

Getting Ready to Plug-in

Here are the three steps that Georgia Power recommends you take to be plug-in ready for the purchase of a plug-in electric vehicle.

Step 1

Do your homework and answer the following questions:

- ▶ Which type of plug-in vehicle do you want—a plug-in hybrid or an all electric vehicle?
- ▶ How do you plan to charge your plug-in electric vehicle—are you going to use 120V charging (level 1) or 240V charging (level 2)?
- ▶ Are you going to install an in-home 240V electric vehicle charging station?
- ▶ Can your home's electrical panel and wiring support charging an electric vehicle using a 240V charging station?
- ▶ Do you need to hire an electrical contractor to assess and modify your electrical panel and/or wiring to be able to charge an electric vehicle?
- ▶ Will you need city permits to complete any necessary electrical work? For more information or assistance answering any of these questions go to www.goelectricdrive.org

Step 2

Complete any work required for the charging you have planned. This work could include:

- ▶ Having your contractor complete any panel and wiring upgrades
- ▶ Having a contractor install a 240V electric vehicle charging station
- ▶ Having the city complete any required inspection

Step 3

Select the appropriate rate plan for your charging preferences

- ▶ What is the best time for you to charge your vehicle?
- ▶ Explore rate options at www.georgiapower.com/residential
- ▶ If you decide to change from your existing rate, contact a GeorgiaPower representative at 1-888-660-5890 or sign up for TOU-PEV rate online at www.georgiapower.com/residential
