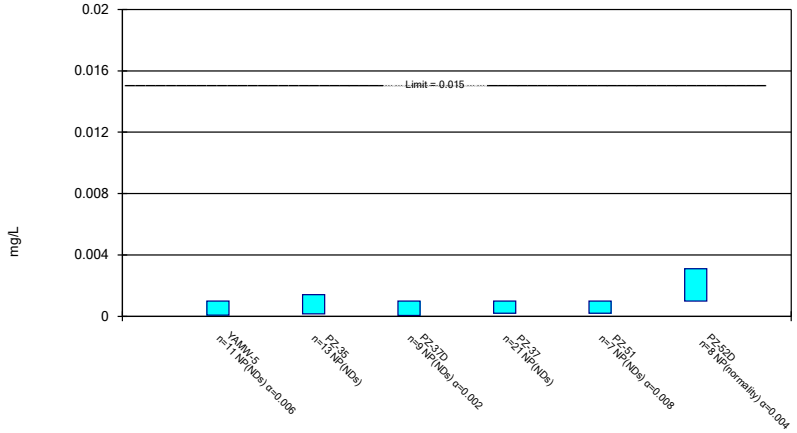
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Lead Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

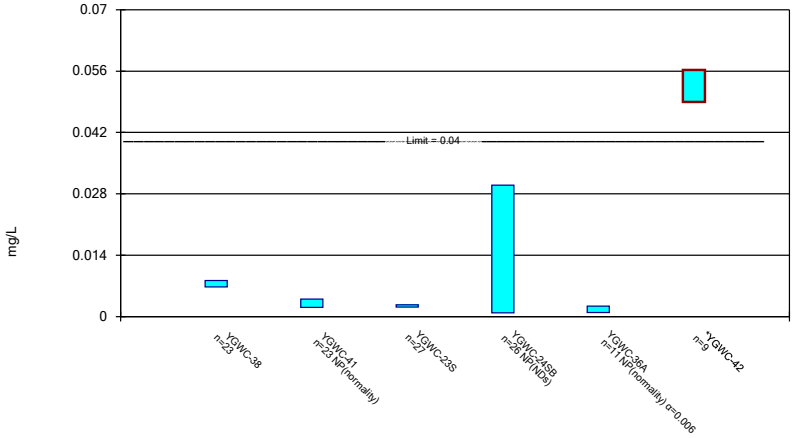
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Lead Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

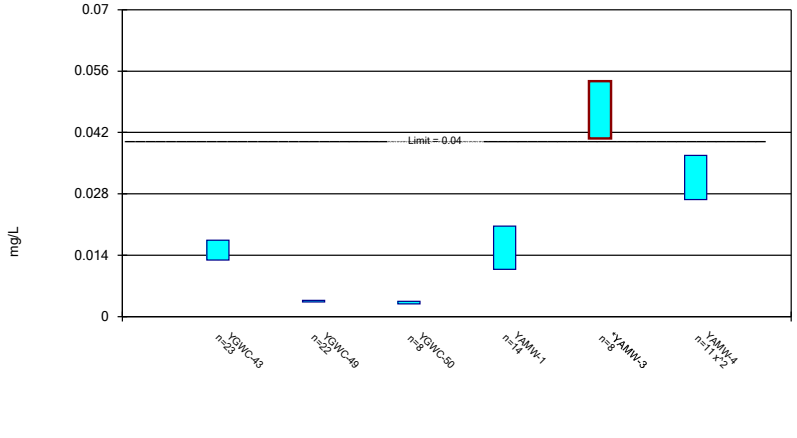
Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Lithium Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

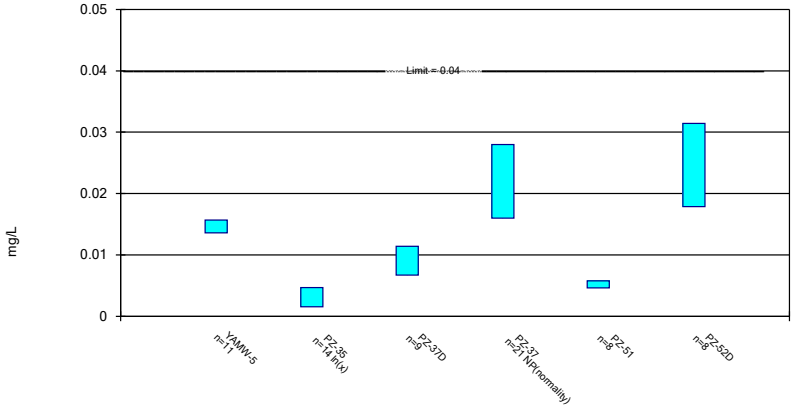
Parametric Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Lithium Analysis Run 7/7/2025 2:59 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

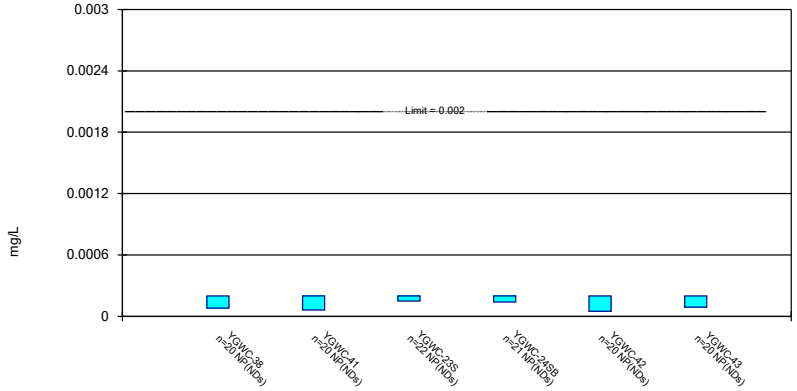
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

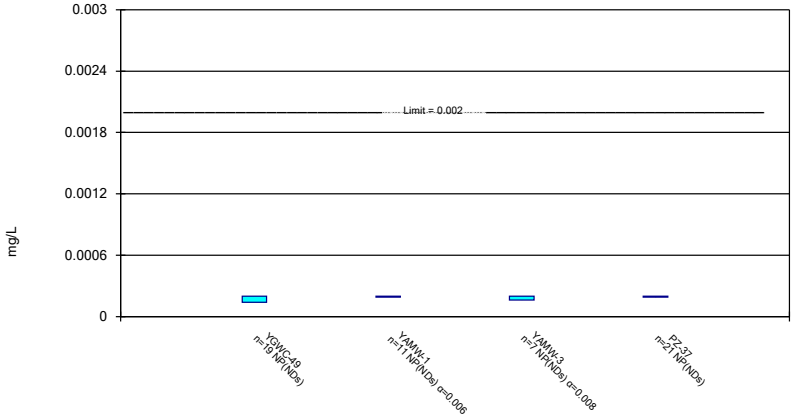


Constituent: Lithium Analysis Run 7/7/2025 3:00 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

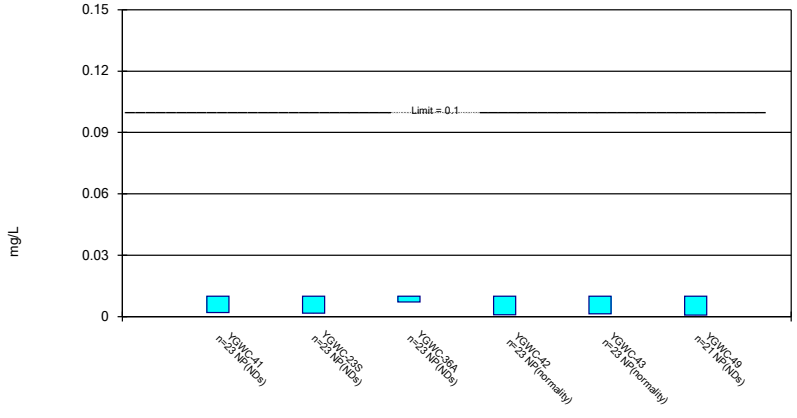


Constituent: Mercury Analysis Run 7/7/2025 3:00 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.

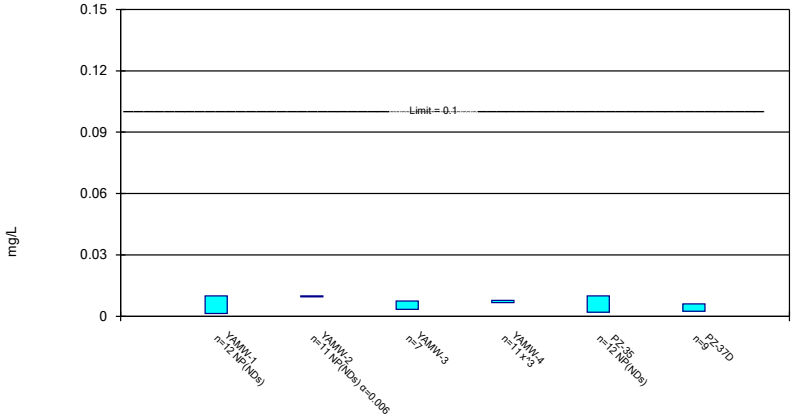


Constituent: Mercury Analysis Run 7/7/2025 3:00 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

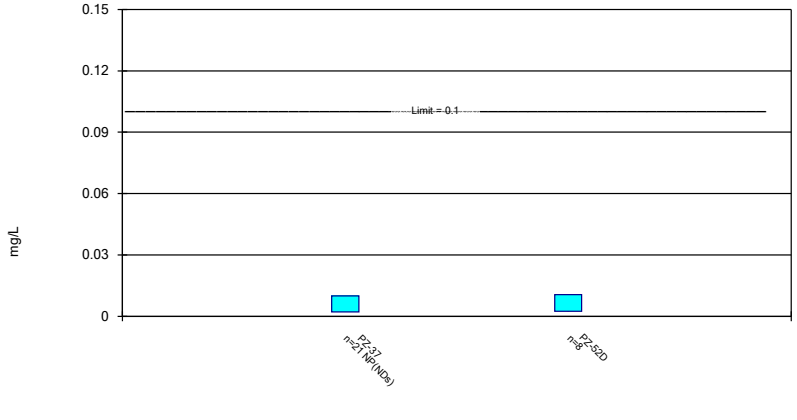


Constituent: Molybdenum Analysis Run 7/7/2025 3:00 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Molybdenum Analysis Run 7/7/2025 3:00 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.0.27 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Re: Plant Yates Ash Management Area (AMA) and R6 CCR Landfill
August/October 2025 Statistical Analysis

Dear Mr. Singleton,

Groundwater Stats Consulting, formerly the statistical consulting division of Sanitas Technologies, is pleased to provide the August/October 2025 semi-annual Groundwater Detection and Assessment Monitoring statistical analysis for Georgia Power Company's Plant Yates Ash Management Area (AMA) and R6 CCR Landfill. The analysis complies with the federal rule for the Disposal of Coal Combustion Residuals from Electric Utilities (CCR Rule, 2015), the Georgia Environmental Protection Division (EPD) Rules for Solid Waste Management Chapter 391-3-4-.10, and follows the United States Environmental Protection Agency (USEPA) Unified Guidance (2009).

Sampling for the Appendix III parameters began in 2016 at most wells. Semi-annual sampling of the majority of constituents has been performed for several years in accordance with the Georgia Department of Natural Resources, Environmental Protection Division groundwater monitoring regulations. A list of all parameters is provided below.

The monitoring well network, as provided by Southern Company Services, consists of the following:

- **Upgradient wells:**
  - **AP-1:** YGWA-47

        - **AP-2:** YGWA-1D, YGWA-1I, YGWA-2I, YGWA-3D, YGWA-3I, YGWA-14S, and YGWA-30I
        - **Gypsum Landfill:** GWA-2
        - **AMA-R6:** YGWA-17S, YGWA-18I, YGWA-18S, YGWA-20S, YGWA-21I, YGWA-39, YGWA-40, YGWA-4I, YGWA-5D, and YGWA-5I
    - **Downgradient wells:** YGWC-23S, YGWC-24SB, YGWC-36A, YGWC-38, YGWC-41, YGWC-42, YGWC-43, YGWC-49, and YGWC-50
    - **Assessment wells:** YAMW-1, YAMW-2, YAMW-3, YAMW-4, YAMW-5, PZ-35, PZ-37, PZ-37D, PZ-51, PZ-52D, PZ-54D, and PZ-55

Data from downgradient wells are evaluated for Appendix III and IV constituents, as described below, when a minimum of 8 samples is available. Note that downgradient well YGWC-50 was first sampled during the August 2023 event and now has a minimum of 9 samples; therefore, data from this well were evaluated with interwell prediction limits for Appendix III parameters and confidence intervals for Appendix IV parameters during this analysis. Assessment wells are evaluated for Appendix IV constituents when a minimum of 4 samples is available. All assessment wells, including wells PZ-54D and PZ-55 which were first sampled in June 2024, have a minimum of 4 samples; therefore, data from these wells were evaluated with confidence intervals for Appendix IV parameters during this analysis.

Downgradient well YGWC-24SA was installed in June 2020 as a replacement well for well YGWC-24S; however, it was abandoned and replacement well YGWC-24SB was installed in late 2022 and first sampled in February 2023. Historical data from wells YGWC-24 and YGWC-24SA were combined with data from well YGWC-24SB. Downgradient well YGWC-36A was installed in September 2020 as a replacement well for YGWC-36 to supplement existing data for each constituent. Historical data from well YGWC-36 were combined with data from well YGWC-36A. Replacement wells YGWC-24SB and YGWC-36A are evaluated in this report for Appendix III and IV constituents.

When a minimum of 8 samples has been collected from new well YGWC-24SB, the Mann-Whitney test will be used to compare newer observations from this well to historical observations from abandoned well YGWC-24SA for Appendix IV constituents to evaluate whether the populations of data are statistically different. In cases where statistically significant differences are identified at the 99% confidence level, the historical record is truncated so that only data from the new well, which may be more representative of current groundwater quality, are evaluated for the Appendix IV constituents in the confidence interval comparisons to respective Groundwater Protection Standards. This evaluation was previously performed for well YGWC-36A and is discussed below.

All data were sent electronically to Groundwater Stats Consulting, and the statistical analysis was reviewed by Kristina Rayner, Senior Statistician and Founder of Groundwater Stats Consulting. Note that all wells were sampled in August 2025, except for downgradient well YGWC-50 which was sampled in October 2025.

The CCR program consists of the constituents listed below. The terms "parameters" and "constituents" are used interchangeably.

- **Appendix III** (Detection Monitoring) **-** boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- **Appendix IV** (Assessment Monitoring) **–** antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

Note that when there are no detections present in downgradient wells for a given constituent, statistical analyses are not required. A summary of Appendix IV downgradient and assessment well/constituent pairs containing 100% non-detects follows this letter. For all constituents, a substitution of the most recent reporting limit is used for non-detect data, and this generally gives the most conservative limit in each case. For interwell prediction and tolerance limits, a single reporting limit substitution is used across upgradient wells for a given parameter. Due to elevated or varying reporting limits (at or above the MCL or CCR-specified level in one or more wells), the following most recent reporting limits, as provided by the laboratory, were substituted across all wells in order to maintain conservative (i.e., lower) limits from a regulatory perspective:

- Antimony: 0.002 mg/L
- Arsenic: 0.002 mg/L
- Chromium: 0.005 mg/L
- Cobalt: 0.005 mg/L
- Lead: 0.002 mg/L
- Molybdenum: 0.01 mg/L
- Selenium: 0.005 mg/L
- Thallium: 0.0005 mg/L

Combined upgradient well data from all units at Plant Yates are utilized to construct statistical limits for Appendix III and IV parameters. Although upgradient well GWA-2 is no longer sampled, data from this well represent groundwater quality upgradient of the facility and are, therefore, plotted on time series and box plots and included in the construction of interwell prediction limits and upper tolerance limits.

Time series plots for Appendix III and IV parameters at all wells are provided for the purpose of screening data at these wells (Figure A). Additionally, a separate section of box plots is included for all constituents at upgradient and downgradient wells (Figure B). The time series plots are used to initially screen for suspected outliers and trends, while the box plots provide visual representation of variation within individual wells and between all wells. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. A summary of flagged outliers follows this report (Figure C).

During previous screenings, data at all wells for constituents detected in downgradient wells were evaluated for the following: 1) outliers; 2) trends; 3) most appropriate statistical method based on site characteristics of groundwater data upgradient of the facility; and 4) eligibility of downgradient wells when intrawell statistical methods are recommended. A power curve was previously provided and demonstrated that the selected statistical methods for the parameters listed above comply with the USEPA Unified Guidance and the Georgia Environmental Protection Division Rules for Solid Waste Management Chapter 391-3-4-.10. The EPA suggests the selected statistical method should provide at least 55% power at 3 standard deviations or at least 80% power at 4 standard deviations.

Summary of Statistical Methods – Appendix III and IV Parameters

Based on the April 2019 evaluation and state and federal regulatory requirements described below, the following methods were selected for Appendix III and IV constituents:

- Appendix III: Interwell prediction limits, combined with a 1-of-2 resample plan for boron, calcium, chloride, fluoride, pH, sulfate, and TDS
- Appendix IV: Confidence intervals for antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, combined radium 226 + 228, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium

The distribution of data is tested using the Shapiro-Wilk/Shapiro-Francia test for normality. Parametric prediction limits (or tolerance limits or confidence intervals as applicable) are utilized when the screened historical data follow a normal or transformed-normal distribution. When data cannot be normalized or the majority of data are non-detects, a nonparametric test is utilized. While the false positive rate associated with the parametric limits is based on an annual 10% (5% per semi-annual event) as recommended by the EPA Unified Guidance (2009), the false positive rate associated with the nonparametric limits is dependent upon the available background sample size, number of future comparisons, and verification resample plan. The following approaches are used for handling non-detects (USEPA, 2009):

- No statistical analyses are required on wells and analytes containing 100% non-detects (USEPA Unified Guidance, 2009, Chapter 6).
- When data contain <15% non-detects, simple substitution of one-half the reporting limit is utilized in the statistical analysis. The reporting limit utilized for non-detects is the most recent practical quantification limit (PQL) as reported by the laboratory.
- When data contain between 15-50% non-detects, the Kaplan-Meier non-detect adjustment is applied to the background data for parametric limits. This technique adjusts the mean and standard deviation of the historical concentrations to account for concentrations below the reporting limit.
- Nonparametric prediction limits are used on data containing greater than 50% non-detects.

Natural systems continuously evolve due to physical changes made to the environment. Examples include capping a landfill, paving areas near a well, or lining a drainage channel to prevent erosion. Periodic updating of background statistical limits is necessary to accommodate these types of changes. In the interwell case, prediction limits are updated with upgradient well data during each event after careful screening for any new outliers. In some cases, the earlier portion of data are deselected prior to construction of limits to provide sensitive limits that will rapidly detect changes in groundwater quality. Even though the data are excluded from the calculation, the values will continue to be reported and shown in tables and graphs.

Summary of Initial Background Screening Conducted in April 2019

Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers at all wells for Appendix III and Appendix IV parameters were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits.

Using the Tukey box plot method, several outliers were identified. When the most recent value is identified as an outlier, values are not flagged in the database at this time as they may represent a possible trend. If future values do not remain at similar concentrations, these values will be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements

reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

During the time of the screening, none of the outliers identified by Tukey's method were flagged in the database as all values were either similar to remaining measurements within the same well and neighboring wells, or the values were reported non-detects. Subsequently, when all upgradient wells were pooled to construct statistical limits, one detected value of 6.3 s.u. for pH at well YGWA-47 (an upgradient well from AP-1) was flagged as an outlier because it was unusually high during a single event compared to all other values at neighboring wells. When any values are flagged in the database as outliers, they are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages will display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed in data. When the reporting limit was higher than the CCR-rule specified levels discussed below, non-detects were substituted with one half the reporting limit.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each well to identify statistically significant increasing or decreasing trends, and the results of those findings were submitted with the screening. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses showed several statistically significant decreasing and increasing trends for the Appendix III parameters. Most of the trends noted were relatively low in magnitude when compared to average concentrations, and the background time period was short with only two years of record, making it difficult to separate trends from normal year-to-year variation; therefore, no adjustments were made to the data sets at that time. If the observed decreasing or increasing trends persist over a longer time frame, some records may need to be truncated.

Appendix III – Determination of Spatial Variation

The Analysis of Variance (ANOVA) was used to statistically evaluate differences in average concentrations among upgradient wells, which assists in identifying the most appropriate statistical approach. Interwell tests, which compare downgradient well data to statistical limits constructed from pooled upgradient well data, are appropriate when average concentrations are similar across upgradient wells. Intrawell tests, which compare compliance data from a single well to screened historical data within the same well, are appropriate when upgradient wells exhibit spatial variation; when statistical limits constructed from upgradient wells are not representative of the current background data population; and when downgradient water quality is unimpacted compared to upgradient water quality for the same parameter.

The ANOVA identified variation among upgradient well data for all Appendix III parameters. These constituents were further evaluated during the screening for the appropriateness of intrawell or interwell methods for each constituent. However, interwell methods will be used for all Appendix III constituents in accordance with Georgia EPD requirements.

Summary of Background Update Conducted in 2024

Outlier Analysis

Time series plots were used to identify suspected outliers, or extreme values that would result in limits that are not representative of the current background data population. Suspected outliers at all wells for Appendix III and Appendix IV parameters were formally tested using Tukey's box plot method and, when identified, flagged in the computer database with "o" and deselected prior to construction of statistical limits. When the most recent value is identified as an outlier, values are not flagged in the database at this time as the measurements may represent a possible trend. If future values do not remain at similar concentrations, these values will be flagged as outliers and deselected. Several low values exist in the data sets and appear on the graphs as possible low outliers relative to

the laboratory's Practical Quantitation Limit. However, these values are observed trace values (i.e., measurements reported by the laboratory between the Method Detection Limit and the Practical Quantitation Limit) and, therefore, were not flagged as outliers.

Using the Tukey box plot method, several outliers were identified and both Tukey's test and visual screening confirmed values flagged from previous analyses. An exception is for one detected value of 6.3 s.u. for pH at well YGWA-47 that was previously flagged as an outlier because it was high during a single event compared to all other values at neighboring wells. However, when compared among pooled upgradient well data, this value is no longer spurious and was unflagged. Although not identified by Tukey's test due to the high percentage of non-detects, elevated concentrations for cobalt at upgradient well GWA-2 remain flagged to reduce variation in the record and maintain statistical limits that are conservative (i.e., lower) from a regulatory perspective.

When any values are flagged in the database as outliers, the measurements are plotted in a disconnected and lighter symbol on the time series graph. The accompanying data pages will display the flagged value in a lighter font as well. A substitution of the most recent reporting limit was applied when varying detection limits existed for a given constituent within a data set. When the reporting limit was higher than the CCR-rule specified levels discussed below, non-detects were substituted with one half the reporting limit.

Seasonality

No obvious seasonal patterns were observed on the time series plots for any of the detected data; therefore, no deseasonalizing adjustments were made to the data. When seasonal patterns are observed, data may be deseasonalized so that the resulting limits will correctly account for the seasonality as a predictable pattern rather than random variation or a release.

Trend Test Evaluation

While trends may be identified by visual inspection, a quantification of the trend and its significance is needed. The Sen's Slope/Mann Kendall trend test was used to evaluate all data at each upgradient well to identify statistically significant increasing or decreasing trends. In the absence of suspected contamination, significant trending data are typically not included as part of the background data used for construction of prediction limits. This step serves to eliminate the trend and, thus, reduce variation in background. When statistically significant decreasing trends are present, all available data are evaluated to determine whether earlier concentration levels are significantly different than current

reported concentrations and will be deselected as necessary. When any records of data are truncated for the reasons above, a summary report will be provided to show the date ranges used in construction of the statistical limits.

The results of the trend analyses showed several statistically significant decreasing and increasing trends for the Appendix III and IV parameters. However, the trends noted were relatively low in magnitude compared to average pooled upgradient concentrations. Therefore, no adjustments were made to the data sets at this time. If the observed decreasing or increasing trends persist over a longer time frame and influence resulting statistical limits, some records may need to be truncated.

Statistical Analysis of Appendix III Parameters – August/October 2025

All Appendix III parameters were analyzed using interwell prediction limits. Background (upgradient) well data were reassessed for potential outliers during this analysis. Values in background which have been flagged as outliers may be seen in a lighter font and as a disconnected symbol on the graphs. No new values were flagged as outliers and a summary of flagged outliers follows this report (Figure C).

Interwell Prediction Limits

Interwell prediction limits, combined with a 1-of-2 resample plan, were constructed using all historical upgradient well data through August 2025 (Figure D). Interwell prediction limits pool upgradient well data to establish a background limit for an individual constituent. The August/October 2025 sample from each downgradient well is compared to the background limit to determine whether initial exceedances are present. As mentioned above, downgradient well YGWC-50 was sampled in October 2025.

In the event of an initial exceedance of compliance well data, the 1-of-2 resample plan allows for collection of one additional sample to determine whether the initial exceedance is confirmed. When a resample confirms the initial exceedance, a statistically significant increase is identified and further research would be required to identify the cause of the exceedance (i.e., impact from the site, natural variation, or an off-site source). If the resample falls within the statistical limit, the initial exceedance is considered to be a false positive result and, therefore, no exceedance is noted and no further action is necessary. If no resample is collected, the original result is considered a confirmed exceedance. A summary table of the interwell prediction limits follows this letter. Prediction limit exceedances were noted for the following Appendix III well/constituent pairs:

- Boron: YGWC-23S, YGWC-36A, YGWC-38, YGWC-41, YGWC-42, YGWC-43, and YGWC-50
- Calcium: YGWC-36A, YGWC-42, and YGWC-50
- Sulfate: YGWC-36A, YGWC-42, YGWC-43, and YGWC-50
- TDS: YGWC-36A, YGWC-38, YGWC-42, YGWC-43, and YGWC-50

Trend Test Evaluation – Appendix III

When prediction limit exceedances are identified in downgradient wells, data are further evaluated using the Sen's Slope/Mann Kendall trend test to determine whether concentrations are statistically increasing, decreasing, or stable at the 99% confidence level (Figure E). Upgradient wells are included in the trend analyses for all parameters found to exceed their prediction limit in downgradient wells to identify whether similar patterns exist upgradient of the site. Upgradient trends are an indication of spatial variability in groundwater quality that is unrelated to practices at the site. Both a summary and complete graphical results of the trend tests follow this report. Statistically significant trends were identified for the following well/constituent pairs:

Increasing trends
- Boron: YGWA-39 (upgradient), and YGWC-43
- Calcium: GWA-2, YGWA-1D, YGWA-5I, YGWA-17S, YGWA-30I, and YGWA-39 (all upgradient)
- Sulfate: GWA-2, YGWA-1D, YGWA-2I, YGWA-3D, YGWA-3I, and YGWA-5I (all upgradient)
- TDS: YGWA-21I, YGWA-39 (both upgradient), and YGWC-43

Decreasing trends
- Boron: YGWA-40 (upgradient), YGWC-38, YGWC-41, and YGWC-42
- Calcium: YGWA-1I, YGWA-18S, YGWA-47 (all upgradient), and YGWC-42
- Sulfate: YGWA-5D, YGWA-18S, YGWA-30I, YGWA-39, YGWA-40, YGWA-47 (all upgradient), and YGWC-42
- TDS: YGWA-47 (upgradient), YGWC-38, and YGWC-42

Statistical Analysis of Appendix IV Parameters – August/October 2025

For analysis of Appendix IV parameters, confidence intervals for each downgradient and assessment well/constituent were compared against corresponding Groundwater Protection Standards (GWPS). GWPS were developed as described below. Data from all wells for Appendix IV parameters are reassessed for outliers during each analysis.

The reported measurements of cobalt from August 2020 through August 2022 in upgradient well GWA-2 were previously flagged as outliers as these measurements were two orders of magnitude higher than remaining measurements at this well. This step results in statistical limits that are conservative (i.e., lower) from a regulatory perspective. If further studies indicate these measurements represent spatial variation in groundwater quality, the values will be re-evaluated for construction of interwell tolerance limits. A November 2021 observation for lithium at YAMW-3 was previously added to the database, but was flagged as an outlier with an "ox" flag in the database since this sample was collected prior to the well's redevelopment. Note that more recent concentrations for cobalt at upgradient well YGWA-21I have been increasing and the February 2025 observation was flagged during a previous analysis as an outlier in order to maintain statistical limits that are capable of readily detecting changes in downgradient groundwater quality. All upgradient concentrations will be re-evaluated in future analyses and if future observations are similar to this measurement, then this observation may be unflagged as an outlier.

Data among downgradient wells were also re-evaluated during this analysis, and no additional values were flagged as outliers. A summary of flagged outliers follows this report (Figure C).

Mann-Whitney Test

During the October 2023 analysis, the Mann-Whitney (Wilcoxon Rank Sum) test was used to compare the median of observations sampled before October 2020 at abandoned well YGWC-36 to the median of the 8 most recent observations sampled at replacement well YGWC-36A for each Appendix IV parameters. When no variation was present between historical data and compliance samples, the Mann-Whitney test was not performed, which was the case for mercury and thallium. When the populations of the two groups are statistically significantly different at the 99% confidence level (such as cadmium and lithium), the historical data sampled from abandoned well YGWC-36 are truncated to only use data from well YGWC-36A. The earlier data are shown on the time series as disconnected point and in a lighter font on the data pages. A list of constituents using truncated records follows this report.

Interwell Upper Tolerance Limits

Interwell tolerance limits were used to calculate site-specific background limits from all available pooled upgradient well data through August 2025 for Appendix IV constituents (Figure F). Parametric tolerance limits are used when data follow a normal or transformed-normal distribution. When data contained greater than 50% non-detects or did not follow

a normal or transformed-normal distribution, non-parametric tolerance limits were used. When the alpha level (or false positive rate) for a nonparametric limit is shown as NaN in the results table, it indicates that the background sample size is large enough such that the resulting alpha level (or false positive rate) is too small to display in the results table.

Groundwater Protection Standards

The background limits were then used when determining the groundwater protection standard (GWPS) under 40 CFR §257.95(h) and Georgia EPD Rule 391-3-4-.10(6)(a). On July 30, 2018, US EPA revised the Federal CCR rule updating GWPS for cobalt, lead, lithium, and molybdenum as described above in 40 CFR §257.95(h)(2). Effective on February 22, 2022, Georgia EPD incorporated the updated GWPS into the current Georgia EPD Rules for Solid Waste Management 391-3-4-.10(6)(a). In accordance with the updated Rules, the GWPS is:

- The maximum contaminant level (MCL) established under §141.62 and §141.66 of this title
- Where an MCL has not been established for a constituent, Federal and State CCR Rules specify levels for cobalt (0.006 mg/L), lead (0.015 mg/L), lithium (0.040 mg/L), and molybdenum (0.100 mg/L)
- The respective background level for a constituent when the background level is higher than the MCL or Federal CCR Rule identified GWPS

Following Georgia EPD Rule requirements and the Federal CCR requirements, GWPS were established for statistical comparison of Appendix IV constituents for this sample event (Figure G).

Confidence Intervals

To complete the statistical comparison to GWPS, confidence intervals were constructed on downgradient and assessment wells for each of the Appendix IV constituents in accordance with the state requirements. Assessment wells are included when a minimum of 4 samples is available.

The Sanitas software was used to calculate the confidence intervals, either parametric or nonparametric, depending on the data distribution and percentage of non-detects. When data followed a normal or transformed-normal distribution, parametric confidence intervals were used for Appendix IV parameters. Nonparametric confidence intervals, which use the appropriate order statistics, depending on the sample size, as interval limits, were constructed when data did not follow a normal or transformed-normal distribution

or when there were greater than 50% non-detects. The lower confidence limit, which is constructed with 99% confidence for parametric confidence intervals, is compared to the GWPS prepared as described above. The achievable confidence level associated with nonparametric confidence intervals is dependent upon the number of samples available.

Although trend analysis for Appendix IV parameters in downgradient wells is not routinely included in data screening, records with visually apparent trends may be formally tested using the Sen's Slope/Mann-Kendall trend test at the 95% confidence level. When statistically significant trends are identified, the record may require truncation prior to construction of confidence intervals if earlier concentrations no longer represent current average conditions (USEPA Unified Guidance, 2009, Chapter 7). Note that due to a statistically significant decreasing trend for selenium at downgradient well YGWC-38 and a statistically significant increasing trend for lithium at YGWC-42 (Figure H), only concentrations since March 2021 and, subsequently, relatively stable observations were used to construct confidence intervals for these well/constituent pairs to represent the current average of groundwater quality conditions. As mentioned above, the records for cadmium and lithium at downgradient well YGWC-36A were also evaluated with confidence intervals using only the most recent measurements. Trend tests using both the full and truncated records follow this report and a list of well/constituent pairs that use a truncated portion of their record follows this letter.

Only when the entire confidence interval is above a GWPS is the well/constituent pair considered to exceed its respective standard. If there is an exceedance of the GWPS, a statistically significant level (SSL) exceedance is identified. A summary of the confidence intervals follows this letter (Figure I). Exceedances were noted for the following well/constituent pairs:

- Cadmium: YGWC-50
- Lithium: YGWC-42 and YAMW-3
- Selenium: PZ-37

Trend Test Evaluation – Appendix IV

Assessment monitoring well/constituent pairs identified with confidence interval exceedances are further evaluated using the Sen's Slope/Mann-Kendall trend test using 95% confidence (Figure J). Although the trend tests for Assessment monitoring pairs were previously evaluated using 99% confidence, the 95% confidence level more rapidly identifies statistically significant trends. Additionally, the 95% confidence level is recommended in cases with limited sample sizes and, particularly, for new assessment wells. Upgradient wells are included in the trend analyses to identify whether similar

patterns exist upgradient of the site for the same constituents. When trends are present in upgradient wells, it is an indication of variability in groundwater quality unrelated to practices at the site. Significant trends were identified for the following well/constituent pairs:

Increasing trends

- Lithium: YGWA-3D, YGWA-3I, YGWA-39 (all upgradient), and YGWC-42
- Selenium: YGWA-17S (upgradient)

Decreasing trends

- Cadmium: YGWC-50
- Lithium: YGWA-1D, YGWA-18I, YGWA-18S, and YGWA-47 (all upgradient)
- Selenium: PZ-37

Note that while a statistically significant increasing trend for selenium at upgradient well YGWA-17S was identified, the slope, however, is zero at this well which represents the median slope of all the possible pairwise slopes of the data evaluated.

Summary

Observations from the August/October 2025 sample event at Yates AMA-R6 were compared to established interwell prediction limits for all Appendix III constituents. Exceedances were identified for the following well/constituent pairs:

- Boron: YGWC-23S, YGWC-36A, YGWC-38, YGWC-41, YGWC-42, YGWC-43, and YGWC-50
- Calcium: YGWC-36A, YGWC-42, and YGWC-50
- Sulfate: YGWC-36A, YGWC-42, YGWC-43, and YGWC-50
- TDS: YGWC-36A, YGWC-38, YGWC-42, YGWC-43, and YGWC-50

When confidence intervals were constructed on downgradient wells for Appendix IV constituents and compared to respective GWPS, exceedances were identified for the following well/constituent pairs:

- Cadmium: YGWC-50
- Lithium: YGWC-42 and YAMW-3
- Selenium: PZ-37

Thank you for the opportunity to assist you in the statistical analysis of groundwater quality for Plant Yates Ash Management Area (AMA) and R6 CCR Landfill. If you have any questions or comments, please feel free to contact us.

Figure H. Lithium YGWC-42 & Selenium YGWC-38 Trend Tests	599
Figure I. Confidence Intervals	605
Figure J. Appendix IV Trend Tests - Confidence Interval Exceedances	696

Summary Tables

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Date Ranges

Date: 10/30/2025 12:48 PM

Plant Yates Client: Southern Company Data: Yates AMA-R6

Cadmium (mg/L)
- YGWC-36A overall:10/7/2020-8/12/2025

Lithium (mg/L)
- YGWC-36A overall:10/7/2020-8/12/2025
- YGWC-42 overall:3/4/2021-8/13/2025

Selenium (mg/L)
- YGWC-38 overall:3/4/2021-8/14/2025

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

100% Non-Detects: Appendix IV Downgradient & Assessment

Analysis Run 10/29/2025 3:33 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Antimony (mg/L)
YAMW-2, YAMW-3, PZ-51, PZ-55

Arsenic (mg/L)
YAMW-2, PZ-55

Beryllium (mg/L)
YAMW-4, PZ-37D, PZ-55

Cadmium (mg/L)
YGWC-24SB, YGWC-43, YAMW-4, PZ-37D

Chromium (mg/L)
PZ-37D, PZ-51, PZ-55

Cobalt (mg/L)
YGWC-38, YGWC-23S, YGWC-24SB, PZ-37D

Fluoride (mg/L)
YAMW-1

Lead (mg/L)
YAMW-3, PZ-55

Mercury (mg/L)
YGWC-36A, YGWC-50, YAMW-2, YAMW-4, YAMW-5, PZ-35, PZ-37D, PZ-51, PZ-52D, PZ-54D, PZ-55

Molybdenum (mg/L)
YGWC-38, YGWC-24SB, YGWC-50, YAMW-5, PZ-51

Selenium (mg/L)
YGWC-24SB, YGWC-43, PZ-37D

Thallium (mg/L)
YGWC-38, YGWC-41, YGWC-23S, YGWC-24SB, YGWC-42, YGWC-43, YAMW-1, YAMW-2, YAMW-3, YAMW-4, YAMW-5, PZ-35, PZ-37D, PZ-37, PZ-51, PZ-52D, PZ-55

Appendix III Interwell Prediction Limits - Significant Results

Upper Tolerance Limits Summary Table

Plant Yates Client: Southern Company Data: Yates AMA-R6 Printed 10/29/2025, 3:26 PM

Constituent	Upper Lim.	Bg N	Bg Mean	Std. Dev.	%NDs	ND Adj.	Transform	Alpha	Method
Antimony (mg/L)	0.0047	485	n/a	n/a	87.84	n/a	n/a	NaN	NP Inter(NDs)
Arsenic (mg/L)	0.0046	533	n/a	n/a	75.42	n/a	n/a	NaN	NP Inter(NDs)
Barium (mg/L)	0.21	533	n/a	n/a	2.064	n/a	n/a	NaN	NP Inter(normality)
Beryllium (mg/L)	0.0011	517	n/a	n/a	80.66	n/a	n/a	NaN	NP Inter(NDs)
Cadmium (mg/L)	0.00063	517	n/a	n/a	94.97	n/a	n/a	NaN	NP Inter(NDs)
Chromium (mg/L)	0.0093	485	n/a	n/a	80.82	n/a	n/a	NaN	NP Inter(NDs)
Cobalt (mg/L)	0.035	526	n/a	n/a	69.96	n/a	n/a	NaN	NP Inter(NDs)
Combined Radium 226 + 228 (pCi/L)	6.92	511	n/a	n/a	0	n/a	n/a	NaN	NP Inter(normality)
Fluoride (mg/L)	1.1	536	n/a	n/a	54.66	n/a	n/a	NaN	NP Inter(NDs)
Lead (mg/L)	0.002	487	n/a	n/a	88.3	n/a	n/a	NaN	NP Inter(NDs)
Lithium (mg/L)	0.026	511	n/a	n/a	26.81	n/a	n/a	NaN	NP Inter(normality)
Mercury (mg/L)	0.00064	441	n/a	n/a	87.53	n/a	n/a	NaN	NP Inter(NDs)
Molybdenum (mg/L)	0.03	475	n/a	n/a	61.68	n/a	n/a	NaN	NP Inter(NDs)
Selenium (mg/L)	0.005	515	n/a	n/a	93.01	n/a	n/a	NaN	NP Inter(NDs)
Thallium (mg/L)	0.00053	449	n/a	n/a	97.33	n/a	n/a	NaN	NP Inter(NDs)

YATES AMA-R6 GWPS				
Constituent Name	**MCL**	**CCR-Rule Specified**	**Background Limit**	**GWPS**
Antimony, Total (mg/L)	0.006		0.0047	0.006
Arsenic, Total (mg/L)	0.01		0.0046	0.01
Barium, Total (mg/L)	2		0.21	2
Beryllium, Total (mg/L)	0.004		0.0011	0.004
Cadmium, Total (mg/L)	0.005		0.00063	0.005
Chromium, Total (mg/L)	0.1		0.0093	0.1
Cobalt, Total (mg/L)		0.006	0.035	0.035
Combined Radium, Total (pCi/L)	5		6.92	6.92
Fluoride, Total (mg/L)	4		1.1	4
Lead, Total (mg/L)		0.015	0.002	0.015
Lithium, Total (mg/L)		0.04	0.026	0.04
Mercury, Total (mg/L)	0.002		0.00064	0.002
Molybdenum, Total (mg/L)		0.1	0.03	0.1
Selenium, Total (mg/L)	0.05		0.005	0.05
Thallium, Total (mg/L)	0.002		0.00053	0.002

**Gray cell indicates Background Limit is higher than MCL or CCR Rule Specified Level*

**MCL = Maximum Contaminant Level*

**CCR = Coal Combustion Residual*

**GWPS = Groundwater Protection Standard*

Lithium YGWC-42 & Selenium YGWC-38 Trend Tests - All/Significant Results

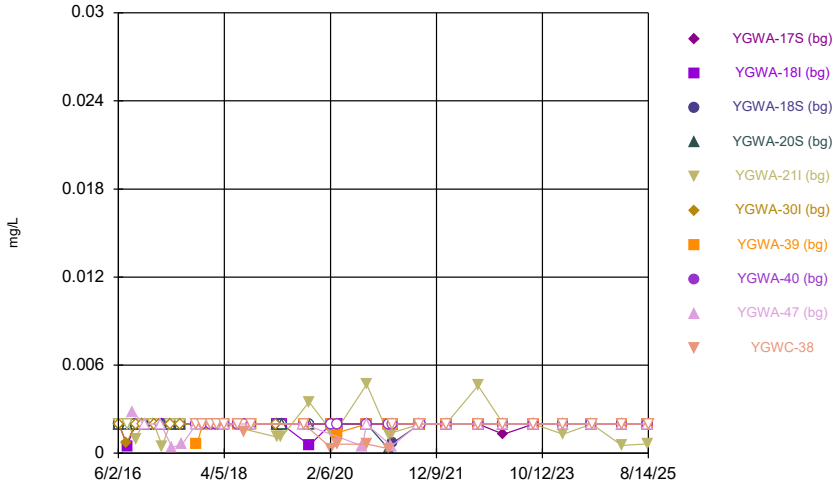
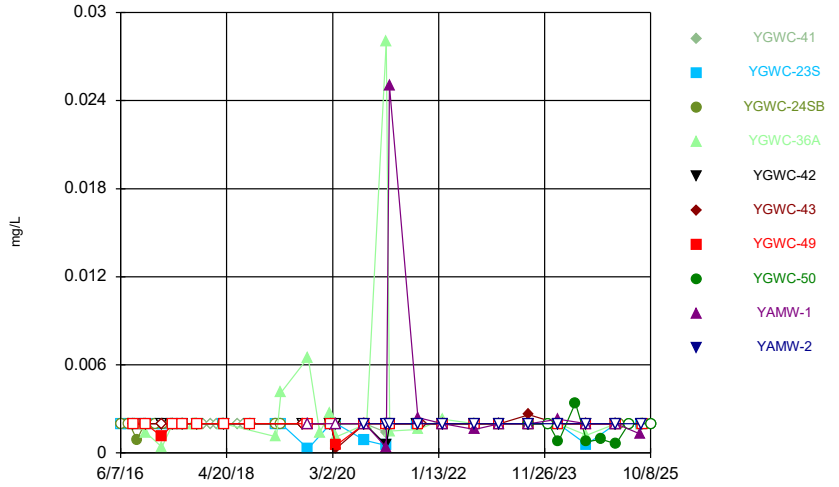
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

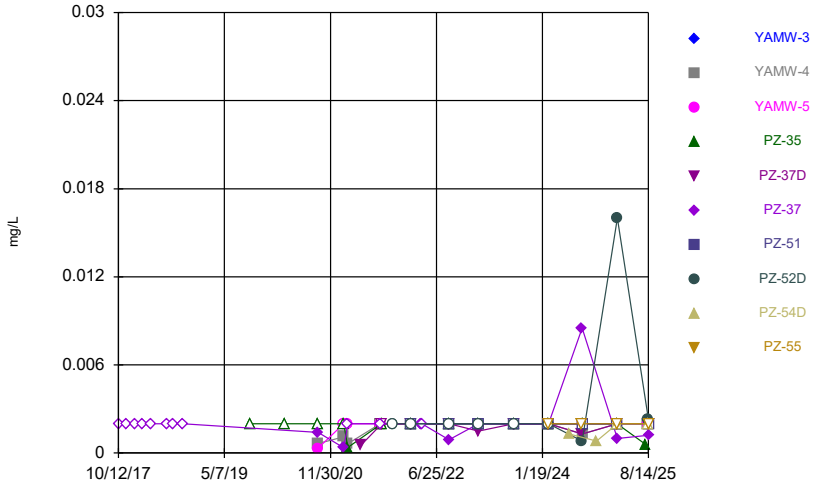
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

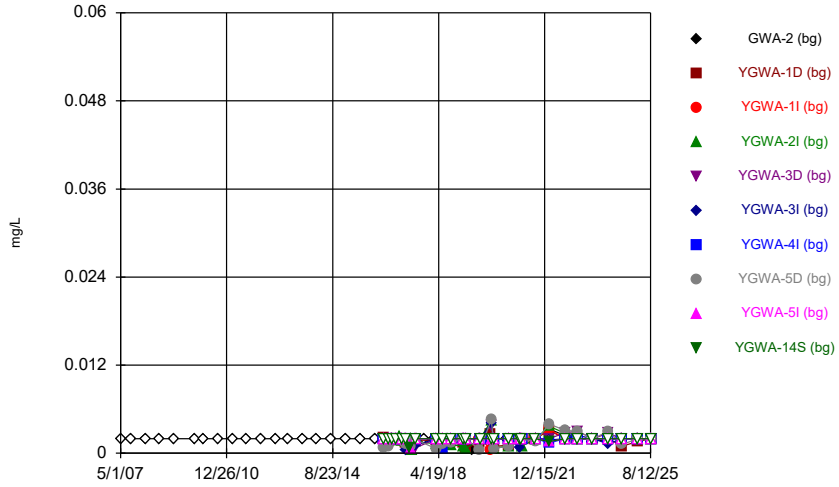
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

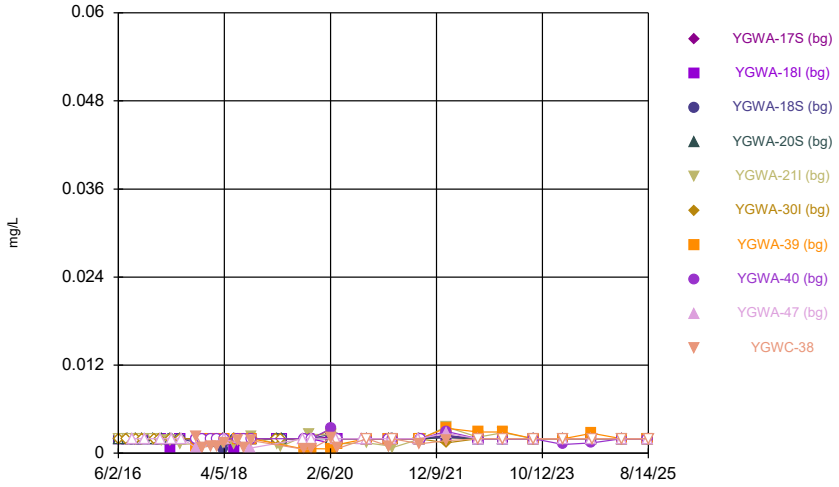
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Antimony Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

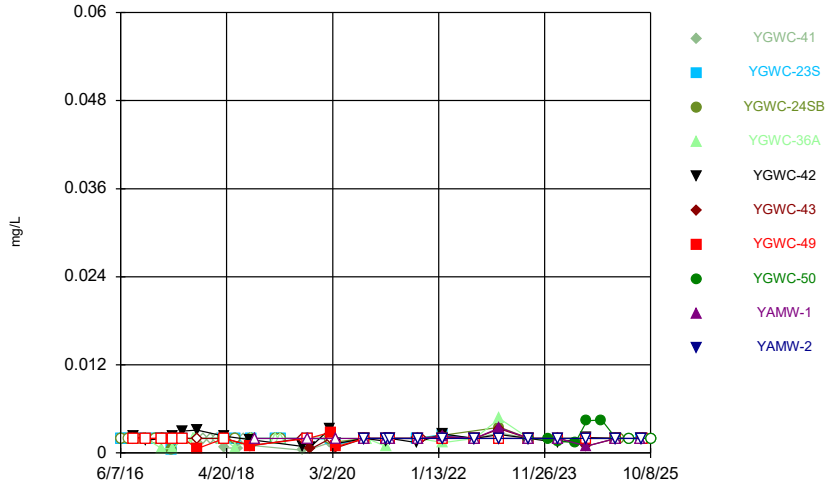
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

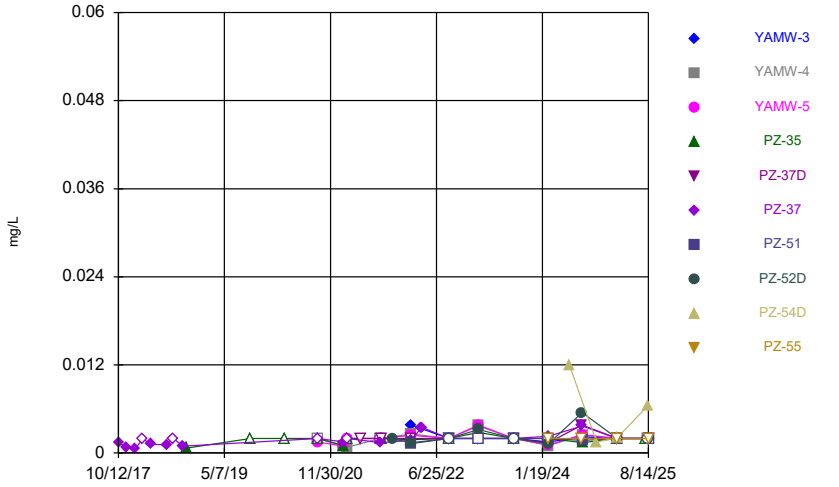
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

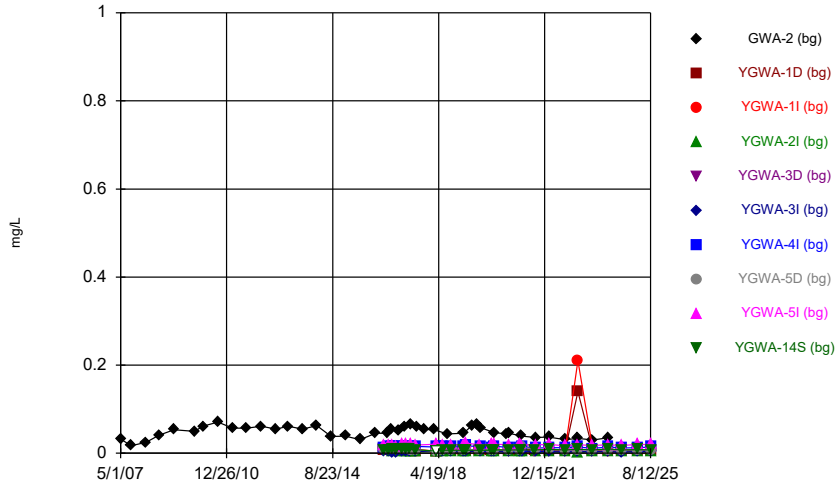
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

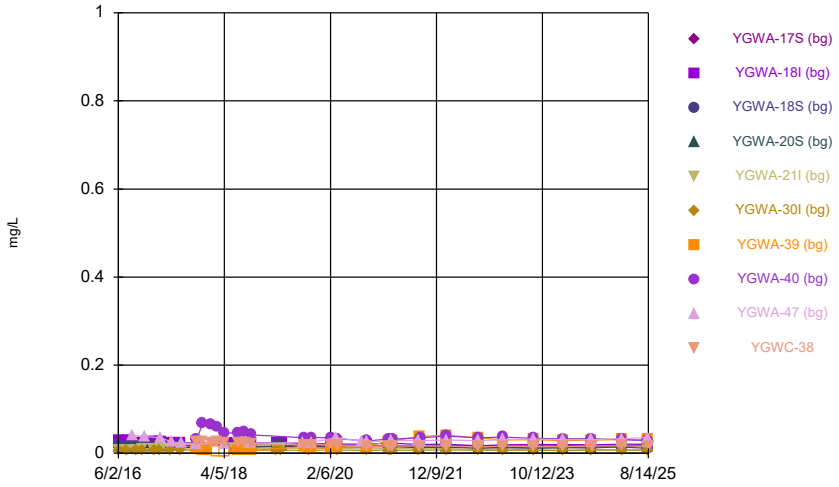
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Arsenic Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

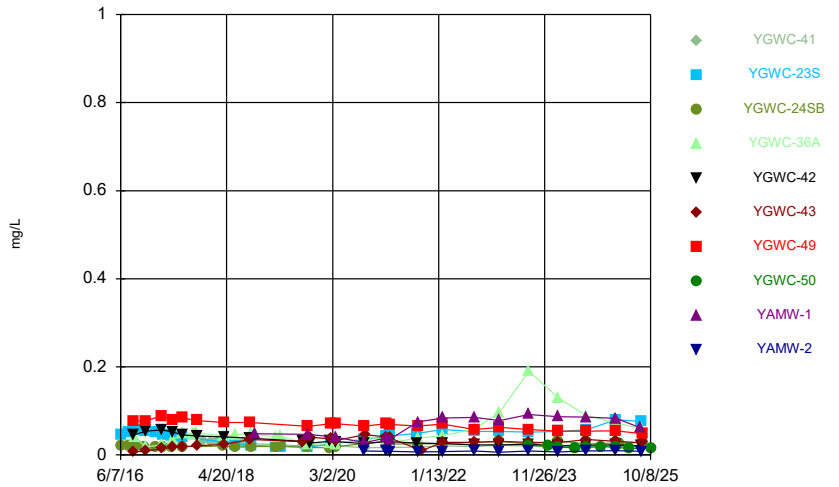
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Barium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

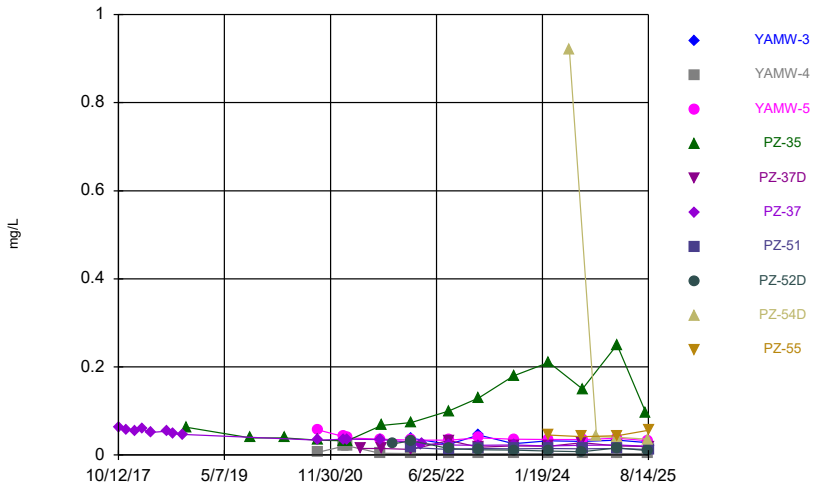
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Barium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

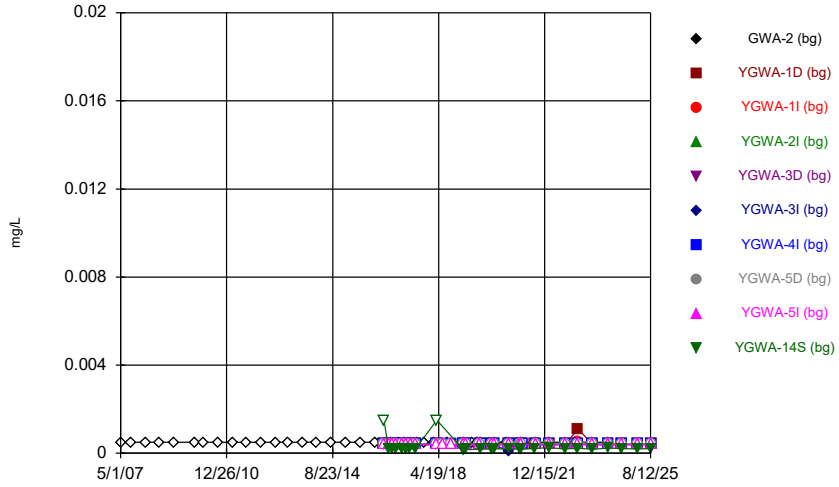
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG



Time Series

Constituent: Barium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

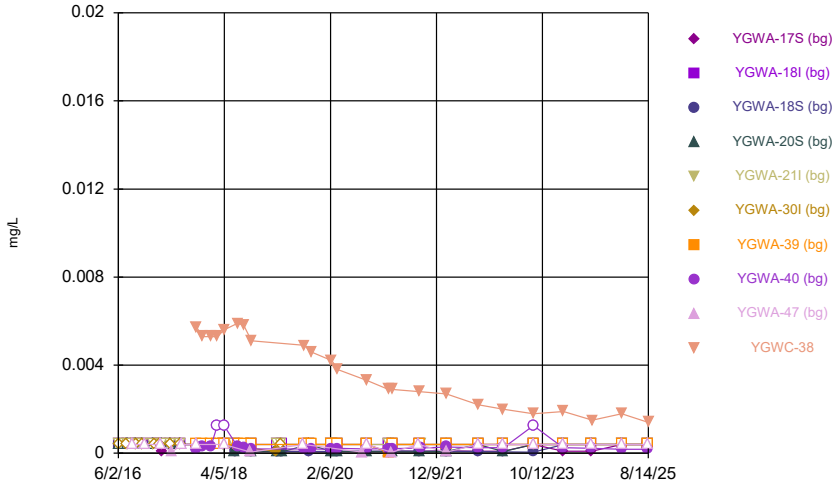
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG



Time Series

Constituent: Barium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

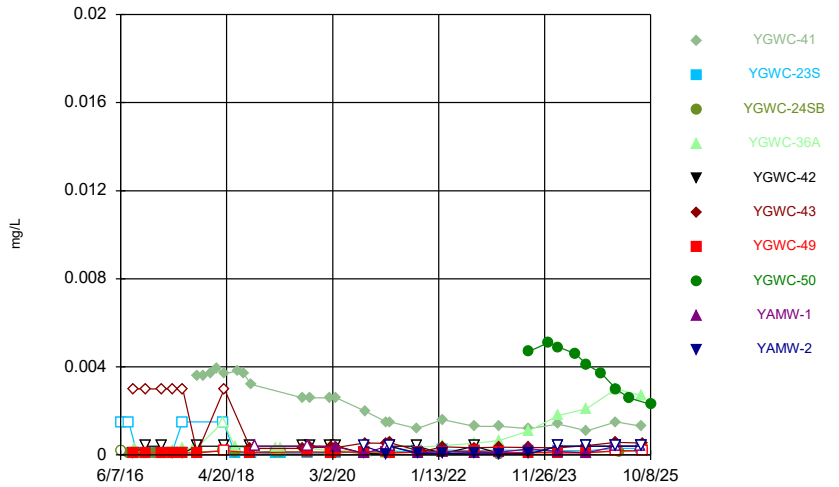
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

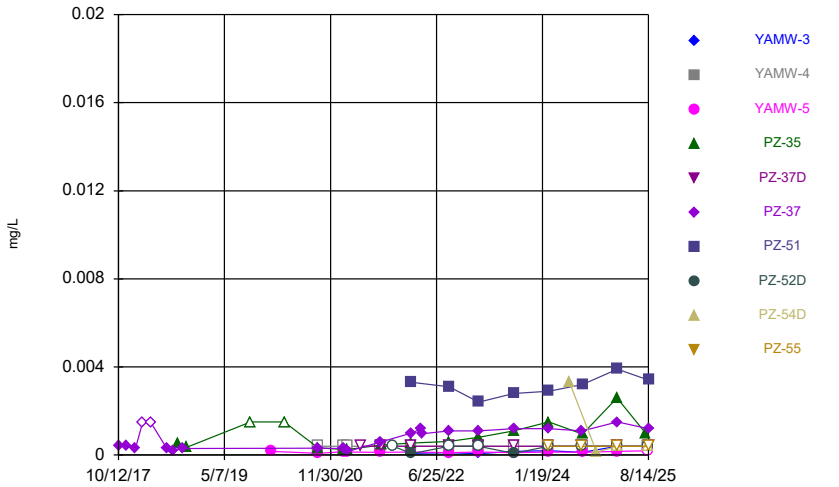
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

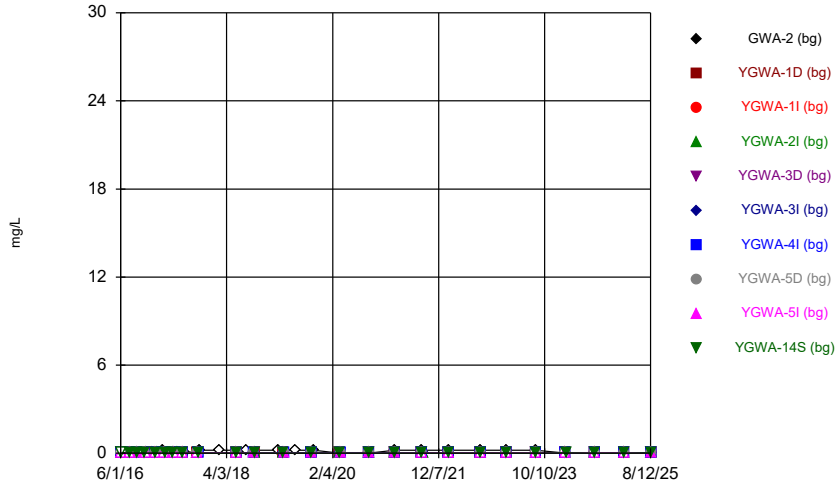
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

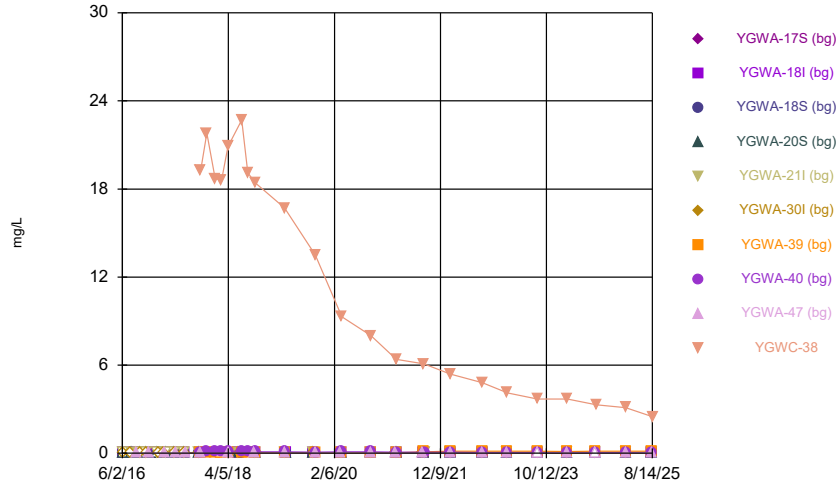
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Beryllium Analysis Run 11/6/2025 8:34 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

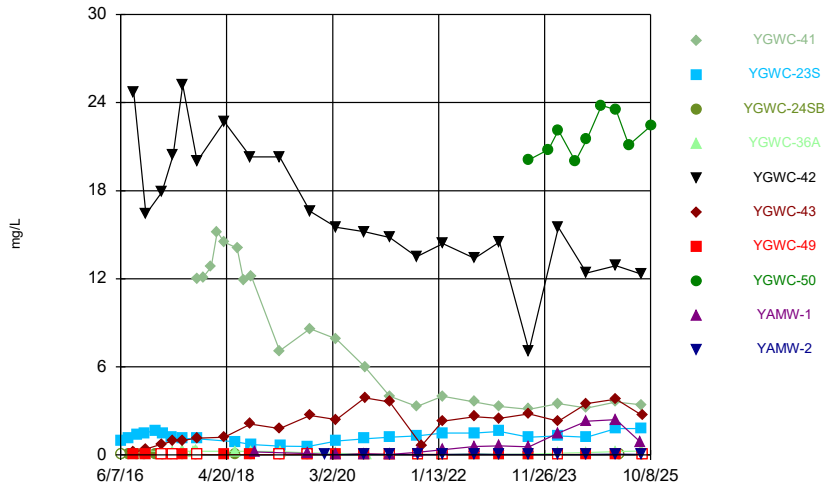
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

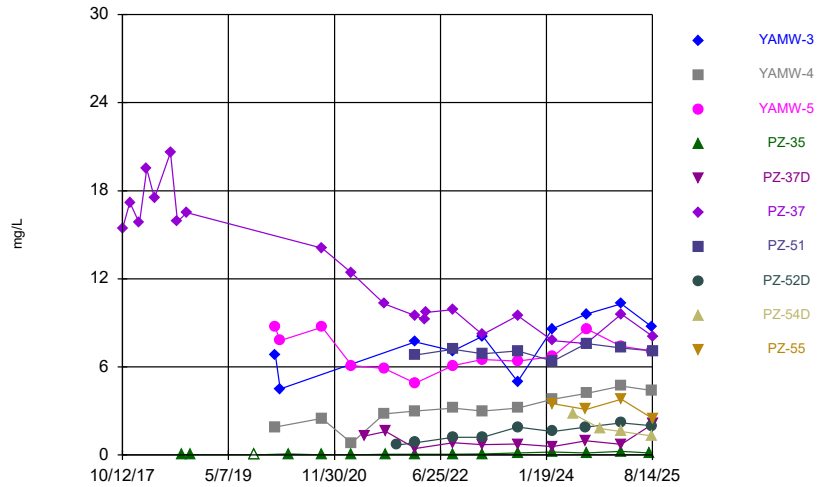
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

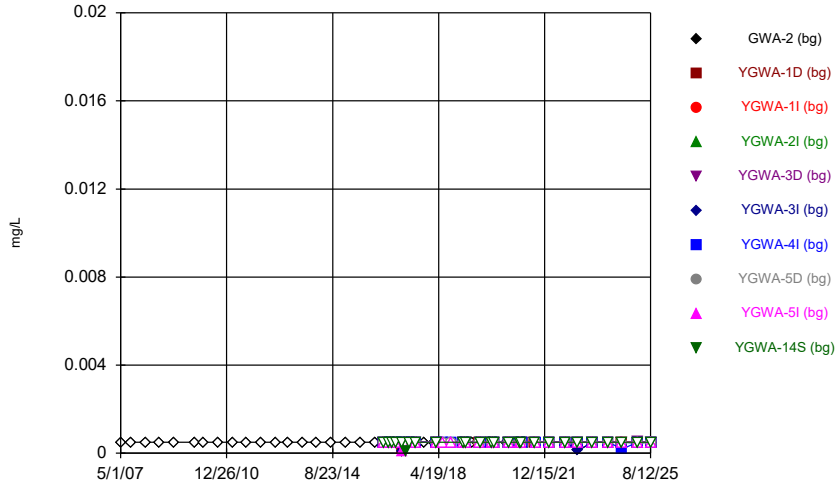
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

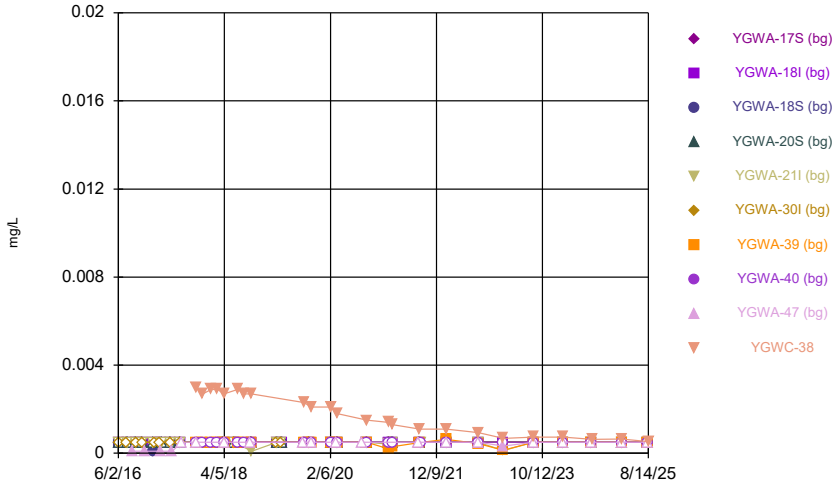
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Boron Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

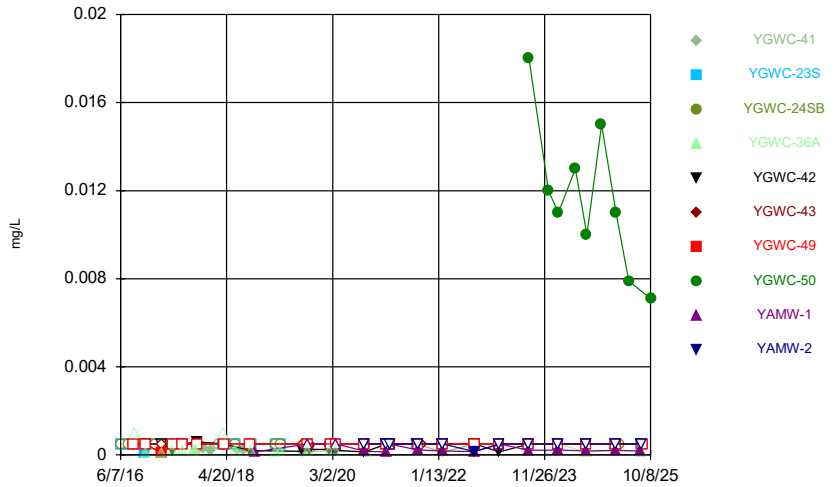
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

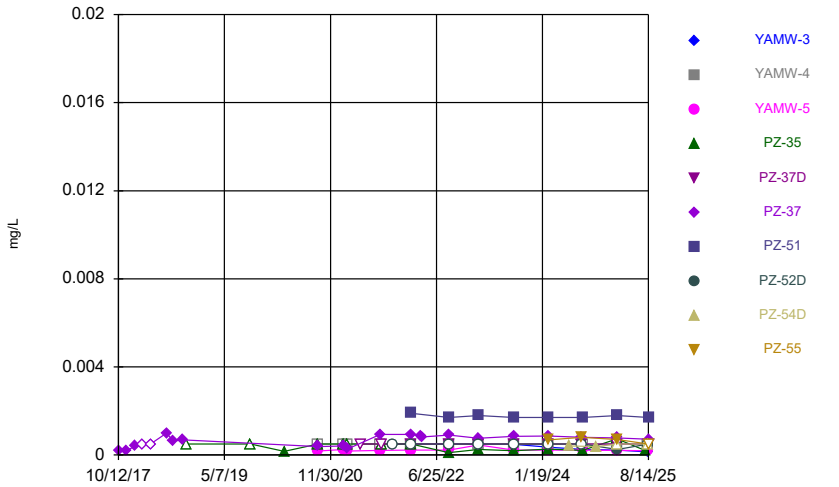
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

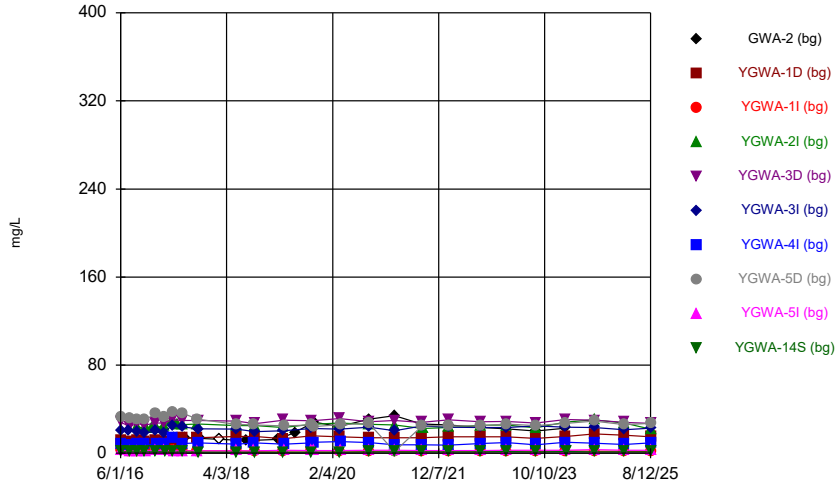
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Cadmium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Calcium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Calcium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Calcium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Calcium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Time Series

Constituent: Chloride Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Time Series

Constituent: Chromium Analysis Run 11/6/2025 8:35 PM
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

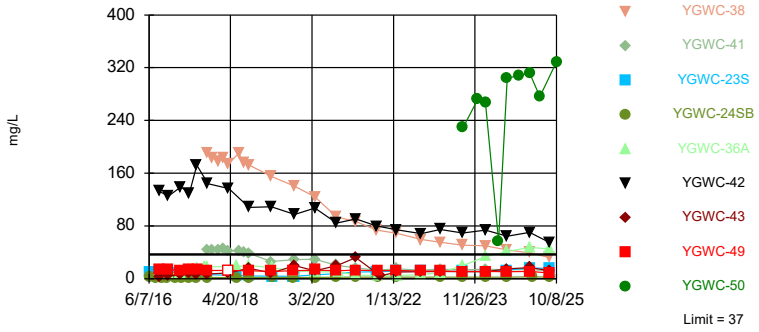
Exceeds Limit: YGWC-38, YGWC-41, YGWC-23S, YGWC-36A, YGWC-42, YGWC -43. YGWC-50

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 461 background values. 51.84% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Boron Analysis Run 11/6/2025 8:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

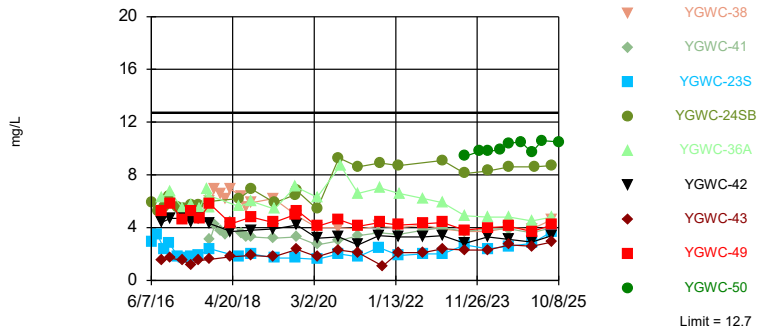
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Exceeds Limit: YGWC-36A, YGWC-42, YGWC-50

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 467 background values. 0.6424% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Calcium Analysis Run 11/6/2025 8:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

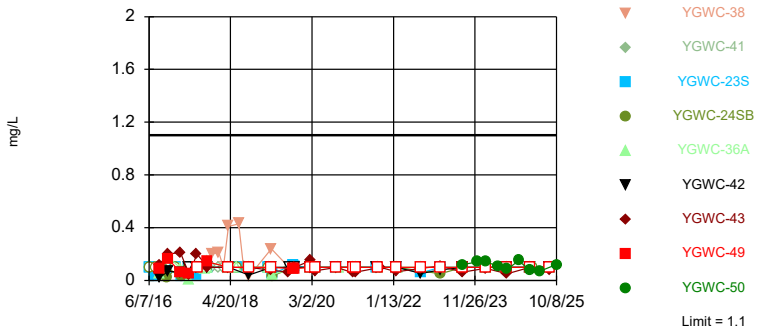
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Within Limit

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 466 background values. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Chloride Analysis Run 11/6/2025 8:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

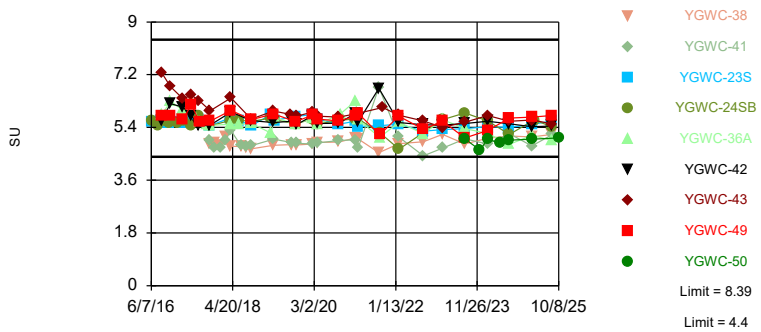
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.

Within Limit

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 536 background values. 54.66% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Fluoride Analysis Run 11/6/2025 8:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

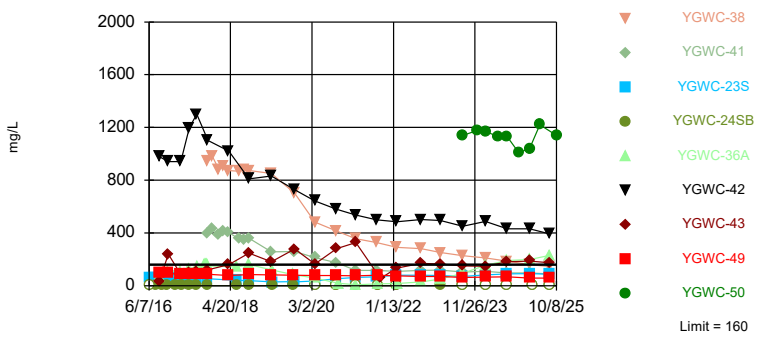
Within Limits

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limits are highest and lowest of 545 background values. Annual per-constituent alpha = 0.001769. Individual comparison alpha = 0.00009831 (1 of 2). Comparing 9 points to limit.

Constituent: pH, Field Analysis Run 11/6/2025 8:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6



Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

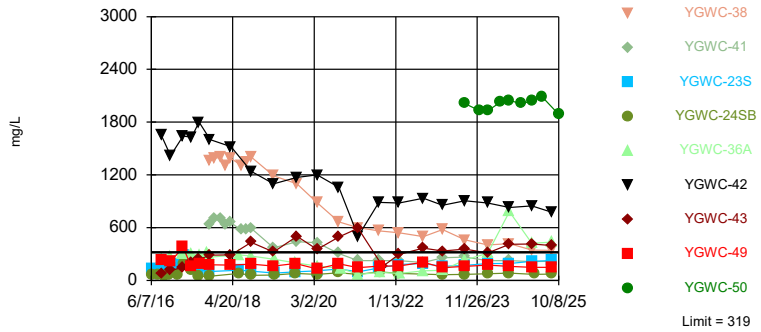
Hollow symbols indicate censored values.

Exceeds Limit: YGWC-36A, YGWC-42, YGWC-43, YGWC-50

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 467 background values. 4.497% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.



Constituent: Sulfate Analysis Run 11/6/2025 8:45 PM View: Appendix III Interwell
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Exceeds Limit: YGWC-38, YGWC-36A, YGWC-42, YGWC-43, YGWC-50

Prediction Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric prediction limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 460 background values. 0.4348% NDs. Annual per-constituent alpha = 0.0008845. Individual comparison alpha = 0.00004916 (1 of 2). Comparing 9 points to limit.

Constituent: TDS Analysis Run 11/6/2025 8:50 PM View: Appendix III Trend Tests
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Sen's Slope Estimator

YGWA-47 (bg)

n = 22

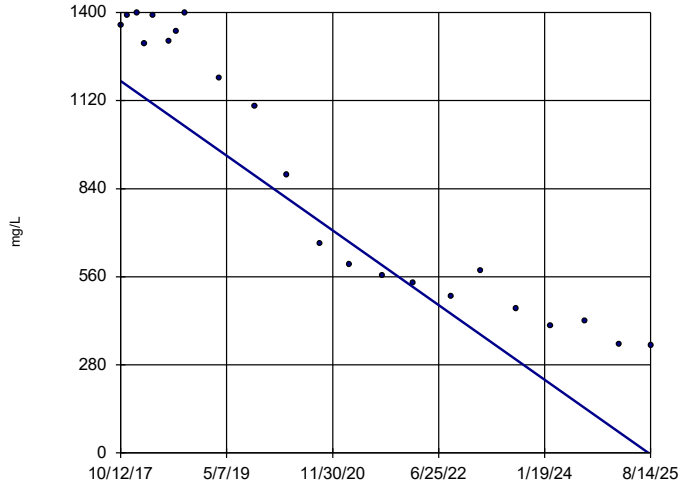
Slope = -7.486 units per year.

Mann-Kendall statistic = -117
critical = -92



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: TDS Analysis Run 11/6/2025 8:50 PM View: Appendix III Trend Tests
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

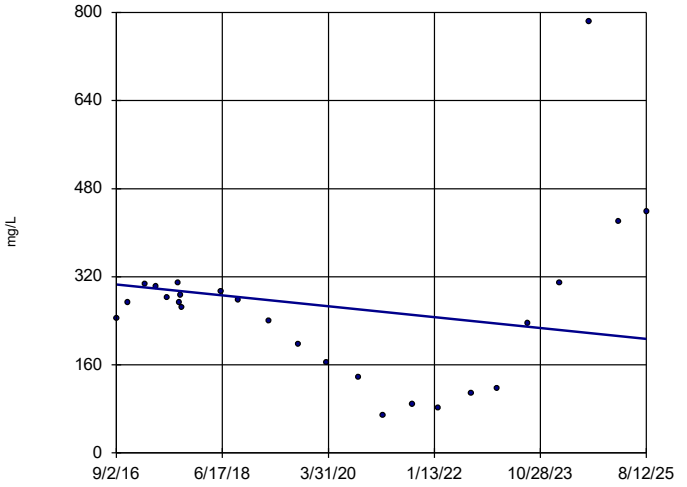
Sen's Slope Estimator

YGWC-38

n = 22

Slope = -151.3 units per year.

Mann-Kendall statistic = -193
critical = -92



Decreasing trend significant at 99% confidence level (α = 0.005 per tail).

Constituent: TDS Analysis Run 11/6/2025 8:50 PM View: Appendix III Trend Tests
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

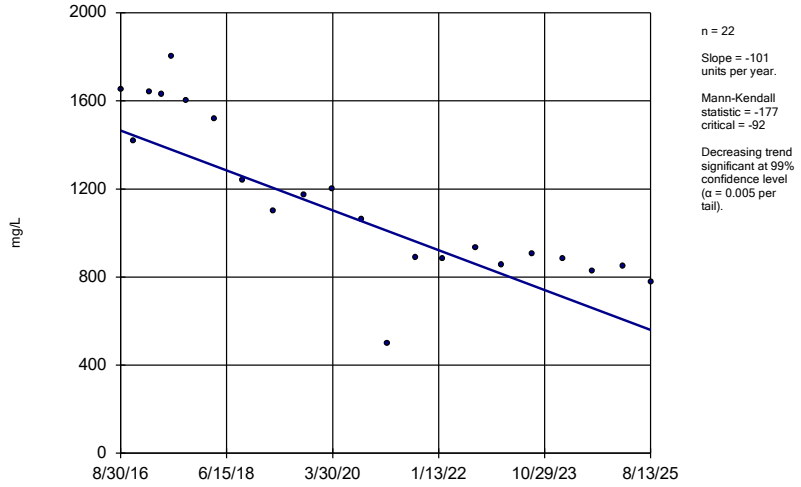
Sen's Slope Estimator

YGWC-36A

n = 25

Slope = -11.07 units per year.

Mann-Kendall statistic = -34
critical = -111



Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: TDS Analysis Run 11/6/2025 8:50 PM View: Appendix III Trend Tests
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Sen's Slope Estimator

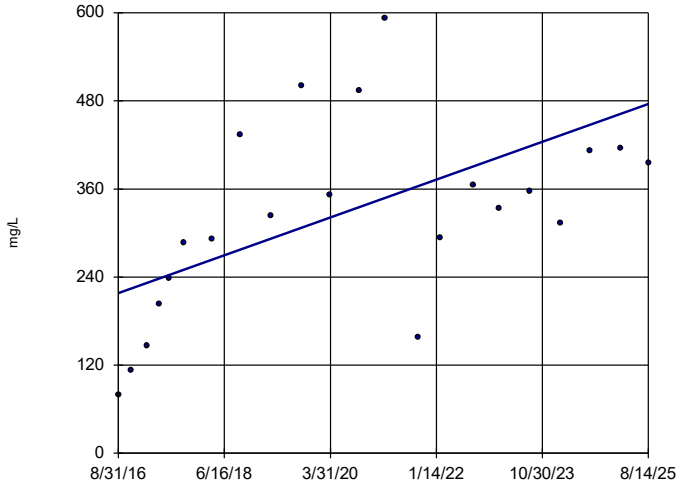
YGWC-42

n = 22

Slope = -101 units per year.

Mann-Kendall statistic = -177 critical = -92

Decreasing trend significant at 99% confidence level (α = 0.005 per tail).



Constituent: TDS Analysis Run 11/6/2025 8:50 PM View: Appendix III Trend Tests

Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Sen's Slope Estimator

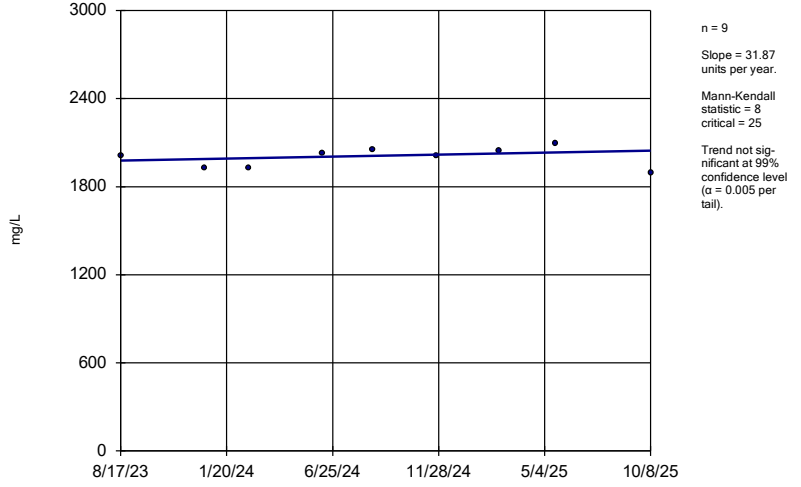
YGWC-43

n = 22

Slope = 28.73 units per year.

Mann-Kendall statistic = 115 critical = 92

Increasing trend significant at 99% confidence level (α = 0.005 per tail).



Constituent: TDS Analysis Run 11/6/2025 8:50 PM View: Appendix III Trend Tests

Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Sen's Slope Estimator

YGWC-50

n = 9

Slope = 31.87 units per year.

Mann-Kendall statistic = 8 critical = 25

Trend not significant at 99% confidence level (α = 0.005 per tail).

Constituent: TDS Analysis Run 11/6/2025 8:50 PM View: Appendix III Trend Tests

Plant Yates Client: Southern Company Data: Yates AMA-R6

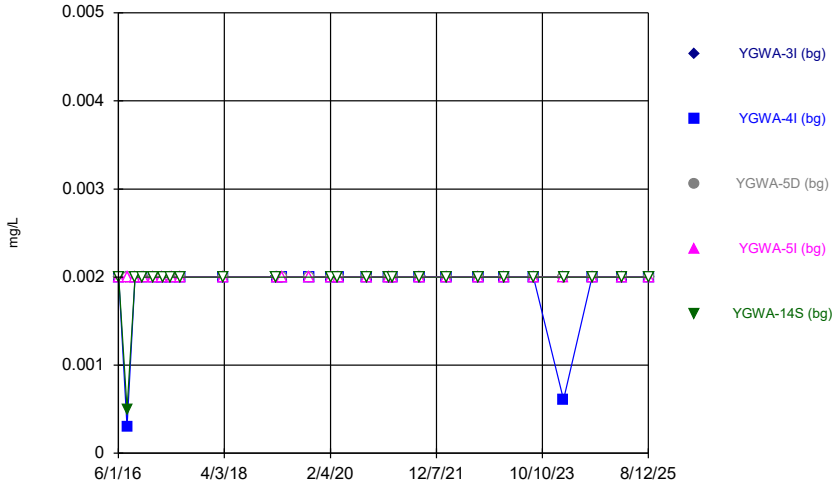
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG
Hollow symbols indicate censored values.



Time Series

Constituent: Thallium Analysis Run 10/29/2025 3:25 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

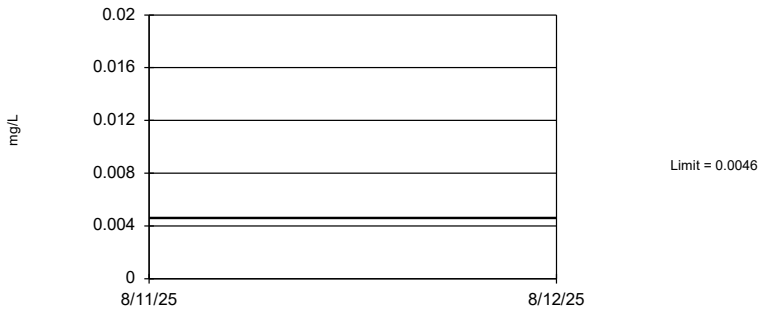
Tolerance Limit

Interwell Non-parametric



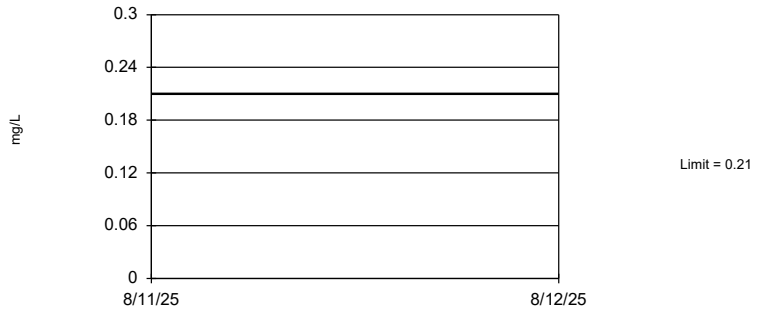
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 485 background values. 87.84% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Antimony Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



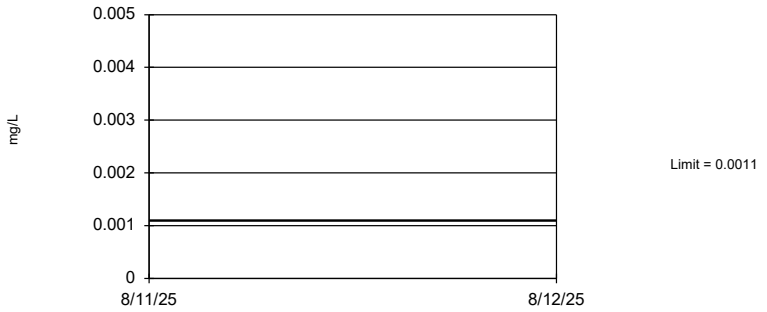
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 533 background values. 75.42% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Arsenic Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



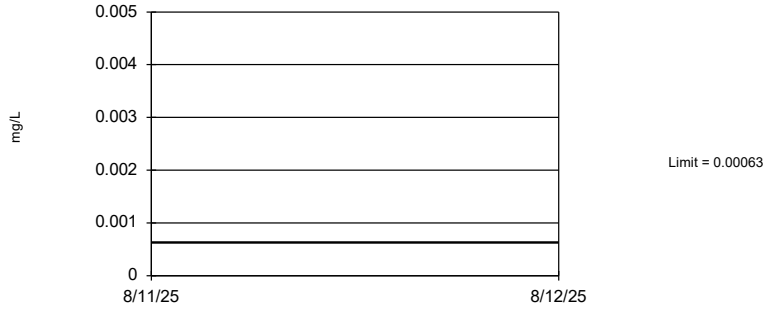
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 533 background values. 2.064% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Barium Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



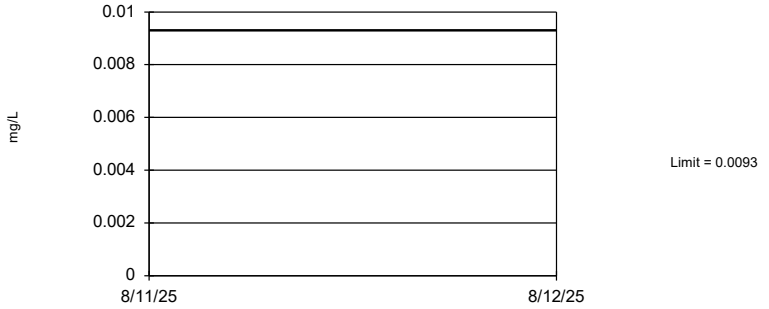
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 517 background values. 80.66% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Beryllium Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



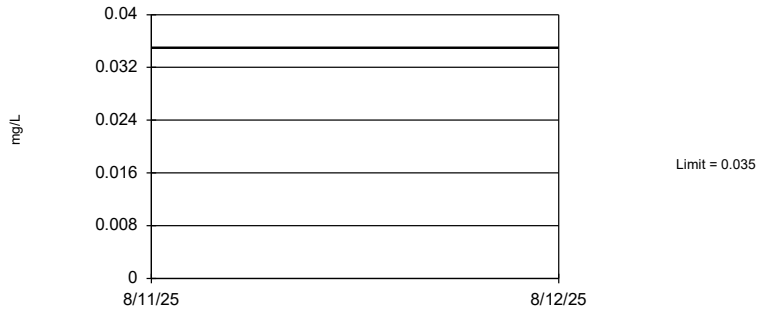
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 517 background values. 94.97% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cadmium Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



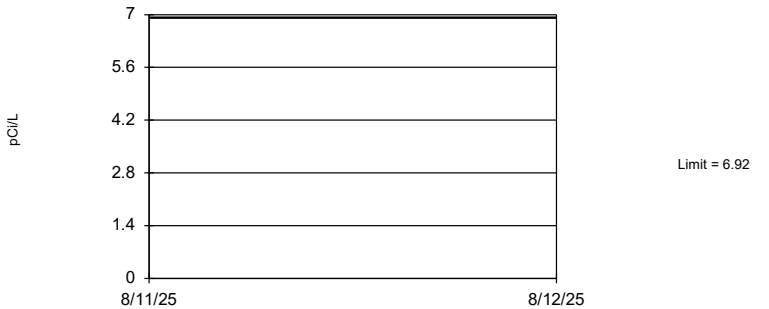
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 485 background values. 80.82% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Chromium Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



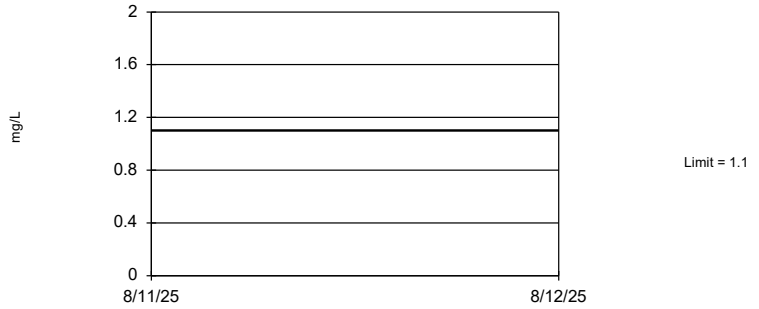
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 526 background values. 69.96% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Cobalt Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



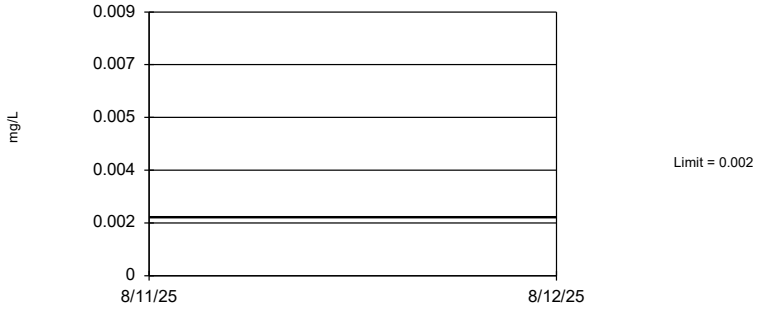
Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 511 background values. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Combined Radium 226 + 228 Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limit
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



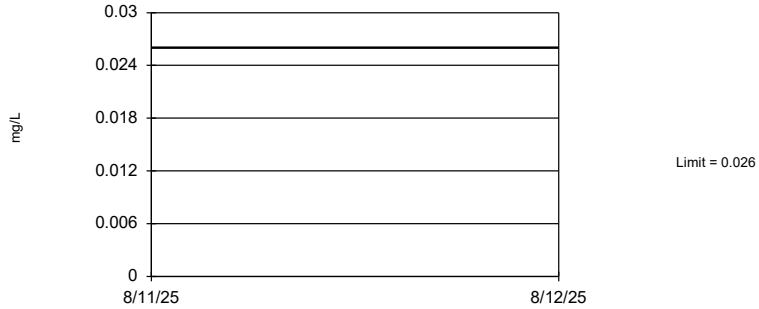
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 536 background values. 54.66% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Fluoride Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



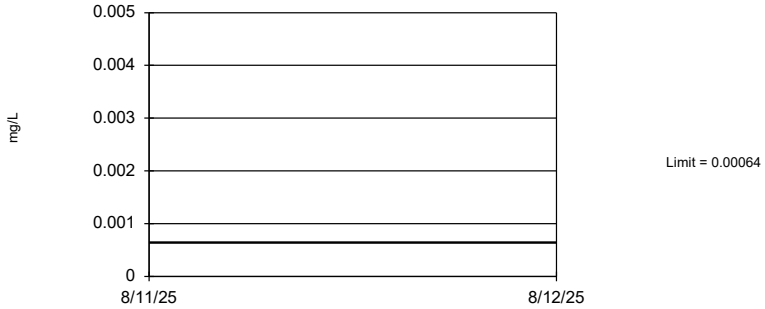
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 487 background values. 88.3% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Lead Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Chi Squared normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 511 background values. 26.81% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Lithium Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 441 background values. 87.53% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Mercury Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

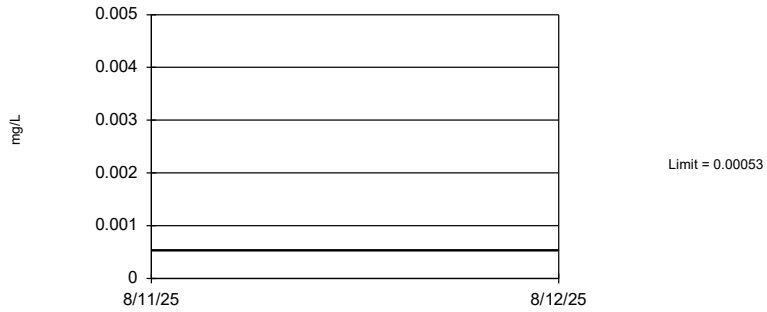
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 475 background values. 61.68% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Molybdenum Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 515 background values. 93.01% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Selenium Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Tolerance Limit

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 50%. Limit is highest of 449 background values. 97.33% NDs. 99.8% coverage at alpha=0.01; 99.8% coverage at alpha=0.05; 99.8% coverage at alpha=0.5. Report alpha < 0.0001.

Constituent: Thallium Analysis Run 10/29/2025 3:24 PM View: Upper Tolerance Limits
Plant Yates Client: Southern Company Data: Yates AMA-R6

Constituent: Barium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

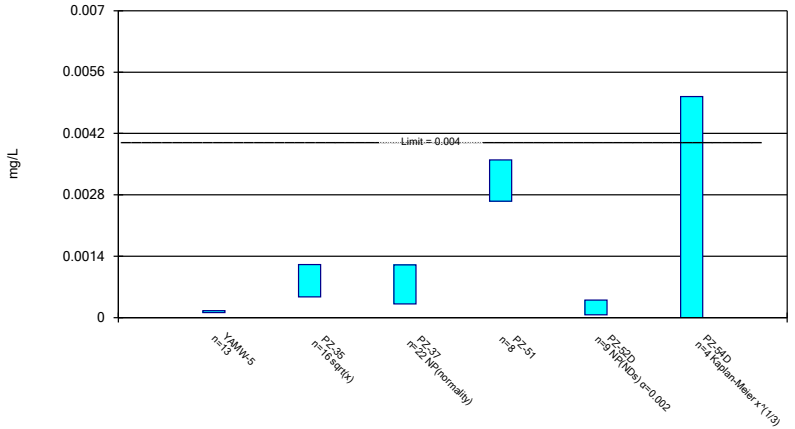
Constituent: Beryllium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

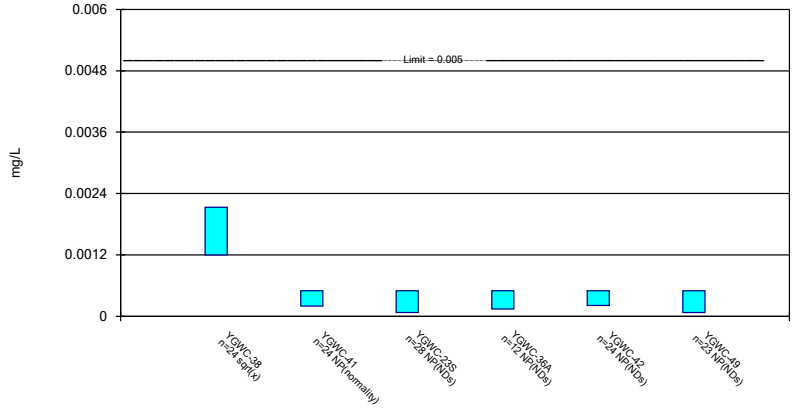


Constituent: Beryllium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

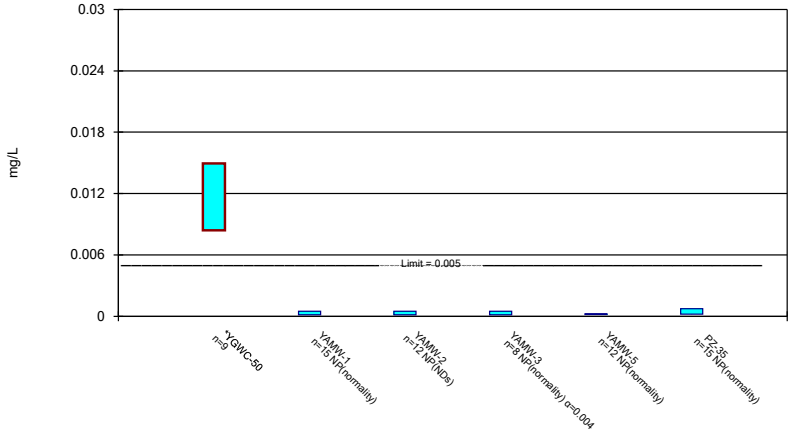


Constituent: Beryllium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

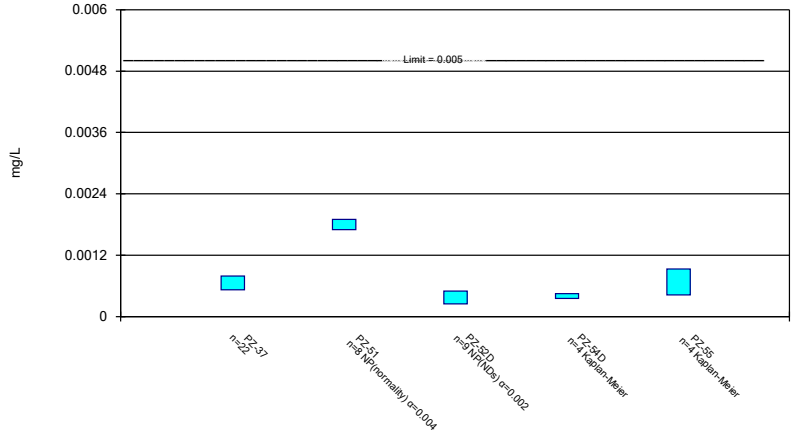


Constituent: Cadmium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance limit is exceeded.* Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

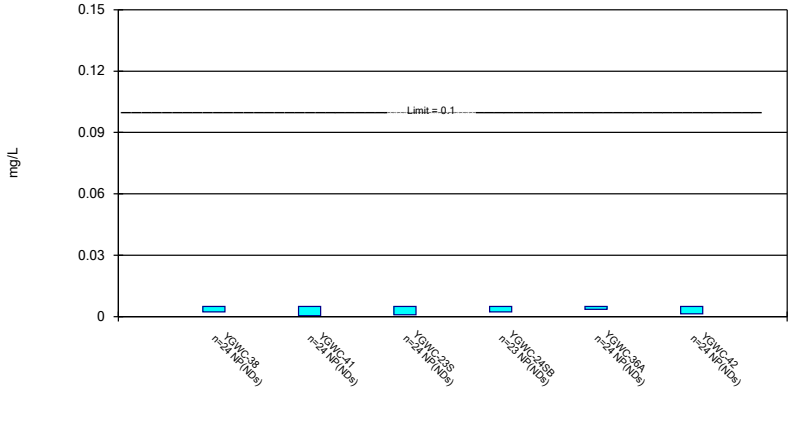


Constituent: Cadmium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

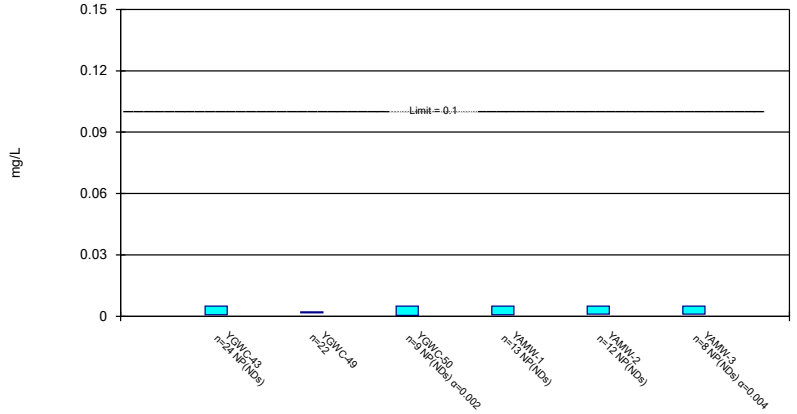


Constituent: Cadmium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

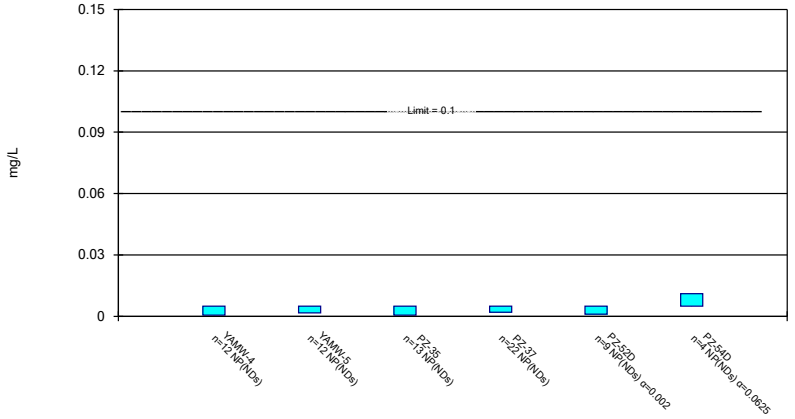


Constituent: Chromium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.

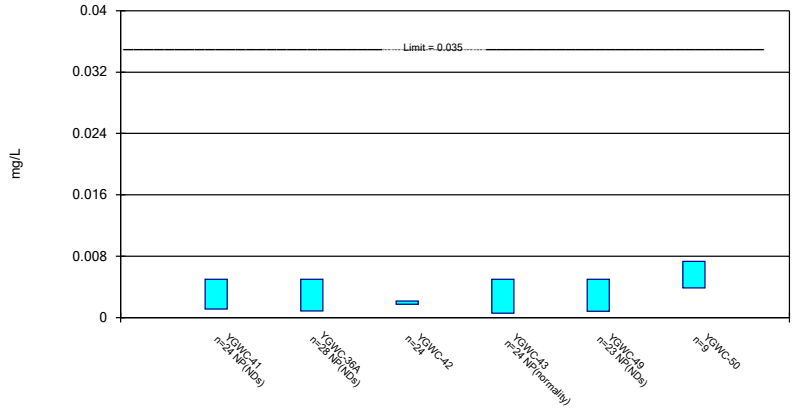


Constituent: Chromium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted.



Constituent: Chromium Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

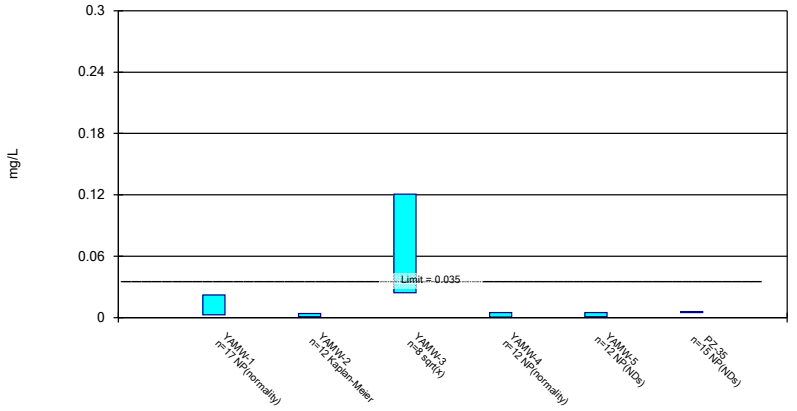
Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

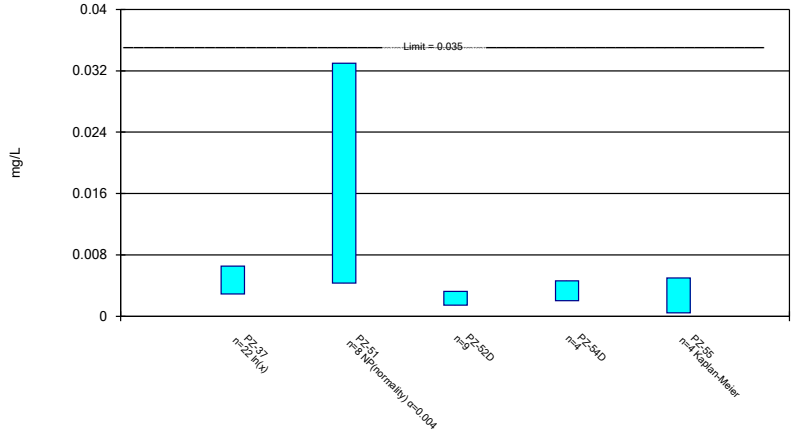
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

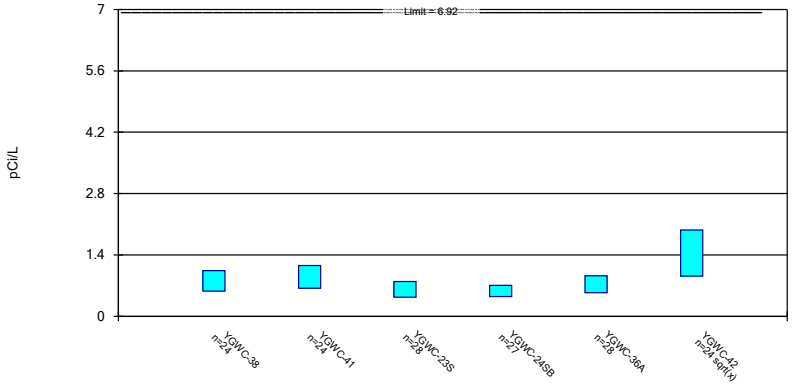
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Cobalt Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

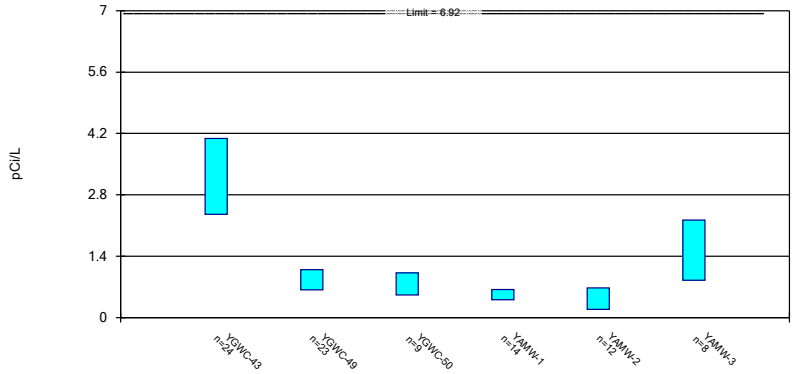
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

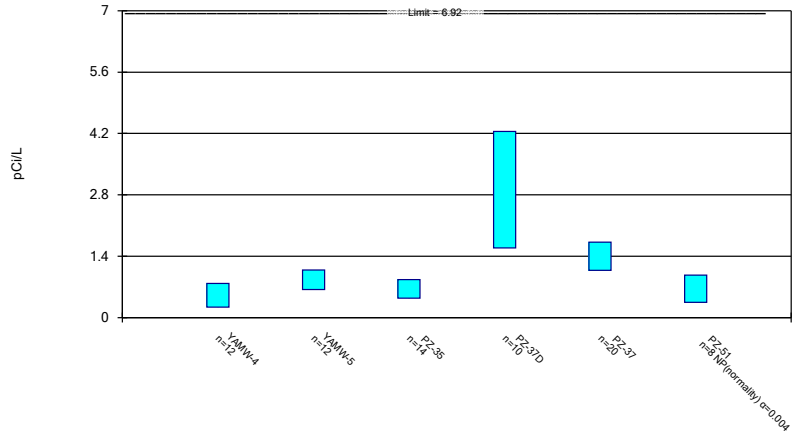
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

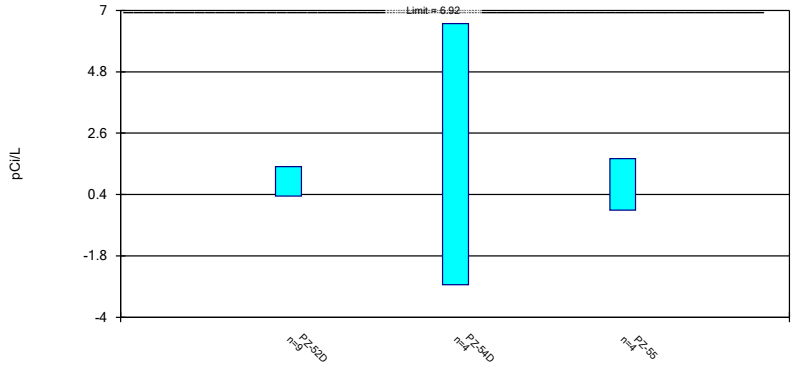
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01 except as noted. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

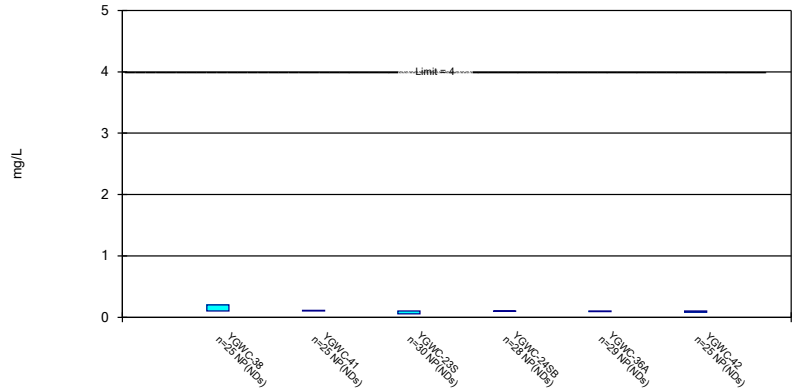
Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Combined Radium 226 + 228 Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

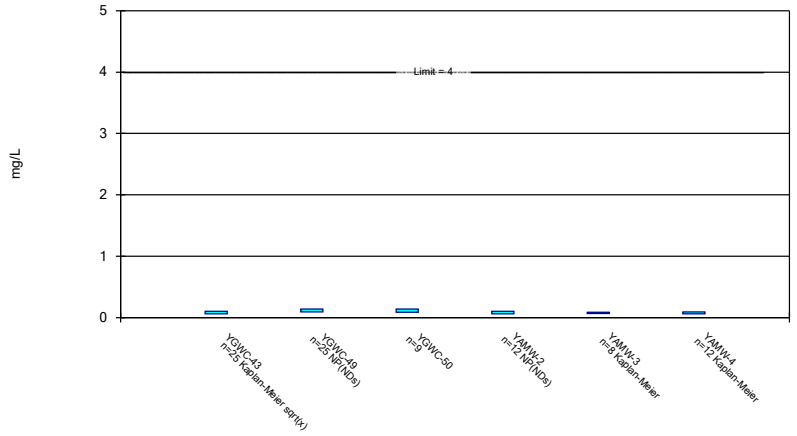
Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.



Constituent: Fluoride Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

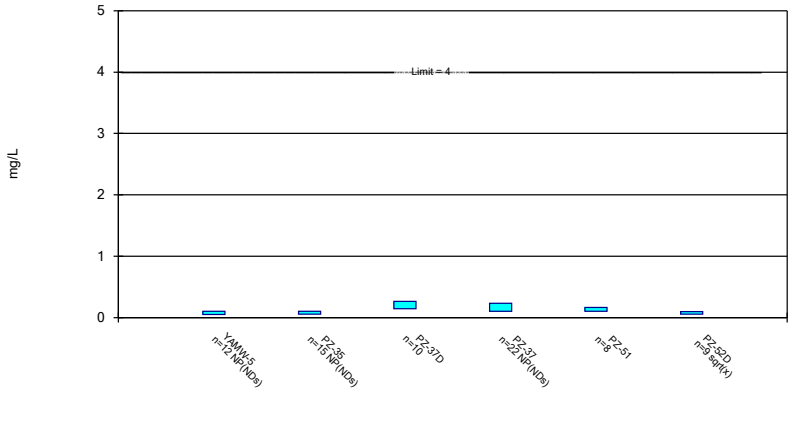
Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.



Constituent: Fluoride Analysis Run 11/6/2025 8:53 PM View: Confidence Intervals
Plant Yates Client: Southern Company Data: Yates AMA-R6

Sanitas™ v.10.1.02 Software licensed to Groundwater Stats Consulting. UG

Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.
